BOARD OF TRADE CERTIFICATE.

Passenger steamer—Motor-boat—" Vessel used in navigation."—By sect. 271 of the Merchant Shipping Act 1894 (57 & 58 Vict. c. 60) it is enacted (*inter alia*): "Every passenger steamer which carries more than twelve passengers shall . . . not ply or proceed to sea or on any voyage or excursion with any passengers on board unless the owner or master has the certificate from the Board of Trade as to survey under this part of this Act, the same being in force and applicable to the voyage or excursion on which the steamer is about to proceed." By sect. 267 of the same Act "passenger steamer" shall mean "every British steamship carrying passengers to, from, or between any places in the United Kingdom." By sect. 742, "'ship' includes every description of vessel used in navigation not propelled by oars." By sect. 743, "any provisions of this Act applying to steamers or steamships shall apply to ships propelled by electricity or other mechanical power." The penalty for the contravention of the above-

PAGE

named provision is contained in sect. 21 of the Merchant Shipping Act 1906 (6 Edw. 7, c. 48). The respondent R. used two petrol-driven motor-boats for carrying passengers, exceeding twelve in number, on two specified days on the river Exe, and into and along the Exeter Canal, without having obtained a certificate of survey from the Board of Trade under sect. 271 of the Merchant Shipping Act 1894. The canal is connected with the sea by means of locks, and is used by seagoing ships for the purpose of getting to and from Exeter, but the motor-boats did not proceed to sea, nor did they go beyond non-tidal waters. Held, reversing the decision of the justices, that the motor-boats were passenger steamers within the meaning of the Act, that they were used for carrying passengers on an excursion, and that they were used "in navigation," and that, although they did not proceed to sea, a certificate of the Board of Trade was required to be held by the owner or master. *Mayor, &c., of Southport* v. *Morriss* (68 L. T. Rep. 221); (1893) 1 Q. B. 359) distinguished. (K. B. Div. Ct.) *Weeks* (app.) v. *Ross* (resp.). 307

CARRIAGE OF GOODS.

1. *Bill of lading—Lien for unpaid freight due from limited company—Shipment by receiver.*—A limited company had for many years shipped goods by the appellants' line of steamers to their agents abroad under a bill of lading which contained a clause giving the shipowners a lien on the goods, not only for freight due thereunder, but also for any previously unsatisfied freight due from the shippers or the consignees. The company got into difficulties, and the respondent was appointed receiver, and he shipped goods by a ship of the appellants to the agents abroad, with instructions to "deliver as below, charging to yours respectfully 'the Company' by A. F. W., Receiver and Manager." The address given for delivery was to the company, care of the agents. The appellants informed the respondent of the amount of freight, and inclosed a bill of lading in the same form as that used on previous shipments by the company. On the arrival of the goods, the shipowners claimed a lien in respect of unsatisfied freight due from the company on shipments before the appointment of the receiver. Held, that they were not entitled to do so. Judgment of the Court of Appeal affirmed, Lords Shaw and Mersey dissenting. (*H. of L.*) *Moss Steamship Company* v. *Whinney* 25

2. *Charter-party—Arbitration clause—Bill of lading—Incorporation.*—Goods were shipped under a charter-party which contained an arbitration clause by which "any dispute or claim arising out of any of the conditions of this charter-party shall be adjusted at the port where it occurs, and the same shall be settled by arbitration." A bill of lading was given to the shipper which provided that freight should be paid "for the said goods, with other conditions as per charter," and in the margin was written in ink, "Deck load at shipper's risk, and all other terms and conditions and exceptions of charter to be as per charter-party, including negligence clause." The shipowners having sued the bill of lading holders for demurrage at the port of discharge: Held, that the arbitration clause in the charter-party was not incorporated in the bill of lading so as to make it applicable to this dispute, it being only intended to apply to the method of settling disputes between the parties to the charter-party arising out of its conditions, and not to disputes arising out of the bill of lading. Judgment of the court below affirmed. *Hamilton* v. *Mackie* (5 Times L. Rep. 677) approved and followed. (H. of L.) *Thomas and Co.* v. *Portsea Steamship Company* 23

3. *Construction—"For six or seven (in charterers' option) consecutive voyages during* 1910."—A charter-party contained the following clause: "This charter to remain in force for six or seven (in charterers' option) consecutive voyages during 1910." On the 3rd Jan. 1910 the ship was ready to receive cargo at Newcastle, but the charterers were unable to load her in consequence of a strike which lasted till the 11th Jan. The ship consequently went on a voyage to Italy for other charterers with a cargo of coal from South Wales, the learned judge finding that this was reasonable. She did not arrive home from her sixth voyage till the 6th Jan. 1911, when the charterers purported to exercise their option to load her for a seventh voyage. Held, on the true construction of the charter-party, that the words "during 1910" were words of description and protection for both parties, the one being only bound to receive cargo, and the other only bound to supply the ship during 1910, and that therefore the charterers were not entitled to exercise the option claimed. *Pope* v. *Bavidge* (1854) 10 Ex. 73) not followed. (Scrutton, J.) *Dunford and Co. Limited* v. *Cia Anonima Maritima Union* ... 32

4. *Demurrage—Delivery according to custom of port—Discharge by port authority—Delay beyond control of charterer.*—The plaintiffs entered into a charter-party with the defendants by which they undertook to send their steamship to a port in Finland to be loaded with pit props and to deliver them at Swansea. It was a term of the charter-party that the cargo should be discharged as fast as the steamship could deliver during the ordinary working hours of the port, but according to the custom thereof, and, should the steamship be detained beyond the time stipulated as above, demurrage should be paid at 4d. per net registered ton per day, and *pro rata* for any part thereof. The charter-party further provided that the discharge was to be effected by the receivers' stevedore, the steamship paying so much per fathom. In a County Court action brought by the shipowners against the charterers for demurrage there was evidence and it was found that there was a custom in Swansea that discharge of pit props was to be done by the harbour authority and not by any stevedore to be named by the receivers of the cargo. Some delay occurred in the discharge. The judge gave judgment for the defendants, the charterers, on the ground

SUBJECTS OF CASES.

PAGE

that as no time was fixed for the discharge, and as the discharge was, according to the practice of the port, in the hands of the harbour authority, the charterers were not liable for the delay, though there was in fact a delay of three days, which would have entitled the plaintiffs to 90*l*., caused by the negligence of the harbour authority. The shipowners appealed. Held (affirming the decision of the County Court judge), that the charterers were not liable for the delay, for the port authority, who discharged the vessel, were not their servants or agents to effect the discharge, and the delay was due to circumstances beyond their control. *Weir* v. *Richardson* (3 Com. Cas. 20) approved. (Adm. Div. Ct.) *The Kingsland* 38

5. *Time charter — Exceptions — Strikes.*—A ship was chartered under a time charter which contained the following clause: "Mutual exceptions: The owners and charterers shall be mutually absolved from liability in carrying out this contract in so far as they may be hindered or prevented by" (*inter alia*) "strikes." The charterers in good faith, in the ordinary course of trade, sent the ship to load a cargo of coal at a port where to their knowledge there was a strike at the collieries. The ship could have been employed in other ways, but was retained by the charterers within the area of the strike. In consequence of the strike she was delayed for some time in obtaining a cargo. Held, that the charterers were liable to pay the agreed hire for the period of such delay. Judgment of the Court of Appeal affirmed. (H. of L.) *Brown and Another* v. *Turner Brightman and Co.* 79

6. *Loss by fire—Unseaworthiness—Actual fault or privity—M.S.A.* 1894, *S.* 502.—The owner of a British sea-going ship is exempted by sect. 502 of the Merchant Shipping Act 1894 from liability for loss or damage by reason of fire on board the ship where the loss or damage happens without his actual fault or privity. A bill of lading contained a clause providing that the shipowner was not responsible for any loss of or damage to the goods received for carriage occasioned by . . . fire or unseaworthiness, provided all reasonable means had been taken to provide against such unseaworthiness. Held, by the Court of Appeal, that a shipowner is not deprived of the protection of sect. 502 merely because the fire is caused by unseaworthiness, but that the operation of the section may be ousted by special contract and the owners be liable where a breach of the warranty of seaworthiness is proved. Decision of Bray, J. affirmed. (Ct. of App.) *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company Limited* ... 82

7. *Bill of lading—Railway Acts.*—The provisions of the Railway and Canal Traffic Act 1854 are extended by section 31 of the Railways Clauses Act 1863 to the steam vessels of a railway company and to the traffic carried on thereby. Therefore a railway company, whose private Act incorporates the Railways Clauses Act 1863, is not protected by a condition in a bill of lading in respect of goods carried by them by sea only that they shall not be liable for the negligence of the master or mariners navigating their steam vessels, as such a condition is not reasonable. (Coleridge, J.) *Jenkins* v. *Great Central Railway Company* 154

8. *Bill of lading—Through carriage—Liability of shipowner for damage—Onus of proof.*—Goods were dispatched from Minneapolis to Glasgow, *viâ* New York, under a through bill of lading which covered the whole transit both by land and water carriers. The bill of lading was signed by an agent representing both the inland carriers and the shipowners "on behalf of carriers severally, but not jointly," and contained clauses that the goods were "received in apparent good order except as noted," and that "no carrier shall be liable for loss or damage not occurring on his own road or his own portion of the straight route, nor after the property is ready for delivery to the next carrier or consignee." The receipt given at New York by the respondents—the shipowners—to the inland carrier stated that a small quantity of the total shipment was damaged. On discharge from the respondents' vessel at Glasgow a much larger quantity was found to have similar damage. There was evidence to show that at New York the goods were hurriedly shipped without adequate examination as to the condition of delivery from the inland carrier, and there was also some evidence that during the shipment at New York rain had fallen which might have caused the damage. Held, that the shipowners were liable for the whole loss except that notified to the inland carriers at New York. By Lord Shaw: The principal of *The Peter der Grosse* (3 Asp. Mar. Law Cas. 195 (1876); 1 P. Div. 414; 34 L. T. Rep. 749) as to onus of proof approved. Judgment of the Court of Session reversed and decision of the Lord Ordinary restored. (H. of L.) *Crawford and Another* v. *Allan Line Steamship Company* 100

9. *Charter-party — Delay—Inaccessibility—Strikes—*Ejusdem generis.—A steamer was chartered to proceed to named ports ordered on signing bills of lading and there deliver her cargo alongside any wharf and (or) vessel and (or) craft as ordered. The cargo was to be taken from alongside by the consignees at the port of discharge at a specified rate, "provided steamer can deliver it at this rate." If longer detained the consignees were to pay steamer demurrage at specified rate. "Time to commence when steamer is ready to unload and written notice given, whether in berth or not. . . . In case of strikes, lock-outs, civil commotions, or any other causes or accidents beyond the control of the consignees which prevent or delay the discharging, such time is not to count unless the steamer is already on demurrage." On the arrival of the steamer at one of the named ports on the 20th Sept. it was found that all the berths alongside the wharf were occupied by other vessels and the steamer could not get to a berth alongside the wharf until the 25th Sept. By a regulation the shore labourers would not discharge vessels until they were in a berth alongside a wharf; and cargo was brought to the rail by them, the ship's crew not being employed. Held, first, that the parties must be assumed to know the regulations at the port, and time commenced not when unloading in fact began, but when the steamer was ready to unload, "whether in berth or not." Held, secondly, that the words "provided the steamer can deliver" had no bearing on the case, as they were only concerned with the mechanical facilities of the steamer for delivery. Held, thirdly, that delay occasioned not by a strike or by anything analogous thereto, but by a regulation of the shore labourers of the port, did not fall within the exception in respect of strikes, &c. Decision of Hamilton, J. affirmed. (Hamilton, J.) *Northfield Steamship Company Limited* v. *Compagnie l'Union des Gaz* 87

10. *Bills of lading—Assignment—Cessor of liability—Arbitration Act* 1889 (52 & 53 *Vict. c.* 49), *s.* 6.—The plaintiffs, owners of the steamship *Den of Mains*, chartered her by charter-party dated the 26th April 1911 to the defendants M. and Co., to load a cargo of beans at Vladivostock, and to proceed to a port in the United Kingdom and there deliver the cargo "agreeably to bills of lading." On the 10th June a cargo of about 6000 tons was loaded, and bills of lading made out to the order of the defendants or their assigns were signed by the master and handed to the defendants' representative. They

SUBJECTS OF CASES.

PAGE

had, by a contract dated the 27th April 1911, sold the cargo to the other defendants the B. Company on the terms of a "basis delivered" contract, by clause 10 of which the contract was to be void as regarded any portion shipped which might not arrive. On the 12th June the defendants M. and Co., under the contract of the 27th April, declared to the B. Company that the beans had been shipped by steamship *Den of Mains*. On arrival of the vessel at Liverpool, the port of discharge, M. and Co. handed to the B. Company the bills of lading indorsed against a payment. When the discharge had been completed it was alleged that there was a shortage of 171 bags, and, the B. Company having paid only in respect of the quantity actually delivered, M. and Co. instructed them to make a corresponding deduction from the freight, but the plaintiffs refused to acknowledge the claim for short delivery. A dispute having thus arisen, M. and Co. gave notice that they demanded an arbitration under a clause in the charter-party which provided for arbitration "by arbitrators, one to be appointed by each of the parties to this agreement, if necessary the arbitrators to appoint a third," and formally required the plaintiffs within seven clear days to appoint their arbitrator. The plaintiffs did not appoint an arbitrator, and the defendants after the expiry of the seven days gave notice of the appointment of a gentleman to act as sole arbitrator. On a summons for direction taken out by the plaintiffs: Held, (1) that there was nothing in the contract or the circumstances of the case to satisfy the court that it was the intention of the shipowners and charterers that the responsibility of the former under the charter-party had ceased; and (2) that the submission to arbitration came within sect. 6 of the Arbitration Act 1889. (K. B. Div. Bray, J. *Steamship Den of Airlie Company Limited* v. *Mitsui and Co. Limited and British Oil and Cake Mills Limited.*) 97

11. *Charter-party — Strike clause — "Loading" and "discharge" — Demurrage.*—A charter-party contained a "strike" clause: "If the cargo cannot be discharged by reason of a strike or lock-out of any class of workmen essential to the discharge of the cargo, the days of discharging shall not count during the continuance of such strike or lock-out." On the arrival of the ship at the port of discharge, a strike of carters was in existence, in consequence of which the docks had become congested: this condition of affairs rendered it impossible for the defendant, who was consignee, to accept delivery of the cargo, there being neither space for the cargo in the docks nor means of taking it away when tendered over the ship's rail. Held, in the circumstances, that the carters were not a "class of workmen essential to the discharge" within the meaning of the clause, and that the defendant was not protected by the clause as discharge was not made impossible by the strike. Held, also, that "discharge" is a joint act, necessitating co-operation on the part of the ship and the receiver of the cargo, and that the obligation of the ship under this term is fulfilled when its crew or its stevedore's men are in a position to offer, and do offer, delivery to the consignee over the ship's side. (Ir. K. B. Div. Ct.) *Langham Steamship Company Limited* v. *James Gallagher* 109

12. *At ship's risk.*—A charter-party contained the following clause: "The cargo to be ordered by the captain as required, and when signed for to be at ship's risk until shipped on board . . . but in all other respects the act of God, perils of the sea . . . are always mutually excepted." The cargo, consisting of sleepers, was brought alongside the vessel in rafts, and a number of sleepers were lost after being signed for on behalf of the shipowner through certain excepted perils before they were shipped on board. Held, that "at ship's risk" meant that the sleepers were at the absolute risk of the shipowner during the period between their being signed for and being shipped on board as the excepted perils did not apply to that period. (Bray, J.) *Dampskebsselskabet Skjoldborg and C. K. Hansen* v. *Charles Calder and Co.* 156

13. *Charter-party—Charterer to pay all "dues"—Ship to pay all "port charges"—Custom of port of Santos.*—A charter-party contained the following clause: "The charterer paying all dues and duties on the cargo, and the steamer all port charges, pilotages, &c., as customary," and also provided that on arrival at Santos the steamer should discharge on the quay. At Santos a dock company has authority to enforce a tariff, being entitled (*inter alia*) to make a charge "for the use of the quay for loading and discharging goods and any merchandise. . . . " The plaintiffs' vessel having been discharged on to the quay, the charterers' agents at the port of Santos charged against the ship in accounts rendered the particular charge for cargo so delivered. In an action by the shipowners to recover the amount deducted: Held, following the decision of Walton, J. in *Field Line (Cardiff)* v. *San Paulo Gas Company* (unreported, but delivered on the 14th April 1908), that the charge was not a "due" on the cargo, but a port charge falling on the steamer. (Hamilton, J.) *Societa Anonima Ungherese di Armamenti Marittimo* v. *Hamburg South American Steamship Company* 228

14. *Charter-party—"Consignees to effect discharge of cargo steamer paying 1s. per ton"—Sale of cargo by consignee—"Cost of stevedoring to be paid by" purchaser—Right to sum payable by steamer.*—The appellant had chartered a steamer to load a cargo of coal for Sydney. The charter-party contained the following clause: "Consignees to effect the discharge of the cargo, strike or no strike, steamer paying 1s. per ton of 20cwt." Before the ship arrived the appellant sold the cargo to the Government of New South Wales on the terms (*inter alia*) "The Government to guarantee to discharge the vessel at not less than 500 tons per day, strike or no strike. The cost of stevedoring to be paid by the Government." Held, that the Government were entitled to retain the 1s. per ton payable as against the appellant. Judgment of the court below affirmed. (P. C.) *White* v. *Williams* 208

15. *Charter-party—Bills of lading—Submission—Injunction to restrain arbitration—Arbitration Act 1889 (52 & 53 Vict. c. 49), s. 6.*—The plaintiffs, owners of the steamship *Den of Mains*, chartered her by charter-party dated the 26th April 1911 to the defendants M. and Co., to load a cargo of beans at Vladivostock, and to proceed to a port in the United Kingdom and there deliver the cargo "agreeably to bills of lading." On the 10th June a cargo of about 6000 tons was loaded, and bills of lading made out to the order of M. and Co. or their assigns were signed by the master and handed to M. and Co.'s representative. M. and Co. had, by a contract dated the 27th April 1911, sold the cargo to the defendants the B. Company on the terms of a "basis delivered" contract, by clause 10 of which the contract was to be void as regarded any portion shipped which might not arrive. On the 12th June the defendants M. and Co., under the contract of the 27th April, declared to the B. Company that the beans had been shipped by steamship *Den of Mains*. On arrival of the vessel at Liverpool, the port of discharge, M. and Co. handed to the B. Company the bills of lading indorsed against a payment. When the discharge had been completed it was alleged that there was a shortage of 171 bags, and, the

PAGE

B. Company having paid only in respect of the quantity actually delivered, M. and Co. instructed them to make a corresponding deduction from the freight, but the plaintiffs refused to acknowledge the claim for short delivery. A dispute having thus arisen, M. and Co. gave notice that they demanded an arbitration under a clause in the charter-party which provided for arbitration "by arbitrators, one to be appointed by each of the parties to this agreement, if necessary the arbitrators to appoint a third," and formally required the plaintiffs within seven clear days to appoint their arbitrator. The plaintiffs did not appoint an arbitrator, and the defendants after the expiry of the seven days gave notice of the appointment of a gentleman to act as sole arbitrator. The plaintiffs thereupon took out a summons for further directions, asking (*inter alia*) for an injunction to restrain the first defendants from proceeding with the arbitration, alternatively that leave be given to the plaintiffs to revoke the submission to arbitration. Held, without deciding the point of law decided by Bray, J. (1) that there was no jurisdiction in the court to grant the injunction asked for; and (2) that in the exercise of its discretion the court ought not to give leave to revoke the submission to arbitration. Decision of Bray, J., reported 12 Asp. Mar. Law Cas. 97 (1912); 105 L. T. Rep. 823, affirmed on other grounds. *Steamship Den of Airlie Company Limited* v. *Mitsui and Co. Limited and British Oil and Cake Mills Limited.* (Ct. of App. Vaughan Williams, Farwell, and Kennedy, L.JJ.) 169

16. *Charter-party—Bill of lading—Failure to load complete cargo—Unseaworthiness—Deviation to port of refuge—Dead freight—Lien—Unliquidated damages.*—By the terms of a charter-party the shipowners had a lien on the cargo for dead freight, and by the bills of lading the cargo was to be delivered to the shippers' order, or to their assigns, "all other conditions as per charter-party." The charterers failed to load a complete cargo, and the owners loaded other cargo, at a lower rate than the chartered freight, in order to minimise the loss. An excessive quantity of deck cargo was loaded so as to make the ship in fact unseaworthy at the time of sailing, and she was in consequence compelled to put into a port of refuge for repairs, after which she completed her voyage. In a claim by the owners against the bill of lading holders for a lien on the cargo for loss sustained in consequence of the charterers' failure to load a complete cargo: Held, that the right to compensation having accrued before the ship sailed, and the deviation to a port of refuge for repairs being justifiable under the circumstances, the contract of affreightment was not put an end to by the unseaworthiness or the deviation, and the owners retained their rights under it, and that a claim for dead freight included a claim for unliquidated damages. Judgment of the Court of Appeal reversed. (H. of L.) *Kish and another* v. *Taylor Sons and Co.* 217

17. *Bill of lading—"Shipped in apparent good order and condition"—Incorrect statement—Liability of shipowner—Estoppel.*—The master of a ship signed bills of lading by which he acknowledged to have received a cargo of sugar in "apparent good order and condition." In an action by the indorsees of the bills of lading against the shipowners in respect of damage to the sugar: Held, that, as the bill of lading contained a statement that the goods when shipped were in "apparent good order and condition," they were estopped from saying that the goods when shipped were not in apparent good order and condition. *Compania Naviera Vasconzada* v. *Churchill and Sim* (10 Asp. Mar. Law Cas. 177; 94 L. T. Rep. 59; (1906) 1 K. B. 237) followed.

PAGE

(Scrutton, J.) *Martineaus Limited* v. *Royal Mail Steam Packet Company Limited.* 190

18. *Bill of lading—Loading charges—London clauses—Discharge of ship at riverside wharf.*—By the "London clause" shipowners are entitled to exact certain charges from consignees of cargo in respect of discharge of vessels. On the construction of a bill of lading: Held, that these charges could only be exacted by the ship when she discharged her cargo in a dock, and not when she discharged at a riverside wharf. (Scrutton, J.) *Produce Brokers' Company Limited* v. *Fromess, Withy, and Co. Limited* ... 188

19. *Bill of lading—Defect in tap—Loss by fire—Unseaworthiness.*—A bill of lading provided that the owners of the vessel were not to be liable "for fire on board" or owing to "unseaworthiness of the ship at the commencement of or at any period of the voyage, provided all reasonable means have been taken to provide against such unseaworthiness." The ship took fire in consequence of some oil from a leaky tap coming into contact with a light, the tap being in that condition at the commencement of the voyage. Held, that as there was no defect existing in the tap which could not be ordinarily remedied in the course of the voyage, the condition of the tap did not in any way constitute initial unseaworthiness. (Hamilton, J.) *Virginia Carolina Chemical Company* v. *Norfolk and North American Shipping Company* 233

20. *Loss by fire—Unseaworthiness—Fault or privity of owners—Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *s.* 502.—A cargo of oil carried on board a ship was destroyed by fire, the cause of the loss being the stranding of the ship occasioned by the unseaworthiness of her boilers. Held, that as the owners had not fulfilled their duty in seeing that the ship was seaworthy, they were not entitled to the protection of sect. 502 of the Merchant Shipping Act 1894, as the loss had not happened without their actual fault or privity. (Bray, J.) *Asiatic Petroleum Company Limited* v. *Lennard's Carrying Company Limited* 269

21. *Bill of lading—Strikes—Clause exempting shipowners from liability.*—A bill of lading contained a clause to the following effect: "If the master reasonably anticipates that delivery will be impeded at the port of delivery by strikes, the master may at any point of the transit, at the risk and expense of the owner of the goods, tranship or land or otherwise dispose of the cargo, or any part thereof, and the same may be reshipped or forwarded, or he may proceed on the voyage with the whole or part of the goods, and discharge the same on the return voyage, or forward them to their destination from another port always subject to the conditions of the forwarding conveyance. . . . If the discharge of the cargo be or threatens to be impeded by absence from whatever cause of facilities of discharge, the master to have liberty at ship's expense, but shipper's risk, to put the whole of the cargo into hulk, lighter. . . . Transhipment of cargo for ports where the ship does not call or for shipowner's purposes to be at shipowner's expense." A ship left Adelaide on the 10th April 1912, bound to London and Liverpool with a general cargo including 2794 sacks of flour belonging to plaintiffs for delivery in London. She arrived at Gravesend when there was a strike throughout the Port of London which would or might have prevented the discharge in London of her cargo. The strike also would or might have prevented her loading coal necessary for her refrigerating machinery. She had only 100 tons of coal on board, equal to one day's consumption for refrigerator and steaming purposes, and required an immediate further supply of coal. There was no way of ascertaining how long the strike

SUBJECTS OF CASES.

PAGE

would last, and in fact the strike continued till the month of August. Under these circumstances she proceeded at once to the Hook of Holland, arriving there on the 25th May, where she took a sufficient quantity of coal on board. Learning that the strike still continued, she proceeded on the 26th May towards Liverpool, where she arrived on the 28th May and discharged her cargo, including plaintiffs' cargo and other London cargo. As a result of the discharging of the plaintiffs' cargo at Liverpool instead of London, transhipment expenses and dock dues at Liverpool amounting to 30*l.* 15s. 7d. were paid by the defendants to the Mersey Docks and Harbour Board, and were charged to the plaintiffs by the defendants. Of this the plaintiffs had paid 30*l.* under protest, and now sought to recover the said sum. Held, that the plaintiffs were entitled to succeed as in the events which happened the expenses were not thrown upon the owners of the goods. (Bray, J.) *Wiles and Co. Limited* v. *Ocean Steamship Company Limited* 277

22. *Bill of lading—Unseaworthiness—Fire—Exception—Merchant Shipping Act* 1894 (57 & 58 *Vict.* c. 60), *s.* 502.—The parties to a bill of lading excluded the operation of sect. 502 of the Merchant Shipping Act 1894, which exempts the shipowner from liability for loss or damage to goods by fire. It was found as a fact that the vessel was unseaworthy, and that the unseaworthiness caused the loss either by perils of the seas or fire. Held, that the shipowner was liable, as the bill of lading was ambiguous and consequently did not exempt the shipowner from the obligation to provide a seaworthy ship. (Scrutton, J.) *Ingram and Royle Limited* v. *Services Maritimes Du Tréport Limited* 295

23. *Lump freight—Perils of the seas.*—By the terms of a charter-party it was provided that the steamship *Ethelwalda* should load a full and complete cargo of pit props at a port in Finland and proceed to Port Talbot, a dock as ordered, and there deliver the cargo on being paid a lump sum of 1600*l.* The charter-party contained an exception clause including (*inter alia*) perils of the seas. The *Ethelwalda* loaded her cargo and proceeded to Port Talbot, but before she could get into a dock she went ashore and ultimately became a total wreck. Part of the cargo was washed ashore, and a substantial part was collected on behalf of the shipowners and delivered to the consignees. Held, that the shipowners were entitled to payment of the lump freight as they had substantially performed their contract save in so far as they had been prevented by an excepted peril, namely, perils of the seas. (Pickford, J.) *Harrowing Steamship Company Limited* v. *William Thomas and Sons* 261

24. *Liability for damage caused by open valves.*—A charter-party provided that "nothing herein contained shall exempt the shipowners from liability to pay for damage to cargo occasioned by bad stowage, by improper or insufficient dunnage, or absence of customary ventilation, or by improper opening of valves, sluices, and ports." Held, that the shipowners were liable for damage caused by a valve being improperly left open although it had originally been properly opened. (Bray, J.) *Meral and Co.* v. *Ropner and Co.* 268

25. *Demurrage—Exceptions—" Strikes . . . or any other cause beyond the control of the charterer."*—The following printed clause appeared in a charter-party: "The steamer to be loaded in usual turn, with customary dispatch at Goole, and discharged in thirty-six running hours, commencing first high water on or after arrival at or off the berth, unless berthed before, but time, unless used, not to commence between six p.m. and six a.m." The following written clause appeared in the margin: "When steamer loads at Hull seventy-two running hours will be allowed for loading and discharging, which time is to commence when steamer is at or off loading berth, but should steamer be prevented from entering the loading dock owing to congestion, time to commence from first high water after arrival off the dock." Held, that when the steamer loaded at Hull the time commenced to run from the time the steamer got to the loading berth. The charter-party also contained the following clause: "Strikes of workmen, lock-outs, pay days, idle days or cavilling days, or riots, or frost, rain, or floods, or any accident or any cause whatsoever beyond the control of the charterer, which may prevent or delay her loading or unloading excepted." There was a delay of seventeen hours at the port of discharge in consequence of a deficiency of railway waggons due to an abnormal demand upon the railway company. The plaintiffs claimed demurrage in respect of the seventeen hours. Held, that the words "or any cause whatsoever" were wide enough to exclude the *ejusdem generis* rule of construction, and that the charterers were therefore not liable for demurrage. (Bailhache, J.) *France, Fenwick, and Co. Limited* v. *Philip Spackman and Sons* 289

26. *Custom of port of Novorossisk—Evidence—Distinction between law and custom.*—A custom is a reasonable and universal rule of action in a locality, followed, not because it is believed to be the general law of the land or because the parties following it have made particular agreements to observe it, but because "it is in effect the common law within that place to which it extends, although contrary to the general law of the realm." Alleged custom of the port of Novorossisk considered. *Lockwood* v. *Wood* (6 Q. B. 50) considered. (Scrutton, J.) *Anglo-Hellenic Steamship Company Limited* v. *Louis Dreyfus and Co.* 291

27. *Strike — Demurrage — Construction of discharging clause.*—A charter-party contained the following clause: "Time to commence when steamer is ready to unload and written notice given, whether in berth or not. In case of strikes, lock-outs, civil commotions, or any other causes or accidents beyond the control of the consignees which prevents or delays the discharging, such time is not to count unless the steamer is already on demurrage." Held, that the clause did not mean that time was not to count at all if a strike delayed the discharging, but that time should not count to the extent of any delay caused by a strike. (Scrutton, J.) *London and Northern Steamship Company Limited* v. *Central Argentine Railway Limited* 303

28. *Charter-party—Safe port.*—A charter-party provided that a ship should "trade between any safe ports between Hamburg and Brest and the United Kingdom." The ship was ordered by the charterers to go to Craster, a port in the United Kingdom which was perfectly safe to make provided the sea were smooth, but which might become dangerous if a change of wind altered the conditions. At the time the vessel was ordered to Craster the sea was smooth. Held, that the port was not a safe port within the meaning of the charter-party. (Rowlatt, J.) *Johnston Brothers* v. *Saxon Queen Steamship Company* 305

29. *Bill of lading — Freight — Warehouseman — Delivery—Liability of consignee for freight—Merchant Shipping Act* 1894 (57 & 58 *Vict.* c. 60), *ss.* 493-496.—Certain goods were shipped at Antwerp in a steamship owned by the defendants and consigned to the plaintiffs at Southampton under a bill of lading which provided (*inter alia*) as follows: "The goods to be taken from alongside by the consignees as soon as the vessel is ready to discharge . . . or other-

SUBJECTS OF CASES.

PAGE

wise they may be landed, put into lighters, or stored . . . at the expense of the consignee of the goods. . . . Freight to be paid at destination before delivery. . . . The company shall have a lien upon the goods for the payment thereof, as well as a general lien, not only for the freight of the same, but for all other freights, storages, or other charges owing to the company by the shipper, consignee, or owners." The vessel arrived at Southampton, and was ready to discharge, but the plaintiffs did not take delivery. The goods were landed by the master and stored with a warehouseman, with instructions that the goods were to be held for the shipowners, and not to be delivered to any person without their instructions, which were to be accompanied by their release for the freight. The bill of lading was sent by the plaintiffs to the warehouseman with the sum due for freight as under sects. 493-496 of the Merchant Shipping Act 1894. The warehouseman, acting upon the instructions of the shipowners that the goods were not to be delivered to the plaintiffs until payment of freight to the shipowners had been made, refused to deliver the goods. In an action by the plaintiffs for the delivery of the goods on payment of freight to the warehouseman: Held, that as the shipowners had not landed the goods and stored them in the warehouse under the provisions of the Merchant Shipping Act 1894, the consignees had no right to delivery of the goods by the warehouseman on depositing the amount due for freight. (Scrutton, J.) *Dennis and Sons Limited* v. *Cork Steamship Company Limited* 337

30. *Bill of lading—Exemptions from liability—Fire—" Actual fault or privity "—Perils of the sea—Unseaworthiness—Maintenance of vessel's class—Merchant Shipping Act* 1894 (57 & 58 *Vict.* c. 60), s 502.—By sect. 502 of the Merchant Shipping Act 1894, the owner of a British seagoing ship is not liable to make good any loss or damage happening without his actual default or privity where any goods, merchandise, or other things taken in or put on board his ship are lost or damaged by reason of fire on board the ship. A bill of lading, on the terms of which the plaintiffs shipped certain goods on the defendants' ship, contained the following exemptions from liability: (1) " Fire on board. . . . and all accidents, loss, and damage whatsoever from . . . perils of the seas . . . or from any act, neglect, or default whatsoever of the master, officers, crew . . . or agents of the owners . . . in the management, loading, stowing, discharging, or navigation of the ship or otherwise. . . ." (11) " It is agreed that the maintenance by the shipowners of the vessel's class . . . shall be considered a fulfilment of every duty, warranty, or obligation, and whether before or after the commencement of the said voyage." A fire broke out on the ship, which went down, and the plaintiff's goods were lost. Scrutton, J. found as facts that the ship was unseaworthy; that the unseaworthiness caused the loss of goods either by perils of the sea or by fire, and that the fire occurred without the actual fault or privity of the shipowner, and he held that the parties to the bill of lading had excluded the operation of the above sect. 502; and that the shipowners were liable as the bill of lading did not in unambiguous terms exempt them from the obligation to provide a seaworthy ship. Held, that there was no contract between the parties excluding the protection afforded to the shipowners by sect. 502, and substituting in its place a contractual liability of the shipowners, and, therefore, the shipowners were not liable. *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company* (12 Asp. Mar. Law Cas. 82, 233; 107 L. T. Rep. 320; (1912) 1 K. B. 229) distinguished. Decision of Scrutton, J. reversed. (Ct. of App.) *Ingram and Royle Limited* v. *Services Maritimes Du Treport Limited* 381

PAGE

31. *Charter-party — Lay days — Strike — Avoidance of charter.*—By the terms of a charter-party it was agreed that a vessel should proceed to a dock, there to load from the charterers a cargo of coal. The coal was to be loaded in 140 running hours, and it was provided that " any time lost through riots, strikes, lock-outs, or any disputes between masters and men occasioning a stoppage of pitmen, trimmers, or other hands connected with the working or the delivery of the coal for which the steamer is stemmed; or by reason of accidents to mines or machinery, obstructions on the railway or in the docks; or by reason of floods, frosts, fogs, storms, or any cause beyond the control of the charterers, not to be computed as part of the loading time (unless any cargo be actually loaded during such time). In the event of any stoppage or stoppages arising from any of these causes continuing for the period of six running days from the time of the vessel being ready to load, this charter shall become null and void, provided, however, that no cargo shall have been shipped on board the steamer previous to such stoppage or stoppages." The vessel was ready to load in the dock on the 4th April 1912 at 1 p.m. At that time a national coal strike was in progress, which terminated on the 9th April 1912. No coal had been received at the dock during the continuance of the strike, and after its termination none was ready for shipment until the 11th April, a period of more than six days after the vessel was ready to load. On the 10th April the charterers gave notice to the shipowners that, a stoppage having continued for six running days within the meaning of the charter-party, such charter-party was null and void. In an arbitration between the shipowners and the charterers an umpire held that the charter-party was void by reason of a stoppage arising from the specified causes or some of them—viz., a colliers' strike and causes beyond the control of the charterers within the meaning of clause 3 of the charter. Held, that although the actual strike was over, it had directly caused a state of affairs in the collieries which physically prevented the output of coal, and that in these circumstances there was a stoppage due to strike within the meaning of the charter-party, and the decision of the umpire was right. Observation: In order that there may be a " stoppage due to strike," the stoppage and the strike must be absolutely intimately connected one with the other. (Bailhache, J.) *Gordon Steamship Company Limited* v. *Moxey Savon and Co. Limited* 339

32. *Charter-party—Lump freight—Non-arrival of chartered ship—Delivery of part of cargo—Freight.*—By the terms of a charter-party it was provided that a steamship should load a full and complete cargo of pit props at a port in Finland and proceed to Port Talbot, a dock as ordered, and there deliver the cargo on being paid a lump sum of 1600*l*. The charter-party contained an exception clause including (*inter alia*) perils of the seas. The steamship loaded her cargo and proceeded to Port Talbot, but before she could get into a dock she went ashore and ultimately became a total wreck. Part of the cargo was washed ashore, and a substantial part was collected on behalf of the shipowners and delivered to the consignees. Held, that the shipowners were entitled to payment of the lump freight as they had performed their contract save in so far as they had been prevented by an excepted peril. Judgment of Pickford, J. (12 Asp. Mar. Law Cas. 261; 107 L. T. Rep. 459) affirmed. (Ct. of App.) *Harrowing Steamship Company Limited* v. *William Thomas and Sons* 344

33. *Charter-party — Construction — Date specified for termination of hire—Retention of vessel beyond date specified—Time essence of contract.*—By the terms of a charter-party a vessel was chartered from 15/31 May 1912 until

SUBJECTS OF CASES.

PAGE

15/31 Oct. 1912 at the rate of 615*l*. per current month "hire to continue from the time specified for terminating the charter until her redelivery to owners (unless lost) at a port on east coast of United Kingdom between the 15th and 31st Oct. 1912." On the 18th Oct. 1912 the vessel was at West Hartlepool, and upon that day she was despatched by the charterers on a voyage from which, to the knowledge of the charterers, it was impossible that she could return in time to be redelivered to the owners by the 31st Oct. She was in fact redelivered on the 20th Nov. The current rate obtainable for the vessel on the 31st Oct. was 900*l*. per month, and the owner sought to recover from the charterers damages for twenty days' detention of the ship calculated at the difference between the current rate and the chartered rate for the period in question. Held, that the clause in the charter-party set out above indicated an intention on the part of the parties to make the time specified in the charter for the redelivery of the vessel of the essence of the contract, and that as she was not redelivered by the 31st Oct. the charterers had committed a breach of contract for which they were liable in damages at the rate claimed. (Atkin, J.) *Watson Steamship Company Limited* v. *Merryweather and Co.* 353

34. *Charter-party — Demurrage — Agreed rate— Damages for detention.*—A charter-party provided that cargo was to be taken from alongside the ship at the port of discharge at the average rate of 500 tons per day, and "if longer detained consignees to pay steamer demurrage at the rate of 4d. per net register ton per running day." Held, that no provision, either express or implied, was contained in the charter-party that the agreed rate of demurrage should only apply to a reasonable number of days over and above the lay days. (Bray, J.) *Western Steamship Company Limited* v. *Amaral, Sutherland, and Co. Limited* 358

35. *Cargo—Loss by fire—Unseaworthiness of ship —Fault or privity of owners—Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *s.* 502.—A cargo of oil carried on board a ship was destroyed by fire, the cause of the loss being the stranding of the ship occasioned by the unseaworthiness of her boilers. Held (Vaughan Williams, L.J. dissenting), that the owners were not entitled to the protection of sect. 502 of the Merchant Shipping Act 1894, as the loss had not happened without their actual fault or privity. Per Buckley, L.J., the words "actual fault or privity" infer something personal to the owner, something blameworthy in him as distinguished from the fault or privity of his servants or agents. Per Hamilton, L.J., that if the sources of information had been used and not neglected, the condition of the boilers would have been learnt in time. In the present case the managers had from time to time such knowledge of the matter as made them blameworthy for the ship's unseaworthiness. Decision of Bray, J. (reported 12 Asp. Mar. Law Cas. 269; 107 L. T. Rep. 651) affirmed. (Ct. of App.) *Asiatic Petroleum Company Limited* v. *Lennard's Carrying Company Limited* 381

36. *Bill of lading—Exceptions—Liability for unmarked goods—Missing goods—Several consignees—Apportionment of unmarked goods—Condition exempting ship from liability for obliteration or absence of marks*—Commixtio.—A vessel loaded with a cargo of jute in bales. The bills of lading, which included bales with many different marks, were indorsed to thirty-seven different consignees. All the cargo was discharged at one port, and it was then discovered that thirty-three of the consignees had received their full consignments, but that the consignments to the four others were incomplete. There were eleven bales which could not be identified as belonging to any consignee by reason of defective or obliterated marking. In addition, there was a deficiency of fourteen bales. The bills of lading stated that the bales were received "marked and numbered as per margin"; that the number of packages signed for was to be binding on the shipowners unless errors or fraud were proved; but the ship was not to be liable for "inaccuracies, obliteration, or absence of marks." In an action for freight brought by the shipowners against one of the four consignees, an indorsee of one of the bills of lading, he counter-claimed for the value of six bales not delivered to him. The shipowners admitted their liability to make good the shortage of the fourteen bales, but contended that they were not liable at all for the eleven bales which could not be identified, and that the above exception protected them. Held, that the burden of proving that the exception protected them lay upon the shipowners, and that on the facts found no such protection was available to them; that they had failed to deliver the six bales and had failed to prove that the failure to deliver was due to any obliteration or absence of marks, and were liable for their full value. *Spence* v. *Union Marine Insurance Company* (18 L. T. Rep. 632; L. Rep. 3 C. P. 427) distinguished. Dictum of Lord Russell of Killowen in *Smurthwaite* v. *Hannay* (7 Asp. Mar. Law Cas. 380, 485; 71 L. T. Rep. 157, 160; (1894) A. C. 494, 505) considered. Decision of the Second Division of the Court of Session (1913, S. C. 19) reversed. (H. of L.) *Sandeman and Sons* v. *Tyzack and Branfoot Steamship Company Limited* 437

37. *Charter-party—Cessation of hire—Damage to ship during voyage owing to shifting of cargo.*—A charter-party provided that "in the event of loss of time from deficiency of men or stores, breakdown of machinery, collision, docking, stranding, or other accident or damage preventing the working of the vessel for more than twenty-four consecutive hours, the time lost shall be allowed to the charterers, including first twenty-four hours, and if such detention shall exceed thirty days charterers to have the option of cancelling this charter; but should the vessel be driven into port or to anchorage by stress of weather, or from accident to the cargo, such detention or loss of time shall be at the charterers' expense." The chartered vessel, which carried, amongst other things, a deck cargo, encountered heavy weather in the course of the voyage, and the deck cargo shifted. It was found necessary for safety to put into port, and upon arrival it was necessary to discharge the deck cargo and to examine the ship, which was injured by reason of the combined effect of the stress of weather and the shifting of the cargo, and to execute the necessary repairs to the ship. The vessel was detained in all for thirty-three days and seventeen hours, of which period nine days and twelve hours were occupied by repairs to the ship itself. It was contended by the charterers that, under the terms of the charter-party, the vessel was off hire for a period of nine days and twelve hours upon the ground that it was time lost from an accident or damage preventing the working of the vessel. For the shipowners it was contended that the ship was on hire during the period when she was being repaired on the ground that the delay was due to an accident to the cargo. Held, that the words "such detention" in the clause "should the vessel be driven into port or to anchorage by stress of weather, or from accident to the cargo, such detention or loss of time shall be at the charterers' expense" referred only to time actually lost by stress of weather, or by accident to cargo and repairing the results of such accident, but did not include time lost owing to damage to the ship which was caused by the accident to the cargo, such damage coming

SUBJECTS OF CASES.

PAGE

within the words "or other accident or damage" in the earlier part of the clause, and that consequently, as the delay caused by the repairing of the vessel exceeded twenty-four hours, she was off hire during the nine days and twelve hours occupied in repairing her. (Bailhache, J.) *Burrell and Sons* v. *F. Green and Co.* 411

38. *Carrier — Lighterman — Contract to lighter goods—Exemption from liability—Negligence.*—In a contract made between the plaintiffs and the defendant, it was agreed that the defendant should lighter goods from an import ship to a wharf on the Thames. The goods were lightered by the defendant on the terms (*inter alia*) of the following notice: "The rates charged by me for lighterage are for conveyance only. I will not be responsible for any damage to goods, however caused, which can be covered by insurance. Merchants are advised to see that their policies cover risk of craft and are made without recourse to lighterman." The plaintiffs suffered a loss which they alleged arose from the negligence by defendant's servants. On the facts: Held, that the damage was not caused by the negligence alleged, but *Semble*, the notice given by the defendant did not exempt him from liability for loss by negligence. (Pickford, J.) *Joseph Travers and Sons Limited* v. *Cooper* 444

NOTE.—Since affirmed by C. A.—ED.

39. *Contract of carriage—Through bill of lading—Transhipment into lighter—Unseaworthiness of lighter—Liability of shipowner on the through bill of lading—Shipper's risk.*—Cargo owners shipped machinery on the defendants' steamship at New York for carriage to Hull to be thence transhipped to Norrköping in Sweden on terms contained in a through bill of lading. The goods arrived safely at Hull, and were placed in a lighter hired by the defendants in order that they might be transhipped into a vessel bound for Norrköping. Owing to the unseaworthiness of the lighter the machinery was damaged. The cargo owners sued the shipowners who had carried the goods to Hull for the damage they had sustained, alleging that the shipowners were the carriers of the machinery from New York to Norrköping, and were liable for the damage sustained by the unseaworthiness of the lighter. The shipowners contended that they were only carriers to Hull, and that from thence their only duty was to make contracts to forward the goods to Norrköping, and that if they were carriers the terms of the bill of lading exempted them from liability. Held, that the obligations of the shipowners as carriers subsisted when the goods were shipped into lighter, and that the shipowners were therefore liable for the damage caused by the unseaworthiness of the barge. Held, further, that the words "shipper's risk" only applied to the carriage after the goods had been placed on the transhipment vessel, and that whatever the words meant they referred to something other than a breach of the fundamental obligation of the shipowner to supply a seaworthy vessel. (C. A.) *The Galileo* 461

NOTE.—Since affirmed by H. of L.—ED.

40. *Charter-party—Dispatch money—Time saved in loading.*—*Primâ facie* the presumption is that the object and intention of dispatch clauses is that the shipowner shall pay to the charterer for all time saved to the ship, calculated in the way in which, in the converse case, demurrage would be calculated—that is, taking no account of the lay day exceptions: (*Laing* v. *Holloway*, 1878, 3 Q. B. Div. 437, and *Re Royal Mail Steam Packet Company* v. *River Plate Steamship Company*, 102 L. T. Rep. 333; 11 Asp. Mar. Law Cas. 372; 1910 1 K. B. 601). This *primâ facie* presumption may be displaced where either (i.) lay days and time saved by dispatch are dealt with in one clause and demurrage in another clause (*The Glendevon*, 70 L. T. Rep. 416; 7 Asp. Mar. Law Cas. 439; 1893 P., 269); (ii.) lay days, time saved by dispatch, and demurrage are dealt with in the same clause, but upon the construction of that clause the court is of opinion, from the collocation of the words, or other reason, that the days saved are referable to and used in the same sense as the lay days as described in the clause, and are not referable to or used in the same sense as days lost by demurrage: (*Nelson* v. *Nelson Line*, 96 L. T. Rep 887; 10 Asp. Mar. Law Cas., 544, 581; 1907 2 K. B. 705). By the terms of a charter-party it was provided that "the entire cargo shall be loaded at the average rate of 500 units per running day of twenty-four consecutive hours (Sundays and non-working holidays excepted)," and the owners agreed to pay the charterers 10*l.* per day for all time saved in loading. The cargo loaded consisted of 5132 units, and it was agreed that the charterer was entitled to ten and a half days for loading the cargo, and that the lay days began to count at 8 a.m. on Thursday, the 20th March. The 23rd March was a Sunday, and the loading was finished at 8 a.m. on Wednesday, the 26th March, so that, excluding the Sunday, five days had been occupied in loading. The charterer claimed that, as the remaining five and a half lay days (excluding Sundays), if used, would have expired only at 8 p.m. on Tuesday the 1st of April, he was entitled to be paid six and a half days' dispatch money at the rate of 10*l.* a day. The owners admitted their liability for five and a half days, but disputed their liability for the remaining day on the ground that it was a Sunday and was excluded from the lay days, and was therefore equally excluded from the dispatch days. It was contended on behalf of the charterer that the object of the clause was to give dispatch money in respect of time saved to the ship, and that, as owing to the exertions of the charterer the ship was using the Sunday for the purpose of the voyage, he was entitled to be paid dispatch money in respect of that day. Held, that the Sunday must be taken into account in assessing the dispatch money to which the charterer was entitled. (Bailhache, J.) *Mawson Shipping Company Limited* v. *Beyer* 423

41. *Charter-party — Master co-owner — Loss of cargo through unseaworthiness—Liability of co-owner other than master.*—A ketch was owned by two co-owners, and worked on the basis that the master took two-thirds of the gross freights, out of which he paid the mate and the crew, the provisions, and expenses of the voyage. The owners took one-third of the gross freight, subject to deductions for port dues. The owners provided for the upkeep and insurance of the vessel. The ketch loaded a cargo of cement under a charter-party made by the master, which was lost through the unseaworthiness of the vessel. In an action by the owners of the cargo against one of the co-owners of the ketch: Held, that the contract of charter-party was made by the master personally, and that the defendant was therefore not liable. *Steel* v. *Lester* (37 L. T. Rep. 642; 3 Asp. Mar. Law Cas. 537; 3 C. P. Div. 131) and *Bernard* v. *Aaron* (9 Jur. N. S. 470) followed. *Associated Portland Cement Manufacturers* (1900) *Limited* v. *Ashton* 501

42. *Charter-party — Exceptions — Restraint of princes—Right to cancel.*—The defendants chartered a Greek steamer from the plaintiff to sail from Leghorn and load a cargo at a port in the Sea of Azof under a charter-party which contained an exception of restraints of princes. The steamer passed through the Dardanelles on

SUBJECTS OF CASES.

PAGE

the 28th Sept., and on the 30th, in view of the imminent probability of war, the Turkish Government arrested and detained all Greek vessels arriving in the Dardanelles. The steamer arrived at her loading port on the 1st Oct., and received delivery of part of her cargo, after which the charterers stopped the loading. On the 18th Oct. war was declared between Greece and Turkey. From the 16th to the 20th Oct. the Turkish Government unexpectedly allowed Greek vessels to pass through the Dardanelles for certain short periods. The steamer's lay days did not expire until the 22nd Oct., and on the 21st Oct. the defendants cancelled the charter. In an action by the plaintiff for damages for alleged breach of charter: Held, that at the time of the breach alleged an excepted peril, namely, restraint of princes, prevented the charter from being carried out by the vessel proceeding on her voyage, and that the restraint was likely to continue so long as to defeat the object of the adventure, and that therefore the defendants were not liable. *Embiricos* v. *Reid and Co.* 513

43. *Charter-party—Loss of time—Prevention of efficient working—Cesser of hire.*—A charter-party contained the following clause, "In the event of loss of time through deficiency of men or stores, repairs, breakdown of machinery, pumps, pipes, or boilers (whether partial or otherwise), collision or stranding, or damage preventing the efficient working of the vessel for more than forty-eight running hours, the payment of hire shall cease until she be again in an efficient state to resume her service." On the construction of the clause: Held, that for losses of time of less than forty-eight hours no claim for cesser of hire could be made, but where from any of the causes named in the charter-party there were losses of time exceeding forty-eight hours the charterer was entitled to cesser of hire for the whole of the time so lost. *Meade King, Robinson, and Co.* v. *Jacobs and Co. and others* 515

44. *Charter-party — Demurrage — Agreed rate— Damages for detention.—Western Steamship Company Limited* v. *Amaral, Sutherland, and Co. Limited* 493

45. *Charter-party—Loss by excepted peril—Delivery of part of cargo—Lump sum freight— Right of shipowner to recover.*—By a charter-party, which contained an exception of "perils of the seas," a ship was to proceed to a named port and there load a full and complete cargo of pit props, and then proceed to a port in the United Kingdom and there deliver the same on payment of a lump sum for freight, to be paid in cash on the unloading and right delivery of the cargo. The ship loaded the cargo and proceeded to the port of discharge, but was wrecked outside that port by perils of the seas, and became a total loss. About three-quarters of the cargo was saved and was delivered to the charterers. Held, that the shipowners were entitled to the full freight. Judgment of the Court of Appeal (12 Asp. Mar. Law Cas. 344; 108 L. T. Rep. 622) affirmed. *Thomas and Sons* v. *Harrowing Steamship Company* ... 532

46. *Bill of lading—Transhipment of goods at ship's expense and shipper's risk—Damage during transhipment — Negligence — Liability of shipowner.*—Goods were shipped under a through bill of lading at New York for conveyance to a port in Sweden *viâ* Hull. By the terms of the bill of lading the goods were to be delivered at Hull "to be thence transhipped at ship's expense and shipper's risk to the port of N.," the carrier to "have liberty to convey goods in craft and (or) lighters to and from the steamer, at the risk of the owner of the goods. The goods arrived at Hull in good order and condition, and were there transhipped into a lighter, to be conveyed to a vessel bound for N. in Sweden. The lighter was not seaworthy, and was left unattended in the dock, and sank, and the goods were damaged. Held, that there was negligence on the part of the shipowners, and that they were not protected by the clause in the bill of lading. Judgment of the Court of Appeal (12 Asp. Mar. Law Cas. 461; 110 L. T. Rep. 614; (1914) P. 9) affirmed. *Wilson and Sons* v. *Owners of Cargo ex Galileo; The Galileo* 534

47. *Charter-party—Timber — Freight — Measurement of cargo — Alternative methods — Remeasurement—Liability for cost of.*—By the terms of a charter-party it was provided (*inter alia*) that a steamship should load from the agents of the charterers a cargo of pit props, freight to be payable at a specified rate "per intaken piled fathom of 216 cubic feet." Pit props are measured by alternative methods: either by lengths and tops, or lengths alone, the former method giving more timber per fathom than the latter. The terms of the charter-party served to indicate that the measurement of the cargo was to be by lengths alone, but in fact, at the port of loading, the shippers measured by lengths and tops, giving 683 cubic fathoms, a bill of lading being tendered accordingly to the owners and signed by them under protest. The bill of lading contained the words "measure unknown," in accordance with the terms of the charter-party. When the ship arrived at the port of discharge the shipowners alleged that the bill of lading was inaccurate, and had the cargo remeasured by length only, on which basis the cargo was found to consist of 784 cubic fathoms. In an action by the shipowners to recover the expense of remeasuring the cargo: Held, that the charterers were liable to pay to the shipowners the expenses incurred by having the cargo measured at the port of discharge, as the charter-party created a contractual obligation on the part of the charterers to procure the measurement of the cargo at the port of loading in accordance with the method indicated by the charter-party. *Joseph Merryweather and Co. Limited* v. *William Pearson and Co.* ... 540

48. *Charter-party—Port — King's Lynn — "Safe port"—Meaning of.*—The term "port" in a charter-party is to be taken in its commercial sense, and is not to be defined by the meaning given to it by the Legislature in Acts passed for such entirely different objects such as pilotage or revenue. Where by a charter-party a vessel was to call for orders "to discharge at a safe port in the United Kingdom . . . or so near thereto as she can safely get always afloat and deliver such cargo in accordance with the custom of the port for steamers," and the vessel was ordered to King's Lynn, but could not enter the dock there without being lightened, and therefore lightened at another place and completed her discharge in King's Lynn Dock, and the owners of the ship brought an action to recover the extra expense incurred by them in lightening the ship: Held, the owners were entitled to the extra expense of lightening, as King's Lynn was a safe port within the meaning of the charter-party. A "safe port" means a port to which a vessel can get laden as she is, and at which she can lay and discharge, always afloat. *The Alhambra* (4 Asp. Mar. Law Cas. 410; 44 L. T. Rep. 637; 6 P. Div. 68) followed. *Hall Brothers Steamship Company Limited* v. *R. and W. Paul Limited* 543

49. *Port of London—Port rates—Transhipment— "Coastwise"—Exemptions.*—By sect. 13, sub-sect. 1, of the Port of London Act 1908, "all goods imported from ports beyond the sea or coastwise into the port of London or exported to parts beyond the seas or

PAGE

coastwise from that port" shall be liable to port rates. By sect. 13, sub-sect. 5: "For the purpose of this section goods shall not be treated as having been imported or exported coastwise unless imported from or exported to a place seaward of a line drawn from Reculvers Towers to Colne Point." By sect. 9 of the Provisional Order confirmed by the Port of London (Port Rates on Goods) Provisional Order Act 1910, "No port rates shall be charged by the authority on transhipment goods, which expression wherever used in this order means and includes goods imported for transhipment only," and "for the purposes of this section the expression 'goods imported for transhipment only' shall mean goods imported from beyond the seas or coastwise for the purpose of being conveyed by sea only to any other port whether beyond the seas or coastwise." Goods were imported from beyond the seas into the port of London for transhipment only, and were duly certified by the owners as being for transhipment. They were conveyed by a sailing barge down the Thames to Rochester on the Medway. Held (Buckley, L.J. dissenting), that the word "coastwise" in the expression "beyond the seas or coastwise" in sect. 9 of the above Provisional Order has its ordinary meaning, having reference to a voyage between places on the coast of the United Kingdom, when used, as in the context, in contrast to "beyond the seas," and that its ordinary meaning was not displaced by the definition of the words "goods imported or exported coastwise" in sect. 13, sub-sect. 5, of the Act of 1908; that the conveyance from London to Rochester by the Thames and Medway was a conveyance "by sea only" to another port "coastwise" within the meaning of sect. 9; and that therefore the goods, having been imported for the purpose of being conveyed, were exempt from port rates. *British Oil and Cake Mills Limited* v. *Port of London Authority* 548

50. *Carrier — Lighterman — Contract to lighter goods—Exemption from liability—Negligence.*—When a bailee of goods has to admit that goods have been damaged while in his custody, and in the absence of his custodian, and it is found that the absence was improper and negligent, and that the absence makes it difficult to determine what was the cause of the damage, and the owner of the goods can suggest a probable cause which the presence of the custodian might have prevented, the burden of proof is imposed on the bailee to show that it was not the negligent absence of his custodian which was the cause of the damage. Where goods were laden on a barge under a contract by which the barge owner sought to relieve himself from liability for negligence by the insertion of the following clause, "The rates charged by me for lighterage are for conveyance only. I will not be responsible for any loss of or damage to goods, however caused, which can be covered by insurance . . . ." and the barge owner's servant was in fact negligent in that he left the barge unattended, in consequence of which during his absence the barge began to fill and later sank, the Court of Appeal held that the onus lay upon the barge owner to show that he had taken proper and reasonable care of the goods, and that the negligence of his servant was not the cause of the loss. Decision of the House of Lords in *Morison, Pollexfen, and Blair* v. *Walton* (unreported), decided on the 10th May 1909, followed. Held, further (Buckley, L.J. dissenting), that the terms of the notice given by the defendant were wide enough to exempt him from liability for loss by negligence. (Ct. of App.) *Joseph Travers and Sons Limited* v. *Cooper* 561

NOTE.—The material words of the decision in *Morison, Pollexfen, and Blair* v. *Walton* (unreported), decided on the 10th May 1909, were, per Lord Loreburn, L.C., "Here is a bailee, who, in violation of his contract, omits an important precaution, found by the learned judge upon ample evidence to be necessary for the safety of the thing bailed to him and which might have prevented the loss. And his breach of contract has the additional effect of making it impossible to ascertain with precision and difficult to discover at all what was the true cause of the loss. I cannot think it is good law that in such circumstances he should be permitted to saddle upon the parties who have not broken their contract the duty of explaining how things went wrong. It is for him to explain the loss himself, and, if he cannot satisfy the court that it occurred from some cause independent of his own wrongdoing, he must make that loss good"; and, per Lord Halsbury, "It appears to me that here there was a bailment made to a particular person, a bailment for hire and reward, and the bailee was bound to show that he took reasonable and proper care for the due security and proper delivery of that bailment; the proof of that rested upon him." If the shorthand notes of this case can be obtained it will be reported in these Reports at a later date.—ED.

51. *Loss of time—Cesser of hire—"Damage preventing working of vessel"—"Accident to cargo"—Ship driven into port of refuge—Delay by charterers in giving instructions to master—Appeal against finding of umpire.*—A ship under charter was driven into a port of refuge. An umpire found that there was in fact an unrestowage of the deck cargo, and that the charterers on the ship's arrival at the port to give instructions to the master with regard to the restowage of the deck cargo, and that the charterers ought in the ordinary course of business to have given the master instructions. It was contended for the charterers that this was a finding in law, and that the finding was wrong in law, as it was the duty of the master to act without waiting for the charterers' instructions. Held, that there might have been before the umpire facts to justify his finding, and, that being so, there was no rule of law which compelled the court to say that the umpire was wrong in his finding. Decision of Bailhache, J. (12 Asp. Mar. Law Cas. 411; 109 L. T. Rep. 970; (1914) 1 K. B. 293) affirmed. (Ct. of App.) *Burrell and Sons* v. *F. Green and Co.* Appeal from the King's Bench Division 589

52 *War risk—C.i.f. contract—Goods lost owing to capture of vessel by enemy cruiser—Whether war risk on buyer or seller.*—The appellants bought 100 bales of cloth from the respondent, which were to be shipped from Calcutta to London. The contract of sale provided that should the goods not arrive from loss of vessel or other unavoidable cause, the tender to the buyer of the insurance policy with the bill of lading should be deemed a good tender of the goods not arriving. It also contained a clause, "War risk for buyer's account." On the 15th July 1914 twenty-five bales goods were shipped per steamship *City of W.*, and on the following day the shippers took out an insurance policy which did not cover war risk—that is to say, an f.c.s. policy. On the 20th Aug. the respondent tendered the documents, including the above policy, but on the following day the steamer was posted as lost, having been sunk by a German cruiser. In arbitration proceedings claiming payment of 441*l.* 2s. on the shipper's draft, the arbitrator found the appellants (the buyers) responsible for the war risk. On a case stated: Held, following *Biddell Brothers* v. *E. Clemens Horst Company* (12 Asp. Mar. Law Cas. 1, 80; 105 L. T. Rep. 563; (1911) 1 K. B. 220), (1) that, apart from the special terms of the contract, the tender of a policy containing the f.c. and s. clause was a sufficient tender within the meaning of the contract, it being proved that there was no custom in the trade for the seller to take the war risk; (2) that this being a c.i.f. contract, it was duly performed by the tender of the proper documents within a reasonable time after shipment, and that it was immaterial to consider whether before the date of the tender

PAGE

of the document the property in the goods was the seller's or the buyer's or some other person's; and, further, that the seller's obligation could not depend on whether the goods are lost or not. (Atkin, J.) *Groom Limited* v. *Barber* 594

COLLISION.

1. *Whistle—Warship—Squadrons.*—In a case of collision between a merchant ship and a warship which was one of a flotilla, the Court of Appeal, having found that the merchant ship negligently ported when close to the warship and that she failed to sound her whistle when she ported: Held, differing from the President, that she was in fault for a breach of art. 28 or the regulations, which provides for appropriate signals when a vessel takes "any course authorised or required by these rules." (Ct. of App.) *The Hero.* (See *Collision*, No. 6, below.) 10

NOTE.—The H. of L. has since (see *Shipping Gazette*, Jan. 30, 1912) dismissed an appeal from the above judgment. Their Lordships agreed with the Court of Appeal in finding both vessels to blame. They arrived at this conclusion, however, on a different ground to that upon which the Court of Appeal decided the case. Their Lordships found the merchant ship to blame for negligently porting across the vessels of the flotilla, and for so mainly contributing to the accident. They found the warship to blame because she also contributed to the accident.—ED.

2. *Duty to take compass bearing of approaching vessels—Collision Regulations* 1910 *—Preliminary to steering and sailing rules— Arts.* 2, 21, 28, 29.—It is the duty of those navigating a ship who see a light on a ship approaching them to see whether it appreciably alters its bearing with reference to their ship, and to test this by compass according to the direction contained in the preliminary paragraph to art. 17 of the Sea Rules. (Adm. Div.) *The President Lincoln* 41

3. *Trawler engaged in trawling—Duty of trawler to keep her course and speed—Collision Regulations* 1910, *arts.* 9 (*d*) 1 (1906), 19, 21, 23.—When a steam trawler is exhibiting a triplex light in accordance with art. 9 (*d*) 1 (1906) of the Sea Rules, she is to be regarded as incapable of manœuvring. It is the duty of approaching vessels to keep out of her way. Her duty is to do nothing but keep her course and speed. There is no duty upon her to stop her engines, except, perhaps, in obedience to the note to art. 21 of the Sea Rules. (Adm. Div.) *The Ragnhild* 44

4. *Launch—Conflict of duties.*—Shipbuilders, who were about to launch a vessel, gave notice to the harbour authority, to the pilots of the port, and to persons using the port of their intention to launch a vessel at a particular time on a certain day. On the morning of the launch the vessel to be launched was dressed with flags; and tugs and boats were in attendance to warn passing vessels. The launch being timed to take place at 12.30 p.m., preparations for releasing the vessel were begun at 6 a.m. About 10.30 a.m. a ketch drifting up the river with her anchor down fouled some moorings in the river and brought up a little below the slipway from which the launch was to take place. Messages were sent to her at 10.30 a.m. and 11.30 a.m. from the shipbuilding yard that she had better move, and about noon a tug was sent to advise her to buoy her anchor and let the tug tow her away to a place of safety. Those on the ketch refused this offer, as they did not think the ketch was in the line of the launch, though they offered to move if the shipbuilders would give them a new anchor. The shipbuilders delayed the launch fifteen minutes to enable the tug to move the ketch. The tidal conditions were favourable at the time fixed for the launch. Had it been further delayed they would have been unfavourable. The shipbuilders, being apprehensive of danger to their vessel and the lives of their men and the public using the river, if the launch was delayed, and, not thinking that there was any substantial risk to the ketch, launched the vessel, which collided with the ketch, the collision being due to the vessel not going across the river, but being swept a little down river by the tide, which, owing to the delay, had begun to set down river along the river bank. In an action for damage by the ketch owners it was held in the Admiralty Court that, though the ketch had no right to be where she was, the shipbuilders could have prevented any damage to her by postponing the launch, and judgment was given for the amount of the damage claimed by the ketch owners. The shipbuilders appealed to the Court of Appeal. Held, by the Court of Appeal, reversing the decision of the Admiralty Court, that the claim of the ketch owners should be dismissed, and that judgment should be entered for the shipbuilders, who had been placed in a position of difficulty and had adopted a reasonable course of action, and had without negligence chosen the lesser of two evils. (Ct. of App.) *The Highland Loch.* (See No. 5 below.) 68

5. *Launch—Right of shipbuilders to launch—Duty of ship at anchor to get out of the way.*—Where a person, through no fault of his own, is placed in a position in which he is obliged to take one of two risks, he is justified in taking what appears to be the lesser risk, and will not be held liable for damage so caused to the party whose act occasioned the risk. Shipbuilders were preparing to launch a ship, and had given all the necessary notices that they intended to launch at a certain hour on a certain day. About two hours before the time fixed for the launch a vessel anchored in a position in which it was possible, though not probable, that she might be injured by the launch. Her master was warned that the launch was about to take place, and was requested to move, but refused to do so. There was evidence that if the launch had not taken place at the time fixed it must have been delayed for twenty-four hours, and

PAGE

that, after all preparations had been made, such delay would have caused considerable risk to life and property. The launch took place, and the vessel launched, collided with the vessel at anchor and injured her. Held, that the vessel at anchor was solely to blame for the collision. Judgment of the court below affirmed. (H. of L.) *Owners of the Frances* v. *Owners of the Highland Loch; The Highland Loch* 106

6. *Warship—Merchant ship—Both to blame.*—A merchant steamship met a flotilla of warships proceeding upon an opposite and parallel course. The warships were proceeding in two columns each divided into three subdivisions. The merchant ship passed inside the first subdivision of the starboard column, which was a little out of its station to starboard, and outside the second subdivision, passing it green to green. On approaching the third subdivision she ported her helm, and ran across the bows of the leading vessel of that subdivision, causing risk of collision. The helm of the warship was first ported, and then starboarded, and a collision took place by which the warship was sunk. Held, that both vessels were to blame as both had contributed to the accident. Judgment of the court below affirmed. (H. of L.) *Owners of the Hero* v. *Lord Commissioners of the Admiralty, and Cross-appeal; The Hero* ... 108

7. *Navigation round bend of river.*—Where vessels are approaching each other at Baldwin Point in Bow Creek, which is a blind corner and a difficult bend to navigate, good seamanship requires that a vessel going up with the tide shall give such warning as will enable vessels which may be coming down against the tide to approach the bend in such a way as to prevent any collision. It is the duty of vessels coming down against the tide to proceed cautiously, and if necessary stop above the bend altogether. In the City of London Court the learned deputy judge held that a vessel going up with the tide approaching this bend was alone to blame for a collision with a down-comer for failing to warn her. The Divisional Court varied this order on appeal, holding that both vessels were to blame, the one going up for not giving sufficient warning, and the one coming down for proceeding carelessly at such a speed that she could not have avoided a collision with an innocent vessel if she met one at the bend. (Adm. Div. Ct.) *The Kennet* 120

8. *Compulsory pilotage — Exemption — Ballast—Bunkers—Merchant Shipping Act* 1894—*Order in Council the* 25*th July* 1861.—A steamship left Newcastle-on-Tyne for London, on a voyage to Port Chalmers, New Zealand, *viâ* London, with no cargo, but having on board 3040 tons of coal, of which 1095 tons were carried in her bunkers and the rest in No. 3 hold and No. 3 between deck; she also had on board 710 tons of water ballast. The steamship had a water ballast capacity of 1538 tons and the water ballast and coal on board was more than was necessary to make the vessel seaworthy. When coming up the Thames in charge of a pilot she ran into and damaged a pier. In an action brought by the pier owners against the shipowners to recover damages for the injury done to the pier, the shipowners pleaded that the steamship was in charge of a compulsory pilot, and that the damage was caused by his negligence. An order was made that the point whether the steamship was under compulsory pilotage should be tried first. On the hearing: Held, that the steamship was navigating in ballast from a port or place in the United Kingdom to another port or place in the United Kingdom within the meaning of the Trinity House by-law authorised by the Order in Council of the 25th July 1861, and was therefore exempt from compulsory pilotage. (Adm. Div.) *The Tongariro* 235

PAGE

9. *Fog—Tug attached but not towing—Sound signals—Maritime Conventions Act* 1911.—Where a tug was during fog accompanying a vessel in from sea to the Tyne, and was made fast alongside her but was not towing her, it was held in the circumstances: (1) That the tug was not bound to comply with sub-sect. (e) of art. 15 of the Sea Rules as she was not towing. (2) That she was not bound to comply with sub-sect. (a) of the same article as safe navigation demanded that she should not sound any signals as if she were a separate vessel having way upon her. In this case both the plaintiffs' and defendants' vessels were found to blame for excessive speed. The defendants' vessel was found to blame in addition for bad look-out and for not stopping. The court, in applying sect. 1 of the Maritime Conventions Act 1911 (1 & 2 Geo. 5, c. 57), apportioned two-thirds of the blame to the defendants' vessel and one-third to the plaintiffs', and gave no costs on either side. (Adm. Div.) *The Sargasso* 202

10. *Fog—Both to blame—Initial wrong—Degree of fault—Maritime Conventions Act* 1911—*Costs.*—In an action for damage by collision, in which both vessels were found to blame for negligent navigation in fog, the vessel which was found guilty of the initial fault was ordered to pay 60 per cent. of the damage, the other vessel 40 per cent., under the provisions of sect. 1, sub-sect. 1, of the Maritime Conventions Act 1911. No order was made as to costs. (Adm. Div.) *The Rosalia* 166

NOTE.—This was the first case to be tried under the Maritime Conventions Act 1911.—ED.

11. *Lights—Tug lying by a ship and in attendance on her—Sound signals—Compulsory pilot.*—A tug in attendance on, but not fast to, a vessel at anchor with anchor lights, in the Mersey was stemming the tide, and carrying the usual under-way lights. Her green light was open to an upcoming steamship in charge of a compulsory pilot in such a position that the pilot navigated the upcoming ship towards the vessel at anchor and her tug under the impression that he was approaching one vessel under way showing her green light. A collision and damage resulted. In a damage action brought by the owners of the ship at anchor, the defendants pleaded compulsory pilotage: Held, that the tug was properly exhibiting her green light as she was under way, and that the defendants could not properly complain of having been misled by the green light; that the collision was brought about by the negligence of the pilot, but that the plea of compulsory pilotage failed upon the grounds: (1) That the master of the defendants' ship in fact appreciated the true position of things in time to warn the pilot that he was under a misapprehension and failed to do so as was his duty in accordance with the decision in *The Tactician* (10 Asp. Mar. Law Cas. 534; 97 L. T. Rep. 621; (1907) P. 244). (2) That the master of the defendants' ship knew what the pilot was doing and failed to call his attention to the fact that no sound signals had been given as was his duty. (Adm. Div.) *The Elysia*...... 198

NOTE.—This case seems to decide the point left open by Lord Alverstone, L.C.J., in *The St. Paul* (11 Asp. Mar. Law Cas. 169; 100 L. T. Rep. 184; (1909) P. 43) as to whether it is the duty of a master to call the attention of a compulsory pilot to the fact that sound signals ought to be given. It does not, however, decide the other point left open in that case as to whether the responsibility for giving sound signals rests with a master or a pilot.—ED.

12. *Application of Maritime Conventions Act* 1911 (1 & 2 *Geo.* 5 *c.* 57), *ss.* 4 (1), 9 (2).—A steamship dredging up the river Ouse was run into by two lighters proceeding up the river in tow of a tug. The collision happened before the passing of the Maritime Conventions Act

PAGE

1911, but proceedings were instituted after, by the owners of the steamship against the owners of the tug to recover the damage. The defendants contended that, even if they were to blame, as the steamship had broken art. 28 of the collision regulations by failing to sound whistle signals when she ported and went astern she was also to be deemed to be in fault. Held, that as sect. 419 (4) of the Merchant Shipping Act 1894 was repealed by sect. 4 (1) of the Maritime Conventions Act 1911 and as no proceedings had been taken in respect of the collision before the passing of the Maritime Conventions Act 1911, sect. 9 (2) and (3) of that Act applied, and as the breach of the collision regulations did not in fact contribute to the collision, the steamship was not to blame. (Adm. Div.) *The Enterprise* 240

13. *Vessel aground in Thames at night—Lights —Validity of rule* 30 *of the Thames Rules— Collision Regulations, art.* 11.—A vessel upwards of 150ft. in length aground in the Thames was exhibiting two white lights, one forward and one aft, in order to comply with rule 30 of the Thames By-laws for vessels "of 150ft. or upwards aground in or near a fairway." It was contended in a damage action that she should have exhibited the two white lights and the two red lights prescribed by art. 11 of the Sea Rules for vessels "aground in or near a fairway," as rule 30 of the Thames Rules was ambiguous, and that therefore art. 11 of the Sea Rules was the article to be obeyed. Held, that there is no ambiguity in rule 30 of the Thames By-laws so far as concerns "vessels of 150ft. or upwards"; that it was a rule duly made by a local authority as contemplated by art. 30 of the Sea Rules, and as such was the rule which applied to vessels "150ft. in length or upwards aground in or near a fairway" in the Thames. *The Carlotta* (8 Asp. Mar. Law Cas. 544; (1899) P. 223; 80 L. T. Rep. 664) referred to. (Adm. Div.) *The Bitinia* 237

NOTE.—This decision does not seem to cover the case of a vessel which may be less than 150ft. in length aground in the Thames. Query as to the lights such a vessel ought to carry.—ED.

14. *Steamship aground in the Thames—Signals— Thames Rules* 30, 40, *and* 52.—A vessel proceeding up the Thames grounded. She sounded four short blasts on her whistle to signify that she was not under command, but, before she could put up the lights required by art. 30 of the Thames Rules, she was run into by a steamship which had been coming up the river about a quarter of a mile astern of her. In a damage action: Held, that the steamship which got aground was not to blame for not putting up the lights required by art. 30, as that rule was not applicable, and, even assuming that she was, there was not sufficient time in which to put them up before the collision, and she had sounded a four-blast signal signifying that she was not under command. Held, further, that the overtaking ship was alone to blame for not keeping out of the way and for bad look-out. Observations on the want of a signal to be made by vessels temporarily aground in the Thames. (Adm. Div.) *The Bromsgrove* 196

15. *Collision — Thames — Compulsory pilotage — General Pilotage Act* 1825 (6 *Geo.* 4 *c.* 125), *s.* 59 *—Duties of Masters and Pilots.*—(1) A steamship belonging to the port of London while going down the Thames in charge of a duly licensed Trinity House pilot on a voyage from London to East Africa with a cargo and passengers collided with some barges and tugs. The master had been absent from the bridge for some time before the collision, and only returned shortly before the collision. In a damage action brought by the owners of the injured craft it was held that the master was not negligent in not being on the bridge in accordance with art. 14 of the Thames Rules, that the pilot was solely in fault, and that, following the case of *The Hankow* (40 L. T. Rep. 335; 4 Asp. Mar. Law Cas. 97 (1879); 4 P. Div. 179), the owners of the steamship were not liable for the damage as the pilot was compulsorily in charge, as the steamship was navigating in the port of London, a place in relation to which particular provision as to the appointment of pilots had been made by charter and by Act of Parliament within the meaning of the statute (6 Geo. 4, c. 125, s. 59). On appeal to the Court of Appeal: Held, affirming the decision of Sir S. Evans, P. (reported below and in (1911 P. 234) that the owners of the steamship were not liable as the pilot was compulsorily in charge, for the steamship was navigating within a port in relation to which particular provision as to the appointment of pilots had been made. *The Hankow* (ubi sup.) approved (*a*). (2) Observations by the President (Sir Samuel Evans) in the Admiralty Court as to the effect of rule 14 of the Thames Rules and as to the duties of masters of ships in charge of pilots (*b*). Ct. of App.) *The Umsinga* 174

NOTE.—(*a*) A note as to the charters of the Trinity House will be found in the report of *The Hankow*, at p. 97 of 4 Asp. Mar. Law Cas. The charters have been printed and published (1730), and there is a copy of the publication in Lincoln's-inn Library. The case of *The Cayo Bonito*, reported in 9 Asp. Mar. Law Cas. 445 and in (1903) P. 203, contains much valuable information. (*b*) In the course of the case in the Admiralty Court *The St. Paul* (1908) P. 320; (1909) P. 43; 11 Asp. Mar. Law Cas. 152) was referred to as to the duties of masters and pilots with regard to whistling. The point was left open by the learned President. *The Shakkeborg* (1911) P. 245, and in *Shipping Gazette*, 11th April 1911) was also cited, in which case Bargrave Deane, J., decided, upon the advice of the Elder Brethren, that the duty of a look out in the River Thames is to report every material light as soon as it becomes material.—ED.

16. *Workmen's Compensation Act* 1906—*Action in* rem—*Damage done by any ship—Admiralty Court Act* 1861 (24 *Vict.* c. 10) *s.* 7—*Remoteness of damage.*—A lightship owned by the Commissioners of Irish Lights was run into and damaged by a German sailing ship which was in tow of a tug. The sailing ship was arrested in England in an action *in rem* instituted by the owners of the lightship to recover the damage they had sustained, and an undertaking was given in the action to appear and put in bail to answer the claim. After the writ was issued and the undertaking was given, one of the crew of the lightship made a claim under the Workmen's Compensation Act 1906 against her owners for compensation for injury caused by shock by fright before the collision actually took place, and an award was made in his favour in proceedings before an Irish County Court judge. The owners of the German ship were not represented at the County Court and were not parties. The owners of the lightship claimed an indemnity for any sum paid or payable to the workman in respect of his injury, and sought to recover the sum so paid from the owners of the German sailing ship. On the claim coming before the registrar he dismissed it. The owners of the lightship appealed from his decision. On appeal: Held, affirming the decision of the registrar, that even assuming that the seaman had in fact sustained the shock alleged and was entitled to recover compensation under the Act from the commissioners, and though the ship was for the purposes of the Act to be considered a British ship, the owners of the German sailing ship were not bound by the

PAGE

decision in the arbitration. Held, further, that the damage was not "done by any ship" within the meaning of sect. 7 of the Admiralty Court Act 1861, and that the claim was too remote. (Adm. Div.) *The Rigel* 192

17. *Compulsory pilotage—Humber—Bunker coal—Pilotage—Stores*—2 & 3 *Will.* 4, *c. cv.*, *s.* 24.—The defendant steamship on a voyage from Yarmouth to a Russian port was coming up the Humber to Grimsby for bunker coal in charge of a duly licensed Humber pilot, when she collided with and damaged a steam trawler. In a damage action brought by the owners of the steam trawler, the defendants alleged that if there was any negligence on board their steamship which caused or contributed to the collision it was the negligence of the compulsory pilot who was in charge, and that they were not liable. Held, that the defendants were liable, for though the negligence on their vessel which caused the collision was that of the pilot, the vessel was exempt from compulsory pilotage as bunker coals were "stores," and so their vessel was putting into the Humber for the purpose of obtaining stores only within the meaning of sect. 24 of 2 & 3 Will. 4, c. cv. (Adm. Div.) *The Nicolay Belozwetow* 279

18. *Damage to buoy — County Courts Admiralty Jurisdiction Act* 1868 (31 & 32 *Vict. c.* 71), *s.* 3 (3) — *County Courts Admiralty Jurisdiction Amendment Act* 1869 (32 & 33 *Vict. c.* 51), *s.* 4.—A steamship ran into a gas buoy and injured it. The owners of the gas buoy sued the owners of the steamship, bringing their action in a County Court in Admiralty. The County Court judge dismissed the action, holding that he had no jurisdiction to try the case. On appeal to the Admiralty Divisional Court: Held (affirming the decision of the County Court judge) that the County Court had no jurisdiction to try the case, as the word "collision" in the County Courts Admiralty Jurisdiction Act 1868, s. 3, sub-s. 3, only referred to collisions between ships. *The Normandy* (26 C. C. C. Rep. 314; 90 L. T. Rep. 351; 9 Asp. Mar. Law Cas. 568; (1904) P. 187) followed. (Adm. Div. Ct.) *The Upcerne* 281

19. *Both to blame—Different degrees of fault—Costs—Maritime Conventions Act* 1911 (1 & 2 *Geo.* 5, *c.* 57), *s.* 1.—When in a collision action both ships are held to be in fault, but in different degrees, the practice in force before the passing of the Maritime Conventions Act, that each party to the action should bear their own costs, is to be followed unless there are special circumstances in existence to induce the court to depart from it. (Adm. Div.) *The Bravo* 311

20. *Crossing vessels—Duty to give way—Duty to keep course—Look-out.*—Where in an action for damage by collision the facts showed that two vessels were approaching each other so as to involve risk of collision, the duty upon one being to keep out of the way and upon the other to keep course and speed, the President (Sir Samuel Evans) found as a fact that the officer in charge of the keep course and speed vessel was closely watching the other vessel, up to the last expecting her to carry out her obligation to keep out of the way, and said that in such circumstances the court should not be too ready to cast blame upon a vessel placed in a difficulty by, and left in doubt as to the intentions of, another vessel whose duty it is to keep out of the way. (Adm. Div.) *The Tempus* 396

21. "*Excessive bail*"—*Cost of bail fees.*—A steamship ran into another moored alongside a wharf in the river Thames, doing damage to the moored vessel and breaking her adrift. The vessel which had been moored did damage to others after she was broken adrift. In an action for damage brought by the owners of the vessel broken adrift they demanded bail in 10,000*l.* but ultimately reduced their demand to 9000*l.* The question of liability having been fought and determined in favour of the plaintiffs, they filed a claim in the registry amounting to 3451*l.* 13s. 5d. The defendants tendered 3100*l.*, which was accepted by the plaintiffs. On a motion by the defendants that the plaintiffs should bear the cost of the excessive bail fees: Held, that the bail demanded was excessive, and that the plaintiffs were to bear the cost of the fees for the bail demanded above 6000*l.* (Adm. Div.) *The Princess Marie José* ... 360

22. *River Thames—Vessel turning in river—Sound signals—Thames By-laws* 1898, *by-law* 40.—When a steamship is turning round in the Thames and has in accordance with by-law 40 of the Thames By-laws 1898 given four blasts to signify her manœuvre, that signal for the time being supersedes signals as to engine movements, and good navigation does not require that three short blasts should be blown every time engines are put full speed astern in such circumstances. (Adm. Div.) *The Harberton* ... 342

23. *Single ships approaching squadrons—Duty to give way—Duty to keep course and speed—Notice to Mariners, April* 1907—*Collision Regulations* 1897, 19, 21, 22, 27, 29.—Where in a collision action a foreign steamship was approaching a squadron of British warships and it was her duty under art. 21 of the Regulations for Preventing Collisions at Sea (1897) to keep her course and speed, it was held by the President (Sir Samuel Evans) that it was not bad seamanship or negligence for her to do so in the circumstances, and that she was not to blame for failing to comply with the Board of Trade notice to mariners, dated April 1897, with reference to single ships approaching squadrons, about the existence of which notice her officers had no knowledge. (Adm. Div. *The King Alfred* 401

24. *Joint negligence of two ships—Innocent third ship—Recovery of damage by owners of innocent ship against the owners of one of the wrong-doing ships—Right of the owners of the wrong-doing ship who had paid to recover a contribution from the owners of the other wrong-doing ship—Division of loss—Maritime Conventions Act* (1 & 2 *Geo.* 5, *c.* 57) 1911, *s.* 1—*Construction of statute—Preamble of Act.*—Sect. 1 of the Maritime Conventions Act 1911 must be construed not as apportioning any existing liability, but as providing that the whole of the damage or loss referred to is to be borne in proportion to the degree in which each vessel is in fault; and, if it be impossible to establish different degrees of fault, then equally. A tug towing two hoppers brought one of them into collision with a steamship. Both the hopper and steamship were damaged. In a collision action brought by the owners of the hopper against the owners of the steamship and the owners of the tug to recover the damage they had sustained, the steamship and tug were both held to be equally in fault for the collision, and the hopper was held free from blame. The owners of the hopper recovered the whole of their damage against the owners of the steamship. The owners of the steamships then sought to recover half the sum paid by them to the owners of the hopper from the owners of the tug. The President (Sir S. Evans) held that they were entitled to recover that sum. The owners of the tug appealed to the Court of Appeal. Held, affirming the decision of the President (Sir S. Evans), that the sum recovered by way of damage against the owners of one of the wrong-doing ships by the owners of the innocent ship was loss caused to that wrong-doing ship within the meaning of sect. 1 of the

PAGE

Maritime Conventions Act 1911, and that the owners of the wrong-doing ship who had paid it were entitled to recover half the sum so paid from the owners of the other wrong-doing ship. Held, further, that where the words of an Act are clear it is not permissible to look at the preamble of the Act as an aid to construe the meaning to be given to the provisions of the Act. (Ct. of App.) *The Cairnbahn* 455

25. *Collision—Steamship entering the river Mersey from dock—Duty to steamships in the river — Crossing vessels — Good seamanship — Mersey Rules, art.* 1—*Collision Regulations* 1897, *arts.* 19, 27, 29.—Art. 19 of the Collision Regulations applies in the Mersey in all fit and proper cases, but there may be circumstances in which the rules of good seamanship may displace its application. A steamship leaving dock and entering the Mersey sighted another on the port bow coming up the river. The steamship coming up the river had her starboard side open to the steamship entering the river. The steamship coming up the river sounded two short blasts and starboarded until shortly before the collision, when she reversed. The vessel entering the river kept her course and speed and then ported. In an action for damage brought in the County Court, it was held that the steamship entering the river from dock was alone to blame, as art. 19 of the collision regulations did not apply, and that instead of keeping her course and speed she should have waited in the dock entrance until the upcoming steamship had passed. On appeal to the Divisional Court: Held, that art. 19 did not apply in the circumstances and that both vessels were to blame, the steamship coming up the river for continuing to starboard when she knew the vessel entering the river was porting, and for not reversing sooner; and the vessel entering the river for not waiting in the dock mouth till the steamship coming up had passed. *The Sunlight* (90 L. T. Rep. 32; 9 Asp. Mar. Law Cas. 509; (1904) P. 100) considered. *The Llanelly* 485

26. *Compulsory pilot—Duty of crew to assist pilot —Liability of owners for damage.*—The plea of compulsory pilotage will not be upheld if the pilot does not receive proper support and assistance from the crew. In a collision action where both vessels were to blame for speed in fog, it was held by Bargrave Deane, J. that where reports in a foreign tongue were made from forward to the bridge to which a pilot paid no attention, it was the duty of the crew to see that the pilot understood the reports, and to point out to him that by continuing at speed he was committing a breach of the collision regulations. *The Ape* 487

27. *Collision between a steamship and a barge in tow of a tug—Steamship and tug to blame—Damage to cargo on barge—Claim by owners of Cargo—Right to recover total damage against either steamship or tug—Division of loss—Maritime Conventions Act* 1911 (1 *&* 2 *Geo.* 5, *c.* 57), *s.* 1; *s.* 9, *sub-s.* 4.—A dumb barge in tow of a tug came into collision with a steamship. The cargo on the barge was damaged. The servants of the tug owners controlled the navigation of the barge, and the barge was under hire to the tug owners, who were in the position of owners of the barge. The tug owners and the cargo owners brought an action against the owners of the steamship to recover the amount of the damage done to the barge and to the cargo on the barge. The owners of the steamship counter-claimed against the tug owners for the damage done to the steamship. The court held that the collision was due to the fault of the steamship and the tug, and that the steamship was to blame to the extent of three-fourths and the tug was to blame to the extent of one-fourth. The owners of the cargo on the barge claimed as innocent parties to recover the whole of their damage against the owners of the steamship. Held, that as the tug and barge were controlled by the servants of the tug, by whose fault the collision was partly caused, the principle laid down in *The Milan* (5 L. T. Rep. 590; Lush. 388) was applicable, and that the cargo owners could only recover three-fourths of their damage from the owners of the steamship. *The Drumlanrig* 103 L. T. Rep. 773; 11 Asp. Mar. Law Cas. 520; (1911) A. C. 16) followed. *The Devonshire* (107 L. T. Rep. 179; 12 Asp. Mar. Law Cas. 210; (1912) A. C. 634) distinguished. *The Umona* ... 527

28. *Collision—Warship—Value of vessel—Depreciation—Allowance for degradation of type—Circumstances justifying an alteration of the amount assessed by the registrar—Cause of action for loss of life of seamen apart from statute—Right to recover pensions and gratuities paid by the Admiralty as an act of grace—Remoteness of damage.*—A submarine having been sunk through the negligent navigation of a steamship and all but one of her crew drowned, the Commissioners of the Admiralty brought an action against the steamship owners to recover the damage they had sustained. They included in their claim the following among other items: 35,000*l.*, the value of the submarine; 5140*l.* 18*s.* 6*d.*, the capitalised amount of the pensions and gratuities paid or payable by the plaintiffs to the relatives of the crew who were drowned. At the reference the assistant registrar allowed the value of the submarine at 26,500*l.*, and he disallowed the sum claimed for pensions, but stated that, if he was wrong in disallowing it, the sum recoverable was 4100*l.* The Admiralty Commissioners appealed, seeking to recover the capitalised value of the pensions, which they agreed to accept at 4100*l.*; the shipowners appealed, seeking to get the amounts allowed for the value of the vessel reduced. On the hearing of the appeal, the President (Sir S. T. Evans) Held that on the evidence a sufficient deduction had not been made for depreciation and degradation of type, and that the sum of 26,500*l.* should be reduced to 23,850*l.* Held, further, that, as apart from statute, the negligent killing of a person gave rise to no cause of action, the Admiralty Commissioners could not recover damages for the loss of the crew, and that, as the pensions and gratuities were given as an act of grace and were not recoverable from the Admiralty as of right, the Admiralty Commissioners could not recover them as damages; and that the sums paid were too speculative and remote to be recovered as damages. The Admiralty Commissioners appealed to the Court of Appeal, seeking to get the above decision reversed. Held, by the Court of Appeal, that, as the appeal with regard to the value of the submarine was a question of *quantum* only, and as the assistant registrar and merchants had made no error in principle or calculation and had not misunderstood the evidence given when they assessed the value of the sunken submarine at 26,500*l.*, that figure would be restored, and the decision of the learned President would be reversed and the appeal on that point would be allowed. Held, further, by the Court of Appeal, that the Admiralty Commissioners had sustained no injury by the deaths of the seamen; that the amounts paid to their dependants by the Admiralty Commissioners were not recoverable as damage resulting from the collision; and that the decision of the learned President would be affirmed on this point. Held, further, by Kennedy, L.J., that the amounts paid by the Admiralty Commissioners were not recoverable as they were paid gratuitously and were not paid because the

PAGE

wrongful act of the defendants had imposed a duty on the Admiralty Commissioners to make the payments. *The Amerika* 536

NOTE.—Apparently the ground upon which the Court of Appeal reversed the President was that a figure arrived at by the registrar should only be reviewed if the registrar has erred in principle or the sum allowed is either grossly too large or grossly too small. It may be doubted whether the Court of Appeal has sufficiently considered what hitherto has been the practice of the Admiralty Court, namely, that the report of the registrar is not a final judgment, but it must be confirmed by the Court to give it validity (see Roscoe's Admiralty Practice, 3rd edit., p. 385, note to Order LVI., r. 10; see also the judgment of Bargrave Deane, J., in *The Wallsend*, 10 Asp. Mar. Law Cas. 476; 96 L. T. Rep. 851; (1907) P. 302).—ED.

29. *Overtaking and overtaken vessels—Negligence—Steamers crossing—Regulations for Preventing Collisions at Sea, arts.* 19, 21, 24*—Suction or interaction — " Swerve " — Admission of further evidence.*—A warship, the *Hawke*, and a large Atlantic liner, the *Olympic*, approaching each other on crossing and converging courses in the Solent, off the Isle of Wight, came into collision. The House of Lords held that the real cause of the collision was that the *Olympic*, having the *Hawke* on her starboard hand and the consequent duty to keep clear, took too wide a sweep round the West Brambles Buoy, and, having plenty of sea room, failed to avail herself of it and keep clear of the *Hawke* as she could and ought to have done. Held, also, that, in the case of a vessel so large as the *Olympic*, forces of interaction, the true nature of which may not be clearly known, might have been operative at a distance of 100 yards or even more, and that the two vessels, moving through the shallow waters in that locality at high speeds, were in sufficiently close proximity for an interaction resembling suction in its effects to take place between them. Held, also, that the contention on behalf of the owners of the *Olympic*, founded upon the case of *The Pekin* (8 Asp. Mar. Law Cas. 367; 77 L. T. Rep. 443; (1897) A. C. 532)—namely, that, having regard to the locality, the Crossing Rules (arts. 19 and 21) were not applicable—was not well founded. Decision of the Court of Appeal affirming Evans, P., affirmed. H. of L.) *The Owners of the Steamship Olympic* v. *Commander William F. Blunt; Owners of the Steamship Olympic* v. *Commissioners for Executing the Office of Lord High Admiral of the United Kingdom* 580

DAMAGE.

Contract—Graving dock—Railway company—Regulations—Negligence—Liability for damages.—The plaintiffs, owners of the steamship *Marmion*, claimed against the defendants, owners of a graving dock at Hull, damages for the defendants' alleged breach of contract in and about the dry-docking of the steamship. She suffered damage by reason of the unevenness of the block caps on which she rested, which were provided by the defendants for reward, and the unevenness was alleged to be due to the defendants' want of care. There were no statutory provisions relating to the defendants' rights and liabilities as dry-dock owners. The *Marmion* required painting, and the defendants let the dock for that purpose

SUBJECTS OF CASES.

PAGE

and did not do the painting themselves. The ship entered the dock under a contract with the defendants, by virtue of which dock dues were charged, and there were also charges for pumping, and the use of blocks, shores, &c., which the defendants contracted to supply, the blocks being of the usual kind. Clause 9 of the defendants' regulations was as follows: "The owner of a vessel using the graving dock must do so at his own risk, it being hereby expressly provided that the company are not to be responsible for any accident or damage to a vessel going into, or out of, or whilst in the graving dock, whatever may be the nature of such accident or damage, or howsoever arising." Held, that clause 9 applied; that it covered negligence, and rendered the defendants immune from liability for the condition of the blocks. *Pyman Steamship Company Limited* v. *Hull and Barnsley Railway Company Limited; The Marmion* 511

DOCKS.

1. *Docks—Berth—Preferential right to occupy berth—Damages.*—A shipping company had a preferential right to occupy a certain berth in a dock on Wednesday and Saturday in each week and were not entitled to use any other berth in the same port. The berth was situated at a wharf in a channel which was partly natural and partly artificial. The agreement between the two companies provided (*inter alia*) that in the event of any accident beyond the control of the dock company which caused loss or delay to the shipping company, the latter should be entitled to use some other berth, the dock company being under no liability to make good or pay compensation for such loss or delay. On the 28th Oct. 1911 the shipping company's steamer *P.* arrived in the port, and found that the particular berth to which she should have gone was occupied by the steamship *B.*, belonging to a Dutch company, which had gone to the berth and remained there contrary to the orders of the dock company. Owing to shortness of water in the dock the *B.* could not be moved to admit of the *P.* occupying the berth, and the *P.* accordingly went into an inner dock by the direction of the dock company, and by reason of shortness of water was detained there for a week, and consequently lost a complete round voyage. A portion of her cargo was shut out, and taken on by the next steamer of the line. The shipping company claimed from the dock company damages for the delay suffered by the *P.*, and the dock company in turn sued the owners of the *B.* to recover any damages they might be called upon to pay to the shipping company. Held, that the dock company were liable to the shipping company, as they had not in fact used their best endeavours to ensure that the shipping company should have the use of the berth, and that the wrongful action of the owners of the *B.* was not an accident beyond the "control of the dock company" within the meaning of the agreement; (2) that the owners of the *B.*, being guilty of a trespass, were liable to pay damages to the dock company, but not in respect of the whole of the detention of the *P.*, as she did not go into the inner dock

PAGE

owing to the order of the master of the *B.*; and (3) that the owners of the *B.* were not liable to pay the dock company's costs in defending the action brought by the shipping company, because it was unreasonable for the dock company to defend the action. 2. *Rates—Exemption—Goods imported for transhipment only—Goods imported for conveyance by sea to any other port coastwise—Transhipment of goods in port of London for Rochester—Port of London Act* 1908 (8 *Edw.* 7, *c.* 68), *s.* 13 *—Port of London (Port Rate on Goods) Provisional Order Act* 1910 (10 *Edw.* 7 *&* 1 *Geo.* 5, *c. c.*), *sched.*, *s.* 9.—Goods were imported from beyond the seas into the port of London for transhipment only, and were duly certified by the owners as being for transhipment. They were conveyed down the Thames to Rochester on the Medway. Held, under sect. 13 of the Port of London Act 1908 and sect. 9 of the Port of London (Port Rates on Goods) Order 1910 that the goods were exempt from payment of port rates as they were goods imported from beyond the seas for the purpose of being conveyed by sea only to another port "coastwise," as the definition of "coastwise" in sub-sect. 3 of sect. 13 of the Port of London Act 1908 is not imported into sect. 9 of the Provisional Order 1910, and the term "conveyed by sea only" is used to make a distinction between conveyance by land and not by river. (Pickford, J.) *British Oil and Cake Mills Limited* v. *Port of London Authority* 417

NOTE.—Since upheld by C. A.—ED.

3. *Port of London—Port Rates—Exemptions "Goods imported for transhipment only"—Oil in bulk—Mixture with other oil—Identification—Goods "shipped again as soon as practicable"—Port of London Act* 1908 (8 *Edw.* 7, *c.* 68), *s.* 13—*Port of London (Port Rates on Goods) Provisional Order Act* 1910 (10 *Edw.* 7 *&* 1 *Geo.* 5, *c. c.*), *sched.*, *s.* 9.—By sect. 13 of the Port of London Act 1908 and sect. 9 of the Port of London (Port Rates on Goods) Order Act 1910, it is provided that goods imported for transhipment only into the port of London are exempt from port rates. By sect. 9 of the Provisional Order 1910, the expression "goods imported for transhipment only" is defined as meaning goods imported from beyond the seas or coastwise for the purpose of being conveyed by sea only to any other port, which are certified and proved within a certain period of the report of the ship at the Custom House to have been intended for transhipment, and which shall have been shipped again as soon as practicable for conveyance by sea to some other port. The certificate stating that the goods are intended for transhipment must contain particulars of the description, quantity, destination, route, and mode of conveyance of such goods, and the certificate stating that the goods have been shipped again as soon as practicable must contain such particulars as the Port of London Authority may require. The plaintiffs were importers of oil in ocean tank steamers. Such oil as was intended for transhipment was discharged into tanks in London, some of the tanks being empty, some containing oil brought by other steamers, and some containing oil intended for distribution in the London district. The plaintiffs delivered to the defendants inwards port rates exemption certificates which stated that the oil was intended for transhipment, and gave the statutory particulars as to the amount of oil intended to be transhipped with its destination. On one of the certificates was given the name of three steamers bracketed together, it not being then known which of the steamers would be available. The plaintiffs also delivered outwards port rates exemption certificates with respect to oil for transhipment for which they claimed exemption. The defendants denied the plaintiff's right to exemption with respect to the oil intended for transhipment upon four points—viz.: (1) that the oil lost its identity on being discharged into tanks; (2) that it was impossible to identify the oil transhipped with the oil set out in the inwards certificate; (3) that the name of the export steamer was not sufficiently stated; and (4) that the oil had not been transhipped as soon as practicable. Held, that if the plaintiffs could prove that the oil intended for transhipment had in fact been transhipped the oil was exempt from the port rates even though it was discharged into tanks containing other oil or mixed with oil not intended for transhipment, and that it was not necessary to set out the specific name of the export vessel in the exemption certificate. Held, also, that the words "as soon as practicable" mean that the transhipment must be carried out as soon as practicable having regard to the ordinary course of navigation and the facilities of the port, and not as soon as practicable having regard to the convenience of the merchant's business. (Pickford, J.) *Anglo-American Oil Company* v. *Port of London Authority* 419

ENEMY.

Trading with the enemy—C.i.f. contract—Tender of documents after outbreak of war—Goods to deliver at Hamburg—Seller not entitled to force acceptance of documents involving delivery of goods to alien enemy.—The claimants, who were produce merchants of Liverpool, in May 1914 sold certain Chilean honey to the respondents to be shipped on a certain German-owned steamer and delivered at Hamburg, terms c.i.f. cash in Liverpool against documents. The honey was shipped on the 28th June and the shipment was declared on the 28th July, but the ship was interned at a neutral port. On the 4th Aug. war was declared with Germany, and on the 5th Aug. a proclamation was issued prohibiting trading with the enemy, and on the same day the shipping documents were tendered. The respondents having refused payment; Held, that the respondents (the buyers) were justified in refusing the tender of the documents on the ground that if they accepted them they would be offending against the provisions of the proclamation of the 5th Aug., inasmuch as it would involve trading with the enemy. MARINE INSURANCE.

1. *Inchmaree clause—Latent defect—Damage to hull prior to policy.*—A policy of marine insurance insuring a ship for twelve months from the 8th Dec. 1908 against the ordinary Lloyd's perils contained the following clause: "This insurance also specially to cover . . . loss of or damage to hull . . . through any latent defect in the . . . hull . . . provided such loss or damage has not resulted from want of due diligence by the owners of the ship, or any of them, or by the manager." Before the policy came into existence there was a defect in the sternpost of the ship which had been covered up by the makers and remained undiscoverable by reasonable inspection. The defect became visible during the currency of the policy owing to ordinary wear and tear. In an action by the assured to recover under the policy the cost of replacing the sternpost: Held, that the assured were not entitled to recover, as there had been no loss or damage from the perils insured against during the currency of the policy. Decision of Scrutton, J. (reported 104 L. T. Rep. 208 (1911), 11 Asp. Mar. Law Cas 580), affirmed. (Ct. of App.) *Hutchins Brothers* v. *Royal Exchange Assurance* 21

2. *Sale of goods — C.i.f. contract — Insurance against "all risks."*—By a contract in writing the defendants sold a quantity of citrons to the plaintiffs, and as the plaintiffs stipulated for "complete insurance against all risks," the defendants inserted in the margin of the contract the following words: "Insurance to be effected by us all risks." The defendants took out a policy covering the goods from Piræus to Antwerp for "850*l.* on 102 casks citrons (in brine). So valued. To pay average as customary." The policy contained an f.p.a. clause and the usual memorandum. There were clauses attached to the policy including one which covered "all risks by land or water (if by sea, at current additional premium)" and a "held covered clause," which provided (*inter alia*) that in the case of circumstances which might cause a variation and (or) entire alteration in the risk as contemplated in the policy, a payment in respect thereof should be made by the assured. The citrons, on their arrival at Antwerp, were found to be considerably damaged owing to their having been stowed on deck instead of under deck. In an action by the plaintiffs against the defendants for failing to insure the goods against all risks: Held, on the true construction of the contract, that the defendants were only bound to cover all risks in the sense of the entire quantum of damage, and not to procure a policy covering the plaintiffs against all causes of accident. (Hamilton, J.) *Vincentelli and Co.* v. *John Rowlett and Co.* ... 34

3. *Non-disclosure of material facts—Over-insurance—Marine Insurance Act* 1906.—Two policies of insurance were taken out by the owners of a ship upon her hull without disclosing to the insurers the fact that the master appointed for the voyage had not been to sea for twenty-two years, that he had lost his last ship, and had had his certificate suspended. The hull was in fact over-insured. There were other insurances on gross freight and disbursements. There was no insurable interest in part of the disbursements. The insurance upon them was by an "honour policy," otherwise a "p.p.i. policy." The managing owner (to whom money was due from the ship) had effected "honour policies" to a large amount on disbursements to protect his own interests. The ship was lost on the voyage by the default of the master. In an action brought by the shipowners against the insurers on the policies: Held, affirming the decision of the Court of Session, that the ship was not unseaworthy by reason of the incompetence of the captain, and that there was no breach of warranty of seaworthiness; that there was no duty on the owners to disclose the master's record to the insurers, and that such non-disclosure was not non-disclosure of a material circumstance within the meaning of the Marine Insurance Act 1906. Held, also,

SUBJECTS OF CASES.

PAGE

reversing the decision of the Court of Session, that the omission to disclose the over-insurance of the hull and the existence and amount of the "honour policies" did amount to the non-disclosure of material circumstances, and that the two policies were void owing to the concealment of material facts. (H. of L.) *Thames and Mersey Marine Insurance Company* v. *Gunford Ship Company—Southern Marine Mutual Insurance Association* v. *Same* 49

4. *Reinsurance—Risk—Intention of assured.*—A ship was insured by three policies issued by the plaintiffs. The first two were for 500*l.* each for a voyage from "Newcastle, N.S.W., to port or ports, place or places in any order or rotation on the West Coast of South America." The vessel was valued at 12,000*l.* in them, and the risk was to continue until thirty days after arrival at final port of discharge or until sailing on next voyage, whichever might first happen. The third was for 1000*l.* for a voyage "at and from Valparaiso and (or) port or ports, place or places in any order or rotation on the West Coast of South America" to the United Kingdom, or Continent, or the United States. The vessel was valued in this policy at 10,000*l.*, and the risk was to commence from the expiration of the previous policy. The plaintiffs reinsured the vessel with the defendant for a voyage "at and from Valparaiso and (or) any port or ports, place or places on the West Coast of South America" to the United Kingdom, Continent of Europe, or the United States. The valuation of the vessel was the same as in the original policy. The plaintiffs gave instructions to their brokers to effect this reinsurance for a voyage "at and from Valparaiso and (or) W.C.S.A. or h/c to U.K. and (or) Cont., or to U.S.A. or h/c . . . warranted nitrate or h/c. Valuation clause. Hull, &c., vd. 10,000*l.* or v.o.p." The vessel was chartered to load a cargo of coal at Newcastle, N.S.W., and under the charter-party the charterers directed her to discharge the cargo at Valparaiso, and bills of lading were accordingly issued making it deliverable at that port. The vessel was then under a second charter-party to proceed to Tocopilla to load a nitrate cargo for a European port, and when she reached Valparaiso it was agreed between the owners and charterers under the first charter-party that, instead of delivering the whole of the cargo of coal at Valparaiso, she should proceed with 800 or 900 tons of coal still on board and deliver same to charterers at Tocopilla. By this arrangement it was unnecessary for the captain to take ballast on board for the voyage from Valparaiso to Tocopilla, and on this voyage the vessel stranded and became a total loss. The plaintiffs paid the owners of the ship for a loss under the first two policies, and now brought an action on the policy of reinsurance. Held, that the defendant was liable as there was no evidence of an intention on the part of the plaintiffs to cover only their liability under the third policy. (Bray, J.) *Reliance Insurance Company* v. *Duder* 95

5. *Constructive total loss—Marine Insurance Act 1906.* — For the purpose of determining whether a ship can be treated as a constructive total loss within the meaning of the Marine Insurance Act, the value of the wreck cannot be taken into consideration, and the assured is not entitled to add the value of the wreck to the cost of repairs. By reason of the provision contained in sub-sect. 2 (ii.) of sect. 60 of the Marine Insurance Act 1906, there is a constructive total loss of a ship where she is so damaged by a peril insured against that the cost of repairing the damage would exceed the value of the ship when repaired. The effect of the section is to alter the law as laid down by the House of Lords in *Macbeth* v. *Maritime Insurance Company Limited* (11 Asp. Mar. Law Cas. 52; 98 L. T. Rep. 594; (1908) A. C. 144.) (Bray, J.) *Hall* v. *Hayman* 158

6. *Reinsurance—Risk—Intention — Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *s.* 26, *sub-s.* 3.—The plaintiffs issued two policies for the insurance of a vessel for a voyage from "Newcastle, N.S.W., to port or ports, place or places, in any order or rotation, on the West Coast of South America." The vessel was valued in these policies at 12,000*l.*, and the risk was to continue until thirty days after arrival at final port of discharge or until sailing on next voyage, whichever might first happen. The vessel was also insured by a policy issued by the plaintiffs for a voyage "at and from Valparaiso and (or) port or ports, and (or) place or places, in any order or rotation, on the West Coast of South America" to the United Kingdom, or Continent, or the United States. The vessel was valued in this policy at 10,000*l.*, and the risk was to commence from the expiration of the previous policy. The plaintiffs reinsured the vessel with the defendant for a voyage "at and from Valparaiso and (or) port or ports, and (or) place or places, on the West Coast of South America" to the United Kingdom, Continent of Europe, or the United States. The valuation of the vessel was the same as in the two original policies. The plaintiffs gave instructions to their brokers to effect this reinsurance for a voyage "At and from Valparaiso and (or) W. C. S. A. or h/c to U. K. and (or) Cont., or to U.S.A. or h/c . . (wd. nitrate or h/c). Valuation clause. Hull, &c., vd. 10,000*l.* or v.o.p." The vessel was chartered to load a cargo of coal at Newcastle, N.S.W., and under the charter-party the charterers directed her to discharge the cargo at Valparaiso, and bills of lading were accordingly issued making it deliverable at that port. The vessel was then under a second charter-party to proceed to Tocopilla to load a nitrate cargo for a European port, and when she reached Valparaiso it was agreed between the owners and charterers under the first charter-party that, instead of delivering the whole of the cargo of coal at Valparaiso, she should proceed with 800 or 900 tons of coal still on board and deliver the same to charterers at Tocopilla. By this arrangemeent it was unnecessary for the captain to take ballast on board for the voyage from Valparaiso to Tocopilla, and on this voyage the vessel stranded and became a total loss. The plaintiffs paid the owners of the ship for a loss under the first two policies, and then brought an action against the defendant on the policy of reinsurance. The defendant contended that the plaintiffs did not intend to cover by the reinsurance any risk except the risk under the third policy, and intended to exclude their liability under the two earlier policies. Held, that this contention failed both upon the facts and the law; that the terms of the written contract being what they were, the evidence as to intention adduced by the defendant was not legally admissible; and held also, Buckley, L.J. (*dubitante*), that the defendant was liable as there was no evidence to show that the plaintiffs intended to cover only their risk under the third policy. Decision of Bray, J. (12 Asp. Mar. Law Cas. 95; 105 L. T. Rep. 820) affirmed, and sect. 26, sub-sect. 3, of the Marine Insurance Act 1906 considered. (Ct. of App.) *Reliance Insurance Company* v. *Duder* 223

7. *Policy on floating dock — "Seaworthiness admitted" — Concealment.* — The plaintiffs effected an insurance on a floating dock, which was to be towed from Avonmouth to Brindisi, against all the usual risks, and the policy contained a clause "seaworthiness admitted." Although the plaintiffs believed that the dock

SUBJECTS OF CASES.

PAGE

was fit for the voyage, it was not in fact seaworthy, as it required special strengthening in order to fit it for the voyage. During the voyage the dock sank and was totally lost. In an action on the policies: Held, that the underwriters were by reason of the admission of seaworthiness put on inquiry as to its construction, and the plaintiffs were not bound to disclose the want of special strengthening. (Scrutton, J.) *Cantiere Meccanico Brindisino* v. *Janson and Others; Cantiere Meccanico Brindisino* v. *Constant* 186

8. *Perils of seas—Hulk—Damage by leakage.*—Goods belonging to the appellants were stored in a hulk moored in a tidal river, in smooth water, and were insured (*inter alia*) against perils of the seas. In consequence of natural decay, which could not be detected by ordinary examination, the hulk became leaky, and the goods were injured by water which found its way through the decayed woodwork of the bottom of the hulk. Held, that though the damage was due to sea water it was not due to sea perils, which were the perils insured against. Judgment of the court below affirmed. (P. C.) *Sassoon and Co.* v. *Western Assurance Co.* 206

9. *Constructive total loss — Freight policy — Institute time clauses — Construction.*— The plaintiffs, the assured, were insured with the defendants under a time policy on freight per the steamship *Ivy*, valued at 950*l.*, "chartered on unchartered, on board or not on board, and (or) bunker out and freight only home." There were three separate printed sets of clauses attached, the principal one being the "Institute Time Clauses—Freight 1910," of which No. 5 was as follows: "In the event of total loss, whether absolute or constructive, of the steamer, the amount underwritten by this policy shall be paid in full, whether the steamer be fully or only partly loaded, or in ballast, chartered or unchartered." During the course of the voyage the vessel became a constructive total loss, but was subsequently towed to a port where she discharged her cargo, and the plaintiff received payment of freight. In an action to recover the full amount of the policy: Held, that the underwriters were entitled to credit for the amount of the freight received by the assured. (Hamilton, J.) *Coker* v. *Bolton* 231

10. *Policy on floating dock — "Seaworthiness admitted" — Concealment — Marine Insurance Act* 1906.—The plaintiffs effected an insurance on a floating dock, which was to be towed from Avonmouth to Brindisi, against all the usual risks, and the policy contained a clause "seaworthiness admitted." Although the plaintiffs believed that the dock was fit for the voyage, it was not in fact seaworthy, as it required special strengthening in order to fit it for the voyage. During the voyage the dock sank and was totally lost. In an action on the policies: Held, that the underwriters, who were aware that the subject-matter of the insurance was a dock and not an ordinary sea-going vessel, were by reason of the admission of seaworthiness put upon inquiry as to the dock's construction, and the plaintiffs were not bound to disclose the want of special strengthening. Decision of Scrutton, J. (12 Asp. Mar. Law Cas. 186; 106 L. T. Rep. 678; (1912) 2 K. B. 112) affirmed. (Ct. of App.) Appeal from the King's Bench Division. *Cantiere Meccanico Brindisino* v. *Janson and others; Cantiere Meccanico Brindisino* v. *Constant* 246

11. *Policy on freight—Chartered or as if chartered—Concealment—Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *s.* 18.—A policy of insurance taken out by the plaintiffs in respect of the steamship *Ayrshire* was expressed to be upon "Freight of frozen meat and (or) apples and (or) other refrigerated produce, and valued at 15,000*l.* chartered or as if chartered. On board or not on board . . . lost or not lost at and from any ports or places in any order or rotation in the United Kingdom to any ports or places in any order or rotation in Australia and (or) Tasmania *viâ* Durban and (or) any route and wheresoever." Attached to the policy was a clause which contained (*inter alia*) the following stipulations: "Warranted free from any claim consequent on loss of time, whether arising from a peril of the sea or otherwise, but this clause only to apply in cases where the vessel is fulfilling a special charter containing a cancelling date." On the construction of the policy: Held, that the expression "as if chartered" did not extend the freight covered to the anticipation of freight under contracts which at the material time did not exist. Held, also, that as the plaintiffs concealed from the defendants the fact that by the terms of a certain contract freight was liable to be lost if the steamer did not arrive in Tasmania to load on a certain date, this was a concealment of a material fact, and entitled the defendants to avoid the policy. (Hamilton, J.) *Scottish Shire Line Limited and others* v. *London and Provincial Marine and General Insurance Company Limited* 253

12. *Concealment—Innocent assignee—Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *s.* 50 (2).—An underwriter must have the opportunity of deciding for himself whether the knowledge of a material fact will affect him or not. A defence of concealment of a material fact in connection with a policy of marine insurance is a good defence even against an innocent assignee of the policy. Such a defence arises "out of the contract" within the meaning of sect. 50 (2) of the Marine Insurance Act 1906. (Hamilton, J.) *William Pickersgill and Sons Limited* v. *London and Provincial Insurance Company Limited and Ocean Marine Insurance Company Limited* 263

13. *Reinsurance—Slips.*—In Jan. 1911 D. and W. (a firm of underwriters) initialled a slip insuring the steamshps *Olympic* and *Titanic* for twelve months from delivery, and afterwards reinsured part of this risk with the plaintiffs. In Dec. 1911 the defendant initialled a slip reinsuring a portion of the plaintiff's risk for "twelve months from expiration or delivery, clauses and conditions as original." In Jan. 1912, whilst the steamship *Titanic* remained undelivered, D. and W. initialled another slip, as follows: "*Olympic*, *Titanic*, twelve months from expiry." No intimation was given to D. and W. or the plaintiff's agent that this was intended to be anything else than a renewal for a further twelve months after the expiry of the first twelve months, but before the policy was issued an intimation was given to the leading underwriter to explain that the insurance, so far as the *Titanic* was concerned, would commence from the delivery of the same. On the 3rd April 1912 a policy was issued by D. and W. insuring the *Titanic* for 2500*l.* from the 2nd April 1912. On the 10th April 1912 the plaintiffs, by a policy of that date, reinsured D. and W.'s risk to the extent of 400*l.*, and on the 11th April 1912 the defendant underwrote a policy reinsuring the plaintiff's risk to the amount of 80*l.*, the policy having the following clause: "Being a reinsurance for account, the Scottish National Insurance Company Limited, subject to the same clauses and conditions as original policy or policies, and to pay as may be paid thereon." The *Titanic* was lost on the 15th April 1912, and the plaintiffs paid D. and W. under the policy of the 10th April. They now sued the defendant under the policy of the 11th April. Held, that the defendant was liable on the grounds that the policy of the 10th April 1912 was the original policy referred to in the

SUBJECTS OF CASES.

PAGE

policy of the 11th April 1912; that D. and W. were always under a contract of insurance of the *Titanic* for the first twelve months by virtue of the slip they initialled in Jan. 1911; that the plaintiffs agreed to reinsure them up to 400*l.* in Jan. 1911, and remained under this liability; that the defendant agreed to reinsure the plaintiffs against their liability to the amount of 80*l.* by initialling the slip of Dec. 1911; that he signed the policy of the 11th April in pursuance of that contract of reinsurance. (Bray, J.) *Scottish National Insurance Company Limited* v. *Poole* 266

14. *Non-disclosure of material fact—Policy "subject without notice to the same clauses and conditions as the original policy"—Liability of reinsurer.*—The plaintiffs insured the hull of a steamship on a time policy for 500*l.* at a premium of 6 per cent. The policy contained a clause that the ship had the option to navigate the Canadian lakes, and an additional premium of 3 per cent. was paid in respect thereof. The defendants reinsured 250*l.* on the risk at the same premium of 6 per cent., but no mention was made at the time the reinsurance was effected of the option to navigate the lakes or the additional premium. The defendants' policy was stated to be "subject without notice to the same clauses and conditions as the original policy." While in the lakes the ship sustained damage in respect of which the plaintiffs paid 117*l.* 13*s.* on their original policy. The plaintiffs claimed 58*l.* 16*s.* 6*d.*, the proportion due from the defendants, but the defendants repudiated liability on the ground that a material fact had been concealed from them, and their policy of reinsurance was thereby rendered invalid. Held, that although the option to navigate the lakes was a material fact that ordinarily should have been disclosed when the reinsurance was effected, the defendants had agreed to be bound by the terms of the original policy without notice, and were therefore liable. (Scrutton, J.) *Property Insurance Company Limited* v. *National Protector Insurance Company Limited* 287

15. *Lloyd's policy—Collision clause—Construction—Collision with nets of fishing vessel.*—A collision with nets attached to a fishing vessel is not a "collision with any other ship or vessel" so as to bring it within the terms of the usual collision clause of a Lloyd's policy. (Pickford, J.) *Bennett Steamship Company Limited* v. *Hull Mutual Steamship Protecting Society Limited* 355

16. *Reinsurance against total or constructive total loss only—Provision "to follow hull underwriters in event of a compromised or arranged loss being settled."*—The plaintiff took out a policy of reinsurance with the defendants which contained the following clause: "Being a reinsurance and to pay as per original policy or policies, but the insurance is against the risk of the total or constructive total loss of the steamer only, but to follow hull underwriters in the event of a compromised or arranged loss being settled." The owner of the insured ship brought an action against the hull underwriters claiming for a constructive total loss and alternatively for a partial loss. This action was compromised without anything being said as to whether the settlement was as for a constructive total loss or as for a partial loss. In an action on the reinsurance policy: Held, that the plaintiff was entitled to recover as, there having been a claim for a constructive total loss and that claim having been compromised, there was, within the meaning of the clause in question, "a compromised or arranged loss," notwithstanding that there was at the same time a claim for a partial loss. (Bray, J.) *Street* v. *Royal Exchange Assurance* 356

PAGE

17. *Marine Insurance—Total loss—War risk—Cargo not sent forward for fear of capture—Whether constructive total loss.*—In Dec. 1903 the plaintiffs took out a marine policy with the defendants to insure a cargo against war risk only at and from San Francisco to Vladisvostok *viâ* Nagasaki. In Feb. 1904, when some of the cargo had been loaded, war had broken out between Russia and Japan, and the Japanese fleet was blockading Vladivostok, and stopping and capturing vessels. Under these circumstances the underwriters telegraphed to the plaintiffs that if the cargo was sent to Vladivostok *viâ* Nagasaki they would take up the position that the plaintiffs had deliberately caused the loss. The plaintiffs then gave notice of abandonment to the underwriters, which the latter refused to accept, and the plaintiffs discharged the cargo and sold it in order to minimise the loss to the underwriters. In an action by the plaintiffs to recover on the policy: Held, that in the circumstances anticipation of loss by capture did not constitute a constructive total loss; that at the time of the abandonment there was no constructive total loss; that partial loss was insufficient, and the plaintiffs were not entitled to recover. See *The Knight of St. Michael* (infra) and *Butler* v. *Wildman* (infra). (Pickford, J.) *Kacianoff and Co.*, v. *China Traders' Insurance Company Limited* .. 395

18. *Captain's effects—Total loss—Captain's clothes and watch not lost—Liability of underwriters.*—A policy of marine insurance for the sum of 100*l.* was issued by underwriters upon captain's effects, sextant, and chronometer, against risk of total loss of vessel only. During the currency of the policy the vessel was lost while in port through one of the perils insured against, and such of the captain's effects as were on board were destroyed. At the time of the loss the captain was on shore, and the clothes and watch he was wearing were not lost. In an action claiming the full amount of the policy: Held, that the policy covered the whole of the captain's effects, including those temporarily removed from the ship, and the value of the goods not lost must be taken into account in estimating the amount for which the underwriters were liable. (Pickford, J.) *Anstey* v. *Ocean Marine Insurance Company Limited* ... 409

19. *Policy—Perils of the seas—Institute time clauses.*—The plaintiffs took out a policy of marine insurance with the defendants on their ship which covered (*inter alia*) perils of the seas. The policy included the conditions of the Institute time clauses as attached, clause 3 of which provided as follows: "In port and at sea, in docks and graving docks, and on ways, gridirons, and pontoons, at all times, in all places, for all occasions." Clause 7 provided: "This insurance also specially to cover . . . loss of or damage to hull or machinery through the negligence of the master, mariners, engineers, or pilots, or through explosions, bursting of boilers, breakage of shafts, or through any latent defect in the machinery or hull. . ." While the ship was lying in a dock, a boiler which was being lifted by a floating crane in order that it might be loaded into the hold fell and damaged the ship owing to the pin of a shackle breaking. In an action under the policy: Held, that the loss was not covered (i.) by the words in the body of the policy, as it was not caused by a peril of the sea; (ii.) by clause 3 of the attached clauses, as that clause did not enlarge the risks covered by the policy; (iii.) by clause 7 of the attached clauses, which ought not to be read into the ordinary Lloyd's perils clause in the policy so as to apply the general words of Lloyd's perils clause to clause 7; (iv.) that the Marine Insurance Act 1906 had not altered the law in this

PAGE

respect. *Jackson* v. *Mumford* (1902, 8 Com. Cas. 61) followed. (Pickford, J.) *Stott (Baltic) Steamers Limited* v. *Marten and others* ... 414

NOTE.—This case has since been affirmed by the C. A. Phillimore, L.J. *dubitante*.—ED.

20. *Policy—Transit—Duration of risk—Conclusion of transit.*—The plaintiffs effected a policy of marine insurance with the defendant and other underwriters, at Lloyd's, in respect of a new cast-steel frame for a steamer. The policy was expressed to be "against all risks, especially including breakage and damage done and received through loading and discharging, irrespective of percentage." By clauses attached to the policy it was also provided that the insurance should include "all risks of craft and (or) raft and (or) of any special lighterage without recourse against lighterman . . . of fire, transhipment, landing, warehousing, and reshipment if incurred, and whilst waiting shipment and (or) reshipment, and all other risks and losses by land and water from the time of leaving the warehouse at point of departure until safely delivered into warehouse or other place for which the goods have been entered, or in which it is intended they shall be lodged, whether previously discharged or landed elsewhere within the port or place of destination or not." The casting was shipped to Hamburg and discharged on the quay on the 14th June, at which time the steamer into which the steel frame was to be fitted had not arrived. On the 27th June the frame was transported in a lighter to the quay of the V. Company's shipbuilding yard at Hamburg, and while being lifted from the lighter to the quay it struck the quay wall and was thereby rendered useless. In an action by the plaintiffs to recover under the policy: Held, that the loss was not covered by the policy, as the transit was at an end when the loss occurred. (Pickford, J.) *Deutsch-Australische Dampschiffsgesellschaft* v. *Sturge* 453

21. *Policy—Insurance against risk of seizure and detention—Actual total loss—Constructive total loss—Particular average loss—Captain's letters—Privilege—Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *ss.* 57 (1), 60.—The plaintiffs' steamship *P.* was chartered to carry a cargo of coal from Newport to Constantinople. She was insured with the defendant at Lloyd's against capture, seizure, and detention. While on the voyage war broke out between Greece and Turkey, and the *P.* was stopped by the Greeks off Tenedos who took her to Lemnos and removed the cargo. The plaintiffs gave the defendant notice of abandonment, and six weeks after the Greeks released the ship. In an action by the plaintiffs on the policy for an actual or a contructive total loss, or alternatively, damages for a particular average loss. Held, that there was not an actual total loss at the time of notice of abandonment as the plaintiffs were not then "irretrievably deprived" of the ship within the meaning of sect 57 (1) of the Marine Insurance Act 1906, nor a constructive total loss within the meaning of sect. 60 (2) as the words of the sub-section, "unlikely that he can recover the ship," mean within a reasonable time. Held, also, that the plaintiffs were entitled to the extraordinary expenses paid to procure the release of the ship, and to damages by reason of her detention, as a particular average loss, but not to damages for depreciation in the earning capacity of the ship by reason of her detention. *Quære*, whether privilege attaches to the letters of a master where he is instructed by her owners to state that they are written for the benefit of the solicitors. (Pickford, J.) *Polurrian Steamship Company Limited* v. *Young* ... 449

22. *Policy—Reinsurance—Constructive total loss—Partial loss—"Compromised or arranged loss."*—The plaintiff took out a policy of reinsurance with the defendants which contained the following clause: "Being a reinsurance and to pay as per original policy or policies, but the insurance is against the risk of the total or constructive total loss of the steamer only, but to follow hull underwriters in the event of a compromised or arranged loss being settled." The owner of the insured ship brought an action against the hull underwriters claiming for a constructive total loss and alternatively for a partial loss. This action was compromised without anything being said as to whether the settlement was as for a constructive total loss or as for a partial loss. In an action on the reinsurance policy: Held, that as a claim had been made by the shipowner in respect of a constructive total loss and had been persisted in down to the settlement of the action which had been compromised, there was within the meaning of the clause in question "a compromised or arranged loss" notwithstanding that there was at the same time a claim for a partial loss. Decision of Bray, J. (12 Asp. Mar. Law Cas. 356; 109 L. T. Rep. 215) affirmed. *Street* v. *Royal Exchange Assurance* ... 496

23. *Policy—Pool—Passage money.*—The plaintiffs took out a policy of marine insurance with the defendant on the steamship *W.* for a voyage from the United Kingdom to Australia and New Zealand. The policy covered the risk of loss of passage money, and was also expressed to cover any reasonable disbursements arising from accident or loss on account of passengers, whether for maintenance or conveyance to destination in accordance with the requirements of the Merchant Shipping Act 1894. The plaintiffs had a "pooling" agreement with two other shipping companies for sharing profits. The *W.*, having a number of emigrant passengers on board, dragged her anchors at the outset of the voyage, returned to port, and was detained for repairs. The passengers in question were sent on in another ship belonging to the "pool," and the *W.* eventually proceeded on her voyage carrying other passengers who had paid their passage money, the number exceeding that which had originally started in her. The plaintiffs made disbursements in respect of the maintenance of the original passengers, and also in respect of carriage to their destination. In an action on the policy: Held, that the plaintiffs were entitled to recover, as the insurance was made by the plaintiffs for their own benefit, and not for that of the pool, and that the passage money paid by the other passengers was not in the nature of a salvage. *New Zealand Shipping Company Limited* v. *Duke* ... 507

24. *Policy — Collision clause — Lloyd's policy — Nets.*—A collision with nets attached to a fishing vessel is not a "collision with any other ship or vessel" so as to bring it within the terms of the usual collision clause of a Lloyd's policy. Decision of Pickford, J. (12 Asp. Mar. Law Cas. 355; 109 L. T. Rep. 213; (1913) 3 K. B. 371) affirmed. *Bennett Steamship Company Limited* v. *Hull Mutual Steamship Protecting Society Limited* ... 522

25. *Total loss—War risk—Cargo not sent forward for fear of capture—Whether constructive total loss.*— In Dec. 1903 the plaintiffs took out a marine policy with the defendants to insure a cargo against war risk only, at and from San Francisco to Vladivostok *viâ* Nagasaki. In Feb. 1904, when some of the cargo had been loaded, war having broken out between Russia and Japan, the Japanese fleet was blockading Vladivostok, and stopping and capturing vessels. Under these circumstances the underwriters telegraphed to the plaintiffs that, if the cargo was sent to Vladivostok *viâ* Nagasaki, they would take up the position that the

PAGE

plaintiffs had deliberately caused the loss. The plaintiffs then gave notice of abandonment to the underwriters, which the underwriters refused to accept, and the plaintiffs discharged the cargo and sold it. In an action by the plaintiffs to recover on the policy: Held, that the loss was not caused by the peril insured against, namely, capture, for the discharge of the cargo had prevented the peril from operating; the vessel was never in risk of capture, for the plaintiffs determined not to undergo the risk. Decision of Pickford, J. (12 Asp. Mar. Law Cas. 395; 109 L. T. Rep. 365; (1913) 3 K. B. 407) affirmed. *Kacianoff and Co.* v. *China Traders' Insurance Company Limited* ... 526

26. *Policy—Collision—Damage—Collision caused to their ship by back-wash—Liability.*—By a policy of marine insurance underwritten by the defendants on the plaintiff's steamer *C.*, it was provided that "if the ship hereby insured shall come into collision with any other ship or vessel, and the assured shall in consequence thereof become liable to pay, and shall pay by way of damages to any other person or persons any sum or sums not exceeding in respect of any one such collision the value of the ship hereby insured," the defendants would pay a certain proportion of such sum or sums. A collision occurring between the steamship *C.* and the steamship *R.*, the impetus thus given to the *R.* plus the back-wash from the *C.*'s propeller drove the *R.* into the steamship *G.*, causing damage which the owners of the *C.* were held liable to pay to the owners of the *R.* In an action on the policy: Held, that as the forces set in operation by the C. caused the collision, the defendants were liable. *William France, Fenwick, and Co. Limited* v. *Merchants' Marine Insurance Company Limited* 544

27. *Material fact — Innocent mistake as to materiality — Secondhand machinery—Concealment.*—Where a policy of marine insurance contained the following clause: "In the event of any incorrect definition of the interest insured, it is agreed to held the assured covered at a premium (if any) to be arranged," and the subject-matter of the insurance was new and second-hand machinery, but the assured honestly thought that to define it as "machinery" simply was a sufficient and correct definition of the interest insured: Held, that in the circumstances the failure to disclose to the underwriters that some of the machinery was second-hand, though a concealment of a material fact, was an innocent non-disclosure, and that the assured were entitled to rely on the "held covered" clause. *Hewitt Brothers* v. *Wilson* ... 546

28. *Time policy—"Perils of the sea"—Institute time clauses — "Inchmaree" clause — Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *s.* 30; *sched.* 1. *r.* 12.—The expression "a peril of the sea" means a peril to which the assured is exposed by reason of the fact that his adventure is a marine adventure, or, expressed in the negative, a peril to which the assured would not be exposed if his adventure were not a marine adventure—that is to say, the peril must be in some sense attributable to the fact that an adventure is marine. The plaintiffs took out a policy of marine insurance with the defendants on their ship, which covered (*inter alia*) perils of the seas. The policy included the conditions of the Institute time clauses as attached, clause 3 of which provided as follows: "In port and at sea, in docks and graving docks, and on ways, gridirons, and pontoons, at all times, in all places, and on all occasions." Clause 7 provided: "This insurance also specially to cover . . . loss of or damage to hull or machinery through the negligence of the master, mariners, engineers, or pilots, or through explosions, burstings of boilers, breakage of shafts, or through any latent defect in the machinery or hull. . ." While the ship was lying in the dock a boiler, which was being lifted by a floating crane in order that it might be loaded into a hold, fell, owing to the pin of a shackle breaking, and damaged the ship. In an action under the policy: Held, (1) that the loss was not caused by a peril of the sea; (2) that clause 3 of the Institute time clauses did not enlarge the risks insured by the policy; and (3) that the risks specifically mentioned in clause 7 were not extended to matters *ejusdem generis* by the general words in the body of the policy. *Stott (Baltic) Steamers Limited* v. *Marten and others* 555

29. *Plaintiffs British subjects—Defendants alien enemies—Action on policy—Right of plaintiffs to proceed with action—Right of defendants to appear—Costs.*—An action was brought upon a policy of marine insurance effected on behalf of the plaintiffs, who were British subjects, with the defendant company. The policy was effected before the war between Great Britain and Germany. The loss was before the war, and the pleadings were closed before the war. The war had the effect of making the defendant company an alien enemy. On an application on behalf of the defendants for a stay of proceedings during the war: Held, that there was no rule of the common law which suspended an action in which an alien enemy was defendant, or prevented his appearing and conducting his defence. *Quære*, whether in the event of the alien enemy defendant succeeding in the action, he would be entitled to an order for payment of costs until after the war. (Bailache, J.) *Robinson and Co.* v. *Continental Insurance Company of Mannheim* 574

30. *Reinsurance — Constructive total loss — Compromise between assured and insurers of original policy—Benefit of compromise to reinsurers.*—Where a loss occurs under a policy of insurance and the underwriter is covered by reinsurance to the full extent, the contract of the reinsurer is to pay the original insurer forthwith the full amount for which the original insurer is liable to the assured, the indemnity afforded by reinsurance being against liability, and not against the discharge of liability. In such a case the reinsurer is entitled to have all the rights of the original insurer, whether of abandonment or subrogation, exercised for his benefit. The plaintiffs insured a ship against total and (or) constructive total loss only and reinsured the risk with the defendants, the policy of reinsurance not containing the usual clause "to pay as may be paid thereon." The ship stranded, and notice of abandonment was given by her owner, who alleged that she was a constructive total loss. The plaintiffs refused to accept the notice of abandonment, and the owner brought an action against them which was compromised by the plaintiffs paying the owner less than the loss. The defendants were invited to agree to the compromise, but declined on the ground that there had been no constructive total loss in fact. In an action by the plaintiffs against the defendants on the policy of reinsurance: Held, that there was a constructive total loss in fact; that the defendants were disentitled to the benefit of the compromise, and were liable to the plaintiffs for the full amount of the reinsurance, subject to the benefit of any rights they might have had in respect of the abandonment of the ship if no compromise had been effected. (Bailhache, J.) *British Dominions General Insurance Company Limited* v. *Duder and others* 575

MARITIME CONVENTIONS ACT 1911.

Maritime Conventions Act 1911 (1 & 2 *Geo.* 5, *c.* 57), *ss.* 5, 8—*Lord Campbell's Act.*—A steam trawler collided with a ketch. The ketch was lost, and in consequence of the collision her crew, one of whom was her owner, were drowned. After the passing of the Maritime Conventions Act 1911, and more than a year after the collision, the widow of the owner instituted proceedings *in rem* to recover damages for the loss of the ketch, and damages on behalf of herself and her four children under the Fatal Accidents Act for the loss of life of her husband. The defendants admitted liability for the loss of the ketch, but alleged that the action to enforce the right given by the Fatal Accidents Act should have been brought within twelve months after the death of the deceased, and that, as that had not been done, the plaintiff had lost her right to recover anything in respect of the loss of her husband. Held, that a claim against a vessel or her owners for damages for loss of life may under sect. 8 of the Maritime Conventions Act 1911 be brought within two years from the date when the loss was caused in spite of the provisions of Lord Campbell's Act by which an action for damages for loss of life must be begun within twelve calendar months after the death of the deceased person. MERSEY DOCK ACTS.

Sunken vessel—Obstruction to navigation—Right to destroy vessel—Mersey Docks Act 1874 (37 & 38 *Vict. c. xxx.*), *s.* 11—*Mersey Docks and Harbour Board Act* 1889 (52 & 53 *Vict. c. cxi.*), *s.* 29.—A schooner sank in Crosby Channel, within the defendants' jurisdiction. The defendants destroyed the schooner by blowing her up. Sect. 11 of the Mersey Docks Act 1874, as amended by sect 29 of the Mersey Docks and Harbour Board Act 1889, empowers the Mersey Docks and Harbour Board to raise, destroy, or remove any wrecks of vessels or any vessels sunk or stranded in any dock or elsewhere within the port of Liverpool which are an obstruction to safe and convenient navigation "in the judgment of the marine surveyor . . . of the board . . . such judgment being recorded in writing and deposited with the secretary of the board." In an action by the owners of the schooner: Held, that it was not a condition precedent to the exercise by the board of their statutory powers that the judgment of the marine surveyor that the vessel was an obstruction to safe and convenient navigation should first have been recorded in writing and deposited with the secretary of the board. In order that the board might exercise their powers it was sufficient that the marine surveyor had honestly arrived at the conclusion that the vessel should be raised, destroyed, or removed, and that his judgment to that effect should be put in writing and deposited with the secretary of the board within a reasonable time thereafter. NEGLIGENCE.

Contract ticket—"Form approved by the Board of Trade"—Exception of negligence on back of ticket—Exception not approved by Board of Trade—Validity—Merchant Shipping Act 1894 (57 & 58 *Vict. c.* 60), *s.* 320—*Misdirection.*—The several plaintiffs sued the defendants under the Fatal Accidents Act 1846 to recover damages for negligence in respect of the deaths of the members of their respective families who were drowned while emigrant passengers on the *Titanic.* The defendants denied negligence, and alternatively claimed exemption from liability by reason of clause 3 of the "Notice to Passengers" printed upon the back of the contract ticket, which by sect. 320 (1) of the Merchant Shipping Act 1894 the shipowner is bound to give to the person who pays for the steerage passage, which notice included a condition that the shipowner should not be liable to any passenger carried under the contract, even though the loss or damage was caused or contributed to by the neglect or default of the shipowner's servants. This condition was referred to on the face of the ticket by the words 'See Back." The plaintiffs contended that (1) the words constituting the exemption clause were not part of the contract set forth on the contract ticket; (2) If they were the operation of the exemption was excluded by sect. 320 (2) of the Merchant Shipping Act 1894 which provides that the contract ticket shall be in a form approved by the Board of Trade. Held, that there was evidence upon which the jury were entitled to find that the defendants were negligent. Held, further (Buckley, L.J., dissenting), that clause 3 not being in the form approved by the Board of Trade under sect. 320 of the Merchant Shipping Act 1894, was invalid. Held, also, by Vaughan Williams, L.J., that clause 3 was not part of the contract between the passenger and the defendants. Decision of Bailhache, J., affirmed. (Ct. of App.) *The Titanic* 466

PILOTAGE.

Compulsory pilotage—Ship navigating in compulsory pilotage district—Stopping outside port for orders—Orders from port taken to ship by boat—No pilot employed—Pilotage Act 1913 (2 & 3 *Geo.* 5, *c.* 31), *s.* 11.—Sect. 11, sub-sect. 1, of the Pilotage Act 1913 provides as follows: "Every ship (other than an excepted ship) while navigating in a pilotage district in which pilotage is compulsory for the purpose of . . . making use of any port in the district . . . shall be either (*a*) under the pilotage of a licensed pilot of the district; or (*b*) under the pilotage of a master or mate possessing a pilotage certificate for the district who is *bonâ fide* acting as master or mate of the ship." The London pilotage district extends from Dungeness to Gravesend, and embraces Dover. A ship, not an excepted ship, was directed to proceed to Dover for orders. She came up the Channel, passed Dungeness, and proceeded to Dover, where she stopped about a quarter of a mile from the Admiralty Pier, and while lying there a motor-boat came from the port with orders for her to proceed to Hamburg. Neither her master nor her mate possessed a pilotage certificate for the district. Held, that the words "making use of any port in the district" included the use which the ship made of the port of Dover, and that she was in the circumstances bound to employ a licensed pilot of the district. SUBJECTS OF CASES.

PAGE

PRACTICE.

1. *Workmen's Compensation Act* 1906 (6 *Edw.* 7, *c.* 58)—*Appeals thereunder.*—In any proceeding under sect. 11 of the Workmen's Compensation Act 1906, an appeal from an order therein made by the judge of a County Court does not lie direct to the Court of Appeal, but to the Divisional Court. Such an order is made by the judge of a County Court in exercise of his general jurisdiction and not as arbitrator, and an apeal therefrom is by the ordinary procedure as to appeals from County Courts. So held by the Court of Appeal, Farwell, L.J. dissenting. (Ct. of App.) *Paganotis* v. *Owners of Ship Pontiac* 92

2. *Preliminary Acts.*—Observations by Fletcher Moulton, L.J., as to the binding character of statements made by parties in the Preliminary Acts filed by them. (Ct. of App.) *The Seacombe* 142

3. *Action* in rem—*Appearance by foreign defendants—Bail—Statutory limit of liability.*—The owners of a British ship instituted an action *in rem* to recover the damage they had sustained by reason of a collision between her and a French barque. The French barque was arrested, and her owners, foreigners, entered an appearance in the action and gave bail to obtain the release of the vessel, the amount of the bail being equal to the appraised value of the barque and the agreed amount of the freight. The foreign owners defended the action and counter-claimed for the damage they had sustained. On the hearing of the action the French barque was held alone to blame, and a decree was drawn up condemning the defendants and their bail in the amount of the damage sustained by the plaintiffs with the costs of the claim and counter-claim. On motion by the defendants to vary the decree by limiting its terms so that the plaintiffs should not be entitled to recover more under it than the appraised value of the vessel, the freight, and costs: Held, on the authority of the principles laid down in *The Dictator* (67 L. T. Rep. 563; 7 Asp. Mar. Law Cas. 251; (1892) P. 304), approved by the Court of Appeal in *The Gemma* (81 L. T. Rep. 379; 8 Asp. Mar. Law Cas. 585; (1899) P. 285), that, as the appearance of the defendants was voluntary and they had submitted to the jurisdiction of the court, the decree had been rightly drawn up and judgment should be given against them personally for the whole of the damage sustained by the plaintiffs, subject to the right of the defendants to limit their liability under the provisions of the Merchant Shipping Act 1894. (Adm. Ct.) *The Dupleix* 122

4. *Discovery—Admission of liability subject to a reference—Inspection—Order XXXI., r.* 18.—A collision occurred between a steamship and a lightship in Liverpool Bay. The owner, master, and crew of the lightship started an action *in rem* to recover the damage they had sustained. The owners of the steamship admitted liability subject to a reference. The plaintiffs then delivered particulars of their claim and *inter alia* claimed a sum of 7047*l.* as the value of the lightship. The defendants made an application to the registrar for an order that they were entitled to inspect the plaintiffs' books in order to see upon what basis the plaintiffs arrived at the value set upon their lightship at the time of the collision. The registrar refused to make the order, and on appeal to the judge he confirmed the order of the registrar. The defendants appealed to the Court of Appeal. It was admitted that the books would have to be produced at the reference. Held, reversing the decision of the judge and the registrar, that the defendants were entitled to an order for the inspection of the books before the reference. (Ct. of App.) *The Pacuare* 222

5. *Lights—Preliminary act.*—Order XIX., r. 28, of the Rules of the Supreme Court 1883 directs that in actions for damage by collision between vessels, the plaintiff and the defendant are to file with the registrar a document to be called a preliminary act, which, among other information is to contain the following statements concerning the lights seen on the vessel collided with: "(k) The lights (if any) of the other vessel which were first seen. (l) Whether any lights of the other vessel, other than those first seen, came into view before the collision." The defendants' preliminary act contained the following statements in answer to (k): "The masthead, towing, and both side lights of the *Tavistock*"; and in answer to (l), "None." In fact the master of the defendants' vessel, after seeing all the lights on the plaintiffs' vessel, saw the green light shut in, leaving the red open alone, and then the red was shut in and the green light alone left open. Observation by the President: It is desirable that practitioners should state, in answer to par. (l) in the Preliminary Act Forms in Collision Actions, the lights in the sense of the combination of lights seen on the other vessel and the alterations therein. (Adm. Div.) *The Monica* 164

6. *Pleadings—Particulars.*—A vessel at anchor was run into and damaged by a vessel in motion. In an action for damage, the owners of the vessel at anchor delivered a statement of claim in which they alleged that those on the vessel colliding with them did not take proper and seamanlike measures to keep clear. A summons for particulars of the measures which should have been taken was dismissed by the registrar. The defendants appealed to the judge in chambers. On appeal: Held, that as the plaintiffs could give no particulars the allegation should be struck out, the judge at the trial having power to deal with any negligence proved but not pleaded. (Adm. Div.) *The Kanawha* 317

7. *Practice Jurisdiction—Short delivery—Damage to goods—"Goods carried to any port in England"—Power to arrest—Admiralty Court Act* 1861 (24 *Vict. c.* 10), *s.* 6—*Arbitration Act* 1889 (52 & 53 *Vict. c.* 49), *s.* 4.—Ten cases of gold coin were shipped at Hamburg by the plaintiffs on a German steamship to be carried to Montevideo or Buenos Ayres. The bill of lading on the terms of which the cases were carried gave the shipowner liberty to call at intermediate ports, and provided that any disputes as to its interpretation were "to be decided in Hamburg according to German law." The steamship called at Southampton and then went on to Montevideo, where only nine cases of gold coin were delivered. The steamship put into Southampton on her voyage back from Montevideo to Hamburg. The owners of the case arrested the steamship at Southampton, alleging that damage had been done to goods carried into a port in England by breach of duty or contract on the part of the owner, master, or crew of the steamship. There was no evidence as to where the case was lost. The owner of the ship, having entered an appearance under protest, took out a summons asking that the writ, the warrant of arrest, and the undertaking to put in bail should be set aside on the ground that the court had no jurisdiction to arrest the vessel or try the case, or that the action should be stayed under sect. 4 of the Arbitration Act 1889. Held, by the President (Sir S. T. Evans), that the court had jurisdiction to try the case as the goods were goods carried into a port in England, but that the proceedings in the action should be stayed in order that the parties

PAGE

might litigate in Germany as they had agreed to do under the terms of the bill of lading, the clause therein relating to disputes amounting to a submission to arbitration within the meaning of sect. 4 of the Arbitration Act 1889. (Adm. Div.) *The Cap Blanco* 399

See *Collision*, No. 2.

8. *Alternative Defences—Compulsory pilotage—Inevitable accident—Costs.*—A steamship at anchor in the Thames was run into and damaged by another steamship which was proceeding down the Thames in charge of a compulsory pilot. In a damage action brought by the owners of the vessel at anchor the defendants alleged that the collision could not have been avoided by the exercise of ordinary and reasonable maritime care and skill; and, further, that if there was any negligence on their steamship, which they denied, it was the negligence of the compulsory pilot. The action was dismissed on the ground that the sole negligence on the defendants' ship was that of the compulsory pilot, but no order was made as to costs. The defendants obtained leave from the judge to appeal as to costs. Held, that no general rule as to whether in such circumstances the action should be dismissed with or without costs could be laid down. That if the defendants had relied solely on the plea of compulsory pilotage and had succeeded on that plea, *primâ facie* they would have been entitled to their costs, but that when alternative defences are raised and the defendants lose on one and succeed on the other, the judge is entitled in the exercise of his discretion to make no order as to costs. (Ct. of App.) *The Ophelia* 434

9. *Practice—Costs—Non-jury action—Issues in fact and law—Judgment for plaintiff on both with costs at trial—Appeal by defendant on issue of law only—Judgment wholly set aside on appeal, and judgment entered for defendant with costs —Taxation—Costs of issue of fact on which plaintiff succeeded at trial—Order LXV., rr.* 1, 2. —An issue in fact and an issue in law were raised upon a claim. The plaintiffs succeeded on both issues before a judge sitting without a jury, and he ordered judgment to be entered for the plaintiffs with costs. The defendants appealed on the issue in law only. The Court of Appeal ordered that the appeal be allowed, and that the judgment in favour of the plaintiffs be wholly set aside, and that judgment be entered for the defendants with costs, including the costs of the appeal. No special application was made by either side as to the costs of the issue of fact. On a summons to review taxation, Bailhache, J. held that the taxing master was not debarred by the order of the Court of Appeal from taxing the plaintiffs' costs of the issue of fact. Held, by the Court of Appeal, that the taxing master was bound by the order of the Court of Appeal, and the plaintiffs were therefore not entitled to the costs of the issue of fact. *Slatford* v. *Erlebach* (106 L. T. Rep. 61; (1912) 3 K. B. 155) distinguished. *Ingram and Royle Limited* v. *Services Maritimes du Tréport* 493

10. *Writ—Service—Foreign corporation—Residence within jurisdiction—Carrying on business —Firm of agents in England—Service on one member of firm—Authority of agents to contract—Order IX., r.* 8.—A foreign corporation may be served within the jurisdiction if it is carrying on business in this country. And it does so if contracts have been habitually made for a reasonably substantial period of time at a fixed place of business within the jurisdiction by a firm or a person there, without referring each time to the foreign corporation for instructions, and with the result that the foreign corporation has become bound to another party. The test in each case is to ascertain whether the agent, in carrying on the foreign corporation's business, makes a contract for the foreign corporation, or, in carrying on the agent's own business, sells a contract with the foreign corporation. In the former case the foreign corporation is, and in the latter it is not, carrying on business at the agent's place. If a firm are carrying on the foreign corporation's business in this country they are the proper persons to be served, and service upon one member of the firm is service upon the firm, for each member is agent for every other. In such a case there is no question of "head officer," as referred to in rule 8 of Order IX., as distinguished from subordinate officer. The foreign corporation is served by service on the firm or some member of the firm. Decision of Coleridge, J. affirmed. *Thames and Mersey Marine Insurance Company* v. *Societa di Navigazione a Vapore del Lloyd Austriaco* 491

11. *Practice — Discovery — Privilege—Marine insurance — Commercial list — Inspection of documents—Communications from agent after commencement of litigation for the purpose of conducting defence.* — The plaintiffs sued the defendants upon a policy of marine insurance upon the plaintiffs' ship. On the 28th Oct. 1913 the ship went ashore, and on the 30th Oct. the plaintiffs gave the defendants notice of abandonment, which was refused. In Jan. 1914 the writ was issued, and the defendants agreed to treat the writ as issued on the 30th Oct. 1913. The plaintiffs applied for discovery of part 2 of the defendants' list of documents, which was as follows: "Cables and correspondence which passed between the Salvage Association and their agent . . . and other persons and came into existence on and after the 30th Oct. 1913 . . . such cables and correspondence being with regard to the subject-matter of this litigation and expressing or for the purpose of obtaining advice or evidence to be used in it or for the purpose of leading to the obtaining of evidence to enable the defendants' solicitors properly to conduct the action on their behalf." The defendants having claimed privilege: Held, that the claim of privilege came within the decision in *Birmingham and Midland Motor Omnibus Company Limited* v. *London and North-Western Railway Company* (109 L. T. Rep. 64; (1913) 3 K. B. 850), and was good, the correspondence having taken place after the parties became at arm's length, and having been obtained for use by the defendants' solicitors in the prospective litigation between the parties. Decision of Bailhache, J. reversed. *Adam Steamship Company Limited* v. *London Assurance Corporation* 559

PRIZE.

1. *Enemy ship—Outbreak of hostilities—Ship in British port—Right to capture or detain—Jurisdiction of Prize Court—Hague Conference* 1907 *— Convention VI., arts.* 1, 2 *— Reciprocal arrangements—Right of alien enemy to appear in Prize Court—Sufficiency of affidavit.*—By the Hague Convention 1907, No. VI., it is stated (*inter alia*), in art. 1, that it is desirable that any merchant ship belonging to one of the belligerent Powers which is in an enemy

PAGE

port at the commencement of hostilities should be allowed a certain number of days, if necessary, to depart freely to its port of destination, or to any other port indicated to it; and, in art. 2, that if the ship cannot, owing to circumstances beyond its control, depart within the specified period, it sould be detained, but not condemned. A German vessel arrived in an English port before the outbreak of hostilities between Great Britain and Germany, and was seized after the commencement of the war by the Collector of Customs of the port. Held, that the seizure of the ship was lawful; and upon the application of counsel for the Crown, the ship was ordered to be detained by the marshal until further order of the court, with liberty to apply and all questions of costs reserved. The agents of the owners of an enemy ship have no *locus standi* in an English Prize Court, where the affidavit filed by them shows no grounds entitling them to appear in the proceedings. (Prize Court. Evans, P.) *The Chile* 598

2. *Enemy ship—Capture on high seas—Ignorance of declaration of war—Right of capture—Hague Conference* 1907—*Convention VI., art.* 3—*Germany not a party to the article—Article not applicable—Condemnation.*—By international law enemy ships, and the cargoes of enemy subjects therein, are liable to capture and condemnation as lawful prize if they are taken on the high seas at any time after the outbreak of hostilities. It is immaterial that the ships set sail before the declaration of war or that the masters of the same were still ignorant of a state of war being in existence at the time of capture. The only exception to this rule is provided by art. 3 of the Hague Convention 1907, No. VI., which substitutes detention and restoration at the conclusion of the war for condemnation, and the exception only applies to those Powers which have assented to the article. As the German Empire had refused to give its assent, the exception has no application in the case of ships and cargoes belonging to the subjects of that country. (Prize Court. Evans, P.) *The Perkeo* 600

3. *Enemy ship—Capture on high seas—Ignorance of declaration of war—Hague Conference* 1907—*Convention VI., art.* 3—*Right of alien enemy to appear in Prize Court—Nature of affidavit required as condition precedent—Shareholders—Neutrals and British subjects—Neutral mortgagees—Claims—Identification of mortgagees with ship—Rejection of claims—Claimants for price of necessaries—Bounty of Crown.*—A ship flying the German flag, which left her last port of departure before the declaration of war between Great Britain and Germany, was captured on the high seas whilst still ignorant that a state of war existed. Held that by international law there was an undoubted right to capture and to condemn her, since Germany had refused to accede to art. 3 of the Hague Conference 1907, Convention VI. She was therefore condemned, and not ordered simply to be detained. At the time of capture the ship was subject to a *bonâ fide* mortgage to a Dutch company, but remained in the possession of the German owners. The Dutch company claimed that their rights, as mortgagees, should be met out of the proceeds of the sale of the ship. Held, that the mortgagees were identified with the nationality of the ship, and that "upon the authorities, upon principle, and upon grounds of convenience and practice" the claims of the neutral mortgagees must be rejected in the Prize Court. In this respect there was no difference between neutral mortgagees and British mortgagees. As the affidavit filed by the agents of the German owners of the ship showed no special right in them to be heard in an English Prize Court, their claim was struck out. Shareholders in an enemy ship, even though they be British or allied subjects, and necessaries men have no rights in the Prize Court. (Prize Court. Evans, P.) *The Marie Glaeser* 601

4. *Enemy fishing vessel—Vessel employed exclusively in coast fishery—Exemption from capture—Position of vessel when captured—Presumption that vessel is deep-sea fishing vessel—Right of capture—Hague Conference* 1907, *Convention XI., art.* 3 — *Evidence admissible in prize cases—Prize Court Rules* 1914, *Order XV.*—By art. 3. of the Hague Conference 1907, Convention XI., it is provided that: "Vessels employed exclusively in coast fisheries, or small boats employed in local trade, are exempt from capture, together with their appliances, rigging, and cargo. This exemption ceases as soon as they take any part whatever in hostilities." This immunity from capture does not extend to deep-sea fishing vessels which are engaged in a commercial enterprise which forms a part of the trade of the enemy country. *Quære*, whether Germany can, during the present war, claim any of the benefits of the Hague Conventions. The Prize Court is not bound by the ordinary rules of evidence of the municipal courts, but may in its discretion draw inferences from trustworthy information in its possession. (Prize Court. Evans, P.) *The Berlin* 607

REGISTRAR AND MERCHANTS.

1. *Measure of damage—Remoteness—Loss of use of vessel—Strike delaying progress of repairs.*—Where a vessel is injured in a collision at sea by the negligence of another vessel and it is reasonable to take the damaged vessel to a dock for repair, and where the owner of the innocent vessel acts in a reasonable and businesslike way in all matters connected with the docking and repairing of the vessel up to the time of the vessel being delivered to him in a state of repair, the wrongdoer is liable to make good any loss which the owner of the injured ship can show he suffered by being deprived of the use of his ship during the whole period when she was unavailable for use through being under repair. A collision occurred between two vessels, and the plaintiffs' vessel was so damaged that she had to be dry docked for

PAGE

repairs. Plaintiffs and defendants agreed that a reasonable time for the repairs to take was eighteen days. The contract made between the plaintiffs and the repairers provided that, owing to circumstances that might arise in regard to weather and labour troubles, the repairers should not guarantee a time in which to complete the work, but the repairers undertook to do their very utmost to complete the work in eighteen weather working days. The repairs were begun on the 18th May. On the 31st May a strike began which continued until the 20th July. The repairs were finished on the 10th Aug. But for the strike the repairs would have been finished in eighteen days. At the reference, when the damages were being assessed, the plaintiffs claimed for the loss of the use of the vessel from the date of the collision up to the end of the time taken to repair it. The defendants denied that they were liable for the loss of the use of the vessel when the actual work of repair was suspended by the strike. The registrar held that the defendants were liable for the whole of the time. The defendants appealed to the judge. Held, confirming the report of the registrar, that the loss of the use of the vessel for the whole period while she was in dry dock, including the period of the strike which occurred while she was in dry dock, flowed directly or immediately and naturally and in the usual or ordinary course of things from the wrongful act of the plaintiffs, and such damage was not too remote and was recoverable. (Adm. Div.) *The London* 405

2. *Ship sunk—Time charter—Ship sub-chartered on time—Sub-charterers' right to recover bill of lading freight—Right of bailee to recover damage.*—An Italian steamship was let on time charter to a firm who sub-chartered the steamship under a time charter, the terms of which, with the exception of the rate of freight, were similar to that of the time charter between the Italian owners and the original charterers. During the currency of the sub-time charter the steamship was sunk, and the Italian owners and the owners of the cargo brought an action against the owners of the wrongdoing vessel and recovered damages. The sub-charterers then started proceedings as time charterers of the Italian steamship against the owners of the wrongdoing steamship to recover damages—namely, the bill of lading freight which they would have earned if the voyage the Italian steamship was performing when she was sunk had been completed and the value of certain bunker coal owned by them and which would have been on board at the end of the voyage. The action was settled on terms, and, on the reference to the registrar to assess the damage, the registrar allowed the claim for bunker coal, but disallowed the claim for freight on the ground that injury to the property of another which rendered a contract made between the owner of the property and a third party less beneficial to the third party gave no right of action to the third party against the wrongdoer. On appeal the judge of the Admiralty Court affirmed the decision of the registrar. The sub-charterers appealed to the Court of Appeal. The Court of Appeal having ordered further evidence to be taken before the registrar as to who were the parties to the contract of carriage, and on its being reported by the registrar that the contract of carriage was made between the sub-charterers as carriers and the shippers, the owners of the cargo: Held, that the plaintiffs, the sub-charterers, had a sufficient possessory interest in ship and cargo as bailees to entitle them to maintain an action for the bill of lading freight lost through the collision. (Ct. of App.) *The Okehampton* 428

3. *Warship—Value of vessel—Depreciation—Degradation of type—Searching for wreck—Cause of action for loss of life of seamen apart from statute—Right to recover pensions and gratuities paid by the Admiralty as an act of grace—Remoteness of damage.*—A submarine having been sunk through the negligent navigation of a steamship and all but one of her crew drowned, the Commissioners of the Admiralty brought an action against the steamship owners to recover the damage they had sustained. They included in their claim the following among other items: 35,000*l*., the value of the submarine; 1286*l*. 3s. 8d., the expenses for searching for her; 5140*l*. 18s. 6d., the capitalised amount of the pensions and gratuities paid or payable by the plaintiffs to the relatives of the crew who were drowned. At the reference the assistant registrar allowed the value of the submarine at 26,500*l*.; the expenses for searching for the wreck, 1286*l*. 3s. 8d.; and he disallowed the sum claimed for pensions, but stated that if he was wrong in disallowing it the sum recoverable was 4100*l*. The Admiralty Commissioners appealed seeking to recover the capitalised value of the pensions, which they agreed to accept at 4100*l*.; the shipowners appealed seeking to get the amounts allowed for the value of the vessel and the expenses of searching for her reduced. On the hearing of the appeal by Sir S. T. Evans, President: Held, that on the evidence a sufficient deduction had not been made for depreciation and degradation of type, and that the sum of 26,500*l*. should be reduced to 23,850*l*. Held, further, that on the evidence 1286*l*. 3s. 8d. was a proper sum to allow for searching for the vessel. Held, further, that as apart from statute the negligent killing of a person gave rise to no cause of action, the Admiralty Commissioners could not recover damages for the loss of the crew; that as the pensions and gratuities were given as an act of grace and were not recoverable from the Admiralty as of right, the Admiralty Commissioners could not recover the sums paid as they were too speculative and remote to be recovered as damages. (Adm. Div.) *The Amerika* 478

NOTE.—The Court of Appeal (Buckley and Kennedy, LL.J. and Scrutton, J.) have since varied the above decision and restored the finding of the Assistant Registrar as to the item of £26,500, the amount which he had allowed at the reference for the value of the submarine, thus reversing the decision of the President, who had reduced that item to £23,850. Apparently the ground upon which the Court of Appeal reversed the President was that such a figure should only be reviewed if the Registrar has erred in principle or the sum allowed is either grossly too large or grossly too small. It may be doubted whether the Court of Appeal sufficiently considered what hitherto has been the practice of the Admiralty Court—namely, that the report of the Registrar is not a final judgment, but it must be confirmed by the court to give it validity: (see Roscoe's Admiralty Practice, 3rd edit., p. 385, note to Order LVI., r. 10; see also the judgment of Deane, J. in *The Wallsend*, 10 Asp. Mar. Law Cas. 476; 96 L. T. Rep. 851; (1907) P. 302).—ED.

RESTRAINT OF TRADE.

Contract—"Intent to restrain trade to the detriment of the public"—Construction—Proof of intent—Evidence—Contracts in restraint of trade unenforceable at common law—Australian Industries Preservation Act 1906, *ss.* 4, 7, 9, 15A.—It is an essential element of offence under sect. 4 (1) (a) and sect. 7 (1) of the Australian Industries Preservation Act 1906, that there should be an actual intent to restrain trade or commerce to the detriment of the public, and the mere intent to restrain trade or commerce without the further intent to cause detriment to the public, is not sufficient. All contracts in restraint of trade or commerce which are unenforceable at common law, and all combinations in restraint of trade or commerce which, if embodied in a contract, would be unenforceable at common law, are not necessarily detrimental to the public within the meaning of the Act, nor are those who enter into such contracts or combinations necessarily to be taken to have intended to act to the detriment of the public merely from being so concerned. In establishing the contract, or combination, or the monopoly, or attempt to monopolise, the prosecutor may, in default of evidence to the contrary, rely on averments in the information, declaration, or claim, but the wrongful intention must always be proved by proper evidence. The prosecutor cannot plead the evidence whereby he hopes to establish wrongful intention and rely on the provisions of sect. 15A (inserted in the Act of 1906 by sect. 4 of the amending Act of 1908) as rendering the proof of what he pleads unnecessary. The principles of law relating to monopolies and contracts in restraint of trade considered. Decision of the High Court of Australia affirmed. (P. C.) *Attorney-General of the Comonwealth of Australia* v. *Adelaide Steamship Company Limited and others* 361

SALE OF GOODS.

1. *C.i.f. contract—Payment—Tender of shipping documents—Sale of Goods Act* 1893.—Where goods are sold under the terms of a c.i.f. contract for net cash the buyer is bound to pay for the goods on tender of the usual shipping documents, even though the goods have not arrived at their destination. Judgment of the Court of Appeal reversed. (H. of L.) *E. Clemens Horst Company* v. *Biddell Brothers* ... 80

2. *Law merchant—Documents—Construction.*—Observations on the effect of the law merchant upon the construction of commercial documents. (Ct. of App.) *Biddell Brothers* v. *E. Clemens Horst and Co.* 1

3. *C.i.f. contract—Transhipment—Tender of one bill of lading—Right to reject goods.*—Where there is a contract on sale on c.i.f. terms, it is, by mercantile usage, unless otherwise agreed, the duty of the seller to provide by a contract of affreightment for the carriage of the goods from the port of shipment to the port of destination named in the contract, and by an indorsed bill of lading or otherwise to transfer to the buyer the benefit of those rights created by the contract of affreightment between the shipper and the shipowner for the entire voyage from port of shipment to port of destination. In the case of a shipment of goods under a c.i.f. contract from Manila to London *viâ* Hong-Kong under the bills of lading, one from Manila to Hong-Kong and the other from Hong-Kong to London respectively, where the seller tendered to the buyer the Hong-Kong to London bill of lading: Held, that this was not a good tender, and the buyer was entitled to reject the goods. (Scrutton, J.) *Landauer and Co.* v. *Craven and Speeding Brothers* 182

4. *F.O.B.—Shipment by seller—Notice—Sale of Goods Act* 1893 (56 & 57 *Vict. c.* 71), *s.* 32, *sub. s.* 3.—By a contract dated the 27th June 1912 the plaintiffs sold to the defendants 200 bags of rice f.o.b. Antwerp, cash against bills of lading. On the 9th Aug. the defendants sent instructions to the plaintiffs to ship the rice to Odessa and pay the freight on their account. The plaintiffs instructed certain merchants in Hamburg, from whom they had bought the rice, to ship it by first steamer to Odessa on account of the defendants. On the 24th Aug. the rice was shipped per steamship *Egyptian* which sailed on the 25th Aug., and was lost at sea on the following day. The first intimation of the shipment that the defendants received from the plaintiffs was on the 29th Aug., when the plaintiffs presented the bills of lading for payment. The defendants had not insured the rice, evidence being given to the effect that it was not their practice to insure until after they had received notice as to which ship the goods had been dispatched by. The plaintiffs claimed the price of the rice and the amount of freight paid by them on defendants' account. The Sale of Goods Act 1893, s. 32 (3), provides that: "Unless otherwise agreed, where goods are sent by a route involving sea transit, under circumstances in which it is usual to insure, the seller must give such notice to the buyer as may enable him to insure them during their sea transit, and, if the seller fails to do so, the goods shall be deemed to be at his risk during such sea transit." Held, that the sub-section did not apply to a contract for the sale of goods on f.o.b. terms, and the defendants were therefore liable. (Bailhache, J.) *Wimble* v. *Rosenberg* 275

5. *Sale of goods—Shipment by seller—No statutory notice of shipment given by seller to buyer—Sale of Goods Act* 1893 (56 & 57 *Vict. c.* 71), *s.* 32, *sub-s.* 3.—By a contract dated the 27th June 1912 the plaintiffs sold to the defendants 200 bags of rice f.o.b. Antwerp, cash against bills of lading. On the 9th Aug. the defendants sent instructions to the plaintiffs to ship the rice to Odessa, and pay the freight on their account, leaving it to the plaintiffs to select the ship. The plaintiffs instructed certain merchants in Hamburg, from

SUBJECTS OF CASES.

PAGE

whom they had bought the rice, to ship it by first steamer to Odessa, on account of the defendants. On the 24th Aug. the rice was shipped per steamship *Egyptian*, which sailed on the 25th Aug., and was lost at sea on the following day. The first intimation of the shipment that the defendants received from the plaintiffs was on the 29th Aug., when the plaintiffs presented the bills of lading for payment. The defendants had not insured the rice, evidence being given to the effect that it was not their practice to insure until after they had received notice as to the ship by which the goods had been dispatched. The plaintiffs claimed the price of the rice and the amount of the freight paid by them on defendants' account. The Sale of Goods Act 1893, s. 32 (3) provides that: " Unless otherwise agreed, when goods are sent by a route involving sea transit, under circumstances in which it is usual to insure, the seller must give such notice to the buyer as may enable him to insure them during their sea transit, and, if the seller fails to do so, the goods shall be deemed to be at his risk during such sea transit." Held by Vaughan Williams and Buckley, L.JJ. (Hamilton, L.J. dissenting), that sub-sect. 3 of sect. 32 of the Sale of Goods Act 1893 applies to a contract for the sale of goods on f.o.b. terms. Decision of Bailhache, J. on this point reversed. But, held by Buckley, L.J. that in the circumstances no notice to enable the buyer to insure was necessary, and that if this were not so, the contract of the 27th June was in itself a sufficient notice. Decision of Bailhache, J. in favour of the plaintiffs affirmed. (Ct. of App.) *Wimble* v. *Rosenberg* 373

7. *Performance of contract—Resale—Appropriation—Loss of cargo on voyage—Sellers aware of loss at time of tender of appropriation—Validity of tender.*—In May 1912 the P. Company sold to the O. Company a certain quantity of goods to be shipped from an Oriental port to an English port in the month of Dec. 1912 or Jan. 1913. By two of the clauses of the contract it was provided that: (3) " Particulars of shipment . . . to be declared by original sellers not later than forty days from the date of the last bill of lading. . . . In case of resales, copy of original appropriation shall be accepted by buyers and passed on without delay. . . ."; and (10) " This contract is to be void as regards any portion shipped that may not arrive by the ship or ships declared against this contract." In Sept. 1912 the P. Company purchased the same amount of the same kind of goods for shipment from V. to England under a similar contract from a third company, the date of the shipment to be Dec. 1912 or Jan. 1913. The goods were duly shipped, and the vessel in which they were carried sailed from V. towards the end of Jan. 1913. A few days later the vessel was wrecked and the cargo was totally lost. On the date of the loss the P. Company received a declaration and appropriation of the cargo carried in the vessel, but, at the time of such declaration and appropriation, neither the P. Company nor the third company had any knowledge of the vessel except that she had sailed from the port of V. Later on the same day the P. Company, having in the meantime become aware of the loss of the vessel and its cargo, declared and appropriated the shipment to their contract with the O. Company. The O. Company refused to accept the tender. Held, that as the P. Company knew of the loss of the vessel and its cargo at the time of the declaration and appropriation to the O. Company, there was no obligation on the latter to accept the tender, and that clause (10) in the contract did not operate, as there had been no valid declaration and appropriation between the parties to it. (K.B. Div. Ct.) *Olympia Oil and Cake Company Limited (apps.)* v. *Produce Brokers Company Limited (resps.)* 570

SALE OF GOODS ACT 1893.

See *Sale of Goods*, Nos. 1, 2, 3, 5, 6.

SALVAGE.

1. *Loss of fishing—Loss of profit.*—Three steam trawlers while engaged in fishing in the North Sea fell in with a vessel in distress and towed her to a place of safety. In salvage suits brought by the steam trawlers they each made a claim of varying amounts for loss of profit on the fishing voyages which were ended or interrupted by rendering the services. Held, that they were not entitled to recover a sum representing loss of the prospective profit on the fishing voyage interrupted to render the salvage services. (Adm. Div.) *The Fairport* ... 165

2. *Practice—Salvage—Actions by co-salvors—Tender of lump sum by owners of salved property—Duty to apportion among the different salvors.*—A steamship broke down and had to take the assistance of a tug. The tug ran short of coal and had to leave her. A steam trawler and a lifeboat then came up and rendered assistance, and she was brought into safety. Actions for salvage were instituted by the trawler and the lifeboat, and the actions were consolidated. The owners of the salved steamship then tendered a lump sum of 350*l*. to the salvors. The salvors took out a summons asking for an order that the defendants should apportion the sum tendered between them. The assistant registrar made an order directing the apportionment. The defendants appealed to the judge. Held, that it was impossible to lay down any hard-and-fast rule as to when or by whom a salvage tender ought to be apportioned, but that it was desirable, where the owners of the salved ship had full information as to the merits of the services of the various salvors, that they should save the expense of further litigation by themselves apportioning the amount which they tendered, and that in the circumstances of this case the defendants should apportion. *The Burnock* 490

3. *Compulsory pilot—Risk necessary to entitle a pilot to salvage.*—A steamship on a voyage from the Tyne to Marseilles when off the Royal Sovereign Lightship lost her propeller and drifted up Channel. She anchored off Rye and then touched the ground several times. Those on the steamship burnt flares for assistance and a lifeboat and tugs came out to the vessel and she was taken in tow for London. When the steamship entered the compulsory pilotage district she was boarded by a pilot off Dungeness, who took charge of her to Gravesend. Salvage suits were instituted by the tugs, the pilot, and the lifeboat crew. Held, that the tugs and the lifeboat crew were entitled to salvage, and that the pilot was not entitled to salvage, for though the vessel while in his charge sheered and the anchor of the vessel had fouled the hawser of one of the tugs, and there was some apprehension that the steamship might leak, the pilot had not done more work or run any greater risk than he would have been called upon to do in the performance of an ordinary pilotage contract. *The Bedeburn* 530

SUBJECTS OF CASES.

PAGE

SEAMAN.

1. *Death by accident "arising out of" employment—Workmen's Compensation Act* 1906 (6 *Edw.* 7, *c.* 58).—An officer of a ship, who was on duty on deck, disappeared from the ship in broad daylight, in fine calm weather. No one saw what happened to him, but there was evidence that not long before he had complained of feeling sick and giddy. Held, that there was evidence from which the court might infer that he fell overboard from an accident arising not only "in the course of" but "out of" his employment, within the meaning of the Workmen's Compensation Act 1906, and that his dependants were entitled to compensation under the Act. Judgment of the Court of Appeal affirmed. (H. of L.) *Owners of the Ship Swansea Vale* v. *Rice* 47

2. *Accident—Dependency—Workmen's Compensation Act* 1906 (6 *Edw.* 7, *c.* 58), *s.* 1.—The principle established by the decision of the House of Lords in *New Monckton Collieries Limited* v. *Keeling* (105 L. T. Rep. 337; (1911) A. C. 648), that dependency is a question of fact, and that there is no legal presumption of dependency even in the case of a wife, applies equally to the case of infant children. Where, therefore, there was no evidence of dependency in fact of infant children on their father, a workman whose death had been caused by an accident arising out of and in the course of his employment within the meaning of sect. 1 of the Workmen's Compensation Act 1906, and there was no evidence that the children had ever been maintained by him, they were held not to be dependants and not to be entitled to compensation under that Act. *Briggs* v. *Mitchell* (1911) 48 Sc. L. R. 606) approved. Decision of the County Court judge reversed. (Ct. of App.) *Lee* v. *Owner of Ship Bessie* 89

3. "*Expenses caused by desertion*"—*Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *ss.* 221, 232—*Merchant Shipping Act* 1906 (6 *Edw.* 7, *c.* 48), *s.* 28, *sub-s.* 1.—During a voyage which was not to exceed three years, a number of the seamen who had signed articles for the whole voyage deserted from the ship at San Francisco, thereby forfeiting the wages then due to them. After these desertions the vessel was chartered for six months to be used as a store ship for coals. For more than five months of this period no new seamen were engaged to take the places of the deserters, and the owners thereby saved a considerable sum in wages. The master then engaged new seamen for the homeward voyage in place of the deserters and these were paid at a higher rate of wages, but the total excess pay of these men amounted to much less than the total of the wages saved to the owners, and in consequence of the desertions the owners saved in wages above 260*l*. Held, that the extra pay of the new men engaged was "excess wages" within sect. 221 of the Merchant Shiping Act 1894, and was "expenses caused by the desertion" within sect. 232 of the Act, and was therefore properly included in the reimbursement account under sect. 28, sub-sect. 1 (b) of the Merchant Shipping Act 1906, and could be set off against the forfeited wages, notwithstanding that the owners had saved a large sum in wages in consequence of the desertions; and, further, that the seamen so engaged were, within the meaning of sect. 221, "substitutes" engaged in place of the seamen who had deserted, although they had not been engaged for more than five months after the desertions. During a voyage a number of seamen deserted in Melbourne, and in consequence of these desertions the vessel was detained one day while the master was engaged in finding substitutes, incurring personal expenses in doing so, and as the vessel was ready to sail in order to save further pier dues he moved to an anchorage in the bay, thereby incurring an expense for pilotage and for the cost of coal to take the vessel to the anchorage. In his reimbursement account the master included (in addition to the cost of pilotage and personal expenses which were allowed) a sum representing the wages and cost of food of the crew for one day and the cost of the coal to take the vessel from the pier to the anchorage. Justices having allowed these items as being expenses caused to the master by the absence of the seamen due to desertion within sect. 28 of the Act of 1906: Held, that these items were not "expenses caused by the desertion," and ought not to be included in the reimbursement account. (K. B. Div. Ct.) *Deacon* (app.) v. *Quale* (resp.). *Neate* (app.) v. *Wilson* (resp.) ... 125

4. *Workmen's Compensation Act* 1906 (6 Edw. 7, c. 58), s. 1.—A seaman employed on board a fishing vessel was engaged in discharging fish from it across a gangway resting on a floating pontoon. While he was standing in the middle of the gangway it became necessary to lower the end of it that rested on the pontoon. Instead of walking off the gangway the seaman caught hold of the stem of another vessel which was moored alongside, and swung himself therefrom. While doing so he slipped and fell into the water, sustaining such serious injuries that he died. Held, that the accident arose "out of" as well as "in the course of" the seaman's employment. Decision of the County Court judge reversed. (Ct. of App.) *Gallant* v. *Owners of Ship Gabir* 284

5. *Workmen's Compensation Act* 1906 (6 *Edw.* 7, *c.* 58), *ss.* 1, 4, *sub-s.* 1.—Where the owners of a steamship entered into a contract with a contractor to scale the boilers of the vessel, and he engaged certain workmen to do the work, the principals not exercising any control over the workmen, it not being their practice to undertake the scaling of the boilers of their steamships themselves, they always employing an independent contractor to do it, the operation that the contractor had contracted to perform for the principals was held not to be work executed "in the course of or for the purposes of" the principals' "trade or business" within the meaning of sect. 4, sub-sect. 1, of the Workmen's Compensation Act 1906, so that the principals were not liable to pay compensation to one of the workmen who was injured by "accident arising out of and in the course of" his employment. *Spiers* v. *Elderslie Steamship Company* (1909, S. C. 1259; 46 Sc. L. Rep. 893), the reasoning of which was adopted by the Court of Appeal in England in *Skates* v. *Jones and Co.* (103 L. T. Rep. 408; (1910) 2 K. B. 903), applied. Decision of the County Court judge affirmed. (Ct. of App.) *Luckwill* v. *Auchen Steamship Company Limited* 286

6. *Meaning of the word "wreck."*—The word "wreck" in sect. 158 of the Merchant Shipping Act 1894 should be construed in relation to the subject-matter of the section, and the words "wreck of the ship" in that section include such a structural injury to the hull of a ship as will render her incapable of continuing the maritime adventure in respect of which the seamen's contract is entered into. A seaman and fireman entered into an agreement to serve on a passenger steamship, the voyage being described as "from Southampton to New York (*via* Cherbourg and Queenstown) and (or) if required to any port or ports within the North Atlantic and South Atlantic Oceans trading as may be required until the ship returns to a final port of discharge in the United Kingdom for any period not exceeding twelve months." There was also a clause in the agreement which provided that "if from any cause the said ship cannot sail on the date appointed

PAGE

or should the vessel put back into port through accidents the said crew will be transferred to any other vessel belonging to the same owners taking the place of the vessel herein named, at the same rate of wages and in the several capacities herein named." The day the steamship started from Southampton she came into collision with a warship, and on the following day returned to Southampton. The Board of Trade required that she should surrender her passenger and free-board certificates. The steamship had to go to Belfast to be repaired; the repairs took about two months to complete. The voyage was abandoned, no other vessel taking the place of the steamship the seamen had agreed to serve on. The seamen were dismissed on the return of the steamship and given three days' pay. They claimed in addition to the three days' wages earned by them a further sum of one month's wages as compensation for being discharged otherwise than in accordance with their agreement without fault on their part and without their consent. This claim was made by them under sect. 162 of the Merchant Shipping Act 1894. The owners refused to pay them compensation on the ground that the service terminated by reason of the wreck of the ship. This contention was based upon the wording of sect. 158 of the Merchant Shipping Act 1894. Held, by the Court of Appeal (Vaughan Williams and Buckley, L.JJ., Kennedy, L.J. dissenting), affirming the decision of Bargrave Deane, J., that on the facts proved the service had terminated by reason of the wreck of the ship, and that the seamen had been rightly dismissed and were not entitled to a month's wages. Held, by Kennedy, L.J. dissenting: The word "wreck" means such a disaster to a ship as destroys her character as a ship, and also that the contract with the seamen was not dissolved by the damage to the ship, so that if the defendant owners of the ship chose for their own pecuniary advantage to discharge the seamen otherwise than in accordance with the terms of their contract, they were liable to pay the compensation contemplated by sect. 162 of the Merchant Shipping Act 1894. (Ct. of App.) *The Olympic* ... 318

7. *Steward—Ship's articles—Wages—Agreement for payment of additional sum not specified in articles—Right to recover—Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *ss.* 113, 114, 742.—The Merchant Shipping Act 1894, s. 113, provides that the master of a ship shall enter into an agreement with every seaman whom he carries to sea as part of his crew. Sect. 114 provides that the agreement shall contain (*inter alia*) the amount of wages which each seaman is to receive. Sect. 742 defines "seaman" as including every person except masters, pilots, and apprentices employed in any capacity on board any ship, and by the same section the word "wages" includes "emoluments." The plaintiff was a ship's steward in the employment of the defendants, who were the owners of a line of steamers. He signed the usual form of agreement of ship's articles under sects. 113 and 114 of the Merchant Shipping Act 1894, in which his wages were stated to be 10*l.* a month. In his evidence at the trial he stated that in addition he was to be allowed 5 per cent. commission on the profits of the bar, which was under his charge. After he had made two voyages on the defendants' ships he had a conversation with the superintendent steward, and it was arranged that, instead of receiving 5 per cent. of the bar profits, he should be paid a fixed sum of 5*l.* a month in addition to the amount to which he was entitled under the ship's articles, such additional sum not appearing therein. In the action the plaintiff sought to recover 10*l.*, being the amount of two months' additional remuneration at 5*l.* a month. Held, that as the plaintiff's duties in connection with the bar were part of the duties for which he was engaged and which he was bound to perform, the payment of 5*l.* a month in respect of those duties formed part of his wages, and not being set out in the ship's articles could not be recovered. (K. B. Div. Ct.) *Thompson* v. *H. and W. Nelson Limited* 351

8. *Wages—Summary Jurisdiction Act* 1879 (42 & 43 *Vict. c.* 49), *s.* 33, *sub-s.* 1—*Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *s.* 164—*Finality of magistrate's decision.*—By sect. 164 of the Merchant Shipping Act 1894 (57 & 58 Vict. c. 60), it is provided that "a seaman or apprentice to the sea service, or a person duly authorised on his behalf, may, as soon as any wages due to him, not exceeding fifty pounds, become payable, sue for the same before a court of summary jurisdiction in or near the place at which his service has terminated, or at which he has been discharged, or at which any person on whom the claim is made is or resides, and the order made by the court in the matter shall be final." Certain seamen made claims upon the appellants, who were shipowners, for extra wages which had been promised to them by the captain of one of the ships of the appellants during the time that the ship was journeying from a foreign port to Southampton, and the justices of Southampton allowed the claims. Upon the application of the respondents, however, the justices agreed to state a special case for the consideration of the High Court. Held, following the case of *Westminster Corporation* v. *Gordon Hotels* (98 L. T. Rep. 681; (1908) A. C. 142), that the judgment given by the justices was final, and that there was no power to state a case. (K. B. Div. Ct.) *Wills and Sons* (apps.) v. *McSherry and others* (resps.) 426

9. *Contract of seaman to serve in ship—Persuading seaman not to join ship—Offence—"His ship"—Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *ss.* 113, 236 (1).—By sect. 236, sub-sect. 1, of the Merchant Shipping Act 1894, if a person persuades or attempts to persuade a seaman to neglect or refuse to join or proceed to sea in or to desert from "his ship," he shall be liable to a fine. The respondent was engaged at Whitby to serve as a seaman on board a British steamship, and the agent who engaged him ordered him to go to Middlesbrough, having advanced his railway fare on orders from the owners. The respondent went on board the ship at Middlesbrough, and his discharge book was taken and kept by an officer of the ship, and on the next day the respondent was ordered by an officer of the ship to go to the Board of Trade offices for the purpose of signing articles, and he left the ship with the object of so doing, but outside the Board of Trade offices he was accosted by the appellant, who attempted to persuade him to refuse to go to sea to board the ship. The respondent afterwards signed articles and received and cashed an advance note, but in consequence of the appellants's conduct he did not proceed to sea. It was not shown that the appellant had any conversation with the respondent after he had signed articles, or that he had attempted to persuade him to refuse to sign articles. The appellant having been convicted under sect. 236: Held, on appeal, that although the respondent had not signed articles at the time when the appellant attempted to persuade him to refuse to join the ship, the ship was then the respondent's ship within the meaning of the section, and the appellant was rightly convicted of attempting to persuade the respondent to refuse to join "his ship." (K. B. Div. Ct.) *Vickerson* (app.) v. *Crowe* (resp.). 446

10. *Wages—Overtime—Seaman required to work overtime—Claim for extra wages.*—When a sea-

PAGE

man enters into articles with a shipowner for a voyage, the seaman is as a general rule bound to give his full services for the wages specified in the articles, and he is not entitled to any payment in respect of overtime merely because he is called upon to work for longer hours than was contemplated when the articles were entered into, even though an express promise was made to him by an officer of the ship to pay overtime. A seaman signed articles as a fireman and trimmer on a steamship; he had four-hour watches until the ship reached L., when one fireman was left behind having fallen ill. The remaining firemen were asked by the chief engineer to do six-hour watches, which they did for about a week, the chief engineer promising to pay overtime and saying that if the shipowners did not pay it he would pay it himself. Upon a claim by a fireman against the shipowners in respect of such overtime: Held, on the authority of *Harris* v. *Carter* (3 E. & B. 559), that there was no consideration for the promise made by the chief engineer even if he had authority to make it, which he had not, and that the seaman was not entitled to claim any overtime payment. *Harrison and another* (appe.) v. *Dodd* (resp.) 503

11. *Seaman—Dispute with employer—Reference to superintendent of a mercantile marine office—Adjudication by deputy superintendent—Jurisdiction to adjudicate—Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *ss.* 247, 263, 387.—The Merchant Shipping Act, 1894, s. 387 (1), provides that a superintendent of a mercantile marine office shall inquire into, hear, and determine any dispute either between the owner of a fishing boat and the skipper or a seaman of the boat, or between the skipper of a fishing-boat and any seaman of the boat concerning (ii.) the skipper or seaman's engagement, service, or discharge . . . if any party to the dispute calls on him to decide it, and his decision thereon shall be final and binding on all persons. Sect. 247 (2) provides that "any act done by, to, or before a deputy duly appointed shall have the same effect as if done by, to, or before a superintendent. A deputy superintendent having adjudicated upon a dispute in relation to the discharge of a seaman under sect. 387, Held (on appeal from a County Court judge), that he had jurisdiction to adjudicate. *Mayhew* v. *Tripp* 505

SPECIFIC PERFORMANCE.
Constructive total loss — Removal by canal authority—Contract of sale—Delivery order—Transfer of possession—Closing of register—Bill of sale—Merchant Shipping Act 1894 (57 & 58 *Vict. c.* 60), *s.* 21, 24, 530—*Merchant Shipping Act* 1906 (6 *Edw.* 7, *c.* 48), *s.* 52 (1)—*Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *s.* 60.—On the 22nd March a registered ship was sunk in the fairway of the Manchester Ship Canal and became an obstruction to navigation. The plaintiffs, the owners of the Manchester Ship Canal, gave notice to the owners of their intention to remove the vessel, and exercise their powers under sect. 530 of the Merchant Shipping Act 1894. As the expense of raising and repairing the ship was greater than her value when raised, she was abandoned by the owners, and accordingly sold by public auction on the 1st May, described as a "register ship." The defendant Horlock became the purchaser, the contract providing that on completion of the purchase the seller would deliver to the purchaser a delivery order (these latter words being written in over the words "legal bill of sale" which had been erased) for the vessel. The defendant paid a deposit on signing the contract, and on the 8th May, the day fixed for completion, was prepared to pay the balance of the purchase money and demanded a bill of sale transferring the ship to him. The plaintiffs, however, refused to execute a bill of sale and offered a delivery order in pursuance of the contract, which the defendant declined to accept, or to complete the contract. At this time the ship's register had not been closed, but this was done shortly afterwards by the owners giving notice to the registrar. On the 22nd May the plaintiffs offered a bill of sale, which the defendant refused to accept, the register then being closed. In an action by the plaintiffs for specific performance of the contract and the balance of the purchase money, the defendant contended that the contract was for the sale of a registered ship, and that, notwithstanding anything in the contract to the contrary, he was entitled to transfer by bill of sale under sect. 24 of the Merchant Shipping Act 1894. Held, reversing the decision of Eve, J., that the ship had been constructively lost on the 22nd March 1913, within the meaning of sect. 21 of the Act of 1894, and then ceased to be a registered ship, so that the register was properly closed: that there was no representation in the contract that she was a registered ship at the date of the sale; that no bill of sale was necessary for her transfer or would have been effective if granted: and that the action succeeded. *Manchester Ship Canal* v. *Horlock* 516

STATUTE OF LIMITATIONS.
Shipping agent—Balance of account—Liability as express trustee.—The plaintiff, who was the sole surviving partner of a French firm of average adjusters carrying on business in Paris, sued the defendant to recover the sum of 96*l.* 11s. 4d. as money had and received in the following circumstances: In 1883 a vessel called the *I.*, which was loaded with coal, became a total wreck near R. The defendant at that time was carrying on business as a shipping

SUBJECTS OF CASES.

PAGE

agent at R., and the plaintiff's firm, acting for the insurers of the vessel, sent over the bill of lading to the defendant with instructions to sell the cargo on the plaintiff's behalf. The cargo was duly sold by the defendant, and after deducting certain payments from the sum received there remained in his hands the sum of 96*l.* 11s. 4d., which amount for several years appeared in the defendant's books as a sum owing to somebody in respect of the *I.* The entry ceased in 1888, and the amount in question had not been paid over to the plaintiff firm or the insurers. In 1906 the plaintiff became aware of the facts in connection with the sum of money, and in 1912 he brought an action to recover it. It was contended by the defendant that the plaintiff's claim was barred by the Statute of Limitations. For the plaintiff it was submitted that the defendant was an express trustee of the money sued for, and that, consequently, the Statute of Limitations did not run against his claim. Held, that in the circumstances the mere fact that at some time there had been a fiduciary relationship in existence did not prevent the Statute of Limitations succeeding as a defence, and that, the case being one of an ordinary commercial agent who had incurred a debt, the statute applied. TUG AND TOW.

1. *Towage contract—Defect in gear—Warranty of fitness—Conditions.*—Tug owners contracted to tow a partly laden vessel from a dock in Birkenhead to a dock in Liverpool upon the terms that they would not be responsible for any damage or loss . . . arising from any perils or accidents of the seas or rivers, or arising from . . . towing gear, including consequence of defect therein or damage thereto. They supplied two tugs for the towage. The rivets which fastened the towing gear to the structure of one of the tugs parted, the gear was lost overboard, and in consequence of the breaking of the rivets the ship collided with the dock wall and was damaged. In an action by the shipowner against the tug owner to recover the damage caused by breach of warranty or breach of contract in not providing tugs properly equipped and fit to perform the contract, it was held that the shipowner was entitled to recover, as there was an implied warranty in the contract of towage that the tugs supplied were duly equipped and fit for the service; that even if there was no such warranty, as the damage had been caused by a defect in the tug that might have been ascertained by the exercise of reasonable care on the part of the tug owner, and as no proper inspection of the tug had been made, the damage was recoverable. It was further held that the conditions in the contract did not exempt the tug owner, for they only referred to defects arising during the towage, and not to those in existence when the towage began, and that, even if the conditions were intended to refer to defects in existence before the towage began, the words used were not clear enough to exempt the tug owners from liability. The tug owners appealed. Held, that it was unnecessary to decide the question as to whether the tug owner warranted that the tug was fit to perform the contract, for it was his duty to supply a tug as fit as care and skill could make it, and under the circumstances the onus was on him to show that the accident could not have been prevented by the exercise of care and skill, and that he had not done. Held, further, that

PAGE

the words in the conditions of towage referred only to defects coming into existence during the towage. Held, by Vaughan Williams and Farwell, L.JJ. (Kennedy, L.J. dissenting), that the rule of construction that an exception to be efficacious must not be ambiguous only applied to cases in which the exception dealt with a common law liability, and had no application in this case. Held, by Farwell and Kennedy, L.JJ. (Vaughan Williams, L.J. dissenting), that the words "towing gear" did not include the rivets which attached the towing hook and plates to the structure of the tug, and that the defect in the rivets was not a defect within the words of the condition. (Ct. of App.) *The Westcock* ... 57

2. *Collision—Steamship and barge in tow of a tug —Steamship and tug to blame for collision— Barge not to blame—Admiralty rule as to division of loss—Joint tortfeasors—Right of barge owners to recover whole damage against either wrongdoer—Judicature Act* 1873 (36 & 37 *Vict.* c. 66), s. 25, *sub-s.* 9—*Preliminary acts— Character of statements contained in them.*— A tow is not liable in law for the wrongful act of her tug merely because of the relation of tug and tow. Whether a tow is liable or not depends upon the facts in each case. (Ct. of App.) *The Devonshire; The Seacombe* ... 137, 142

3. *Admiralty rule as to division of loss.*—A barge in tow of a tug which had control of the navigation came into collision with a steamship. The collision was brought about by the joint negligence of the tug and the steamship. The tug and the steamship were both found to blame. The barge was free from blame. The owners of the barge and her master and crew claimed to be entitled to recover the whole of their damage against the steamship, contending that they had been injured by the wrongful act of two joint tortfeasors and that they were entitled to recover their loss in full against either wrongdoer. The defendants contended that in accordance with the Admiralty rule as to the division of loss in cases of damage arising from collisions between ships when both vessels were to blame, laid down in *The Milan* (*Lush.* 388), affirmed in *The Drumlanrig* (103 L. T. Rep. 773; 11 Asp. Mar. Law Cas. 520; (1911) A. C. 16), the plaintiffs could only recover half their loss from the owners of the steamship and the balance against the other wrongdoer, the tug. The President held that there was no Admiralty rule in existence before the passing of the Judicature Act 1873, which prevented an innocent person injured by a collision produced by the joint negligence of two other persons from recovering the whole of his loss from either of the wrongdoers, and gave judgment in favour of the plaintiffs for the whole of their damage against the owners of the steamship. The steamship owners appealed. Held, by the Court of Appeal, Fletcher Moulton and Buckley, L.JJ (Vaughan Williams, L.J. dissenting), affirming the decision of Sir S. Evans, President, that before the passing of the Judicature Act 1873 the rule in force in the Admiralty Court as to the division of loss applied only to damage caused by collision between two ships when both ships were to blame, but that there was no such rule with regard to cases of collision causing loss to the owners of a vessel which was towed into collision but which was not to blame, and that the plaintiffs were therefore entitled to recover the whole of their damages from either of the wrongdoers. (Ct. of App.) *The Devonshire* ... 137

4. *Admiralty Rule as to Division of Loss—Preliminary Acts.*—A barge in tow of a tug collided with a steamship. The control of the navigation of the tug and barge was in the hands of those on the tug. In an action for damage brought by the barge owners, the owners of her cargo and the master and crew against the owners of the steamship, the defendants called no evidence, and on the evidence called by the plaintiffs it was held that the tug and tow were to blame and that the steamship was not to blame. In the preliminary act filed on behalf of the defendants, and in the defence it was stated that the steamship slowed her engines and starboarded when she saw the tug and barge, but the judge disregarded statements made in the preliminary acts and defence, and, deciding the case on the evidence given, found the tug and barge alone to blame. The plaintiffs appealed. On the hearing in the Court of Appeal the barge owner obtained leave to call the master of the steamship. Held, by the Court of Appeal, that, on the evidence given, the steamship was to blame for not keeping her course and speed, and that as the tug was also to blame and the barge was not to blame, the plaintiffs, following the decision in *The Devonshire* reported above, were entitled to recover the whole of their damage from the owners of the steamship. Observations by Fletcher Moulton, L.J., as to the binding character of statements made by parties in the preliminary acts filed by them. (Ct. of App.) *The Seacombe* ... 142

5. *Admiralty rule as to division of loss.*—A barge in tow of a tug which had control of the navigation collided with a steamship. The tug and the steamship were both found to blame in the Admiralty Court. The barge was freed from blame. Held, that, as the barge in tow was completely under the control of the tug and did not stand to the latter in the relation of master and servant, the barge was to be considered as an innocent ship in no sense identified with the delinquent tug, and that there was no rule in force in the Court of Admiralty before the passing of the Judicature Act 173 which would prevent the owner of the innocent barge from recovering the whole of the damage which he had sustained from either wrongdoer. Judgment of the Court of Appeal (reported 12 Asp. Mar. Law Cas. 137; 106 L. T. Rep. 241; (1912) P. 21), affirming the judgment of the President, Sir Samuel Evans, set out in the report of the case in the Court of Appeal, affirmed. The appeal dismissed with costs. (H. of L.) *Owners of Steamship Devonshire v. Owners of Barge Leslie and others; The Devonshire* ... 210

See *Collision*, Nos. 2, 4.

6. *Collision between tow and third ship—Towage contract—Third-party notice.*—A tug towing a laden barge brought it into collision with another ship. The barge and her cargo were sunk. The owner of the cargo on the barge brought an action against the tug owners and the steamship owners to recover their damage. The tug owners served a third-party notice on the barge owners claiming an indemnity from the latter for any damage paid or costs incurred in the action against them on the ground that in the requisition under which the towage was performed such an indemnity was implied. Held, that no such indemnity was implied in the requisition, and that the third parties, the barge owners, should be dismissed from the action with costs. (Adm. Div.) *The Devonshire and St. Winifred* ... 314

REPORTS

OF

Cases Argued before and Determined by the Superior Courts

RELATING TO

MARITIME LAW.

Supreme Court of Judicature.

COURT OF APPEAL.

Jan. 30, 31, *Feb.* 1, *and March* 21, 1911.

(Before Vaughan Williams, Farwell, and Kennedy, L JJ.)

Biddell Brothers *v.* E. Clemens Horst and Co. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Sale of goods—C.i.f. contract—Payment—Tender of shipping documents—Sale of Goods Act 1893 (56 & 57 *Vict. c.* 71), ss. 28, 32, 34.

Where a parcel of hops was sold under a c.i.f. contract and for "net cash" and the contract did not provide for "payment against shipping documents":

Held, reversing a decision of Hamilton, J. (reported 103 *L. T. Rep.* 661; 16 *Com. Cas.* 14) *by Vaughan Williams and Farwell, L.JJ., Kennedy, L.J. dissenting, that the buyers were not bound to pay for the hops on tender of the shipping documents, but were entitled to refuse payment until they had been given an opportunity to inspect the parcel.*

Observations on the effect of the law merchant upon the construction of commercial documents.

Appeal by the plaintiffs from a decision of Hamilton, J. in an action tried by him without a jury.

The plaintiffs' claim was for damages in respect of breaches of two agreements.

On the 13th Oct. 1904 the defendants entered into an agreement with Messrs. C. Vaux and Sons Limited (hereinafter called the buyers) whereby the defendants agreed to sell to the buyers 100 bales equal to or better than choice brewing Pacific Coast hops of each of the crops of the years 1905 to 1912 inclusive.

The hops were to be shipped to Sunderland, and the buyers agreed to pay for the said hops at the rate of 90s. sterling per 112lb. c.i.f. to London, Liverpool, or Hull. Terms, net cash.

It was agreed that the contract was to be severable as to each bale, and the agreement contained a clause

That the sellers may consider entire unfulfilled portions of this contract violated by the buyers in case of refusal by them to pay for any hops delivered and accepted hereunder, or if that contract or any part of it is otherwise violated by the buyers. Time of shipment to place of delivery or delivery at place of delivery during the months inclusive of October to March following the harvest of each year's crop.

On the 21st Dec. 1904 the defendants entered into a further agreement with the buyers whereby they sold them fifty bales of British Columbia hops equal to or better than choice brewing Pacific Coast hops of each of the crops of the years 1906 to 1912 inclusive, the material terms of which were identical with those of the former contract.

On the 11th Aug. 1908 Messrs. Vaux and Sons Limited assigned all their rights and benefits under these contracts to the plaintiffs.

On the 29th Jan. 1910 the defendants, by letter of that date, offered to ship to the plaintiffs 150 bales of hops of the 1909 crop according to the agreement, and they alleged that the plaintiffs on the 1st Feb. 1910 required them as a condition precedent to the shipment of the said hops to submit samples of the hops to be so shipped, and said they would only pay for the hops against the examination of each bale. The plaintiffs alleged that they required the defendants to ship and deliver the hops in accordance with the terms of the two agreements, but that the defendants refused to ship or deliver the hops to the plaintiffs, and they claimed 787*l*. 10*s*. damages.

By their defence the defendants alleged that, as the contract was a c.i.f. contract, payment was to be net cash against documents, and they alleged that by reason of the plaintiffs' violation of the entire unfulfilled portion of each of the agreements, the defendants refused, by letter of the 5th Feb. 1910, to perform the agreements further. The defendants counter-claimed 525*l*. damages for the plaintiffs' refusal to take and pay for the 150 bales of the 1909 crop in accordance with the agreement.

The Sale of Goods Act 1893 (56 & 57 Vict. c. 71) provides:

Sect. 28. Unless otherwise agreed, delivery of the goods and payment of the price are concurrent conditions—that is to say, the seller must be ready and willing to give possession of the goods to the buyer in exchange for the price, and the buyer must be ready and willing to pay the price in exchange for possession of the goods.

Sect. 32 (1):

Where, in pursuance of a contract of sale, the seller is authorised or required to send the goods to the buyer,

(*a*) Reported by Edward J. M Chaplin, Esq., Barrister at-Law.

delivery of the goods to a carrier, whether named by the buyer or not, for the purpose of transmission to the buyer is *primâ facie* deemed to be a delivery of the goods to the buyer.

Sect. 34:

(1) Where goods are delivered to the buyer, which he has not previously examined, he is not deemed to have accepted them unless and until he has had a reasonable opportunity of examining them for the purpose of ascertaining whether they are in conformity with the contract.

(2) Unless otherwise agreed, when the seller tenders delivery of goods to the buyer, he is bound, on request, to afford the buyer a reasonable opportunity of examining the goods for the purpose of ascertaining whether they are in conformity with the contract.

Hamilton, J. held that where goods were sold under the terms of a c.i.f. contract and for "net cash" the buyer was bound to pay for the goods on tender of the usual shipping documents, even when the goods had not arrived at their first destination, and he gave judgment for the defendants.

The plaintiffs appealed.

The arguments submitted in the court below were substantially repeated, and the cases there cited were again referred to.

Shearman, K.C. and *Eustace Hills* (*Leslie Scott*, K.C. with them) for the plaintiffs.

Atkin, K.C. and *George Wallace* for the defendants.

Cur. adv. vult.

March 21.—The following judgments were read:—

VAUGHAN WILLIAMS, L.J.—I am going, in the first instance, to deal with this case quite apart from any difficulties which arise on the construction of the peculiar conditions of this particular contract, and as if the words were simply, "the parties of the second part shall pay for the said hops at the rate of 90s. sterling per 112lb., c.i.f., to be shipped to Sunderland. Terms net cash." It was argued before Hamilton, J., on behalf of the defendants, that the terms net cash in a c.i.f. contract necessarily mean "cash against documents," and that a c.i.f. contract is performed by the vendor shipping goods of the description specified in the contract, effecting a proper insurance thereon, and then tendering to the buyer the documents representing the goods—*i.e.*, the indorsed bill of lading, invoice, and policy—and that thereupon the buyer has to pay for the goods whether they have arrived or not. Hamilton, J. affirmed the proposition just set forth as to performance of a c.i.f. contract by the seller, but in no way based his conclusion on the assumption that "Terms net cash" means "cash against documents," and expressed his opinion that the words "Terms net cash" in themselves mean only, in the absence of proof of trade custom or trade meaning, no credit and no deduction by way of discount or rebate or otherwise, which the law would have implied. The judgment of the learned judge is based primarily not on *Ireland and others* v. *Livingston* (1 Asp. Mar. Law Cas. 389 (1872); 27 L. T. Rep. 79; L Rep. 5 H. L. 395, 406), or the opinion of Blackburn, J. therein stated, nor indeed upon any other authorities upon the meaning of the terms "cost, freight, and insurance," but is based upon the proposition that the terms c.i.f. "are now settled and I hope I may add well understood." Hamilton, J. goes on to say: "It is not and cannot be contended but that the seller under a c.i.f. contract has first of all to arrange to put on board a ship at the port of shipment goods of the description contained in the contract; secondly, to arrange for a contract of affreightment under which they will be delivered at the destination contemplated in the contract; thirdly, to arrange for an insurance upon the usual terms current in the trade available for the benefit of the buyer, and he has then got to make out an invoice in the manner described by Blackburn, J. in *Ireland* v. *Livingston*, or in some other manner which will express the same thing; and, finally, he has to tender to the buyer those documents so that the buyer may know what freight he has to pay in order to obtain delivery of the goods, if they are intact, or so that he may recover for the loss of them, if they have gone to the bottom."

The plaintiffs contended that in the absence of words providing for payment against shipping documents unless they accepted a transfer of the bill of lading the price was not to be paid until they had had the opportunity of examining the shipment, which could not be done till after the arrival of the ship in this country. There is no evidence as to the practice or course of business between the parties to the contract of the 21st Dec., which was a contract under which the defendants entered into an agreement to sell a quantity of bales of British Columbian hops equal to or better than choice brewing Pacific Coast hops of each of the crops of the years 1906 to 1912 inclusive, the said hops to be shipped c.i.f. to Sunderland; but I understood from counsel for the defendants that the policies of insurance were taken out in the name of the defendants, and that the bills of lading were given out by the ship in the name of the defendants. But as in the first instance I dealt with a c.i.f. contract independently of special clauses in this contract, so I propose to deal with this case independently of *jus disponendi*, the risk under the policy of insurance, or the retention by the defendants of possession under bill of lading until indorsed in exchange for the price, and seek only to determine what is the obligation of payment under a c.i.f. contract which does not state when or under what conditions the payment of the price is to be made and which does not contain a provision that payment of the price is to be made against shipping documents. Such a provision is admittedly a very usual provision, but the mere fact that it is a usual provision does not justify the reading of such a provision into the contract of sale and purchase, but rather leads to an opposite conclusion in a case where you do not find this form of words. The observations of Martin and Parke, B B, in giving their opinions in answer to questions put to the judges by the House of Lords in *Gibson* v. *Small* (1852, 4 H. L. Cas. 353), indicate the view that even in the case of a commercial document the court generally should not read into it a condition which is not expressed unless on the basis of a custom or understanding either proved in evidence long notoriously prevalent and adopted and acted upon in courts of law, in which latter case courts of law would take judicial notice of it without requiring any averment or proof in the particular case, and act upon it and apply it in precisely the

same manner as a rule of law. The case of *Gibson* v. *Small* (*sup.*) was an action on a policy, and the question was whether by the law of England, in a time policy effected on a vessel then at sea, there was an implied condition that the ship should be seaworthy on the day on which the policy is intended to attach. It was held that there was no such implied condition. Martin, B., in his answer to questions put by the House of Lords, says (at p. 370): "The question, therefore, really is, 'Has the existence of such a condition or warranty been notoriously prevalent amongst persons engaged in the business of marine insurance?' and for the present purpose it must be shown that the courts of law have adopted and acted upon the principle of it." Parke, B. says (at p. 396): "The whole of the law upon this subject depends upon one question, whether there is any sufficiently distinct and clear authority in the common law for annexing any condition of this sort to a policy of assurance for time. The policy is a written instrument, which contains a number of express stipulations, but none on the subject of seaworthiness. . . . If, then, there is any such warranty or condition, it must be added to the written policy, as an incident annexed to the contract; and that, either by the usage of trade, or by the common law of the land; from the nature of the policy itself, there is no other way in which it can be added. The custom of trade, which is a matter of evidence, may be used to annex incidents to all written contracts, commercial or agricultural, and others, which do not by their terms exclude it, upon the presumption that the parties have contracted with reference to such usage, if it is applicable. This is explained in the case of *Hutton* v. *Warren* (1836, 1 M. & W. 475). But in this case there is no evidence stated on the record of such usage; and none such can be supposed to exist, unless there is evidence of it. Such a condition may, however, be annexed as a necessary incident by the common law. The simple question is, Does the common law annex any such incident? An examination of the authorities, judicial decisions, and dicta, and of text-writers on the common law, from which we derive our knowledge of that law, leaves us without any satisfactory proof that the same implied warranty or condition as to seaworthiness at the commencement of the risk, which confessedly is annexed to voyage policies, or any warranty or condition as to seaworthiness is annexed to time policies." The examination by Lord Campbell in the House of Lords and by Parke, B. in his answer of the grounds on which the Court of Queen's Bench affirmed the existence of an implied warranty of seaworthiness in the case of a time policy from a supposition entertained by the judges of the Queen's Bench of the opinion of all the lawyers of modern times, or from the *obiter dicta* of some judges, show how little judges ought to imply conditions in written commercial contracts from such materials. The origin of the warranty of seaworthiness in the case of a voyage policy was an implication from the nature of the contract, and in the case of *Gibson* v. *Small* (*sup.*) it was sought to argue that a similar implication ought to be made in the case of a time policy. The House of Lords recognised that such a condition might be recognised in the case of a contract, and that it had been so recognised in the case of a voyage policy, but refused to make such an implication in the case of a time policy.

It is said that in the case of a c.i.f. contract an implication ought to be made that payment must be made against tender of shipping documents, and this whether the ship and goods have arrived or not. It is suggested as one of the reasons why this implication should be made that the goods under a c.i.f. contract are carried at the risk of the buyer and must be paid for whether the goods are lost at sea or not, because the policy is taken out on behalf of and in the interest of the buyer. I do not think that any such implication ought to be made, seeing that cash against documents is a term which is frequently included in a c.i.f. contract by express words, and, moreover, because I do not think that the admitted fact that an object of the c.i.f. policy is to enable the goods at sea to be commercially dealt with before the ship arrives compels the buyer to take advantage of this opportunity if for any reason he is not disposed to do so. There is no evidence in the present case of any law merchant or custom which reads such words as payment to be made against shipping documents or words to that effect into the contract. The judgment of Hamilton, J. does not rest on any such basis; what he says is that, because it is now well settled and well understood that the meaning of the terms "cost, freight, and insurance" is that, the seller having tendered the bill of lading, invoice, and policy which complete the delivery of the goods in accordance with the agreement in the contract, the buyer is bound to pay the price of the goods against shipping documents before the arrival of the goods in this country. I gather from the words of the learned judge when dealing with the plaintiffs' case (16 Com. Cas. 17), "A judge, at any rate when he takes the Commercial List, aspires to be both a man of business and a lawyer, but if he cannot be both he must be content to be as nearly a lawyer as he can, and I think the law is as I have laid it down with regard to the plaintiffs' claim," that his decision is based upon his personal knowledge in the Commercial Court. This, of course, is a statement of great weight which must impress everyone, but I do not think we ought to allow this to be the basis of a decision between litigants in an action in a case where there is no evidence whatsoever either as to local usage in England or as to such general usage in England or foreign countries as is a condition of the admission and adoption as part of the law merchant of England of any legal proposition outside the common law. Nor do I think that Bowen, L.J. in *Sanders* v. *Maclean* (1883, 49 L. T. Rep. 462; 11 Q. B. Div. 327), when he made the observation on p. 343 of the Q. B. Div. report, meant that the personal knowledge of an individual judge could suffice for the introduction into the law merchant of England of any proposition outside the common law. The law merchant may, no doubt, govern even the construction of a written commercial document, but in this case, as indeed in every case, there must be evidence in fact of the commercial usage before there can be admission or adoption. When it is said that mercantile law is acted upon by the courts without proof of usage, this means after it has in earlier cases been proved and adopted.

I am not forgetting that in some cases classic legal authorities have been recognised as sufficient evidence of mercantile usage, especially international usage. But even then the authority is in terms recognised as sufficient evidence before the courts give judgment recognising the usage; but no such evidence was referred to in this case. It seems clear on the authorities that the law merchant must be proved as a fact in the sense that the mercantile usage which is recognised as part of the law merchant must be proved, and the fact must, to use the words of Wilmot, J. in *Edie* v. *East India Company* (1761, 1 W. Bl. 295, 299) be reiterated. Once thus recognised the usage becomes part of the law of England and not a mere local usage or custom. Again, Lord Campbell in the House of Lords, in *Brandao* v. *Barnett* (1846, 12 Cl. & F. 787, 805), says: "When a general usage has been judicially ascertained and established, it becomes a part of the law merchant which courts of justice are bound to know and recognise. Such has been the invariable understanding and practice in Westminster Hall for a great many years; there is no decision or dictum to the contrary, and justice could not be administered if evidence were required to be given *toties quoties* to support such usages, and issue might be joined upon them in each particular case."

But in the present case no decision was cited in which the mercantile law relied on had been judicially ascertained and established, and no evidence was given in support of the usage of merchants and shipowners to treat a c.i.f. contract as meaning that cash must be paid against documents whether or not the contract in words makes such a provision. On this point I have only to add that I do not think that the judgment of Kennedy, L.J. (then Kennedy, J.) in *Polenghi* v. *Dried Milk Company* (10 Com. Cas. 42) is in any way inconsistent with the conclusion I have arrived at. On the contrary, it rather affirms the view. Having arrived at this conclusion, it is not necessary that I should give judgment on the difficultiesof construction which arise in this case, nor that I should deal with the argument that the construction put by Hamilton, J. on the c.i.f. contract is inconsistent with the provisions of the Sale of Goods Act 1893, and in particular sect. 28. As to sect. 28 I am not satisfied that there is anything in the present contract which excludes its operation. As to the construction of the contract, I certainly think that the two clauses referred to by Hamilton, J., the first of which contains the words, "The sellers may consider entire unfulfilled portion of this contract violated by the buyers in case of refusal by them to pay for any hops delivered and accepted hereunder," and the second of which contains the words, "Time of shipment to place of delivery or delivery at place of delivery during the months (inclusive) of October to March following the harvest of each year's crop," and the third clause, "If for any reason" the buyers "shall be dissatisfied with or object to all or any part of any lot of hops delivered hereunder, the" sellers "may within thirty days after receipt of written notice thereof ship or deliver other choice hops in place of those objected to," taken together make it very difficult to construe this c.i.f. contract as containing an implied condition for payment of "cash against documents." The appeal therefore must be allowed, and judgment entered for the plaintiffs. As to the amount, I think we have jurisdiction to send the inquiry as to amount to be dealt with by an official referee. (*a*) I think I ought to add that I respectfully differ entirely from the views expressed by Hamilton, J. as to the principle laid down by him when dealing with the counter-claim for ascertaining the loss.

Farwell, L.J.—The first question in this case is whether a contract for hops "c.i.f. to London, terms net cash," but without the words "against documents," means that the price is to be paid against documents, or after the buyer has had the opportunity of inspecting the goods. Hamilton, J. has held, and I agree with him, that the words "terms net cash" add nothing to the contract to pay: they mean only "no credit and no deductions by way of discount or otherwise." The neat question, therefore, remains, whether the fact that the contract is c.i.f. is by itself sufficient to import "payment against documents," or, in other words, whether a contract which does not contain those words is to be read as a contract which does contain them. Now, apart from rectification, with which we are not concerned in this case, there are three ways only in which a provision not expressed in a written document can be added to it. The first is where the words used are elliptical; the second is usage, including in that term the law merchant, whereby, under certain limitations, terms may be added to or phrases may be explained and construed in a written document; and the third is necessary implication as explained in *The Moorcock* (6 Asp Mar. Law Cas. 357, 373 (1889); 60 L. T. Rep. 655; 14 Prob. Div. 64) and *Hamlyn and Co.* v. *Wood and Co.* (65 L. T. Rep. 287; (1891) 2 Q. B. 488, 491), where Lord Esher says: "The court has no right to imply in a written contract any such stipulation, unless, on considering the terms of the contract in a reasonable and business manner, an implication necessarily arises that the parties must have intended that the suggested stipulation should exist. It is not enough to say that it would be a reasonable thing to make such an implication. It must be a necessary implication in the sense that I have mentioned." The words of the contract here—namely, the parties of the second part shall pay for the said hops at the rate of ninety (90) shillings sterling per 112lb. c.i.f. to London"—are obviously elliptical so far as "c.i.f." is concerned, and on construction mean that the 90s. is to include cost, insurance, and freight, which are to be provided by the seller on behalf of the buyer, but they express no time or term of payment: payment is dealt with in the next sentence—"terms net cash"—and here is the natural and usual place to add "against documents" or the like, if the parties so intend. But Hamilton, J. himself says that "net cash" does not mean "against documents," and I can find nothing in the whole of the words read together, or in any of them read separately, from which any such meaning can be extracted on any rules of construction known to the law. It is, in my opinion, equally impossible to add any term by usage. Usage must be proved by evidence, or must have been so often proved as to be part of

(*a*) By agreement the court at a later date itself assessed the amount of damages recoverable by the plaintiffs.

the law merchant, and to be the subject of judicial knowledge: (see *Gibson* v. *Small*, 4 H. L. Cas. 353), but here no evidence was tendered, nor was it suggested, that there was any usage or law merchant. It is common ground that in the majority of c.i.f. contracts the words "cash" or "bills" or the like "against documents" are expressly inserted, and this very fact is almost conclusive that there is no usage or law merchant, for usage implies a term outside the written document, and is, *primâ facie*, negatived by finding an express clause usually inserted in written documents of the class in question. The clauses usually inserted in a particular form of written contract are quite distinct from clauses not so inserted but added by usage or law merchant: the usage or law merchant dispenses with the express insertion. The omission from a contract of a clause usually inserted in contracts of that class is evidence of the intention of the parties that such clause shall not apply, not that it shall: nor can the court infer from the express insertion of a particular clause in most of the contracts of a particular class any usage justifying the addition of such a clause to a contract of that class in which it is not inserted. If Hamilton, J. had ruled that there was any usage so often proved that he had judicial knowledge of its existence, to the effect that a c.i.f. contract always implied "cash against documents," whether so expressed or not, I should probably have deferred to his great knowledge and experience in commercial cases, but he has not done so, nor has counsel suggested that any such usage has ever been proved, and they could hardly be ignorant of its existence if it had any; in the absence of any such usage the judge cannot *mero motu* add to the law merchant, as to which Foster, J. says in *Edie* v. *East India Company* (*sup.*): "Much has been said about the custom of merchants. But the custom of merchants, or law of merchants, is the law of the kingdom and is part of the common law. People do not sufficiently distinguish between customs of different sorts. The true distinction is between general customs (which are part of the common law) and local customs (which are not so). This custom of merchants is the general law of the kingdom, part of the common law"; and Wilmot, J. says: "The custom of merchants is part of the law of England; and courts of law must take notice of it, as such. There may indeed be some questions depending upon customs amongst merchants, where, if there be a doubt about the custom, it may be fit and proper to take the opinion of merchants thereupon; yet that is only where the law remains doubtful. And even there the custom must be proved by facts, not by opinion only; and it must also be subject to the control of law." Indeed in the court below the respondents' counsel argued on the construction of the words "net cash," and did not suggest that "c.i.f." could be construed as including "payment against documents." This reticence is important when the question is as to the existence of usage—a matter that could hardly be unknown to the counsel of experience who argued this case. There remains, therefore, only the third ground. At common law the delivery of goods by the seller and acceptance and payment by the buyer are regarded as concurrent acts, the buyer being entitled to a reasonable opportunity for inspection before he accepts and pays. It is thus expressed by Rolfe, B. in *Startup* v. *Macdonald* (1843, 6 Man. & G. 593, 610): "Now, it may be observed, that in every contract by which a party binds himself to deliver goods, or pay money, to another, he in fact engages to do an act which he cannot completely perform without the concurrence of the party to whom the delivery or the payment is to be made. Without acceptance on the part of him who is to receive, the act of him who is to deliver or to pay can amount only to a tender. But the law considers a party who has entered into a contract to deliver goods or pay money to another as having, substantially, performed it, if he has tendered the goods or money to the party to whom the delivery or payment was to be made, provided only that the tender has been made under such circumstances that the party to whom it has been made has had a reasonable opportunity of examining the goods, or the money, tendered in order to ascertain that the thing tendered really was what it purported to be. Indeed without such an opportunity an offer to deliver or pay does not amount to a tender." The general rule, therefore, is payment against inspected goods; and this is simple enough where both parties and the goods are together in the same place. But when goods are shipped from across seas the contract becomes complicated by the fact that the delivery, although not complete until acceptance, commences on a c.i.f. contract on shipment, and the property passes, subject to certain qualifications not necessary now to consider, when the goods are shipped; if the seller fails to ship, or ships goods not according to contract, the breach by him is committed there and then: (*Parker* v. *Schuller and another*, 17 Times L. Rep. 299; *Crozier, Stephens, and Co.* v. *Auerbach*, 99 L. T. Rep. 225; (1908) 2 K. B. 161). But the buyer's acceptance and duty to pay is not on shipment. The c.i.f. contract usually provides for payment against documents, a practice convenient for both parties, as the bill of lading enables financial dealings on the credit of the goods to be carried out before the arrival of the goods; but no one has ever suggested that on a c.i.f. contract, silent as to time of payment, the buyer is bound to pay on shipment of the goods. The result must therefore be that the ordinary rule of law is not displaced—namely, payment against examined goods. It is said that this cannot be so, because under the contract in common form "c.i.f. payment against documents" the buyer has to unload and warehouse the goods at his own expense; whereas the seller would have to bear such expense if he has to afford the buyer an opportunity of inspection before payment can be required. But that is only to state the different consequences flowing from two contracts expressed in different terms: there is no such necessity for any implication as to justify the court in altering the usual incidence of burdens under a contract silent as to this particular burden; and actual physical necessity is not suggested, and would indeed be disproved by the fact that in this very case such inspection before payment has been given by the sellers in one case at any rate during the existence of this contract. I do not suggest that the conduct of the parties under the contract is admissible as evidence of the construction of the contract; I think that it is not—although it would be so in a suit to

rectify on the ground of common error—but it is admissible to show that there is in fact no such impossibility as to render the contract impossible of performance without the addition of the terms suggested. In my opinion Lord Blackburn's statement in *Ireland* v. *Livingston* (*sup.*) throws no light at all on the question before us, and I cannot follow the reasoning of Hamilton, J. in this case on pp. 14 and 15 of the report in 16 Com. Cas. I will assume that as a matter of usage the seller is bound to tender the bill of lading to the buyer when it arrives, and, if the buyer accepts it, he must, of course, pay for the goods on such acceptance, because the delivery of the bill of lading is a symbolical delivery of the goods, and, if the goods are accepted, the right of antecedent (though not of subsequent) inspection before payment is thereby waived, just as it would be in the case of acceptance of the goods themselves without inspection. But I fail to follow the consequence said by the learned judge to ensue. The duty on A. to tender to B. a document before he can require payment does not impose on B. a duty to accept such document as equivalent to goods, if he has a right to inspect such goods before accepting and paying for them. B. has has the option of choosing between two alternative rights: he may accept symbolical delivery or actual delivery, but in the absence of express contract it is at his option, not at the seller's. In the great majority of cases, it suits both buyer and seller better to give and accept symbolical delivery by the bill of lading, and the existence and exercise of this option explains why in cases where the c.i.f. contract does not contain the words "cash against documents," or the like, the contract is in fact often so carried out. But this is no evidence of usage for the buyer to accept in all cases, or, in other words, to waive the option. If the goods were lost at sea, the option would at once cease because inspection would have been rendered impossible, and the buyer would be bound to pay against documents. Then it is said that *Parker* v. *Schuller and another* (*sup.*) is an authority against the appellants. In my opinion, that case has no bearing on the present. The question there related solely to the duty of the seller and the place where the performance of the contract by him was to be carried out. We are here concerned with the duty of the buyer. No one doubts that the seller's breach of a c.i.f. contract arises on failure to ship, but no one suggests that the buyer's duty to pay arises on such shipment; his duty depends on the terms of the contract, and never came into question in *Parker* v. *Schuller and another* (*sup.*) The basis of my judgment is that the buyer has a common law right (now embodied in the Sale of Goods Act) to have inspected goods against payment, and this cannot be taken away from him without some contract expressed or implied, and here I can find neither. In this particular, and very ill-drawn, contract there are words, especially in the clause referring to refusal to pay "for any hops de ivered and accepted hereunder," which bear out the conclusions at which I have arrived, but I prefer to rest my judgment on the general grounds above stated. It is said that this decision will upset mercantile practice, but I fail to see any difficulty in parties who desire it adding against documents" to their contracts—a course hitherto adopted in the majority of c.i.f. contracts. In my opinion the appeal should be allowed and judgment entered for the plaintiffs.

KENNEDY, L J.—This is an appeal of the plaintiffs in the action against the judgment of Hamilton, J., sitting as a judge without a jury for the trial of commercial cases in the King's Bench Division. The action before him comprised a claim of the plaintiffs for damages for breaches of two contracts, partly typewritten and partly printed, and a counter-claim of the defendants for breaches of the same contracts. So far as regards the claim of the plaintiffs which Hamilton, J. has dismissed, his judgment was, in my opinion, right, and, but for the contrary opinion of the other members of this court, from whom I have the misfortune to differ, I should have ventured to think the case a reasonably simple one. The material terms of the two contracts, with the conflicting contentions of the litigants thereon, are carefully stated by Hamilton, J. in the opening portion of his judgment, reported 103 L. T. Rep. 661; (1911) 1 K. B. 214; 16 Com. Cas. 8, 14, and it is needless for me to repeat them here at length. It is sufficient, in order to make clear the reasoning of my judgment, to summarise the statement of the learned judge. Each of the contracts in question is a contract for the sale of foreign hops of specified quality, to be shipped by the defendants, the sellers, from the Pacific coast to Sunderland, and to be paid for by the plaintiffs, the purchasers, at the rate of 90s. sterling per 112lb. c.i.f. to London, Liverpool, or Hull, terms net cash. No point arises, as the learned judge states, upon the question of the calculation of freight being to London, Liverpool, or Hull while the shipment was to Sunderland. Possibly the explanation of this arrangement is that Messrs. C. Vaux and Sons Limited, the original purchasers, who assigned their interest under the contracts to the plaintiffs, carried on business at Sunderland. Anyhow, the fact is, as it has been treated throughout the argument, immaterial. The dispute between the parties is as to the conditions under which, according to the true interpretation of these contracts, the price is to be paid. The plaintiffs' case is that the price was not to be paid until they had been given an opportunity of inspecting the shipment, which could not be given until after its arrival in this country. The defendants contend that the plaintiffs' obligation was to pay for the hops, whether they arrived or not, against tender of the shipping documents. I agree with Hamilton, J., and indeed it was not disputed on the argument before us, that the plaintiffs in the correspondence clearly expressed their intention not to take delivery of the 1909 shipment (which is that to which this litigation is confined) except upon the terms of payment for which they now contend; and, therefore, if they are wrong in that contention, they relieved the defendants from the obligation to tender, and they have themselves broken these contracts so far as regards this particular shipment. Before litigation began the defendants, for the sake of peace, offered as a matter of grace to make the plaintiffs the reasonable and businesslike concession of attaching to the shipping documents certificates of quality of the Merchants' Exchange at San Francisco, or

other competent authority. But this offer was rejected by the plaintiffs, and each of the parties is now standing upon his rights, as he alleges, under the documents which contain the contracts. The court, therefore, has in the present case to decide what are the true conditions of the right of the seller to payment under a c.i.f. contract, if that commercial contract is to be performed strictly according to its tenor. Hamilton, J. has unhesitatingly decided in favour of the defendants. In his opinion it was unnecessary to refer to authorities as to the meaning of the terms "cost, freight, and insurance," because those terms are now well settled and, as he hoped he might add, well understood. But he has given a reasoned judgment, to which I can discover no answer in the argument of the appellants' counsel, which was for all practical purposes the same as that which appears from the report of the case to have been put forward by them unsucessfully in the court below. But for the differing opinion of Vaughan Williams and Farwell, L.JJ., which, of course, raises in my mind a doubt of the correctness of my own, I should have been content to adopt that judgment as it stands. But, in the circumstances, and believing, as I do, that the matter of this appeal affects a large and important branch of import business, it is, I think, right that I should deal with the case in my own way although this will involve a much longer judgment than I should otherwise have thought necessary or justifiable. The plaintiffs'—that is, the appellants'—argument apart from a reference to certain subordinate and subsidiary printed clauses, to which I shall advert after dealing with the main question, hangs upon considerations arising from (a) the absence after the words "net cash" of such words as "against documents," or "in exchange for documents"; and (b) the provisions of sect. 28 and sect. 34 of the Sale of Goods Act 1893 in respect of the buyer's right to have delivery in exchange for the price and to have an opportunity to examine goods tendered for acceptance. In regard to the wording of the contract, I do not think that the comment that the terms might have been more fully expressed helps one way or the other as to the interpretation of the contract as it stands. All that can be said is that, the condition of payment not being expressly stated except in so far as the words "net cash" negative payment by acceptance and the allowance of deduction or discount, it must be settled by the interpretation of the document according to established principles of mercantile law. If any implication is necessary, the law, as stated by Bowen, L.J. in his judgment in *The Moorcock* (*sup.*), desires to give such business efficacy to the transaction as must have been intended, at all events, by both parties, who are business men. This is not a case, as it seems to me, of a contract the terms of which present ambiguity or conflict. There is no contrariety between "cost, freight, and insurance, net cash," and "cost, freight, and insurance, net cash against documents." Both the fuller and the shorter form are in every-day use; examples of both can be found within the covers of modern law reports (see, for example, *Parker* v. *Schuller and another*, *sup.*, and *Sanders* v. *MacLean*, *sup.*), and, although it is probable, I should think—and the present litigation certainly vindicates its expediency—that the fuller form is the more common, it has, so far as I am aware, never before this case been suggested that a contract "cost, freight, and insurance, net cash," or a contract "cost, freight, and insurance, payment by acceptance," may not imply "against documents" in each case. The well-known passage, in the opinion of Lord Blackburn (then Blackburn, J.), in *Ireland* v. *Livingston* (*sup.*), referred to by Hamilton, J., in which a great master of the commercial law stated the course of business in the performance of a cost, freight, and insurance contract as very usual and well understood, plainly cannot be cited for the respondents as an actual decision in their favour, for the statement itself is *obiter*, and the particular contract in *Ireland* v. *Livingston* (*sup.*) contained the words "payment by acceptance on receiving shipping documents." But Lord Blackburn's opinion was delivered in the House of Lords forty years ago, and, speaking for myself, I do not recollect hearing it suggested, until I listened to the argument of the plaintiffs' counsel in this case, that the value of that opinion as setting forth the relative rights and duties of seller and buyer in the ordinary course of procedure under a c.i.f. contract wholly depended upon the insertion of "against (or "in exchange for") shipping documents" after the statement of the mode of payment by cash or by acceptance, as the case may be. Let us, however, leave out of sight altogether for the present all question of usage or judicial recognition of usage. The application of the principles and rules of the common law, now embodied in the Sale of Goods Act 1893, to the business transaction embodied in the c.i.f. contract appears to me to be decisive of the issue between these parties. Let us see, step by step, how according to those principles and rules the transaction specified in such a c.i.f. contract as that before us is, and, I think, must be, carried out in order to fulfil its terms. At the port of shipment—in this case San Francisco—the vendor ships the goods intended for the purchaser under the contract. Under the Sale of Goods Act, sect. 18, by such shipment the goods are appropriated by the vendor to the fulfilment of the contract, and, by virtue of sect. 32, the delivery of the goods to the carrier—whether named by the purchaser or not—for the purpose of transmission to the purchaser is *primâ facie* to be deemed to be a delivery of the goods to the purchaser. Two further legal results arise out of the shipment. The goods are at the risk of the purchaser, against which he has protected himself by the stipulation in his c.i.f. contract that the vendor shall, at his own cost, provide him with a proper policy of marine insurance intended to protect the buyer's interest, and available for his use, if the goods should be lost in transit; and the property in the goods has passed to the purchaser, either conditionally or unconditionally. It passes conditionally where the bill of lading for the goods, for the purpose of better securing payment of the price, is made out in favour of the vendor or his agent or representative (see the judgments of Bramwell and Cotton, L.JJ. in *Mirabita* v. *Imperial Ottoman Bank* (38 L. T. Rep. 597; 1878, 3 Ex. Div. 164). It passes unconditionally where the bill of lading is made out in favour of the purchaser or his agent or representative as consignee. But the vendor, in the absence of special agreement, is not yet in a position to demand payment from the purchaser;

his delivery of the goods to the carrier is according to the express terms of sect. 32 only "*prima facie* deemed to be a delivery to the buyer," and under sect. 28 of the Sale of Goods Act as under the common law (an exposition of which will be found in the judgments of the members of the Exchequer Chamber in the old case of *Startup* v. *Macdonald* (*sup.*) a tender of delivery entitling the vendor to payment of the price must, in the absence of contractual stipulation to the contrary, be a tender of possession. How is such a tender to be made of goods afloat under a c.i.f. contract? By tender of the bill of lading, accompanied in case the goods have been lost in transit by the policy of insurance. The bill of lading in law and in fact represents the goods. Possession of the bill of lading places the goods at the disposal of the purchaser. "A cargo at sea while in the hands of the carrier is necessarily incapable of physical delivery. During this period of transit and voyage, the bill of lading by the law merchant is universally recognised as its symbol, and the indorsement and delivery of the bill of lading operates as a symbolical delivery of the cargo. Property in the goods passes by such indorsement and delivery of the bill of lading whenever it is the intention of the parties that the property should pass, just as under similar circumstances the property would pass by an actual delivery of the goods. And for the purpose of passing such property in the goods and completing the title of the indorsee to full possession thereof, the bill of lading, until complete delivery of the cargo has been made on shore to someone rightfully claiming under it, remains in force as a symbol, and carries with it not only the full ownership of the goods, but also all rights created by the contract of carriage between the shipper and the shipowner. It is a key which in the hands of a rightful owner is intended to unlock the door of the warehouse, floating or fixed, in which the goods may chance to be." That is the language of Bowen, L.J. in *Sanders* v. *MacLean* (*sup.*). The meaning of "delivery" under the Sale of Goods Act is defined by sect. 62 to be "voluntary transfer of possession from one person to another." Such delivery, as the learned draftsman of the Act and its editor remarks in his note to this section, may be either actual or constructive; and, as Bowen, L.J. has pronounced, in the case of sea-borne goods the delivery of the bill of lading operates as a symbolical delivery of goods. But then I understand it to be objected on behalf of the plaintiffs: "Granted that the purchaser might, if he pleased, take this constructive delivery and pay against it the price of the goods, what is there in the 'cost, freight, and insurance' contract which compels him to do so? Why may he not insist on an option of waiting for a tender of delivery of the goods themselves after having had an opportunity of examining them after their arrival?' There are, I think, several sufficient answers to such a proposition. In the first place, an option of a time of payment is not a term which can be inferred, where the contract itself is silent. So far as I am aware, there is no authority for the inference of an option as to times of payment to be found either in the law books or in the Sale of Goods Act. Secondly, if there is a duty on the vendor to tender the bill of lading, there must, it seems to me, be a corresponding duty on the part of the purchaser to pay when such tender is made. Very relevant on this point is the language of Brett, L.J. in his judgment in *Sanders* v. *MacLean* (*sup.*), which applies to this class of contract the general law expounded by Bowen, L.J. in *The Moorcock* (*sup.*). He said: "The stipulations which are inferred in mercantile contracts are always that the party will do what is mercantilely reasonable"; and if it be the duty implied in the c.i.f. contract, as held by Brett, L.J. in that case, that the vendor shall make every reasonable exertion to send forward and tender the bill of lading as soon as possible after he has destined the cargo to the particular vendee, it is, I venture to think, "mercantilely reasonable" that the purchaser should be held bound to make the agreed payment when delivery of the goods is constructively tendered to him by the tender of the bill of lading, either drawn originally in his favour or indorsed to him, and accompanied, in case of loss, by the policy of insurance. For thereunder, as the bill of lading with its accompanying documents come forward by mail, the purchaser obtains the privilege and absolute power of profitably dealing with the goods days or weeks or, perhaps, in the case of shipments from a distant port, months, before the arrival of the goods themselves. This is, indeed, the essential and peculiar advantage which the buyer of imported goods intends to secure by a c.i.f. contract. But, in truth, the duty of the purchasers to pay against the shipping documents, under such a contract as the present, does not need the application of that doctrine of the inference in mercantile contracts that each party will do what is "mercantilely reasonable," for which we have the great authority of Lord Esher. The plaintiffs' assertion of the right under a cost-freight, and insurance contract to withhold payment until delivery of the goods themselves and until after an opportunity of examining them cannot possibly be effectuated except in one or two ways. Landing and delivery can rightfully be given by the shipowner only to the holder of the bill of lading. Therefore, if the plaintiffs' contention is right, one of two things must happen. Either the seller must surrender to the purchaser the bill of lading, whereunder the delivery can be obtained, without receiving payment, which, as the bill of lading carries with it an absolute power of disposition, is in the absence of a special agreement in the contract of sale so unreasonable as to be absurd; or, alternatively, the vendor must himself retain the bill of lading, himself land and take delivery of the goods, and himself store the goods on quay (if the rules of the port permit), or warehouse the goods for such time as may elapse before the purchaser has an opportunity of examining them. But this involves a manifest violation of the express terms of the contract, "90s. per cwt., cost, freight, and insurance." The parties have in terms agreed that for the buyer's benefit the price shall include freight and insurance, and for his benefit nothing beyond freight and insurance. But if the plaintiffs' contention were to prevail, the vendor must be saddled with the further payment of those charges at the port of discharge which *ex necessitate rei* would be added to the freight and insurance premium which alone he has by the terms of the contract undertaken to defray. Finally, let me test the soundness of the plaintiffs' contention that according to the

true meaning of this contract their obligation to pay arises only when delivery of the goods has been tendered to them after they have had an opportunity of examination, in this way: Suppose the goods to have been shipped, the bill of lading taken, and the insurance for the benefit of the buyer duly effected by the seller, as expressly stipulated in the contract. Suppose the goods, then, during the ocean transit to have been lost by the perils of the sea. The vendor tenders the bill of lading with the insurance policy and the other shipping documents (if any) to the purchaser, to whom from the moment of shipment the property has passed and at whose risk, covered by the insurance, the goods were at the time of loss. Is it arguable that the purchaser could be heard to say, "I will not pay because I cannot have the delivery of and an examination of the goods"? But it is just this which is necessarily involved in the contention of these plaintiffs. The seller's answer, and I think conclusive answer, is, "You have the bill of lading and the policy of insurance." It is noticeable that in the course of the argument in *Tregelles* v. *Sewell* (1862 7 H. & N. 579) Martin, B. observes: "The purchaser was to have a policy of insurance which is usually considered as equivalent to the goods," and earlier in the same argument Wilde, B., at p. 578, asked: "If the meaning is 'to be delivered in Hamburg' what necessity is there for insurance?" The contract in that case was a contract in the fuller form—namely, against documents—but it does not seem to me that that affects the value of those observations as to the relative rights of the buyer and seller.

I have only to add as to this, the main question in the present case, a few words in regard to sects. 28 and 34 of the Sale of Goods Act. As I have already said, my own view as to sect. 28 is that the section is satisfied by the readiness and willingness of the seller to give possession of the bill of lading. I am, however, far from saying that the view which is suggested in the course of Hamilton, J.'s judgment—namely, that when the parties have entered into a c.i.f. contract they have "otherwise agreed"—is not one which could be supported, as I hold that a similar view is the true view also in regard to sect. 34, sub-sect. 2. As to sect. 34, sub-sect. 1, there is no difficulty. No one suggests that the plaintiffs, if they pay against documents, become thereby precluded from rejecting the goods if on examination after their arrival they are found to be not goods in accordance with the contract, or from recovering damages for breach of contract if they prefer that course. So far I have tested the validity of the appellants' contention that under a simple c.i.f. contract the seller is entitled to payment only against delivery of the goods themselves and after examination of the goods, altogether apart from authority, by applying established principles and rules of law to a c.i.f. contract so as to give it in Bowen, L.J.'s language such efficacy as must have been intended by the parties to it as business men. But, in truth, the judgment of the Court of Appeal (Smith, M.R., and Collins and Romer, L.JJ.) in *Parker* v. *Schuller and another* (*sup.*) cannot, in my judgment, be reconciled with this contention of the present appellants. In *Parker* v. *Schuller and another* (*sup.*) the case came before the court on an appeal from the judge in chambers who had affirmed an order giving the plaintiffs leave under Order XI., r. 1 (*e*), to issue a writ and serve the defendant to an action in contract, who was a foreigner out of the jurisdiction, with notice of the writ. The validity of the judge's order depended, according to the terms of Order XI., r. 1 (*e*), upon the existence of a breach, or alleged breach, within the jurisdiction. The contract was in every essential point identical with the contract in the present case. It was a simple c.i.f. contract, without mention of payment against documents, the goods sold being goods to be shipped from Germany to Liverpool. The goods had not been shipped. The breach alleged by the plaintiffs in the indorsement upon the writ of summons and in the affidavit in support of their application was the non-delivery of the goods themselves to them in Liverpool. The judge in chambers, Farwell, J., who heard the application *ex parte* in the first instance, and Lawrance, J., who affirmed his order, had held that the non-delivery of the goods in Liverpool did, as the plaintiffs contended, constitute a breach of the contract within the jurisdiction. The Court of Appeal reversed their decision, holding that this non-delivery of the goods themselves upon which the plaintiffs relied in their writ and the affidavit in support of their application did not constitute a breach of the c.i.f. contract; and there is, I think, a noteworthy confirmation of Hamilton, J.'s opinion that the law on this point has long been treated as well settled in the fact that Mr. Horridge (now Horridge, J.), the counsel for the plaintiffs in *Parker* v. *Schuller and another* (*sup.*), expressly declined even to argue the point upon which his clients had obtained their order from the judges appealed from and upon which the plaintiffs in the present case base their appeal to this court, but endeavoured to uphold that order upon the ground, not relied upon in the writ or in the affidavit, that under the c.i.f. contract the seller is bound to deliver to buyer the bill of lading and the policy of insurance with the other shipping documents (if any), and that their unquestionable failure to do this constituted a breach within the jurisdiction which would justify the grant to his clients of the order for service of notice of the writ which they had obtained. According to the judgment of Hamilton, J., and my own also, Mr. Horridge's argument as to the obligation of the seller under a c.i.f. contract, not merely to ship the goods at the foreign port, but to deliver the shipping documents to his buyer here, was well founded, and the judgments of the Court of Appeal in *Parker* v. *Schuller and another* (*sup.*) contain nothing in conflict with that view. But all the members of the court declined to deal with any defence of the order appealed against which rested upon a breach other than that which was put forward in the plaintiff's writ of summons and affidavit; and, being clearly of opinion that under a c.i.f. contract there was no obligation on the seller to deliver the goods themselves in this country, they allowed the appeal. The case is so important that I think it is my duty to quote one passage from the judgment of the Master of the Rolls at p. 300 of the report in the Times L. Rep.: "Upon the appeal the alleged contract to deliver the goods at Liverpool was dropped, the contract being 'c.i.f. Liverpool,' and it was not argued that the contract was to deliver the goods at Liverpool. That was abandoned. The plaintiff was therefore wrong in his

application. It was not contended that a c.i.f. contract was a contract to deliver goods in this country." Then, after referring to Mr. Horridge's argument that the contract did bind the seller to deliver the shipping documents, the Master of the Rolls proceeded: "It was enough in the present case to say that that was not the cause of action indorsedon the writ of summons, nor the cause of action alleged in the affidavit upon which leave to issue the writ and to serve notice thereof out of the jurisdiction was granted. The claim was for non-delivery of the goods. It was not until the case came into this court that the plaintiff set up another cause of action. That could not be allowed."

The case of the plaintiffs on this present appeal that the defendants can demand payment only upon delivery of the goods logically depends upon the alleged obligation of the defendants to deliver the goods themselves in this country; and we cannot, it appears to me, reverse Hamilton, J.'s judgment in this case without holding, as a necessary conclusion, that this court decided wrongly in *Parker* v. *Schuller and another* (*sup.*) when it held, in regard to a simple c.i.f. contract, essentially identical with the c.i.f. contract in the present case, that it created no such obligation on the part of the seller. In regard to the subsidiary or supplemental clauses of the contracts in question, from which the plaintiffs' counsel sought, to some slight extent, to draw support for their interpretation of the principal or governing provisions, with which I have already dealt, I have really little or nothing to add to that which my brother Hamilton has said in considering this part of the plaintiffs' argument. These clauses are printed clauses not very clearly expressed; but apparently intended to meet certain possible contingencies which we have not to consider in deciding the present issue. They do not appear to me to throw any useful light upon the construction of the contracts in regard to the conditions of payment. I may add that the fact that there is a reference to delivery of goods in a c.i.f. contract was held in *Tregelles* v. *Sewell* (*sup.*) not sufficient to alter the effect of the c.i.f. terms. There the contract was in its fuller form—payment upon delivery of bill of lading and policy—but this does not affect the principle if the contracts are to be performed strictly according to their tenor. In my judgment, the judgment of Hamilton, J. was right, and this appeal, so far as relates to the plaintiffs' claim, should be dismissed. The only remaining question upon this appeal is as to the defendants' counter-claim. The learned judge, with some amount of doubt, has come to the conclusion, in regard to one of the two contracts, that the defendants had given sufficient proof of damage to the extent of 175*l.* They proved to his satisfaction an actual genuine bid of 70*s.* as the best they could get at auction in London on an offer to sell exactly on the terms of the contract in question. Hence a loss of 20*s.* on 175cwt. The question is whether or not this proof of damage ought to be treated as sufficient. I quite understand the reluctance of the defendants to incur the great expense of calling witnesses from San Francisco or of obtaining evidence there on a commission to prove what was actually done in regard to the disposal of the hops, which, but for the plaintiffs' wrongful (as I think) repudiation of the contract, would have been appropriated to the fulfilment of it. But, in the absence of such evidence, I feel myself constrained to hold, though not without doubt, that the legal requirement of proof of substantial damage in such a case, according to the authorities (see especially the judgment of James, L.J. in *Dunkirk Hall Colliery Company* v. *Lever*, 39 L. T. Rep. 239; 9 Ch. Div., at p. 25), and as laid down in sect. 50 of the Sale of Goods Act 1893, has not been fulfilled. The utmost, therefore, that the defendants can claim would be nominal damages. (*a*)

Appeal allowed.

March 2, 3, 6, 7, *and April* 11, 1911.

(Before Vaughan Williams, Farwell, and Kennedy, L.JJ.)

The Hero. (*b*)

Collision—Single ships approaching squadrons—Whistle signals—"Course authorised or required by these rules"—Collision Regulations 1897, arts. 27, 28, 29—Costs.

In a case of collision between a merchant ship and a warship which was one of a flotilla, the Court of Appeal, having found that the merchant ship negligently ported when close to the warship and failed to sound her whistle when she ported, held, differing from the President, that she was in fault for a breach of art. 28 of the regulations, which provides for appropriate signals when a vessel takes "any course authorised or required by these rules."

Appeal from a decision of the President, Sir S. Evans, holding those in charge of the torpedo boat destroyer *Blackwater* alone to blame for a collision between that vessel and the merchant steamship *Hero.*

The appellants, plaintiffs in the court below, were the Commissioners for executing the office of Lord High Admiral of the United Kingdom and the officers and crew of H.M.S. *Blackwater* (suing for their lost effects). The respondents, defendants and counter-claimants in the court below, were the owners of the steamship *Hero.*

The collision occurred about 11.20 p.m. on the 6th April 1909 about five and a half miles to the eastward of Dungeness, in the English Channel. The wind at the time was a light breeze from the eastward and northward, the weather was fine and clear, and the tide was running to the E.N.E. with a force of about one and a half knots. The *Blackwater* was on a course of N. 63° E., making about eleven or twelve knots through the water.

(*a*) On the 30th March an application was made by the plaintiffs to assess the damages sustained by them by reason of the repudiation by the defendants of their agreement to deliver choice brewing Pacific Coast hops, it having been agreed between the parties that the Court of Appeal had jurisdiction to assess the damages. The Court of Appeal held that the figure ought to be fixed at 10*s.* over the contract price, and, further, that the assessment must take the prices down to the date of the last shipment under the contract—namely, the 31st March.

(*b*) Reported by L. F. C. Darby, Esq., Barrister-at-Law.

The *Hero* was on a course of S.W. by W. ¾ W. (magnetic), making about ten knots. Both vessels had the regulation lights exhibited and they were burning brightly.

The case was heard in the Admiralty Court on the 9th, 10th, 11th, and 12th May 1910, and judgment was delivered by the President on the 30th May.

The President.—The questions to be determined in this case relate to a collision which occurred in the English Channel during the night of the 6th April 1909, between H.M.S. *Blackwater* and the merchant ship *Hero*. The action is brought by the Commissioners for executing the office of Lord High Admiral of the United Kingdom and the officers and crew of H.M.S. *Blackwater* as plaintiffs against the owners of the steamship *Hero* as defendants. There is a counter-claim by the defendants. It was originally a counter-claim against the captain and navigating officers of H.M.S. *Blackwater*, but, by an amendment which was made by consent at the commencement of the trial, it is now a counter-claim against Commander Warren, R.N., and Henry Irish, a gunner, who were respectively the commander and the officer in charge of the *Blackwater* at the time of the collision. H.M.S. *Blackwater* was a twin-screw torpedo destroyer of the river class, 225ft. in length and 23½ft. beam. The *Hero* was a merchant vessel, a steel screw steamship, 280ft. in length, of 1812 tons gross and 1164 tons net register, of 1500 h.p. indicated, laden with a cargo of general goods, and manned by a crew of twenty hands all told. As the result of the collision the torpedo destroyer was sunk and lost, and the merchant vessel suffered some damage. The torpedo destroyer was one of a flotilla of twenty-one ships proceeding in two columns up the English Channel on a voyage from Portland to the Firth of Forth. The merchant vessel was proceeding on a voyage from Rotterdam to Bristol. The collision took place between five and six miles to the E.S.E. of Dungeness. The weather was fine and clear, and there was nothing unusual in the wind or tide which affected the case. There was some question as to the exact time when the actual collision occurred, and as to whether it took place about the time of a change by the flotilla of a course of N. 74° E. (magnetic) for a course of N. 63° E. (magnetic). The evidence on behalf of the plaintiffs satisfied me that the collision took place about 11.15 or 11.20 p.m., after the flotilla had been for some time, and for some miles, steady on the new course of N. 63° E. (magnetic), under a speed of about twelve knots. This speed was accelerated to fifteen and a half knots, but only just before the impending collision. The speed of the merchant vessel was about ten knots, until just immediately before the collision, when her engines were put full speed astern. Thus the combined speeds at which the torpedo destroyer and the merchant vessel were approaching each other was about twenty-two knots, which would cover one mile in two and three-quarter minutes, or about 730 yards in one minute. The flotilla consisted of one third class cruiser, two scouts, and eighteen torpedo destroyers. It was disposed in two columns (eleven vessels in the port column and ten in the starboard column). The cruiser *Sapphire* was the leading ship, and headed the port column. There were three subdivisions in each column. The port column was disposed as follows: First subdivision, the *Sapphire* (cruiser), the *Colne* (torpedo destroyer), the *Jed* (torpedo destroyer); second subdivision, the *Skirmisher* (scout), the *Siren* (torpedo destroyer), the *Fawn* (torpedo destroyer), the *Racehorse* (torpedo destroyer); third subdivision, the *Forward* (scout), the *Itchen* (torpedo destroyer), the *Ouse* (torpedo destroyer), the *Liffey* (torpedo destroyer). The starboard column consisted of ten vessels, all torpedo destroyers, disposed as follows: First subdivision, the *Kale*, the *Derwent*, the *Chelmer*; second subdivision, the *Foyle*, the *Cheerful*, the *Peterel*, the *Flirt*; third subdivision, the *Blackwater*, the *Arun*, the *Moy*.

The colliding vessel, the *Blackwater*, was therefore the leading vessel in the last subdivision in the starboard column. The vessels in the starboard column kept their stations by those abeam in the port column. In accurate station, there should be a distance of one cable (measuring from foremast to foremast) between each vessel in a subdivision in either column; a distance of four cables (similarly measured) between each subdivision; and a distance of four cables between the two columns, so that a vessel in the starboard column should be four cables to the starboard of the corresponding vessel in the port column. For the purposes of this case the important factors are that in accurate station the *Blackwater* would keep her station by, and be four cables to the starboard of, the *Forward* of the port column; and in the starboard column, seven cables astern of the *Foyle*, six cables astern of the *Cheerful*, five cables astern of the *Peterel*, and four cables astern of the *Flirt*, one cable ahead of the *Arun*, and two cables ahead of the *Moy*. Representative witnesses were produced by the plaintiffs from various of the vessels in the flotilla. Leaving out for a moment the witnesses from the *Blackwater* herself, the witnesses called by the plaintiffs were as follows: From the *Sapphire*, Lieutenant Thom; from the *Kale*, Commander Barlow; from the *Derwent*, Sub-Lieutenant Bowly; from the *Foyle*, Commander Withers; from the *Flirt*, Gunner Penhallurick; from the *Moy*, Commander Rose and Sub-Lieutenant Turnor. The best evidence with regard to the actual position and stations of the vessels in the flotilla after the change of course from the N. 74° E. to the N. 63° E. (magnetic) was, in my opinion, that of Commander Withers, who was in charge of the *Foyle*, at the head of the second subdivision in the starboard column. When the merchant vessel and the flotilla were approaching each other, the first subdivision in the starboard column had got wide of their stations, so that they were about six or seven cables (instead of four cables) away from the corresponding vessels in the port column. The merchant vessel passed the three vessels of the first subdivision within the lines—*i.e.*, she passed them port to port, or red to red, on an opposite course. The four vessels in the second subdivision were in their right stations—*i.e.*, all four cables to starboard of the vessels abeam in the port column, and the merchant vessel passed them on the opposite side—*i.e.*, green to green, and about a cable away on an opposite course. The *Blackwater* and the other two destroyers in the third subdivision were somewhat out of their stations, being nearer

to the port column than the four cables—*i.e.*, being about three or three and a half cables away from the port column. Somewhere between the *Cheerful* and the *Flirt* the merchant vessel ported a little and steered a course which would again get her between the lines of the flotilla. When the vessels in the third subdivision were observed, the merchant vessel intended to pass them port to port, or red to red. For the purpose of this case I decide, as, indeed, I am bound to do after the judgment of the Lords Justices in *H.M.S. Sans Pareil* (9 Asp. Mar. Law Cas. 59, 78; 82 L. T. Rep. 606; (1900) P. 267), that after the merchant vessel passed the second subdivision and as she approached the third subdivision (headed by the *Blackwater*) those responsible for her navigation got her into a wrong position with reference to the flotilla, and that in so doing they were guilty of bad navigation and were negligent in law.

I need not, therefore, pause to deal with the "Notice to Shipowners and Masters" which was issued by the Marine Department of the Board of Trade in April 1897, and which was fully considered in *H.M.S. Sans Pareil* (*ubi sup.*). The notice is as follows: "Single ships approaching squadrons. — The Board of Trade desire to call the attention of shipowners and masters to the danger to all concerned which is caused by single vessels approaching a squadron of warships so closely as to involve a risk of collision, or attempting to pass ahead of, or through, or to break the line of such squadron. The Board of Trade find it necessary to warn mariners that on such occasions it would be in the interests of safety for single ships to adopt timely measures to keep out of the way of and avoid passing through a squadron."

Further, as regards the liability of the merchant vessel, there remains to be determined the question whether, apart from her faulty navigation or negligence, she was guilty of a breach of any, or of one, of the Regulations for Preventing Collisions at Sea 1897 which would involve a statutory imputation of blame under the Merchant Shipping Act 1894, s. 419. It appears to have been decided that the statutory obligation and penalty under sect. 419 of the Merchant Shipping Act 1894 do not attach to vessels of the Fleet belonging to the Crown, because the Act does not apply to them: (see *H.M.S. Sans Pareil, ubi sup.*). Similar regulations in every respect have been issued for His Majesty's ships by Order in Council in 1899, but they are merely regulations or guides for good seamanship. They were not made under, or by virtue of, the Merchant Shipping Act 1894, and the non-observance of these regulations does not involve His Majesty's ships in the "statutory blame" (to put it shortly) which attaches to private vessels to which the Regulations for Preventing Collisions at Sea 1897 apply. The question has been raised whether, in a collision between a private ship (like a merchant vessel) and one of His Majesty's ships, the merchant vessel escapes the statutory sanction and penalty on the ground that His Majesty's ship is not subject to the like sanction and penalty—*i.e.*, whether there must be a mutuality of liability; or, in other words, whether the statute can apply to one of two vessels, if it does not apply equally to both. The judgments in *H.M.S. Sans Pareil* (*ubi sup.*) in the court of first instance, and in the Court of Appeal, do not appear to agree upon this question. Counsel for the merchant vessel in this case declined to take upon himself the burden of contending that in such a case the merchant vessel would escape the statutory blame, if she was guilty of a statutory breach. In the view I take of the facts, it is not necessary to decide this very important question in this action. There is one other matter to which I must refer before proceeding to discuss where the liability lies for this collision. It appears to be the result of the decisions that, in any event, whether the collision is between private vessels or not, the non-observance of arts. 27 and 29 of the statutory regulations does not involve the penalty of the "statutory blame." Personally, I incline to entertain the doubt as to this which was expressed by Vaughan Williams, L.J. in his judgment in *H.M.S. Sans Pareil* (*ubi sup.*), at p. 286. But, in this case, counsel for the defendants went still further, and contended that a breach of art. 28 of the Collision Regulations, by the omission to sound the appropriate signal on making a change of course, does not involve "statutory blame," and that, in this respect, art. 28 is to be regarded as on the same footing as arts. 27 and 29. I cannot accede to that contention—I am of opinion that a breach of art. 28 would involve the statutory obligation and penalty. I may add that I should be loth to extend the category of articles which might be evaded without incurring the statutory penalty.

Having expressed these opinions, I must now look closely at the circumstances immediately preceding the collision in this case. The evidence was conflicting on many points. When, in the course of this judgment, I state a fact without qualification, it must be taken that that is a fact which I found upon the evidence. First, with regard to the *Hero*. At the time of the collision her captain was below, and only came on deck after feeling the shock of the impact. The officer in charge was the mate, Gracey. He was not called as a witness. Counsel for the defendants intended to call him, and telegrams were received from day to day with reference to the expected arrival of the vessel in which he was employed at the time of the trial. The end of the case was reached, however, before he arrived. Counsel for the defendants did not ask for an adjournment, but elected to close his case without Gracey's evidence. His deposition before the Receiver of Wreck was put in by the Solicitor-General, without objection by counsel for the defendants, but with the reservation that he did not put it in himself as part of his evidence. Nethercott, the look-out man on the *Hero*, died before the trial; Rallo, the man at the wheel, and Shellard, the chief engineer, were the only witnesses called from the *Hero*, other than the captain, who, as stated, was not able to give evidence of the facts leading up to the collision. Secondly, with regard to H.M.S. *Blackwater* (I have before mentioned the witnesses called from the vessels in the flotilla other than the *Blackwater* herself), the witnesses from this torpedo destroyer were Commander Warren, Gunner Irish (the officer on watch), Crossman (the man at the wheel), Blair (the signalman), and Bateman (the engine-room artificer). Deem, the look-out man, was not available, as he had gone to

Australia, but reference was made to the transcript of the notes of the evidence which he gave at a court-martial which had been held to deal with the conduct of Irish. Deem had left his look-out station before the collision. He was under some impression that the commander had called him to the chart-room. He left his station without telling the officer in charge that he was going. He was away from his station for a "minute or two," and on returning he met the signalman (Blair) going down to the commander. Deem saw no lights of the *Hero*, but, after being absent from his station for "a minute or two," he saw the hull of the *Hero* distinctly about two cables away. He did not return to his station, but went below to the mess deck, and piped "Clear lower deck; and hurry up." He did this without orders. The signalman Blair was also intrusted with some look-out duties. He was, however, logging a signal a little time before the *Hero* was sighted. When he sighted her he said she was abreast the *Cheerful*, which would be about six cables distant. Crossman, the man at the wheel, saw nothing of the *Hero* or of her lights before the collision. She was sighted first by Gunner Irish, the officer in charge. He said that he sighted her about eight cables to ten cables distant, bearing a point on his starboard bow, and showing her steaming light and her green light to his own green light. In my opinion she could have been, and ought to have been, sighted much sooner if a proper look-out had been kept on board H.M.S. *Blackwater*. The officer in charge said that when she was about three or four cables distant she altered her course, shutting out her green light and opening her red. He (Irish) then ported his helm from 15° to 20°, in order to pass the *Hero* port to port; he himself went to the wheel to give it the necessary "two turns" for the purpose. He then said in the presence of the quartermaster and signalman, "Red to red, perfect safety; go ahead," or, according to another account, "We will bring them red to red." When he ported his helm he ought, according to the regulations, to have blown a one-blast signal on his siren, but he did not. The reason he gave was that at that time the *Hero* appeared to him to be abreast of the *Flirt* (which in proper station would be four cables ahead), and that if the one-blast signal had been given by him, the *Hero* would be in doubt as to which of the destroyers had given the signal. In the first place, this indicates that the *Hero* was further away from the *Blackwater* when she was sighted than Irish stated. In the next place, in my opinion, the reason given was not an adequate one, and Irish ought to have ordered or given the one-blast signal. If it had been given, apart entirely from the warning which would thereby be conveyed to other vessels, it would quite possibly, and even probably, have affected the situation in so far as the *Blackwater* herself was concerned, because the commander, who was awake in his chart-room, might have heard it, and, if he had, he would have known when he reached the bridge that his vessel was on her port helm. I think, therefore, that Irish was at fault in not giving the signal. Having ported his helm, his vessel answered the helm till he got the *Hero* about one point on his port bow, and his opinion was that he would have safely passed the *Hero* port to port on that helm. Then he wanted to send for the commander, pursuant to the instructions which the commander had given him. He called out for the look-out man Deem in order to send him down to the chart-room. There was no answer, because Deem was not at his post. Then he sent down Blair, the signalman, and Blair went down and informed the commander. A minute or so elapsed, according to the commander's evidence, before he got on the bridge. Probably a minute and a half at least had elapsed since the officer in charge had ported his helm. If so, this would have brought the vessels about five and a half cables, or 1100 yards, nearer to each other when the captain reached the bridge than they were when the officer ported the helm. I am of opinion that when the commander got on the bridge the *Blackwater* was steady on her port helm. The commander said he was not aware of this; he did not ask the officer under what helm she was. I think he ought to have made this inquiry. The officer in charge and the commander do not agree about this matter, or about the bearing of the *Hero* upon the *Blackwater* when the commander reached the bridge. The officer in charge said he told the commander when he arrived that the vessel was under her port helm. If he did not, he ought to have. The commander said that when he got on the bridge the first thing that happened was that he gave an order, "Starboard 30°. Full speed ahead," and that after he had given this order, and not before, the officer in charge told him that he had given her port helm, to which the commander replied, "Well, it is no good." I prefer to accept the commander's version about this, and therefore I think the officer in charge neglected his duty to inform the commander. As to the bearing, the commander said that when he got to the bottom of the ladder and on the bridge the *Hero* showed her red light bearing about two points on the *Blackwater's* starboard bow. The officer in charge said she bore about one point on his port bow, having come to this bearing by reason of his having ported the helm of the *Blackwater*. Immediately the commander came on the bridge, when his destroyer was, as I find, on her port helm, a series of orders was given by him. The accounts which were given of them by the witnesses from the *Blackwater* did not agree. Whatever view may be taken of the orders and directions given by Commander Warren, I desire to put it on record that he gave his evidence in a manly, straightforward, and honourable way, without any attempt to shrink from the consequences of his orders, or to avoid the results which might follow his testimony. According to Commander Warren's recollection, the orders he gave were in the sequence which I shall now proceed to give rather fully. In detailing the orders, I have added some statements of the most material facts and events which acompanied or resulted from the orders, and also some comments which appear to me to be justified. The sequence of the orders was as follows: 1. Thinking the *Hero* was about two cables distant with her red light about two points on the *Blackwater's* starboard bow and not knowing that the *Blackwater* was on a port helm, he ordered "Starboard 30°. Full speed ahead." "Starboard 30°" would be very nearly "hard-a-starboard." It would be within 5° of it. The destroyer's speed at the time was about twelve knots, and she had a reserve speed of another six knots or thereabouts. When the order was given, no signal was sounded. The

appropriate signal would have been two short blasts. Commander Warren in cross-examination said: "It would have been better to have given the signal." It ought to have been given, and I see no adequate reason why it was not. If it had been, the *Hero* might have put her engines full speed astern in time, or manœuvred in some other way to avoid the collision. 2. After the order "Starboard 30°. Full speed ahead" was given, Irish said, "I have already given her a port helm" or "My helm is a-port." Commander Warren replied, "Well, it is no good." 3. Having had more time to look at the *Hero*, the commander came to the conclusion that his vessel must be nearly crossing the *Hero's* line of advance, and, fearing that the stern of his vessel would not clear the *Hero* with the starboard helm, he ordered "hard-a-port." 4. He himself then worked the telegraph to reverse the starboard engine. His object was to hasten the action of the port helm. 5. He ordered Irish to blow "one short blast" (a signal to indicate that he was directing his course to starboard). 6. He said that he thought he must have ordered "full speed astern" by mistake, because while he was telegraphing to reverse the starboard engine, and intending to reverse that alone, the port engine was also reversed by the man attending to its telegraph. 7. Although he ordered one short blast, he heard his siren sound a three-blast signal, which he had not ordered. 8. Immediately or very shortly afterwards he ordered "full speed ahead," although the signal just given indicated the exactly opposite order of "full speed astern." Then his vessel was struck with great violence by the *Hero's* stem or starboard bow, about 40ft. from the stern of the *Blackwater* on her starboard side. The latter's speed had increased between three and four knots during the time the various orders above enumerated were given. So much for the evidence of Commander Warren on these matters. According to Irish, the officer in charge, the sequence of the orders of the commander was as follows: (1) "Hard-a-starboard" (after Irish had told him the vessel was on a port helm). (2) "Full speed astern." (3) "Sound the siren three blasts." (4) "Full speed ahead." He said he did not hear the order of "Full speed ahead" which the commander said he gave with the first order; nor the order "Hard-a-port" or any "port" order; nor an order to sound one blast. Crossman, the man at the wheel, described the orders thus: (1) "Starboard, 30°," and (2) "Hard-a-port." He said that the second order was given when he had only got 15° of the starboard helm on the indicator in obedience to the first order. According to Blair, the signalman, the orders were as follows: (1) "Starboard 30°. Full speed ahead," then a pause—and (2) "Full speed astern." He spoke to no other orders. Bateman, the engine-room artificer, received the following orders in the engine-room: (1) "Full speed ahead." (2) "Full speed astern" (after a few seconds). (3) "Full speed ahead." He said that from the first order to the collision the interval of time was just upon one and a half minutes. The combined distances travelled during that time would be over 1000 yards, and the distance travelled by the destroyer on her first speed alone would be 600 yards. He also proved that this speed had increased, and that the engine made 170 revolutions at the time of the collision, which gave a speed of fifteen and a half knots. It is probable that the commander thought that with the reserve of speed which he could utilise he could have safely crossed the bows of the *Hero*. He very nearly succeeded in doing so, and he would have succeeded if he had had about four seconds more time. But the attempt was a risky one, and unfortunately failed. It is to be remembered, of course, that estimates and calculations of time in such circumstances are uncertain, even more so than estimates of distance. In considering what manœuvres were possible or justifiable on the part of the *Blackwater*, attention must be given to the fact that she was (as all these torpedo destroyers are) a very handy vessel, quick to answer her helm, and easy to work with her engines. It was given in evidence by Commander Warren that by going full speed astern she could be pulled up in from one to two lengths. I have now dealt with the case upon the evidence from the *Blackwater*.

As to the evidence from the *Hero*, unfortunately the court was not assisted by the evidence of Gracey, the officer in charge of the *Hero*, as he was not called, as I have before explained. Referring to his deposition before the Receiver of Wreck, and leaving out the part which has become unimportant in view of my decision that her position established negligence in law on the part of her navigating officers, the account given by Gracey with regard to the *Blackwater* and the other two vessels in her subdivision is shortly as follows: When continuing on his course, the last three vessels were on his port bow, and showed all their lights, being in doubt whether these three vessels could see his side lights, he closed his green, and showed a good red. Immediately his green was closed "the two outside vessels" (by which, I think, he meant the *Arun* and the *Moy*) ported to clear him. The third vessel (by which, I think, he meant the *Blackwater*) came on showing green and red, until when about half a mile distant she showed her red for a brief space, then suddenly starboarded, and apparently attempted to cross his bow. He then, fearing a collision, put his engines full speed astern, and blew three short blasts. The *Blackwater* continued on her course, and the *Hero* struck her between amidships and aft, on her starboard side. Rallo, the only witness called who was on the *Hero's* deck, was at the wheel, in the wheelhouse on the upper bridge. This witness was at times confused in answering questions as to the lights which he saw, and he was in some matters mistaken; but I came to the conclusion that he was a truthful and an honest witness. The result of his evidence with reference to the position of the third subdivision of the flotilla, as I accept it, is shortly as follows: From the three vessels in this subdivision he saw (1) the green lights of all the three vessels; (2) red and green from all three; then, after the *Hero* had ported a point or so, (3) the green light of the *Blackwater* and the red lights of the *Arun* and *Moy*. His evidence as to the sound signals from the *Hero* I shall refer to later. Apart from the evidence of what was done by the *Arun* and *Moy*, the conclusions which I draw from the evidence are these: That the *Blackwater* could, by the exercise of ordinary skill and care by her officers, have avoided the collision by keeping on the port helm which

had been given to her by Gunner Irish; that in the various orders and manœuvres on board the *Blackwater* after the *Hero* was sighted there was confusion, an uncertainty, a want of decision, and an absence of ordinary skill and care; that there was no situation of extreme peril or sudden emergency to account for these things (as in *The Bywell Castle*, 4 Asp. Mar. Law Cas. 207 (1879); 4 P. Div. 219); that her manœuvres were faulty and negligent; that this negligence contributed to the accident; and that, apart from such negligence, the collision would not have happened. In these conclusions the Elder Brethren of the Trinity House who assist me concur.

But the court is not left to speculation as to what might have been done. The matter has been placed outside the region of speculation by the admissions of Commander Warren, and by the evidence of what was actually done by the *Arun* and *Moy* in the like circumstances. Commander Warren admitted that, even if the distance between the two vessels when he got on to the bridge was two cables only, if the *Blackwater* had been kept a-port, she could possibly have cleared the *Hero* port to port; and if the distance was anything like four cables she would certainly have so cleared her. What was done by the *Arun* and *Moy* was described by Sub-Lieutenant Turnor and Commander Rose, who were on the *Moy*, the second vessel behind the *Blackwater*. The sub-lieutenant sighted the *Hero* about abreast the *Peterel—i.e.*, about some seven cables away—and he called the commander, who came on the bridge. At any rate, her helm was ported; so was that of the *Arun*, and at first he observed that the *Blackwater* seemed to have port helm also before she swung round to port. When Commander Rose came on his bridge, he saw the *Hero* six cables away. He waited, and when she was four cables away, and not before, he gave the order to port his helm. The *Arun* ported about the same time, and both the *Arun* and the *Moy* passed all clear of the *Hero* port to port. Commander Rose also stated that when he got on the bridge and saw the *Hero's* light, he thought there was time for the *Blackwater* to get out of the way by porting her helm, and that the effect of starboarding the *Blackwater* was to throw her across the bows of the *Hero*. Clearly the opinion of Commander Rose, who saw the incidents at the time, was that the accident might have been avoided by ordinary skill and care on the part of those responsible for the *Blackwater*. My nautical assessors advise me that what the *Arun* and the *Moy* did the *Blackwater* could have done. There was, therefore, negligence on the *Blackwater*. But, as I have said, there was negligence also attributable to the *Hero* by reason of the position in which she had been placed with reference to the flotilla. Was she, in addition to this negligence, also guilty of a breach of a regulation which would involve "statutory blame," so that, whatever the negligence of those responsible for the *Blackwater* might have been, the *Hero* would be also to blame, and would be responsible for half the damage in accordance with the Admiralty rule. This depends upon whether a sound signal—one short blast—was sounded by the *Hero* when she ported. This question of fact has to be decided upon positive evidence, upon negative evidence, and upon inferences from the evidence and the surrounding circumstances Rallo, the man at the wheel, gave positive testimony that the signal was duly given. Upon being pressed, he was very firm that it was. As against this, reliance was placed by the Solicitor-General upon the omission in the deposition of Gracey of any reference to this sound signal. The negative evidence consists of statements by various witnesses for the plaintiffs that they did not hear the signal, and, by some of them, that if it had been given, they must have heard it. The omission from Gracey's deposition must be put into the scale in weighing the evidence, but I do not attach overwhelming weight to it. The sound signal was stated in the Preliminary Act and in the defence. As to the negative evidence, I have considered it carefully. A short *résumé* of the testimony of the witnesses who were asked as to the various sound signals may be useful in estimating the importance to be attached to it. First of all, there is no dispute (apart from the question which I am now discussing as to whether a one-blast signal was given by the *Hero*) about the other sound signals which were given by both vessels. At any rate, I find that they were in fact as follows: A three-blast signal from the *Blackwater*, and a three-blast signal from the *Hero*. The witnesses who were examined about sound signals were Commander Warren, Irish, Crossman, Blair, Gunner Penhallurick, Sub-Lieutenant Turnor, Commander Rose, and Rallo. Commander Warren said the only signals he heard were the three blasts from his own siren. He probably would not have heard the one blast from the *Hero*, even if it had been sounded, because he was lying down in the chart-room. He did not hear the three-blast signal from the *Hero*, but he said that she may have sounded them without his hearing them. Irish only heard his own three blasts. He thought that if the *Hero* had sounded one blast he would not have missed it. He did not hear the *Hero's* three blasts. Crossman heard no sound signal at all, either his own, or from any other vessel. Blair took no notice of, or did not remember, any sound signal at all, on his own vessel or from the *Hero*. Gunner Penhallurick heard no sound signals at all from either vessel. Sub-Lieutenant Turnor thought he remembered a three-blast signal, and that it was from a siren on the *Blackwater*, but he was not certain about it. He heard no other. Commander Rose said he fancied he heard three blasts from a siren; but subsequently said that the evidence that he gave at the court-martial—viz., that he only heard one blast—was much more likely to be accurate. It was common ground that no signal of one blast was given from the *Blackwater*. Therefore, if he did in fact hear a one-blast signal, it must have been from the *Hero*. The evidence being in this state, I have come to this conclusion that Rallo's positive statement can, and ought to be, accepted, and that when the *Hero* ported, she sounded the appropriate signal of one short blast. If she did, no statutory blame attaches to her in this case. But if she did not, the question would then be whether her failure to do so could, by any possibility, have contributed to the collision? I am satisfied that, even if she did not signal, this did not, in fact, contribute to the accident, because Irish and others saw her port; but I do not think that I could say that it could not by any possibility have

contributed to it. But if I am justified in my finding of fact, the question last referred to may be put aside.

The case, then, in my opinion, stands thus: There is no "statutory blame" on either side —not on the part of the *Blackwater* because she, as a King's ship, is not governed by the statutory regulations made under sect. 418 of the Merchant Shipping Act of 1894; and not on the part of the *Hero* because she is not proved to have been guilty of a breach of art. 28, or of any other statutory collision regulation. But I find that there was negligence on the part of both vessels. This being so, the common law doctrine of contributory negligence must be applied, as in *The Margaret* (5 Asp. Mar. Law Cas. 371 (1884); 9 App. Cas. 873) and *H.M.S. Sans Pareil* (*sup.*). That doctrine is that if A. is injured by B. by the fault more or less of both combined, then if, notwithstanding B.'s negligence, A. with reasonable care could have avoided the injury, he cannot succeed in an action against B, and if, notwithstanding A.'s negligence, B. with reasonable care could have avoided injuring A., A. can succeed against B. (see per Lindley, L.J. in *The Bernina*, 12 P. Div., at p. 89; 6 Asp. Mar. Law Cas. 75 (1887), and the cases there cited). In the leading case of *Tuff* v. *Warman*, which was a case of collision in the Thames, it was said in the Exchequer Chamber (see 5 C. B. N. S, at p. 585), that the proper question in such cases is "whether the damage was occasioned entirely by the negligence or improper conduct of the defendant, or whether the plaintiff so far contributed to the misfortune by his own negligence or want of ordinary and common care and caution that but for such negligence or want of ordinary care and caution on his part the misfortune would not have happened." In other cases it has been said that the question is, Whose negligence was the "proximate cause" of the injury? The Solicitor-General contended in this court that the common law doctrine of contributory negligence should not be applied in the same way in the Admiralty Courts as in the common law courts; that, if it was, the ordinary rule of "both to blame and division of damages" which prevails in Admiralty could seldom have effect. He did not suggest what difference there could be in the principle of the application. On the question of fact, in any case, it is obvious that, in arriving at the "proximate cause" of an accident at sea, the difficulty of the task of manœuvring ships of various kinds and dimensions in uncertain states of weather and tide, and in the unforeseen and unforseeable dangers which are met with upon the waters, must always be regarded; and it must often happen, where two vessels are at fault, that it is impossible to say that one of them without the aid of the other could avoid an accident, or that the fault or negligence of one alone is the proximate cause; so that it has to be decided that the combined negligence of both was the common cause, and that the "both to blame and division of damages" principle is to apply. Moreover, that principle must always apply where there is a breach of a statutory regulation, which so often occurs in cases of collision at sea. The "division of damages" rule, although not quite logical, because the damages are not proportioned either to the degree of blame or to the extent of the injuries caused, has been regarded for a long time in this country as a salutary rule in Admiralty cases. Whether the doctrine of contributory negligence derived from the common law which has been imported into Admiralty actions is equally salutary or reasonable is not for me to determine. I have to act upon the settled law that the doctrine does apply in cases where the facts call for or permit its application. The Solicitor-General in his reply called my attention to an unreported case of the steamship *Cambridge*, and he kindly supplied me with a transcript of the notes of the evidence and of the judgments of Sir Francis Jeune (then President of this Division) and of the Lords Justices in the Court of Appeal. The case was decided in this court on the 17th June 1902, and in the Court of Appeal on the 1st July 1903—*i.e.*. about three years after *H.M.S. Sans Pareil* (*ubi sup.*). The President decided that the steamship *Cambridge*, a passenger steamship, and H.M S. *Salmon*, a torpedo destroyer, were both to blame and both liable; the steamship *Cambridge* because she was guilty of bad navigation in shaping to cross the bows of the torpedo destroyer, and H.M.S. *Salmon* because if she had done what she could and ought to have done the collision would have been avoided. After the judgment had been delivered, Mr. Pickford (counsel for the steamship *Cambridge*) called the attention of the President to the case of *H.M.S. Sans Pareil*, and asked him to apply the principle of that case, and to say that H.M.S. *Salmon* was alone to blame. Apparently, thereupon the President said that he found that it would have required extraordinary care and skill—*i.e.*, something quite beyond ordinary care and skill on the part of H.M.S. *Salmon*—to avoid the collision, and accordingly he adhered to his decision that both were to blame, and he divided the damages. Both sides appealed. The *Cambridge* appealed on the ground that the *Salmon* was solely to blame because she could by the exercise of ordinary care and skill have avoided the collision. The *Salmon* appealed on the ground that the *Cambridge* was solely to blame, apparently, (1) because in the circumstances the *Salmon* could not by the exercise of ordinary care and skill have avoided the collision; (2) because the President had misdirected himself by acting on the principle that extraordinary care could be required; and (3) because the *Salmon* was exonerated from liability by reason of a sudden peril of an extreme emergency. Both appeals failed. In the Court of Appeal, so far as I can see from the judgments, the *H.M.S. Sans Pareil* was not cited, or dealt with at all, in any of the three judgments, and the doctrine of contributory negligence as applied to collisions at sea in the cases of *The Margaret* (*ubi sup.*) and *H.M.S. Sans Pareil* (*ubi sup.*) was not considered or even mentioned, except possibly in one passage in the judgment of the Master of the Rolls. I have read the case carefully. Unless it is to be regarded as a case where both vessels were equally to blame and brought about the collision by their common negligence, or where it required some extraordinary skill and care on the part of either vessel to avoid the accident, I find it impossible to reconcile the decision of the Court of Appeal with the decision in *H.M.S. Sans Pareil*. In the case now before the court, I find that the negligence attributable to the *Hero* did not cause any sudden emergency or extreme peril which

required any extraordinary skill or care to be exercised by the *Blackwater*; that the *Blackwater* was not hampered by the *Hero* or by the other vessels of the fleet so as to be unable to manœuvre properly or safely; and that, notwithstanding the negligence of the *Hero*, the collision could have been avoided by the ordinary skill, caution, and care to be reasonably expected from the navigating officers of H.M.S. *Blackwater*. In these findings the Elder Brethren agree with me. I accordingly decide against the plaintiffs' claim. As to the counter-claim, it follows, from what I have before stated in discussing the facts, that Commander Warren and Irish were guilty of negligence which contributed to the collision; and that the *Hero* could not about the time of the collision have avoided it by the exercise of ordinary care and skill by reason of the faulty manuœvres of the *Blackwater*. As to this also the Elder Brethren agree. Accordingly, I decide the counter-claim, too, in favour of the defendants, and order a reference as to damages, if desired. The order of the court, therefore, is that the judgment be entered for the defendants upon the claim and counter-claim.

On the 26th July 1910 the plaintiffs delivered a notice of appeal praying that the judgment should be reversed or varied by pronouncing that the fault or default of the owners, master, and crew of the *Hero* occasioned the collision, and that the defendants' counter-claim might be dismissed and the plaintiffs' claim pronounced for.

The appeal was heard by the court, which had the assistance of two nautical assessors, on the 2nd, 3rd, 6th, and 7th March, when judgment was reserved.

The *Attorney-General* (Sir Rufus Isaacs, K.C.), *Aspinall*, K.C., and *A. D. Bateson*, K.C. for the appellants, plaintiffs.—The court below has found that both vessels were negligent, but has held that the *Hero* is not liable because those on the *Blackwater* could by the exercise of ordinary care and skill have avoided the result of the negligence of the *Hero*. The *Hero* is alone to blame, for she brought about a position of extreme danger, and she cannot complain if those on the *Blackwater* did not do the best thing in the sudden emergency created by the *Hero*'s wrongdoing. In these circumstances those on the *Hero* cannot say that those on the *Blackwater* were negligent:

The Bywell Castle, 41 L. T. Rep. 747; 4 Asp. Mar. Law Cas. 207 (1879); 4 P. Div. 219;
The Frankfort, 101 L. T. Rep. 664; 11 Asp. Mar. Law Cas. 326; (1910) P. 50;
The Cambridge (referred to in the judgment of the court below).

The *Hero* is to blame for a breach of art. 28 of the Collision Regulations. On the evidence it is clear that she gave no helm signal when she ported shortly before the collision.

Laing, K.C. and *Adair Roche* for the respondents, defendants and counter-claimants. — The judgment appealed from is based on the appellants' (plaintiffs) evidence. On that evidence they have been found alone to blame. [Kennedy, L.J.—Is that quite so. Rallo, a witness for the defence, gives evidence as to the *Hero*'s whistle signal.] If the *Hero* broke a statutory rule, she must be deemed to be in fault, for it would be impossible to show that the breach could not by any possibility have contributed to the collision. The question as to the whistle being sounded is one of fact, and this court will be slow to interfere with such a finding. But assume the whistle was not sounded, there was no breach of art. 28. That article only applies to a steam vessel under way taking any course "authorised or required by these rules." The porting of the *Hero* was not such a course. As to what is a course authorised or required by these rules, see

The Uskmoor, 87 L. T. Rep. 55; 9 Asp. Mar. Law Cas 316; (1902) P. 250;
The Bellanoch, 97 L. T. Rep. 315; 10 Asp. Mar. Law Cas. 483; (1907) A. C. 269;
The Anselm, 97 L. T. Rep. 16; 10 Asp. Mar. Law Cas. 438; (1907) P. 151;
The Corinthian, 101 L. T. Rep. 265; 11 Asp. Mar. Law Cas. 20; (1909) P. 260;

The Mourne (83 L. T. Rep. 748; 9 Asp. Mar. Law Cas. 155; (1901) P. 68) shows that mere porting and starboarding is not "taking a course" within the meaning of the rules. The *Hero* cannot be deemed to be in fault unless the rules apply, and they only apply when there is risk of collision, and, on the plaintiffs' story, there was no risk of collision except that caused by the *Blackwater*. *The Bywell Castle* (*ubi sup.*) has no application, for the President has found as a fact that there was no sudden emergency or peril. The *Cambridge*, which is dealt with at length in the judgment of the court below, conflicts with *The Sans Pareil* (82 L. T. Rep. 606; 9 Asp. Mar. Law Cas. 78; (1900) P. 267). The *Hero*'s wrong manœuvre was long before the collision, and the vessels would have gone clear if the commander had not countermanded the orders given by the gunner. That is the negligence which produced the collision.

The *Attorney-General* in reply.—The *Hero*'s case is a wrongful starboarding by the *Blackwater*; the *Blackwater*'s case is a wrongful porting by the *Hero*. Each says the other made the initial mistake. There is no doubt that a position of danger and emergency was created which placed those on the *Blackwater* in a difficulty. The principles which govern the law as to contributory negligence are stated by Lindley, L.J. in *The Bernina* (56 L. T. Rep. 258; 6 Asp. Mar. Law Cas. 75; 12 P. Div. 58). *The Margaret* (*ubi sup.*) is the leading decision on the point; another is *The Monte Rosa* (68 L. T. Rep. 299; 7 Asp. Mar. Law Cas. 326; (1893) P. 23). The *Hero* is to blame, for her negligence continued up to the collision:

The Clutha Boat No. 147, 100 L. T. Rep. 198; 11 Asp. Mar. Law Cas. 199; (1909) P. 36;
The Frankfort (*ubi sup.*);
The Etna, 98 L. T. Rep. 424; 11 Asp. Mar. Law Cas. 30; (1908) P. 269;
The Ovingdean Grange, 87 L. T. Rep. 15; 9 Asp. Mar. Law Cas. 295; (1902) P. 208.

April 11.—The judgment of the court was delivered by

Kennedy, L.J.—We see no reason to dissent from the judgment of the learned President so far as it imputes actionable negligence to the navigation of H.M.S. *Blackwater*. In regard to the *Hero*, he has found that those in charge of the *Hero* were also guilty of negligent and improper navigation in getting her into a wrong position in regard to the flotilla. But he has also found in effect that, although, if the *Hero*

had kept her course after passing the starboard line of the second division, as she ought to have done, and had not ported, as she did, she would have passed the *Blackwater* safely, green to green, yet, after this initial wrongdoing on the part of the *Hero*, the collision might have been avoided by the exercise of not more than ordinary care and skill on the part of those in charge of the *Blackwater* when they saw the wrong manœuvre of the *Hero;* and, so finding, he has held the *Blackwater* solely to blame for the collision. It is, as Bucknill, J. remarked in his judgment in *The Etna* (*ubi sup.*), frequently a matter of extreme difficulty to decide whether or not the negligence of the initial wrong-doer could have been avoided by the other party. In *The Margaret* (reported as *Cayzer* v. *Carron Company* (*ubi sup.*) and *The Sans Pareil* (*ubi sup.*) the question was decided one way, and in *The Etna* (*ubi sup.*) and *The Cambridge*, heard in the Admiralty Court on the 17th June 1902 and in the Court of Appeal on the 1st July 1903, it was decided the other way. It is not, in our view, an easy question to decide in the present case. It is, however, necessarily a question of fact depending upon the special circumstances of each case; and our nautical assessors concur with the advisers of the President in the Admiralty Court that there was no such emergency created by the negligence and bad navigation of the *Hero* as might not have been successfully met by the exercise of ordinary care and skill on the part of those in charge of the *Blackwater.* In fact, Gunner Irish did take the right step by porting the helm of the *Blackwater*, and there would have been no collision but for the later orders of Commander Warren, which, unfortunately, destroyed the effect of this manœuvre. The appeal of the plaintiffs, therefore, fails so far as it depends upon allegations of the liability of the *Hero* for faulty or negligent navigation causing the collision.

There remains, however, for our consideration a very important question as to the liability of the *Hero* to the statutory imputation of blame, under the Merchant Shipping Act 1894, s. 419, for a breach of art. 28 of the Regulations for Preventing Collisions at Sea. The learned President has expressly held, and, we think, rightly held, that an infringement or non-observance of art. 28 does involve statutory blame; and, although there is no express finding on the point, it is, we think, a necessary inference from the language of his judgment, which deals at length with the question of fact as to the sounding of a one-blast signal on board the *Hero*, that, if there were an omission on the part of those on board the *Hero*, when her helm was ported, to sound the one-blast signal, those in charge of her would have been held by him to have been guilty of a breach of art. 28, and, therefore, the *Hero* must in that case be held partly to blame for the collision under the Merchant Shipping Act 1894, s. 419. He states in his judgment that, if at the time of the porting, which ultimately led to the collision, those on board the *Hero* omitted to sound, with the whistle, the appropriate one-blast signal, he could not say that this omission could not possibly have contributed to the collision. But the learned President, finding, as a fact, that this signal was given on board the *Hero*, has, of course, acquitted her of statutory blame. The appellants contend that the evidence did not justify this finding of fact, and we have to consider and decide first, whether the finding of fact was right, and, secondly, if we are of opinion that the finding of fact was erroneous and that the one-blast signal was not sounded on board the *Hero* at the time in question, whether such an omission constituted a breach of art. 28; for the respondents, besides arguing in support of the President's finding of fact in their favour in regard to the sounding of the one-blast signal, further contend that, even if that signal was not sounded, the *Hero* did not violate the provisions of art. 28 by such an omission.

First, as to the question of fact. This court is very slow indeed to differ from the judge of the Admiralty Court on any decision of fact, depending simply upon the choice between affirmation on the one side and denial on the other and the credibility of witnesses who have been examined in open court at the trial. But, if it is convinced that the judge has been guided to his decision by some misapprehension of the effect of evidence, or of the inference to be drawn from it, or of material circumstances, it is, we conceive, the duty of the Court of Appeal to act upon its own view. In the present case, the finding of the learned President that a one-blast signal was sounded with her whistle on board the *Hero* at the time when her wrongful porting originated the collision with the *Blackwater*, depends entirely upon the evidence of a single witness, the helmsman Rallo. Neither of the two other witnesses—the master and the chief engineer—from the *Hero* deposes to hearing such a signal. Neither of them, it is true, was on deck, the master being in the chart-room, and the chief engineer in the engine-room, so that it is just possible that the whistle would have been sounded without being heard by either of them in any case; and, further, so far as regards the master, it appears that he was actually asleep till just before the collision, and was only then aroused by something—"probably," he says, "by the whistle," but "he was not certain of that." It is possible that his conjecture was right, for just before the impact of collision, which he felt before he could get on his boots in order to go on the deck, the *Hero* admittedly sounded the three-blasts reversing signal. The fact remains that in affirmance of a one-blast porting signal, Rallo is the solitary witness from the *Hero;* and from the same ship came negative evidence of a remarkable character. Gracey, the chief officer of the *Hero*, was the officer in charge on deck before and at the time of the porting in question and at the time of the collision. He was not called as a witness for the *Hero* at the trial, but his deposition before the Receiver of Wreck was put in evidence; and, further, the master of the *Hero* in the course of his re-examination stated the version of the events leading to the collision which Gracey gave to him on the bridge of the *Hero* immediately after the collision. Neither in Gracey's deposition nor in the oral narrative given by him to the master is there any mention of the one-blast signal alleged by Rallo—a strange omission, if omission it be, on the part of the responsible officer, who must have ordered the sounding of the signal, of a most important fact, both in his oral report to

the master immediately after the event and in the signed deposition made by him at leisure four days later before the Receiver of Wreck. Before passing on to the evidence of witnesses from the *Blackwater* and two other vessels of the flotilla, we think it is convenient to note, in regard to the testimony of Rallo, that his first mention at the trial of this port-helm sound signal was not spontaneous, but was elicited at the point where he had stated that the mate gave him an order to port, by a question put to the witness by the defendants' counsel, which, necessarily perhaps, involved an obvious suggestion—"Was there any signal blown?"—and, when, in cross-examination he was pressed by the Attorney-General as to the grounds of his persistency in the accuracy of his recollection, the witness to a considerable extent relied upon an alleged invariable practice on board the *Hero*: "Every time you port one blast is blown?" Answer: "Yes, blown, yes." Turning from the evidence of those on board the *Hero* to the evidence from the *Blackwater*, we find that Gunner Irish, the officer in charge, is positive that no such signal was sounded on the *Hero*, for, he says, if it had been sounded, he must have heard it. Neither Crossman at the wheel, nor Blair, the signalman, appears to have taken notice of any sound signals either on their own ship or on the *Hero*. The evidence from the *Flirt* and the *Moy* carries the case no further, one way or the other. The only signal which Sub-Lieutenant Turnor of the *Moy* seems to recollect is a three-blast signal from the siren of the *Blackwater*. Gunner Penhallurick of the *Flirt* does not seem to have noticed any sound signals. Commander Rose of the *Moy* deposed at the trial to hearing what he thought was a three-blast siren signal from the *Blackwater*, but admitted on cross-examination that the evidence which he had given at the court-martial more recently after the event ought to be treated as more correct, and in that evidence he had stated that, before he noticed the bow of the *Blackwater* swing to port, he heard one blast from a siren. Asked whether it might have been a whistle, Commander Rose said: "It might have been, although I did not think so at the time"; but he added, later on, that he should not think that on a fine, clear night, such as this was, he should have any difficulty in distinguishing between a torpedo destroyer's siren and an ordinary steam whistle. The learned President, if we may, with all respect, say so, seems to have treated the blowing of a whistle, which the *Hero* did carry, and the blast from a siren, which she did not carry, as indistinguishable, for he says in his judgment, in regard to the evidence of Commander Rose: "Therefore, if he did, in fact, hear a blast signal, it must have been from the *Hero*." So far we have dealt with the issue upon the question of the sound signal upon the assumption that Rallo's evidence supported the defendants case. We are not sure that, having regard to the positive opposition of Irish's testimony, and Gracey's significant silence upon so important a matter, we should, even on that assumption, have felt ourselves justified in coming to the same conclusion as that which commended itself to the learned President. But he heard the evidence given, and we should have hesitated long before interfering with his judgment in such circumstances. A careful examination, however, of Rallo's evidence, in the light of established or admitted facts as to the relative positions of the *Hero* and the *Blackwater* when the fatal porting of the former vessel took place, and as to the distance between the two vessels at that moment, has brought us to the opinion that the porting which he describes as accompanied by a one-blast signal was not the porting in question. It is, we think, manifest that that porting, which put the *Hero* on a course to cross the bows of the *Blackwater* and, if she escaped collision with the *Blackwater*, to pass between the starboard and port lines of the third division of the flotilla, took place at a time when the two vessels were so close to each other that a collision was rendered imminent unless the *Blackwater* took immediate steps to counteract the negligent and improper navigation of the *Hero*. There is clear evidence of this from the most important of the witnesses on both sides. Irish, in charge of the *Blackwater*, directly he saw the porting of the *Hero*, not content with at once giving the order "Port two turns," himself rushed to the wheel, pushed aside the seaman who was steering on the bridge, and with his own hands put the helm over, "so that," to use his own phrase, "there should be no mistake." He had seen the *Hero* from the time she was eight to ten cables distant, and he says that she was from three to four cables—that is to say, 600 to 800 yards—distant, and about one cable from the *Flirt*, when, by porting, she suddenly shut out her green and opened her red light and created a position of danger, which Irish evidently felt must be met by instant action. The combined speeds of the two vessels, as the learned President finds, would cover 730 yards in one minute. The proximity of the two vessels to each other at the time of the *Hero*'s porting appears equally clear from the account which Gracey, the first officer of the *Hero*, and at the time in charge of that vessel, gave to the master of the *Hero*: "He (the *Blackwater*) was showing a red light and I ported a point, and just as I steadied the wheel again the destroyer starboarded his helm and shot across the bow." We know from Commander Warren that the order to starboard the helm was given by him when he got upon the bridge just before the collision, and the vessels were so close to each other that he thought that a collision was inevitable. If this be so, and Gracey is right in saying that he had only just ported a point and steadied when the starboarding of the *Blackwater* took place, it is clear that the porting of the *Hero* took place when only a short distance separated her from the *Blackwater*. When we know what happened and what there was in fact time to do between the porting and the collision which followed it, we have a safer guide than estimates and calculations of time, which, as the learned President observes in his judgment, "in such circumstances are uncertain, even more so than estimates of distance." The learned President, acting, we think, upon the evidence of Sub-Lieutenant Turnor, who was on board the *Moy*—the last of the three vessels in the starboard line of the third division—places the *Hero*, when she ported, on the starboard side of the second division, somewhere between the *Cheerful* and the *Flirt*—that is to say, at a distance of about five cables, or 1000 yards, from the *Blackwater*. Even if this longer distance of

some five cables, instead of the shorter distance of three to four cables given by Irish, be taken as approximately the true distance between the *Hero* and the *Blackwater* when the *Hero* by porting suddenly created the risk of collision, it is, we think, impossible to accept Rallo's porting accompanied by a one-blast signal. For this witness, whom the learned President thought to be a "truthful and an honest witness," although he "was at times confused in answering questions as to the lights which he saw, and was in some matters mistaken," positively and persistently asserts that the porting and the signalling to which he deposes occurred at a distance of not less than two miles—that is to say, twenty cables, or 4000 yards, from the *Blackwater.* He asserts this in cross-examination by the Solicitor-General, repeats it in answer to a later question (adding that it was not just a little before the collision, and he did not think there was any danger), and repeats it again in re-examination by Mr. Laing, who, at the suggestion of the learned President, had pressed the witness to give the minimum, saying in answer to the question of counsel that the least distance was two miles. It is, in our judgment, plainly impossible to adopt this evidence of Rallo as to a porting at a distance of at least two miles as a description of the porting for the *Blackwater* which led to the collision. It is agreed that it was a fine, clear night, and, after all reasonable allowance is made, as it ought to be made on such occasions, for a margin of error in the estimates of a witness as to distance, it seems to me impossible justly to treat Rallo's porting of the *Hero* at a distance of two miles as the actual, and, as we have termed it, fatal, porting of the *Hero*, whether that occurred at a distance of 600 to 800 yards, or, as the President has put it, somewhere between the *Cheerful* and the *Flirt*—that is to say, at about 1000 yards from the *Blackwater.* A distance of anything like two miles would place the *Hero* as she was when approaching the *Kale*, which was the leading vessel of the starboard column of the first division of the flotilla and was steaming about thirteen cables ahead of the *Blackwater*. And probably it was a porting for the *Kale* which may be the explanation of Rallo's evidence. The evidence of Commander Pratt-Barlow of the *Kale* strongly confirms this supposition. At the commencement of his examination in chief he told the court that he first sighted the *Hero* about half a mile ahead of his vessel, and showing all three lights. "She ported her helm and altered course half a point to starboard, of course, and passed port to port? I cannot swear that she did, but my impression was that she altered course to starboard." The position of the *Hero* given by Rallo for the porting for the *Blackwater* would fit such a porting for the *Kale* as Commander Pratt-Barlow of the *Kale* thought had occurred. Be this as it may, it will not fit the porting for the *Blackwater.* In the face of Rallo's evidence on this point, apart from the "confusion in answering questions," and his "mistakes in some matters," to which the learned President refers in his judgment, we are unable, with sincere respect, to concur with the President in holding that the defendants' case as to the sounding of a one-blast signal when the *Hero* ported across the *Blackwater* was sufficiently established by the defendant's evidence.

There remains the question whether the omission of those on board the *Hero* to sound the one-blast signal at the time in question constituted a breach of art. 28. That article, so far as it is material to quote it for the purposes of the present case, provides that "when vessels are in sight of one another, a steam vessel under way, in taking any course authorised or required by these rules, shall indicate that course by the following signals on her whistle or siren—viz., one short blast to mean 'I am directing my course to starboard,'" &c. The contention of the respondents is that the *Hero* in porting as she did was not taking a course authorised or required by the rules. Their counsel argues: "Leave on one side our pleaded case that the *Hero* ported whilst the *Blackwater's* red light, as well as her masthead and green light, was open on the port bow of the *Hero.* Treat, if you please, that story as untrue, and adopt the appellants' contention that, when the *Hero* altered her course by porting, the two vessels were showing green light to green light. If the *Hero* ported, and directed her course to starboard, under those circumstances she was not taking a course 'authorised or required by the rules,' but, on the contrary, she was taking a wrong and improper course—a course, therefore, in no sense 'required' by those rules which prescribe a particular course, or 'authorised' by the rules of general direction, such as arts. 27 and 29, within the interpretation placed upon the word 'authorised' by the courts in *The Uskmoor* (*ubi sup.*), *The Anselm* (*ubi sup.*), and *The Bellanoch* (*ubi sup.*)." We cannot accede to such a contention. If it were sound, the strange result would follow that in the present case, and in all like cases, a vessel which took a proper course either required by the rules or, as a seamanlike course, authorised by the rules, but which omitted to make the appropriate sound signal according to rule 28, would incur the penalty incident to statutory blame, whereas a vessel which in precisely the same circumstances took a wrong and unseamanlike course, neither required nor authorised by the rules, and gave no sound signal to indicate that course, would, so far as regards the absence of an appropriate sound signal, go scot-free. We do not think that the language of art. 28, fairly and reasonably interpreted, involves such a conclusion. We do not think that the words "taking any course authorised or required by these rules" limit the application of the rule to the case of a course which, at the trial of a collision action, is found by the court to have been authorised or required by the rules. We ought, it appears to us, to interpret the words as including any course alleged to have been taken by a vessel acting, whether under art. 27 or 29, or under the other articles, so as to avoid immediate danger. So that where, as here, a vessel charged in an action with having taken, in acting for the other vessel, an improper course causing or contributing to a collision, asserts in that action, as the *Hero* does here, that the manœuvre was a proper course under the rules, she cannot successfully contend that because the court holds that her story of the facts is an untrue story, and that upon the true facts the course taken by her was neither a course required nor authorised by the rules, she thereby gains exemption from liability from statutory blame for not sounding the signal appropriate to that course. It was a course which

those in charge of the vessel professed at the time to take, and the owners of the vessel sought to justify in the action, as a course either authorised or required by the rules. In the result, we are of opinion that the *Hero's* allegation that the port-helm signal was sounded when she ported across the bows of the *Blackwater* has not been established, and that as the absence of that signal may, as the learned President has rightly found, possibly have contributed to the collision, the *Hero* must be deemed to blame for breach of art. 28; and therefore the decree of the court below on the claim and counter-claim must be amended by a finding that both vessels were to blame, and by the insertion therein of the necessary consequential directions. With regard to the costs, as the appellants have failed to establish that they were not to blame, and, in the result, both parties have been found to blame, there will be no costs in the Court of Appeal or in the court below.

Solicitor for the appellants, *Treasury Solicitor*.
Solicitors for the respondents, *Thomas Cooper and Co.*

Thursday, May 25, 1911.
(Before VAUGHAN WILLIAMS, FLETCHER MOULTON, and FARWELL, L.JJ.)

HUTCHINS BROTHERS *v.* ROYAL EXCHANGE ASSURANCE. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Marine insurance—Inchmaree clause—Damage to hull through latent defect existing prior to the policy — Latent defect becoming patent through wear and tear during currency of policy.

A policy of marine insurance insuring a ship for twelve months from the 8th Dec. 1908 *against the ordinary Lloyd's perils contained the following clause: "This insurance also specially to cover . . . loss of or damage to hull . . . through any latent defect in the . . . hull . . . provided such loss or damage has not resulted from want of due diligence by the owners of the ship, or any of them, or by the manager." Before the policy came into existence there was a defect in the sternpost of the ship which had been covered up by the makers and remained undiscoverable by reasonable inspection. The defect became visible during the currency of the policy owing to ordinary wear and tear.*

In an action by the assured to recover under the policy the cost of replacing the sternpost:

Held, that the assured were not entitled to recover, as there had been no loss or damage from the perils insured against during the currency of the policy.

Decision of Scrutton, J. (reported 104 *L. T. Rep.* 208) *affirmed.*

APPEAL by the plaintiffs from a decision of Scrutton, J. in an action tried by him without a jury, reported 104 L. T. Rep. 208.

The plaintiffs, who were the owners of the steamship *Ellaline*, claimed against the defendants as underwriters a sum of 137*l.* odd, being the defendants' proportion of an expense of about 2300*l.* incurred by the plaintiffs in replacing a sternpost condemned because of a crack or fissure.

The claim was made under a policy dated the 10th Dec. 1908 insuring the plaintiffs in respect of the *Ellaline*, subject to the Institute time clauses as attached, for twelve months, from noon, the 8th Dec. 1908, to noon, the 8th Dec. 1909, against the ordinary Lloyd's perils.

The Institute time clauses included a clause known as the "Inchmaree clause," which runs as follows:

This insurance also specially to cover (subject to the free of average warranty) loss of or damage to hull or machinery through the negligence of masters, mariners, engineers, or pilots, or through explosives, bursting of boilers, breakage of shafts, or through any latent defect in the machinery or hull, provided such loss or damage has not resulted from want of due diligence by the owners of the ship, or any of them, or by the manager. Masters, mates, engineers, pilots, or crew, not to be considered as part owners within the meaning of this clause should they hold shares in the steamer.

The defendants alleged there was no loss by perils insured against within the period of the policy.

Scrutton, J. found as a fact that there was a defect in the sternpost when it was originally cast; that it was covered up by the makers and remained undiscoverable by reasonable inspection until after the commencement of the policy, and that it became visible owing to the ordinary wear and tear of a ship's life; and he held that the assured were not entitled to recover, as there had been no loss or damage from the perils insured against during the currency of the policy.

The plaintiffs appealed.

Bailhache, K.C., *Dunlop*, and *C. H. Carden Noad* for the plaintiffs.

George Wallace, K.C. and *Chaytor* for the defendants.

VAUGHAN WILLIAMS, L.J.—I think that this appeal fails. I agree with the judgment of Scrutton, J., which I think runs in substance on the lines of the judgment of Walton, J. in *Oceanic Steamship Company* v. *Faber* (10 Asp. Mar. Law Cas. 303; 11 Com. Cas. 179). I desire to refer to the judgment of Walton, J. for this reason, that I entirely agree with it, and it seems to me admirably stated. It is a judgment which is perfectly clear and perfectly logical, and one understands it from beginning to end. We could not possibly assent to the argument which has been put before us by Mr. Bailhache without saying that the decision in *Oceanic Steamship Company* v. *Faber* (*sup.*) was wrong. The passage I wish to refer to begins at p. 185 of the report in 11 Com. Cas. and p. 305 of the report in Asp. Mar. Law Cas.: "I have to construe the clause. It seems to me quite plain that the effect and sense of this clause is not that the underwriters guarantee that the machinery of this vessel is free from latent defects, or undertake, if such defects are discovered during the currency of a policy, to make such defects good. It is plain that that is neither the intention of those who drew this clause, nor is it the sense of the clause itself if reasonably read and reasonably construed. The underwriters agree to indemnify the owner against any loss of or damage to the hull or machinery through any latent defect, so that a

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law.

claim does not fall within the clause unless there is loss of or damage to hull or machinery or some part of the hull or machinery, and there is no claim unless that damage has been caused through a latent defect, or through one or other of the causes that are mentioned in the clause—in this particular case through a latent defect. Therefore there must be a latent defect causing loss of or damage to the hull or machinery, and causing that loss of or damage to the hull or machinery during the currency of the policy under which the claim is made. If those conditions are fulfilled, the underwriters are liable to indemnify the owners in respect of that loss or damage." That is admirably stated. I agree with the judgment of Walton, J. and his reasoning and every passage of it. What is said against this? It is said, "Oh, but there was an appeal (13 Com. Cas. 28; 10 Asp. Mar. Law Cas. 515) in the same case in which the judgment of Buckley, L.J. differs from the view of Walton, J." It is also suggested (I do not think it can be said) that the judgment of the Lord Chief Justice differs from it or, rather, does not affirmatively agree with it. Now, with regard to the judgment of Buckley, L.J., it is impossible to say that the last clause of his judgment is in any way inconsistent either with the judgment of Walton, J. or with the judgment of Scrutton, J. in this case. But a difficulty arises because it is said that there is an earlier passage which does not seem easy to reconcile with the later passage. Buckley, L J.'s judgments are, as a rule, so clear and so plain that he has justly, if I may use the term, acquired a reputation for singular clearness. I do not profess to explain how this passage and the other one can be reconciled, but am of opinion that this appeal fails and must be dismissed with costs.

FLETCHER MOULTON, L.J.—I am of the same opinion, and I will only add a very few words. In my opinion the Inchmaree clause is emphatically a clause of insurance. It is an insurance against perils, but not necessarily perils of the sea. The House of Lords in *Thames and Mersey Marine Insurance Company* v. *Hamilton, Fraser, and Co.* (6 Asp. Mar. Law Cas. 200 (1887); 57 L. T. Rep. 695; 12 App. Cas. 484) decided that you could not recover under a policy of insurance in the form in which it was then drawn for losses which might just as well have occurred in a warehouse or on shore. In that case the valve of the donkey engine had got out of order, and the explosion and trouble resulted therefrom. It had nothing whatever to do with the perils of the sea. The Inchmaree clause was therefore inserted in marine policies in order to extend the policy to risks of that type, and of course we must construe it. We must not start with a predetermined notion of what it was intended to cover, but still it is important to know when and how it was first introduced. Now, the clause begins by saying, "This insurance also specially to cover." It remains, therefore, in the intention of the parties a policy of insurance, and it is to cover loss of or damage to hull and machinery through, among other things, a latent defect in the machinery or hull, "provided such loss or damage has not resulted from want of due diligence by the owners of the ship." Now, what are the facts of the case before us? In casting the sternpost of this vessel the casting failed, and it was a defect which made it a most improper sternpost, not fit to be used in a vessel, but—obviously fraudulently made—the defect was concealed; the sternpost was puttied up and put in the vessel. That was the condition of the vessel at the time when the Inchmaree clause began to run. Subsequently, during the currency of the policy, the paint coming off or being scraped off when they were repairing the ship, it was discovered what kind of sternpost she had, and the surveyors instantly condemned it and it had to be replaced. It is suggested that that is loss of or damage to hull or machinery by a latent defect. It was nothing of the kind. It was a latent defect itself. To hold that this Inchmaree clause covers that would be to make it not an insurance clause, but a guarantee clause, a warranty that the hull and machinery were free from latent defects, the consequence of which would be that all defects which could be discovered would have to be repaired at the cost of the insurers. I am satisfied that there are no words within this clause which imply such an interpretation, and the fact that it begins by being an express insurance against loss or damage to my mind negatives the possibility of such an interpretation. But then it is said that it has been so interpreted in this court in the *Oceanic* case by the Lord Chief Justice and Buckley, L.J. The language at the end of Buckley, L.J.'s judgment is conclusive to my mind against that contention, and I cannot help thinking that the ambiguity which exists in the earlier part of the judgment is partly due to this fact, that "breakage of shafts" is specifically referred to in the clause in another and earlier context. I think it is possible that there will arise a difficult question as to whether "breakage of shafts" is not put in a special position—a position in which other defects of machinery and hull are not—and I think it was in considering those particular words, which do not apply to this present case at all, that Buckley, L J. used the words in the earlier part of his judgment which seem to have caused this impression and given rise to apparent ambiguity. I do not think he intended to differ from the admirable judgment of Walton, J., with which I fully agree, or to differ from me when I said "I do not believe for one moment that this clause means that the machinery is insured against the existence of latent defects."

FARWELL, L.J.—I agree. I desire to adopt the admirable judgment of Walton, J. in the earlier case, and I do not wish to add anything to it.

Appeal dismissed.

Thomas and Co. *v.* Portsea Steamship Company. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Charter-party—Arbitration clause—Bill of lading—Incorporation.

Goods were shipped under a charter-party which contained an arbitration clause by which "any dispute or claim arising out of any of the conditions of this charter-party shall be adjusted at the port where it occurs, and the same shall be settled by arbitration." A bill of lading was given to the shipper which provided that freight should be paid "for the said goods, with other conditions as per charter," and in the margin was written in ink, "Deck load at shipper's risk, and all other terms and conditions and exceptions of charter to be as per charter-party, including negligence clause." The shipowners having sued the bill of lading holders for demurrage at the port of discharge :

Held, that the arbitration clause in the charter-party was not incorporated in the bill of lading so as to make it applicable to this dispute, it being only intended to apply to the method of settling disputes between the parties to the charter-party arising out of its conditions, not to disputes arising out of the bill of lading.

Judgment of the court below affirmed.

Hamilton v. Mackie (5 *Times L. Rep.* 677) *approved and followed.*

Appeal from a judgment of the Court of Appeal (Vaughan Williams, Buckley, and Kennedy, L JJ.), reported 11 Asp. Mar. Law Cas. 530, *sub nom. The Portsmouth*; 104 L. T. Rep. 10; (1911) P. 54, which had reversed a decision of the Admiralty Divisional Court (Sir S. Evans, P. and Bargrave Deane, J.), reported 11 Asp. Mar. Law Cas. 531; 104 L. T. Rep. 10; (1910) P. 293, who had affirmed a decision of the County Court judge of Glamorgan, sitting at Cardiff, staying the action and referring the matter in dispute to arbitration.

The facts appear sufficiently from the headnote above, and from the judgments of their Lordships, and are set out fully in the report in the courts below.

Leslie Scott, K.C. and *Holman Gregory*, K.C., for the appellants, argued that the effect of the marginal clause in the bill of lading was to incorporate all the terms and conditions of the charter-party, including the arbitration clause. They referred to

Weir and Co. v. *Pirie and Co*, 3 Com. Cas. 263;
East Yorkshire Steamship Company v. *Hancock*, 5 Com. Cas. 266;
Russell v. *Niemann*, 10 L. T. Rep. 786; 17 C. B. N. S. 163;
Serraino v. *Campbell*, 64 L. T. Rep. 615; (1891) 1 Q. B. 283;
Larsen v. *Sylvester*, 99 L. T. Rep. 94; (1908) A. C. 295;
Glynn v. *Margetson*, 69 L. T. Rep. 1; (1893) A. C. 351.

Bailhache, K.C. and *A. Parsons*, for the respondents, maintained that the case was covered by the decision in *Hamilton* v. *Mackie* (5 Times L. Rep. 677), and that the decision of the Court of Appeal was right. They also referred to

Manchester Trust v. *Furness, Withy, and Co.*, 73 L. T. Rep. 110; (1895) 2 Q. B. 539;
Gullischen v. *Stewart*, 50 L. T. Rep. 47; 13 Q. B. Div. 317.

Leslie Scott, K.C., in reply, referred to

Restitution Steamship Company v. *Pirrie*, 7 Asp. Mar. Law Cas. 11 (n).

At the conclusion of the arguments their Lordships gave judgment as follows:—

The Lord Chancellor (Loreburn). — My Lords: The question in this case seems to me to be whether an arbitration clause found in the charter-party is applicable to the contract evidenced by the bill of lading, and to disputes arising between the shipowners and the holders of the bill of lading under that document. The bill of lading itself is the primary document to be considered. It acknowledges the shipment of the goods in the usual way, and the terms upon which they are to be delivered. There are two paragraphs in it which refer to the charter-party One of them is in the body of the bill of lading and provides that the goods shall be delivered to "William Malcolm Mackay or his assigns, he or they paying freight for the said goods with other conditions as per charter-party with average accustomed." Now, it is well settled that under words of that kind you cannot say that the arbitration clause in the charter-party is incorporated or made applicable. Then there is another paragraph in the bill of lading relating to the charter-party. It is as follows: "Deck load at shipper's risk, and all other terms and conditions and exceptions of charter to be as per charter-party, including negligence clause." I do not think that this paragraph brings into the bill of lading the arbitration clause any more than the other one does. The arbitration clause is not one that concerns shipment, or carriage, or delivery, or the terms upon which delivery is to be made or taken; it only governs the way of settling disputes between the parties to the charter-party, and disputes arising out of the conditions of the charter-party, not disputes arising out of the bill of lading. In my opinion the Court of Appeal relied rightly upon the decision in *Hamilton* v. *Mackie* (5 Times L. Rep. 677), and, if it is desired to put upon the holders of a bill of lading an obligation to arbitrate because that obligation is stated in the charter-party, it must be done explicitly.

Lord Atkinson.—My Lords: I concur with the judgment of the Lord Chancellor. I think that it is a sound rule of construction that when it is sought to introduce into a document like a bill of lading, a negotiable instrument, a clause such as this arbitration clause, not germane to the receipt, carriage, or delivery of the cargo, or to the payment of the freight, the proper subject-matters with which a bill of lading is conversant, this should be done by distinct and specific words and not by general words such as those written

(*a*) Reported by C. E. Malden, Esq., Barrister-at-Law.

in the margin of the bill of lading in this case. With regard to the other point mentioned by my noble and learned friend, I concur in his opinion.

Lord Gorell.—My Lords: I concur in the judgment which has been delivered by the Lord Chancellor, but I should like to say a few words about this case, because it is one of a class of cases which constantly occur, and these questions as between consignees and shipowners are really of very great commercial importance. The charter-party in this case was made between certain shipowners and certain charterers for the loading of a large cargo of wood goods (of course I am taking it quite shortly) at, I think, the port of Halifax, or some other port, for a port in this country; there was a clause for cesser of liability, and there were provisions as to freight, and the time for loading and the time for discharge; and there was also an arbitration clause in these terms: "Any dispute or claim arising out of any of the conditions of this charter-party shall be adjusted at the port where it occurs, and the same shall be settled by arbitration." Under that charter-party a cargo was provided, but it was not shipped by the charterers; it appears to have been shipped by a certain Mr. William Malcolm Mackay, with whom, no doubt, the charterers had arranged for a cargo. The whole cargo appears to have been dealt with in one bill of lading, which, after providing for the usual exceptions, winds up by saying that the cargo is to be delivered "unto William Malcolm Mackay or his assigns, he or they paying freight for the said goods with other conditions as per charter-party, with average accustomed." The bill of lading also has a marginal clause written in in ink: "Deck load at shipper's risk, and all other terms and conditions and exceptions of charter to be as per charter-party, including negligence clause." Now, I think that it has hardly been argued seriously that the clause as to "paying freight with other conditions as per charter-party" in the body of the bill of lading would incorporate the arbitration clause in this case. There is ample authority against any such view, and I pass from that point. But it is said that the special clause in the margin has in fact had the effect of bringing into the bill of lading the arbitration clause which is found in the charter-party. To my mind the question is one of construction, and, when one turns to the marginal clause in question, I have very serious doubt whether it carries the question one bit further than the clause which is found in the body of the bill of lading, except, of course, so far as it brings in the exceptions in the charter-party, and these exceptions are to include the negligence clause; because it adds, really, in words, to the words in the body "with other conditions as per charter-party," nothing more than that all other terms and conditions are to be those of the charter-party. Now, the case of *Hamilton* v. *Mackie* (*ubi sup.*) has already decided that the words "all other terms and conditions as per charter-party" (I think that those are the exact words) have not the effect of bringing the arbitration clause into the bill of lading. We have not had a full report of that case, so as to enable us to judge whether there was a cesser clause there or not, but I cannot help thinking myself, having regard to the date of that decision, and to the fact that there was a full cargo, as I understand the report, that it is extremely probable that there was a cesser clause in that case, as it had become quite common at the date when that decision was given; and the conclusion to which I come is that that case was rightly decided, and that it really governs the present case; but whether it does so or not, it seems to me that the marginal clause does not contain words which incorporate the arbitration clause in the present case. I think that the true view to take of such a clause is that the "terms and conditions" do not really include more than what refers to those matters which have to be dealt with both by the shipowner and the consignee in relation to the carriage, discharge, and delivery of the cargo. To what extent they include what refers to those matters, or any of them, I do not pause to consider, but I do not see that they deal expressly with the arbitration clause in any way, and of course it is sufficient for present purposes to say that they do not; but my view is that what they deal with is no more than that which I have already stated. Now, that being so, if one considers this case a little more broadly, the shipper is not likely, I think, to have been desirous of consenting to an arbitration clause which possibly places upon him the obligation of deciding by arbitration at any port where a dispute occurs a question in which there is any dispute. Certainly no consignee would ever be likely, naturally, to assent to such a proposition because he might find himself landed in the difficulty of having to go to arbitration at a port of shipment with which he had no further connection than the mercantile one of correspondence. It therefore seems to me, when one looks at the matter broadly, that the true construction to place upon the clause is that which I have already suggested; and that the point may be made still plainer by trying to see what would be the effect produced if this clause of arbitration were actually written into the bill of lading. If it were written in, it would at once be seen that it is not a clause which is consistent in its terms with the terms of the bill of lading. It is consistent with disputes arising under a charter-party, and that again leads to the conclusion that it was never intended to be inserted as part of a bill of lading which was to pass from hand to hand, as bills of lading, being negotiable instruments, usually do. But there is a wide consideration which I think that it is important to bear in mind in dealing with cases of this class. The effect of deciding to stay this action would be that the bill of lading holder, or the shipowner (in this case it would be the shipowner, but it might just as well occur where a bill of lading holder is concerned), who did not wish for an arbitration, would be ousted from the jurisdiction of the courts, and compelled to decide all questions by means of arbitration. Now, I think, broadly speaking, that very clear language should be introduced into any contract which is to have that effect, and I am by no means prepared to say that this contract, when studied with care, was ever intended to exclude or carries out any intention of excluding the jurisdiction of the courts in cases between the shipowner and the bill of lading holder. It seems to me that the clause of arbitration ought properly to be confined, as drawn, to disputes arising between the shipowner and the charterer, and therefore I concur in the motion which the Lord

Chancellor has made that this appeal should be dismissed.

Lord Robson.—My Lords: The question here is whether the appellants, who are consignees of the goods, can compel the shipowners to submit to arbitration on a claim for demurrage instead of bringing an action. For this purpose they must show that the bill of lading, which constitutes the contract between the shipowners and themselves, contains a clear stipulation to that effect. There is an arbitration clause in the charter-party applicable to "any dispute or claim arising out of the conditions of this charter-party," and providing that it "shall be adjusted at the port where it occurs, and settled by arbitration." The appellants contend that this clause is incorporated in the bill of lading by reference. There are two references in the bill of lading which purport to incorporate all or some of the terms of the charter-party. With regard to the clause in the body of the document which expresses the obligation of the shipowner to deliver the goods to the consignee, "he or they paying freight with other conditions as per charter," very little need be said. These words have been the subject of a series of decisions which establish that such a reference does not incorporate every clause or term of the charter-party, but only those terms which are *ejusdem generis* as that for the payment of freight. There is, however, written in the margin of this bill of lading a clause which deals with the incorporation of the provisions of the charter-party in somewhat wider terms. It says: "Deck load at shipper's risk, and all other terms and conditions and exceptions of the charter-party are to be as per charter-party, including negligence clause." In these words we have no specific reference to the payment of freight so as to import a limitation on their generality, but I do not think that they differ in effect from the clause in the body of the bill of lading so far as the question in the present case is concerned. Both clauses are subject to the rule that the terms of the charter-party when incorporated or written into the bill of lading shall not be insensible or inapplicable to the document in which they are inserted, and it is not absolutely clear that, when thus tested, this arbitration clause is applicable to a dispute between persons other than the parties to the charter. It relates expressly only to disputes "arising out of the conditions of this charter-party," and would stand in the bill of lading with that limitation. In one sense it is perhaps difficult to imagine any dispute relating to the chartered voyage which might not be said to arise out of the conditions of the charter, but we are dealing here with obligations founded on the bill of lading, which is a different contract, and is made between different parties, though it relates in part to the same subject-matter. The limitation of the clause to the conditions of this charter-party is therefore, to say the least, embarrassing and ambiguous when it comes to be made part of the bill of lading. It requires, indeed, some modification to make it even read intelligibly in its new connection. It is to be remembered that the bill of lading is a negotiable instrument, and if the obligations of those who are parties to such a contract are to be enlarged beyond the matters which ordinarily concern them, or if it is sought to deprive either party of his ordinary legal remedies, the contract cannot be too explicit and precise. It is difficult to hold that words which require modification to be read as part of the bill of lading, and then purport to deal only with disputes arising under a document made between different persons, are quite sufficiently explicit for the appellants' purpose. On the whole, therefore, I think that their contention fails.

Judgment appealed from affirmed, and appeal dismissed.

Moss Steamship Company v. Whinney. (a)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Bill of lading—Lien for unpaid freight due from limited company—Shipment by receiver—Right to exercise lien against receiver.

A limited company had for many years shipped goods by the appellants' line of steamers to their agents abroad under a bill of lading which contained a clause giving the shipowners a lien on the goods, not only for freight due thereunder, but also for any previously unsatisfied freight due from the shippers or the consignees. The company got into difficulties, and the respondent was appointed receiver, and he shipped goods by a ship of the appellants to the agents abroad, with instructions to "deliver as below, charging to yours respectfully ' the Company ' by A. F. W., Receiver and Manager." The address given for delivery was to the company, care of the agents. The appellants informed the respondent of the amount of freight, and inclosed a bill of lading in the same form as that used on previous shipments by the company. On the arrival of the goods, the shipowners claimed a lien in respect of unsatisfied freight due from the company on shipments before the appointment of the receiver.

Held, that they were not entitled to do so.

Judgment of the Court of Appeal affirmed, Lords Shaw and Mersey dissenting.

Appeal from a judgment of the Court of Appeal (Vaughan Williams and Buckley, L JJ.), Fletcher Moulton, L.J. dissenting, reported 11 Asp. Mar. Law Cas. 507; 103 L. T. Rep. 344; (1910) 2 K. B. 813, which reversed a judgment of Hamilton, J. sitting without a jury, reported 11 Asp. Mar. Law Cas. 381 (1910); 102 L. T. Rep. 177, in favour of the appellants, the defendants below.

The facts and arguments appear sufficiently from the judgments of their Lordships.

Bailhache, K.C. and *C. Robertson Dunlop* appeared for the appellants.

Sir *A. Cripps*, K.C. and *Leck* for the respondent.

(a) Reported by C. E. Malden, Esq., Barrister-at-Law

At the conclusion of the arguments their Lordships took time to consider their judgment.

June 26.— Their Lordships by a majority dismissed the appeal and gave judgment as follows:—

The Lord Chancellor (Loreburn). — My Lords: In this case Fletcher Moulton, L.J. and Hamilton, J. were of one opinion, while Vaughan Williams and Buckley, L JJ. held a different view. Your Lordships have, I am sure, felt the difficulty presented by such a conflict of judicial authority. This is eminently one of those cases in which it is most important to appreciate the true business character of the transaction, and to examine the communications between the parties in that light. Messrs. Ind, Coope, and Co. had for some time shipped beer on the vessels of the Moss Steamship Company, and taken bills of lading which provided that the shipowner should have a lien on the goods, not only for the stipulated freight, but also for any unsatisfied freight due on other shipments either from shipper or consignee to the shipowner. That was the course of business between them up to Jan. 1909. On the 5th Jan. an order was made in a debenture-holder's action that Mr. Whinney should be receiver and manager of Ind, Coope, and Co. Nothing special is to be found in that order. Its effect in law was that the company still remained a living person, but was disabled from conducting its business, the entire conduct of which passed into the hands of Mr. Whinney. Mr. Whinney did not close down the business, but continued it, and, among other things, he resolved to send some of Ind, Coope, and Co.'s beer to Malta to the company's representatives there. Accordingly on the 13th Jan. he sent an order to the Moss Steamship Company directing them to ship the beer to Ind, Coope, and Co., care of Turnbull, jun., and Somerville of Malta, and he signed as follows: "Ind, Coope, and Co. Limited, by Arthur F. Whinney, Receiver and Manager." Upon this, Messrs. James Moss and Co., as agents, shipped the beer and made out the bill of lading in the terms theretofore in use, which, as I have said, gave to the shippers a contractual lien, not merely for the freight of 56*l.* payable for this particular beer, but also for any unsatisfied freight due, either from shipper or consignee. Now, there was at that time due from Ind, Coope, and Co. to the shipowner the sum of 171*l.* for unsatisfied freight, and the dispute which your Lordships have to decide is this: Can Mr. Whinney claim delivery of this beer on payment of the stipulated freight of 56*l.* or must he also pay the additional 171*l.* unsatisfied freight due upon earlier contracts from Ind, Coope, and Co. in accordance with the lien clause in the bill of lading? Obviously, if the lien holds good for this sum of 171*l.* the effect of what Mr. Whinney has done is this: he has given security to the unsecured creditors of Ind, Coope, and Co. which placed them in front of the debenture-holders after the latter had got a receiver appointed, in order to realise their floating security over the undertaking of Ind, Coope, and Co. Questions have been raised as to the power of a receiver and manager to hypothecate assets of the company for the payment of unsecured creditors. It is said that such a proceeding would be *ultra vires*, or at all events an excess of authority, of which a trader who knew the position could not avail himself. I do not think that such a question arises in the present case, for the reason stated by Mr. Bailhache. This is an action between the shipowners on the one side and Mr. Whinney on the other. If Mr. Whinney has contracted so to hypothecate these goods, I say if he has done so, he cannot himself compel the shipowners to deliver them without first satisfying the charge which he has created. As between the litigating parties there is a charge. It may be that Mr. Whinney had no power to create it, but if so, then it is for the company to claim the goods and to raise the question of his authority. Of course, a decision upon the ground so taken by Mr. Bailhache would really settle nothing as to the true rights of the shipowners. In my opinion there is another ground upon which this case ought to be decided in favour of the respondent. The shipowners can claim a lien for the sum of 171*l.* unsatisfied freight only if this unsatisfied freight was due by the shippers or consignees of this particular shipment of beer. Who were the shippers and consignees respectively? We must look at the order of the 13th Jan. and the bill of lading together. The order is signed Ind, Coope, and Co. by Mr. Whinney, receiver and manager. Unless qualified by other circumstances absent here, this means that Mr. Whinney ordered the shipment and contracts for it on his personal credit, looking, of course, for indemnity to the assets of the company, of which he is receiver and manager. He is the shipper in the name, it is true, of Ind, Coope, and Co. The shipowners know, from the terms of the order, or ought to know, that Ind, Coope, and Co. are no longer conducting the business, but that Mr. Whinney is conducting it and making contracts for it. So again, when in the bill of lading Ind, Coope, and Co. are named as consignees, the shipowners know that they are so only in name, the real consignee being the same as the real shipper—namely, Mr. Whinney, the receiver and manager. I agree with Moulton, L.J. that the company was still alive and its business was being still carried on by Mr. Whinney, but he was not carrying it on as the company's agent. He superseded the company, and the transactions upon which he entered in carrying on the old business were his transactions upon which he was personally liable. He was really a trustee, and the shipowners dealt with the trustee. No doubt there may be cases in which a receiver and manager is in all senses the agent of the company, and a question may then arise as to the extent of his authority. But here he was not such agent, and this was sufficiently conveyed to the shipowners by the notice that he was receiver and manager. Had they doubted or desired further information they could have asked for it before contracting to carry the goods. They would have found that the person contracting with them was Mr. Whinney. Accordingly, I move your Lordships that the order appealed from be sustained.

The Earl of Halsbury.—My Lords: I think for more reasons than one, that it is desirable to state the circumstances under which this case comes for adjudication, chiefly because the very sensible arrangement made by the parties to have the real question in dispute disposed of before the courts, might be defeated if questions of pleading

or forms of action should interfere with the determination of the real question as I think that it has interfered with the arguments. Another reason is that I think that if the appellants' argument should prevail, it would be a very serious blow to a system at present prevailing, by which an enormous quantity of business is being carried on. A great many joint stock companies obtain their capital, or a considerable part of it, by the issue of debentures, and one form of securing debenture-holders in their rights is a well-known form of application to the Court of Chancery, which practically removes the conduct and guidance of the undertaking from the directors appointed by the company, and places it in the hands of a manager and receiver, who thereupon absolutely supersedes the company itself, which becomes incapable of making any contract on behalf of the company or exercising any control over any part of any property or assets of the company. Now in this case a joint stock company, Ind, Coope, and Co. Limited, a brewery carrying on an extensive business, part of which consisted in exporting beer, &c., to Malta, became embarrassed in its affairs; the debenture-holders became alarmed, and such an application as I have described was made to the Court of Chancery on the 5th Jan. 1909, and on that day an order was made appointing Mr. Whinney, the respondent, receiver and manager. On the 13th Jan. an order was given by Mr. Whinney for the beer which is the subject of this action, but the order was signed by "Arthur F. Whinney, Receiver and Manager," and on the 15th shipping documents were sent from Moss and Co. with a note that one bill of lading had been sent to the consignee by the ship *Rameses*, the exact date when she started on her voyage is not given. Two bills of lading were issued, one stamped, the other an unstamped copy sent to Ind, Coope, and Co. Limited, Burton-on-Trent. No one has suggested that Mr. Whinney ever saw the bill of lading himself; indeed, Hamilton, J. finds that that form of bill of lading was probably not read by anybody. The letter of the 16th Jan., which inclosed it, bore the statement: "One bill of lading sent to consignee. Please check the inclosed bill of lading, and if found incorrect, return to us immediately, as otherwise we can take no responsibility." That is a warning and request that the bill of lading should be checked. I am satisfied that it has no reference whatever to the terms of the bill of lading, and it only meant matters to be filled in pursuant to the instructions of the 13th Jan., but that included the description of the consignee and the address of the consignee, and I assume that to that extent the bill of lading was duly checked, and certainly no exception was taken. No doubt Mr. Whinney did not read the bill of lading; it is not proved that he did not, but I think that I should be shutting my eyes to the ordinary course of business if I believed that he did. This is certainly what I should infer, and when the witness at the trial is challenged with this notice of the 16th he says that of course it had reference to the number of the casks. Now, if actual knowledge of this particular stipulation in this particular bill of lading is negatived, as I think it is here, I am unable to take the view that, with all respect to this very learned and experienced judge, and my respect for any judgment of his is very great indeed, that there was any evidence of such a contract as would enable Messrs. Moss and Co. to exercise a lien. Such a phrase as "the usual bill of lading" is entirely misleading unless it is explained with respect to what the word "usual" is to be applied. No doubt there are some things which are so common in commerce as, even when not specially called to the attention of the contracting parties, to be assumed by every business man to be included in a common and well-known form of contract, but no one, I should have thought, could contend that when a company has been so altered in its mangement that a receiver has been appointed who is the only person who can contract, that its former course of business is to be considered as making the very first consignment made to be subject to the forms which were in use when the company and not the receiver were conducting the business. It would be quite intelligible that such a clause as we are here discussing should be included in dealings with the company itself, and the practice would be used justly as proof against those who had been in the habit of using it for ten years. But once a receiver and manager is appointed things are changed, and every man of business would know, and ought to know, that the only person with whom he could contract safely would be the manager appointed by the Court of Chancery. Now to say of such a person that the stipulation in question would form a likely clause would be ridiculous. If it were to be inserted at all, it certainly would require that it should be expressly pointed out to the receiver and manager, who, as every business man would know, is placed in his position of receiver and manager to protect the rights of the debenture-holders. One would suppose, from some of the arguments, that one was dealing here with some quite inexperienced persons, who had never heard of a debenture action before, whereas, as I have already pointed out, we are dealing with thoroughly experienced business men, and I observed that, when Mr. Waller was challenged at the trial as to whether he had not heard of a manager and receiver being appointed, his only answer is that he had not been officially informed. As the late Lush, L.J. pointed out, a bill of lading refers primarily to legal relations between the parties as applicable to the particular consignment to which it relates. The question what would be the consequence if Mr. Whinney had known and understood the contract, which he was supposed to have done, but I find as a fact that he did not, does not arise in this case. I agree with the Lord Chancellor that it is unnecessary to discuss it, and I think that this appeal should be dismissed.

Lord Atkinson.—My Lords: The action out of which this appeal has arisen was not an action to recover damages for breach of a warranty given by Arthur F. Whinney of his authority to make a contract, still less an action to recover damages for a false representation made by him of his authority to make any contract. It was a proceeding instituted by him to try the validity, as between him and the appellants, of a lien given to them, and already enforced by them, on certain goods of which he had possession, the property of Ind, Coope, and Co., shipped on the appellants' ship the *Rameses*, and carried by her to Malta. The lien was given in respect of a

simple contract debt, owed by Ind, Coope, and Co., for freights theretofore earned; and in the circumstances of this case must, I think, be taken *primâ facie* to have had the effect of giving to an unsecured creditor of that company priority over its secured creditors. Arthur F. Whinney was, by order of the Court of Chancery, dated the 5th Jan. 1909, made in an action instituted by the debenture-holders of this company, appointed receiver and manager over "all the undertaking and property whatsoever and wheresoever of the company." The company being directed to deliver over to him, amongst other things, "all the stock-in-trade and effects of" their business, and the possession of the said properties, so far as was necessary for the purposes of such receivership and managership; and it was further ordered that Whinney should forthwith, out of any assets coming to his hands, pay the debts of the company, which had "priority over the claims of the debenture stockholders, under the Preferential Payments in Bankruptcy Amendment Act 1897 and be allowed all such payments on his account." It is not pretended that the debt due for back freights, for which the lien was given, was one of these latter, or that any order had been obtained from the court authorising the giving of the lien, and I do not think that it can be contended successfully that under this order Whinney had any power to give a lien, valid at law against everybody on assets of the company coming to his hands, part of its stock in trade, which would have the effect of giving the priority above mentioned. This appointment of a receiver and manager over the assets and business of a company does not dissolve or annihilate the company, any more than the taking possession by the mortgagee of the fee of land let to tenants annihilates the mortgagor. Both continue to exist; but it does entirely supersede the company in the conduct of its business, deprives it of all power to enter into contracts in relation to that business, or to sell, pledge, or otherwise dispose of the property put into the possession or under the control of the receiver and manager. Its powers in these respects are entirely in abeyance. Of all these facts the appellants had notice before this lien was created. That notice was conveyed to them by the description given by Whinney of himself in his letter to them of the 13th Jan. 1909. He describes himself as receiver and manager of Ind, Coope, and Co. That is sufficient: (*Burt and others* v. *Bull*, 71 L. T. Rep. 810; (1895) 1 Q. B. 276). Now, as I understood, the appellants contend that, despite this notice, Whinney could enter into a contract with the appellants, valid and binding as between themselves, that the company should do that which at law it is disabled from doing, and that he himself, Whinney, should do something which at law he is also disabled from doing —namely, that the company should intermeddle with their own goods, that they should become the consignees, if not the shippers of these goods, and should exercise dominion over, and deal with, them in the character of consignees—and that he, Whinney, should, in defiance of the order of the court, give a valid lien over the goods of the company, part of its stock in trade, of which he got possession and control as such receiver and manager in respect of a simple contract debt in the manner and with the result above mentioned; and further, that the lien so given could be enforced, and the receiver be estopped, as it were in a suit such as this, from relying upon its invalidity. It is admitted on both sides that the bill of lading in this case is only evidence of the contract entered into between the shipowner and the shipper, not the complete contract in itself. It is further admitted that it must be construed together with the respondent's letter of the 13th Jan, 1909. It is not denied that the bill of lading is similar in form to those invariably or generally used by the appellants in their business as shipowners, but there is no evidence which I can discover either that its terms were specifically brought to the knowledge of Whinney, or that he was under any necessity or pressure to ship this beer by the *Rameses*, or by any other of the appellants' ships, or indeed to ship it at all. It is not, therefore, in my opinion, open to the appellants to contend that there was some object to be gained by shipping the goods by this ship or by the appellants' line so important in character, that it would have been but reasonable and proper for him, in the efficient and zealous conduct of the business entrusted to him, to accept deliberately the terms contained in the bill of lading, rather than not effect this object. The debt for which the contested lien was given was, by the terms of the bill of lading, a debt due either by the shipper or "consignee." The contention of Sir Alfred Cripps, on behalf of the respondent, on this point was that Whinney was both shipper and consignee of the goods; and that he owed nothing for back freights. That of Mr. Bailhache, on behalf of the appellants was, as I understood it, that, at all events, between the contracting parties the company which did owe back freights is the consignee, and must be so treated; and the judgment of Moulton, L.J. is, apparently, to the effect that the company must, for the purposes of this case, be treated both as shipper and consignee, and that Whinney was only in the position of a general manager of the company appointed by the company itself. This latter point has not, as I gather, been relied upon on behalf of the appellants in argument before your Lordships. The decision of the question turns upon the construction of the letter of the 13th Jan. 1909, since it is admitted that the bill of lading must be read in conjunction with it. In my opinion, Sir A. Cripps is right. I think it obvious that the company were not the shippers. The very words "receiver and manager" convey, according to the above mentioned authority, that Whinney was not an agent of the company, but that he was managing their affairs under the order of the court, and that all their powers were in abeyance. It would seem to me plain, therefore, that the Ind, Coope, and Co., designated as consignee, must be the same company as that first mentioned in this letter—that is, the disabled and superseded company whose powers were dormant; so that the letter must be read as if, after the words Ind, Coope, and Co. Limited, where the same occur for the second time, the words "over whose business the above-mentioned A. F. Whinney has been appointed receiver and manager by the Court of Chancery" had been written into it. Read with that interpolation this letter, in my view, amounts in effect to a direction to consign the beer to Whinney, receiver

and manager, care of Turnbull, jun., and Somerville, Strado Reale, Malta. And if the same interpolation be made in the bill of lading, as I think it must be, then Whinney is himself, under the contract, the consignee, and as he owes nothing for back freights there is no lien.

As regards the second point, the money sued for, was paid under protest to obtain the delivery of the goods, and the question must be determined as if this was a proceeding, instituted by the appellants, to enforce this lien. The question for decision, then, would resolve itself into this: Would Whinney be estopped in such an action as against the appellants from asserting that he had no power to create the lien, and that it was invalid in law? It is to be observed that no evidence whatever was given to show that the appellants refused to ship their goods, or would not have shipped them, except upon the terms of getting this lien. It may well be that the way in which Whinney did this business was the ordinary way in which such business was done by the superseded firm. That, however, in my view, is not enough. He was not the agent of the company, but the officer of the court. His powers were those of such an officer, not those of the company or of an agent or manager appointed by them, who might possibly be held by implication to have conferred upon him power to conduct the business in the mode, and on the lines upon which, it had been theretofore conducted by them. His position would appear to me, therefore, to resemble somewhat that of the directors of a company, who, as I understand the authorities, are not estopped at law from relying on the fact that a contract which they made or act which they did was *ultra vires* and invalid (whether it was an act which could be ratified by the shareholders or not), as against a person who knew, or should be taken to have known, what their powers were, and therefore knew, or should be taken to have known, that the contract or act was *ultra vires*: (see Lindley on Companies, 6th edit, pp. 217, 351, 671). In *British Mutual Bank Company* v. *Charnwood Forest Railway Company* (57 L. T. Rep. 833; 18 Q. B. Div. 714) Bowen, L.J. says: "In the present case the defendant company could not in law have so contracted, for any such contract would have been beyond their corporate powers. And if they cannot contract, how can they be estopped from denying that they have done so?" And Fry, L.J. says: "No corporate body can be bound by estoppel to do something beyond their powers" (*Balfour* v. *Ernest*, 5 C. B. N. S. 601; *Kearns* v. *Leaf*, 1 H. & M. 681; *Chapleo* v. *Brunswick Building Society*, 44 L. T. Rep. 449; 6 Q. B. Div. 696). Those two cases turned upon the ignorance of the plaintiffs of the defendants' want of authority to accept bills. But for that ignorance it is obvious that the plaintiffs must have failed to establish personal liability against the directors. It was contended on behalf of the appellants that the inability of the receiver to create the lien contended for was merely a matter between him and the debenture-holders. They may no doubt dispute, before the court which appointed him, his claim to be reimbursed out of the assets of this firm for the sum paid to obtain delivery of the goods, but with this the appellants have no concern. If that reasoning be sound, the receiver could pledge the goods for a personal debt of his own. I do not think that it is sound. The creation of a lien such as that given was not shown to be incidental to or consequential upon those things which the respondent was authorised to do. It was *primâ facie ultra vires* as the appellants must be taken to have known. In my opinion, therefore, the lien was invalid, and the respondent is, on this ground as well as on the other, entitled to receive back the money sued for. The appeal should, I think, be dismissed.

Lord Shaw.—My Lords: The opinion which I have formed in this case differs from those just delivered. I have arrived at it with diffidence, and only after repeated consideration. I shall express briefly how the matter strikes me. The appellants own a line of steamships trading between Liverpool and Malta. For a good many years Messrs. Ind, Coope, and Co., brewers, have been in the habit of sending by the appellants' steamers consignments of beer to themselves, care of their agents, Messrs. Turnbull, jun., and Somerville. In the course of trade the custom had arisen of shipping upon contracts which provided that the shipowner should have a lien over the consignments for the freight applicable to the cargo and for all freights unpaid. In the present case it is admitted that 171*l*. was due from Ind, Coope, and Co. to the appellants in respect of previously unsatisfied freights. A lien was claimed under the terms of the contract accordingly. The lien has been released by payment, subject to the determination of the point whether such a lien was, in the circumstances, enforceable. There can be no doubt that, under the contract and by the terms of the bill of lading, the payment is due; and no one questions that, had certain events not occurred in the history of Ind, Coope, and Co., the lien was good. A few days, however, before this contract was made, a receiver and manager was appointed of the estate of Ind, Coope, and Co., at the suit of debenture-holders. The fact that there was such a receiver and manager was brought home to the appellants, because a week after his appointment—namely, on the 13th Jan. 1909—the shipping instructions to the appellants were: "Please deliver ale as below, charging to, Yours respectfully, Ind, Coope, and Co. Limited, By Arthur F. Whinney, Receiver and Manager, C.C.C." In the instructions the consignees were stated to be, "Ind, Coope, and Co. Limited, c/o Turnbull, jun., and Somerville, Strada Reale, Valetta, Malta," and the bill of lading which followed named the consignees as "Messrs. Ind, Coope, and Co. Limited, c/o Messrs. Turnbull, jun., and Somerville, or to his or their assigns." The bill of lading, following in this the previous practice of the business, created a lien which covered "any previously unsatisfied freight . . . due either from shippers or consignees to the shipowner." It is plain, accordingly, to my mind that, if Messrs. Ind, Coope, and Co. were either shippers or consignees, the contract which Mr. Whinney made would cover debts due by Ind, Coope, and Co., unless either of two things had occurred—namely, (1) that the entity known as Ind, Coope, and Co, had ceased to exist in law, or (2) that Ind, Coope. and Co. still subsisting in law, a contract entered into at that date, naming them as consignees, was a contract made *sub conditione*, and the condition was of such a character as to wipe out completely

that part of the contract which stipulated for a lien in respect of all previously unsatisfied freights. With regard to the first point—namely, whether Ind, Coope, and Co., as a legal entity, was continued after the appointment of a receiver—I respectfully agree with the judgment of Moulton, L.J.: "It was suggested that Ind, Coope, and Co. Limited after the appointment of the receiver and manager, was a different entity from that which it was before that date. To my mind this is a complete fallacy. The company then was, and still is, a going concern. No steps had been taken to wind it up. The debenture-holders found that it was to their interest to keep the company alive, and so long as it lives it is, and must be, one and the same company. No one but the limited company of that name can carry on the business of Ind, Coope, and Co. so long as that company exists. The whole beneficial interest in its assets may have passed to the debenture-holders and others, and this may fundamentally change the position of those who seek to enforce legal rights against it; but its identity is unchanged, and as the consignee under the bill of lading is Ind, Coope, and Co. Limited it is the same consignee, to whom the previous consignments were sent, and these unpaid freights come within the lien clause exactly as they would have come if the debenture-holders had not taken steps to enforce their security." I do not desire to put the point in any language of my own, adopting as I do in its entirety this paragraph of the learned Lord Justice's opinion. The second question is: Was a contract containing a clause so specific and clear, a clause which included within the scope of the lien freights previously unsatisfied by Ind, Coope, and Co.—was that clause substantially excised from the contract by reason of the appointment of a receiver? I cannot see my way clear to hold that it was. It may be quite true that the effect of the appointment of a receiver would be to place all creditors for debts of the company outstanding at the date of the appointment in a class separate from those who made advances or rendered service to the company after or during the receivership. But in point of fact what Mr. Whinney did in this contract was himself to make —even although he were considered a different person in law from Ind, Coope, and Co.—a shipping contract, one of the terms of which was that the outstanding debts of the appellants should be paid as the agreed-upon return for the then present service of conveying certain goods under the bill of lading to Malta. It was free to him to make that bargain; and it was free to the appellants, the shipping company, to decline to carry the goods or to stipulate for higher freights or different terms. But in my humble opinion, with the utmost deference to the learned judges who reached a different result, it is not free for him to say that he is not bound by an integral portion of the bargain, or to put forward the plea that he had not read a certain part of the contract which *quoad ultra*, he admits must stand. They were satisfied to go on as before, and the contract was thus made in circumstances which I find clearly expressed in the judgment of Hamilton, J.: "He" (that is Mr. Whinney) "instructed the goods to be shipped on the terms that the contract was to contain the usual clause under the bill of lading, so long in use, and he gave instructions for the shipment of the goods in continuation of a course of business and with no such indication that the terms of that business were to be limited as would lead to the inference that any different contract arose in the case of this shipment from the contract that has arisen in the case of prior shipments." The question is raised in several of the judgments of the courts below as to whether the shippers, Ind, Coope, and Co., formerly, and Ind, Coope, and Co. per Whinney, latterly, were the same shippers. There is much to suggest that substantially they were—the continued entity of Ind, Coope, and Co. being as stated. But I do not think it necessary to deal separately with that point; for, in my judgment, it is sufficient to say that by the express terms of the contract, Ind, Coope, and Co. were the consignees of this cargo —stated as such by name. Although the fact of a receivership had occurred in the history of that concern, that fact did not, as I have observed, disable the receiver from making the contract in these terms, or from shipping goods in accordance with the custom which had obtained previously. I do not find sufficient in this case to entitle me to say that I can upset that contract or import into its conditions something foreign to the previous relations of the parties, or excise from the contract what it itself stipulates—namely, that the lien was to cover past freights due to the appellants by the shippers. I admit the difficulties of the case; but I tender my respectful assent to the conclusions reached by Hamilton, J. and Fletcher Moulton, L.J.—remarking, finally, that I take it be somewhat serious that the holders of contracts of that kind should find them substantially modified by events which impinge upon and cut down their terms, and leave it thus open to a receiver to make contracts in comprehensive terms, which he had an undoubted power to make, but upon the construction of which it is open to him to maintain that they are less comprehensive in law than they bear to be on the face of the statement, and, therefore, that the carriers must, on the one hand, stand bound by the contract of carriage, but, upon the other, be limited in their rights of lien and recovery under that contract.

Lord Mersey.—My Lords: It is unnecessary to restate the facts of this case. They will be found set out sufficiently in the judgment of Hamilton, J., and they are not in dispute. It is important, however, to consider two preliminary matters before turning to examine the terms of the contract out of which the action arises. The first is as to the position and powers of Mr. Whinney as receiver and manager of Ind, Coope, and Co. Limited, and the second is as to the nature of the action itself. Mr. Whinney was a receiver and manager appointed by the court; he was not appointed by the debenture-holders, although, no doubt, he was appointed at their instance; nor was he appointed by the company. He was agent for neither the one nor the other, and, therefore, could make no contracts upon which either could sue or be sued. The contract in this case affords a sufficient illustration of what I mean. The debenture-holders could certainly not be sued upon it, for they as a body never had power to carry on the business or to contract in relation to it, nor could the company be sued upon it for they had ceased to be able to make any contracts by an agent or otherwise. Thus no

question of *ultra vires* arises. Mr. Whinney was merely an officer of the court, directed by the court, and by the court alone, to do a certain thing—namely, to carry on the business of Ind, Coope, and Co. Limited, in the ordinary way, until such time as the court might otherwise direct. An obligation was placed on him of making the contracts which might be necessary for so carrying on the business, and annexed to that obligation was a correlative right to be indemnified out of the assets of the company in respect of the liabilities which he might thereby incur. If he were to make contracts not necessary for the carrying on of the business, as, for instance, if he were to buy an excessive quantity of malt or if he were to sell an unduly large quantity of beer, so as to cripple the business, he would be personally liable on the contracts, and when he came to pass his accounts, the court might refuse him any indemnity out of the assets in respect of the liabilities which he had thereby incurred, and might also condemn him in damages for the loss resulting to the business in carrying out the contracts. It would not be for the persons contracting with him to inquire whether the contracts were such as came within the ordinary course of the business. Mr. Whinney, who alone could ascertain whether they were so or not, would have to take the risk of making a mistake in that connection. This was the position of Mr. Whinney with regard to the company of which he was appointed receiver and manager, and with regard to third parties with whom he might contract. As to the nature of the action brought by him, it is sufficient to say that it was an action brought by him in his personal capacity to recover back money of his own which he had paid to the defendants in order to obtain possession of goods on which the defendants alleged, and he denied, that he had created a lien in their favour. The action was not brought to try the right of the company or of the debenture-holders to the possession of the goods. There was nothing in it in the nature of interpleader, and it raised one simple question —namely, had Mr. Whinney created in the defendants a right to hold the goods as against himself, not as against the company, until the alleged lien was discharged? Such was the position of Mr. Whinney in the litigation, and such was the nature of the action brought by him. I have only referred to these matters because I think that some confusion arose during the argument in respect to them. The respondents did not take a different view of them from mine in the courts below, nor do I think that they intended to put forward a different view before your Lordships' House.

I come, therefore, to the question in the case—namely, did Mr. Whinney create a lien on the goods in respect of the back freights? It is said in the first place, that he did not because he could not, inasmuch as the goods were not his. To this contention there are two answers—first, that he was in lawful possession of the goods with power to pass the property in them by virtue of the order of the court under which he was acting. He could certainly sell them and give a good title to a buyer; he could also as part of the carrying on of the business, forward them to the Maltese agency and make such contracts as might be necessary or usual in that behalf; and in the next place it appears to me that if by the contract of affreightment he purported to give a lien, it does not lie in his mouth to deny that the goods were his. It is not a case of warranty that he had an authority from someone else to give a lien. In such a case he would only be liable in damages for breach of the warranty. It is a case in which the goods for all relevant purposes were his own and had been shipped as his own. In the next place it is said that the words of the contract did not create the lien alleged, and this I conceive to be the real question in the case. Now the terms on which the goods were carried are to be found only in the bill of lading, a document which in the ordinary course of business, would be filled up by Mr. Whinney or his clerk, and then presented to the steamship owners for signature. The terms were the same as those on which the steamship company had carried goods for Ind, Coope, and Co. for many years past. The contract, therefore, was one which it was in the ordinary course of Ind, Coope, and Co.'s business to make. These terms gave to the steamship company "a lien and right of sale over the goods shipped in respect of any previously unsatisfied freight, due either from the shippers or consignees to the shipowners." Then who were the consignees? Now, no business man looking at this bill of lading could have any doubt on that point. The goods are "to be delivered (at Malta) to Ind, Coope, and Co. Limited, c/o Messrs. Turnbull, jun. and Somerville, or to his or their assigns." The reference to Turnbull, jun. and Somerville amounts to no more than a notification of an address at which Ind, Coope, and Co. are to be found, and the word "order," which appears in this part of the bill of lading, merely means that the document must be endorsed before the goods can be delivered up in exchange for it. Ind, Coope, and Co. were thus the consignees, and Mr. Whinney did, by the very terms of the contract of affreightment, give to the defendant shipowners the lien which they set up. Both Hamilton, J. and Buckley, L.J. were of opinion that Ind, Coope, and Co. were the consignees mentioned in the bill of lading. Hamilton, J. says "Mr. Whinney had this beer forwarded upon the terms that it should be consigned to Ind, Coope, and Co. Limited," and Buckley, L.J. says: "I agree that the company were in this transaction the consignees," Buckley, L.J. however adds: "but not in the sense in which the defendants seek to affirm that they were such"; and he then goes on to state in what sense the word "consignees" is used in this bill of lading. He says, in effect, that the consignees mentioned in the bill of lading are Ind, Coope, and Co., "by Mr. Whinney as receiver and manager. Here the learned Lord Justice is doubtless referring to the order for shipment of the 13th Jan. 1909, which is an order addressed by Mr. Whinney to the agents of the steamship company directing them to deliver the ale to Ind, Coope, and Co. Limited, Malta. This order is signed "Ind, Coope, and Co. Limited, by Arthur Whinney, Receiver and Manager." But I am at a loss to understand how the fact that the shipper describes himself in the shipping instructions as a receiver and manager can affect the question as to who are the consignees. Ind, Coope, and Co. do not, and, indeed, cannot, exist in two different senses. The company has not been wound-up, nor is it even in

liquidation. The only change that has happened is that, instead of the business being managed by an official appointed by the board of directors, it is managed by an official appointed by the court; but the company is still the same company and the business is still the same business. Mr. Whinney started no new business; he merely continued the old one, and Mr. Whinney himself clearly understood this when on Jan. 6 he telegraphed to Turnbull, jun., and Somerville: "We continue to do business as heretofore, Receiver, Ind, Coope, and Co." It was said during the argument that to let the shipowners have the benefit of the lien would be to make them secured creditors, taking priority over the debenture-holders. The answer is that the shipowners are not concerned with the debenture-holders. They made their contract with Mr. Whinney, and it is the money of Mr. Whinney which they are claiming a right to keep in this action. If Mr. Whinney has provided the money in order to free the goods from a lien, which as against the company he ought not to have created, he will not get the amount allowed in his accounts, and the company will be none the worse. To construe the bill of lading contract as the Court of Appeal has construed it is, in my opinion, to twist it from its plain meaning and to deprive the shipowners of part of the consideration for the carriage of the goods for which they stipulated, which was conceded to them. Another point was taken by the learned Lord Justice in the course of the argument in the Court of Appeal—namely, that Mr. Whinney could not, without the leave of the court, bind the debenture-holders by charging the goods with the back freights. It was a point which had not been taken before Hamilton, J. I think it sufficient to say of it that the same considerations which dispose of the earlier points dispose of this point also. If this contract was one which came within the meaning of carrying on the ordinary business of the company (as I think it was), Mr. Whinney required no leave; the making of it was authorised and, in fact, enjoined by the order of the court appointing him; and if it did not, it is he, and not the shipowners, who must bear the consequences. For these reasons I think this appeal ought to be allowed, and the judgment of Hamilton, J. restored.

The Lord Chancellor.—My Lords: Lord Ashbourne, who is not able to be present to-day, desires me to say that he concurs in the view taken by the majority of your Lordships.

Judgment appealed from affirmed, and appeal dismissed.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Friday, March 31, 1911.

(Before Scrutton, J.)

Dunford and Co. Limited v. Cia Anonima Maritima Union. (a)

Charter-party—"For six or seven (in charterers' option) consecutive voyages during 1910*"—Construction.*

A charter-party contained the following clause: "This charter to remain in force for six or seven (in charterers' option) consecutive voyages during 1910*."*

On the 3rd Jan. 1910 *the ship was ready to receive cargo at Newcastle, but the charterers were unable to load her in consequence of a strike which lasted till the* 11*th Jan. The ship consequently went on a voyage to Italy for other charterers with a cargo of coal from South Wales, the learned judge finding that this was reasonable. She did not arrive home from her sixth voyage till the* 6*th Jan.* 1911, *when the charterers purported to exercise their option to load her for a seventh voyage.*

Held, on the true construction of the charter-party, that the words "during 1910*" were words of description and protection for both parties, the one being only bound to receive cargo, and the other only bound to supply the ship during* 1910, *and that therefore the charterers were not entitled to exercise the option claimed.*

Pope v. Bavidge (1854) 10 *Ex.* 73) *not followed.*

Commercial Court.

Action tried by Scrutton, J. sitting without a jury.

The plaintiffs (charterers) claimed 298*l.* 2*s.* 6*d*. for breach of a charter-party dated the 26th Oct. 1909. The defendants (shipowners) by their defence pleaded that they had duly performed all their obligations under the charter-party.

The charter-party contained the following clause:

This charter to remain in force for six or seven (in charterers' option) consecutive voyages during 1910. . . . Steamers to have liberty to load homeward cargoes to U.K. or Continent. Steamers to have liberty to dry-dock.

On the 3rd Jan. 1910 the defendants' steamer arrived at Newcastle-on-Tyne, but the plaintiffs were unable to load her in consequence of a strike at the colliery which continued till the 11th Jan. Meanwhile, the ship, being unable to load at Newcastle, went, without any objection by the charterers, to South Wales, where she loaded a cargo for Italy, the round voyage occupying sixty-two days. The consequence was that she did not get home from her sixth voyage till after the 6th Jan. 1911, when the charterers then purported to exercise their option to load her for a seventh voyage, but the shipowners declined to allow this on the ground that it could not be commenced till 1911.

Maurice Hill, K.C. and *Lewis Noad* for the plaintiffs.—The plaintiffs were entitled to load the steamer for a seventh voyage. Unexpected delay in connection with one voyage does not

(a) Reported by Leonard C. Thomas, Esq., Barrister-at-Law.

excuse the shipowners from completing the remaining voyages:

Pope v. *Bavidge*, (1854) 10 Ex. 73.

If the seven voyages could not be performed during the year 1910, that position was brought about by the defendants engaging their ship in services of such a kind as made it impossible for them to carry out their contract.

Bailhache, K.C. and *D. Stephens* for the defendants.—The case turns on the construction of the charter-party. As the charter-party provided that the voyages should be made during 1910, the time could not be extended into 1911. More recent decisions have negatived the authority of *Pope* v. *Bavidge (sup.)*, notably *Jackson* v. *Union Marine Insurance Company* (2 Asp. Mar. Law Cas. 435 (1874); 31 L. T. Rep. 789; L. Rep. 10 C. P. 125) and *Nickoll and Knight* v. *Ashton, Edridge, and Co.* (9 Asp. Mar. Law Cas. 209; 84 L. T. Rep. 804; (1901) 2 K. B. 126).

Scrutton, J.—In this case the plaintiffs sue the defendants for damages for breach of a charter-party, the agreed amount being 298*l.* 2*s.* 6*d.* The question arises on the true construction of the charter-party. The adventure which the charterers desired to enter into was to send coal to four Italian ports to cover the year 1910 and possibly longer. The following are the material clauses in the charter-party: "This charter to remain in force for six or seven (in charterers' option) consecutive voyages during 1910. . . . Steamers to have liberty to load homeward cargoes to U.K. or Continent. Steamers to have liberty to dry-dock." I construe that clause as meaning that the steamer is to have a reasonable opportunity to load homeward cargoes from ports in the neighbourhood, or on the way, bearing in mind that it is an adventure to carry outward cargoes, and not to exercise unreasonably the liberty to load homeward so as to interfere with that arrangement. A ship does not run over a year without wanting to dry-dock, and there was liberty to do this. The charter-party certainly gives the charterers the right to have six or seven consecutive voyages, and binds them to find cargo for them, and they are to have the option whether there shall be six or seven voyages. Then come the words upon which, in my opinion, the whole case turns, "during 1910." The facts which happened were these: The shipowners provided for homeward cargoes of ore from the Mediterranean, which is a very ordinary form of business, and in the actual working the voyage outward occupied thirty-six days on the average, and the average time of the homeward voyage was twenty-six days, and I find as a fact that there was nothing unreasonable in the shipowner's way of occupying his homeward voyage. The adventure began in this way: The ship had the right to present herself on the 1st Jan., and she was ready to receive coals on the 3rd Jan., but the charterers were not ready to load in consequence of a strike at the colliery, which continued for eight days after the 3rd Jan. What then happened was that the ship, not being able to get coal at Newcastle, went without any objection by the charterers for another voyage from South Wales to Italy. She took sixty-two days on this round voyage, being a similar time to the other round voyages. That threw out the course of events to some extent, and the result was that she did not get home from her sixth voyage, until after the 6th Jan. 1911. The charterers then purported to exercise their option to have seven voyages. The shipowners said the charterers were not entitled to the seventh voyage because it could not be commenced until 1911 instead of 1910. The case turns entirely on the meaning of the words "during 1910," and I read them as words of description and protection for both parties, the one being only bound to load, and the other only bound to supply the steamer during 1910. That being my view, it follows that the plaintiffs' claim fails.

I desire to say a word or two on the case of *Pope* v. *Bavidge (sup.)* on which Mr. Hill relied. In that case the wording of the charter-party was that the charter should be in force for six successive voyages and that they should be made not later than the last day of Feb. 1853. What happened there was that the ship only made four voyages, and the question was what was to happen in regard to the other three. The question being raised by way of demurrer, the court held that the inability to perform the voyages within the time specified did not discharge the contract, or afford any excuse for not commencing the fourth voyage. Unless that case is affected by subsequent decisions, I am, of course, bound by it if it is applicable to the facts. I think, however, that the reasoning and decision in *Jackson* v. *Union Marine Insurance Company (sup.)* and *Nickoll and Knight* v. *Ashton, Edridge, and Co.* *(sup.)* are such that it is difficult to believe that the case would be decided now as it was decided then. In the last case I have cited, the contract being for the sale of cotton-seed "to be shipped by the steamship *Orlando* at Alexandria . . . during the month of Jan. 1900," the sellers did not ship the cargo by the *Orlando* in January because the vessel had become stranded through perils of the sea, and the Court of Appeal held that the adventure contemplated that the ship should be able to perform the contract. Further, that case was a case where the ship did not perform its obligation because it had been damaged. Part, at any rate, of the delay in the present case resulted from the ship not getting through its voyage in time because the charterer did not provide a cargo. That seems to me to make the most material difference. For these reasons I do not consider it necessary to follow *Pope* v. *Bavidge (sup.)*, and on the line of construction I have indicated I give judgment for the defendants with costs.

(Before HAMILTON, J.)

VINCENTELLI AND CO. *v.* JOHN ROWLETT AND CO. (*a*)

Marine insurance—Sale of goods—C.i.f. contract — Insurance against "all risks"—Meaning of.

By a contract in writing the defendants sold a quantity of citrons to the plaintiffs, and as the plaintiffs stipulated for "complete insurance against all risks," the defendants inserted in the margin of the contract the following words: "Insurance to be effected by us all risks." The defendants took out a policy covering the goods from Piræus to Antwerp for "850l. on 102 casks citrons (in brine). So valued. To pay average as customary." The policy contained an f.p.a. clause and the usual memorandum. There were clauses attached to the policy including one which covered "all risks by land or water (if by sea, at current additional premium)" and a "held covered clause," which provided (inter alia) *that in the case of circumstances which might cause a variation and (or) entire alteration in the risk as contemplated in the policy, a payment in respect thereof should be made by the assured. The citrons, on their arrival at Antwerp, were found to be considerably damaged owing to their having been stowed on deck instead of under deck.*

In an action by the plaintiffs against the defendants for failing to insure the goods against all risks:

Held, on the true construction of the contract, that the defendants were only bound to cover all risks in the sense of the entire quantum of damage, and not to procure a policy covering the plaintiffs against all causes of accident.

COMMERCIAL COURT.

Action tried by Hamilton J. sitting without a jury.

The plaintiffs, who were merchants in Antwerp, sued the defendants for damages for breach of contract and duty in and about the sale of a quantity of citrons.

By a contract in writing, dated the 6th Dec. 1907, the defendants sold to the plaintiffs a quantity of citrons c i.f. her steamer from the Piræus to Antwerp. The following words appeared on the margin of the contract: "Insurance to be effected by us all risks." These words were added in consequence of the plaintiffs having stipulated for "complete insurance against all risks." The defendants took out a policy covering the goods from Piræus to Antwerp for "850*l*. on 102 casks citrons (in brine). So valued. To pay average as customary." The policy contained an f.p.a. clause, the usual memorandum, and (*inter alia*) the following clauses:

1. Including all risks of craft, boats, lighters to and from the vessel, upon whatever terms, as to liability or otherwise, the lighterman may be employed. . . .

2. Including all risk by land or water (if by sea, at current additional premium) from warehouse to manufactory or import vessel, or wherever assured's risk commences, and all risks whilst on quay or elsewhere, awaiting shipment, if shut out by any steamer or steamers not to prejudice the continuity of this risk. . . . Including all risk by conveyance or conveyances and of steam navigation and all liabilities and risks as per the exceptions and conditions in charter-party and (or) bill of lading, including the negligence clause, until safely delivered in the interior or elsewhere to consignee or agent, and the assured's risk ceases. . . .

6. It is hereby agreed that the interest insured under this policy shall, in the event of deviation, be absolutely covered until its safe arrival at its destination, and (or) in the event of any act or neglect on the part of the owners and (or) agents and (or) servants of the vessel in connection with the said interest, and (or) any circumstances whatsoever, whether foreseen or otherwise, which may cause a variation and (or) entire alteration in the risk as contemplated in this policy, and a payment in respect thereof shall be made by the assured, the amount of such payment to be hereafter arranged.

The plaintiffs, on receipt of this policy, objected to its terms on the ground that "it is in fact an ordinary policy, covering the total losses, but not 'all risks without reference to purchase.'" The defendants replied, inclosing a letter from the underwriters, in which the latter stated "that the policy pays average if amounting to 3 per cent. on the value of each cask. We have never heard of such an insurance being effected without a franchise clause, and in fact it is most unusual to cover against other than f.p.a. terms." The plaintiffs persisted in their objection that the policy was not in accordance with the agreement, but eventually took up the shipping documents, adding, "to avoid the return of such inconveniences in future, kindly insure always our goods against all risks without reference to franchise."

The shipment of the citrons took place on an English steamer under an ordinary form of bill of lading, but on arrival at Antwerp it was found that the cargo was damaged to the extent of 297*l*. 11s., the cause being that the cargo was stowed, without the knowledge of the defendants, on deck instead of under deck.

The plaintiffs brought an action against the shipowners in Antwerp, when the court held that the shipowners were protected by the exceptions in the bill of lading; but although the shipment had been by an English vessel, the attention of the Antwerp court did not appear to have been called to the English law on the subject.

The plaintiffs then sued the underwriters, but the action was compromised by the underwriters paying 217*l*. 3*s*. 10*d*. in satisfaction of the plaintiffs' claim and costs.

The plaintiffs brought the present action against the defendants for failure to insure the goods against all risks. Their claim was for 297*l*. 11*s*., the amount of the damage; 8*l*. 13*s*. 11*d*., the costs of the proceedings in Antwerp against the shipowners; and 50*l*. 4*s*. 8*d*., the cost of proceedings against the underwriters. They gave credit for 217*l*. 3*s*. 10*d*., the amount received from the underwriters, leaving a balance of 139*l*. 5*s*. 9*d*.

By their defence the defendants denied that they had failed to insure the cargo against all risks, and pleaded that the plaintiffs had not failed to recover the amount of damage from the shipowners or underwriters by reason of any default or breach of contract on the part of the defendants.

Bailhache, K C. and *Leck* for the plaintiffs.—Having regard to the terms of the contract of

(*a*) Reported by LEONARD C. THOMAS, Esq., Barrister-at-Law.

sale an ordinary Lloyd's "all risks" policy was inadequate. The plaintiffs contracted to give the defendants a policy to cover all risks, and having omitted to do so they are liable for the damage. The term "all risks" may convey one meaning to a broker or underwriter and a different meaning to a purchaser of goods, and it has been held that under a c.i.f. contract the meaning which the purchaser applied to the phrase must prevail:

> *Yuill* v. *Scott Robson*, 10 Asp. Mar. Law Cas. 453; 11 Asp. Mar. Law Cas. 40; 96 L. T. Rep. 842; 98 L. T. Rep. 364; (1907) 1 K. B. 685; (1908) 1 K. B. 270.

In the present case the plaintiffs stipulated for a contract which would protect them against all risks, and they did not get this unless an extra premium was paid under the held covered clause. The risk of clause 6 coming into operation is one for which the defendants are responsible.

Maurice Hill, K.C. and *Disturnal* for the defendants.—The sellers' obligation under the contract is to make a proper and reasonable contract of carriage: (Sale of Goods Act 1893, s. 32 (2). They must assume that the contract of carriage will be duly performed. They must also effect a policy which will cover everything that may happen within the due performance of the contract. The buyer is to be protected either by the contract of carriage or the policy of insurance, and in order to decide whether reasonable contracts of carriage and of insurance have been made it is necessary to look at them both. If the contract of carriage excepts negligence it would, notwithstanding, be quite reasonable if the policy of insurance covered negligence. In the present case everything that could happen to the goods for which the carrier was not liable was covered by the policy. The special contract of carriage was broken by the stowage on deck, and the shipowners became liable as common carriers. The plaintiffs had their remedy against the shipowners, and that is not affected by the fact that the term "all risks" was mentioned in the contract of sale. That term may mean either "all losses" or "all perils," and from the correspondence which passed between the parties it is quite clear that the plaintiffs were using it in the sense of "all losses." They asked for a policy to cover all risks without reference to franchise, but if the expression be read as meaning "all perils" there was no obligation on the defendants to insure against an intentional breach of the contract of carriage. *Yuill* v. *Scott Robson* (*sup.*) is not relevant as there a well-recognised risk was not provided for. The plaintiffs acted unreasonably in the proceedings at Antwerp. They did not take the point that English law governed the contract and that by English law the exceptions in the bill of lading did not, under the circumstances, afford any protection to the shipowners. As the plaintiffs ought to have recovered the full amount of their loss from the shipowners they cannot claim against the defendants.

Bailhache, K.C. in reply.—Under a c.i.f. contract the seller does not fulfil his contract if in one or other of the two documents he reasonably protects the buyer. The question in the present case is as to what the contract between the parties really amounted to. These sellers were under an obligation to insure against all risks, when, in fact, they left a risk uninsured. They gave the plaintiffs a policy which with reference to a part of the cargo did not attach at all, and therefore they are liable in damages. It was not unreasonable for the plaintiffs to take proceedings in Antwerp:

> *Greenock Steamship Company* v. *Maritime Insurance Company*, 9 Asp. Mar. Law Cas. 364, 463; 89 L. T. Rep. 200; (1903) 1 K. B. 657;
> *Tanivaco* v. *Lucas and others*, 6 L. T. Rep. 697; (1861) 1 B. & S. 185;
> *Ireland* v. *Livingstone*, 1 Asp. Mar. Law Cas. 389 (1872); 27 L. T. Rep. 79; 2 Q. B. 99,

were also referred to.

Hamilton, J.—In this case the plaintiffs, carrying on business in Antwerp, sued the defendants, who are merchants in London, for breach of a contract, dated the 6th Dec. 1907, for the sale by the defendants to the plaintiffs, c.i.f. per steamer to Antwerp, of a quantity of large Naxos citrons packed in brine in barrels. The citrons were shipped on board the steamer *Gulf of Suez*, a vessel of the Westcott and Lawrance line, at Piræus for delivery at Antwerp, and they were, but without the privity of the shippers, stowed, not under deck, but in the bridge space which is technically on the deck, and, although they were not so exposed as the term "on deck" might imply, they were not thoroughly protected from the sea. On arrival at Antwerp they were discovered to be extensively damaged, and the amount of damage has been ascertained at 297*l.* 11*s.*

The breach which the plaintiffs allege against the defendants is this: that either they did not effect an insurance against all risks, so that under the circumstances in question the plaintiffs might recover for the damage to the citrons, or else that if they did effect an insurance against all risks they did so only in such a manner that before it could be made available to the plaintiffs it became necessary for them to pay what the defendants ought to have paid and would not pay, that is, a large additional premium to the underwriters.

The contract is contained in a document of the 6th Dec. 1907 headed "Contract," and it is, as I view the facts, the form into which the parties reduced their bargain. It contains in the margin, inserted after it had been originally drawn up and signed, these words: "Insurance to be effected by us all risks." It is signed by the defendants and addressed to the plaintiffs. The plaintiffs had on the same day telegraphed that they accepted this parcel c.i.f. Antwerp, including the insurance against all risks. They wrote on the same day a letter which must have crossed the letter containing the contract note: "We wired you this morning that we should have bought this lot definitely, providing you sell c.i.f. Antwerp with complete insurance against all risks. We know quite well that this is easily obtained in London and on favourable terms." When the contract note was received the plaintiffs replied on the 7th Dec.: "Please add the agreed clause, that your insurance policy must cover all risks without exception." The words in question were then added, and those words were accepted apparently as expressing what the plaintiffs desired. It seems to me, therefore, that I cannot read into the contract note either that the insurance is to be a

complete insurance against all risks or that it is to be a policy to cover all risks without exception. The words of the contract between the parties are "insurance to be effected by us all risks," and it is suggested that that may mean either "an all risks insurance is to be effected by us" or "we are to insure you against all risks." If the first is the meaning of it, then the effect is to contract to procure an insurance which would be known as an all risks insurance. If the second is the meaning, then the sellers contract, at their expense, and in consideration of the purchase price of the goods, to effect an insurance for the benefit of the buyers against all risks. The matter, I think, is disputable, but it appears to me that the second is the true meaning and that the defendants in this case as sellers contracted to effect an insurance in favour of the buyers against all risks.

Now, the question arises, What is meant by the word "risks"? The plaintiffs say that, having procured a bill of lading in ordinary form, as they were bound to do, the sellers were also bound to effect such an insurance that the buyers would find themselves protected against all marine accidents happening in the course of the agreed transit to the damage of the goods, the subject matter of the sale, and that that should be an insurancce which should be effectual for their protection, and such that they could enforce it. The act of the shipowner or his servants in shipping the goods not under deck had the effect in English law of preventing the shipowner relying upon any of the exceptions contained in the bill of lading, and by English law there can be no doubt that the claim for the whole amount of the damage against him was a claim to which he had no answer. The plaintiffs, however, put that claim in suit before a court at Antwerp, and there they lost their action. They subsequently made their claim upon the underwriters on the policy which had been obtained for them by the sellers, and were met by the perfectly good answer that, as far as the policy itself was concerned, it did not attach to the goods because they were shipped on deck, and not under deck; and as regards the held-covered clause — clause 6 — printed at the bottom of the policy, no premium would, in their view, be adequate to induce them to make themselves liable for the loss that had occurred, except the amount of the loss. The plaintiffs thereupon commenced an action against the underwriters, and that action was compromised, as far as I can see, very favourably to the plaintiffs by the underwriters paying 180*l.* and also paying certain costs of the action, for which sum the plaintiffs give credit in this action.

The plaintiffs' contention now is that the contract of the 6th Dec. meant that they should be effectively insured against all causes of accident and damage to their goods, and that the policy of insurance actually given them is one under which the underwriters were entitled to say, as they did say, that they were not liable at all without an extra premium, because the fact that there had been a breach of the contract of carriage contained in the bill of lading prevented the risk from attaching to the goods at all. I think, therefore, the question turns upon what is meant by the word "risks" in the contract. In the expression "insurance to be effected by us, all risks," it seems to me to be equally consistent with the meaning of the word "risk" in ordinary language that it may be intended to describe the quantum of loss in respect of the accident against which the insurer is to give an indemnity, or to express the cause of the accident producing loss against which the assured is to have protection. I do not think that it does violence to language to speak of a man being insured "all risks," meaning thereby that he receives a full indemity instead of a partial indemnity, or to say that he is insured "all risk," meaning thereby that whatever damage may happen he is to receive an indemnity measured in some way or other. It is quite familiar to those connected with insurance business, and I do not think that it is disputed by counsel in this case, that the word "risk" is used in both these senses, and as an illustration of that well-known fact, I may refer to the discussion before Walton, J. in *Schloss* v. *Stevens* (10 Asp. Mar. Law Cas. 331; 96 L. T. Rep. 205; (1906) 2 K. B. 665). I have had no evidence in the witness-box from either side with regard to the transaction itself or the sense in which the expression "risk" was used, but I have the evidence of the correspondence at the time when the policy was first put forward by the sellers, and from that evidence I must draw my own conclusion on this question of fact. On the 28th Jan. the defendants tendered to the plaintiffs the policy in question, which is dated the 27th Jan. To that the plaintiffs took two exceptions, first, as to the date of the policy; and, secondly, as to its language. "We regret to say," they write, "that this policy is not in conformity with our agreements. It is in fact an fact an ordinary policy, covering the total losses but not 'all risks without reference to franchise.' Besides, you say that the steamer left Piræus on the 4th Jan., whereas your policy is dated the 28th Jan. Consequently, the risks incurred between the 4th and 27th inst. are not covered. We suppose all this is the result of a mistake, and we shall be glad if you will correct same."

On the 31st the defendants reply, first, dealing with the question of date; and, secondly, saying this: "As regards your suggestion of 'all risks without reference to franchise,' we inclose you a letter we have received from the underwriters on this point." That was a letter that the policy paid average if amounting to 3 per cent. on the value of each cask, and saying that they had "never heard of such an insurance being effected without a franchise clause, and in fact it is most unusual to cover against other than f.p.a. terms." The plaintiffs still maintained that they had not got the insurance contracted for, but eventually they paid the money due against the shipping documents with the statement that "we must request you to observe that as per our agreements you owe us the reimbursement of all the risks, and there is no question of any kind of franchise. We can show several policies coming from Lloyd's where it is said literally: 'All risks covered without reference to franchise.' In future kindly insure elsewhere our goods against all risks without reference to franchise." That dispute was for the time being ended.

Now, the plaintiffs, although resident in Antwerp, evidently knew quite well what they wanted, and also knew whether it could be obtained or not, and what they meant when they spoke about

"all risks" is shown in the letter that I have referred to of the 6th Dec.: "It is an insurance easily obtained in London and on favourable terms." Two underwriters have been called on behalf of the plaintiffs. They have not been contradicted, and they say, and I accept their evidence, that to insure citrons in barrels on a winter voyage in the Mediterranean shipped on deck is an insurance which under no conditions would they consent to accept. The mode in which they would safeguard themselves from accepting it is by quoting what they considered a prohibitive premium, and their notions of what would be prohibitive vary a good deal—20, 30, 40, and even 50 guineas, but they preface their statements of these amounts by saying that they have never taken such a risk, and could not imagine themselves doing so, and their notions of these premiums were really notions of premiums that would prevent business instead of leading to it. If that is so, it is quite clear that an insurance under which the underwriter appreciated that he would have to cover carriage of these goods on deck on this voyage was one not easily obtained in London on favourable or any terms whatever. Further, the subsequent letters, which I need not read, show that what the plaintiffs had in mind when they cavilled at the policy tendered was that it did not contain words having the same effect as "all risks without reference to franchise, and I think it is quite plain from that correspondence that as a matter of fact what they were trying to get was an insurance against total loss, partial loss, however small, and, of course, general average loss, which is a loss by perils of the sea. It is said that that cannot be so because if they had read their policy they would have seen that subject to paying an adequate premium so as to get held covered, clause 6 of the additional clauses did cover them against every conceivable cause of loss, and at any rate did cover them against the cause of loss in this case, and hence one cannot infer that when they wrote about the quantum of indemnity and called that "all risks" they were negativing any desire to be held covered against all causes of loss against which it is said they were in fact covered subject to the held covered clause. I do not think that on a question of fact I can impute to these gentlemen, business men in Antwerp, a construction like that, which appears to be in itself subtle, and I think it is clear from their letters that they were not thinking about clause 6 of the policy at all, particularly as it contemplated an additional premium. I think they were quite clearly harping upon the same string as before, that they wanted to be covered against particular average loss without reference to franchise—that is to say, whether in excess of 3 per cent. or not, and they got an assurance from the underwriters with which they were for the time being content, though desiring in future to have their own form of words which they thought would make that clearer still, or which they probably thought would have protected them even although the loss was under 3 per cent.

That being so I think that on the true construction of this contract, in view of the evidence before me, the contract was that the insurance should cover all risks in the sense of the entire quantum of damage, and for the time being the 3 per cent., though not covered, was neither the subject of complaint at the time nor is it in dispute in this action, and I am of opinion that the contract was not to procure a policy which would have the effect of insuring the plaintiffs effectively against all causes of accident, even although arising out of the sheer breaches of the contract of carriage made in a proper form, with proper care, and with a well-known and reputable line of shipowners. This relieves me from the necessity of expressing any opinion upon the contention which has been raised upon the part of the defendants that under a c.i.f. contract all that a seller need procure at his own expense is contractual protection against all risks partly under the contract of carriage, and partly under the contract of insurance, and that it is sufficient if under one or other there is a cause of action for all kinds of damage. It is enough to say that I do not think that this is supported by the authorities referred to, and I think the point is novel and difficult.

The only remaining questions which I ought to deal with are pure questions of fact which I ought to dispose of in view of possible further proceedings. If there has been a breach of this contract, the plaintiffs' duty would have been to mitigate their damages by any reasonable steps they were able to take. I do not see on principle why the bringing of an action may not be a reasonable step to take for the purpose of mitigating damages in such a case as this. That appears to have been the view of the plaintiffs and their advisers, for they, in fact, brought an action in Antwerp. If they took such a step as that, and it was, as I think it was, a reasonable step to take in the mitigation of damages, they were also on the same ground bound to conduct it with reasonable intelligence. I am far from saying that it would be unreasonable for a Belgian subject or merchant domiciled in Belgium to take advantage of the Belgian law, which appears to have enabled the present plaintiffs to get the captain whose ship was in Antwerp placed in such a position that in view of the judgment he could be treated as having been domiciled on board his steamer, which was in territorial waters, and that the plaintiffs should prefer a tribunal of their own country to suing the defendants in their country; but I think that before taking that course it would have been unreasonable for the plaintiffs not to ascertain what their legal position was. Their legal position was, that by the law of England their claim was absolutely undefended unless it could be shown, as I think some attempt was made to show, the damage did not arise from sea perils at all, but from inherent vice—that I gather failed almost at the outset—but as far as the point is concerned of recovering on a bill of lading for goods which by implication were stowed under hatches, but which were in fact stowed on deck, according to the law of England, the law of the flag, and the law governing the contract of carriage, there was no defence. It is admitted that what the plaintiffs relied upon was a provision of the Belgian Code. It is not proved that they ever raised the point that the matter must be determined by English law, and that the English law was conclusive in their favour. I think they are in a dilemma in respect of those proceedings in Antwerp; if English law, which gave them an absolutely clear case, was not admissible in that tribunal, they ought not to have resorted

to that tribunal. It was unreasonable to go to a tribunal where the case, to say the least of it, was in some doubt, when all they had to do was to issue a writ in London and to have a decision that there was no answer to the claim at all. If, on the other hand, it is to be presumed, as technically it must be presumed in the absence of evidence to the contrary, that Belgian law is the same as English law, they had only to raise the point that the law of the flag governed the matter and to refer to a few well-known cases in the English law reports, and they would have got judgment in the Belgian court, for I presume that an Antwerp court would have given effect to English law when called to its attention. In either view the plaintiffs conducted that litigation in a manner which simply led to disaster. There is no reason to suggest that if they had recovered judgment they would not have recovered satisfaction.

I think, therefore, the damage sued for in this action is damage which, if they had acted reasonably, they ought to have mitigated so as to make it non-existent, in which case the only damages recoverable here would have been nominal only.

As regards the other side of the matter, the plaintiffs' contention is that they are entitled to call upon the defendants to procure at their own cost under the held covered clause the additional cover, and that they have paid a sum of money which was reasonable, or, rather, they must be treated as having paid it by reason of their giving up their claim on the policy in consideration of the sum of 217*l.* 3*s.* 10*d.* I think upon this evidence that that was a reasonable sum, and that, if the defendants had been liable, they ought to pay the balance claimed. There will be judgment for the defendants.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Nov. 1 *and* 7, 1910.

(Before THE PRESIDENT (Sir S. Evans) and BARGRAVE DEANE, J.)

THE KINGSLAND. (a)

Charter-party—Demurrage—Delivery according to custom of port—Discharge by port authority—Delay beyond control of charterer.

The plaintiffs entered into a charter-party with the defendants by which they undertook to send their steamship to a port in Finland to be loaded with pit props and to deliver them at Swansea. It was a term of the charter-party that the cargo should be discharged as fast as the steamship could deliver during the ordinary working hours of the port, but according to the custom thereof, and, should the steamship be detained beyond the time stipulated as above, demurrage should be paid at 4d. per net registered ton per day, and pro rata *for any part thereof.*

(a) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

The charter-party further provided that the discharge was to be effected by the receivers' stevedore, the steamship paying so much per fathom.

In a County Court action brought by the shipowners against the charterers for demurrage there was evidence and it was found that there was a custom in Swansea that discharge of pit props was to be done by the harbour authority and not by any stevedore to be named by the receivers of the cargo. Some delay occurred in the discharge. The judge gave judgment for the defendants, the charterers, on the ground that as no time was fixed for the discharge, and as the discharge was, according to the practice of the port, in the hands of the harbour authority, the charterers were not liable for the delay, though there was in fact a delay of three days, which would have entitled the plaintiffs to 90l., caused by the negligence of the harbour authority.

The shipowners appealed.

Held (affirming the decision of the County Court judge), that the charterers were not liable for the delay, for the port authority, who discharged the vessel, were not their servants or agents to effect the discharge, and the delay was due to circumstances beyond their control.

Weir *v.* Richardson (3 *Com. Cas.* 20) *approved.*

APPEAL from a decision of the judge of the County Court of Glamorgan held at Swansea by which he held that the defendants were not liable to pay demurrage for the detention of the steamship *Kingsland.*

The appellants, plaintiffs in the court below, were the owners of the steamship *Kingsland.* The respondents were the charterers of the *Kingsland.*

On the 9th Oct. 1909 a charter-party was entered into between the appellants and respondents by which it was agreed that the *Kingsland* should proceed to Finland and there load a cargo of pit props and proceed with them to Swansea.

The *Kingsland* was loaded in accordance with the charter and left for Swansea.

On the 8th Nov., before the vessel's arrival, the charterers suggested to the port authority at Swansea that the *Kingsland* might be given a berth in the new dock which was to be formally opened on the 23rd Nov.

The vessel arrived in Swansea on the 17th Nov., and on the same day the port authority sent a letter to the charterers stating the rates payable for the discharge of the steamship.

The case made by the appellants was that under the terms of the charter-party the cargo was to be discharged with the customary steamship dispatch as fast as the steamship could deliver during the ordinary working hours of the port, but according to the custom thereof, Sundays, general or local holidays (unless used) excepted. The charter-party further provided that, should the steamship be detained beyond the time stipulated as above, demurrage should be paid at 4*d.* per net registered ton per day, and *pro rata* for any part thereof.

The discharge was to be effected by the receivers' stevedore, the steamship paying 3*s.* per fathom.

The discharge was commenced on the 18th Nov. at 11 a.m. and was completed on the 7th Dec. at 10 a.m., and, excluding Sundays and holidays, the

total number of days occupied in discharging was sixteen, whereas in fact, if the defendants had discharged the vessel in accordance with the terms of the charter-party, she could have been discharged in ten days.

The appellants therefore claimed 180*l.* 16*s.*, being six days' demurrage at 4*d.* a ton on 1808 tons.

The respondents in their defence alleged that the steamship was discharged by the Swansea Harbour Trust acting on behalf of the appellants, whose duty it was under the charter to discharge the vessel, and, if there was any delay in the discharge, the respondents were not liable.

Alternatively, they alleged that if there was any duty on them to take any part in the discharge, the discharge was effected by the Swansea Harbour Trust as agents for both the appellants and respondents.

In the further alternative, they alleged that if the steamship was discharged by the Swansea Harbour Trust acting for and as agents for the respondents alone, the Swansea Harbour Trust used all reasonable diligence in discharging the steamship, and the cargo was discharged with the utmost practicable dispatch, having regard to the custom of the port and the facilities for delivery.

They alleged that the berth allotted to the *Kingsland* was the only available and suitable one for her at the port; that the only practicable means of discharging her was by means of two hydraulic travelling cranes erected on the quay; that there was a general holiday at the dock on the 23rd Nov.; that the weather was wet on the 24th, 25th, 26th, 27th, 28th, 29th, and 30th Nov., and on the 1st, 2nd, 4th, and 6th Dec.; and that on the 3rd Dec. there was a gale which caused the ship's moorings to part, which delayed the discharge; and that by the custom of the port the cargo had to be discharged on to the quay.

The respondents, in the further alternative, paid one day's demurrage—30*l.* 2*s.* 8*d.*—into court with a denial of liability.

During the discharge the ship's brokers and the charterers both wrote to the port authority suggesting that, as there were only two cranes in use, the discharge might be accelerated if the ship's winches were also used, but the port authority considered the suggestion impracticable.

The County Court judge held that there had been three days' delay in the discharge, which would have entitled the appellants to 90*l.*, but that the respondents were not responsible for the delay, and dismissed the action.

The appellants lodged a notice of appeal asking that the judgment might be set aside, and that judgment should be entered for the appellants for 180*l.* 16*s.* or 90*l.* 8*s.*, on the grounds that the judge was wrong in law in holding that the defendants were not responsible for the *Kingsland* being ordered to the King's Dock at Swansea; that the Swansea Harbour Trustees in discharging the cargo were in part the servants or agents of the plaintiffs, and in not holding that the said trustees were the servants or agents of the defendants only; that, if the plaintiffs were right on the foregoing questions, they would be entitled to but three days' demurrage, and in not holding that they were entitled to the six days claimed on the defendants' admissions that the wharf on the said dock at which the discharge took place was only partly equipped, and had only two cranes out of six in use.

The respondents also delivered a cross notice of appeal asking that the judgment should be varied by it being held that the appellants were not entitled to 90*l.* 8*s.*

Leck for the appellants, the owners of the *Kingsland.*—The appeal raises two questions: first, whether the charterers are liable for the delay in the discharge, which was being done by the port authority; secondly, what was the extent of the delay. The delay was really six, not three, days, as found by the County Court judge. The place of discharge was the King's Dock, and when the vessel was ordered there it was not fully equipped only two cranes out of six being in working order. The County Court judge has found there was a negligent delay of three days, and that, if the charterers were liable at all, they would be liable for 90*l.*, but apparently certain dicta in *Weir* v. *Richardson* (3 Com. Cas. 20) prevented him from giving judgment for that amount. He ought in fact to have held there was six days' delay. [*Bailhache*, K.C.—I am not aware that there is any appeal as to the amount.] The question of amount is distinctly raised by the notice of appeal. The charter fixes no time in which the discharge is to be completed; the charterers must use diligence to give her a proper discharge. If they send her to a new dock where there is no proper equipment, and where the port authority are negligent, they are liable. The charterers would have succeeded in the court below to the extent of 90*l.* for three days' delay if it had not been for certain dicta in *Weir* v. *Richardson* (*ubi sup.*). That case is distinguishable, for in that case there was privity of contract between the shipowners and the port authority. In this case it was the consignees, and not the shipowners, who requested the port authority to discharge the vessel. The request is contained in the letter of the 8th Nov. Swansea is not a closed port; anyone might be employed to discharge the vessel. [*Bailhache,* K.C.—The evidence is that the port authority always do discharge pit props at Swansea. The PRESIDENT.—No custom is pleaded.] The inference to be drawn from the correspondence is that anyone might have been employed, and that the charterers accepted the port authority. When the vessel had been in Swansea some days, the shipowners' agents suggested that the discharge should be accelerated by the use of the ship's winches. If no cranes were available and it was practicable to discharge by winches, they should have been used:

Rodenacker v. *May and Hassell*, 6 Com. Cas. 37.

Demurrage is payable here because the discharge was not effected with the utmost dispatch practicable, having regard to the custom of the port and the facilities for delivery:

Hulthen v. *Stewart*, 89 L. T. Rep. 702; 9 Asp. Mar. Law Cas. 403; (1903) A. C. 389.

In this case the only person who employed the port authority was the charterer, which distinguishes this case from that of *Weir* v. *Richardson* (*ubi sup.*), where both shipowners and consignees employed them. In *The Jaederen* (68 L. T. Rep. 266; 7 Asp. Mar. Law Cas. 260; (1892) P. 351) the dock authority acted for

both shipowner and consignee. In *Weir* v. *Richardson* (*ubi sup.*) Bigham, J. only followed *The Jaederen* (*ubi sup.*). The County Court judge was wrong in thinking that the facts in this case were similar to those in *Weir* v. *Richardson* (*ubi sup.*), and that was the reason why he did not give judgment for 90*l.*

Bailhache, K.C. and *Jowitt* for the respondents, the charterers.—The charter clearly intends the discharge to be done by one hand according to the custom of the port. The charterers had a right to nominate the King's Dock, and the evidence is that, if the ship goes to the King's Dock, the port authority always discharges pit prop cargoes there. Where there is no fixed time to complete the discharge, the charterer has to use all the methods and means of discharging which are customary. Where it is customary for the dock company to discharge, he must put them in motion:

> *Temple* v. *Runnal*, 18 Times L. Rep. 822;
> *Lyle* v. *Corporation of Cardiff*, 83 L. T. Rep. 329; 9 Asp. Mar. Law Cas. 128; (1900) 2 Q. B. 638.

The foundation for all the decisions on this point is *Postlethwaite* v. *Freeman* (1880, 42 L. T. Rep. 845; 4 Asp. Mar. Law Cas. 302; 5 App. Cas. 599). All the charterer has to do is to see that the dock authority is there to do the discharging. If the dock authority were the agents of the charterers, they might be liable for the three days' delay, but they are not the charterers' agents, and, on the authority of *Weir* v. *Richardson* (*ubi sup.*), the charterers are not liable.

Leck in reply.—The decision in *Weir* v. *Richardson* depended on the incorporation in the bill of lading of some terms in the charter which clearly made the port authority the agent of the shipowners. There is no authority for the statement that all the charterer has to do is to supply stevedores. *Hulthen* v. *Stewart* (*ubi sup.*) shows what the duty of the shipowner and charterer is. Even if the facts are within *Weir* v. *Richardson* (*ubi sup.*), the obligation here to pay demurrage is absolute, though the obligation to discharge is not.

The PRESIDENT.—Judgment in this case was postponed in order that we might see the charter-party in the case of *Weir* v. *Richardson.* Through the kindness of counsel for the appellants we have been able to see that charter-party, and the judgment I am now going to read is the judgment of my brother judge and myself. In this case the plaintiffs appeal against the judgment of the learned County Court judge upon the findings of fact, and upon the law. Having regard to the evidence given, and to the course pursued by the plaintiffs at the trial, we do not feel justified in disagreeing with the finding that there was a custom in the port of Swansea that the discharging of cargoes of pit props was to be done by the harbour authority, and not by any stevedore to be named by the receivers of the cargo. It was admitted by the respondents that they could not upon this appeal dispute the finding that, if they (the defendants) were liable in law for the acts of the harbour authority, they were liable for three days' demurrage. Neither are we able to disturb the finding by saying that the number of days' demurrage should be six days, as contended for by the appellants. Therefore in the event of the defendants being liable for any demurrage, the number of days should be three as decided in the court below. As to the law, the learned County Court judge followed the opinions expressed by Bigham, J. in *Weir* v. *Richardson* (*ubi sup.*). That is not a decision; but the opinions were expressed by an eminent judge of great experience in commercial law thirteen years ago. Counsel for the appellants did not argue that the opinions did not state the law accurately, and did not ask us to disapprove of them. We adopt them. But counsel for the appellants contended that the law as so expressed did not apply to the present case by reason of the words in the present charter-party: "Should the steamer be detained beyond the time stipulated as above for loading and discharging, demurrage shall be paid at 4*d.* per net registered ton per day, and *pro ratâ* for any part thereof." Since the hearing we have seen the charter-party and the bill of lading in the case of *Weir* v. *Richardson* (*ubi sup.*), and we find that the following clause appeared in the charter-party and was incorporated in the bill of lading: "It is agreed that for each and every day's detention by default of the said parties of the second part or their agents, 4*d.* sterling or its equivalent per register ton per day shall be paid day by day by the said parties of the second part or their agent to the said party of the first part or his agent." The argument was that the words in the present charter-party amounted to an express contract by the charterers to pay demurrage at a fixed rate if the time stipulated for discharging were exceeded, however the delay was caused. We are of opinion that these words do not create a fresh or independent liability on the defendants, if they are not, according to the rest of the contract, liable at all for demurrage, which is the result of the doctrines of *Weir* v. *Richardson* (*ubi sup.*); and the words relied on in clause 15 do not prevent the application of those doctrines. The principle upon which they are founded appears to be that the charterers are not responsible for the acts of an authority who in the circumstances are not their servants or agents, or are no more their agents than they are the agents of the shipowners. The matter may be regarded from another point of view, in the light of the cases dealing with the liability of charterers for delay due to circumstances beyond their control. By the custom referred to, it was for the harbour authority to discharge the cargo. The defendants could not control the authority or the use made by the authority of the available appliances. They had no more control over the activity of the harbour authority's workmen than they would have over a strike of those workmen, or over other circumstances existing in the dock. It has been laid down in the long list of cases culminating in *Hulthen* v. *Stewart* (*ubi sup.*) that a provision like the one in this charter-party requires the customary steamship dispatch in discharging, "having regard to the custom of the port, the facilities for delivery possessed by the particular vessel under contract of affreightment, and all other circumstances in existence at the time, not being circumstances brought about by the person whose duty it is to take delivery, or circumstances within his control." One of the circumstances in existence attending the discharge of this particular cargo was that the discharging was to be done by the harbour authority. There was delay by them in discharging. The circum-

stances leading to the delay were not brought about by the defendants; and the conduct of the authority and their negligence—which has been found—were not within the defendants' control. Upon these grounds we think the decision of the learned judge should be upheld.

Solicitors for the appellants (plaintiffs), *Williamson, Hill*, and *Co.*, for *Ingledew* and *Sons*, Cardiff.

Solicitors for the respondents (defendants), *Trinder, Capron*, and *Co.*

(Before BARGRAVE DEANE, J. and Elder Brethren).

THE PRESIDENT LINCOLN. (a)

Collision — Crossing steamships — Duty to keep course and speed—Duty to take compass bearing of lights on approaching vessels — Collision Regulations 1910—*Preliminary to steering and sailing rules—Arts.* 2, 21, 28, 29.

It is the duty of those navigating a ship who see a light on a ship approaching them to see whether it appreciably alters its bearing with reference to their ship, and to test this by compass according to the direction contained in the preliminary paragraph to art. 17 *of the Sea Rules.*

ACTION for damage.

The plaintiffs were the owners of the steamship *Tasso;* the defendants were the owners of the steamship *President Lincoln.*

The case made by the plaintiffs was that shortly before 6 p.m. on the 22nd Jan. the *Tasso*, a steel screw steamship of 1859 tons gross and 1120 tons net register, manned by a crew of twenty hands all told, was in the North Sea, to the northward of the Sandettie Lightship, in the course of a voyage from Antwerp to Swansea with a general cargo. The weather was slightly hazy, the wind variable and light, and the tide about half ebb of the force of about a knot to a knot and a half. The *Tasso*, on a course of W. by S. ¾ S. magnetic, was making about ten knots. She carried the regulation masthead and side lights for a steamship under way and a fixed stern light, which were being duly exhibited and were burning brightly, and a good look-out was being kept on board of her.

In these circumstances those on the *Tasso* saw from two to three miles off and bearing about two points on the starboard bow the two masthead lights of the *President Lincoln*, and shortly afterwards made out through the glasses her red light. The helm of the *Tasso* was thereupon ported and her whistle was sounded one short blast, and the lights of the *President Lincoln* were brought well clear on the port bow of the *Tasso* and the helm of the *Tasso* was then steadied. Shortly afterwards, as the masthead lights of the *President Lincoln* were observed to be closing into line and thus indicated danger of collision, the helm of the *Tasso* was put hard-a-port, her whistle was again sounded one short blast, her engines were put full speed astern, and her whistle was sounded three short blasts; but the *President Lincoln*, which was approaching with great speed, opened her green light and her red light was shut in, and about the same time she was heard to sound two short blasts on her whistle. Nothing further could be done on board the *Tasso*, and the *President Lincoln*, continuing to come on fast, with her starboard side about amidships struck the port bow of the *Tasso*, doing her serious damage.

Those on the *Tasso* charged those on the *President Lincoln* with not keeping a good look-out; with neglecting to keep their course and speed; with improperly starboarding; with not easing, stopping, or reversing their engines; and with failing to indicate their course by whistle signal.

The case made by the defendants was that shortly before 6.57 p.m. on the 22nd Jan. the *President Lincoln*, a twin-screw steamship of 18,167 tons gross and 11,171 tons net register, manned by a crew of 287 hands all told, was in the North Sea, to the westward of the Sandettie Lightship, on a voyage from New York, *viâ* Cherbourg, to Hamburg. The tide was setting to the northward and eastward, and was of the force of about one knot, the wind was S.E., a gentle breeze, and the weather was dark, but a good night for seeing lights. The *President Lincoln* was on a course of E. ¼ S. magnetic, making about fourteen and a half knots. Her two regulation masthead, side, and stern lights were being duly exhibited and were burning brightly, and a good look-out was being kept on board of her.

In these circumstances those on board the *President Lincoln* sighted a white light about ahead distant apparently four or five miles. This light was carefully watched, and about five minutes afterwards another white light on the same vessel came into sight, and the vessel was taken for a fishing vessel. The helm of the *President Lincoln* was shortly afterwards starboarded to get her on to her course for the Haaks Lightship, and, while she was starboarding, the vessel showing the two white lights (which proved to be the *Tasso*) sounded a long blast on her whistle. The helm of the *President Lincoln* was then put hard-a-starboard and two short blasts were sounded on her whistle, and when the *Tasso* answered apparently with two short blasts the *President Lincoln* again sounded two short blasts in reply. The *Tasso*, which was now close to and still showing no side light, appeared, notwithstanding her whistle signal, to be porting towards the *President Lincoln*, and the port engine of the *President Lincoln* was stopped and her starboard engine kept full speed ahead to assist the swinging of the ship as the only means of averting a collision. Just afterwards the *Tasso* loomed in sight, and for the very first time a very dim red light was distinguished, whereupon, with the view of making the blow less serious, the starboard engine of the *President Lincoln* was stopped, the port engine was put full speed ahead, and the helm was ordered hard-a-port, one short blast being sounded on the whistle; but the *Tasso* came on at considerable speed, and with her stem and port bow struck the starboard side of the *President Lincoln* a little abaft amidships. Just before the collision the *Tasso* sounded three short blasts.

Those on the *President Lincoln* charged those on the *Tasso* with not keeping a good look-out;

(a) Reported by L. F. C. DARBY, Esq., Barrister-at Law.

with neglecting to have a proper red light; with neglecting to keep her course and speed; with improperly porting; with not easing, stopping, or reversing their engines; and with neglecting to indicate their course by whistle signal.

The following collision regulations were referred to during the arguments and in the judgment:

2. A steam vessel when under way shall carry—(c) On the port side a red light so constructed as to show an unbroken light over an arc of the horizon of ten points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the port side, and of such a character as to be visible at a distance of at least two miles.

Steering and Sailing Rules.—Preliminary.—Risk of Collision.—Risk of collision can, when circumstances permit, be ascertained by carefully watching the compass bearing of an approaching vessel. If the bearing does not appreciably change, such risk should be deemed to exist.

21. Where by any one of these rules one of two vessels is to keep out of the way, the other shall keep her course and speed.

28. The words "short blast" used in this article shall mean a blast of about one second's duration. When vessels are in sight of one another, a steam vessel under way, in taking any course authorised or required by these rules, shall indicate that course by the following signals on her whistle or siren, viz.:—One short blast to mean, "I am directing my course to starboard." Two short blasts to mean, "I am directing my course to port." Three short blasts to mean, "My engines are going full speed astern."

29. Nothing in these rules shall exonerate any vessel, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals or of any neglect to keep a proper look-out, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

Laing, K.C. and *H. C. S. Dumas* for the plaintiffs.

A. D. Bateson, K.C. and *A. Pritchard* for the defendants.

BARGRAVE DEANE, J.—In this case a collision occurred near the Sandettie Lightship, in the North Sea, on the 22nd Jan. in this year, about six o'clock in the evening, between the steamship *Tasso* and the steamship *President Lincoln.* The *Tasso* is a vessel of 1859 tons gross, manned by a crew of twenty hands, and she was on a voyage from Antwerp to Swansea with a general cargo. The *President Lincoln* is one of the Hamburg-American liners, and is a twin-screw steamship of 18,167 tons gross, manned by a crew of 287 hands all told, and was on a voyage from New York, *viâ* Cherbourg, to Hamburg, with passengers and cargo. The two vessels were approaching each other on converging courses. The course of the Hamburg-American boat was E. ½ S., and that of the other vessel at the time she was sighted W. by S. ¾ S., and that would put them approaching, the starboard side of the *Tasso* to the port side of the *President Lincoln.*

One of the first matters which I find in this case is that at no time before the course was altered on the Hamburg-American boat was the *Tasso* on her starboard side, but always on her port bow. That is a preliminary finding which affects the whole of my judgment.

The story told by the *Tasso* is this: that the master, who had been on the bridge, told the officer of the watch, the second officer, when he went below, that when the Sandettie Lightship was sighted he should alter the course to W. by S. ¾ S., a point more southerly. The captain, then being below, heard one blast blown upon the whistle, which indicated that his vessel was porting, whereas, according to the order he had given before leaving the bridge, she should have starboarded a point. He says that shortly afterwards he went up on the bridge, and both the second officer and he ascertained that the vessel was then heading W. by N. ½ N., a variation of some three and a quarter points. That signal would indicate to any vessel approaching her that she was altering her course, and being on the port bow of the Hamburg-American boat before she altered her course, it would take her still more on to the port bow of the Hamburg-American boat. The *Tasso* continued on that course, the lights of the *President Lincoln* getting as much as three points on the port bow, until the captain and the second officer of the *Tasso* observed that her masthead lights were closing in, indicating that she was under starboard helm. Thereupon the master of the *Tasso* says, and he is corroborated by the other members of his crew, that he ordered the helm hard-a-port and reversed his engines. That, of course, would throw his head still more to starboard, and that was the way in which his vessel was manœuvring at the time of the collision. I cannot find any fault with the *Tasso* so far as her navigation is concerned. She had the duty, having the other vessel on her starboard bow, of keeping out of the way, and, expecting the other vessel to keep her course, she ported and brought the other vessel on her port bow, and when afterwards she saw there was danger of collision she reversed her engines and hard-a-ported, which threw her head still more off to starboard.

Now let me take the case of the Hamburg-American boat. The *President Lincoln* at the moment was proceeding during the second officer's watch, but Captain Hahn was on the bridge; and although it was the second officer's watch, it is not disputed that the captain was the moving spirit in what was done on the Hamburg-American boat. She set a course from the East Goodwin for the Sandettie Lightship, and at the time of the collision—or rather just before the collision, before she altered her course—she had the Sandettie Lightship on her starboard bow. The captain and second officer, on the bridge, say that they saw a white light right ahead. They saw no coloured light, but after a little time they saw another white light a little below the other. What the second white light was we do not know. It may have been a fisherman's light, or it may have been some other vessel which had two lights —but they seem to have taken it for granted very early that they were fishermen's lights which they saw, and accordingly, having another fisherman between that light and the Sandettie Light, they determined to alter their course and make straight for the Haaks Lightship, which meant starboarding their helm and crossing in front of the vessel which was showing a white light. So far as that is concerned, if that is an absolutely satisfactory story, no one can complain about the starboarding if they believed there was nothing but a fisherman fishing in the way; but did they ascertain that it was a fisher-

man? We know as a fact that the other vessel was not a fisherman, but was the *Tasso.* Are the master and the second officer to be relied upon as to this light being right ahead? We have had two look-out men from the *President Lincoln*—one was in the crow's-nest and the other on the forecastle head—and they both say that the light which they saw was on the starboard bow. I find as a fact that is was on the port bow, and the master and the second officer say it was right ahead. That is very unsatisfactory.

What was the duty of those on the Hamburg-American boat? They had a white light ahead of them, and they ought, according to art. 17, to have taken certain steps. Art. 17 has the following preliminary paragraph: "Risk of collision can, when circumstances permit, be ascertained by carefully watching the compass bearing of an approaching vessel. If the bearing does not appreciably change, such risk should be deemed to exist." That imposes upon people who are navigating a ship the duty of observing a light which is ahead of them, to see whether it appreciably changes its position. You are not left to say: "Oh! I will wait and see if I can see a red light or a green light," but you must look and see if the light appreciably alters its position, and should deal with it by compass bearing. We know perfectly well that if those on the *President Lincoln* had done that they could not have missed seeing that this vessel which, as I have said, was approaching them on the port bow, was getting so many points broader on the port bow and appreciably altering her position. If so, then there was undoubtedly risk of collision if they starboarded. They did not take the trouble to ascertain if the light was altering its position or not, but Captain Hahn and the second officer seem to have taken upon themselves the assumption, without testing it, that this was a fishing vessel. In fact, it was a vessel going ten knots in an opposite direction to themselves, and they were going fourteen knots, which means that these two vessels were approaching each other at the rate of a mile in two and a half minutes.

In my opinion that was faulty navigation on the part of the master of the Hamburg-American boat, and I think that is really the initial cause of this collision. If he had taken proper precaution he undoubtedly would not have starboarded as he did. It was his starboarding which brought about the collision.

I have had, therefore, two questions to determine with regard to this vessel. First of all, I think, from the contradictory story told as to where this light was, that there was defective look-out on the Hamburg-American boat. Beyond that, I think that by not observing the provisions of the preliminary paragraph of the steering and sailing rules there was further neglect of duty on the part of the *President Lincoln.* On that account also she is to blame.

There is one other point which I have to deal with. I have already said that so far as the navigation of the *Tasso* is concerned I have no fault to find; but there is a question raised by the Hamburg-American boat, that the *Tasso* was carrying a defective red light; and they say that if they had seen that red light sooner it would have made a difference in their navigation. The first question I have to decide with regard to that is the distance at which these two vessels were seen one from the other. I think the captain of the *President Lincoln* says that the white light was seen six miles away. Of course, if that was so, he would not have had an opportunity of seeing the red light of the *Tasso.* At that time the red light would not be open to him, even if visible, because the green light would have been open until the *Tasso* ported. Therefore we have got to ask ourselves when it was that the *Tasso* got within two miles of the Hamburg-American boat so as to open her side lights. I have very great difficulty in finding when it was that the green light would change into red by the *Tasso* altering her course to starboard under port helm. It may be, but I am not prepared to find it, that the green light was open before she ported, although it was never seen by the people on the Hamburg-American boat. They all agree it was a good light, because they saw it afterwards. Therefore I must leave out that part of the case, because I do not think it is clearly established that the green light was ever open and in view to the Hamburg-American boat; but undoubtedly the red light was open, and I have got to ask myself whether it was visible.

If it was visible and in view of course the Hamburg-American boat ought to have seen it, and they did not until just before the collision, when I think they say the *Tasso* was only 100ft. away. The red lamp has been produced, and the evidence is very unsatisfactory about that red lamp. The red lamp produced has a short circular chimney, and no doubt that would have the effect of keeping the draught off the flame. The lamp so produced is said to be exactly like what the lamp was at the time of the accident, although the chimney itself was cracked and subsequently was taken out and a new chimney was put in. I do not think that it is by any means clear what sort of chimney was in this lamp at the time. There is a contradiction between the captain and the people who trimmed the lamp. The captain says the lamp was as it is now. The other people say "No! the chimney in the lamp then was a long chimney, with a bulb, elongated into a narrow chimney." The captain says the only thing wrong with the lamp when it was opened was a little smoke round the rim at the top of the chimney. Undoubtedly the chimney at some time got cracked. It was taken out from the lamp after the accident, it was put by the second mate somewhere in the lamp locker, and subsequently it was thrown overboard in Dover Harbour by the man in charge of the lamps. It is very unfortunate that it was thrown overboard, because, except the captain, the other men say it was not that sort of chimney at all. Was it a proper chimney or a chimney which had been put in that day and did not suit the lamp, and which had begun to smoke and caused a good deal of smoke to get into the interior of the lamp apart from the chimney itself? It is said by those on the Hamburg-American boat who looked at the lamp that it was full of smoke inside the lamp, and that that obscured the lamp. It is unfortunate that the chimney was thrown away. It was known at the time that the question of the efficiency of the red lamp was being raised; and the Hamburg-American boat people bring a large body of evidence here to show that complaint was made of the condition of the lamp, and that a man actually went on board the *Tasso*—the saloon

steward, a man of experience—from the Hamburg-American boat, and looked at the lamp, and was satisfied that the lamp was obscured. I cannot reject all this evidence about the lamp being in this condition, and I have come to the conclusion in fact that for some reason or other —I cannot say why, whether it was that the chimney was not suited to the lamp and caused the smoke—but I am of opinion that the lamp was in a faulty condition at the time of the collision, and that blame attaches to those on the *Tasso* for navigating with the lamp in that condition.

I accept the evidence of the Hamburg-American boat that the lamp was not burning brightly, and I hold that both vessels are to blame for this collision.

Solicitors for the plaintiffs, *Thomas Cooper and Co.*

Solicitors for the defendants, *Pritchard and Sons.*

July 21, 22, 24, *and* 25, 1911.

(Before BARGRAVE DEANE, J. and Elder Brethren.)

THE RAGNHILD. (*a*)

Collision—Steamship—Trawler engaged in trawling—Duty on steamship to keep out of the way —Duty of trawler to keep her course and speed —Collision Regulations 1897, *arts.* 9 (*d*) 1 (1906) 19, 21, 23.

When a steam trawler is exhibiting a triplex light in accordance with art. 9 (*d*) 1 (1906) *of the Sea Rules, she is to be regarded as incapable of manœuvring. It is the duty of approaching vessels to keep out of her way. Her duty is to do nothing but keep her course and speed. There is no duty upon her to stop her engines, except, perhaps, in obedience to the note to art.* 21 *of the Sea Rules.*

ACTION for damage.

The plaintiffs were the owners of the steam trawler *Easington;* the defendants and counter-claimants were the owners of the Danish steamship *Ragnhild.*

The case made by the plaintiffs was that shortly before 5.27 a.m. on the 5th March 1911 the *Easington,* a steel steam trawler of 183 tons gross, was one of the Great Northern fleet of trawlers fishing about 180 miles north-east by east of the Spurn Lightship. The wind was N.N.W., a strong breeze, the weather fine and clear. The *Easington* was trawling with her head about S.W. by W., making about two to two and a half knots; her regulation lights for a steam fishing vessel trawling, including a stern light, were being duly exhibited and were burning brightly, and a good look-out was being kept on board of her.

In these circumstances those on the *Easington* saw about two and a half to three miles off and about three points on the starboard bow the masthead and red light of the *Ragnhild.* The *Ragnhild* approached as if to cross ahead of the *Easington,* but when she got quite close she shut in her red light and opened her green. The *Easington* at once gave a long warning blast, but could do nothing more as she was incumbered with her trawl. Two short blasts were then heard from the *Ragnhild,* and she came on at great speed and with her stem and starboard bow struck the *Easington* on her starboard side abaft the beam such a severe blow that she sank within a very short time with all her fish and her crew's effects.

Those on the *Easington* charged those on the *Ragnhild* with not keeping a good look-out; with failing to keep clear of the *Easington* and the fleet of trawlers fishing; with failing to keep on her course and cross ahead of the *Easington;* with failing to starboard; with failing to ease, stop, or reverse in due time; and with failing to indicate her course by whistle signal.

The case made by the defendants and counter-claimants was that the *Ragnhild,* a Danish screw steamship of 1494 tons gross and 932 tons net register, whilst bound from Seaham to Kiel with a cargo of coal, manned by a crew of eighteen hands all told, was in the North Sea about latitude 55° N. and longitude 3° 10′ E. The weather was dark but clear, and the wind a strong northerly breeze. The *Ragnhild,* which had altered her course for other lights of fishing vessels, was heading about north-east by east magnetic, and was making about five knots. The regulation lights for a steamship under way were being duly exhibited and were burning brightly, and a good look-out was being kept on board of her.

In these circumstances a white light on the trawler *Easington* was particularly noticed bearing about half a point on the port bow; it seemed to be about a mile distant, but it was in fact nearer. The helm, which had previously been starboarded for another trawler, was ported back a little from N.E. by E., and a good look-out was kept for any coloured or other light which might be exhibited by the *Easington,* but afterwards, when it was seen that the *Easington* was not showing any coloured light and was heading to the south-westward, the engines were stopped and a long warning blast was sounded. The *Easington,* however, came on, and with her starboard side aft struck the *Ragnhild* on her starboard bow, doing her damage.

Those on the *Ragnhild* charged those on the *Easington* with not keeping a good look-out; with exhibiting misleading lights; with not exhibiting proper lights for a steam trawler; with not keeping out of the way and with not taking proper measures to keep out of the way; with not stopping the engines in due time or at all; with not porting, and with wrongly starboarding.

The following collision regulations were referred to in the pleadings during the arguments and in the judgment:

1. The rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other lights which may be mistaken for the prescribed lights shall be exhibited.

2. A steam vessel when under way shall carry—(*a*) On or in front of the foremast, or if a vessel without a foremast then in the fore part of the vessel, at a height above the hull of not less than twenty feet, and if the breadth of the vessel exceeds twenty feet, then at a height above the hull not less than such breadth, so, however, that the light need not be carried at a greater height above the hull than forty feet, a bright white light, so constructed as to show an unbroken light over

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

an arc of the horizon of twenty points of the compass, so fixed as to throw the light ten points on each side of the vessel, viz., from right ahead to two points abaft the beam on either side, and of such a character as to be visible at a distance of at least five miles.

9. Fishing vessels and fishing boats, when under way and when not required by this article to carry or show the lights hereinafter specified shall carry or show the lights prescribed for vessels of their tonnage under way. (*d*) Vessels, when engaged in trawling, by which is meant the dragging of an apparatus along the bottom of the sea—(1) If steam vessels, shall carry in the same position as the white light mentioned in art. 2 (*a*) a tricoloured lantern so constructed and fixed as to show a white light from right ahead to two points on each bow, and a green light and a red light over an arc of the horizon from two points on each bow to two points abaft the beam on the starboard and port sides respectively; and not less than six nor more than twelve feet below the tricoloured lantern a white light in a lantern, so constructed as to show a clear uniform and unbroken light all round the horizon. . . . All lights mentioned in subdivision (*d*) 1 and 2 shall be visible at a distance of at least two miles.

18. When two steam vessels are meeting end on, or nearly end on, so as to involve risk of collision, each shall alter her course to starboard, so that each may pass on the port side of the other. This article only applies to cases where vessels are meeting end on, or nearly end on, in such a manner as to involve risk of collision, and does not apply to two vessels which must, if both keep on their respective courses, pass clear of each other.

19. When two steam vessels are crossing, so as to involve risk of collision, the vessel which has the other on her own starboard side shall keep out of the way of the other.

21. Where by any of these rules one of two vessels is to keep out of the way, the other shall keep her course and speed. Note.—When, in consequence of thick weather or other causes, such vessel finds herself so close that collision cannot be avoided by the action of the giving-way vessel alone, she also shall take such action as will best aid to avert collision.

22. Every vessel which is directed by these rules to keep out of the way of another vessel shall, if the circumstances of the case admit, avoid crossing ahead of the other.

23. Every steam vessel which is directed by these rules to keep out of the way of another vessel shall, on approaching her, if necessary, slacken her speed or stop or reverse.

27. In obeying and construing these rules, due regard shall be had to all dangers of navigation and collision and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

28. The words "short blast" used in this article shall mean a blast of about one second's duration. When vessels are in sight of one another, a steam vessel under way, in taking any course authorised or required by these rules, shall indicate that course by the following signals on her whistle or siren, viz.:—One short blast to mean, "I am directing my course to starboard." Two short blasts to mean, "I am directing my course to port." Three short blasts to mean, "My engines are going full speed astern."

29. Nothing in these rules shall exonerate any vessel, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look-out, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

At the conclusion of the evidence the learned judge stated that in his opinion the evidence as to the steam trawler having her proper trawling lights exhibited was overwhelming.

A. D. Bateson, K.C. and *John B. Aspinall*, for the plaintiffs, were not called on.

Batten, K.C. and *Dunlop* for the defendants.—No doubt the number of witnesses who speak to seeing the triplex light is large, but can the evidence be accepted? It is submitted it cannot be. The steam trawler is to blame for not stopping her engines; if she had stopped them there would have been no collision. This court has never held a trawler free from blame when she failed to stop her engines before the collision. If a trawler stops her engines the trawl acts as an anchor and at once brings the trawler to a standstill. The trawler ought to have stopped under art. 23, and she ought possibly to have kept out of the way in accordance with art. 19. At all events, she is to blame for not making full use of such power as she possessed to avert collision. If the trawler could prove that she did that, she would be free from blame, and that is the foundation of all the cases which have been decided on this point:

The Tweedsdale, 61 L. T. Rep. 371; 6 Asp. Mar. Law Cas. 430 (1889); 14 P. Div. 164;
The Grovehurst, 103 L. T. Rep. 239; 11 Asp. Mar. Law Cas. 440; (1910) P. 316;
The Dunelm, 51 L. T. Rep. 214; 5 Asp. Mar. Law Cas. 304 (1894); 9 P. Div. 164;
The Cockatrice, 98 L. T. Rep. 728; 11 Asp. Mar. Law Cas. 50; (1908) P. 182;
The King's County, (1904) 20 Times L. Rep. 202.

A. D. Bateson, K.C. in reply.—The *King's County* was decided on the question of bad look-out. The present case depends on seamanship. There would have been no collision but for the porting of the *Ragnhild* just before the collision. The right view is that the trawling lights prescribed by art. 9 are intended to notify other vessels that they are to get out of the way: (*The Grovehurst, ubi sup.*). The steamship is alone to blame; she did not keep out of the way while the steam trawler kept her course and speed, which is all she ought to have done in the circumstances.

BARGRAVE DEANE, J.—This is an action for damage brought by the owners of the steam trawler *Easington* against the owners of the steamship *Ragnhild*, a Danish steamer, which was on a voyage from Seaham to Kiel with a cargo of coal.

The *Easington* was trawling in the North Sea, and was one of the fleet known as the Great Northern Steam Fishing Company's fleet. She was, with another vessel, the *Erne*, the most westerly and to a certain extent away from the rest of the fleet. The collision took place at about half-past five in the morning of the 5th March in this year. It was dark but clear, and there was some wind and sea; and the two vessels came together with such violence and with such serious effect that the *Easington* sank. Fortunately her crew were able to get into their boat and get on board the *Erne*, and no life was lost.

Now, the first question in the case is one of fact. Was the *Easington* exhibiting her proper fishing light? Was she carrying an all-round globe white light, a triplex light such as is prescribed for fishermen to carry, and a stern light?

On the one side I have the evidence of those on the *Easington* herself, who swear that the lights were duly exhibited and burning before and at the time of the collision, and I have the evidence of the same people and from the *Erne* that after the collision those lights were still seen to be burning. It is a question of the credibility of witnesses. No fewer than ten men swear to the fact that these lights were burning properly before and at the time of the collision. On the other hand, the whole case of the *Ragnhild* is that the *Easington* was not exhibiting proper fishing lights. It is said that she was exhibiting only a white light, I suppose meaning a globe all-round light. That is sworn to by the second officer of the *Ragnhild*, who was in charge, and in a certain sense it is deposed to by the captain of the *Ragnhild*, who was in his cabin at the time of the collision, and who said that he looked out of his cabin window and only saw one white light, and that he never did see, after the collision, anything but a white light on the vessel with which he had collided. I do not think his evidence is conclusive, even if it is accepted. In regard to the second officer, if his story is absolutely to be depended upon, this trawler was not carrying the proper regulation light. Therefore it is a question of fact, of the credibility of witnesses—am I satisfied or not that the trawler was carrying proper lights? On the one side, as I have said, there are ten witnesses; on the other side only one, and it is perfectly clear that the second officer of the *Ragnhild* did not conduct the navigation of his ship in a seamanlike way. He altered his helm twice without blowing any signal. He had a man on the look-out, by his side, apparently, on the bridge—and it is said that the weather was such that it was not fit to be on the forecastle head—but as far as I can understand there was no report of this vessel; and the misfortune is that I am told that both the man at the wheel and the man who had been on the look-out have deserted and cannot be brought here as witnesses. It is unfortunate, and I am very sorry that is so, but I have to act upon the evidence which is put before me, and the conclusion I have arrived at is that the trawler's lights were properly exhibited and burning. In addition to the evidence I have got to look at the probabilities. Here is a fleet of vessels. It is essential for their own safety, one from another, that they should be carrying proper lights. It is highly improbable that they would not be exhibiting the proper lights. The argument put forward is that it is quite likely they did not trim their lights, but allowed them to go out, and so on. I do not think it is probable. Of course it is possible—we know what these fishermen are—they are excellent seamen, but no doubt rough and ready in their ways—but still the conclusion I have come to is that the lights were burning. If the lights were burning the evidence of the second officer of the *Ragnhild* is not of much value. On the other hand, I have got to look at what he actually deposed to. He says that when he saw a white light and a green light he starboarded. That is the same story as that told by the *Easington*, that on their starboard bow they saw this steamer, showing her red light, and that she opened her green light, showing she was starboarding. The second officer said that having starboarded and got green to green he then saw a white light, and that as he appeared to be running into that white light he ported. That, again, corroborates the story of the *Easington* that the vessel having starboarded and become green to green then ported and ran into them. I cannot help thinking that the second officer having got among these fishing vessels, did not know where he was or what he ought to do, and that in the hurry of the moment he starboarded and then ported. It was simply a matter of bad seamanship. If that is the case, of course his vessel must be held to blame.

It is suggested by counsel for the defendants, however, that the case is not concluded by the finding; that here was a trawler which, though it is true she was hampered by having her trawl down, was bound—I do not think he goes so far as to say keep out of the way—to stop as soon as she saw a collision was imminent. The word "imminent" is very awkward. It does not mean when there is possible risk of collision; it means when by doing something you can avoid it or can hope to avoid it. In this case the *Easington* kept her course and speed—she did not stop—her engines were going ahead at the time of the collision. She was struck right aft on the starboard side—both parties agree about that—and the angle was a fine angle, leading aft.

Now, the Elder Brethren have gone into this question of stopping, and first of all I will deal with it from the seamanship point of view. Those on the trawler see on their starboard bow a vessel showing a red light. The vessel starboards, which brings her green to green, a perfectly safe course, and so they continue, green to green, until just before the collision, when suddenly the vessel ports and opens her red light again. A vessel which adopts that sort of manœuvre is a very difficult vessel to deal with, and I am advised, and I agree with the advice, that in this particular case there is no reason to say that for the non-stopping of her engines when that second alteration of the *Ragnhild's* helm took place, namely, the porting, immediately before the collision, any fault is to be found with the seamanship of the *Easington*. I go a step further, although I need not do so, because if from the seamanship point of view the trawler is not to blame for not stopping her engines, then it decides the question; but I go a step further than the case of *The Grovehurst* (*ubi sup.*), which was a somewhat similar case to this. In that case, at the last moment, when the collision was practically inevitable, the trawler did stop her engines, just as the blow was struck. My opinion of the law as to this case is based upon the decision in *The Grovehurst* (*ubi sup.*). I agree that as soon as the rules of navigation were altered, making it absolutely incumbent upon a trawler with her trawl down to carry a triplex light, there was some object in altering the law. What was the object? The Court of Appeal, in dealing with *The Grovehurst* (*ubi sup.*), were unanimous that the alteration in the law was this, that the trawler was put into the position of an unnavigable vessel which any vessel approaching, whether steamer or sailing vessel, had to keep out of the way of. It followed from the decision that if that duty is incumbent upon the approaching vessel to keep out of the way, it is necessary that the trawler should do nothing, but keep her course and speed under

art. 21. The Court of Appeal practically said that in *The Grovehurst* (*ubi sup.*). Vaughan Williams, L.J. says this: "In the case of *The Tweedsdale*—decided at a time when the exhibition of the triplex light was discretionary—it was held that a steam trawler, going slowly with a triplex light exhibited, had no duty to get out of the way of a sailing ship, the incapacity of the trawler to manœuvre, and her triplex light, throwing the duty on other vessels to keep out of the way of the trawler. This decision seems to me to be common sense, and in my opinion applies *a fortiori* now that the duty of exhibiting the triplex light is absolute."

It stands to reason from the seamanship point of view that if you are conducting the operations of the steamer or the sailing vessel and you see an object in your way exhibiting a light which indicates to you that she cannot get out of your way, then the whole duty is on you to keep out of her way and the whole duty on her is to do nothing, except, perhaps, if anything can be done at the last moment to prevent the collision being brought about. I think art. 21 becomes plain directly you find that this new art. 9, which was made law in 1906, becomes operative. Under art. 9 here is a vessel which has to keep out of the way of the other, and under art. 21 the other vessel must keep her course and speed; and I think that if she were to stop at a time when the other vessel was going to clear and a collision happened she would be held to blame. You hamper the movements of a vessel which has to keep out of the way if you do not keep some regular system of movement which the other vessel can see and appreciate and act to avoid. In my view, therefore, it follows as a natural course that where the duty is imposed upon one vessel to keep out of the way, it is the duty of the other vessel to keep her course and speed. Buckley, L.J. takes the same view. He says in *The Grovehurst* (*ubi sup.*): "A statutory obligation imposed upon trawlers, engaged in trawling, to have special lights, must have been, as it seems to me, imposed for some purpose, and the purpose must have been to acquaint other vessels that the vessel is a trawler engaged in trawling, and therefore incumbered by her gear. Presumably the object of giving that information was that other vessels might know that in some way she stood in an exceptional position. If that exceptional position was that she was relieved from some duty, which otherwise she would owe, the provision becomes intelligible; but, if not, I do not know what could have been the purpose." Then the President of this Division (Sir S. T. Evans), who was the third judge, comes to the same conclusion. He says: "It would seem to be entirely in the interest not only of the fishing community, but also of all those who navigate waters where the fishing business is carried on, that there should be no uncertainty as to the course to be pursued, arising from a want of knowledge of the manœuvring facilities of a trawler, and that, where fishing lights are carried by a trawler, crossing steamers not incumbered should know that the incumbered vessel is there and is incumbered, and that they should direct their operations accordingly." That, of course, means that they cannot direct their operations unless they know what the other vessel is doing, and if it is understood that the other vessel is to do nothing then they are not incumbered in their navigation in having to deal with her; whereas if the other vessel altered her helm or speed and moved about in all sorts of directions, perhaps trying to go astern, it is obvious she would incumber the vessel which had to keep out of her way. The only rational course is to say that one vessel shall keep her course and speed, and the other vessel shall keep out of the way.

In my opinion, in this case the trawler is not to blame for her manœuvring, or rather for her want of manœuvring, and the whole cause of this collision was faulty look-out on the *Ragnhild*, and she is alone to blame.

HOUSE OF LORDS.

Friday, May 5, 1911.

(Before the LORD CHANCELLOR (Loreburn), Lords ASHBOURNE, ALVERSTONE, and SHAW.)

OWNERS OF THE SHIP SWANSEA VALE *v.* RICE. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Employer and workman—Death by accident "arising out of" employment—Disappearance of sailor from ship—Workmen's Compensation Act 1906 (6 *Edw.* 7, *c.* 58).

An officer of a ship, who was on duty on deck, disappeared from the ship in broad daylight, in fine calm weather. No one saw what happened to him, but there was evidence that not long before he had complained of feeling sick and giddy.

Held, that there was evidence from which the court might infer that he fell overboard from an accident arising not only "in the course of" but "out of" his employment, within the meaning of the Workmen's Compensation Act 1906, *and that his dependants were entitled to compensation under the Act.*

Judgment of the Court of Appeal affirmed.

APPEAL from a judgment of the Court of Appeal (Cozens-Hardy, M.R. and Moulton, L.J., Buckley, L.J. dissenting) reported 102 L. T. Rep. 270; 29 C. C. C. Rep. 425, who had affirmed a decision of the County Court judge of Glamorganshire sitting at Swansea.

The respondents were the widow and daughter of William Rice, who was mate of the ship *Swansea Vale*, of which the appellants were owners, and was drowned at sea under circumstances which appear sufficiently from the headnote above, and are more fully set out in the report in the court below.

The respondents applied for compensation under the Workmen's Compensation Act 1906, and the learned County Court judge held that there was evidence from which he could infer that the deceased man lost his life from an accident "arising out of and in the course of his employment" within the meaning of the Act, and awarded compensation.

(*a*) Reported by C. E. MALDEN, Esq., Barrister-at-Law.

The employers appealed, but the decision of the County Court judge was affirmed, as above mentioned.

Atkin, K.C. and *L. M. Richards*, for the appellants, contended that the respondents had not discharged the onus which lay upon them of proving that Rice lost his life by an accident "arising out of" his employment. There is no evidence at all as to what happened to him except that he disappeared. See *Bender* v. *Owners of the Steamship Zent* (100 L. T. Rep. 639; (1909) 2 K. B. Div. 41; 29 C. C. C. Rep. 175) and *Marshall* v. *Owners of the Wild Rose* (11 Asp. Mar. Law Cas. 251, 409; 103 L. T. Rep. 114; (1910) A. C. 486; 29 C. C. C. Rep. 531), which were very similar cases, though the learned County Court judge thought that they were distinguishable. As to what is meant by an accident "in the course of" employment, but not "arising out of" such employment, see *Barnabas* v. *Bensham Colliery Company* (103 L. T. Rep. 513), where it was held in this House that there must be some definite evidence to bring a case within the Act, and that a guess or conjecture is not sufficient.

D. Villiers Meager and *R. C. Ollivant*, for the respondent, maintained that there was evidence sufficient to justify the County Court judge in arriving at the conclusion that Rice lost his life from an accident arising out of his employment. It is very like the case of *Wilkes* v. *Dowell* (92 L. T. Rep. 677; (1905) 2 K. B. 225; 27 C. C. C. Rep. 164) where a man engaged in unloading a ship had a fit, and fell down into the hold and was injured. See also the Scotch decisions:

Mackinnon v. *Miller*, 1909, Sess. Cas. 372; 46 Sc. L. Rep. 299;
Grant v. *Glasgow Railway Company*, 45 Sc. L. Rep. 128.

There is no suggestion of suicide or murder.

Atkin, K.C. did not reply.

At the conclusion of the arguments their Lordships gave judgment as follows:—

The Lord Chancellor (Loreburn).—My Lords: I am glad that the learned counsel who addressed to your Lordships such a concise and admirable argument recognised the true value of decided cases in connection with an argument like this. Cases are valuable in so far as they contain principles of law. They are also of use to show the way in which judges regard facts. In that case they are only used as illustrations. Judges are not laying down law when they are explaining their reasons for coming to a conclusion of fact. It seems to me that you have to decide each case upon its own facts, the question here being whether there is any evidence to justify the County Court judge arriving at the conclusion at which he did arrive. I must point out that what is evidence and what is merely guessing is a matter which cannot be defined. What you want is to weigh probabilities, if there be proof of facts sufficient to enable you to have some foothold or ground for comparing and balancing probabilities at their respective value, the one against the other. In the present case employment on board ship necessarily exposed this unfortunate man to the danger of falling overboard. We have knowledge of certain things. He was on board this ship in the course of his employment, and therefore the accident, if it were one, happened in the course of his employment. Unquestionably he fell overboard in one way or another. That is obvious. Under these circumstances, if you exclude the possibility of suicide or murder, it must have been an accidental falling overboard, and there was an injury arising out of an accident in the course of his employment. Was it an injury or accident arising out of his employment? We know that this man at an early hour complained of being sick and giddy. He was on deck discharging a most responsible office at the very time when he disappeared from the ship. It is natural to suppose that he might be at the side of the ship for the exact purpose of his duty. It was possible also that he might have been there because he was seized with a feeling of sickness. If he fell overboard, as undoubtedly he did, by slipping or losing his balance while at the side discharging some duty, that would be an accident arising out of and in the course of his employment—looking out, for example, or anything of that kind, then unquestionably the accident arose out of his employment. If he was taken giddy while at the side, of course the accident arose out of his employment. I think that it would be the same if, taken by nausea, he went to the side to vomit. That also would be an accident arising out of his employment. He might have been going to examine the lifeboat. All these things were possible and not an improbable explanation of what happened. The other alternatives were suicide or murder. If you weigh the probabilities one way or the other, the probabilities are distinctly greater that this man perished through an accident arising out of and in the course of his employment. I am quite certain that the County Court judge was entitled to come to this conclusion. Under the circumstances I agree with the opinion of the Court of Appeal. I think that this appeal ought to be dismissed with costs.

Lord Ashbourne.—My Lords: I agree. I think on the facts that there was ample warrant for the County Court judge to arrive at the conclusion at which he did arrive. This man met with his death by accident arising out of and in the course of his employment. Here was a man of experience, of good character, with everything to make him careful, in charge of a new ship, the principal officer beginning his watch and requiring to have his eyes about him. He was there without any suggestion of suicide or any criminal act on the part of others which could have led him into danger or difficulty. He went on his watch not feeling well, but with an attack of giddiness. Is it a strong presumption to reach the conclusion that it must have been by some accident that a man of this character met his death by falling into the sea? It is impossible to measure the facts of one case by the facts of another, but I have no difficulty in arriving at the conclusion that this appeal should be dismissed with costs.

Lord Alverstone.—My Lords: I concur.

Lord Shaw.—My Lords: This case appears to me to raise no difficulty with regard to the distinction between inference in the ordinary case and conjecture. The facts are simple. A man engaged in a variety of duties is sent in a sick and giddy condition to perform those duties.

In such a position his duty takes him into a position of danger. He has to pace to and fro upon the deck. I tender my assent to the proposition that it is impossible in all cases of precedent or alleged precedent to go by analogy of facts. Few cases arise in ordinary life, or in the law courts, in which such analogy is complete, and unless it is complete it must lead to dangerous conclusions. In the case of *Marshall* v. *Owners of the Wild Rose* (*ubi sup.*) I specially reserved the case of a sailor whose life is sacrificed under circumstances of mystery. I see no occasion to differ from, but much to incline me to agree with, the judgment in the case of *Mackinnon* v. *Miller* (1909) Sess. Cas. 372), and in particular with the judgment of Lord Dunedin.

Judgment appealed from affirmed, and appeal dismissed with costs.

Solicitors for the appellants, *Botterell* and *Roche*, for *William Cox*, Swansea.

Solicitor for the respondents, *John T. Lewis*, for *Llewelyn, Howell*, and *Williams*, Swansea.

(Before the Lord Chancellor (Loreburn), Lords Macnaghten, Alverstone, Shaw, and Robson.)

Thames and Mersey Marine Insurance Company *v.* Gunford Ship Company.

Southern Marine Mutual Insurance Association *v.* Same. (*a*)

ON APPEAL FROM THE FIRST DIVISION OF THE COURT OF SESSION IN SCOTLAND.

Marine insurance—Warranty of seaworthiness—Competency of master—Non-disclosure of material facts—Valued policy on hull—Concurrent policies on freight and disbursements—Honour policies—Over-insurance—Marine Insurance Act 1906 (6 *Edw.* 7, *c.* 41), *ss.* 18, 19, 20.

Two policies of insurance were taken out by the owners of a ship upon her hull without disclosing to the insurers the fact that the master appointed for the voyage had not been to sea for twenty-two years, that he had lost his last ship, and had had his certificate suspended. The hull was in fact over-insured. There were other insurances on gross freight and disbursements. There was no insurable interest in part of the disbursements. The insurance upon them was by an "honour policy," otherwise a "p.p.i. policy." The managing owner (to whom money was due from the ship) had effected "honour policies" to a large amount on disbursements to protect his own interests. The ship was lost on the voyage by the default of the master. In an action brought by the shipowners against the insurers on the policies:

Held, affirming the decision of the Court of Session, that the ship was not unseaworthy by reason of the incompetence of the captain, and that there was no breach of warranty of seaworthiness; that there was no duty on the owners to disclose the master's record to the insurers, and that such non-disclosure was not non-disclosure of a material circumstance within the meaning of the Marine Insurance Act 1906.

Held, also, reversing the decision of the Court of Session, that the omission to disclose the over-insurance of the hull and the existence and amount of the "honour policies" did amount to the non-disclosure of material circumstances, and that the two policies were void owing to the concealment of material facts.

Appeals from two judgments of the First Division of the Court of Session in Scotland, consisting of the Lord President (Lord Dunedin), Lords Kinnear and Johnston, who had affirmed decisions of the Lord Ordinary (Lord Salvesen) in favour of the respondents, the owners of the ship *Gunford*, in actions brought against the appellants on policies of insurance.

The cases are reported 1910, Sess. Cas. 1072: 47 Sc. L. Rep. 860.

The two cases raised the same questions, and they were argued together.

In the case of the Thames and Mersey Marine Insurance Company, the respondents claimed as for a total loss upon two policies of insurance. Each policy was for 1000*l.* upon the hull of the *Gunford*, valued at 18,500*l.*, on a voyage from Rotterdam to Hamburg and thence to Santa Rosalia. The managing owner was Mr. Francis Briggs, of Glasgow. The total insurances upon the ship at the time of the voyage amounted to 35,800*l.*, including a p.p.i. policy for 4500*l.* by Mr. Briggs for his own account. The justification for the 35,800*l.* insurance was based, the appellants said, upon the fact that to repay the original capital, to pay off the debts of the company, and to cover freight and insurance would require 40,000*l.* The appellants refused to pay, on the alleged ground that Captain Sember, who was the master, had last been to sea twenty-two years before; that from 1885 to 1907 he was a stevedore in Glasgow; that he lost the *Perthshire* off the Falkland Islands, in 1885, on a voyage to Santa Rosalia. The appellants therefore resisted the claim of the respondents on the ground that there was a breach of warranty of seaworthiness under the policy by reason of the fact that the ship did not sail with a competent master, and that excessive and speculative insurances had been effected upon freight and disbursements.

Briefly, the ship *Gunford* was wrecked on the Brazilian coast in 1907, while bound from Hamburg to Santa Rosalia, and as the result of a Board of Trade inquiry the master's certificate was suspended for twelve months, and the court considered that the insurances were excessive. A large proportion of the underwriters denied liability, and pleaded (*inter alia*) that there was concealment by the assured of the following material facts—namely, that a captain had been appointed who had not been to sea for twenty-two years and had had his certificate suspended for six months for losing his last ship; that the ship consequently was unseaworthy; and that in addition to insuring a vessel not worth 10,000*l.* for the sum of 18,500*l.*, the assured had effected honour or disbursement policies for 11,000*l.*, so that a loss would be highly advantageous to them. A prominent London underwriter gave evidence on behalf of the Institute of London Underwriters that the facts not disclosed were material, but the Lord Ordinary repelled the defences and gave judgment for the pursuers, the present respondents. He found that the defenders had failed to prove that the *Gunford* was unseaworthy

(*a*) Reported by C. E. Malden Esq., Barrister-at-Law.

by reason of the incompetence of the master. The First Division affirmed the judgment of the Lord Ordinary, as above mentioned, although Lord Johnston had considerable doubt on the question of unseaworthiness.

Leslie Scott, K.C. and *F. D. Mackinnon*, for the appellants, argued that there had been a breach of the warranty of seaworthiness, and also a concealment of material circumstances known to the assured which would have influenced the judgment of a prudent insurer within the meaning of the Marine Insurance Act 1906. If there was a breach of the warranty of seaworthiness the question of over-insurance does not arise. The facts show that the master was not a competent person to command the ship, and in any case his previous record should have been communicated to the insurers. They should also have been informed of the excessive valuation and over-insurance, and that it was to the interest of the assured that the vessel should be lost. See

Ionides v. *Pender*, 2 Asp. Mar. Law Cas. 266 (1874); 30 L. T. Rep. 547; L. Rep. 9 Q. B. 531;
Hutchinson v. *Aberdeen Sea Insurance Company*, 3 Rettie, 682.

J. Avon Clyde, K.C., *C. D. Murray*, K.C. (both of the Scottish Bar), and *Raeburn*, for the respondents, contended that the negligence of the master and crew was one of the perils insured against. Seaworthiness is not a question of degree. A ship is either seaworthy or not. If the master was incompetent it would have appeared at the beginning, not at the end of the voyage. If the assured honestly believed that he was competent it is sufficient, and there was no necessity to make any communication to the underwriters. The facts as to the insurances were not material. A policy on the hull is not the same as a policy on the ship, and it is not void because the managing owner had taken out p.p.i. policies in his own name from which the owners could get no benefit. It is a common practice to insure hull, freight, and disbursements cumulatively. They referred to

Leslie Scott, K.C. in reply.—The fact of over-insurance is material if it is more advantageous for the insured that the ship should be lost, because of the conflict between interest and duty. The standard laid down by the statute is the "judgment of a prudent insurer," and therefore speculative over-insurances should be disclosed.

At the conclusion of the arguments their Lordships took time to consider their judgment.

June 28.—Their Lordships gave judgment as follows:—

The Lord Chancellor (Loreburn).—My Lords: The facts of this case have been exhaustively considered in the opinion about to be delivered by the Lord Chief Justice, which I have had the advantage of reading, and therefore I need not recapitulate them. I agree with the First Division in thinking that there was no breach of the warranty of seaworthiness and that there was no concealment of material facts in regard to the qualifications and career of the master. There is, however, one further ground of defence—namely, the non-disclosure of material facts as to other insurances effected upon hull, freight, and disbursements. Upon this point I am constrained to differ from the First Division with much reluctance because of its great authority. No actual circumstance is in dispute affecting this point, but the question is what ought to be the conclusion of fact. Were the circumstances which the assured or his agent failed to disclose material in the sense described by the statute? Now, it is common ground that owners and agent between them (for I cannot discriminate) effected policies upon her hull, freight, and disbursements for 35,600*l.*, apart from master's effects valued at 200*l.* If the insurances be split up, they were as follows: Upon hull, 19,000*l.*; on freight, 5500*l.*, the freight for the voyage being about 4800*l.*, of which one-half had been paid in advance and was not at risk; on disbursements, 4600*l.*, and additional on hull and disbursements (including debts of ship to her managing owners and others) against total loss, 6500*l.* The actual value of the hull was about 9000*l.* No insurable interest could be shown in respect of the greater part of the items stated to have been insured under the denomination of disbursements, and full indemnity for actual disbursements would in the event of loss be recovered by reason of the high valuation of the hull. It was admitted that it would be a great deal better for the shareholders if the ship were lost. If she completed the voyage she would earn 2400*l* freight and be worth herself some 9000*l.*, in all 11,400*l.* If she were lost her owners and agents stood to receive 35,600*l.*, less a sum of 2400*l.* freight already paid. Their theory of insurance was to insure the original capital of the company which owned her, and to add to that the debts of the company. Accordingly I ask myself, in the language of the statute, would these circumstances influence the judgment of a prudent insurer in fixing the premium or determining whether he would take the risk? I can answer this question only in one way. In truth the witnesses for the most part answered it in the same way. It is very possible that some underwriters do not ask and do not expect to be told what are the insurances, and that some underwriters gamble. But I do not believe that prudent underwriters would treat as immaterial such over-insurance and such large sums placed on disbursements as were effected in this case. I am requested by Lord Macnaghten to say that he concurs in this opinion.

Lord Alverstone.—My Lords: This is an appeal which arose out of an action brought in the Scottish court upon two policies of insurance for 1000*l.*, each effected with the appellants, the Thames and Mersey Marine Insurance Company, on behalf of the owners of the sailing ship *Gunford*. The defenders, the present appellants, resisted payment of the amounts insured on the

grounds that there was a breach of the warranty of seaworthiness and of non-disclosure of material facts (*a*) as to the captain of the vessel; (*b*) as to the other insurances effected in connection with the ship. The facts material to those points were not in dispute. The Gunford Shipping Company Limited was managed by Francis Briggs, by whom all the business of the ship, including the employment of her officers and the effecting of insurances, was transacted. The captain of the vessel on the voyage in question was A. W. Sember. The *Gunford* sailed from Hamburg on the 12th Oct. 1907 with a full cargo of patent fuel, coke, and machinery, on a voyage round Cape Horn to Santa Rosalia. In the course of the voyage on the 10th Dec. 1907 she went ashore near Cape San Roque and became a total loss. All the policies for voyage and time contained a warranty of seaworthiness. The appellants alleged that this warranty was broken, in that the ship was not seaworthy, because Captain Sember was not a competent master. Lord Salvesen, the Lord Ordinary before whom the case was tried in the first instance, came to the conclusion that there was no breach of the warranty of seaworthiness. He found, after considering the evidence, that the *Gunford* was not unseaworthy by reason of the captain's incompetence. Upon this part of the case your Lordships did not call upon counsel for the respondents. There is, in my opinion, ample evidence on which the learned judge could find, as he did, that the captain was not incompetent, and the appeal, so far as it is based upon that ground, fails. Upon the second ground—namely, that there was concealment of material facts in connection with the employment of the captain—there was a great deal of evidence on both sides. The facts relied upon by the appellants were that a period of twenty-two years had elapsed since Captain Sember had last been at sea, he, during that time, having been engaged as a stevedore; it was further said that his engagement as captain was made without sufficient inquiry, and the circumstances under which he was engaged were such that it was material to the underwriters to be informed of the previous history and experience of the captain. A great many witnesses were called for the appellants, who stated that, in their opinion, it was material to the underwriters that they should be informed of the circumstances connected with the captain's experience above referred to. The Lord Ordinary, in his judgment, came to the conclusion that, under ordinary circumstances, underwriters rely upon the information at their own disposal with regard to the competency of masters, that the name of the master is, as a rule, not inserted in the policy, and that it is only on very rare occasions that underwriters make any inquiry as to his name or history, and that they rely on the shipowners to engage a competent master. There is no doubt that in this case the information at the disposal of the underwriters would not have afforded the necessary information, because Captain Sember was not appointed master of the *Gunford* until the 19th July, and the records of information as to masters at the disposal of the underwriters at the date when the policies were effected would not have contained his name. I am, however, not prepared to differ from the Lord Ordinary and the Court of Session upon this part of the case. The fact upon which most reliance was placed was that the underwriters were not told that the master had been on shore for twenty-two years; but this fact could not well be stated by itself without further information as to other matters put before Mr. Briggs as to the qualifications of Captain Sember, and, looking to the well-established usage, I concur in the view taken, as appears in the judgments in the court below, that there was no concealment of any material fact in regard to the captain. I have now to deal with the remaining point in the case, and that is whether or not there was concealment of material facts by reason of the non-disclosure of the insurances effected upon the ship. Before discussing this matter it is desirable to state briefly the law applicable to the case. It is, in my opinion, quite unnecessary to do more than refer to the sections of the Marine Insurance Act 1906. Sect. 17 is in the following terms:

A contract of marine insurance is a contract based upon the utmost good faith, and if the utmost good faith be not observed by either party, the contract may be avoided by the other party.

Sect. 18 (1). Subject to the provisions of this section the assured must disclose to the insurer before the contract is concluded every material circumstance which is known to the assured, and the assured is deemed to know every circumstance which in the ordinary course of business ought to be known by him. If the assured fails to make such disclosure, the insurer may avoid the contract. (2) Every circumstance is material which would influence the judgment of a prudent insurer in fixing the premium or determining whether he will take the risk. (3) In the absence of inquiry the following circumstances need not be disclosed—namely: (*a*) Any circumstance which diminishes the risk. (*b*) Any circumstance which is known or presumed to be known to the insurer. The insurer is presumed to know matters of common notoriety or knowledge and matters which an insurer in the ordinary course of his business as such ought to know. (*c*) Any circumstance as to which information is waived by the insurer. (*d*) Any circumstance which it is superfluous to disclose by reason of any express or implied warranty. (4) Whether any particular circumstance which is not disclosed be material or not is in each case a question of fact. (5) The term circumstance includes any communication made to or information received by the assured.

Sect. 19. Subject to the provisions of the preceding section as to circumstances which need not be disclosed where an insurance is effected for an assured by an agent the agent must disclose to the insurer: (*a*) Every material circumstance which is known to himself. And an agent to insure is deemed to know every circumstance which in the ordinary course of business ought to be known by or to have been communicated to him.

The two policies to which the appeal now under consideration relates were dated the 30th and 31st Aug. 1907, but the material date for the purpose of the question under consideration—viz., the date of the initialling of the slip—was the 3rd Aug. The policies were effected upon the instructions of Mr. Briggs. The actual amount of freight due under the charter-party was 4790*l*., of which one-half, 2395*l*., was paid in advance at Hamburg. The disbursements and other outlay which had been incurred in order to earn the freight were stated to amount to 5280*l*. Some portion of this amount would not have created any insurable interest, having regard to the provisions of sect. 16, but in the view which I take

it is unnecessary to say how much. Moreover, it was conceded that the only source from which these disbursements could be repaid was the freight earned by the ship, which freight was itself insured. The insurances which were effected on behalf of the owners amounted to 29,300*l.* as follows: Hull, valued at 18,500*l.*, 19,000*l*; freight, valued at 5500*l.*, 5500*l.*; master's effects, valued at 200*l.*, 200*l.*; disbursements, p.p.i. policy, 4600*l.*; total, 29,300*l.* In addition, Mr. Briggs took out for his own protection insurances to the amount of 6500*l.* by p.p.i. honour policies, making in all 35,800*l.* The evidence established that the actual value of the property at risk was hull 9000*l.* and freight about 5000*l.*, but the underwriters accepted a policy upon which the hull was valued at 18,500*l.* Assuming that no part of the disbursements should be taken into consideration as being included in the difference between 9000*l.*, the actual value of the hull, and 18,500*l.*, the insured value of the ship, there was still a double insurance in respect of the alleged disbursements to the extent of 4600*l.* in addition to the 6500*l.* insurances effected by Briggs. If the difference between the declared 18,500*l.* and actual 9000*l.* value was represented by any insurable interest in disbursements, the over-insurance or over-valuation would be correspondingly increased. It was proved in evidence that no dividends had been earned by the ship for about seven years; it was further established that the object of the insurances was to cover debts owing by the company in the event of the loss of the vessel. There was further evidence that the profits which were being earned by the ship could not stand the amount paid in respect of premiums of insurance. All the disbursement policies were valued policies —that is to say, in the event of the ship being lost the full amount would be paid—and it was admitted by Mr. Briggs that it would be a great deal better for the shareholders if they lost their ship under the policies than if they had to realise their ship by sale, unless they got the Spanish Government to buy or a war took place. Even assuming the value of the ship to be taken at 18,500*l.*, the total amount at risk did not exceed 23,500*l.* before the moiety of the freight was paid at Hamburg, and a little over 21,000*l.* after the vessel left Hamburg. Some distinction was attempted to be made between over-valuation and over-insurance, but, inasmuch as all the polices were valued policies, the question becomes immaterial. There was on the evidence over-valuation to the extent of 11,100*l.*, without taking into consideration the difference between the declared value, 18,500*l.*, and the actual value, 9000*l.* Apart, then, from evidence in the particular case, it seems to me that the statement of the facts is sufficient to show that, looking to the provisions of the Act of 1906, the circumstances were material as being those which would influence the judgment of a prudent insurer in fixing the premium or determining whether he would take the risk. Before proceeding to examine the evidence bearing upon this part of the case, I think it well to consider the grounds upon which judgment was given for the pursuers in the court below. Lord Salvesen, in the first instance, left out of view the honour polices; he further held that the pursuers were not concerned with the policies for 6500*l.* taken out by Briggs, because their manager entered into these contracts for his own behoof, and without the authority of the pursuers; and he also held that it is not in accordance with the principles and calculations on which underwriters in practice act, that there should be any disclosure with regard to policies covering other risks which the particular underwriter is not asked to accept. The Lord President adopted in terms the reasoning of Lord Salvesen, and further, in a passage at the end of his judgment, appears also to put out of view the policies which were effected by Briggs. Lord Johnston considered that as soon as it was ascertained that the policies in question were valued policies, the case was at an end. I refer to these reasons because, with the greatest respect for the opinions of the learned judges, they do not seem to me to have considered sufficiently the question of concealment as it arises upon the sections of the statute to which I have called attention, and have not, so far as I can follow their judgments, considered the evidence bearing upon this part of the case. Before I refer to that evidence, I think it well to say that I cannot accept the view that the 6500*l.* honour policies, effected it is said by Mr. Briggs for his own protection, can be put out of view on the grounds suggested by the judgments. Briggs was the managing owner of the ship; the disbursements, in respect of which he was purporting to insure, were moneys due from the ship to him, and in considering whether there was over-valuation or over-insurance, and in this case, as I have pointed out, the terms are synonymous, which ought to have been disclosed to the underwriters, I cannot, having regard to the provisions of sect. 19 of the Act, put out of view the 6500*l.* policies effected by Briggs, nor does it, to my mind, make any difference in regard to the duty of disclosure that the policies covering this 6500*l.* and the policies for the 4600*l.* also for disbursements were honour policies. These policies were void under sect. 4 of the Act, but they go to swell the sum which would be payable in the event of the ship being lost, and the total amount being upwards of 35,000*l.* whereas the value actually at risk did not exceed 14,000*l.*, there was a very large over-valuation which might well make a prudent underwriter hesitate both as to undertaking the risk and consider the premium which he should require before doing so. I am aware of the doubt suggested by the Court of Appeal in *Roddick* v. *Indemnity Mutual Marine Insurance Company* (8 Asp. Mar. Law Cas. 24; 72 L. T. Rep. 860; (1895) 2 Q. B. 380), as to whether the effecting of honour policies was a breach of a warranty not to insure, but, in my opinion, the view taken by Kennedy, J. in that case was correct, and at any rate the point does not affect the question now under consideration. Dealing now with the evidence in the case, the whole of which I have considered carefully, though, having regard to the terms of the statute, and the duty of the assured, I doubt whether a great part of it was relevant or admissible, the practice of underwriters as to accepting any risks or not making inquiries on particular points cannot, in my opinion, affect the duty as defined by statute, and cannot properly be received as evidence of waiver in any particular case. I have, however, come to the conclusion that the evidence as given establishes, beyond any reasonable doubt, that the matters to

which I have referred were material to be disclosed.

Taking first the evidence of the pursuer, it is to be noted that, although Mr. Lockhart, one of the principal witnesses for the pursuer, stated that it is not the practice for underwriters, now, to be informed or to inquire as to what are the current insurances on other interests, such as freights or disbursements, the witness admitted in cross-examination that, had he not known, he would want a satisfactory explanation as to the large amount of the total insurances, and that without explanation he would probably not take the risk. It is to be noted that Mr. Lockhart was well acquainted with all the facts of the case, and knew the reasons which had induced Messrs. Briggs to insure to the extent which they had done. Mr. Dixie, who was the manager to Messrs. Howard Houlder and Co., had done the *Gunford's* insurance ever since 1893, and knew all the facts; and it was his firm that had effected the policies with the underwriters. Mr. Boyd, also a witness for the pursuers, stated that the value of the hull was far too high; and Mr. Shankland, who stated that the underwriters would not be in the least concerned by other policies for disbursements, does not appear to have given satisfactory answers to the questions put to him in cross-examination. On the other hand, the evidence of Mr. Jervis, Mr. Douglas, and Mr. Lemon seems to me to be entitled to great weight, as well as that of Mr. Swan and Mr. White. I have referred to this evidence in some detail, because I felt it right to consider how far the view which I have formed, apart from the evidence, as to the materiality of the facts not disclosed is borne out by the testimony given in court, and speaking for myself I unhesitatingly come to the conclusion that, both from the point of view of fixing the premium and determining whether he would undertake the risk, the over-valuation was a matter material to be considered by the underwriters. As regards the amount of premium, this view is confirmed by the correspondence which passed between the brokers, Howard Houlder and Co. and Francis Briggs and Co., when the insurances were being effected. I will not refer to the letters in detail, but when the brokers were being asked on the 30th July to insure 13,000*l*. on hull, 6000*l*. on freight, 6000*l*. on disbursements, and 200*l*. effects they replied: "The market is very difficult for this outward voyage, and, as we have already mentioned to you, we see no possible chance of placing the lines you wish covered on freight and disbursements at anything like a reasonable price; indeed, we would go further and say that we do not think that there is a market for such amounts at any price." Your Lordships were informed by counsel for the respondents that this correspondence was not referred to during the arguments in the court below. I have only mentioned it because it cannot be said in any way to displace the inference of fact which I have drawn from the evidence which I have quoted. A distinction was drawn in argument by Mr. Clyde between insurances on hull, or hull and materials, and insurances on ship. For some purposes, I agree that there may be a distinction, but it is wholly immaterial in this case, having regard to the difference between the valuation of the interests and the amount insured as contrasted with the value actually at risk. In my opinion the appeal should be allowed, and judgment given for the defenders upon the ground that the policies were void owing to concealment of material facts. In the second appeal, which is brought by the Southern Marine Mutual Assurance Association, upon the main point the facts and arguments were the same, but it was alleged, on behalf of the respondents, that the defenders were not entitled to the benefit of the objection because they received payment of premium after they knew of the facts, and had, with the same knowledge, agreed that the ship should remain insured with the association until her arrival. I am satisfied that the appellants had not full knowledge of the facts when they received payment of the premium, and that the agreement to keep the vessel covered was made at a time when they were disputing their liability under the policies. No distinction should, therefore, be drawn between the two cases.

Lord SHAW.—My Lords: In this action the respondents, the Gunford Ship Company Limited and the liquidator thereof, seek to recover a total loss upon two policies of insurance, each for 1000*l*. effected upon the hull of the ship *Gunford* for the voyage from Rotterdam to Hamburg, and thence to Santa Rosalia. The one policy is dated the 30th Aug., and the other the 31st Aug. 1907. The insurances were effected through the agency of one Francis Briggs, the managing owner of the *Gunford*. He was also the manager of the Gunford Ship Company, which appears to have been an ordinary one-ship company. The claim is resisted by the appellants on various grounds. Two of these alone have been the subject of argument, the first—namely, that the contract is void because the vessel was not seaworthy at the inception of the voyage; and the second that the contract is voidable by reason of concealment by the assured and their agent of facts material to be known by insurer. The *Gunford* was towed from Rotterdam, and on the 12th Oct. 1907 she left Hamburg with a full cargo apparently. She was wrecked on the 29th Nov. near Cape San Roque on the Brazilian coast. After various ineffective tackings for the purpose of weathering the cape, she struck badly on a rock or reef, and become a total loss. The crew of twenty-six reached the shore in safety, but ten sailors, unfortunately, died of a fever caught after landing. A Board of Trade inquiry was held upon the circumstances, and there seems no reason to doubt the soundness of its findings, that the stranding was caused by default of the master. His certificate of competency was suspended for twelve months. Having come to the conclusion which I shall mention in a little while that the contract of insurance is not enforceable on the ground of the concealment of material facts, it is not necessary that I should enter upon the merits of the plea of unseaworthiness, a plea which is founded upon the alleged incapacity of Captain Sember for the responsible post of master of this sailing vessel. Sember's record was not good. He had not been to sea for twenty-two years, having been acting mostly as a stevedore during that time. When he was last at sea his conduct had been such that his certificate had been suspended for six months, his ship having been lost. The certificates which he produced, although good, should have prompted inquiry into his record. But he answered an

advertisement and was appointed as mate of a vessel named *Belford*, at 9*l*. a month, and within a few days he was appointed master of the *Gunford*, at 20*l*. a month. The interviews at which these appointments were made only lasted a few minutes. They were held with Briggs, whose relation to the vessel and to the company will be mentioned afterwards. I am not satisfied in my own mind that Sember was a competent master, and I incline strongly to the opinion that his record was such as to impose a duty upon the assured to explain to the insurers the peculiar, and, as I hope, the unique circumstances of the appointment. Upon either view the claims under the policy would fail. I have, however, sufficiently indicated my doubts as to this part of the case; and I do not think it necessary to dissent from your Lordships' opinion upon it, having after much consideration no doubt that the defenders should be assoilzied on the second head of the argument. By the policies the insurance is "declared to be upon hull and materials, valued at 18,500*l*." The vessel was an old vessel, and, from the point of view of realisation in the market, was apparently worth 9000*l*. Had this over-valuation been tainted by fraud, the contract of insurance could not have been enforced. Where there is a heavy overvaluation, fraud is *à priori* not very far to seek. But fraud is not pleaded here, and upon the general question it ought to be remembered that to the insurer using a ship as part of the going concern of a business, a statement of value going much beyond the amount to be realised if the concern was stopped, and the asset put upon the market, is intelligible and legitimate. It is not discountenanced by the Marine Insurance Act 1906, but on the contrary is, apart from fraud, held under sect. 27, sub-sect. 3, of the statute to be conclusive of the insurable value. It was not argued that this part of the transaction was assailable in law. Much more serious considerations, however, follow. There were insurances on freight to the extent of 5500*l*., and insurances on disbursements to the extent of 4600*l*. The latter policies, those on disbursements, were p.p.i. policies. They were bound to be so, because, in point of fact, as was admitted in argument for the respondents, the disbursements were the very things which had been already accounted for in the freight, and, when the ship became a wreck, the payment on these policies was not to be a payment of indemnity, but a present to the assured of this sum of money, a present falling due to be made in the event of the wreck and loss of the vessel. The story, however, does not stop there. There were also insurances on disbursements on behalf of Briggs. There were time policies current during the voyage to an amount of no less than 6500*l*. Briggs had made advances to the bank on behalf of the company, and he was in other ways deeply involved as a creditor. Any payments made under these insurances would, again, not be payments to indemnify Briggs for loss, but would also be in the nature of presents—presents made upon the issue of a gamble upon the life of the vessel, and the issue to be favourable to Briggs when the vessel was lost. It needs no words of mine to point out that property at sea and the lives of seamen stand in the greatest peril if business of that character obtains the sanction of the law. These policies are admitted to be p.p.i. policies—that is to say, without further proof of interest than the policy itself. They are, therefore, by sect. 4, sub-sect. 2, of the Act of 1906, deemed to be gaming or wagering contracts, and, by sub-sect. 1, "Every contract of marine insurance by way of gaming or wagering is void." The sub-sections simply express the principles of the law anterior to the Act; but, to judge from the facts of the present case, the abolition of gambling, involving danger to property and life at sea, has not been much furthered by these plain words of the Legislature. Indeed, the argument of the respondents, an argument which succeeded in the Court of Session, is this, that the policies are policies of insurance without real insurable interest; that they are gambling and wagering policies, but that the shipping and insuring world is aware that such things go on; and that every insurer of ships or hull takes his risk that the scales may be weighted in favour of the destruction of the vessel by that kind of underwriting.

This argument raises, in my humble judgment, something much more serious than a mere question of the duty of disclosure; it is necessary to examine fundamentally the position of an owner who has made legitimate insurances upon ships, cargo, or freight, and also made separate gambling insurances. It appears to me that, wherever owners enter into gambling transactions of this kind, these transactions themselves are not only invalid but they infect and invalidate the entire insurances which the same assured have made upon vessel, freight, or cargo. The reason of that is this: the voyage is one, and the ship, its earnings, its cargo, its crew, all are involved in that one and single hazard which has been undertaken and is, by the gambling transaction, improperly weighted towards loss—a loss which, falling upon the ship, would not rest there but spread to unsalved cargo, and to freight, not to speak of the peril to human life which would be thus encountered. The line of plain duty for all parties to the contract is that the ship shall be preserved; but when a gamble has been made by one of the parties for gain upon the event of the loss of the ship, although the subject of the particular gamble be not the ship itself, the interest of that party is that the ship shall be destroyed. This hazard against the life of the vessel humbly appears to me to taint every policy entered upon by the same gambling adventurer, and no such policy thus depending upon the same hazard is enforceable. The rule governing this is simple and familiar—viz., that the law will not countenance or enforce a transaction which is thus tainted by conflict between duty and self-interest. The rarity and difficulty of a right adjustment of the wavering balance swayed by self-interest have been memorably phrased. But the law does not attempt the task; the penalty against such a conflict between interest and duty is the invalidation of the bargain. I remark, however, that the foregoing observations are not directed to the case of insurances upon ships in which third parties have acquired, in ignorance of the other and over-insurances, and in good faith and for valuable consideration, separate interests. The rights of such parties would require to be separately and fully considered. The case as presented, although it touched and could not but touch this fundamental ground, was taken as an issue on the duty of

disclosure, and I accordingly proceed to treat it on that footing. So dealing with it, I do not find myself able to agree with the judgment of either House of the Court of Session. It follows upon the nature of the argument there presented that no duty rests upon the owners, or agent, to disclose to the insurers of the hull facts of the character found in this case. I cannot assent or give any countenance to such a view. The learned Lord Ordinary says: "I cannot see that there is any duty whatever on the part of the assured to disclose to the underwriter on hull, who accepts the vessel at a declared value, that he is also effecting insurances upon freight and disbursements." The opinion of all your Lordships is to an opposite effect, and I humbly agree with that opinion. So far as the effecting of insurances upon freight is concerned that is sound business, because it is grounded upon a stipulation for true indemnity; but so far as disbursements, wherever they are duplications of freight, are concerned, these, when freight has already been insured, form no part of a contract of indemnity, but the insurance upon them is merely a gamble, discountenanced by sound principle and not enforceable by law. It forms a distinct temptation of self-interest to business and to conduct which are nefarious. In point of fact, however, these illegitimate, dangerous, and unenforceable policies are entered upon because of the knowledge that in the majority of cases, if the hazard placed against the life of the vessel be won, the stake will be paid. The competition in the underwriting world seems to be such that, with premiums paid down, no questions will be asked, and nothing will be said should loss ensue. It is this which, in fact, constitutes the peril to property and life, and I am not surprised that in this case witnesses like Mr. Douglas, speaking apparently with the authority of large associations of underwriters, condemned the practice. "If I had known," says Mr. Douglas, "that so much was on the vessel, I would not have touched her with a 6ft. pole, because I consider that such insurances are a direct incentive to loss." In another passage Mr. Douglas remarks with force, "She is insured for loss and not against loss." As I have observed, the practice is continued because underwriters pay upon such policies. They go by the much-abused name of "honour"; and the illegitimate "honour" policies constitute that incentive of self-interest towards the destruction of the vessel which the law holds, quite apart from proof of fraud in the specific transaction, to be enough to make the policy void. It appears to me—differing in this by a very wide diameter from the judgment of the court below—that when insurances of that illegitimate character are also effected by the owner and insurer of the hull, the duty of disclosure of that material fact is plain. Their non-disclosure can, in my humble judgment, be pleaded as an answer to liability upon any policy effected over the hull. I have already referred to the honour policies for 6500*l.*, taken out by Briggs as an individual. The Lord President says that he feels difficulty "in holding that a policy upon the hull, for the ship, should be held as bad, because a person who was acting as managing owner or managing director did not disclose that he, as an individual, had honour policies in connection with the same venture." Lord Salvesen is also of this opinion. He holds that the insurers are not concerned with the honour policies at all, and that the fact that the director "entered into contracts which are not legally enforceable for his own behoof, and without their (the owners') authority is, in the absence of fraud, as irrelevant as if an outsider had had a gamble on the fate of the *Gunford*." "Moreover," adds the learned Lord Ordinary, "I think that it is not in accordance with the principles and calculations on which underwriters act in practice, that there should be any disclosure with regard to policies covering other risks which the particular underwriter is not asked to accept." If this be the law, it is manifest that a most dangerous situation has arisen, for, as I have already pointed out, the importation of self-interest in favour of loss is thus permitted and unchallenged by law, although it is that very thing which, in principle and by repeated authorities, stands condemned and disallowed. But I do not labour this matter of the policies and the position of Briggs; nor do I cite the decisions; because it appears to me that sect. 19 of the statute of 1906, puts plainly a duty of disclosure upon the agent:—"The agent of the assured must disclose to the insurer (*a*) every material circumstance which is known to himself." It is admitted that the honour policies for 6500*l.* were known to Briggs, being in fact his own insurances. The circumstances of these heavy gambling policies having been entered into were, in my opinion, most material to disclose to insurers of the hull. How such knowledge on the part of Briggs, and the duty of disclosure arising from it, should be held not to fall under the plain provisions of the statute, I am somewhat at a loss to understand. These Briggs honour policies for 6500*l.* fall to be added to the other disbursement policies of a gambling nature for 4600*l.*; and it thus appears that to the extent of 11,100*l.* no disclosure was made, and the ship was sent to sea, the scale of self-interest in favour of her destruction being as stated. I am of opinion that, these being the facts, the objection taken to the liability on the policies is good, and that the appeal should succeed.

Lord Robson.—My Lords: The first question which arises in this case is whether or not the *Gunford* was unseaworthy by reason of the incompetence of her captain. The learned judge at the trial, Lord Salvesen, has answered that question in favour of the plaintiffs, and there is ample evidence to justify his finding. The next question is whether, notwithstanding that the captain was in fact competent, his record was so suspicious and unsatisfactory that the plaintiffs must be found guilty of concealing material facts in not communicating to the insurers such knowledge as they possessed of his antecedents. It is easy to state the case against the plaintiffs on this head in a way which raises suspicion as to their conduct, but, on the whole, I think that they were entitled to the exoneration which they have received at the hands of the learned trial judge in answer to this question. They may fairly plead in their favour that they believed in the strong testimonials, from most respectable firms, with which the captain supported his application for employment. A firm of high standing wrote that they had employed him for thirty years, first as mate, then as master, and latterly as stevedore, and, during the whole of that time, found him an active, energetic, and competent man, adding that

they recommended him to anyone requiring his services. They did not think it necessary to state that he had been on shore for the preceding twenty-two years. The nearest approach to that information was made by a gentleman of position in the shipping world, who, in strongly recommending the captain, said he had known him for over twenty years, first as master in a line of sailing ships, "but for most of that time he had been engaged in stevedoring and superintendence." There were other testimonials equally emphatic and equally imperfect. At the same time the inquiries, if any, made by the plaintiffs were of the most perfunctory kind. They made the appointment with a minimum of trouble, and the best which can possibly be said for them is that, in the then existing circumstances, it was necessarily made in a hurry. But the most important question in the case arises in connection with the insurances. The appellants say that they were excessive. So far as the excess consisted of over-valuation on the legitimate policies no complaint is open to the appellants, for the values were agreed and so bind the insurers. That part of the case is, therefore, put forward by them only as showing that the legitimate policies more than covered the risks, and left no excuse for the making of wager or "honour" policies. Their complaint rests in substance on the non-disclosure of those wager policies. The vessel had originally cost 20,750*l.* At the date of the policies now in question she was fifteen years old, and was worth about 9000*l.* to sell. For the purposes of insurance of the hull and materials her value was agreed at 18,500*l.* The underwriters, of course, were well aware that this was an over-valuation. Knowing, as they did, the age and type of the vessel and the rate of annual depreciation, they could tell, almost as exactly as her owners, what she was worth; and, moreover, they had, as it happened, regularly insured her for years past. Although the contract of insurance is expressed to be a contract of indemnity, and the indemnity is properly based on market value at the time of the loss, yet the law allows the insured value to be agreed between the parties, and the agreed value, though frequently, and perhaps generally, in excess of the market value, is binding in the absence of fraud. There are often legitimate business reasons for this discrepancy between the selling value and the insured value, and it should not be assumed that it necessarily creates any actual conflict between duty and interest on the part of the shipowner in regard to the safety of the thing insured. The assured naturally aims at re-instatement rather than bare indemnity, and the insurer has also his own reasons for preferring that the values should be high so long as they do not constitute a temptation to loss. In order that he may be saved the trouble of small claims, which are often of a doubtful character, he stipulates that the ship shall be warranted free from average under 3 per cent., and where the total agreed value is high, the insurer's protection under this clause is increased. Again, in claims for constructive total loss, the higher the value, the more difficult it is for the assured to establish that the cost of repairs will exceed the repaired value, so as to entitle him to treat the vessel as lost and leave the wreck on the insurer's hands. The insurer is, therefore, willing to undertake the risk of a certain amount of over-valuation, relying no doubt on the character of the assured and also on the interest which the managing owners or managers have in preserving the ship as a source of business profit to themselves. In addition to the hull and materials, the plaintiff insured the gross freight at 5500*l.* This policy also involved an over-valuation as it made no deduction for the expenses of earning the freight, but the insurance of gross instead of net freight is expressly allowed by our law, and is of great practical convenience in avoiding a troublesome, uncertain, and possibly litigious inquiry into working expenses. By the foregoing policies the plaintiffs secured that in case of loss they would receive more than a strict indemnity based on existing values, but perhaps not quite enough to replace the article insured without some slight loss. They proceeded, however, to effect a valued policy for 4600*l.* on "disbursements." A list of the payments comprised under this head was put in by the plaintiffs and amounted to 5280*l.* as against a total chartered freight of 4790*l.* So far as these payments consisted of current working expenses necessary to earn freight, they were covered by the insurance on the gross freight and so far as they consisted of repairs, output, and insurance premium on hull, they would ordinarily be included in the policy on ship and materials. This policy was, therefore, an over-insurance by double insurance. The plaintiffs could not legally avail themselves of it to enforce recovery of any sum in excess of the indemnity allowed by law, but this was a "p.p.i." or honour policy, *i.e.*, it was made "without further proof of interest than the policy itself." In other words, it was a wager, and it is well known that the sums insured under such policies are, under ordinary circumstances, paid with the same regularity as if they were legally due. A further policy of the same character for 6500*l.* was taken out on his own account by Mr. Briggs, the plaintiffs' manager, who had the conduct of the whole transaction, and is, by sect. 19 of the Marine Insurance Act 1906, made responsible for disclosure of every material circumstance within his knowledge. The question to be determined by your Lordships is, whether it was material to the insurers of the hull and freight to be informed of these honour polices, and that depends on whether they were among the circumstances which would "influence the judgment of a prudent insurer in fixing the premium or in determining whether he will take the risk." This is a question of fact, and there was evidence both ways about it in the form of underwriters' opinions on the point. Without depreciating the value of those opinions I think that a jury, or a court of law acting as a jury, when once made acquainted with the general conditions of marine insurance, can easily decide for themselves how far any particular circumstance would influence the judgment of a prudent insurer. The proposition laid down by Blackburn, J. in the case of *Ionides* v. *Pender* (2 Asp. Mar. Law Cas. 266 (1874); 30 L. T. Rep. 547; L. Rep. 9 Q. B. 531), that excessive and speculative insurance has "a direct tendency to make the assured less careful in selecting the captain, and to diminish the efforts which in case of disaster he ought to make to diminish the loss" can scarcely be contested, and, however willing individual insurers may be to take the risk of such insurance, their opinion cannot

bind others of more prudent temperament. So long as the parties to a policy are dealing only with agreed values on ship or freight, high as those values may be, the ordinary course of insurance business provides substantial safeguards both to the legitimate insurers and the seamen, against the dangers referred to by Blackburn, J., but those safeguards are materially diminished when the owners or managers take to wager policies with other underwriters. The insurers can make sure ordinarily that the agreed value shall fall short of what is necessary for complete reinstatement. Even when the agreed value is high enough to give a profit to the shareholders, the insurers can estimate the heavy loss of business and management profits which the destruction of the ship may impose on the managers, and it is to the managers that they look for vigilance and care in securing her safety. But when, as in the present case, the wager policies increase the amount recoverable by the owners on a total loss to a figure far in excess of what is needed for reinstatement, and, worse still, when the managers themselves stand to make a large profit under such policies in case of loss, the incentive to care over the safety of the ship begins to be substantially affected, and the insurers are entitled to form their own opinion as to how far they will trust the assured under such circumstances. I think, therefore, that the existence and amounts of the wager policies were circumstances material to be disclosed, and that this appeal should be allowed.

The LORD CHANCELLOR.—With regard to the costs, the judgment of your Lordships' House will involve the respondents paying the costs here and in the courts below, but, having regard to the issues of fact found in favour of the respondents, that ought to be less half the cost of the proof before the Lord Ordinary.

Judgment appealed from reversed. Respondents to pay the costs in this House and in the courts below, less half the costs of the proof before the Lord Ordinary.

Solicitors for the appellants, *Waltons* and *Co.*, for *J.* and *J. Ross*, Edinburgh.

Solicitors for the respondents, *W. A. Crump* and *Son*, for *Webster, Will*, and *Co.*, Edinburgh, and *Wright, Johnston*, and *Mackenzie*, Glasgow.

Supreme Court of Judicature.

COURT OF APPEAL.

Feb. 27, 28, *March* 1 *and* 2, 1911.
(Before VAUGHAN WILLIAMS, FARWELL, and KENNEDY, L.JJ.)

THE WESTCOCK. (a)

Towage contract—Defect in towing gear—Warranty of fitness—Duty to use reasonable care to provide a fit tug—Conditions of towage.

Tug owners contracted to tow a partly laden vessel from a dock in Birkenhead to a dock in Liverpool upon the terms that they would not be responsible for any damage or loss . . . arising from any perils or accidents of the seas or rivers, or arising from . . . towing gear, including consequence of defect therein or damage thereto. They supplied two tugs for the towage. The rivets which fastened the towing gear to the structure of one of the tugs parted, the gear was lost overboard, and in consequence of the breaking of the rivets the ship collided with the dock wall and was damaged. In an action by the shipowner against the tug owner to recover the damage caused by breach of warranty or breach of contract in not providing tugs properly equipped and fit to perform the contract, it was held that the shipowner was entitled to recover, as there was an implied warranty in the contract of towage that the tugs supplied were duly equipped and fit for the service; that even if there was no such warranty, as the damage had been caused by a defect in the tug that might have been ascertained by the exercise of reasonable care on the part of the tug owner, and as no proper inspection of the tug had been made, the damage was recoverable. It was further held that the conditions in the contract did not exempt the tug owner, for they only referred to defects arising during the towage, and not to those in existence when the towage began, and that, even if the conditions were intended to refer to defects in existence before the towage began, the words used were not clear enough to exempt the tug owners from liability.

The tug owners appealed.

Held, that it was unnecessary to decide the question as to whether the tug owner warranted that the tug was fit to perform the contract, for it was his duty to supply a tug as fit as care and skill could make it, and under the circumstances the onus was on him to show that the accident could not have been prevented by the exercise of care and skill, and that he had not done.

Held, further, that the words in the conditions of towage referred only to defects coming into existence during the towage.

Held, by Vaughan Williams and Farwell, L.JJ. (Kennedy, L.J. dissenting), that the rule of construction that an exception to be efficacious must not be ambiguous only applied to cases in which the exception dealt with a common law liability, and had no application in this case.

Held, by Farwell and Kennedy, L.JJ. (Vaughan Williams, L.J. dissenting), that the words "towing gear" did not include the rivets which attached the towing hook and plates to the structure of the tug, and that the defect in the rivets was not a defect within the words of the condition.

APPEAL from a decision of the President by which he held that shipowners were entitled to recover the damage they had sustained by their ship falling against a jetty while in tow of the appellants' tug, in consequence of the towing gear carrying away.

The appellants, defendants in the court below, were the owners of the steam tugs *Westcock* and *Southcock*.

The respondents, plaintiffs in the court below, were the owners of the steamship *Araby*.

The owners of the *Araby* entered into a contract with the owners of the *Westcock* and *Southcock*

(a) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

under which the latter agreed to tow the *Araby* from Birkenhead to Liverpool upon the following terms :

Conditions of Towage.—The tug owners are not to be responsible for any damage or loss to the ship they have contracted to tow or to the cargo aboard her arising from any perils or accidents of the seas, rivers, or navigation, collision, stranding, straining, fire, explosion, or arising from boilers, steam, machinery, or towing gear (including consequence of defect therein or damage thereto), and whether the perils or things above mentioned or the loss or injury therefrom be occasioned by the negligence, default, or error in judgment of the pilot, master, officers, engineers, crew, or other servants of the tug owners, nor are they to be responsible for damage done by any ship they have contracted to tow even if occasioned by the negligence of the tug owner's servants, and in employing the tug the shipowner is to be deemed to have expressly agreed to indemnify the tug owners for any damages they may be called upon to pay any person by reason of such damage by the ship in tow.

The facts as to the construction of the towing gear and the accident are fully stated in the judgment of the President.

The plaintiffs alleged that the tug owners warranted that their tug was fit for the towage, or that they undertook to use reasonable care to see that the tugs supplied were properly equipped and fit for the towage.

The defendants denied the warranty, and alleged that they took all reasonable care to see that the tugs supplied were properly equipped and fit, but that, if they had not done so, they were protected by the conditions set out above. They further alleged that the plaintiffs had been guilty of contributory negligence in ordering the tugs to tow in the weather which prevailed, and set up a counter-claim, based on an implied term in the contract, that the plaintiffs were to indemnify the defendants for the loss of the towing gear.

No evidence was called in support of the counter-claim, and it was not proceeded with.

The action was tried before the President on the 17th, 18th, 19th, and 31st Oct., when judgment was delivered.

The PRESIDENT.—This is an action for breach of a contract of towage. The plaintiffs are the owners of the steel screw steamer *Araby*, and the defendants are the owners of the tug *Westcock*. The contract was made on the 12th Jan. 1909 for the towage of the *Araby* from the Morpeth Dock, Birkenhead, to the Canada Dock, Liverpool. Two tugs belonging to the defendants were engaged—namely, the *Westcock* and the *Southcock*; but, for the purposes of this case, the tug *Westcock* is the only one that need be considered. The substance of the case for the plaintiffs is that, by reason of the inefficiency of the tug *Westcock*, the towing gear of the tug carried away and fell overboard; and that, as the result of this, the *Araby* was driven against the knuckle of the pierhead at the entrance to the Canada Dock, and was damaged. There is a counter-claim by the owners of the tug against the owners of the steamer, which will be dealt with later. The facts were gone into in ample detail at the hearing. The theories advanced on either side were many and contradictory. It would not serve any useful purpose to attempt to set out all the facts and theories in this judgment. It is only necessary to state such of the facts, theories, and contentions as will make the conclusions at which I have arrived intelligible. The distance from the Morpeth Dock to the Canada Dock is about two miles along and across the Mersey. For part of this distance the *Westcock* had been towing ahead of the *Araby*, with the tug *Southcock*. When near the end of the towing voyage, just outside the entrance to the Canada Dock, the *Westcock* came away from ahead, and was made fast to the stern of the *Araby*. This was done pursuant to the directions of the dockmaster, in order that the stern of the *Araby* might be pulled to the northward and westward, so that she might be properly headed for the entrance into the Canada Dock. The *Westcock* was made fast by two sets of ropes. The ropes were 6in. manillas, and were supplied by the *Araby*. Each set consisted of an end and a bight on and round a hook on the *Westcock*, hereinafter called the tug. Each set had therefore three lines of 6in. rope. On the tug were two hooks, one called the centre hook and the other the starboard hook. One set of ropes led from the starboard quarter of the steamer and was made fast to the centre hook of the tug, and the other from the port quarter to the starboard hook. These two hooks were placed between an upper plate and a lower table, to which they were connected by vertical pins. The table and plate were both connected with angle bars, which were fastened to an iron bulkhead or casing by means of rivets. The two hooks could move horizontally. There was a contest as to the vertical motion. The angle bar to which the top plate was connected was fastened to the bulkhead by eight rivets. The heads of the rivets were on the other side of the bulkhead—that is, the side of the bunker hold. While the towing was still proceeding, just outside the entrance to the Canada Dock, the top angle bar, the top plate, and the two hooks carried away and were lost overboard. They were never recovered. Of the towing gear, only the lower table and what was below it remained. The cause of the carrying away of the top angle bar, the top plate, and the hooks was the breaking of the eight rivets referred to. They broke on the towing gear side of the bulkhead. Some of the broken rivets projected on that side about one-eighth of an inch from the surface of the bulkhead, and the others were broken flush with the bulkhead. The rivets, apart from the small broken parts, remained in the bulkhead, and the heads were on the bunker side of it. On the day after the accident the towing gear of the tug was temporarily repaired. In effecting these repairs the broken rivets were knocked out from the towing gear side into the bunker on the other side. The broken rivets were never produced after the accident. It is to be regretted that they were not preserved and produced. There was some correspondence about them, the effect of which in substance was that the defendants said that all the towing gear was lost overboard, and that there was nothing to produce. The plaintiffs, in their letter of the 25th Feb. 1909, asked specifically for the parts of the broken rivets or bolts. They were met with the same answer, that all the towing gear had been lost overboard. It was clear, and beyond question, that the breaking of the rivets was the cause of the carrying away of the towing gear, and was, therefore, the cause of the *Araby* striking

against the pier and suffering the damage which was alleged by the plaintiffs. As to the rivets, the plaintiffs alleged that the equipment of the *Westcock* was unfit in that (*inter alia*) (1) the attachments of the top plate and the top angle bar by rivets were not strong enough; (2) undue strains were transmitted to the rivets by reason of the structure of the towing hooks. In answer to this, the case for the defendants was that all eight rivets were broken together by some great, unusual, and unexpected strain, alleged to be due wholly or partly to the weight of the tow, the wind, the sea, the tide, and the scope of the hawser between tug and tow. If the rivets had been in good condition the evidence on both sides was that they ought to have stood a very heavy, steady strain—namely, from 90 to 99 tons. The plaintiffs attacked the design of the tug, and contended that it was faulty and rendered the tug inefficient. They alleged that the two gear hooks were rigid, had no vertical hinge or swivel, or vertical play, and that in consequence great leverage strains were transmitted to the fastenings of the gear Elaborate calculations of these alleged leverage strains were given. Upon the evidence I find that the centre hook was a swivel or hinge hook, and that the starboard hook had enough vertical play; and I find, and am also advised by the Elder Brethren, who are assisting me, that the tug was not faulty in design, and was not inefficient upon that ground. Upon the other hand, the defendants contended, as I have said, that there was an unusual and excessive strain upon the towing gear and its connections, because (1) the scope of the towing hawser was too short, and (2) because the wind, sea, and height out of the water of the *Araby* were unusual and unexpected. It was pleaded by the defendants that the scope of the hawser was given and determined by the *Araby*. This was not so. It was determined by the master of the tug. In this latter event the defendants contended that, if the tug master was wrong in deciding the scope of the hawser, they (the defendants) were exempted from liability by the conditions of the contract. Upon the evidence I find, and I am also advised, that there was no unusual or excessive strain, and no strain that might not reasonably be expected, due to the alleged causes, or any of them. The ropes did not part, and there was no buckling or disturbance of the casing. Without going in further detail into the evidence, I will state the conclusions at which I have arrived as to the cause of the accident.

I find that the accident was due to the weakness, fatigue, and defective condition of the eight rivets, and that at the time of the contract, and of the commencement of the towing operations, the tug *Westcock* was inefficient on this ground to perform the towage services which the defendants contracted to perform. I further find upon the evidence—in case these further findings should turn out to be material—that this inefficiency could have been ascertained by reasonable care, skill, and attention on the part of the tug owners; that no proper inspection of the tug was made by them or their servants before the towage contract was entered into; and that the last inspection before the contract was only an ordinary and perfunctory one, and did not extend to an examination of the rivets or fastenings between the towing gear and the bulkhead casing.

The question which has to be determined is whether the defendants are liable in these circumstances in view of the terms of the contract. The contract for the towage was verbal. Although there was an issue upon the pleadings as to the terms of the contract, there did not remain, after the evidence, any contest upon the matter. The contract was an ordinary contract for towage, subject to the conditions set out in the defence. These conditions are as follows: "The tug owners are not to be responsible for any damage to the ship they have contracted to tow arising from any perils or accidents of the seas, rivers, or navigation, collision, straining, or arising from towing gear (including consequence of defect therein or damage thereto), and whether the perils or things above mentioned or the loss or injury therefrom be occasioned by the negligence, default, or error in judgment of the pilot, master, officers, engineers, crew, or other servants of the tug owners." Apart from any special terms or conditions, I endeavoured in *The Maréchal Suchet* (11 Asp. Mar. Law Cas. 553 (1910); 103 L. T. Rep. 848), after a careful examination of the authorities, to state what I thought were the obligations of a tug owner under a towage contract. They were stated as follows: "The owners of the tug must be taken to have contracted that the tug should be efficient, and that her crew, tackle, and equipment should be equal to the work to be accomplished in weather and circumstances reasonably to be expected, and that reasonable skill, care, energy, and diligence should be exercised in the accomplishment of the work. On the other hand, they did not warrant that the work should be done under all circumstances and at all hazards, and the failure to accomplish it would be excused if it were due to *vis major* or to accidents not contemplated, and which rendered the doing of the work impossible." These obligations can, however, be got rid of or modified by express and apt terms in the contract, just as the obligations of a shipowner may be got rid of or modified, in the case of the duty or obligation to provide a seaworthy vessel under a charter-party or a contract of affreightment. The primary obligation of a tug owner under a towage contract may be described as a duty to provide a tug which, at the time of the contract or at the commencement of the operations of towage under the contract, is efficient to perform the towage services which the tug undertakes to perform in circumstances reasonably to be expected; or as a representation, or an engagement, or a contract, or an implied engagement that the tug is reasonably efficient for that purpose. If my findings of fact in this case are justified, it matters not whether this primary obligation is an absolute one, so as to amount to a warranty of fitness or efficiency, or whether the obligation is satisfied by the tug owner proving that the unfitness or inefficiency was not discoverable or preventable by any care or skill, or by his proving that he was not aware of the unfitness or inefficiency, and that it could not be discovered by an ordinary inspection. Unless the special conditions in this contract exonerate the defendants, upon my findings the defendants would be liable in any of the above views of their legal obligations. But, lest my findings of fact may not commend themselves to

an appellate tribunal, it is necessary for me to state my view more particularly as to what the obligations are, apart from special conditions or exceptions. In my opinion it is not sufficient for a tug owner in an action like the present to prove that he was not aware of any unfitness or inefficiency, or that it could not be discovered by an ordinary inspection. At the lowest I think his obligation is to prove that the unfitness or inefficiency was not preventable or discoverable by care and skill. But is not the obligation at the outset greater than this? Is it not an obligation which is absolute and which therefore amounts to a warranty? I think it is. It is well established that the obligation under a charter-party or a bill of lading to provide a vessel which is seaworthy, in the commercial and legal sense, is an absolute one and amounts to a warranty of seaworthiness; and this obligation has been described as "a representation and an engagement—a contract—by the shipowner that the ship . . . is at the time of its departure reasonably fit for accomplishing the service which the shipowner engages to perform" (per Lord Cairns in *Steel* v. *State Line Steamship Company*, 3 Asp. Mar. Law Cas. 516; 3 App. Cas. 72, at p. 76); "and as a duty on the part of the person who furnishes or supplies the ship . . . unless something be stipulated which should prevent it, that the ship shall be fit for its purpose. That is generally expressed by saying that it shall be seaworthy, and I think also in marine contracts, contracts for sea carriage, that is what is properly called a 'warranty' not merely that they should do their best to make the ship fit, but that the ship should really be fit": (per Lord Blackburn, 3 App. Cas., at p. 86). It is as important that a tug which undertakes to tow a vessel in some cases for long distances and in varying circumstances, with lives and property at risk, should be efficient for the accomplishment of its work, as it is that a cargo-laden ship should be seaworthy, and in this sense fit for the purposes of the service undertaken under a charter-party. The foundation of the obligation is the same in either case—namely, the fitness of the tug or the ship for the purpose of the service to be performed. This appears to be the ground of the decision in *The Undaunted* (5 Asp. Mar. Law Cas. 580; 54 L. T. Rep. 542), and I observe that that case has been taken by text-writers to establish that a tug owner warrants the fitness of the tug: (see Carver on the Carriage of Goods by Sea, 3rd edit., sect. 112, at p. 140). The late Mathew, L.J., in *Hyman* v. *Nye* (44 L. T. 919), states that "the warranty of seaworthiness in the case of a ship has been traced in many recent cases to its source in the ordinary contract for hiring an article for a specific purpose." In the *Minnehaha* (Lush. 335) Lord Kingsdown, in giving the decision of the Privy Council, says: "When a steamboat engages to tow a vessel for a certain remuneration from one point to another, she does not warrant that she will be able to do so, and will do so, under all circumstances and at all hazards; but she does engage that she will use her best endeavours for that purpose, and will bring to the task competent skill, and such a crew, tackle, and equipments as are reasonably to be expected in a vessel of her class. She may be prevented from fulfilling her contract by *vis major*, by accidents which were not contemplated, and which may render the fulfilment of her contract impossible, and in such a case, by the general rule of law, she is relieved from her obligations, But she does not become relieved from her obligations because unforeseen difficulties occur in the completion of her task; because the performance of the task is interrupted or cannot be completed in the mode in which it was originally intended, as by the breaking of a ship's hawser." This, I think, means, or at any rate is consistent with the construction, that there is, in a towage contract, first a warranty that at the outset the crew, tackle, and equipments are efficient, and afterwards an implied obligation that competent skill and best endeavours should be exercised in the performance of the work. It has been argued before me that the judgment of Lord Halsbury in the House of Lords in *The Ratata* (8 Asp. Mar. Law Cas. 236, 427; (1898) A. C. 513) shows that only reasonable care and skill in providing an efficient tug is required by the contract; but it seems to me that the argument is not well founded. I think that the headnote is an accurate statement of the decision in that case. It runs: "Held, that the appellants were bound to exercise reasonable care and skill in the conduct of the towage, and that, there being evidence of failure in that respect, the respondents were entitled to sue the appellants for damages." The facts of that case were peculiar. When Lord Halsbury refers to "reasonable care and skill," and says that there was no contract of warranty, I think he was referring to the conduct of the towing operations after the towing had commenced. The decision is not, in my judgment, any authority for the proposition that the tug owners did not warrant the efficiency of the tug for the towage at the commencement of the towage. If the matter were, or is, *res integra*, I see no reason whatever why the same kind of obligation as to efficiency or fitness should not attach to a marine contract of towage as attaches to a marine contract of carriage. But the ordinary contract being (as I think it is) a warranty of fitness, or an implied obligation to provide a tug in a fit and efficient condition so far as skill and care can discover its condition, a serious question remains—namely, whether, under the special terms of exemption in the contract in this case, the defendants are relieved from liability. Whatever the exact obligations of the tug owners may be, there are exceptions under which they seek to avoid, restrict, or minimise those obligations, and they must clearly make out that they are protected by these conditions. I think that the canon of construction to be applied is similar to that which has so frequently been applied in "seaworthiness" cases. Many illustrations can be given. In *Nelson Line (Liverpool) Limited* v. *James Nelson and Sons Limited* (10 Asp. Mar. Law Cas. 581; (1908) A. C. 16, at p. 19) Lord Loreburn says: "The law imposes on shipowners a duty to provide a seaworthy ship, and to use reasonable care. They may contract themselves out of those duties, but unless they prove such a contract the duties remain, and such a contract is not proved by producing language which may mean that and may mean something different. As Lord Macnaghten said in *Elderslie Steamship Company* v. *Borthwick* (10 Asp. Mar. Law Cas. 24; (1905) A. C. 93, at p. 96), 'an ambiguous document is no protec-

tion.'" In *Owners of Cargo of Steamship Waikato* v. *New Zealand Shipping Company* (8 Asp. Mar. Law Cas. 442; (1899) 1 Q. B. 56, at p. 58) Collins, L.J. said: "I am not sure that the shipowners did not really mean to cover by the exception all defects at the beginning of the voyage whether latent or patent. I am inclined to think that they probably did mean to do so. But they are the persons setting up the exception, and who have to make out their exemption. I do not think they can sustain that onus, unless by unambiguous language they have excluded the liability which would *primâ facie* rest upon them. I think that the language used in this case is far too ambiguous for that purpose." This passage was cited and approved by Vaughan Williams, L.J. in *Rathbone Brothers and Co.* v. *D. MacIver, Sons, and Co.* (9 Asp. Mar. Law Cas. 467; (1903) 2 K. B. 378, at p. 384); and Lord Selborne, in the well-known passage in his judgment in *Steel* v. *State Line Steamship Company* (*sup.*) said: "The excepted perils are capable of, and ought to receive, a construction, not nullifying and destroying the implied obligation of the shipowner to provide a ship proper for the performance of the duty which he has undertaken."

In the case now before the court I think the reasonable construction to place upon the conditions, and the construction which the owners of the *Araby* might reasonably, and would probably, put upon them, is that they apply to circumstances occurring after the commencement of, and during, the towage, and not to the state of things existing before the towage began. It is hardly conceivable that the conditions should be read as meaning "We will be responsible for inefficiency in any part of the tug except in the towing gear, but we will not be responsible for inefficiency in the towing gear itself"—that being one of the most important parts of the tug in respect of the service it has to perform. The words of exception relied upon by the defendants occur in the middle of a clause which appears to deal with matters which happen during the towing voyage. The clause begins with words obviously referring to the towing voyage, and ends with an exemption from the negligence of the tug owner's servants, and the pilot, who, of course, would only come upon the scene in the course of the towing voyage. In corroboration of this construction I may refer, by way of illustration, to an American case decided in the Supreme Court of the United States (*The Caledonia* (1895) 157 U. S. 124, at p. 138), where the exceptions in a bill of lading were much in the same terms and order as in the present case, although they were more extensive. It was there held in accordance with the English decisions that the exceptions were to be construed most strongly against the shipowner, and that he was not exempted from liability for damage through the breaking of a shaft due to a latent defect which existed before and at the commencement of the voyage. The following passage occurs in the judgment of the court: "Moreover, the words 'delays, steam, boilers, and machinery, or defects therein,' formed part of a long enumeration of the causes of damage, all the rest of which related to matters subsequent to the beginning of the voyage, and, by another familiar rule of construction, they should be treated as equally limited in their scope." I respectfully agree with that passage and with the judgment of that eminent tribunal. This case was followed in the same court by a later one, *The Carib Prince* (1898) 170 U. S. 655, at p. 659, and the following passage (referring to *The Caledonia*) is taken from the judgment: "The principle upon which the ruling rested was that clauses exempting the owner from the general obligation of furnishing a seaworthy vessel must be confined within strict limits, and were not to be extended by latitudinarian construction or forced application so as to comprehend a state of unseaworthiness . . . at the commencement of the voyage."

The principles and canon of construction adopted and applied in these cases ought also, in my judgment, to be applied in the construction of the towage contract in the present case. For instances where the language was held not to be sufficiently express and unambiguous to exempt the shipowner seeking to reply upon exceptions, see *Owners of Cargo on Ship Maori King* v. *Hughes* (8 Asp. Mar. Law Cas. 65; 73 L. T. Rep. 141; (1895) 2 Q. B. 550) and *Owners of Cargo of Steamship Waikato* v. *New Zealand Shipping Company* (*sup.*). If the tug owners in the present case wished to escape their *primâ facie* liability for defects or inefficiency existing before the towage began, they ought to have made that clear by express and unmistakable words, as was done, for example, in the *Cargo ex Laertes* (6 Asp. Mar. Law Cas. 174 (1887); 57 L. T. Rep. 502; 12 P. Div. 187) and in *Rathbone Brothers and Co.* v. *MacIver, Sons, and Co.* (*sup.*), although in the latter case the shipowners were held not exempted by reason of subsequent words in the contract. In my judgment the words used in the conditions in the present case are not sufficiently clear to exempt the tug owners from liability. A reasonable and sufficiently wide meaning is given to them by reading them as referring only to perils, accidents, defects, damage, negligence, default, or error in judgment after the work of towing began, and during the performance of the work. I may add, although I do not desire my judgment to rest upon it, that the defendants could not complain if a strict meaning were given to the words "towing gear" in the conditions by holding that they describe merely the actual towing gear itself, and not the rivets or attachments between the gear and the bulkhead. This is the meaning the defendants themselves have given to the words. They persisted in the correspondence that "all the towing gear" was lost overboard. The rivets were not so lost. The defendants knew they had remained in the bulkhead casing. If this be the right meaning, the defect, which caused the accident, is not within the words of the conditions at all. As to the counter-claim, it is based upon an alleged agreement by the plaintiffs to indemnify the defendants against any damages. No such agreement was established. Indeed, no evidence at all was given to support the counter-claim, either in law or in fact. Judgment will accordingly be entered for the plaintiffs on the claim and counter-claim, with costs, and there will be the usual reference on the claim.

On 21st Nov. 1910 the defendants gave notice of appeal praying that the judgment should be set aside, and that the plaintiffs' claim should be dismissed with costs.

The appeal was heard on the 27th and 28th Feb. and 1st and 2nd March 1911.

Aspinall, K.C. and *Dunlop* for the appellants (defendants).

Leslie Scott, K.C. and *A. T. Miller* for the respondents (plaintiffs).

The arguments of counsel as to the meaning to be attached to the words in the conditions of towage "or towing gear (including consequence of defect therein)" appear in the judgments, and the following case was cited on the point:

The Caledonia, U. S. Rep., vol. 157, p. 124.

The following authorities were cited and referred to on the point as to whether the tug owner warranted that the tug was fit to perform the towage:

Vaughan Williams, L.J.—I do not propose to deliver a long judgment, or to attempt to dispose of all the questions which have been argued in this case. I may as well say at once that I think this appeal fails, and that the judgment of the President ought to be supported; but I do not think that it will be sufficient for me to state merely the main ground upon which I propose to base my judgment, though, of course, it is a very good rule that judges ought not to decide more than is really necessary for the decision of the case. The ground which I am going to give for the decision of this case, if it is a sound ground, disposes of it altogether, and therefore, in accordance with the rule I have just mentioned, I shall not deal at length with matters that, from the point of view that I am going to take in my judgment, it is really unnecessary to discuss. I may as well begin my judgment by stating the ground upon which I propose to support the decision of the President, but I wish to say at once that I have approached this case with more than usual anxiety, because I think, both in the case of *The Maréchal Suchet* (*ubi sup.*) and in this case the President, in, if I may venture to say so, the most clear and forcible way, has really between those two cases laid down generally what are the duties and liabilities of a tug owner to the people who employ him. Therefore I approach with some anxiety the present judgment, for it is the judgment of a judge who has so recently had the whole of this subject before him, who has really dealt with it with wonderful clearness which admits of no mistake. The ground upon which I am going to base my judgment is wholly irrespective of the principle of construction which was laid down in many cases, including the case of *Rathbone* v. *MacIver* (*ubi sup.*), which was a case in this court of which I was a member, which principle is: that if there is a common law liability in a shipowner or a tug owner (and I make no difference between shipowner and tug owner for this purpose) he can only relieve himself of that common law liability, which is a common law warranty, by showing by plain and unambiguous words that the intention of the contracting parties was to relieve the tug owner from such liability. I do not myself feel inclined at the present moment to affirm the proposition that that rule of construction applies to anything beyond the common law liabilities, common law absolute warranties, absolute in the sense that the person who complains of the ship or the tug has not to give any evidence whatever of negligence. He has got to show, of course, the fact that the warranty was not complied with, that the ship was unseaworthy, or that the ship was unseaworthy in the sense that it was unfit to receive the cargo which was put upon it, but he has not to prove negligence. I think that the cases are not strong enough to justify me upon this occasion in doing more than to say that, as at present advised, I do not see any case cited which carries that rule of construction further than that, to make it apply to a case where the words are said to relieve the shipowner or the tug owner, or whoever it may be, from a common law liability. I think it is convenient at this moment to say that I am not myself, as at present advised, disposed to decide this case upon the basis that we should read the words "towing gear" as not including the attachments. In my opinion the hooks and the upper and lower plates connected with the angle bars and fastened to the iron bulkhead by means of rivets were essential to the working of the towing gear, and are covered by the words "towing gear" in the exceptions which form part of the conditions of towage. I think, therefore, that we cannot rest a judgment against the *Westcock* on the ground that the words "towing gear" do not include the attachment which I have described. This attachment was for the purpose of towage, and could be used only for that purpose. With regard to the answer that the assessors were good enough to give us, that sailors would call this permanent structure on the ship, which was to my mind essential to carrying out a towage, part of the ship, that answer does not, to my mind, really affect the construction of the contract that we have before us. Having said that, as the shortest way of dealing with the points that I think I ought to refer to, I propose to read in the first instance a headnote which gives a shorter and terser account of the question raised in this case than I could give if I

substituted language of my own. This is the headnote in the present case as reported in (1911) P. 23: "Whilst the defendants' tug was towing the plaintiffs' vessel from Birkenhead to the Canada Dock, Liverpool, the towing gear of the tug carried away, with the result that the plaintiffs' vessel fell against the pierhead at the entrance to the dock and sustained damage. In an action for breach of the contract of towage, the defendants relied on a condition in the contract by which they were not responsible for any damage to the ship they have contracted to tow arising from any perils or accidents of the seas, rivers, or navigation, collision, straining, or arising from towing gear (including consequence of defect therein or damage thereto), and whether the perils or things above mentioned or the loss or injury therefrom be occasioned by the negligence, default, or error in judgment of the pilot, master, officers, engineers, crew, or other servants of the tug owners." The actual contract is rather longer, but that sets out, to my mind, all the material part of it. It was held by the President "That the defendants were liable, as there was an implied warranty in the contract of towage that the tug supplied was duly equipped and fit for service; but the cause of the damage sustained by the plaintiffs' vessel was the defective condition of the rivets attaching the towing gear of the tug to her bunker casing. This defect was not covered by the contract, the conditions of which only applied to circumstances occurring after the commencement of and during the towage, and not to the state of things existing before the towage began." My judgment is based upon that last proposition being absolutely correct. I think that these words, reasonably construed, do not extend to defects existing before the towage began. It is not necessary for me, except in the shortest possible manner, to refer to the arguments which were put forward on either side, but I may just say that counsel for the appellants, the tug owners, referred to two matters which he said should lead one to the conclusion that these exceptions were intended to apply to matters and circumstances before the towage began as well as to matters and circumstances after the towage began. The two matters that he referred to were these: One was that when you read the words in brackets, "including consequence of defect therein or damage thereto," the suggestion was that the "defect therein" referred to defects existing before the towage began, and that "damage thereto" referred to circumstances subsequently arising, to damage of the ship after the towage had begun. That was the argument on one side. The argument on the other side was that if you look at the words in this exception clause, from the beginning to the end, there is not, if you leave out the contention of counsel for the appellants about the effect of the word "defects," a single instance mentioned which would not be of matters arising after the towage commenced. That was the way counsel for the respondents put it. Having read the judgment carefully, and treating this contract as an ordinary contract outside the rule which renders it necessary to include a matter in the contract by plain and unambiguous language, I have come to the conclusion that on a reasonable reading of this contract it was not intended that the defects existing, the shortness of equipment or the defects in equipment, at the time the contract was entered into, should be covered by this clause. When I say this, I am not at all taking the view that was taken by Stirling, L.J. on the contract before him in *Rathbone* v. *MacIver* (*ubi sup.*), or by Collins, L.J. in the case of *The Waikato* v. *New Zealand Shipping Company* (*ubi sup.*). That suggested that the probable intention, at all events, of the tug owner was to protect himself against having to be made liable for damage done to the towed ship by reason of matters like these existing before the towage began. The more I read this contract the more I come to the conclusion myself that it was the intention of both parties to deal only with the defects and damage arising in the course of the towage.

Having said that, I wish to say that generally I accept the conclusions in fact of the learned President. I think that generally speaking that is the rule that the Courts of Appeal have laid down for themselves when dealing with these Admiralty appeals, but it must not be taken, from my saying that, that I mean that that rule is an exclusive rule. There may arise cases in which the court would think it was its duty to differ from the judge of the Admiralty Court upon mere questions of fact upon which he has given a finding with the assistance of the Elder Brethren, but one does not do it except in cases where there is very strong ground for thinking the finding in fact wrong. I have set out, for my own convenience, the conclusions in fact of the President. The accident was due to weakness or fatigue of the rivets. I accept that conclusion, and I wish to say with reference to this that I now take the view of the onus of proof in these cases which was not entirely present to my mind during the whole of the argument. I think myself that, quite apart from any warranty at all, but taking an ordinary contract in which the contracting party has the obligation to use reasonable skill and care without any warranty of equipment or anything of the sort, when he is entering into a contract to tow, and in the course of the contract to tow an accident happens which damages the towed ship, that fact alone is sufficient to shift the onus. The moment that has occurred, the onus is on the defendant to explain the accident, if I may use the expression. Until it has been proved that the accident occurred in the course of the towage, the onus is on the plaintiff, the person who complains that his ship has been injured in the course of the towage. But when you show that the ship has been injured in the course of the towage, I think the onus shifts, and it is for the tug owner to explain how the accident occurred, and to relieve himself from liability for that accident by showing exactly what was done, and how that which was done shows that he was guilty of no negligence, but that he was using reasonable skill and care. I leave out the word "equipment," because, in the sense in which it has been used before us in this argument, there is no difference between equipment and warranty really. Then, subject to that, I accept the finding of the learned judge here. I do not mean that I say that I should have come to the same conclusion that in this tug the rivets in the plates came away by mere weakness, making them unable to stand the strain of 22½ tons or 45 tons, whichever way it is put.

I think it is quite possible that I should have come to the conclusion that the pulling and the inability to stand the strain was not the real cause, but something in the nature of a jerk, for which, of course, if there was an absolute warranty, they would have to bear the liability. The learned President finds in terms that at the time of the contract the *Westcock* was inefficient to perform the towage services, and that this inefficiency could have been ascertained by reasonable care, skill, and attention on the part of the tug owners; that there was no proper inspection of the tug; and if there was any testing by a hammer, it was only a perfunctory inspection. On those facts there is nothing more, I think, really that it is necessary for me to say. The learned judge does refer to his own decision in *The Maréchal Suchet* (*ubi sup.*), and he does in the course of that make observations which he bases on the decision in the case of *The Ratata* (*ubi sup.*) and the observations of Lord Halsbury. In so far as he draws the inference as to the shifting of the onus entirely, I agree, but in so far as regards what he says of the judgment of Lord Halsbury—I will not occupy time by reading the passage now from the judgment of Lord Halsbury—that it justifies the statement that there is a common law warranty in this case, I cannot agree. I should think that of the two the judgment is rather the other way, that it was no authority for that proposition. However, it is not necessary that I should go through these matters at length; I have been through the cases, beginning with *The Minnehaha* (*ubi sup.*) and I make the same observation that I do as to *The Ratata*. Then really as to the other cases, they are all cases which, to my mind, refer to a different contract entirely, a contract of carriage. It is sufficient for me to say, not that the conclusion of the learned President which he has expressed so clearly is wrong—I have not got to say that—but what I have got to say is that it must not be taken from my judgment that I assent to anything except the proposition that this particular exception is limited to matters coming into existence after the time the towage began and does not apply to matters existing before it began. I think this appeal must therefore be dismissed.

Farwell, L.J.—I also am of opinion that this appeal fails. I see no reason whatever to doubt the correctness of the findings of fact of the learned President, and, accepting those facts, really it would be unnecessary to go further, because, as the learned President himself says in his judgment: "If my findings of fact in this case are justified, it matters not whether this primary obligation is an absolute one, so as to amount to a warranty of fitness or efficiency, or whether the obligation is satisfied by the tug owner proving that the unfitness or inefficiency was not discoverable or preventable by any care of skill, or by his proving that he was not aware of the unfitness or inefficiency, and that it could not be discovered by ordinary inspection." But, inasmuch as the learned President has himself, in a most learned and careful judgment, if I may venture to say so, gone very fully into matters, and as the case has been discussed in this court for nearly three days, I feel bound to say one or two words on the two questions raised. The first is, what is the liability apart from the special words of the contract; secondly, what is the construction of the contract. The learned President has said that there is an absolute obligation amounting to a warranty, which he likens to the obligation under a charter-party or bill of lading, to provide a vessel seaworthy in its commercial and legal sense. I am not, as at present advised, prepared to say that I assent to that. I do not say that I dissent from it. I should require very much more time to consider all the authorities if I had to pronounce a final opinion upon that, but I will say just in two or three sentences why I feel a difficulty at present in accepting it. "Seaworthiness," according to Parke, B. in *Gibson* v. *Small* (4 H. L. C. 397), is part of the common law of England, and "there is ample authority that a warranty or condition of seaworthiness at the commencement of the risk is implied in all voyage policies, whether it has been adopted originally from the law merchant, or implied from the very nature of the contract itself"; and that, he says, is the common law of England. The majority of this court, of whom I was one, have recently seen our way to imposing or inferring from the common law liability of a common law carrier a corresponding liability on the consignor who calls upon him to perform the duty to him which he is bound by common law (with certain qualifications) to accept. It appears to me to be quite a different matter to say that you can extend the category of common law warranties by adding another one to them—that is to say, by adding to tugs and tug service to ships the liability for cargo carried. As at present advised, I desire to express no opinion on that at all. On the other two points I agree with the learned President and with my Lord also. I think the liability may be very well stated as Lindley, J. put it in respect to carriage in *Hyman* v. *Nye* (*sup*). He says—I read it as applying to a tug owner—"His duty appears to me to be to supply a tug as fit for the purpose for which it is hired as care and skill can render it; and if whilst the tug is being properly used for such purpose it breaks down, it becomes incumbent on the person who has let it out to show that the breakdown was in the proper sense of the word an accident not preventable by any care or skill." Then a little lower down he says: "As between him and the hirer the risk of defects in the tug, so far as care and skill can avoid them, ought to be thrown on the owner of the tug. The hirer trusts him to supply a fit and proper tug; the lender has it in his power not only to see that it is in a proper state, and to keep it so, and thus protect himself from risk, but also to charge his customers enough to cover his expenses." That, in my opinion, applies as much to a tug as to a carriage. The same principle was adopted in the case of the refrigerator: (*The Maori King* v. *Hughes* (*ubi sup.*). I therefore think that on that point the learned President was amply justified in the judgment that he gave.

Then there is the second question, Is there anything in the express words of the contract to deprive the shipowner of that protection? In my opinion there is not. Again, I adopt what my Lord has said. I do not call in aid the somewhat stringent rule of construction which has been

adopted, and which I think certainly depends on the necessity of very clear words in order to exclude a common law obligation as distinguished from a contractual obligation, a rule which amounts practically to this, that the words must bear the meaning contended for, not merely that they may bear it on one of two possible constructions. When you are dealing with obligations arising *ex contractu* from the parties themselves, no such rule can properly be invoked, and therefore I do not in any way rely on the case of *Nelson* v. *Nelson* (*ubi sup.*), or any of those cases, and to that extent I venture respectfully to differ from the learned President in the court below. But on the construction itself I really have nothing to add to what has been already said, both in this court and in the court below. It is clearly, to my mind, limited to the period of towage. The liability was an antecedent liability, and it is impossible to read the word "defect" as extending the protection to a period beyond that which governs the whole period. Such a forced rule of construction I think never would be applied, and certainly not in a case like this. Further, speaking for myself, I do not agree with the view the learned President has taken as to the meaning of the words "towing gear." We, unfortunately, have mislaid the written answers given us by our assessors, but, speaking from recollection, the answers were, first of all, that the bulkhead itself, into which the rivets were fixed, is part of the ship and not part of the towing gear; and, secondly, that the rivets and the angle iron are both of them not parts of the towing gear, but that by which the towing gear is attached to the ship. That, to my mind, is a most material circumstance. Without saying that "towing gear" is a technical phrase in the sense that you would take evidence of it and be bound by the answers of the experts who gave that evidence to you, I think it is material to consider what towing gear means amongst seafaring men; and as they take that view, and particularly as it entirely accords with my own, I propose to adopt that reading of it. That is another reason why counsel for the appellants cannot succeed, and therefore I think the appeal must be dismissed.

Kennedy, L.J.—I am of the same opinion. This appeal must be dismissed. Very many interesting questions have been discussed in the course of the argument in this case, upon which we have had very great assistance from learned counsel on both sides. I do not propose to decide this case upon a decision as to the correctness or incorrectness of the view so clearly expressed in the judgment of the learned President, that, in the relation (for I desire to use a neutral term) between the shipowner who employed the tug owner and the tug owner who undertakes to provide a tug for service, the choice of the tug remaining with the tug owner, there is to be implied, whether you call it a duty or an obligation or a warranty, an engagement of an absolute nature that the tug shall be in all respects absolutely fit for the service. It is expressed by the learned President in the words: "The canon of construction to be applied is similar to that which has so frequently been applied in seaworthiness cases. It is stated above. 'A warranty of fitness, or an implied obligation to provide a tug in a fit and efficient condition.'" The ordinary contract is, he says, "a warranty of fitness." That is the extreme view. Now, I do not wish to decide a point on this case which is not necessary in my opinion. I only desire to say that I do not myself feel assisted, in dealing with the question, by considering whether or not such a warranty, in the cases where it is implied, as in the case of the carrier of goods, is to be treated as arising from an implication in a contract or is to be treated as arising from a common law duty. I may say that, looking at the authorities, it is very difficult to say which of the two views is more correct. It is quite true that, as is put in the passage quoted by Farwell, L.J., the warranty of seaworthiness which a carrier has to give has been historically treated as a warranty arising directly out of the common law; but, on the other hand, authorities to whom I should humbly bow have repeatedly spoken of the obligation as one arising out of the contract itself as an implied term. In *Steel* v. *State Line Steamship Company* (3 App. Cas. 72) there is the judgment of Lord Cairns, L.C. I am not going to quote the whole of pp. 76 and 77 of the report in the App. Cas., but one sentence; but the most interesting argument, if one may say so with deference to so great an authority, which he there presents as a dilemma to the shipowner, is based upon a consideration of the obligation of seaworthiness arising as an implied term of the contract. He summed it up in this sentence: "But, my Lords, if that is so"—that is to say, if the dilemma I have put is correct—"it must be from this, and only from this, that in a contract of this kind there is implied an engagement that the ship shall be reasonably fit for performing the service which she undertakes. In principle I think there can be no doubt that this would be the meaning of the contract." Lord Blackburn, on p. 86, dealing with the same argument, says: "I take it, my Lords, to be quite clear, both in England and in Scotland, that where there is a contract to carry goods in a ship, whether that contract is in the shape of a bill of lading or any other form, there is a duty on the part of the person who furnishes or supplies that ship, or that ship's room, unless something be stipulated which should prevent it, that the ship shall be fit for its purpose. That is generally expressed by saying that it shall be seaworthy; and I think also in marine contracts, contracts for sea carriage, that is what is properly called a 'warranty'"—that is reported, and doubtless was intended to be, in inverted commas—"not merely that they should do their best to make the ship fit, but that the ship should really be fit." I desire to reserve my opinion as to whether the relation between the tug owner and the owner of the ship who enters into arrangements with him for towage is or is not one which carries that implied duty or warranty or obligation, whichever be the preferred term, of an absolute nature. The facts of this case render it unnecessary to decide that matter here, because unquestionably you have got no less an engagement than was the engagement which is dealt with by the Divisional Court in the case of *Hyman* v. *Nye* (6 Q. B. Div. 685). There were considered judgments of Lindley, J. and Mathew, J., as they then were. And it cannot be said, I should think, that, in this case, where you are taking a tow, there is a less duty than existed there. As

I understand that judgment, and as I understand the law, the point is whether or not the duty of the man who supplies a thing, whether he sells goods or is a person who lets out a vehicle on hire, is largely, if not wholly, dependent upon it being known what specific use is to be made of the thing lent or sold or hired; and in that case Hawkins, J. had, in the opinion of the court, left the question to the jury in the wrong way, because, as put shortly by Mathew, J. on p. 689: "The learned judge appears to have considered that the plaintiff, by his pleadings, had undertaken to prove negligence, and to have told the jury that if they thought reasonable care and precaution had been taken by the defendant to ascertain that the carriage was safe, they might find that it was safe. In other words, the question whether the carriage was safe was treated as if it were the same with the question whether the defendant might have reasonably believed it to be safe." That is the view distinctly disapproved of by the decision in *Hyman* v. *Nye.* So in the present case it would clearly, in my view, have been insufficient, and was treated by the learned President in regard to this further point to be insufficient, if the defendants had been able to prove that they might have reasonably believed this tug to be safe. The fact is that, as Lindley, J. expressed it, if that is not the right view, if the right view in a case of this kind was that something was to be used for a specific purpose known and intended by both parties at the time of making the contract, there is very little to choose between the absolute duty and the relative duty. As he puts it at the foot of p. 688, after speaking of what he calls the slightly ambiguous expression "reasonably fit and proper," which requires explanation, he says: "In a case like the present, the carriage to be reasonably fit and proper must be as fit and proper as care and skill can make it for use in a reasonable and proper manner"; and a little below he says: "A carriage not fit and proper in this sense would not be reasonably fit and proper, and *vice versâ.* The expression 'reasonably fit' denotes something short of absolutely fit; but in a case of this description the difference between the two expressions is not great." What I do wish to express, speaking for myself, is the view that it would be entirely wrong, in a case of this kind, for the tug owner to say: "No reason has been shown by the plaintiff that I might not reasonably have believed it to be safe." That is condemned by the case of *Hyman* v. *Nye,* and I think rightly, because a greater burden lies upon him, the burden of proof that in fact it was as reasonably fit and proper a tug as care and skill could make it for use. The difference, therefore, obviously is very slight. Very much the same view as that which is there elaborated has been expressed in a much older case, to which counsel for the appellants was kind enough to give me the reference, the case of *Robertson* v. *Amazon Tug and Lighterage Company* (46 L. T. Rep. 146; 7 Q. B. Div. 598). There the reason which I have given has the high authority of Brett, L.J. who says, at p. 606: "When there is a specific thing, there s no implied contract that it shall be reasonably fit for the purpose for which it is hired or is to be used. That is the great distinction between a contract to supply a thing which is to be made and which is not specific, and a contract with regard to a specific thing. In the one case you take the thing as it is, in the other the person who undertakes to supply it is bound to supply a thing reasonably fit for the purpose for which it is made." Here, therefore, I desire, in accordance with that judgment, to say that a different set of considerations again would have arisen if the owner of the ship had picked the particular tug, and not left it to the defendants to supply the article which they knew was an important matter, and knew was to be supplied for the purpose of towing and docking this vessel, the *Araby*, in the Liverpool river. If that is the contract as laid down in *Hyman* v. *Nye,* which is the second and alternative view pointed out by the President as sufficient, the appeal equally fails as if the contract was absolute. He describes this what I may call qualified obligation as "an implied obligation to provide a tug in a fit and efficient condition so far as skill and care can discover its condition," and I accept that myself as quite correct at any rate, even if there is not a fresh absolute liability, and the facts show that the judgment on that view was right. With regard to those facts, I should be exceedingly slow to differ on any question of fact from the judge who heard the evidence. I should be so in any case, but I think it has been held by the highest tribunal that, especially in Admiralty cases ought that rule to be as strictly observed as reason can permit, because not only is it the decision of the judge who hears the evidence, but the decision of a judge in highly technical matters in which he has the assistance of skilled assessors, and if they advise him upon questions of fact and within the sphere of their duty, which is that of technical and professional assistants, I for one, short of proved mistake or misunderstanding, should not dream of interfering with the decision of the court below; but that, of course, does not apply to mere inference; I am speaking of facts. Now, the facts here, as found by the court below, were that this was an ordinary service, not even at sea, but in the Liverpool river, an ordinary service in weather which cannot be called in the least extreme, and in the nature of service which is performed every day—the towing by two tugs across the river of a large ship undoubtedly, rather high out of the water, and the docking of her safely in the Canada Dock. The Elder Brethren advised the judge in that matter, and I see no reason whatever for supposing that there was a mistake or misunderstanding. They further advised him that: "There was no unusual or excessive strain, and no strain that might not have been reasonably expected due to the alleged causes or any of them"; and you have got, further, the fact, which is on the face of the evidence itself, that it was proved that no one had ever heard, in the circumstances of such a towage, of the ropes not breaking, but the structure of the vessel, whether you call it part of the towing gear or not, parting first; that is the evidence given by two experienced and skilled witnesses, and there was no suggestion that that evidence was not absolutely correct. Therefore there being clearly a duty, as is pointed out in *Hyman* v. *Nye* (*ubi sup.*), to satisfy what I will call the qualified condition of fitness, the burden of proof lay upon the

defendants, as is pointed out in that case, and I think is pointed out by Lord Halsbury in the case, which was referred to in argument, of *The Ratata* (*ubi sup*), to show that there was something which excused the failure to perform the service as such. In the present case, the evidence being that, so far from there being an explanation, it was an unheard-of thing that such a thing should happen as did happen, the defendants did not satisfy the burden of proof, which was a burden which lay upon them. The passage I was referring to of Lord Halsbury, when Lord Chancellor, is in the case of *The Ratata*: "The fact that it was an inefficient tug on this occasion is proved by the defendants themselves, when they show how on other occasions it had properly and efficiently performed its functions. If it was suggested that it was some extraordinary and unusual event, and as this was not a contract of warranty the defendants would have been entitled to insist on that as a defence, it was for the defendants to prove it." That is so even on the qualified contract suggested at the trial. It appears to me that upon that ground it is quite sufficient to deal with the case. I am not quite sure that I have the concurrence of the other members of the court, but I am myself inclined to think that even if it was a qualified contract, and not an absolute contract of fitness, if it is implied in the contract, then the principles which have been so often referred to, of seeing, where there are exceptions, whether those exceptions are sufficiently clear to avoid the obligation of the implied contract, would have to be considered in this case. In other words, what is called the ambiguity question would arise just as much as it would arise in the case of an absolute contract. If there is the implied contract, as I have said, correctly expressed in the judgment here: "An implied contract to provide a tug in a fit and efficient condition so far as skill and care can discover its condition," then if, as the defendants contend, you are to apply these terms as making away with the implied contract, you have to find those special terms are sufficiently clear, just as much as if the contract had been one of an absolute nature. I certainly do not think that they are sufficiently clear as they stand if they are to be read as meaning by the word "defect" that the implied contract or obligation of providing the tug in a fit and efficient condition is varied. If it means we have negatived this by the word "defect," I think they should clearly put in their contract that the word "defect" is to cover antecedent defects as well as such defects as may arise in the course of the contract of towage. But I also think that we are relieved from that difficulty by the advice which we have received from our assessors as it stands, which I now quote exactly as the questions have been found. The first question is: "Is the bulkhead of the tug to which the angle bar was attached usually called 'towing gear'? Is it spoken of by sailors as part of the ship, or part of the towing gear? The answer is, We should not call the bulkhead of the tug, as spoken of by sailors, part of the towing gear. The next question is, Does your answer extend to the rivets or attachments as well? The answer is, From a sailor's point of view, the rivets and attachments (angle bars) are not termed the towing gear. The rivets secure the plates and the angle bars to which the towing gear is attached. And there is a further question, Would the effect of the hawser being only 15 fathoms materially increase the jerking strain on the rope?—Yes." I should not presume on matters of this kind to differ from them if and so far as they are questions of technical and nautical skill. The learned President in the court below, in referring to the words "towing gear," says: "I may add, although I do not desire my judgment to rest on it, that the defendants, could not complain if a strict meaning were given to the words 'towing gear' in the conditions by holding that they describe merely the actual towing gear itself, and not the rivets or attachments between the gear and the bulkhead. This is the meaning the defendants themselves have given to the words. They persisted in the correspondence that 'All the towing gear was lost overboard.'" I must say I cannot help joining in the regret of the President that the defendants did throw away those rivets, instead of keeping them for inspection after so unusual and extraordinary an occurrence as the carrying away of this part of the ship, whether you call it part of the ship itself or part of the towing gear, and instead of subjecting them to a fair examination by both sides. That would probably have saved this action from proceeding as it has, because, as counsel for the appellants said, if it had turned out that these rivets were fatigued I do not think this question would have arisen in the form in which it has. But unfortunately, instead of taking what I should have thought was obviously the more desirable course, those broken rivets or whole rivets, whichever they were, were thrown away, although the bulkhead to which that attachment was fixed with the angle iron was not either buckled or otherwise disturbed, and therefore the natural inference would be to think, even if they might think the strain excessive: "What a curious coincidence; the strain has burst and carried overboard the towing gear, and yet with an undamaged bulkhead, without straining or buckling, away have gone the rivets so far as holding any further is concerned." However, I think the fair inference is that those rivets and the bulkhead would not be treated as part of the towing gear, in which case, as those are the important words in connection with the preceding word "defect," upon which the defence is based, the defence would fall to the ground. I think, therefore, that this appeal ought to be dismissed on all these grounds.

Solicitors: for the appellants, *Hill, Dickinson, and Co.*; for the respondents, *Lightbound, Owen, and MacIver.*

June 21 *and* 22, 1911.

(Before VAUGHAN WILLIAMS, FLETCHER MOULTON, and BUCKLEY, L JJ. and Nautical Assessors.)

THE HIGHLAND LOCH. (*a*)

Collision—Conflict of duties—Ship being launched colliding with ship at anchor—Right of shipbuilders to launch—Duty of ship at anchor to get out of the way.

Shipbuilders, who were about to launch a vessel, gave notice to the harbour authority, to the pilots of the port, and to persons using the port of their intention to launch a vessel at a particular time on a certain day. On the morning of the launch the vessel to be launched was dressed with flags, and tugs and boats were in attendance to warn passing vessels. The launch being timed to take place at 12.30 *p.m., preparations for releasing the vessel were begun at* 6 *a.m. About* 10.30 *a.m. a ketch drifting up the river with her anchor down fouled some moorings in the river and brought up a little below the slipway from which the launch was to take place. Messages were sent to her at* 10.30 *a m. and* 11.30 *a m. from the shipbuilding yard that she had better move, and about noon a tug was sent to advise her to buoy her anchor and let the tug tow her away to a place of safety. Those on the ketch refused this offer, as they did not think the ketch was in the line of the launch, though they offered to move if the shipbuilders would give them a new anchor. The shipbuilders delayed the launch fifteen minutes to enable the tug to move the ketch. The tidal conditions were favourable at the time fixed for the launch. Had it been further delayed they would have been unfavourable. The shipbuilders, being apprehensive of danger to their vessel and the lives of their men and the public using the river, if the launch was delayed, and, not thinking that there was any substantial risk to the ketch, launched the vessel, which collided with the ketch, the collision being due to the vessel not going across the river, but being swept a little down river by the tide, which, owing to the delay, had begun to set down river along the river bank.*

In an action for damage by the ketch owners it was held that, though the ketch had no right to be where she was, the shipbuilders could have prevented any damage to her by postponing the launch, and judgment was given for the amount of the damage claimed by the ketch owners. The shipbuilders appealed to the Court of Appeal.

Held, by the Court of Appeal, reversing the decision of the Admiralty Court, that the claim of the ketch owners should be dismissed, and that judgment should be entered for the shipbuilders, who had been placed in a position of difficulty and had adopted a reasonable course of action, and had without negligence chosen the lesser of two evils.

APPEAL from a decision of Sir E. Evans, President, holding that the owners of the steamship *Highland Loch* were alone to blame for a collision between their vessel and the ketch *Frances*, which occurred while the *Highland Loch* was being launched.

The case made by the appellants, the owners of the *Highland Loch*, who were defendants and counter-claimants in the court below, was that the *Highland Loch*, a screw steamship of 4675 tons register, was built in the Tranmere Yard of Cammell, Laird, and Co. on the river Mersey, and her launch was arranged to take place at 12.30 p.m. on the 17th Jan. 1911. The date had been fixed for several days, and they had given all the usual and necessary notices. A launch and two tugs, the *East Cock* and *South Cock*, which were in attendance, were dressed with flags, and two row boats were stationed in the river, one on each side of the launch ways, each carrying a red flag, and a red flag was flying at the pier head at their yard. In these circumstances the ketch *Frances* was seen about 11 a.m. on the morning of the 17th Jan. to come to rest in a position in the river nearly opposite the launch ways and about from 500 to 600 yards out from them, where she lay with her anchor down. A message was at once sent out to her by the dock master to tell those on board that there was going to be a launch and that the *Frances* should move. The master of the *Frances* told the messenger that his anchor was foul of some moorings, and he was then advised to slip his chain or knock a pin out of the shackle, attach a rope to it, and buoy the anchor, but he refused to do anything. About 11.30 a.m. another message was sent by the tug *East Cock* to warn the master of the *Frances* that he must move away as his position was an unsafe one on account of the impending launch. The *Frances*, however, did not move, her master alleging that he could not lift his anchor. Shortly after noon the tug again went out to the *Frances*, carrying a messenger with a third message of warning, and the master of the ketch was then urged to slip his cable and let his vessel be towed by the *East Cock* out of the way, but the master refused to slip his cable. The tug then got hold of a rope from the *Frances* and pulled her to the northward over her anchor in order to see if the anchor could be got in by that means, but this attempt to get the anchor in was unsuccessful. At 12.40 p.m. a warning signal gun was fired from the shore, indicating that the launch was to take place in about five minutes, and, as the master of the ketch still persisted in his refusal to slip his cable (which, if slipped, could have been buoyed so as to be easily picked up again), the tug, being unable to do anything further for the safety of the ketch, returned to the launch. At 12.45 p.m., it being then considerably past the time appointed for the launch, which could not with safety to life and property be further delayed, the *Highland Cock* was let go from the ways. Immediately she took the water her anchor was let go, but, before it held her, an ebb current which was running near the shore took effect upon the stern of the *Highland Loch*, causing her to take a sheer more to the northward towards the place where the *Frances* lay, and the port quarter of the *Highland Loch* struck the ketch a glancing blow on the latter's port side.

The appellants alleged that those in charge of the *Frances* knew or had full notice and means of knowing of the intended launch and that it could not with safety be postponed, and that they had ample time to move the ketch or allow her to be moved out of the way, but they neglected and refused to do so.

The appellants charged those on the *Frances* with neglecting to move out of the way and refusing to take the assistance offered by the *East*

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

Cock; and with neglecting to slip the anchor chain or run out more cable, or take any steps to enable the *East Cock* to tow the *Frances* into a place of safety.

The appellants further alleged that the collision and damage consequent thereon were solely caused by the negligence of the respondents.

The appellants also pleaded that the *Highland Loch* was in charge of a compulsory pilot, and that, if the collision was caused by the fault of anyone on board the *Highland Loch,* it was caused by the fault of the pilot, but this defence was abandoned.

The case made by the respondents, the owners of the ketch *Frances,* who were plaintiffs in the court below, was that shortly before 12.45 p.m. on the 17th Jan. 1911, the *Frances,* a ketch of 71 tons, whilst bound from Pentewan to Runcorn with a cargo of china clay, manned by a crew of four hands, was at anchor in the Mersey to the northward and eastward of the appellants' shipyard. The weather was a little hazy, the wind calm, and the tide flood. A good look-out was being kept on board the *Frances.* Her anchor was foul of some ground moorings, and the crew were doing their best to get the anchor clear in order to shift their berth, but were not succeeding, although assisted by the appellants. In these circumstances the appellants launched the *Highland Loch,* and did so in such a way that she came out into the river at high speed, stern first, and her stern sheered down river, and with her stern and propeller she struck the *Frances* on the port side, doing damage.

The respondents, the owners of the *Frances,* alleged that those launching the *Highland Loch* were negligent in launching her at a time when and in a manner which they knew or ought to have known would endanger the *Frances* and the lives of those on board of her, and in not keeping her clear of the *Frances* or taking proper precautions or measures to do so.

On the 12th Jan. Cammell, Laird, and Co. sent out notices to the harbour-master of the Mersey Docks and Harbour Board, to the Superintendent of Pilotage of the Mersey Docks and Harbour Board, and to the manager of the Birkenhead Corporation Ferries, whose vessel plied across the Mersey, in the following form:

Highland Loch.—We beg to inform you that we intend launching this vessel at 12.30 p.m. on Tuesday next, the 17th inst.

On the same day Cammell, Laird, and Co. sent to the Cunard Steamship Company the following notice:

Highland Loch.—We beg to notify you that we intend launching this vessel on Tuesday next, the 17th inst., at 12.30 p.m., and, if you think it necessary to remove the buoy, we shall be glad to bear half the expense of doing so.

The buoy referred to was a permanent mooring which the Cunard Company had in the river.

On the 13th Jan. the Cunard Company replied as follows:

We beg to acknowledge the receipt of your letter of the 12th inst., and note that you intend to launch the above vessel on Tuesday next, the 17th inst. We think it necessary to remove the buoy, and are making arrangements to do so, and will debit you with half the cost.

On the 17th Jan. 1911, shortly before the launch, Cammell, Laird, and Co. sent the following letter to the master of the *Frances:*

The Captain, schooner *Frances.*—Dear Sir,—We observe that you are in the line of the launch of our steamship *Highland Loch,* and, as all preparations are made, we must launch the ship at 12.30 to-day. We cannot be responsible for any damage done thereby to your ship, and would advise you to slip your anchor and clear away at once.—Yours truly, Cammell, Laird, and Co. P.S. We also cannot be responsible for any accident to any person on board your ship.—C., L., and Co.

The case was heard by the President (Sir S. Evans), assisted by Elder Brethren, on the 11th and 12th May 1911, and judgment was delivered on the 18th May.

The President.—The plaintiff's ketch the *Frances* was damaged by the launching of the defendants' vessel, the *Highland Loch,* in the river Mersey, about or shortly after 12.45 p.m. on the 17th Jan. last.

The ketch's anchor had dragged and got foul of some moorings in the river in the vicinity of the slip from which the launch was to take place.

All proper notices of the intended launching were given, and particular warning was given to the *Frances.* The launching was timed for about 12.30 p.m. About 10.30 a.m. the defendants sent a message to the master of the *Frances* by a boatman that there was going to be a launch, and that he (the master) was to get his vessel out of the way.

About 11.30 a.m. another message was sent by one of the tugs in attendance at the launch to a similar effect and the master was told he must slip his anchor.

Shortly before 12.30 p.m. one Lang, the assistant yardman of the defendants, went out in the same tug, and took with him a letter from the defendants' manager to the master [set out above].

Lang delivered this letter to the master, who showed reluctance in accepting it, and he did not in fact open it until after the collision. Lang, however, told him that the launch was coming off and he must get out of the way, and he tried to persuade him to slip his cable.

The attitude taken by the master was in substance this: "I cannot heave my anchor, and will not slip my cable, unless you will pay, or be answerable for it, or for a new anchor and take my ketch away in safety."

The answer of Lang in substance was: "I have nothing to do with paying for an anchor, and I have no authority to become answerable for it; but, if you will slip your cable, I will tow you away to a place of safety."

At the request of the master of the ketch, the tug made fast in order to draw her up to her anchor, and tried to heave her anchor, or to get her clear in that way.

Meantime Lang sent a boatman on shore to report the position.

The tug did not succeed in heaving the anchor, and the ketch was only moved a very short distance, and was not, in fact, cleared out of the way of the launch.

The boatman reported to the defendants' manager that the master would not slip his anchor, but that the tug was going to tow him

as far to the north as possible, in order to try to get him clear.

It had been arranged between Lang and the defendants' manager that, if the master was going to slip his anchor, Lang would blow a signal of three blasts from the tug, and then the manager would delay the launch for about fifteen minutes. No signal was blown. When the message above referred to was given to the manager, he immediately ordered the defendants' steamer to be launched, having, as he said, considered beforehand what to do if the master would not slip the anchor. The launch had been delayed about a quarter of an hour.

When the first gun was fired Lang was still on the ketch, to which the tug was made fast. On hearing the gun he went on the tug and ordered the tug to throw over the ketch's rope. The tug then steamed away. The ketch would soon regain her first position, from which the tug had moved her only a few yards. A second gun was fired, and the launch was made.

The master hoped and expected that his ketch was in a safe position.

The defendants' manager, however, had written that it was in the line of the launch, and he ordered the launching to take place, without heeding the consequences to the ketch or to any person on board of her.

The launched vessel collided with the ketch, and caused the damage, to recover which the action is brought. The plaintiffs allege, in these circumstances, that the *Highland Loch* was launched at a time when, or in a manner which, the defendants knew would endanger the *Frances* and the lives of those on board.

The defendants plead in answer that the master of the ketch refused to slip the anchor and to get out of the way, and that the launching could not with safety be postponed.

The steamer could not go into the water till the hydraulic stopway was removed. It was not proved to my satisfaction that, apart from inconvenience and possible cost, there was any danger in postponing the launch.

The question is, Who in these circumstances is responsible for the collision?

The obligations of those who cause a launch to be made, and of those who navigate the river in the vicinity at the time, have been discussed in various cases. They are *The Blenheim* (4 No. Cas. 393); *The Vianna* (Swab 405); *The United States* (2 Mar. Law Cas. O. S. (1865); 12 L. T. Rep. 33); *The Glengarry* (2 Asp. Mar. Law Cas. 230 (1874); 2 P. Div. 235); *The Andalusian* (4 Asp. Mar. Law Cas. 22 (1878); 2 P. Div. 231); *The Cachapool* (4 Asp. Mar. Law Cas. 502 (1881); 7 P. Div. 217); *The George Roper* (5 Asp. Mar. Law Cas. 134 (1883); 8 P. Div. 119).

If proper notice is given, vessels navigating the river or anchored in it must take all reasonable precautions to avoid a collision.

On the other hand, those intending to launch a vessel must take precautions, and "the utmost precautions," against any injury being caused by the launch; and the burden of showing that such precautions have been taken lies upon those managing the launch.

These precautions are necessary, not merely to safeguard property, but to protect lives which may be in danger. For this purpose, amongst other things, there is a duty upon those about to launch a vessel to keep a good look-out, and, before giving the final order for launching, to ascertain that no ship is passing, or lying near, so as to be endangered by the launch: (see *The Blenheim, ubi sup.*; and *The Vianna, ubi sup.*).

As to the two vessels which collided, I am of opinion that the master of the *Frances* was at fault in not slipping and buoying his anchor, and dropping, or being towed to a place of safety. He had no right to make it a condition, before taking the proper steps which good navigation required him to take in order to perform his obligation, that the anchor should be paid for, or that an undertaking should be given to pay for it or to replace it. The question is, not whether his conduct in making the demand in the interest of his owner was reasonable conduct in a servant, but whether he took reasonable steps in navigation to avoid danger.

As to the defendants, they were, in my opinion, at fault also, in ordering the *Highland Loch* to be launched, knowing the danger to the *Frances* and to those on board, and in deliberately disregarding such a danger. If those managing a launch are to blame for not keeping a good look-out, and for not ascertaining, as well as circumstances permit, before the final order to launch is given, that no ship was within a dangerous zone, they are still more to blame, if, having kept a look-out, and knowing the proximity of a vessel in danger, they launch a steamer which will not only probably but almost certainly, cause loss of life or injury to property.

The question remains whether the liability for injury attaches to both, or one only of these two vessels which have been negligently managed?

In some of the cases cited both the vessels were held to blame, and in others one only. In *The Cachapool* (*ubi sup.*) the steamer at anchor in the river was held alone to blame. That case must be looked at in the light of the particular facts. The steamer there was, although late, being towed away, and there is nothing to show that the launch was ordered with the anticipation or expectation of danger, and with the threat that those managing it would not be responsible for loss of life, or injury to property. Moreover, the court held that the launch was "delayed as long as it was prudent to do so." I am not sure whether that phrase was intended to convey that the court was satisfied that "the launch could not with safety to life and property be further delayed," as pleaded in par. 5 of the defence.

In the present case, there was some slight evidence that "it would not have been safe to postpone the launch altogether," but it fell far short of establishing the plea of danger to life and property; and, indeed, the defendants' counsel did not contend that the plea had been established, or rely on it as a defence.

The case of *Davies* v. *Mann* was cited in argument in *The Cachapool*, but it was not dealt with in the judgment. That is, perhaps, the most familiar of the cases which illustrate the doctrine that was further established in the later cases of *Tuff* v. *Warman* (5 C. B. N. S. 573) and *Radley* v. *London and North-Western Railway Company* (35 L. T. Rep. 637; 1 App. Cas. 759).

Tuff v. *Warman* was a case of a collision between two vessels, although it was an action at common law, and it is now well established that the doctrine laid down in the three last-

named cases applies to actions for collision brought in the Admiralty Division, where the facts call for its application. The following passage in the address of Lord Penzance to the House of Lords in *Radley* v. *London and North-Western Railway Company* has constantly been referred to as a clear statement of the doctrine: "The first proposition is a general one, to this effect, that the plaintiff in an action for negligence cannot succeed if it is found by the jury that he has himself been guilty of any negligence or want of ordinary care which contributed to cause the accident. But there is another proposition equally well established, and it is a qualification upon the first—namely, that, though the plaintiff may have been guilty of negligence, and although that negligence may in fact have contributed to the accident, yet, if the defendant could in the result, by the exercise of ordinary care and diligence, have avoided the mischief which happened, the plaintiff's negligence will not excuse him."

It is no doubt inconvenient and may be productive of monetary loss if, by the negligent or unreasonable action of those in charge of a vessel in a river near a launching place, a launch is postponed. Fortunately, by the reasonable management of navigating vessels, such postponements are hardly ever caused. If any action of such an unreasonable kind is anticipated, the the harbour and dock authorities have generally full powers to cause the removal of the offending vessel.

But I conceive it would have been no answer to the plaintiff's claim in *Davies* v. *Mann*, if it had been shown that the defendant was hurrying to catch a particular train, and that he would be a great loser monetarily if he lost it, or to the plaintiff's right to recover in *Tuff* v. *Warman*, if it had been proved that the defendant's vessel was making haste to reach a particular dock in order to enter on a particular tide.

In the present case, the defendants, for their own purposes, determined to launch at the particular tide, whatever the consequences might be to the plaintiffs' vessel and its crew. They did so, to the plaintiffs' injury.

This being so, the plaintiffs' negligence does not excuse the defendants, because they could, by the exercise of care, have avoided the mischief which their deliberate action caused.

I therefore pronounce the defendants solely to blame.

On the 30th May 1911 the defendants served the plaintiffs with a notice of appeal asking that the judgment should be reversed, and that the *Frances* should be held alone to blame.

The appeal was heard on the 21st and 22nd June 1911.

Laing, K.C. and *Keogh* for the appellants, the owners of the *Highland Loch.*—The appellants were not guilty of negligence. They had given general notice of the launch, and had sent a note to the master of the ketch informing him of the launch. [Vaughan Williams, L J.—Is there any power in anyone to compel the ketch to move?] The harbour authority possibly might do so, but it was very doubtful if it was necessary to move her. [Vaughan Williams, L.J.—There being that doubt, you launched, and you have been held guilty of negligence.] We submit that those on the ketch were negligent to stay there; she could have slipped her anchor up to the last minute, and we sent a tug to take her to a place of safety. It is wrong to say that the launch was ordered without heeding the consequences to the ketch, and we did not launch at a time which would almost certainly cause loss of life or injury to property. Such findings cannot be supported. The evidence shows that Mr. Boyd did not think that the ketch was in serious danger, and the President himself thought it was unreasonable to ask the builders to postpone the launch until another tide. The danger to life and property if the launch was delayed was proved. [Vaughan Williams, L.J.—Is your submission that you have no right to launch if you know that the vessel will be hit, but that you may launch if there is only a chance of its being hit?] There was practically no chance of the ketch being hit. If it was the duty of the ketch to get out of the way, and the builders were not negligent in launching, they are not to blame. The launch had been delayed as long as was prudent, so the builders were not guilty of negligence:

> *The Cachapool*, 43 L. T. Rep. 171; 4 Asp. Mar. Law Cas. 502 (1881); 7 P. Div. 217.

In any event, there is negligence in both ships, and both ships should be held to blame, for the negligence continued right up to the collision:

> *The Margaret*, 52 L. T. Rep. 361; 5 Asp. Mar. Law Cas. 204 (1884); 9 App. Cas. 873.

The ketch was negligent to be where she was:

> *City of Lynn*, 11 Fed. Rep. 339.

The ketch constituted a nuisance, and the builders are not debarred from launching because someone is obstructing the river, unless it is clear that they will inevitably do damage:

> *Grand Trunk Railway of Canada* v. *Barnett*, 104 L. T. Rep. 362; (1911) A. C. 361;
> *Petrie* v. *Rostrevor*, 1898, 2 Ir. Q. B. 556;
> *Dimes* v. *Petley*, 15 Q. B. 276.

Bailhache, K.C., *Bateson*, K.C., and *Dunlop* for the respondents.—The ketch in this case is not a trespasser, nor did she constitute a nuisance. The ketch came up the river not knowing anything about the intended launch and was trapped in moorings which were unmarked, and they were unmarked because the buoy attached to them had been removed by those launching the vessel. The conduct of the ketch was not unreasonable, and the right of the ketch to use the river was wholly disregarded by those conducting the launch. [Buckley, L.J.—If the vessel is warned of the launch, has she a right to stay?] If the ketch is free to move, perhaps the launch might have a prior right to the use of the river for a time. [Fletcher Moulton, L J.—Surely the ketch must act reasonably. Which is the greater evil to risk, damage by delaying the launch or the possible loss of the anchor of the ketch?] No choice of evils entitles a man to commit an act of trespass by allowing his vessel to collide with another. If he does that and damage ensues he is liable. This case is not similar to *The Cachapool* (*ubi sup.*), for in that case the anchored vessel might have moved without any loss to herself. To delay the launch might possibly have caused loss to the shipbuilders, or to the public using the river, but the shipbuilders had no right to prevent

the possibility of that loss at the expense of the ketch owner:

Whalley v. *Lancashire and Yorkshire Railway Company*, 50 L. T. Rep. 472; 13 Q. B. Div. 131.

Laing, K.C.—It is suggested that the mooring constituted a trap. Even if that is so, it was not a trap set by the shipbuilders, and when the ketch was in the trap the shipbuilders offered to take the ketch out of the trap, but the ketch refused the assistance of the tug which was sent by the shipbuilders, and which was ready to keep the ketch in tow until the launch was over.

VAUGHAN WILLIAMS, L.J.—This case raises the question under what circumstances those who have charge of the launching of a ship can safely take the risk of damage to property or persons in case the launched ship should collide with a ship lying in the river where the launch is to take place, and also the question how far the unreasonable refusal of such a ship anchored in the river to slip her anchor and go out of danger would be an answer to any action by which the ship unreasonably refusing to move claimed to recover the damage occasioned by a collision resulting from the launch.

We have asked our assessors the following question, and received the following answer: "What was the reasonable course for (*a*) the master of the ketch and (*b*) the owner of the launch to take when 12 30, the hour fixed for the launch, arrived?—(*a*) That he would slip his cable, provided the tug kept hold of him and towed him to a place of safety, and brought him back to his cable; (*b*) to suggest to the ketch the obvious course, when they knew the launch must take place.

Before dealing in detail with the facts in this case and the findings of the learned judge in relation thereto, I will make some observations as to the principle of law determining this case. It is clear that in the course of using a highway, whether by water or land, the mere fact that one of the persons using the highway negligently, unreasonably, or wrongfully obstructs the way will not exonerate any person who is using the highway from the duty to take care to avoid injuring the obstructing person or in this case the obstructing ship; and, *a fortiori*, will not justify the infliction of wilful injury: (*Davies* v. *Mann*, 10 M. & W. 546). In each of these cases of wrongful or unreasonable conduct which I have indicated the wrongful conduct of those obstructing the highway still leaves the duty on the persons obstructed to take care not to injure the obstructor. Parke, B. says upon p. 549 of the report of that case: "Were this not so a man might justify the driving over goods left on a public highway, or even over a man lying asleep there, or the purposely running against a carriage going on the wrong side of the road." This duty may, of course, be limited by the force of surrounding circumstances. It might be that the avoidance of injury to the obstructor or his property would involve a risk of injury to an innocent third person using the same highway, and in such a case the obstructed person might reasonably, even deliberately, run against the obstructor of the highway, or his property, and yet have a good defence to any action by the obstructing person for injury done to his person or property. In the case of *The Cachapool* (*sup.*), a case very like the present in its circumstances, the head note runs thus: "A barque was at anchor in the Mersey, in the way of the *C.*, a vessel about to be launched. The launch was delayed as long as was prudent, but the barque not having been got out of the way in time was struck by the *C.* in coming off the ways, and both vessels were damaged. Reasonable notice had been given of the launch, and a steam tug had been sent by those superintending the launch to tow the barque out of danger, and would have done so in time to have prevented the collision but for the obstinacy of those on board the barque." Sir R. Phillimore in his judgment says: "A question which has been much considered by the court is whether even after the *Gladstone* was taken hold of by the tug at half-past nine or a quarter to ten o'clock, those on board the *Gladstone* did anything which contributed to the collision, or neglected to do anything which would have prevented it. The Elder Brethren are of opinion that if the *Hercules* in the first instance, instead of giving the warnings she did, had taken the *Gladstone* in tow, the result would have been different, and also that if those in charge of the *Gladstone* had not been obstinate and had allowed the *Hercules* to take their vessel to the north-east, the launch would have gone clear."

Those words might be read as meaning that the fact that the *Gladstone* in that case had been guilty of unreasonable conduct alone constituted a defence to any action brought by the *Gladstone* for damage which was incurred by the launch being sent forth into the water as it was. I do not think that Sir R. Phillimore intended to say that the mere fact of unreasonable obstinacy on the ship run down would constitute a defence if the running down might have been avoided, and still less when the risk of running down had been deliberately taken by the owners of the *Cachapool*. The facts alleged, if proved, would show that those in charge of the launch could reasonably suppose there was no risk. I agree entirely with the judgment of Sir R. Phillimore.

The questions, therefore, in this case, on the evidence, will be: (1) Did the defendants reasonably suppose that there was no risk? (2) Did they reasonably choose to launch the *Highland Loch*, rather than to postpone the launch as being the lesser of two evils, one of which had to be taken in the presence of a real dilemma? Before calling attention to the judgment of the President as a whole, it is convenient to call attention to a particular part of it, which deals with these questions. "The master hoped and expected that his ketch was in a safe position." That is the finding of the President, and in my judgment it is entirely justified by the evidence. "The defendants' manager, however, had written that it was in the line of the launch, and he ordered the launching to take place, without heeding the consequences to the ketch, or to any person on board of her. The launched vessel collided with the ketch, and caused the damage, to recover which the action is brought." It is convenient at this point that I should read the letter which was written on behalf of the defendants, with reference to this subject: "The Captain, schooner *Frances*.—Dear Sir,—We observe that you are in the line of the launch of our steamship *Highland Loch*,

and, as all preparations are made, we must launch the ship at 12.30 to-day. We cannot be responsible for any damage done thereby to your ship, and would advise you to slip your anchor and clear away at once.—Yours truly, Cammell, Laird, and Co. Limited. (Signed) W. Boyd, Manager. Jan. 17, 1911. P.S. We also cannot be responsible for any accident to any person on board your ship.—C., L , and Co., W. B."

It is rather difficult, in the face of that letter, to avoid the conclusion of the President that those who were conducting the launch were conscious of a real risk to property and person. I do not suppose that anyone would say that a mere possibility of an accident in the course of the launch would be sufficient to prevent those in charge of the launch saying, "Oh, we acted quite reasonably in launching our ship. It is quite true that there was a possibility of an accident, but so slight a possibility that it was a negligible fact, and a fact that reasonable persons could neglect"; but I think it is rather difficult to say that in the face of this letter. On the other hand, it has been suggested that the letter does not indicate the state of mind of the writer of the letter, but only indicates the fact that he wanted to bring pressure; that he might perfectly well have written that letter although he agreed with what the master of the ketch subsequently stated —namely, that it was quite safe. If that is so he was acting in full accordance with the principle of law laid down by the judgment of Parke, B. in *Davies* v. *Mann*, and if that was so the judgment would be wrong which held the defendants here to be solely to blame, or indeed to be to blame at all.

Again, another point is made here. It is said that even if there were strong grounds present to the minds of those who launched the ship for supposing that there was very great risk of collision with the ketch, yet they might reasonably launch, because if they did not launch it might be the cause of very great danger to persons other than the master and crew of the ketch; because there would be danger, if it was attempted to put back the blocks, to the men who were putting back the blocks, and danger also, if the blocks were not put back, that the ship might of herself, I think is the expression used, glide down the ways and be launched. It is said that that would be a danger to people using the river, because such a launch at an uncertain time would come upon those using the river unexpectedly. I confess myself that I do not think, on the face of the evidence, that this was such a pressing danger as to justify this choice of the lesser evil and refusing to postpone the launch; but I am told it is not open to the court to say that because of a conversation which took place between counsel for the defendants and the President in the course of the case. Counsel for the defendants was pressing the witness to admit that there would be a very serious danger of the sort I have described if the launch were postponed. He asked the witness this question: "I want to ask you about the danger, if any, of postponing the launch. Supposing you had not launched her that tide at all, what would have had to have been the course adopted by you, about giving notices, and the danger there may have been, if any, to your people"? and the witness replied: "Well, we would have had to have renewed the notices." Thereupon the President said: "With as much difficulty as there was, Mr. Laing, I do not think it was reasonable to ask these people to postpone the launch till the next tide." I agree, if I may say so, with the learned President. The learned President there, as he did in his judgment, is taking exactly the same view as is indicated in the answer given to the question put by the learned counsel. Then this occurs:—"Mr. Laing: The object of my question was to meet an observation your Lordship made yesterday as to whether there was any possible risk to their own people by keeping the launch suspended without some proper supports. —The President: Yes, you asked him about the next tide. His waiting another quarter of an hour or twenty minutes is another matter. I do not think it was reasonable to ask these people, in the face of as much difficulty as there was, to postpone the launch till another tide. The danger of postponing it on this tide for another quarter of an hour, or twenty minutes, that is another thing."

It is quite clear that the learned President was not affirming that last proposition of Mr. Laing.— "Mr. Laing: I want to deal with both propositions. You put it off for a quarter of an hour, and that quarter of an hour made the ebb tide stronger, you told me?—Yes."

So Mr. Laing took the same view. He was not satisfied with this question. He then asked the following questions: "Supposing you had had to postpone it for a tide, could you have done so on the next tide?—No, we would have done it on the next daylight tide, two tides later. You would have had to keep her for two tides?—Yes. What would you have had to do, with regard to these notices that you had given?—We would have had to renew them all. Because, I dare say you know, they are sent around?—They are sent to everyone in that port. The President: You need not pursue this, after what I have said, need you?"

The learned President was referring again to that which he had said before when a similar question was put—that it was not a reasonable thing for those people to ask for a postponement of the launch. As far as danger is concerned there is no admission whatsoever, and the learned President manifestly meant that the question of danger must be proved, and there is nothing in what he stated to show that he was satisfied upon this point. Mr. Laing then asked the witness: "Leaving the launch in her condition, and being ready for the launch, would there be any danger to the ship herself, or to any of your men?" It is obvious that Mr. Laing did not think the President relieved him from the obligation to prove the danger. The answer of the witness was: "It is a very dangerous thing at all times to let a launch be delayed. It is a very critical moment, and the launch might take charge, and go off at any moment, and with risk to both life and property in the yard." If that evidence stood alone, uncross-examined to, it might be unnecessary to consider the matter any more, but counsel for plaintiffs, in cross-examination, asked these questions: "You have a hydraulic stopway for this purpose?—We have, yes. Did you mean what you said in your letter to the captain of the schooner *Frances*?— Certainly. You did?—Yes. And, of course, if she is in the line of the launch she will be in serious

danger, will she not?—Well, in the possible line of the launch; you cannot say what way the launch will come off. And if she is in the possible line of the launch, she is in serious danger, is she not?—Not in serious danger. There are many chances against her being struck. And many chances in favour of her being struck?—I should say one in twenty, perhaps. And you took the chance?—It was the lesser chance."

Now, I do not want to lengthen my judgment, but in the earlier part of the evidence there was evidence given plainly enough to indicate that the view was not unreasonable that, if you had got a hydraulic stop there, even though you had knocked away the wooden support, yet still, generally speaking, the hydraulic stop would be quite enough to keep the launch in its position on the ways until the time of launching came. I should hesitate if there was a finding specifically by the learned President on this matter of fact, but when one reads the other part of the evidence one sees the really great effect that the postponement of twenty minutes, or whatever the time was, had upon the tide and upon the direction which the launched ship would take; and one notices that if the ship had taken the line which she might have been expected to take if she had been launched at 12.30, the risk of striking the ketch would have been very small. I think it was really very small at the time, and that is the opinion not only of the witnesses for those who had charge of the launch, but it is the expressed opinion of the master of the ketch. His opinion is that if it had not been for the increased force and altered direction of the tide between 12.30 and the time when the launch actually took place, the launch really would have been effected without any danger or any substantial danger of collision. With regard to the question as to whether in the circumstances the risk of launching was one which those in charge of the launch might reasonably, as reasonable men, take, I think there is a good deal to say for that, and I should not be disposed to differ from my brethren, who have a strong view upon that question. As to the question of the choice of the lesser evil, there is evidence both ways as to what would have been the danger of postponing the launch; but again I say that I shall not differ from my brethren.

I think I ought to call attention to one or two observations which the learned President made in the course of his judgment—a judgment in which he found the *Highland Loch* solely to blame. Of course a possible finding would have been that they were both to blame, and *primâ facie* I should have been disposed to agree with that view. I have not the slightest doubt but that the ketch was to blame; but as to the *Highland Loch* I can only say that if those in charge of the launch took the view that there was danger to life and property and that they would take the risk, I think the facts are such as to justify a verdict against them, whether it is the common law verdict against them, or whether it is an Admiralty verdict against them—which would give them the benefit of both to blame.

The learned President in his judgment said: "The attitude taken by the master was in substance this: I cannot heave my anchor, and will not slip my cable, unless you will pay, or be answerable for it, or for a new anchor, and take my ketch away in safety." One must bear in mind in this case that the ketch would never have been put in the position in which she was if it had not been for the fact that the Cunard Buoy had been taken away and that the moorings were left at the bottom of the river, and were left there a source of danger; and that this was done at the instance of those who had the launching of the *Highland Loch*, who paid half the expenses of the removal of the buoy. The learned President continued: "The answer of Lang, the messenger sent to the ketch by the defendants, in substance, was: I have nothing to do with paying for an anchor, and I have no authority to become answerable for it; but, if you will slip your cable, I will tow you away to a place of safety. At the request of the master of the ketch, the tug made fast in order to draw her up to her anchor, and tried to heave her anchor, or to get her clear in that way." I have already read the paragraph with regard to the hope and expectation of the master of the ketch, and the letter written by the defendants. I have already said that I think it is possible to come to the conclusion that although that letter did express a fear of an accident to person and property, yet in fact those who conducted the launch may have thought there was no substantial danger. I say nothing more, excepting that the law is laid down by the President as follows: "If proper notice is given, vessels navigating the river or anchored in it must take all reasonable precautions to avoid a collision. On the other hand, those intending to launch a vessel must take precautions—and the utmost precautions—against any injury being caused by the launch; and the burden of showing that such precautions have been taken lies upon those managing the launch." These precautions are necessary, not merely to safeguard property, but to protect lives which may be in danger. For this purpose, amongst other things, there is a duty upon those about to launch a vessel to keep a good look-out and, before giving the final order for launching, to ascertain that no ship is passing or lying near so as to be endangered by the launch: (*The Blenheim*, *sup.*; *The Vianna*, *sup.*). The learned President continues: "As to the two vessels which collided, I am of opinion that the master of the *Frances* was at fault in not slipping and buoying his anchor, and dropping, or being towed to a place of safety. He had no right to make it a condition before taking the proper steps which good navigation required him to take in order to perform his obligation, that the anchor should be paid for"—I agree he had no right. "The question is not whether his conduct in making the demand in the interest of his owner was reasonable conduct in a servant; but whether he took reasonable steps in navigation to avoid danger." The learned President, after referring to the cases of the *Cachapool* and *Davies* v. *Mann*, said in the *Cachapool* the steamer at anchor in the river was held alone to blame. That case must be looked at in the light of the particular facts. The steamer there was, although late, being towed away, and there is nothing to show that the launch was ordered with the anticipation or expectation of danger, and with the threat that those managing it would not be responsible for loss of life or injury to property. Moreover, the court held that the launch was 'delayed as long

as it was prudent to do so.' I am not sure whether that phrase was intended to convey that the court was satisfied that 'the launch could not with safety to life and property be further delayed,' as pleaded in par. 5 of the defence. In the present case, there was some slight evidence that 'it would not have been safe to postpone the launch altogether.'" — I think there was very strong evidence, which I have read—"but it fell far short of establishing the plea of danger to life and property, and indeed the defendants' counsel did not contend that the plea had been established, or reply upon it as a defence." I think that must be a mistake, because Mr. Laing is always particularly careful, and he takes the exactly opposite view. The learned President continues: "In the present case, the defendants, for their own purposes, determined to launch at the particular tide, whatever the consequences might be to the plaintiffs' vessel, and its crew. They did so to the plaintiffs' injury." I unhesitatingly say myself that if that statement of fact by the learned judge is correct, the judgment as delivered by him ought to stand, and that the *Highland Loch* ought to be found solely to blame. I wish to say in the most emphatic manner that if it be true that "the defendants, for their own purposes, determined to launch at a particular tide, whatever the consequences might be to the plaintiffs' vessel, and its crew," the *Highland Loch* was in the wrong." The learned President concludes: "This being so, the plaintiffs' negligence does not excuse the defendants, because they could, by the exercise of care, have avoided the mischief which their deliberate action caused." As I have said, those statements by the learned judge which I have just read are statements of fact, which certainly are not uncontradicted by the evidence. There is direct evidence on the one hand that those who were conducting the launch, notwithstanding the letter written, really thought, as the master of the ketch thought, that there was no serious risk, and that at the moment when the launch began there was not any risk. Also, there is strong evidence that there was so much danger to be anticipated from the postponement of the launch that this choice of the lesser evil arose. When one considers what they really did, we cannot leave entirely out of consideration the fact that the demand for payment in case the anchor was really lost was causing the dilemma in which the unfortunate vessel was. In all the circumstances I think the decision of the learned President cannot stand, and must be reversed on the ground I have mentioned, and I do not think, as at one time I thought might be the case, that we ought to find both to blame.

Fletcher Moulton, L.J.—This is a case which turns upon the conflict of duties that arises when the parties are put in a position of danger and difficulty by the improper action of one of them, and the decision of the court in such a case must, in my opinion, turn upon the facts in the particular case; and a very small difference in the facts of two cases may lead the court to come to different conclusions in the two cases. Therefore I think it of very little value to discuss as a preliminary part of my judgment hypothetical cases, so as to lay down a rule of law. It is better to ascertain the exact facts of this case, and then see if there is any doubt as to the rule of law which we ought to apply. Further, I think in such cases the court is bound to pay very close attention to the evidence. It is the duty of the parties to put evidence before the court as to the facts of the case, sufficient to enable it to draw the necessary legal inferences.

What are the facts of this case? The accident occurred on the occasion of the launching of a vessel from the shipyard of Cammell, Laird, and Co. The launching of a vessel on tidal waters is unquestionably a proper and lawful user of the river. It is a user of a very peculiar kind. To a certain extent it is for the moment an exclusive user, which interferes with the ordinary lawful user of the waters by ships going up and down. On the other hand, if it is a lawful user, the persons who are using the highway must, on the rare occasions that such an event happens, respect it and adapt their conduct to the necessities of the launch. In the present case the plaintiffs' ketch came into the river at a time when all proper warnings and notices had been given that this launch was to take place at 12.30. In addition there was all the display of flags which is associated with a launch, and two tugs were out with flags on them. I should have thought it was reasonable to suppose that vessels coming into the Mersey and knowing launches might take place would have paid sufficient attention to these signals, and would have known what was going to occur. However, the evidence is that the plaintiffs' master did not know of it until he cast anchor in a place nearly opposite the shipbuilding yard, and unfortunately his anchor fouled some moorings.

Now, a launch has to be prepared for. The ship must be built in a perfectly stable position. The consequence is that, as everyone knows, there are very solid though temporary structures built round it, so that it is in a position of complete safety during the long period occupied in its building. When you come to the time of the launch, for hours before the launch you are taking away all these structures which give stability and safety to the ship while being built, and at last you come to a condition in which the ship is unquestionably in a most insecure position as it lies; and can be freed and allowed to go into the water by the mere release of the hydraulic brake. These operations of freeing the ship of supporting structures had been going on from six o'clock in the morning, and therefore it takes, even with the strong gangs of the shipbuilding yard, something like six hours to free the ship. So far as I can see the position of the plaintiffs' vessel was discovered about 10.30, and warning was given to it to clear out of the way. That was repeated at 11.30, and then, finally, there was a very express intimation to the master that he must get out of the way a little after twelve o'clock. What was the position he took up? He took up the position that he had come there, his anchor was fast, and being there he had a right to remain there, and he could name his own terms for going. In my opinion he was entirely wrong. He had no business there. The reasonable user at that moment of the waterway required that the position in which he was should be left vacant for the purposes of the launch, and even though he could not go away without some inconvenience to himself, yet he was bound to do so in order to leave the proper user of the waterway for the launch on the occa-

sion on which it was fixed. The user of the highway is a good example of the proverb "Live and let live." People have to use it reasonably, respecting the fact that their fellow-countrymen also have the power of using it reasonably.

I do not think there was any doubt in the court below, nor is there any doubt in the mind of any of us, that the position which the master of the ketch took up was thoroughly unreasonable. It was a position in which he was not exposed to serious inconvenience in clearing away. All he had to do was to slip and buoy his anchor, and when he came back he could get hold of the chain and be in exactly as good a position as he was at the moment when he was required to go away. He stubbornly refused to go and his refusal in all its details shows that he took not only a thoroughly unreasonable position, but he was attempting to use the position which he had accidently acquired, and which he had no right to maintain, for the purpose of gaining an advantage. He offered to go if they would give him a new anchor. He had no right to make such terms at all. His duty was to do all he reasonably could to permit the launch to go on. What was the consequence of this? In my opinion it created a position in which the defendants were obliged to choose between two evils. One was to postpone the launch: the other was to let the launch take place; and I further say that the necessity of choosing between those two evils arose at the last moment and after twelve o'clock was past; in other words, when the launch was all ready to take place, when the vessel was absolutely denuded of the structures which had rendered it safe during the period of building, and when there was only a slight, though no doubt efficient, obstacle, which prevented it from going into the water of its own accord.

The defendants put forward plainly in evidence the danger of postponing the launch at that late hour, and the reason why I differ from the conclusions to which the learned President came is that I think that he did not appreciate the seriousness with which the defendants insisted on this, which I consider to be their true defence, and the absolutely uncontradicted character of the evidence in its favour. I have gone through the evidence, and I find that no evidence at all was given by the plaintiffs upon this point—not even expert evidence—but when the yard-manager of the defendant company was called he says, "We started at six o'clock in the morning to remove the shores and keel blocks, and we were working at that right up to about twenty minutes past twelve. When you have taken these shores and keel blocks away, is it safe, or not safe, to postpone the launch altogether?—It is not safe. What might happen? The vessel might go off the ways. Go off, on her own account?—Go off, on her own account, also the ways might possibly sink below her."

Then a little later he is cross-examined in this way: "Suppose you had known, by launching when you did, that four men would have been drowned, would you still have launched the *Highland Loch?*—No, I do not think I would. You could have avoided that. You would have kept her there?—I would have tried to. And you could have done so?—I am not sure. You have a stop-way, have you not, that prevents her going into the water until you want her to go?—Yes. And until you remove the stop-way she will not go. Will she?—No. And it is a hydraulic stop?—It is. And I suppose you can get cables, if necessary, to hold her, can you not, to strengthen your stop-way, if you do not feel very confident about it?—It would be a difficult matter. But you could do something, I suppose, could you not?—Yes. You knew there were men on this craft?—Yes."

Then he is cross-examined on these lines: "If you were certain there would be a fatal accident if you launched, would you postpone the launch?" and I cannot think how any humane man could say otherwise than that if he knew it was going to be fatal to his fellow-creatures he would have accepted whatever risk there was and postponed the launch. But that carries the plaintiffs' case with regard to it a very little way. In re-examination counsel for the defendants goes into the matter fully:—"With regard to the launch of the *Highland Loch* you told me, I thought I might have misunderstood you, that the vessel might launch herself.—She might. Then you were asked by Mr. Bateson whether you had not to remove the stop-way?—Yes. The two answers do not seem to me to be consistent. Can she launch herself notwithstanding the stop-way?—Something might go wrong with the stop-way. You mean the stop-way might remove itself?—Yes. Well, would it be safe, supposing you had wished to postpone this launch, to leave her without putting back these shores and stops and dogs, whatever you call them?—It would not. And would it be a safe job for the men to put them back?—No, it would not." The President: 'Was it an apprehension of some possibility of danger that made you go on with the launching, or the fact that you had made all preparations for it?'—The possibility of danger."

I take next the evidence of the manager of the shipbuilding department, Mr. William Boyd. He is asked: "I want to ask you about the danger (if any) of postponing the launch. Supposing you had not launched her that tide at all, what would have had to have been the course adopted by you, about giving notices, and the danger there may have been (if any) to your people?—Well, we would have had to have renewed the notices."

Then the President interrupts and observes: "With as much difficulty as there was, Mr. Laing, I do not think it was reasonable to ask these people to postpone the launch till the next tide," and Mr. Laing says: "The object of my question was to meet an observation your Lordship made yesterday, as to whether there was any possible risk to their own people by keeping the launch suspended without some proper supports." Then the President says: "Yes, you asked him about the next tide. His waiting another quarter of an hour or twenty minutes is another matter. I do not think it was reasonable to ask these people in the face of as much difficulty as there was to postpone it till another tide. The danger of postponing it on this tide for another quarter of an hour or twenty minutes, that is another thing." Then, in my opinion, Mr. Laing finishes that point by one question. He asks the witness: "You put it off for a quarter of an hour, and that quarter of an hour made the ebb tide stronger, you told me?—Yes. Supposing you

had had to postpone it for a tide, could you have done so on the next tide?—No, we would have done it on the next daylight tide, two tides later."

What I refer to is this: I think the learned President did not see that the postponement increased the danger. The conditions of this river are very clearly described. While the flood tide is still going up in the centre, near high tide, there comes an ebb tide running down by the side. If that is very weak a launch can shoot through it to the middle and then it follows the flood tide and goes in the direction of the flood. If, however, the ebb tide near the shore is strong, while the launch is passing through the region of the ebb it gets turned in the direction of the ebb; and it was its being turned in that direction, contrary to expectation, which made it strike the ketch. This idea of the President that the reasonable course would have been to wait twenty minutes more shows that he had omitted the complicated nature of the position and the unseen dangers which might have arisen. In my opinion every minute of postponement would have increased the danger, and therefore the defendants' manager was in this position: he must decide at once which was the right thing to do, because if he postponed it the danger got greater to the ketch, and in fact soon the only way would have been to postpone the launch for a couple of tides, with all the attendant danger to the defendants' own men. But the President says. "You need not pursue this after what I have said, need you?" Then Mr. Laing asked this question: "Would there be any danger to the ship herself or to any of your men?—It is a very dangerous thing at all times to let a launch be delayed. It is a very critical moment, and the launch might take charge and go off at any moment, and with risk to both life and property in the yard." Now, if one thinks of what the consequences would be of a launch taking place not at the proper time but taking place while they were securing the vessel, waiting for the next tide, when probably there would be vessels going up and down in front of the shipyard, one sees that the dangers of postponing the launch were serious; and, unless we are to disbelieve this witness, he, as a man of experience, thought they were greater than the dangers of letting the launch go on, because he distinctly says he took the lesser chance of doing damage. That is the whole of the evidence with regard to the consequences of postponing the launch.

Now let me turn to the evidence of the probable consequences of allowing the launch to take place. Here we come to a very strange state of things The plaintiffs' evidence—evidence of fact given by two men, the master of the ketch and, I think, the mate—is emphatic that there was no danger at all in their opinion.

The master is asked these questions: "How did she come?—She came off and then turned stern down towards us. She would have gone away clear of us if she had gone straight off altogether. She came half off, and then turned stern towards us. When you were hung up by the moorings were you lower down the river?—Just below the line of the yard. Do you know this place well enough to say whether you were opposite the basin, or whether you were opposite the yard?—No, I could not say exactly now. At any rate you were below the line of the launch?—Yes, just below the line of the launch. And if she had gone out straight, she would have gone out all clear, would she?—Yes."

Then he was asked: "Did you think she would touch you when she was launched?" and his answer was "No." Then the President says: "The question is, if the launch was going to take place, did you think you were safe?—Yes, I did not think she was coming on us. Do you mean that if the vessel was launched, you would still be safe?—Yes, I thought the vessel would come off above us." The other witness called for the plaintiffs, Frederick Murt, was asked by Mr. Laing, "Did you think you were in any danger from the launch before it came off?—No, we did not know if the ship was in danger, or not. Did you think so?—No." The consequence is that the effect of their evidence is that there was no ground for thinking there would be a collision. When I turn to the evidence called on behalf of the defendants, it indicates that the danger of the ketch being struck was very slight. The yard-manager says, "I thought there was a slight risk." Then he was asked, "But you were willing to run it?" He answered, "I thought it was so very slight." Again, Lang, the assistant yard-manager, says, "There was very little danger." Counsel then asks, "But you thought there was some?—Very little." Then, in the evidence of Mr. Boyd, this passage occurs: "So far as your experience taught you, did you think the *Frances* was in a position of serious danger?—Not serious. I thought it safer to warn the ship to get out of the way. The question I asked you was did you think she was in a position of serious danger or in a position in which you ought to warn her?—Not of serious danger." Then the witness is asked: "And if she is in the possible line of the launch, she is in serious danger, is she not?—Not in serious danger. There are many chances against her being struck. And many chances in favour of her being struck?—I should say one in twenty, perhaps. And you took the chance?—It was the lesser chance." I have read the whole of the evidence and I intend to abide by the evidence as to the consequences of the two alternative courses of conduct.

In my opinion the manager of the defendants realised that there was a serious danger in postponing the launch, and certainly he must have realised that the magnitude of the risk of an accident arising from such circumstances would be very much greater than the magnitude of an accident arising from collision with the ketch. I think it is clear also that everybody thought that the danger from collision if the launch took place at once was remote, and I am quite satisfied that the manager realised that the general danger would be increased by delay, and that he must act at once.

Now, what is the legal principle to be applied? In my opinion, if by their unreasonable conduct the plaintiffs put the defendants into a position where there had to be an immediate choice of one of two actions, both of which involved risk, they do not succeed in their case unless they show that the choice which under those circumstances the defendants made was one which was negligently and improperly made. They do not succeed if they say, "You knew that the course which you took brought with it a risk of injury,"

The defendant has a right to say, "You didn't give me the opportunity of avoiding danger—danger to life in this case—and our duty was to do that which minimised the danger." On the evidence I am satisfied that that is what the defendants did; but even if I was not satisfied it is for the plaintiffs in such a case as that to satisfy me that the choice that the defendants made was an unwarranted one. It is no use saying that letting the launch go was an act and that not letting it go was doing nothing. There are cases when doing nothing is as much an act and as responsible an act as doing something; and in this case the leaving the ship in that position instead of letting her go into the water was in my opinion reasonably considered by the defendants to be causing a greater risk to life as well as to property than to let her go and to complete the launch as was intended.

For these reasons I am of opinion that no case of negligence or improper conduct has been made out against the defendants, and that those in charge of the plaintiffs' ship were solely to blame.

I cannot but think from the very accurate enunciation of principles of law which I find in the judgment of the President, that he would have come to the same conclusion if he had not by inadvertence thought that he was relieved from considering the question of the danger of postponing the launch by reason of its not being relied upon as the main line of defence.

I feel satisfied that it was relied upon and relied upon as the first line of defence, but I can understand how it was that the President thought that the defendants' case was a different one, for this point on which they, in my opinion, succeed is very shortly stated, and the evidence is very conclusive, but they have raised before us a second line of defence which, I confess, I have not understood, and which I feel incapable of formulating; but just because it is not so conclusive and was not so clear and definite it certainly occupied the majority of the time during which counsel for the appellants were addressing us. I cannot help thinking that by holding on to this second and weaker line of defence they must have made it loom so large in the mind of the President that he forgot it was only a second line of defence and that there was a first and impregnable one, which rested on the evidence and the short principle that if by your own fault you put a man into a position where he is obliged to choose between two evils, then, if there is no negligence in his choice, but he chooses what he honestly believes to be the lesser evil, you cannot blame him.

Buckley, L.J.—There are two questions to be decided—first, whether the ketch is to blame; and, secondly, whether the launch is to blame. It is not worth while to discuss the first question at any length. The President, from whom this appeal is brought, all the members of this court, and our assessors are all of opinion that the ketch was to blame. The President summarised the evidence upon this part of the case in these words: "The attitude taken by the master was in substance this: I cannot heave my anchor, and will not slip my cable, unless you will pay, or be answerable for it or for a new anchor, and take my ketch away in safety." The answer of Lang in substance was: "I have nothing to do with paying for an anchor, and I have no authority to become answerable for it; but, if you will slip your cable, I will tow you away to a place of safety." Upon that the President says: "The master of the *Frances* was at fault in not slipping and buoying his anchor and dropping, or being towed to a place of safety. He had no right to make it a condition before taking the proper steps which good navigation required him to take in order to perform his obligation, that the anchor should be paid for, or that an undertaking should be given to pay for it, or to replace it." In all those observations I entirely agree. If I had myself to travel through the evidence, there would have been some further observations which I would make, but they would not have been in favour of the master of the ketch. As regards our assessors, a question was put to them as to what was the reasonable course for the master of the ketch to take, and they said he should have slipped his cable, provided the tug kept hold of him, towed him to a place of safety, and brought him back to his cable. That was offered him, and he refused. To state the position in my own words, it was this: The ketch had sustained a misfortune. She was coming up dragging her anchor, and it caught in some moorings and she could not lift it. She had no business to be there in the sense that though this was a highway for the use of all vessels, it was reasonable at this moment that the ship being launched should use it. The defendants were entitled for the purpose of the launch reasonably to say to persons navigating the river: "Go away, I am going to make an extraordinary use of the highway for a short time." The master of the ketch was bound to act reasonably. He had, as I have said, become entangled and could not go unless he did a very simple act. He was not permanently fixed to the anchor. The anchor may have been said to have been for the moment inextricably fixed to the bottom, but he had only got to slip and buoy his cable and he could be taken away in safety and brought back in safety. There was no difficulty about the matter at all. He refused to do it, and under those circumstances he was, in my opinion, to blame for not clearing the highway for the proper user of the highway by the launch for a temporary purpose.

The second question is this: Was the launch to blame? Here the learned judge says this: "It was not proved to my satisfaction that, apart from inconvenience and possible cost, there was any danger in postponing the launch." He also says: "There was some slight evidence that 'it would not have been safe to postpone the launch altogether,' but it fell far short of establishing the plea of danger to life and property; and, indeed, the defendants' counsel did not contend that the plea had been established or rely upon it as a defence." This case, I think, shows the disadvantages that arise from postponing a judgment. You lose all the advantage of dealing with the matter when the evidence which has been adduced, and the arguments which have been presented, and the incidents that have occurred in the course of the trial are all present to the mind. The learned President postponed his judgment for six days, and it is plain that he had forgotten what had taken place in the course of the trial.

It is clear that the learned judge said he was satisfied upon the question of the danger of postponing the launch till a later tide than this one, but that as to postponing till a later moment on this tide, that was another matter. The President said to counsel for the defendants: "You need not pursue this after what I have said, need you?" That, to my mind, is perfectly plain—that the President was saying, "I have told you that I am satisfied as regards the danger of postponing to a subsequent tide, although I am not satisfied as to the danger of postponing to a later moment on this tide." It is clear that with regard to the danger of postponing the launch to a later tide, counsel for the defendants had been relieved by the learned President of the obligation to call further evidence. In those circumstances it seems to me that the fact that there was substantial danger to life and property in postponing the launch to another tide is a matter which must be taken to be established in this case. In that state of things what was the position of the owner of the launch? There was this ketch lying in the river, and I am satisfied, if it is material, that the mental attitude of the master of the ketch was that it was perfectly safe. What was the mental attitude of the owner of the launch? Upon the evidence I hold that to his mind there was some risk as regards striking the ketch, but that it was a negligible risk. It was a possibility—the thing might happen, and in point of fact it did happen—but his position of mind was that he thought it was a negligible risk—a factor in the situation which he had to bear in mind, but not the only factor to be borne in mind. The other significant factor was this: that if he did not launch on this tide he was confronted with this danger—there was the ship in a position in which she was held up by the hydraulic stop, and which, if a gale got up, might, I suppose, be blown over, and which, if the tackle gave way, might take charge and launch herself at any moment. Unless he launched on this tide he had to face that state of things. Moreover, he could not launch on a later tide without serving fresh notices. In the meantime he was in peril. He must either leave the ship as it was and take the risk or he must replace the shores. On the evidence I think it is established that there was a serious danger to life and property, and he was confronted with this state of things: "There lies that ketch in the river; I may strike her. I do not think I shall, but it is possible I may. It is a slight and a negligible risk. On the other hand, I am confronted with this: that, unless I launch within the next five minutes, I have to face the possibility of this ship launching herself, and the public generally will be at great risk on resuming the ordinary navigation of the river." What was he to do? Can it possibly be said it was unreasonable of him, taking all the circumstances, to accept the risk of striking the ketch? To my mind it was not unreasonable. It was perfectly plain he had done everything reasonable by way of seeking to induce the ketch to go away, and in my opinion there was no negligence, in this state of facts, in letting the launch go on. If that be so the defendants, owing a duty to the ketch and also to others who might be injured by the course which they chose to take, reasonably discharged their duty to all those to whom they owed a duty by accepting the responsibility of launching the vessel as they did.

For these reasons, in my judgment, the defendants were not to blame, and there was blame to be attached to the ketch.

I only want to say one word on a sentence of the judgment of the learned President: "In the present case, the defendants, for their own purposes, determined to launch at the particular tide, whatever the consequences might be to the plaintiffs' vessel and its crew." If the evidence had established that state of facts I should have agreed with the judgment of the President, but I desire to say that to my mind the evidence does not establish that state of facts. I think that by the stubborn, obstinate conduct of the master of the ketch the defendants were placed in a position of considerable embarrassment and difficulty, and I think they adopted the reasonable way out of it, and were not considering their own purposes only and disregarding the consequences to the ketch. I think they were weighing all the consequences which they ought to have weighed and which would determine their course of action; and I think they adopted a reasonable course of action. In my opinion judgment ought to be entered for the appellants, and the ketch *Frances* pronounced alone to blame.

HOUSE OF LORDS.

Monday, Oct. 30, 1911.

(Before the LORD CHANCELLOR (Loreburn), Lords ATKINSON, SHAW, and MERSEY.)

BROWN AND ANOTHER v. TURNER, BRIGHTMAN, AND CO. (a)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Time charter—Exceptions—Strikes.

A ship was chartered under a time charter which contained the following clause: "Mutual exceptions: The owners and charterers shall be mutually absolved from liability in carrying out this contract in so far as they may be hindered or prevented by" (inter alia) *"strikes." The charterers in good faith, in the ordinary course of trade, sent the ship to load a cargo of coal at a port where to their knowledge there was a strike at the collieries. The ship could have been employed in other ways, but was retained by the charterers within the area of the strike. In consequence of the strike she was delayed for some time in obtaining a cargo.*

Held, that the charterers were liable to pay the agreed hire for the period of such delay.

Judgment of the Court of Appeal affirmed.

APPEAL from a judgment of the Court of Appeal (Cozens-Hardy, M.R, Fletcher Moulton and Farwell, L.JJ.), who had reversed a judgment of Bray, J. upon a special case stated by an arbitrator.

The question arose under a time charter-party, dated the 16th Oct. 1908, of the steamship *Zambesi*,

(a) Reported by C. E. MALDEN, Esq., Barrister-at-Law.

made between the respondents as owners and the appellants as charterers, by which the *Zambesi* was chartered for a period of twelve months, renewed by agreement for a further period of twelve months. It appeared that during a colliery strike in New South Wales in the early part of 1910 the charterers were prevented from loading a cargo of coal on board the steamer at Newcastle, N.S.W., for an intended voyage to Manila. The arbitrator found that when the charterers ordered the steamer to Newcastle they knew that a strike was in operation, and that there were other trades in which the steamer might have been employed which would not have been interfered with by any strike.

The charter contained the following clause:

Mutual exceptions: The owners and charterers shall be mutually absolved from liability in carrying out this contract in so far as they may be hindered or prevented by [*inter alia*] strikes.

In view of this clause the arbitrator determined that the hire ceased to be payable for the period in question subject to the opinion of the court. Bray, J. delivered judgment in favour of the charterers, holding that the charterers, having sent the steamer to Newcastle *bonâ fide* and in the ordinary course of their business, it was no answer to say that they might have sent the ship elsewhere and perhaps obtained another cargo. The shipowners appealed to the Court of Appeal, which set aside the order of Bray, J., holding that the charterers had not been hindered or prevented in carrying out the contract merely because the strike prevented the most beneficial use of the ship.

Atkin, K.C. and *Leck* appeared for the appellants.

M. Hill, K.C. and *Adair Roche*, who appeared for the respondents, were not called on to address their Lordships.

At the conclusion of the argument for the appellants their Lordships gave judgment as follows:—

The Lord Chancellor (Earl Loreburn).—My Lords: I agree with the conclusion at which the Court of Appeal has arrived.

The question is a very short one. It turns upon the construction of a clause in this charter-party—whether the charterers were prevented from carrying out this contract by the strike. If by carrying out the contract is meant merely performing the obligation due from the charterers to the owner, or the owner to the charterers, then it is quite clear that the strike did not prevent the charterers from paying the hire of the ship. If upon that clause it can be said that the charterers were prevented from carrying out this contract because they were prevented from enjoying the rights bestowed upon them, then equally I think that the strike has not prevented that. They used all their rights all the time. They took the ship to the port; they chose to keep her there, but the only misfortune was that they could not get a cargo. It was no part of the obligation of the owners to see that they got a cargo. To my mind the real meaning of this clause is that placed upon it by the Court of Appeal. Even if it were not so I do not think that the appellants could succeed, for the reasons which I have stated.

Lord Atkinson.—My Lords: I concur.

Lord Shaw.—My Lords: In this case the arbitrator found that there were other trades in which vessels might be employed within the limits of the charter which would not have been interfered with by any strike. That has been put in purposely by the arbitrator in order to have some effect given to it. When I look to the contract I observe, as is usual in such cases, that the charterers have a right to direct the movements of the vessel. In sending this vessel at a certain date they knew that they were sending it within the area of the strike. Under the charter-party it was clear that they had the power of withdrawing it from the area and placing it elsewhere, and according to the finding of the arbitrator they could have done so, so that the vessel might have been employed in carrying cargo during that period. They, however, exercised the option of retaining the vessel within the area of the strike.

Under those circumstances I do not see my way to differ from the view reached by the Court of Appeal on the construction of this clause. The same result is reached by the fact that the charterers have themselves to blame for the results which have followed, and they cannot rely upon this clause.

Lord Mersey concurred.

Judgment appealed from affirmed, and appeal dismissed.

E. Clemens Horst Company *v.* Biddell Brothers. (a)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Sale of goods—C.i.f. contract—Payment—Tender of shipping documents—Sale of Goods Act 1893 (56 & 57 *Vict. c.* 71), *ss.* 28, 34.

Where goods are sold under the terms of a c.i.f. contract for net cash the buyer is bound to pay for the goods on tender of the usual shipping documents, even though the goods have not arrived at their destination.

Judgment of the Court of Appeal reversed.

Appeal from a judgment of the Court of Appeal (Vaughan Williams and Farwell, L.JJ.), Kennedy, L.J. dissenting, reported 12 Asp. Mar. Law Cas. 1; 104 L. T. Rep. 577; (1911) 1 K. B. 934, reversing a judgment of Hamilton, J., reported 103 L. T. Rep. 661; (1911) 1 K. B. 214, at the trial before him without a jury.

On the 13th Oct. 1904 an agreement was entered into between the appellants of the first part and Messrs. C. Vaux and Sons, of Sunderland, of the second part, whereby it was agreed that the parties of the first part were to sell to the parties of the second part 100 bales equal to or better than choice brewing Pacific Coast hops of each of the crops of the years 1905-1912 inclusive. The hops were to be shipped to Sunderland. The parties of the second part were to pay for the hops at the rate of 90s. sterling per 112lb., c.i.f. to

(a) Reported by C. E. Malden, Esq., Barrister-at-Law.

London, Liverpool, or Hull. Terms net cash, the contract to be severable as to each bale. The sellers might consider entire unfulfilled portions of the contract violated by the buyers in case of refusal by them to pay for any hops delivered and accepted hereunder or if the contract or any part of it be otherwise violated by the buyers. Time of shipment to place of delivery or delivery at place of delivery during the months (inclusive) of October to March following the harvest of each year's crop. And if for any reason the parties of the second part be dissatisfied with or object to all or any part of any lot of hops delivered hereunder the parties of the first part might within thirty days after receipt of written notice thereof ship or deliver other choice hops in place of those objected to.

On the 21st Dec. 1904 a second contract was entered into between the same parties which provided that the parties of the first part agreed to sell to the parties of the second part fifty bales equal to or better than choice brewing Pacific Coast hops, British Columbian hops, of each of the crops of 1906 to 1912 inclusive; the hops to be shipped to Sunderland. The parties of the second part were to pay for the said hops at the rate of ninety shillings sterling per 112lb., c.i.f. to London.

This second contract provided for cash payment, the severable nature of each bale, and continued in the same form as the contract of Oct. 1904.

On the 11th Aug. 1908 Vaux and Sons assigned both contracts to the respondents, and on the 28th Sept. 1908 the respondents gave notice to the appellants of such assignment. During the year 1909 the full quantity of hops was delivered under the contracts by the appellants to the respondents, but in no case were the respondents asked to pay for the same until they had been given an opportunity of inspecting them.

On the 29th Jan. 1910 the appellants wrote to the respondents as follows:

We are now ready to make shipment to you of the entire 150 bales 1909 crop of the contracted quality and according to the terms of the contract. . . . For the invoice price less freight we will value on you at sight with negotiable bills of lading and insurance certificates attached to draft, and if you wish we will also attach certificates of quality of the Merchants' Exchange, San Francisco, or other competent authority to cover the shipments.

This letter was replied to in the following terms:

We are prepared to take delivery of the fifty bales of British Columbian hops, contract the 21st Dec. 1904, and 100 bales of Pacific Coast hops, contract the 13th Oct. 1904, of the quality contracted for and on the terms of the contracts respectively. . . . It is in accordance with the universal practice of the trade and the custom adopted by you in your dealings with other purchasers of your hops, and it has also been your custom with our assignors to submit samples and the samples having been accepted to give delivery in bulk in accordance with the samples, but if you decline to adopt the usual and undoubtedly most convenient course we can only pay for the hops against delivery and examination of each bale. We cannot fall in with your suggestion of accepting the certificate of quality of the Merchants' Exchange, San Francisco.

On the 5th Feb. 1910 the appellants' solicitors, by a letter of that date to the respondents, refused to deliver the hops, alleging that the respondents' letter of the 1st Feb. was a breach of the contract, and the appellants never delivered or tendered the hops or any of them. After further correspondence between the parties and their solicitors the respondents on the 11th March 1910 issued a writ against the appellants, claiming 787*l.* 10*s.* damages for the appellants' failure to deliver the hops. The appellants delivered points of defence and counter-claim, alleging that it was not the appellants who had refused to deliver, but the respondents who had refused to accept the hops, and counter-claimed 525*l.* damages for non-acceptance of the hops. On the 3rd June 1910 the respondents delivered points of reply.

Hamilton, J. gave judgment for the defendants on the claim and the counter-claim on the ground that a tender of documents of title to the hops by the appellants constituted a sufficient tender of the hops; that a tender of the documents was dispensed with by the letter of the 1st Feb. 1910, and he assessed the damages at 175*l*.

The Court of Appeal set aside the judgment, and entered judgment for the plaintiffs on their claim and on the counter-claim on the ground that the ordinary rule of law applied and that the plaintiffs were only bound to pay against examined goods; that there was no agreement to the contrary, and that, as regards the counter-claim, even if there had been a breach by the plaintiffs, there was no evidence of any loss to the defendants, and as to this Kennedy, L.J. concurred. On the 30th March 1911 the court, with the consent of the parties, assessed the damages at 481*l.* 5*s.*, and judgment was entered for the plaintiffs on the claim for 481*l.* 5*s.* and on the counter-claim.

The defendants appealed to the House of Lords.

The Sale of Goods Act 1893 (56 and 57 Vict. c 71) provides:

Sect. 28. Unless otherwise agreed delivery of the goods and payment of the price are concurrent conditions; that is to say, the seller must be ready and willing to give possession of the goods to the buyer in exchange for the price, and the buyer must be ready and willing to pay the price in exchange for the goods.

Sect. 34 (1). Where goods are delivered to the buyer which he had not previously examined, he is not deemed to have accepted them unless and until he has had a reasonable opportunity of examining them for the purpose of ascertaining whether they are in conformity with the contract. (2) Unless otherwise agreed when the seller tenders delivery of goods to the buyer he is bound, on request, to afford the buyer a reasonable opportunity of examining them for the purpose of ascertaining whether they are in conformity with the contract.

Sect. 62. "Delivery" means voluntary transfer of possession from one person to another.

Atkin, K.C. and *F. D. Mackinnon* appeared for the appellants.

Shearman, K.C. and *Eustace Hills* for the respondents.

At the conclusion of the arguments their Lordships gave judgment as follows:—

The Lord Chancellor (Earl Loreburn).—My Lords: In this case there has been a remarkable divergence of judicial opinion. Hamilton, J. and Kennedy, L.J. holding one view, and Vaughan Williams and Farwell, L JJ. another. The contract, no doubt, is one of a special and

peculiar kind, as might be inferred from the difference of opinion to which I have referred. For my part, I think it reasonably clear that this appeal ought to be allowed. The admirable and remarkable judgment of Kennedy, LJ., illuminating, as it does, the whole field of controversy, relieves me from the necessity of saying much.

This contract is what is known as a cost, insurance, and freight, or c.i.f. contract, and under it the buyer was to pay cash. But when? The contract does not say. The respondents say on the physical delivery and acceptance of the goods when they have come to England. Sect. 28 of the Sale of Goods Act 1893 says in effect that, unless otherwise agreed, payment must be made on delivery—that is, on giving possession of the goods. It does not say what is meant by delivery. Accordingly, we have to supply from the general law the answer to that question. The question is, when is there delivery of goods on board ship? That may be quite different from delivery of goods on shore. The answer is that delivery of the bill of lading when goods are at sea may be treated as delivery of the goods themselves. That is so old and so well established that it is unnecessary to refer to authorities on the subject.

In my judgment, it is wrong to say, upon this contract, that the vendor must defer tendering the bill of lading until the ship has arrived in this country, and still more wrong to say that he must wait until the goods are landed and examination made by the buyer. Upon the counter-claim I am of opinion that the Court of Appeal were right. The result will be that Hamilton, J.'s order will be restored as to the claim, and that, as to the counter-claim, there must be judgment for the defendants, with 1*s.* damages, without costs.

Lords Atkinson, Gorell, and Shaw concurred.

Judgment of the Court of Appeal on the claim reversed. Judgment of Hamilton, J. restored. Respondents to pay to the appellants the costs in this House and below. Judgment on the counter-claim affirmed without costs.

Solicitors for the appellants, *Parker, Garrett, and Co.*

Solicitors for the respondents, *Nicholson, Graham,* and *Jones.*

Supreme Court of Judicature.

COURT OF APPEAL.

Nov. 20, 21, *and* 22, 1911.

(Before Vaughan Williams, Buckley, and Kennedy, L.JJ.)

Virginia Carolina Chemical Company *v.* Norfolk and North American Steam Shipping Company Limited. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Loss by fire—Fire caused by unseaworthiness—Liability of shipowner—Exceptions in bill of lading—Merchant Shipping Act 1894 (57 *&* 58 *Vict. c.* 60), *s.* 502.

The owner of a British sea-going ship is exempted by sect. 502 *of the Merchant Shipping Act* 1894 *from liability for loss or damage by reason of fire on board the ship where the loss or damage happens without his actual fault or privity.*

A bill of lading contained a clause providing that the shipowner was not responsible for any loss of or damage to the goods received for carriage occasioned by . . . fire or unseaworthiness, provided all reasonable means had been taken to provide against such unseaworthiness.

Held, by the Court of Appeal, that a shipowner is not deprived of the protection of sect. 502 *merely because the fire is caused by unseaworthiness, but that the operation of the section may be ousted by special contract and the owners be liable where a breach of the warranty of seaworthiness is proved.*

Decision of Bray, J. affirmed.

Trial of preliminary points of law by Bray, J. sitting without a jury.

The points of claim, so far as material, were as follows:

(1) The plaintiffs were the holders of a bill of lading dated the 18th Aug. 1910, signed by the master of the steamship *West Point* on behalf of the defendants as owners of the vessel, by which the defendants acknowledged that 8986 bags of sulphate of ammonia had been shipped in apparent good order and condition on board the vessel, to be delivered in like good order and condition at Charlestown. (2) The plaintiffs alleged that the defendants failed to deliver the goods in good order and condition or at all. (3) Alternatively, that the *West Point* was unseaworthy and unfit for the carriage of the goods on shipment and at the commencement of the voyage, as the fittings of a low-pressure oil tank containing 120 gallons of paraffin oil were defective, whereby the oil escaped on the 27th Aug. 1910 and became ignited and the vessel took fire and foundered with the goods on the 29th Aug. 1910.

The plaintiffs claimed the value of the goods, 11,785*l.*

The defendants admitted that the vessel took fire, and that by reason thereof she sank and the plaintiffs' goods were lost, but that the fire and consequent loss of goods happened without their actual fault or privity, and that by reason of sect. 502 of the Merchant Shipping Act 1894 they were not liable to make good the loss. They denied that the *West Point* was unseaworthy or unfit for the carriage of the goods, and, alternatively, that they were exempted from liability by the terms of the bill of lading, which provided that they should not be liable for

> Any loss, detention of, or damage to the goods, or the consequences thereof, or expenses occasioned by any of the following causes—viz.: . . . fire on board, in hulk, or craft, or on shore; explosions, heat, defects in hull, tackle, engines, boilers, machinery or their appurtenances, or accidents arising therefrom; perils of the seas. . . . and all accidents of navigation . . .; nor for any act, neglect, or default of the pilot, master, crew, stevedores, engineers, or agents of the shipowners . . . or by unseaworthiness of the ship at the commencement of or at any period of the voyage, provided all reasonable means have been taken to provide against such unseaworthiness, or by any other cause whatsoever.

By order of the court the following preliminary questions of law were tried before the trial of the

(*a*) Reported by Edward J. M. Chaplin and Leonard C. Thomas, Esqrs., Barristers-at-Law

action: (1) Whether the defendants could rely on sect. 502 of the Merchant Shipping Act 1894 in answer to the plaintiffs' claim based on unseaworthiness as alleged; and (2) whether the defendants were precluded from setting up the said section by reason of the special contract contained in the bill of lading.

Sect. 502 of the Merchant Shipping Act 1894 provides (*inter alia*) that "the owner of a British sea-going ship, or any share therein, shall not be liable to make good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases—namely: (1) Where any goods, merchandise, or other things whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship. . . ."

Atkin, K.C., *Maurice Hill*, K.C., and *R. A. Wright* for the plaintiffs.—The defendants are not entitled to rely on sect. 502 of the Merchant Shipping Act 1894 as that section does not apply where there is a breach of the initial obligation to provide a seaworthy ship, and the loss involved in the present case was occasioned by such initial breach:

The Diamond, 10 Asp. Mar. Law Cas. 286; 95 L. T. Rep. 550; (1906) P. 282.

The section does not apply in this case, because the parties have superseded it by special contract.

Sir *R. B. Finlay*, K.C., *Bailhache*, K.C., and *Dawson Miller* for the defendants.—A proviso cannot be read into the section that shipowners are not to be protected where the loss by fire is due to unseaworthiness. The only exception provided by the section is where the loss is due to the actual fault or privity of the shipowner. No other exception can be implied. There cannot be the same implication in regard to a statute as to a contract. Sect. 503 of the same Act limits in certain cases the shipowner's liability for loss of life or injury or damage to property where such loss takes place without the shipowner's actual fault or privity, but it has never been suggested that the shipowner is precluded from limiting his liability if the ship was originally unseaworthy. There is no inconsistency between the bill of lading exceptions and sect. 502, and therefore the section is not superseded. The exceptions against liability in the case of fire and unseaworthiness are separate, and cannot be read together. The exception in the bill of lading should be read as limiting the shipowner's liability for loss by fire except when caused by his own privity or default. In Carver's Carriage by Sea (5th edit., sect. 76, p. 102) it is stated that the exemptions from liability by statute apply notwithstanding the form of the bill of lading.

Atkin, K.C. in reply.

Bray, J.—In this case the point in dispute is whether the liability of the defendants for damage by fire to the plaintiffs' goods is to be governed by the provisions of sect. 502 of the Merchant Shipping Act, and two questions have been formulated for my decision. They are—whether the defendants can rely on sect. 502 in answer to the plaintiffs' claim based on unseaworthiness as alleged in the points of claim, and whether the defendants are precluded from setting up the section by reason of the special contract contained in the bill of lading.

The first question is based on the assumption that the contract for the carriage of the goods by the ship in question contained no special terms relating to damage by fire; the second on the assumption that the goods were carried on the terms of the bill of lading referred to in the pleadings. If the plaintiffs are right as to either of the questions for the purpose of to-day they succeed. I have come to the conclusion that on the second point they are right, and, therefore, it might be unnecessary for me to answer the first question; but as it has been argued I think I had better state the opinion I have formed, although I cannot say that I am very confident that I am right. The question is undoubtedly a difficult one. The plaintiffs' contention is this:

Their claim, they say, is for damages for breach of the warranty of seaworthiness, and the section does not touch that warranty. The section is to be treated as creating an excepted peril, and according to *Steel* v. *State Line Steamship Company* (3 Asp. Mar. Law Cas. 516 (1877); 37 L. T. Rep. 333; 3 App. Cas. 72) excepted perils in a bill of lading do not, as a rule, relieve the shipowners from the consequences of a breach of the warranty unless so expressly provided. The defendants say that the words are perfectly general, and apply to all cases where there has been damage to goods on board by fire, and that to construe them in the way suggested would be to add to the section the words "unless caused by unseaworthiness." I have been referred to previous Acts, first the Act of George III. The section there has a similar ambiguity and does not help me.

The Act of 1854 contains a section in which almost the same language is used as in the Act of 1894. No doubt the Act of 1894 was to a large extent a consolidating Act. In 1854 the law was not as clearly settled as it has been since. It had, of course, been settled that there was the warranty of seaworthiness, but it was not, perhaps, fully realised how extensive that warranty was, and that it involved the obligation that the ship was properly protected against fire. Nor had it been decided that the excepted perils did not relieve the shipowners from the consequences of breach of the warranty. I think it is quite possible that the Legislature in 1854 had not in view the particular case which has arisen here. Under these circumstances I think my duty is to give to the words of the section their most literal interpretation. [His Lordship, having read the section, continued:] Construed literally, I think those words apply whenever there has been damage to goods by fire without the shipowners' actual fault or privity and that whether there has been a breach of the warranty of seaworthiness or not. This section was intended to apply in the absence of special provisions. There is always, in the absence of some special provision in a contract of carriage by sea in a ship, a warranty of the seaworthiness of the ship, and therefore the section is intended to apply to a contract where there is such a warranty; therefore in the absence of some special provision I think it applies even though there has been a breach of the warranty; in effect it limits the liability for such a breach. I

think the fact that the following section which limits the damages clearly applies to damage consequent on breach of the warranty tends to confirm the view I have taken. I think I must answer the first question in favour of the defendants.

I come now to the second question. It is conceded that it is open to the parties to exclude the section by their contract. *The Satanita* (7 Asp. Mar. Law Cas. 580 (1895) and 8 Asp. Mar. Law Cas. 190 (1896); 75 L. T. Rep. 337; (1897) App. Cas. 59) is sufficient authority on that point. That case also decides that the section need not be excluded in so many words; it is sufficient if it appears from the contract between the parties that they intended to exclude it. It becomes, therefore, a question of what is the true construction of this bill of lading.

In this bill of lading we have this provision, that the goods are to be delivered in the like good order and condition subject to the clauses and conditions expressed in this bill of lading, which constitutes the contract between the shipowners, shippers, and consignees. I think this is a strong indication that the bill of lading contains all the terms; if not in every case, at all events where these terms deal with a particular subject matter.

Now, there are three possible cases of damage by fire. (1) Where it is caused by accident; (2) where it is caused by the negligence of the master or crew, or, indeed, of anyone except the owner himself; and (3) where it is caused by some negligence or fault on the part of the owner. The bill of lading deals with each of these cases. The statute does the same. They both cover the same subject-matter. I think the parties, by providing expressly for each of these cases, have shown their intention to substitute their own provisions for the provisions of the statute. I think the fact that they followed the same course with regard to robbery tends to show the same intention.

It was strongly pressed on me that the provision in the bill of lading with regard to unseaworthiness is negative and not affirmative; but the parties are dealing with excepted perils and the form in which the earlier part of the clause is drawn made it more natural to put it in a negative form. Anyone, I think, reading the clause would conclude that it was clearly intended that the owner should be liable in case he had failed to take reasonable means to provide against unseaworthiness. My answer, therefore, to the second question is in favour of the plaintiffs.

The defendants appealed and the plaintiffs gave notice of a cross-appeal.

Sir *R. B. Finlay*, K.C., *Bailhache*, K.C., and *Dawson Miller* for the defendants.

Atkin, K.C., *Maurice Hill*, K.C., and *R. A. Wright* for the plaintiffs.

The arguments adduced in the court below were substantially repeated, and the cases there cited were again referred to, with the addition of the following:

Forward v. *Pittard*, 1 Term Rep. 27;
Amies v. *Stevens*, 1 Str. 128;
The Warkworth, 5 Asp. Mar. Law Cas, 194, 326 (1884); 51 L. T. Rep. 558; 9 P. Div. 145;
Sutton v. *Orient Steam Navigation Company*, 12 Com. Cas. 270;
Tattersall v. *National Steamship Company*, 5 Asp. Mar. Law Cas. 206 (1884); 12 Q. B. Div. 297;
Lyon v. *Mells*, 5 East, 428.

VAUGHAN WILLIAMS, L.J. read the following judgment:—This is a case in which two preliminary questions were ordered to be tried before the trial of the action.

The action is an action against shipowners for non-delivery of sulphate of ammonia shipped on board the steamship *West Point*. The preliminary questions are the following: (1) Whether the defendants can rely on sect. 502 of the Merchant Shipping Act 1894 in answer to the plaintiffs' claim, based on unseaworthiness, set out in paragraphs 3 and 4 of the points of claim. (2) Whether the defendants are precluded from setting up the said section by reason of the special contract contained in the bill of lading.

As to the first question, I agree entirely with Bray, J. If you read the general words of sect. 502 as qualified or limited by the warranty of seaworthiness implied by law, to so hold would be to change the words of the section from "a British sea-going ship" into "a British sea-going seaworthy ship." [His Lordship read sect. 502 of the Merchant Shipping Act, and continued:] I think that this section by clause 1 exonerates the shipowner from both the common law liability in cases of loss from fire and, what is perhaps more important in this case, from liability for loss of goods from fire, even though the cause of the fire may be the unseaworthiness of the ship. The answer to the first question is based on the assumption that the contract for the carriage of the goods by the ship in question contained no special terms relating to damage by fire. Bray, J. deals with the second question on the assumption that the goods were carried on the terms of the bill of lading referred to in the pleadings, and on this assumption comes to the conclusion that the plaintiffs are right, because the defendants are precluded by reason of the special contract contained in the bill of lading from setting up sect. 502 in answer to the claim of the plaintiffs.

The question is, as Bray, J. says, a difficult one. I have had great doubts in the course of the argument as to the proper answer to the second question, and have been not a little influenced towards the conclusion at which I have arrived by the opinion of Kennedy, L.J., whose experience and knowledge of the course of decision on questions of merchant shipping is very great. My doubts have arisen, not only on the question whether, according to the true construction of the bill of lading, its provisions are so inconsistent with sect. 502 as to warrant the conclusion that the parties to the contract of freight intended to preclude the shipowners from setting up sect. 502 as an answer to the claim of the plaintiffs in respect of the non-delivery of the goods on board the ship destroyed by fire, but have arisen also in respect of the question whether, when the terms of the contract contained in the bill of lading relied on as precluding the defence based on the statute are ambiguous, the statutory defence ought to be excluded, or whether the statutory defence only ought to be excluded when the intention to exclude is made plain by the terms of the bill of lading.

I know of no direct authority on the point, but I gather from the arguments of counsel on both sides that it was not substantially contested that, however difficult and ambiguous the construction of the bill of lading may be, yet if the conclusion of an intention to exclude the statute can be reasonably arrived at, that is sufficient to exclude the statute. The points on the bill of lading in favour of exclusion are, first, that the bill of lading says that the said goods are to be delivered in good order and condition, subject to the clauses and conditions expressed in this bill of lading, which constitutes the contract of freight between the shipowners, shippers, and consignees.

Then the clause, negativing the responsibility of the shipowner for loss or damage to goods occasioned by any of the following causes, expressly mentions fire on board, which was unnecessary if reliance was intended to be placed on the statute, although some effect might be given to the clause in respect of matters outside sect. 502, *e.g.*, where the loss did not occur without the actual fault or privity of the shipowner. Again, the last words of the catalogue of causes set out in the clause are "by unseaworthiness of the ship at the commencement of or at any period of the voyage, provided all reasonable means have been taken to provide against such unseaworthiness, or by any other cause whatever." The words of the proviso are certainly very different from and inconsistent with the words "without his actual fault or privity" which constitute a proviso on the general words of the section.

I only mention these points as being the most salient, for there were other points based on the words in the bill of lading which were urged upon us by the counsel for the respondents. It must always, however, be remembered that the whole of the clause on the face of it seems to be intended to be in favour of the shipowner, and in that sense to point rather to the extension of the protection afforded by the section and not to its exclusion. Mr. Bailhache, in his admirable argument on behalf of the appellants, accepted the proposition that what he was arguing for amounted to a contention that the section would prevail, even though the cause of the fire was the unseaworthiness of the ship and all reasonable means had not been taken to provide against the unseaworthiness and such unseaworthiness was the cause of the fire, the immediate cause of the loss being the fire and not the unseaworthiness. He pointed out that the words of the bill of lading relied on by the respondents were negative and not affirmative words, which one would have expected if the intention was to exclude the operation of the section. On the whole, I have come to the conclusion, not without doubt, that the decision of Bray, J. on the second question was right, and our judgment must be for the respondents, and the appeal dismissed with costs.

Buckley, L.J.—There were two questions to be decided in this case by the learned judge. At the commencement of his judgment, after reading the two questions, he said this: "The first question is based on the assumption that the contract for the carriage of the goods by the ship in question contained no special terms relating to damage by fire. The second is based on the assumption that the goods were carried on the terms of the bill of lading referred to in the pleadings." That, I think, was quite right. In fact counsel have argued it before us upon that footing, and I propose to answer the two questions upon the assumption there made. I think it is rather a pity that the order as drawn up did not introduce that assumption, and I think the learned judge's answer to the first question would have been more aptly expressed by saying, "upon the assumption that the contract contained no special terms relating to damage by fire, then answer the first question in the affirmative," but that is what he meant, and there is no question about that at all. I propose to deal with the two questions on those assumptions.

The first question is as regards the true construction of sect. 502 of the Merchant Shipping Act 1894. Apart from statute, a shipowner was at common law under two liabilities, the one being that of an insurer arising from the fact that he was a carrier and therefore bound to produce the goods which had been intrusted to him for carriage, and the other under an implied warranty of seaworthiness. The statute in the case of fire, if I rightly understand it, relieved him from both the first and the second of those liabilities if the fire happened without his actual fault or privity. It relieved him not only from the liability as an insurer, but also from the liability under an implied warranty of seaworthiness. To express the same thing in other words, the section is not to be read as if it were "the owner of a seaworthy British sea-going vessel"; it is the owner of any British sea-going ship, be it seaworthy or unseaworthy, shall not be liable for damage by fire unless it happens with his actual fault or privity. That is the construction which I place upon the section, and it answers the first question. If there is no special contract, then, according to my opinion, the defendants can rely on the section construed as I have construed it.

But in that state of things, and that being the liability of the shipowner, the contract was made which is contained in this bill of lading, and I think the true construction of the contract is this. I will read it as if the shipowner said: "I know that I am under these two liabilities, the one as insurer and the other under an implied warranty of seaworthiness, but I further know that in respect of both those liabilities I have the benefit of sect. 502 of the Merchant Shipping Act 1894, unless I contract myself out of the statute"; it is common ground that it is competent for him to do so if he chooses, and he does so in this case by apt words. That being the state of affairs, the bill of lading commences by saying that the shipowner is to deliver the goods "in the like good order and condition." Of course if the clause stopped there, and there were nothing more, the shipowner would be liable under both heads of liability, subject, of course, to the protection afforded by the section, but the clause goes on to say that he is to do that "subject to the clauses and conditions expressed in this bill of lading, which constitutes the contract of freight," and I have to go on and see whether the liability thus assumed, with the protection which sect. 502 has given him, is varied somehow or other by what I am coming to in this special contract.

Then I come to a clause on which, in my opinion, the whole contest arises. It is a long

clause commencing with the words, "The shipowners and (or) charterers are not responsible," and ending with the words "unseaworthiness, or by any other cause whatever." I read that clause as divided into two parts, the first being virtually the whole of the clause with the exception of the last line and a half; the second half is the last line and a half, and it is addressed to unseaworthiness. It is short; I will read it: "Shall not be responsible for damage to goods by unseaworthiness of the ship at the commencement of or at any period of the voyage, provided all reasonable means have been taken to provide against such unseaworthiness, or by any other cause whatever." Now, it seems to me that by that portion of the clause the shipowner was contracting as to what was to be his liability under the head of implied warranty of seaworthiness, and it is his liability in respect of that which is defined there. In my opinion the earlier part of the clause is to be read as if it said: "As for unseaworthiness, I am going to deal with that presently. In this first part of the clause I am not going to deal with it at all. For the first part of this clause I am content to take it that my ship is to be a seaworthy ship." I think the first part of the clause expresses this: "If my ship is seaworthy my contract is that I shall not be liable for fire on board as insurer against fire, and that exemption is to apply not only in the cases mentioned in sect. 502, but in any case whatsoever." Having done that, he has finished with his liability as insurer. Then he takes up his liability on his implied warranty of seaworthiness. The next words, I think, define all his liability in respect of that. He says—by negative words, I agree—"I will not be liable for unseaworthiness provided all reasonable means have been taken to provide against such unseaworthiness." Now, there the words are negative words—he says, "I will not be liable for that"—but I think they are pregnant words and infer an affirmative, and that what he has said in that clause is this: "I will be liable for unseaworthiness if I have not taken all reasonable means"

The particular question which we have to consider here is this, and Mr. Bailhache most plainly put it, as I thought, in commencing his argument: For the purpose of testing the case you have to make the hypothesis that a fire has occurred by unseaworthiness against which reasonable precautions have not been taken, but that the fire happened without the actual fault or privity of the shipowner. Under those circumstances is he liable?

The answer to this question, which in substance is this—namely, whether the defendants are precluded from setting up the section by reason of the special contract—involves this, can they set up sect. 502 and say: "This fire did not happen with our actual fault or privity; therefore we are not liable, although it is agreed that we did not take all reasonable precautions to provide against such unseaworthiness—*i.e.*, against such fire?" To my mind that is excluded by the terms of the contract.

I think, therefore, that both questions were rightly answered, and that really no difficulty occurs as to the one conflicting with the other, because one has to bear in mind that the first question is put on one assumption and the second on another. The first question, I think, is rightly answered in the affirmative upon the assumption on which it is made, and the second question, I think, is also rightly answered in the affirmative upon the words of the contract. For these reasons I am of opinion that both the appeal and the cross-appeal ought to be dismissed with costs.

Kennedy, L.J.—This is unquestionably, to my mind, a difficult case; but it has been argued so thoroughly and so lucidly by the learned counsel on both sides that I know that I should gain nothing by further consideration. There are two questions which were before the learned judge in the court below. If the first of those questions had been answered by him differently, if he had held that the words of sect. 502 of the Merchant Shipping Act 1894 in regard to the liability of a shipowner in the case of a fire were to be read in a sense unfavourable to the present appellants, there would be nothing further to be said on their behalf; but the learned judge has answered that question in their favour. Dealing with that question first, for myself I must say that I think it the more doubtful part of this case. There is, in my judgment, a great deal to be said for the view that the Legislature did not lose sight of the law which, unquestionably, had been settled before the date of the statute, that there is, in every contract with regard to the carriage of goods in a ship, an absolute warranty, and that warranty is that the vessel must, at the time of sailing with the goods, have that degree of fitness, as regards both the safety of the ship and also the safe carriage of the cargo in the ship, which an ordinarily careful and prudent owner would require his vessel to have at the commencement of the voyage, having regard to the probable circumstances of that voyage and its nature. It is possible—and my brother Bray had that, I think, fully in his mind when he used the language that he did in his decision upon that section—that someone, quite reasonably, might come to the conclusion that the implied warranty was not intended to be, as it were, abrogated by the section in regard to damage by fire, and that the exemption from liability to the extent to which that section gives it is an exemption which, so far as the owner was concerned, was mainly intended to relate to those circumstances in which the owner was either the captain on board, or, as is the case on small ships, was, perhaps, actually the fitter-out of the ship, if not the master, for the voyage. Of course, if that view were taken, and the section was read subject to the implication, there could be no further contest on behalf of the appellants; but I am not prepared to differ from Bray, J.

Upon the whole, I think that he has come to that which is, from the lawyer's point of view, the more correct conclusion, and it is obviously the safer, for one good general reason, that the words are unqualified in their terms, and, as has been pointed out by Vaughan Williams, L.J. and by Buckley, L.J., and also by Bray, J., if you are to read in the implication, you are virtually reading in the word "seaworthy" in addition to the word "sea-going" as the epithet of the vessel. I assume, therefore, because, on the whole, I think, it is the better conclusion, that this section is to be read without any qualification that the vessel should be seaworthy at the commencement of the voyage, and that under the protection of that

section, whatever it is, the owner, in a case where a fire happens on board his ship, which is not proved to have originated or been directly caused by his actual fault or privity, is exempt.

Then, assuming the first question to be answered, as it was answered, we come to the second question in this case, which is, I think, again a difficult one to answer; but I am of opinion that the view which Vaughan Williams, L.J. and Buckley, L.J. have expressed here in concurrence with that expressed by Bray, J. in the court of first instance is right. Without analysing in detail the language of an exceedingly ungrammatical document, I have come to a conclusion, which I can state in very few words, upon what I consider to be the real sense and effect of the clause in the bill of lading which contains the exceptions in which fire and unseaworthiness are mentioned. It appears to me that the appellants' contention—that is, the contention of the shipowners—with reference to the terms as to unseaworthinesa, which are contained at the close of the paragraph which we have been discussing almost exclusively, which begins with the "act of God, enemies, pirates, theft," and ends with "unseaworthiness or any other cause whatever" compels them to say that the terms as to unseaworthiness which, if I understand rightly, the learned counsel say are unquestionably of effect in relation to matters arising in connection with the other perils mentioned do not constitute a contract with the parties in regard to fire. Indeed, it was argued for the appellants here that the unseaworthiness clause has so much that it can unquestionably operate upon in regard to the other perils, that you need not treat the last clause as to unseaworthiness as having any relation to the words "fire on board" as one of the perils, because there were so many other subjects of peril to which the unseaworthiness clause might be referred. It was said (I think I am quoting the exact words) by the learned counsel, Mr. Bailhache, with his usual clearness and frankness, that the words "fire on board" on his contention were in fact redundant. I am unable, however, to treat the words as superfluous when, in the natural concatenation of the sentences, I find no distinction drawn between fire on board and other perils; and when it is conceded that the part of the clause as to unseaworthiness and the liability of the shipowner therefor in its limited shape, as it appears in the bill of lading, has a reference to all the other perils, I cannot construe the clause in such a way as to say that, because liability for fire is dealt with by statute, I am to treat that part of the clause as having effect as to all other perils, and having no effect as regards fire on board. It is not as if the Act of Parliament had itself provided in terms for what was to be the position of the shipowner in regard to fire caused by unseaworthiness; on the contrary, the argument of the appellants itself is that it has not done so, but has placed a different limitation upon the shipowner's liability —namely, in so far as it has exempted him from liability for fire unless caused not by unseaworthiness, but by his actual fault or privity.

It seems to me, construing this document upon its face in its natural way, that I cannot accept an interpretation which isolates fire and puts it in a different position from the other perils, and if that clause applies to fire on board, as it undoubtedly does to the other perils dealt with in the same connection, and, in the same sentence, if it be conceded, as it must be, that the clause as to unseaworthiness creates a contract between the parties, then I have found that I have got a contract; and if that contract as to unseaworthiness does refer to fire, it does seem to me that you then have the same position as that which had to be considered by the House of Lords in the case of *The Satanita* (*ubi sup.*). I have got a clause which says as regards all perils, and among them the peril of fire, that the liability as to unseaworthiness shall exist—it is put negatively here, but I think nothing really turns upon that—but the liability of the shipowner will be taken away if he has used all reasonable means to provide against such unseaworthiness, or, putting it negatively, the shipowner shall not be liable for the unseaworthiness of the ship, provided all reasonable means have been taken by him to provide against such unseaworthiness. In *The Satanita* (*ubi sup.*) the question was whether the words of the contract between the parties to pay for all damage must be taken to exclude the provisions as to liability in the Merchant Shipping Act 1894, and it was held that if they were sufficiently clear they did, and if I find a contract by which the parties have said, "A particular form of degree of liability for unseaworthiness shall exist in relation to all the mischiefs that may happen upon the ship, which I catalogue, and which include fire," it seems to me, following the reasoning of the House of Lords, there being nothing to prevent sect. 502 being dealt with by such an independent contract, I ought to give effect to the contract between the parties which arises from their express bargain, and, in so doing, I uphold the judgment which has been pronounced upon this second question.

Appeal and cross-appeal dismissed.

(Before COZENS-HARDY, M.R. and FARWELL, L.J.)

NORTHFIELD STEAMSHIP COMPANY LIMITED v. COMPAGNIE L'UNION DES GAZ. (a)

APPEAL FROM THE KING'S BENCH DIVISION.

Charter-party — Delay in discharging cargo — Inaccessibility of wharf — Impossibility of getting to berth alongside—Loss occasioned by delay—By whom to be borne—Exceptions— Strikes—Ejusdem generis.

A steamer was chartered to proceed to named ports ordered on signing bills of lading and there deliver her cargo alongside any wharf and (or) vessel and (or) craft as ordered. The cargo was to be taken from alongside by the consignees at the port of discharge at a specified rate, "provided steamer can deliver it at this rate." If longer detained the consignees were to pay steamer demurrage at specified rate. "Time to commence when steamer is ready to unload and written

(a) Reported by E. A. SCRATCHLEY, Esq., Barrister-at-Law.

notice given, whether in berth or not. . . . In case of strikes, lock-outs, civil commotions, or any other causes or accidents beyond the control of the consignees which prevent or delay the discharging, such time is not to count unless the steamer is already on demurrage."

On the arrival of the steamer at one of the named ports on the 20th Sept. it was found that all the berths alongside the wharf were occupied by other vessels and the steamer could not get to a berth alongside the wharf until the 25th Sept.

By a regulation the shore labourers would not discharge vessels until they were in a berth alongside a wharf; and cargo was brought to the rail by them, the ship's crew not being employed.

Held, first, that the parties must be assumed to know the regulations at the port, and time commenced not when unloading in fact began, but when the steamer was ready to unload, "whether in berth or not."

Held, secondly, that the words "provided the steamer can deliver" had no bearing on the case, as they were only concerned with the mechanical facilities of the steamer for delivery.

Held, thirdly, that delay occasioned not by a strike or by anything analogous thereto, but by a regulation of the shore labourers of the port, did not fall within the exception in respect of strikes, &c.

Decision of Hamilton, J. affirmed.

APPEAL by the defendants from the decision of Hamilton, J. sitting without a jury.

The facts of the case sufficiently appear from the headnote and judgments.

The appeal, although from a final order, was by the consent of the counsel engaged therein, duly filed before the hearing thereof, heard before two judges of the Court of Appeal, instead of three, under the provisions of sect. 1 of the Supreme Court of Judicature Act 1899.

Atkin, K.C. and *S. A. T. Rowlatt*, for the appellants, referred to

S. A. T. Rowlatt was heard in reply on the first point only.

Cur. adv. vult

Dec. 14, 1911.—The following written judgments were delivered :—

COZENS-HARDY, M.R.—This appeal raises a question on the construction of a charter-party, the material facts being agreed. By clause 1, the steamer was to load a cargo of coal at Sunderland and proceed therewith to Genoa or Savona as ordered and there deliver her cargo alongside any wharf and (or) vessel and (or) craft as ordered.

By clause 8, the cargo was to be taken from alongside by consignees at port of discharge at the average rate of 500 tons per day, weather permitting, Sundays and holidays excepted, "provided steamer can deliver it at this rate." If longer detained, consignees to pay steamer demurrage at the rate of 4*d.* per net register ton per running day. "Time to commence when steamer is ready to unload and written notice given, whether in berth or not."

The steamer was ordered to Savona, and arrived and was moored at the Punta inside the port and harbour of Savona on the 20th Sept. All the berths alongside the wharf were occupied by other vessels, and the steamer could not get to a berth alongside the wharf until the 25th Sept. The question in substance is this, Who has to bear the loss occasioned by the delay?

Now, it is admitted that by reason of certain rules made by the shore labourers, and recognised and sanctioned by the port authorities, shore labourers will not discharge vessels until they are in berth alongside a wharf, and, further, that the cargo is not brought to the rail by the ship's crew, but by the shore labourers. It must, I think, be taken that these rules are and have for several years been part of the regulations of the port of Savona which the parties to the charter-party must be assumed to know. This being so, the express provision of clause 8 applies. Time commences, not when unloading in fact begins, but when the steamer is ready to unload, "whether in berth or not." She was ready to unload on the 22nd Sept., though not in berth, and written notice was given on that day. It is, however, contended that the earlier words, "provided the steamer can deliver," point to a different conclusion, as the steamer was not in fault; and could not deliver earlier. But those words seem to me to have no bearing upon the case. They only deal with rate of discharge of the cargo when once the discharge has begun, and are concerned with what I may call the mechanical facilities of the steamer for delivery.

Then it is said that the final sentence in clause 8 exempts the charterers: "In case of strikes, lock-outs, civil commotions, or any other causes or accidents beyond the control of the consignees which prevent or delay the discharging, such time is not to count unless the steamer is already on demurrage." But delay occasioned, not by a strike or by anything analogous to a strike, but by a regulation of the port of Savona, cannot fall within this exception.

It follows that, in my opinion, the judgment of Hamilton, J., following a decision of Pickford, J. on the same charter-party, in favour of the plaintiffs is correct, and this appeal must be dismissed with costs.

FARWELL, L.J.—The question in this case depends on the construction of the charter-party of the 25th Aug. 1909, on which three points arise.

The vessel was chartered to proceed to Genoa or Savona, as ordered on signing bills of lading, and there deliver her cargo alongside any wharf and (or) vessel and (or) craft as ordered. The consignees were to take the cargo alongside at port

of discharge. "Time to commence when steamer is ready to unload and written notice given, whether in berth or not."

The first question arises on those words. There was no berth vacant at Savona at which the vessel could be unloaded until four days after her arrival, and accordingly she did not get a berth until the fifth day. There was no other means of unloading her except alongside the wharf when there was a berth vacant. In my opinion the words "whether in berth or not" were inserted to meet this very case. I do not think it possible to read them as equivalent to "although she be moored alongside a vessel or craft and not in berth." Want of space to berth is of very frequent occurrence, and the parties appear to me to have expressly provided for it. And this disposes also of the contention that the ship was not "ready to unload." She was ready so far as she was concerned, and the fact that she was not in a berth is rendered immaterial by this clause.

The next question arises on these words: "The cargo to be taken from alongside by consignees at port of discharge, free of expense and risk to steamer, at the average rate of 500 tons per day, weather permitting, Sundays and holidays excepted, provided steamer can deliver it at this rate." At Savona it is the course of business, recognised since 1907 by the port authorities, that steamers are not discharged until they are in berth alongside a wharf, and that shore labourers will only work in connection with the discharging of vessels when they are in berth alongside the wharf; and that all the work is done by shore labourers, the crew not being employed to bring the cargo to the rail. In my opinion these facts are irrelevant in considering the question whether "the steamer can deliver it at this rate." These words refer to the structural capacity and fittings of the vessel, not to her position in the harbour as to the supply of labour from the shore available for the consignees.

The third question is the strike clause: "In case of strikes, lock-outs, civil commotions, or any other causes or accidents beyond the control of the consignees which prevent or delay the discharging." I have no doubt that the other causes must be restricted to causes *ejusdem generis*, and I think it impossible to say that a regulation made by the shore labourers as to the terms on which they will work, recognised and sanctioned by the port authority for four years, is *ejusdem generis* with a strike. The course of business at Savona was well known to both parties at the date of the charter-party, and if this possible absence of labour was contemplated as within this exception, it should have been clearly stated.

I think that the judgment of Hamilton, J. should be affirmed.

Appeal dismissed.

Solicitors for the respondents, *Botterell* and *Roche*.

Oct. 26 *and Nov.* 7, 1911.

(Before COZENS-HARDY, M.R., FLETCHER MOULTON and FARWELL, L.JJ.)

LEE v. OWNER OF SHIP BESSIE. (a)

APPEAL UNDER THE WORKMEN'S COMPENSATION ACT 1906.

Employer and workman—Death caused by accident—Compensation—Claim by dependants—Infant children—Absence of evidence of dependency—No presumption of dependency — Workmen's Compensation Act 1906 (6 *Edw.* 7, *c.* 58), *s.* 1.

The principle established by the decision of the House of Lords in New Monckton Collieries Limited v. Keeling (105 *L. T. Rep.* 337; (1911) *A. C.* 648), *that dependency is a question of fact, and that there is no legal presumption of dependency even in the case of a wife, applies equally to the case of infant children.*

Where, therefore, there was no evidence of dependency in fact of infant children on their father, a workman whose death had been caused by an accident arising out of and in the course of his employment within the meaning of sect. 1 *of the Workmen's Compensation Act* 1906, *and there was no evidence that the children had ever been maintained by him, they were held not to be dependants and not to be entitled to compensation under that Act.*

Briggs v. Mitchell (1911) 48 *Sc. L. R.* 606) *approved.*

Decision of the County Court judge reversed.

AN arbitration under the Workmen's Compensation Act 1906 was requested between the widow of a deceased workman and his employer as to the liability of the latter to pay compensation under that Act to herself and her two legitimate infant children as the dependants of the former in respect of the injury caused to them by his death through an "accident arising out of and in the course of the employment" of the deceased.

It appeared that the widow had been deserted by her husband, and subsequently, on the report of his death, cohabited with another man and had done so for eight years. She had several illegitimate children by him.

During the whole of the eight years she had the custody of her two legitimate children by her husband (aged ten and eight respectively at the death of their father), and had maintained them without his assistance.

According to the evidence, the husband had not maintained the children at all since the year 1903.

The case came on to be heard at the County Court of Somersetshire holden at Bridgwater, when it was decided by the learned County Court judge that the widow was not a dependant of her deceased husband. But His Honour found that the two infant children were dependants, and accordingly awarded them the sum of 195*l*.

From that part of the decision the employer now appealed.

Alexander Neilson, for the appellant, referred to

Cur. adv. vult.

(a) Reported by E. A. SCRATCHLEY Esq., Barrister-at-Law

Nov. 7.—The following written judgments were delivered :—

COZENS-HARDY, M.R.—This is an appeal from an award of 195*l.* in favour of two infant children of a deceased workman. The award can only be supported on the ground that the children were dependants—*i.e.*, "wholly or in part dependent upon the earnings of the workman at the time of his death."

Now, it has recently been held by the House of Lords in *New Monckton Collieries Limited* v. *Keeling* (105 L. T. Rep. 337; (1911) A. C. 648) that dependency is a question of fact, and that there is no legal presumption of dependency even in the case of a wife. It is my duty loyally to follow that decision, and I can see no ground for not applying it to the case of infant children. In the recent case of *Briggs* v. *Mitchell* (4 Butterworth's C. C. 400) the Court of Session, differing from the view of this court which was overruled by the House of Lords in *New Monckton Collieries Limited* v. *Keeling* (*ubi sup.*), held that there was no presumption in the case of infant children. This Scotch decision must, I think, be regarded as good law.

Now, in the present case there was no evidence of dependency in fact. Since 1903 the infant children have not been in any way maintained by their father. They have resided with and been maintained by their mother, who has been living in adultery with a man by whom she has had several illegitimate children. All this is beyond dispute. The learned County Court judge gave his decision before the House of Lords had overruled the decision of this court. I am bound to say the decision of the learned County Court judge cannot now be supported.

It has been argued that the case ought to be sent back to the County Court judge in order that he may consider whether a case can be established on behalf of the infants of dependency in fact. I think it would be wrong to do this. No evidence was adduced in favour of dependency in fact, and it was for the applicants to establish their case.

In my opinion there is no course open to us but to allow this appeal.

Having regard to the position in life of the infants and the serious question involved, we appointed the official solicitor to defend the appeal, and by our order we provided for his costs. And I desire to add that Mr. Goddard has greatly assisted the court by his argument on behalf of the infants.

FLETCHER MOULTON, L.J.—In this case the widow of Robert Lee applied on behalf of herself and his two legitimate infant children as dependants for compensation in respect of his death by an accident arising out of and in the course of his employment by the respondent, the owner of the ship *Bessie*. No question arises as to the accident or the employment, the sole question being whether the widow and children were dependants of the deceased man. The widow had been deserted by her husband, and subsequently, on the report of his death, lived with another man. The learned County Court judge found that the widow was not a dependant, and from that decision no appeal is brought. But he found that the two infant children (who were aged ten and eight respectively at the death of the father) were dependants, and awarded them the sum of 195*l.* accordingly. From this decision the respondent appeals.

It is now settled law that dependency is wholly a question of fact, and therefore, if there was any evidence to support the decision of the County Court judge that the infant children were dependants, we ought not to allow the appeal. The note by the County Court judge of the evidence is very meagre. There is no dispute as to the ages or the legitimacy of the children. It would seem that at the hearing the widow gave evidence that her husband left her and lived with another woman, and that she heard four years afterwards that he was dead. She gives no evidence as to his having given her money for the support of the children. The mother of Robert Lee also gave evidence and stated that the deceased used to give her money from time to time, and that he made an offer to support his children. She also states that on one occasion he gave her money to give to the wife, but that the wife refused to take it, saying that he ought to send her money regularly himself to support his children, and that after he had assaulted her he had left her and never paid anything to support his children. Although the widow does not seem to have been asked any question on the subject of this conversation with the mother of the deceased, I think it must be taken that he never actually gave any money to his wife for the support of the children. I am unable to find from the judge's note at what date the widow left the husband, but the learned judge expresses himself satisfied that her adultery was brought about by her husband's desertion of her and his reported death. This refers to a report spoken to in the evidence of the widow, and stated by her to have occurred about four years after her husband's desertion. I conclude on the whole that this desertion must have taken place when the younger child was little more than an infant, though this is mainly conjecture. The case was argued on the basis that, since the desertion by the father, the mother had supported the children by her own labour, or that they had been supported by the man with whom she was living, but I can find no express reference to this in the judge's notes.

The law as to what constitutes dependency in the case of a wife has been fully laid down by the House of Lords in their decision in the case of *New Monckton Colleries Limited* v. *Keeling* (*ante*, p. 276; 105 L. T. Rep. 337; (1911) A. C. 648). There is no presumption of law that a wife is dependent on her husband's earnings merely because of his legal obligation to maintain her. But, on the other hand, this legal obligation is not to be ignored in deciding on the fact of her dependency. In the leading opinion, Lord Atkinson, after laying down these principles, goes on to say: "On the contrary, the existence of the obligation, the probability that it will be discharged, either voluntarily or under compulsion, the probability that the wife will ever enforce her right if the obligation be not discharged voluntarily, are all matters proper to be considered by the arbitrator in determining the question of fact whether or not the wife, at the time of her husband's injury, looked to his earnings for her maintenance and support in whole or in part. It is one of the many elements to be taken into account." Of the other learned Law Lords who took part in the

appeal, the Lord Chancellor formally agreed with the opinion of Lord Atkinson from which I have already quoted. He adds a few remarks in which again he makes it clear that in his opinion the fact that a legal duty lies upon the workman to provide maintenance is an element to be considered. Lord Robson was of the same opinion, as is shown by the following extract: "The wife does not necessarily cease to be dependent on the husband simply because the latter refuses to recognise or perform his obligation and succeeds in throwing the burden of her maintenance for the time being on the wife's parents or friends or on the State. They may fulfil the husband's duty for him, but the wife's legal dependence is still on him and not on them, and his death deprives her of the proper stay and support on which alone she is entitled to rely." He also expresses his approval of several previous decisions in which a wife who was living separate from her husband at the date of his death and receiving no support from him was yet held to be dependent upon him.

In my opinion the effect of this decision is that legal obligations to support must not be taken at their theoretical value, but at their practical value. For instance, the mere fact that a husband is bound to support his wife does not establish that she is totally or at all dependent upon him within the meaning of the Act if the circumstances are such that there is no reasonable probability that her rights would have been practically and effectually asserted. But if on the evidence there is any fair probability that the legal rights would at any future time have been actually and effectually asserted by the wife, then there is evidence of dependency, and the compensation must be regulated by an estimate of her practical loss subject to the provisions of the Act. That this is so is made very clear by a passage in the opinion of Lord Robson. In the course of his opinion he says: "The money coming to a widow under the Act is not a present in consideration of her status; it is a payment by a third person to compensate her as a dependant for her actual pecuniary loss by her husband's death; and where her husband's death does not, in the circumstances of the particular case, involve any real detriment to her pecuniary position, there is no rule of law to prevent the arbitrator from finding that, though married to the deceased, the applicant was now in fact dependent upon him."

I have now to consider in the light of this decision the position of the children. Up to a certain age, a father is compellable by law to support his infant children. It may well be that the compulsion is indirect, and can only be effected through the medium of the Poor Law. To my mind this is immaterial. We have to consider the practical value of the existence of this legal duty, and, though this may be modified by the indirectness of the machinery by which it is enforced, it is not taken away. Indeed, in certain respects I think that the practical value of the obligation to support infant children is more likely to survive their absence from the father than is the practical value of the obligation to support a wife. The wife's absence from her husband is often the result of her own choice or of her own conduct, and, where she has done nothing to disentitle her to support from her husband, it must be more or less by her own choice that she does not compel him to contribute to her support, since he is legally bound to do so if she chooses to enforce her legal rights. But no such thing can be said in the case of infant children, at all events so long as they are incapable of work and cannot do anything themselves to decide by whom they are to be maintained or with whom they shall live. One can easily imagine cases in which they ought to be held to be almost wholly dependent on the father, as, for instance, when they are being supported by a mother who is herself too ill to be able much longer to work.

In my opinion, therefore, the decision of the House of Lords in the case of *New Monckton Collieries Limited* v. *Keeling* (*ubi sup.*), although it does not refer to the case of infant children, logically carries with it the result that in their case the County Court judge is bound to consider the practical value of the father's legal obligations to support them, and that, if he comes to the conclusion that there is a reasonable probability that this will be enforced in the future, he is entitled and bound to hold them to be dependants, and to award compensation accordingly.

In applying this law to the facts of the present case I am met with two difficulties. In the first place, the extreme meagreness of the notes leaves me in great doubt as to the material which the County Court judge had for the purposes of his decision. For example, the question whether the mother was likely to be able to support her children if the man with whom she was living refused to do so may have been partly answered by the appearance of the woman herself, who gave evidence. The mode in which she was able to support them in the past does not seem to have been gone into. It is said that it is for the applicant to make out his case. This is beyond question, but we must, I think, look closely into what passed at the trial in the case of infant children under circumstances such as the present to see that their rights were duly considered. This leads me to the second difficulty, which to my mind is a very serious one. I do not think that the learned County Court judge appreciated rightly the issue which he had to try, and this by no fault of his own, but from the position in which the decisions stood at the time. The decision in the House of Lords in *New Monckton Collieries Limited* v. *Keeling* (*ubi sup.*) was not before him, and I have no doubt that he thought he was justified in acting on legal presumptions unless the case were such as to afford very strong evidence in rebuttal. I hesitate, therefore, on the one hand, to accept his finding of dependency as binding upon us by virtue of its being a finding of fact, and, on the other hand, I do not think it fair for us to decide on the meagre note taken by him in the view that he was entitled to act on the legal presumption of dependency.

The proper course for this court to adopt, therefore, in my opinion would be to send the case back for a rehearing, when the County Court judge would be able to determine whether there was such a reasonable probability that in the future the father would be called upon to fulfil his legal obligations to support his children as would justify him in finding that there was to some extent dependency. But as my brethren are of a different opinion their views must prevail.

Farwell, L.J.—I am of opinion that this appeal succeeds.

The award of the County Court judge is obviously founded on decisions of this court which have since been overruled by the House of Lords. It is now settled beyond controversy that dependency is a question of fact and not of law. As Lord Atkinson says in *New Monckton Collieries Limited* v. *Keeling* (at p. 650 of (1911) A. C.): "It may be that her husband was in law bound to maintain her, but it is by the discharge of this obligation, not by its mere existence in law, that a husband supports and maintains his wife"; and Lord Shaw says: "The Act of Parliament seems to say, among the relations of the deceased workman if there be those who depended for support upon his earnings and who by his death have lost that support upon which they depended, then let them be compensated for that loss."

In the present case the wife had been living with another man for the last eight years and had had children by him. During the whole of those eight years she had the custody of the appellants her two legitimate children by her husband, and had maintained them without his assistance. It appears that at some time unfixed the husband made an offer to his own mother to support his children, and once at some unknown date gave his mother some money to give to his wife which she (the wife) refused. It is clear on the evidence that the husband has not maintained his children at all since 1903. But then Lord Atkinson's observations (at p. 653 of (1911) A. C.) are relied on. In my opinion they have no reference at all to a case like the present, but refer to a case such as that mentioned (at p. 657 of (1911) A. C.) of a man leaving his wife and children dependent on charity for a month or two in order to go and look for work and dying while away. It would be impossible in such a case to hold that the mere fact that the man at his death was earning nothing and that his wife and family were supported by charity was sufficient to take them out of the Act.

But I cannot think that Lord Atkinson meant that the possibility that the guardians of the poor might make the father pay for the support of his children or of any of the other persons for whom he is liable to the guardians—such as his own parents and grandparents—makes them dependants when they have not in fact been supported by him either at all or for years before his death. Such a construction is inconsistent with the whole tenor of the judgment. Moreover, the liability to support a wife, which was the case before the House, is of a different character from the liability to support a child. The former can be enforced by the wife herself by her power to bind the husband to pay for necessaries; the latter cannot, and is really a liability to the guardians, not to the child: (see *Shelton* v. *Springett*, 11 C. B. 452, and the observations of Maule, J., at p. 454). The Scotch decision in *Briggs* v. *Mitchell* (4 Butterworth's C. C. 400) is in accordance with my view.

Appeal allowed.

(Before COZENS-HARDY, M.R., FLETCHER MOULTON and FARWELL, L.JJ.)

PANAGOTIS *v.* OWNERS OF SHIP PONTIAC. (*a*)

APPEAL UNDER THE WORKMEN'S COMPENSATION ACT 1906.

Employer and workman — Seaman — Injury by accident—Compensation—Order for detention of ship in port—Appeal by shipowners—Whether direct to Court of Appeal—Practice—Jurisdiction — Workmen's Compensation Act 1906 (6 *Edw.* 7, *c.* 58), *s.* 11; *sched.* 2, *s.* 4.

In any proceeding under sect. 11 *of the Workmen's Compensation Act* 1906, *an appeal from an order therein made by the judge of a County Court does not lie direct to the Court of Appeal, but to the Divisional Court. Such an order is made by the judge of a County Court in exercise of his general jurisdiction and not as arbitrator, and an appeal therefrom is by the ordinary procedure as to appeals from County Courts.*

So held by the Court of Appeal, Farwell, L.J. dissenting.

AN application was made by a seaman under the provisions of sect. 11 of the Workmen's Compensation Act 1906 to the judge of the County Court of Glamorganshire, holden at Barry, for an order to detain the ship on which he was employed which was lying in the port of Cardiff.

The ground of the application was that the employers, the owners of the ship, were liable as such owners to pay compensation under that Act in respect of personal injuries by accident arising out of and in the course of the employment caused to the "workman" by whom the application was made.

The learned County Court judge found that the owners of the ship were probably liable as such to pay compensation as claimed by the applicant and that none of the owners resided in the United Kingdom, and accordingly his Honour made the order applied for.

From that order the employers appealed.

On the appeal coming on to be heard the preliminary question was raised whether, in a proceeding under sect. 11 of the Act, a direct appeal would lie from the County Court to the Court of Appeal; or whether an order on such a proceeding ought to be considered to be made by the judge of the County Court in the exercise of his general jurisdiction as such and to be subject to an appeal in accordance with the ordinary procedure for appeals from the County Courts.

By sect. 11 of the Workmen's Compensation Act 1906 it is provided as follows:

(1) If it is alleged that the owners of any ship are liable as such owners to pay compensation under this Act, and at any time that ship is found in any port or river of England or Ireland, or within three miles of the coast thereof, a judge of any court of record in England or Ireland may, upon its being shown to him by any person applying in accordance with the rules of the court that the owners are probably liable as such to pay such compensation, and that none of the owners reside in the United Kingdom, issue an order directed to any officer of customs or other officer named by the judge requiring him to detain the ship until such time

(*a*) Reported by E. A. SCRATCHLEY, ESQ., Barrister-at-Law.

as the owners, agent, master, or consignee thereof have paid such compensation, or have given security, to be approved by the judge, to abide the event or any proceedings that may be instituted to recover such compensation and to pay such compensation and costs as may be awarded thereon; and any officer of Customs or other officer to whom the order is directed shall detain the ship accordingly. (2) In any legal proceeding to recover such compensation the person giving security shall be made defendant, and the production of the order of the judge, made in relation to the security, shall be conclusive evidence of the liability of the defendant to the proceeding. (3) Section six hundred and ninety-two of the Merchant Shipping Act 1894 shall apply to the detention of a ship under this Act as it applies to the detention of a ship under that Act, and, if the owner of a ship is a corporation, it shall for the purposes of this section be deemed to reside in the United Kingdom if it has an office in the United Kingdom at which service of writs can be effected.

By sect. 4 of the 2nd schedule to the same Act it is provided as follows:

The Arbitration Act 1889 (52 & 53 Vict. c. 49) shall not apply to any arbitration under this Act; but a committee or an arbitrator may, if they or he think fit, submit any question of law for the decision of the judge of the County Court, and the decision of the judge on any question of law, either on such submission, or in any case where he himself settles the matter under this Act, or where he gives any decision or makes any order under this Act, shall be fined, unless within the time and in accordance with the conditions prescribed by rules of the Supreme Court either party appeals to the Court of Appeal, and the judge of the County Court, or the arbitrator appointed by him, shall, for the purpose of proceedings under this Act, have the same powers of procuring the attendance of witnesses and the production of documents as if the proceedings were an action in the County Court.

Albert Parsons and *Gathorne-Hardy* for the respondent.

No reply was called for. *Cur. adv. vult.*

Nov. 7, 1911.—The following written judgments were delivered:—

COZENS-HARDY, M.R.—This is an appeal from an order made by the County Court judge at Barry under sect. 11 of the Act of 1906 for the detention of a ship found in the port of Cardiff. The order is in accordance with form 28. Sect. 11 of the Act of 1906 is obviously an adaptation of sect. 1 of the Shipowners' Negligence (Remedies) Act 1905. It does not confer any jurisdiction upon a Scotch court. It authorises an order to be made at any time, whether before or after an application for arbitration, and by a judge of any Court of Record in England or Ireland words which plainly include any judge of the High Court. On the construction of sect. 11, it seems to me clear that the order for detention is only in aid of the arbitration and is not part of the arbitration.

I arrive at this conclusion for several reasons. The order may be made before any proceedings are instituted, and by a judge before whom no such proceedings can be taken. It may be made in England though the arbitration must be in Ireland or in England. In my opinion the order under appeal was made by the County Court judge not as arbitrator having jurisdiction in all matters arising in the arbitration, but as a County Court judge acting in a judicial character. The exclusion of Scotch arbitrations supports this view. The question arises to whom does an appeal lie from such an order. It is said that it lies to this court under the express language of sect. 4 of the 2nd schedule, but I am unable to assent to this view. That clause begins with the words, "the Arbitration Act 1889 shall not apply to any arbitration under the Act, but," and then follow words which apply only to arbitrations under the Act. It is plain that clause 4 would have no application if the order were made by any judge of a court of record except a County Court judge, and I think it is almost equally clear that sect. 4 would not apply where the order is made by a judge of County Court A and the arbitration proceedings are pending in County Court B.

This is the conclusion at which I have arrived on consideration of sect. 4 taken by itself, and it is, I think, assisted by the language of sect. 1, sub-sect. 3, of the Act which alone refers to the 2nd schedule and refers to the schedule as containing the provisions in accordance with which arbitration proceedings are to be carried on. I think the only appeal to this court from any decision given, or order made, by the County Court judge is where the decision or order is given or made by him as arbitrator. It follows that in my opinion we have no jurisdiction to deal with the present appeal. The appeal lies to the Divisional Court.

FLETCHER MOULTON, L.J.—In this case an application was made to the judge of the County Court of Glamorganshire for an order to detain the ship *Pontiac* under the provisions of sect. 11 of the Workmen's Compensation Act 1906. The ground of the application was that the owners of the ship were liable as such owners to pay compensation under the Act in respect of personal injuries by an accident arising out of and in the course of his employment caused to Peter Panagotis on whose behalf the application was made. The ship was in the port of Cardiff. On the material before him the County Court judge found that the owners of the said ship were probably liable as such to pay such compensation and that none of the owners resided in the United Kingdom, and accordingly made the order applied for. The present appeal is brought from that order, and there arises the preliminary question whether in a proceeding under sect. 11 of the Act there is a direct appeal from the County Court to this court, as in the case of awards under the Act, or whether such an order ought to be considered to be made by the judge of the County Court in the exercise of his general jurisdiction as such and to be subject to an appeal in accordance with the ordinary procedure for appeals from the County Court.

There is nothing in sect. 11 itself which relates to the question of appeal. The powers are given to "a judge of any court of record in England

or Ireland." The procedure is no doubt in aid of enforcing any award that may be made in arbitration proceedings, but the jurisdiction does not depend on such proceedings having been instituted. No arbitration proceedings need be pending at the date of the application. The judge to whom the application is made need not be, and probably, in most cases, would not be a judge who would have jurisdiction in such arbitration proceedings. Indeed, it might well be that an application would be made under this section to a judge in England in respect of arbitration proceedings which could only take place in Scotland or Ireland. Special provisions are made in the rules for the registrar of the court in which the order is made to transmit certified copies of all records made with reference to the matter and other necessary documents to any court in the United Kingdom where proceedings for arbitration may be instituted in the matter.

In the absence of any special provision as to appeal, and from the fact that the section empowers judges not only of the County Court but of the Supreme Court and other courts of record to hear the applications, I am of opinion that the appeals from orders thereunder ought to follow the rules of procedure with regard to appeals in general from the particular court where the application is made unless special provisions can be found in some other part of the Workmen's Compensation Act 1906 to the contrary. The counsel for the appellant claims that this is the case, and refers us to sect. 4 of the second schedule which says (omitting non-relevant words) that "the decision of the judge on any question of law, either on such submission, or in any case where he himself settles the matter under this Act, or where he gives any decision or makes any order under this Act, shall be final, unless within the time and in accordance with the conditions prescribed by rules of the Supreme Court either party appeals to the Court of Appeal." This, he contends, is wide enough to cover orders made under sect. 11.

It may be taken that if these words were to be found without qualification in the enacting portion of the Act the language is wide enough to cover orders made under sect. 11 of the Act. But you cannot judge from the words of a schedule alone the enacting effect of those words. The schedule only takes that place in the enactment which is given to it by the words in the enacting portion of the Act which refer to it, and thereby show its relation to the enacting portion of the Act. In the present case the schedule is only referred to in sect. 1, sub-sect. 3, and exists only for the purposes of that sub-section. This sub-section reads as follows: "If any question arises in any proceedings under this Act as to the liability to pay compensation under this Act (including any question as to whether the person injured is a workman to whom this Act applies), or as to the amount or duration of compensation under this Act, the question, if not settled by agreement, shall, subject to the provisions of the first schedule to this Act, be settled by arbitration, in accordance with the second schedule to this Act." Sched. 2 therefore is simply a code of rules regulating arbitrations under the Act, and its effect is the same as though sect. 1, sub-sect. 3 had terminated in the words "in accordance with the following rules" and sched. 3 had been set out in full immediately after as part of that sub-section. It follows, therefore, that the wide language of sect. 4 of the second schedule, while sufficient to cover all orders made by the County Court judge in arbitration under the Act, has no reference whatever to orders made under sect. 11 which are not made in the course of arbitrations.

For this reason, I am of opinion that the order was made by the County Court judge in virtue of his statutory jurisdiction as such and that the appeal must be governed by the general statutory provisions as to appeals from County Courts. The appeal therefore ought to have been brought to a Divisional Court, and we have no jurisdiction to hear it.

Farwell, L.J.—In this case I regret that I am unable to agree with the other members of the court. The Act of 1906 is divided into three parts, the first part being in the usual form of Act followed by three schedules; I do not know the reason of such division, which is extremely inconvenient for purposes of reference, but, in my opinion, the schedules must be treated as parts of the Act, and the Act must be read as if it were divided into parts with sections running on in the usual way. As Lord Esher says in *Attorney-General* v. *Lamplough* (38 L. T. Rep. 87; 3 Ex. Div. 214, at p. 229): "With respect to calling it a schedule, a schedule in an Act of Parliament is a mere question of words. The schedule is as much a part of the statute and is as much an enactment as any other part." And in *Allen* v. *Flicker* (10 Add. & Ell. 640) both Denman, C.J. and Pattison, J. treat it as possible for an earlier Act to be repealed by the construction of a schedule to a later Act. It must, of course, depend in a great measure on the nature and wording of the schedules. Thus in the present Act the third schedule contains a list of diseases and processes without more. This schedule has reference to and is restricted by the enactments in the body of the Act. But scheds. 1 and 2 contain words of express enactment, and are as much actual enactments as the body of the statute itself.

Now the present Act provides that the employer shall be liable to pay compensation in accordance with the 1st schedule sect. 1 (1), and that if any question arises in any proceedings under the Act as to the liability to pay compensation under the Act or as to the amount or duration of such compensation, the question shall be settled by arbitration in accordance with the 2nd sched. sect. 1 (3). Then sect. 11 introduces a clause not germane to the arbitration, but for the purpose of securing to the workman the fruits of the arbitration if any. [His Lordship then read the section and continued:] It is a procedure analogous to that of the old Court of Chancery, a procedure *ad interim* referred to in Mitford on Pleading (p. 5) and explained in *Hayward* v. *East London Waterworks Company* (52 L. T. Rep. 175; 28 Ch. Div. 138, at pp. 145, 146). And in *Stevens* v. *Chourn* (84 L. T Rep. 796; (1901) 1 Ch. 894, at p. 901) and applied in cases where it was necessary for the court to interfere in order to keep things *in medio* until the rights of the parties were determined by another court which alone had jurisdiction to settle their rights. In sect. 11 the judge "of any court of record in England or Ireland" includes, but is certainly not confined to, County Court judges, and the procedure is obviously no part of

the arbitration, because the security to be given is "to abide the event of any proceedings that may be instituted to recover such compensation."

So far, therefore, the Act has given compensation, and has provided the means for ascertaining it, and has also given in the case of ships an independent power outside the arbitration to secure such compensation. Then comes sect. 4 of sched. 2, and I think that on a fair reading of the Act and schedules as a whole, the words "or where he gives any decision or makes any order under this Act" are not restricted to arbitration, but are general and extend to orders made under sect. 11 of the Act. The Act enables orders to be made not only by County Court judges but by any judge of record. It is true that sect. 1, sub-sect. 3, of the Act deals only with arbitrations, and is the only section that refers to the 2nd schedule. But the Act creates in sect. 11 a power in the County Court judge, outside and irrespective of the arbitration, and contains in sched. 2, sect. 4, words wide enough to cover orders made under that power. The judge referred to in this section is obviously the County Court judge, and the words "where he gives any decision or makes any order under this Act" ought not in my opinion to be restricted to orders made in arbitrations only, when the Act has given him power to make other orders outside the arbitration.

I am influenced by the unnecessary trouble and expense caused to suitors by any other construction. If the order under sect. 11 is made by a judge of the High Court in England or Ireland, the appeal is to the Court of Appeal in England or Ireland as the case may be, and in all orders made in arbitrations under the Act the appeal is the same. It seems impossible that the Legislature can have intended that in the one case of an order made by a County Court judge under sect. 11, the appeal should be to the Divisional Court before it comes to the Court of Appeal. Apart from the unnecessary multiplication of appeals, there is the practical consideration that orders under sect. 11 are urgency orders calling for speedy determination, and that the Court of Appeal is always accessible, while Divisional Courts have to be formed and sit only from time to time. In a case where the words are at least ambiguous, I think that these considerations ought to have weight, and I accordingly am of opinion that the appeal is rightly presented to this court.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION

Thursday, Nov. 23, 1911.

(Before BRAY, J.)

RELIANCE MARINE INSURANCE COMPANY v. DUDER. (a)

Marine insurance — Reinsurance — Risk—Intention of assured.

A ship was insured by three policies issued by the plaintiffs. The first two were for 500l. each for a voyage from "Newcastle, N.S.W., to port or ports, place or places in any order or rotation on the West Coast of South America." The vessel was valued at 12,000l. in them, and the risk was to continue until thirty days after arrival at final port of discharge or until sailing on next voyage, whichever might first happen. The third was for 1000l. for a voyage "at and from Valparaiso and (or) port or ports, place or places in any order or rotation on the West Coast of South America" to the United Kingdom, or Continent, or the United States. The vessel was valued in this policy at 10,000l., and the risk was to commence from the expiration of the previous policy. The plaintiffs reinsured the vessel with the defendant for a voyage "at and from Valparaiso and (or) any port or ports, place or places on the West Coast of South America" to the United Kingdom, Continent of Europe, or the United States. The valuation of the vessel was the same as in the original policy. The plaintiffs gave instructions to their brokers to effect this reinsurance for a voyage "at and from Valparaiso and (or) W.C.S.A. or h/c to U.K. and (or) Cont., or to U.S.A. or h/c . . . warranted nitrate or h/c. Valuation clause. Hull, &c., vd. 10,000l. or v.o.p."

The vessel was chartered to load a cargo of coal at Newcastle, N.S.W., and under the charter-party the charterers directed her to discharge the cargo at Valparaiso, and bills of lading were accordingly issued making it deliverable at that port. The vessel was then under a second charter-party to proceed to Tocopilla to load a nitrate cargo for a European port, and when she reached Valparaiso it was agreed between the owners and charterers under the first charter-party that, instead of delivering the whole of the cargo of coal at Valparaiso, she should proceed with 800 or 900 tons of coal still on board and deliver same to charterers at Tocopilla. By this arrangement it was unnecessary for the captain to take ballast on board for the voyage from Valparaiso to Tocopilla, and on this voyage the vessel stranded and became a total loss. The plaintiffs paid the owners of the ship for a loss under the first two policies, and now brought an action on the policy of reinsurance.

Held, that the defendant was liable as there was no evidence of an intention on the part of the plaintiffs to cover only their liability under the third policy.

COMMERCIAL COURT.

Action tried by Bray, J. sitting without a jury. The plaintiffs' claim was to recover for a loss

(a) Reported by LEONARD C. THOMAS, Esq., Barrister-at-Law.

under a policy of reinsurance upon the vessel *Kynance.*

By their points of claim the plaintiffs pleaded that they caused themselves to be insured by a policy dated the 9th Aug. 1910, which was expressed to be a policy of reinsurance for 500*l.* upon the vessel *Kynance*, valued as in original policy, against the risk of total or constructive total loss only, subject to the same terms, clauses, and conditions as the original policy or policies, and to pay as may be paid thereon. The voyage insured was "at and from Valparaiso and (or) any port or ports, place or places on the West Coast of South America" to the United Kingdom or Europe or the United States. They alleged that on the 29th July 1910 the *Kynance* while on the insured voyage from Valparaiso to Tocopilla, whence she was to sail to the United Kingdom, was totally lost by perils insured against—viz., perils of the sea.

They also alleged that at the time of the loss they were fully interested in the policy of the 9th Aug. 1910 in that they had executed and delivered to the owners of the *Kynance* two policies of insurance on the vessel, dated the 6th and 11th May 1910 respectively, each for 500*l.* Each of these policies insured the vessel from Newcastle, N.S.W., to port or ports, place or places in any order or rotation on the West Coast of South America. The vessel was valued at 12,000*l.*, and the risk was to continue until thirty days after arrival at final port of discharge or until sailing on next voyage, whichever might first occur.

The defendant by his defence pleaded that the *Kynance* was also insured by the plaintiffs under another policy for 1000*l.*, dated the 4th Aug. 1910, for her homeward voyage, which was described as "at and from Valparaiso and (or) port or ports and (or) place or places in any order or rotation on the West Coast of South America" to the United Kingdom or Continent or the United States. The vessel was valued at 10,000*l.*, and the risk was to continue until thirty days after arrival, however employed, or until sailing on next voyage, whichever might first occur.

The policy contained a provision :

In the event of total and (or) constructive total loss of the vessel, underwriters' subscriptions to be limited to 50 per cent. of their lines. Warranted nitrate or held. covered at a premium to be arranged.

The policy also contained a proviso :

Risk to commence from expiration of previous policy.

The defendant also alleged that the risk intended to be reinsured by his policy was the risk under the plaintiffs' policy of the 4th Aug. 1910, and he said there had been no loss under that policy, and that the risk never attached, the *Kynance* having been lost before the expiration of the previous policy, and also that there had been a breach of the warranty : "Warranted nitrate."

The plaintiffs had given written instructions to their brokers, dated the 14th July 1910, to negotiate the reinsurances with the defendant. These instructions were for a reinsurance on a voyage

At and from Valparaiso and (or) W.C.S.A. and h/c to U. K. and (or) Cont. or to U.S.A. or h/c. Leave to call, &c., against the risk of T. and (or) C.T. Loss only (wd. nitrate or h/c). Valuation clause. Hull, &c., vd. 10,000*l.* or v.o.p.

The facts with regard to the voyage were as stated in the report of the *Steamship Kynance Company Limited* v. *Young* (11 Asp. Mar. Law Cas. 596 (1911); 104 L. T. Rep. 397), as follows :

By the terms of a charter-party dated the 5th Jan. 1910 the *Kynance* was chartered by Messrs. James and Alexander Brown to load a cargo of coal at Newcastle, N.S.W., and therewith proceed to Valparaiso,

Where . . . having been reported to charterers' agents, she shall receive orders to discharge there or at a safe port not north of Pisagua. . . . Freight for the said cargo to be paid at the rate of 17*s.* per ton. . . . Should the vessel be ordered to a direct port of discharge before sailing, 6*d.* per ton reduction in above freight.

By a charter-party dated the 17th March 1910 the *Kynance*, described as "being now at Newcastle, N.S.W., to load for Chili," was chartered to Messrs. Frederick Huth and Co.

The charter-party provided (*inter alia*) that the ship "after delivery of present cargo for owners' benefit at Chili" should "proceed in ballast thence to nitrate loading port and there receive orders from charterers' agents, said orders to be given by charterers' agent at coal discharge port . . . . and there load a full and complete cargo of nitrate" for carriage to Europe.

The *Kynance* loaded her cargo of coal at Newcastle, N.S.W., and sailed on the 27th April 1910. Before sailing the charterers directed that she should discharge her cargo at Valparaiso, and bills of lading were accordingly issued making the cargo deliverable at that port. On the 10th June 1910 she arrived at Valparaiso, and commenced to discharge her cargo. The agents of Messrs. F. Huth and Co. then gave orders that she should proceed under the charter of the 17th March 1910 to Tocopilla as the port of loading for her nitrate cargo.

While at Valparaiso an agreement was made between the captain of the *Kynance* and Messrs. J. and A. Brown, the charterers under the charter-party dated the 5th Jan. 1910, that, in lieu of the discharge of the coal cargo being completed at Valparaiso, 800 or 900 tons of the cargo should be carried on by the ship to Tocopilla and discharged there, and that, as the presence of that cargo on the *Kynance* would relieve the captain from the necessity of taking on board ballast at Valparaiso, there should be a reduction of 3*s.* per ton on the charter-party freight of 16*s.* 6*d.* per ton upon the 800 or 900 tons to be delivered at Tocopilla.

Pursuant to this arrangement, freight on the cargo discharged at Valparaiso was paid, leaving freight on the 800 or 900 tons to be paid at Tocopilla upon delivery of the said cargo at that port.

On the 19th July 1910 the *Kynance* sailed from Valparaiso with 800 or 900 tons of coal on board bound for Tocopilla, and on the 29th July 1910 she stranded off Punta Blanca and became a total loss by perils of the sea, the plaintiffs alleging that the 800 or 900 tons of cargo was lost, and, in consequence, the freight upon it.

In an action upon a policy of insurance similar to the policies of the 6th and the 11th May, Scrutton, J. held that the owners of the *Kynance* and the charterers were entitled to vary the mode of performing the charter-party by discharging the coal at two ports of the West Coast of South America instead of at one, and that the policy

covered such an adventure, and therefore the owners were entitled to recover under the policy.

Bailhache, K.C. and *Mackinnon* for the plaintiffs.

Atkin, K.C. and *Leck* for the defendants.

Cur. adv. vult.

Bray, J.—This is a claim by the plaintiffs under a reinsurance policy subscribed by the defendant. Many of the facts in this case are the same as those in *Steamship Kynance Company* v. *Young* (*sup.*). They are stated in the judgment of Scrutton, J. and need not be repeated here. The *Kynance* was insured by three policies issued by the plaintiff company. The three policies covered the whole round voyage from Newcastle, N.S.W., to the West Coast of South America and home to the United Kingdom or other ports. The first two, for 500*l.* each, were dated the 6th and 11th May 1910, and the third, for 1000*l.*, dated the 4th Aug. 1910. The voyages were described substantially in the same way as in the policies in the case before Scrutton, J. In the first two the ship was valued at 12,000*l.*, and the risk was to continue for thirty days after arrival at final port of discharge, however employed, until sailing on next voyage, whichever may first occur, and in the third the ship was valued at 10,000*l.*, and the risk was to commence from the expiration of the previous policy. Under the decision of Scrutton, J., the liability of the plaintiffs for the loss which occurred between Valparaiso and Tocopilla arose under the first two policies and not under the third. The plaintiffs have paid under the first two policies. They now claim to be repaid under a reinsurance policy dated the 9th Aug., subscribed by the defendant. Mr. Atkin, for the defendant, did not argue, and could not, in my opinion, successfully argue, that the loss did not fall within the words of that policy, but he contended that the general words must be limited by the intention of the assured, and that the intention of the assured was to reinsure only his liability under the third policy, dated the 4th Aug. That is the point I have to decide. The defendant relied first on the instruction given by the plaintiffs to Messrs. J. A. Pemberton and Co., and through them to Messrs. Hamilton, Smith, and Co., the brokers who negotiated the insurance with the defendant. The instructions are in writing, and dated the 14th July 1910. In these the voyage is described as at and from Valparaiso and (or) W.C.S.A. (West Coast of South America) or b/c, hull covered, to United Kingdon and (or) Continent or U.S.A. or b/c. Nothing is said as to the risk commencing from the expiration of any previous policy. So far this shows an intention that the risk shall commence with the voyage from Valparaiso if the vessel went to Valparaiso, and serves as an indication that the risk is to cover something more than the risk covered by the policy of the 4th Aug. because of the absence of the limitation of the risk in the latter policy. The next important words are "warranted nitrate or b/c." This is an indication that the cargo would be nitrate, but the addition of the words b/c, hull covered, shows that the cargo might be different, and that it was intended to cover the cargo whatever it was. Then come the words "valued 10,000*l.* or v.o.p." It appears that the underwriters usually, or perhaps always, require to know the amount for which the ship is valued, and the smaller the amount the greater, according to their view, is the risk. Ten thousand pounds was the valuation of the third policy, and in any event a large part of the risk would be under that policy, but, again, the addition of the words "or v.o.p.," which I interpret as meaning "valued in original policy," is an indication that the value might be something different. The instructions from Pemberton to Hamilton, Smith, and Co. do not seem to me important. Then entries in the plaintiffs' books were put in, but I do not think they carry the matter further. Lastly, there was evidence by Mr. Duder and another underwriter that they always did ask the broker the insured value, but they did not pretend to say that they recollected this particular occasion nor the answer that was given if the question was asked. I could not find on this evidence that the question was asked, or that Mr. Duder was told that it was 10,000*l.* Then comes the slip. That does not mention the insured value of 10,000*l.*, or that the cargo was warranted nitrate or b/c. I do not attach much importance to this, but it is some indication that Messrs. Hamilton, Smith, and Co. read their instructions as showing that their principal intended that the policy should cover as much as possible. In my opinion the most important part of the evidence is the instructions of the plaintiffs to insure, but, taking it altogether, I am unable to find that the intention of the plaintiffs was to cover only their liability under the third policy. It might be true to say that they expected the liability to arise under the third policy, but I find it is not true that their intention was to cover that liability only. There must be judgment for the plaintiffs, with costs.

Wednesday, Dec. 6, 1911.

(Before Bray, J.)

Steamship Den of Airlie Company Limited v. Mitsui and Co. Limited, and British Oil and Cake Mills Limited. (a)

Charter-party — Bills of lading — Assignment — Cesser of shipowner's liability—Submission to arbitration—Arbitration Act 1889 (52 & 53 *Vict. c.* 49), *s.* 6.

The plaintiffs, owners of the steamship Den of Mains, *chartered her by charter-party dated the* 26*th April* 1911 *to the defendants M. and Co., to load a cargo of beans at Vladivostock, and to proceed to a port in the United Kingdom and there deliver the cargo "agreeably to bills of lading." On the* 10*th June a cargo of about* 6000 *tons was loaded, and bills of lading made out to the order of the defendants or their assigns were signed by the master and handed to the defendants' representative. They had*

(a) Reported by Leonard C. Thomas, Esq., Barrister-at-Law.

had, by a contract dated the 27th April 1911, *sold the cargo to the other defendants the B. Company on the terms of a "basis delivered" contract, by clause* 10 *of which the contract was to be void as regarded any portion shipped which might not arrive. On the 12th June the defendants M. and Co., under the contract of the 27th April, declared to the B. Company that the beans had been shipped by steamship* Den of Mains. *On arrival of the vessel at Liverpool, the port of discharge, M. and Co. handed to the B. Company the bills of lading indorsed against a payment. When the discharge had been completed it was alleged that there was a shortage of* 171 *bags, and, the B. Company having paid only in respect of the quantity actually delivered, M. and Co. instructed them to make a corresponding deduction from the freight, but the plaintiffs refused to acknowledge the claim for short delivery. A dispute having thus arisen, M. and Co. gave notice that they demanded an arbitration under a clause in the charter-party which provided for arbitration "by arbitrators, one to be appointed by each of the parties to this agreement, if necessary the arbitrators to appoint a third," and formally required the plaintiffs within seven clear days to appoint their arbitrator.*

The plaintiffs did not appoint an arbitrator, and the defendants after the expiry of the seven days gave notice of the appointment of a gentleman to act as sole arbitrator.

On a summons for directions taken out by the plaintiffs:

Held, (1) *that there was nothing in the contract or the circumstances of the case to satisfy the court that it was the intention of the shipowners and charterers that the responsibility of the former under the charter-party had ceased; and* (2) *that the submission to arbitration came within sect.* 6 *of the Arbitration Act* 1889.

Commercial Court.

Summons for directions before Bray, J. adjourned to open court for argument.

The facts and arguments are sufficiently stated in the written judgment of Bray, J.

Bailhache, K.C. and *Mackinnon* for the plaintiffs.

Atkin, K.C. and *Leck* for the defendants.

Bray, J.—The summons for further directions in this case asks that the defendants Mitsui and Co. Limited be restrained until after the hearing of this action from proceeding with a certain arbitration; alternatively, that leave be given to the plaintiffs to revoke the submission to arbitration, and, alternatively, that the notice dated the 10th Nov. 1911, purporting to be given by H. D. Blyth and Co. on behalf of the defendants, Mitsui and Co. Limited, appointing Mr. Howard Glover sole arbitrator be set aside, and that the plaintiffs have seven days in which to appoint their arbitrator. The facts are shortly as follows: The defendants, Mitsui and Co. Limited, whom I will call the first defendants, on the 28th April 1911 chartered from the plaintiffs the steamship *Den of Mains*, to load a cargo of beans at Vladivostock and to proceed to a port in the United Kingdom or other ports and there discharge. The charter-party contained an arbitration clause, to which I shall have to refer, with other terms, later. On the 27th April the first defendants, by a contract of that date, sold 6100 tons of beans, more or less, to the defendants, the British Oil and Cake Mills, whom I will call the second defendants, upon terms which I shall also refer to. On the 10th June, the cargo (about 6100 tons) having been loaded, two bills of lading comprising the whole cargo were signed by the master and handed to the first defendants' representative. They were made out to the order of the first defendants or to their assigns. On the 12th June the first defendants under the contract of the 27th April declared to the second defendants that the beans had been shipped by the steamship *Den of Mains.* On the arrival of the *Den of Mains* at Liverpool, the port of discharge, the first defendants, under clause 4 of the contract, handed to the second defendants the bills of lading duly indorsed against a payment. When the discharge had been completed it was alleged that there was a shortage of 171 bags representing about fourteen tons, and a difference in weight of thirty-six tons. The second defendants have only paid in respect of the quantity actually delivered, and the first defendants, in consequence of the shortage, instructed the second defendants to deduct from the freight a sum of 103*l.* 1s. 6*d.*, the value of the bags alleged to be short delivered, and this was done.

The plaintiffs refused to acknowledge the first defendants' claim for short delivery, and eventually the first defendants gave notice that they demanded arbitration under the charter-party, and on the 1st Nov. gave a formal notice to Galbraith, Pembroke, and Co., on behalf of the plaintiffs, that they had appointed Mr. Glover their arbitrator, and formally required the plaintiffs within seven clear days to appoint their arbitrator. The plaintiffs did not appoint an arbitrator, and on the 10th the first defendants gave notice of the appointment of Mr. Glover as sole arbitrator. On the 8th Nov. the plaintiffs issued their writ claiming (1) balance of freight, 103*l.* 1*s.* 6*d.*; (2) a declaration that the defendants, Mitsui and Co. Limited, having indorsed over to the defendants, the British Oil and Cake Mills Limited, the bills of lading for 27,132 and 44,280 bags of oil beans under circumstances in which the property in the goods referred to in such bills of lading passed to the indorsees, have no further rights under the contract evidenced in such bills of lading; (3) a declaration that the notice dated the 1st Nov. 1911, purporting to be given by H. D. Blyth and Co. on behalf of the defendants Mitsui and Co. Limited, calling upon the plaintiffs to appoint an arbitrator under the terms of a charter-party of the steamship *Den of Mains*, dated the 26th April 1911, is bad in law and of no effect; (4) an injunction to restrain the defendants, Mitsui and Co. Limited, from proceeding with the said threatened arbitration, and on the 17th this summons was issued. Meanwhile, the second defendants, on the instructions of the first defendants, paid the balance of freight claimed into court. Two affidavits were filed, one on behalf of the plaintiffs, and the other on behalf of the first defendants. Mr. Atkin, on behalf of the plaintiffs, made three points: (1) That the first defendants had no power to appoint Mr. Glover as sole arbitrator; (2) that the notices of the 1st and 10th Nov. were bad, as they were not served on the plaintiffs, but only on Galbraith,

Pembroke, and Co.; and (3) that the obligation of the plaintiffs under the charter-party to deliver the beans had ceased.

I will deal with these points in their order. As to the first, the defendants allege that this case comes within the words of sect. 6 of the Arbitration Act 1889, which provides that: Where a submission provides that the reference shall be to two arbitrators, one to be appointed by each party, &c. "(b) If, on such a reference, one party fails to appoint an arbitrator, either originally or by way of substitution as aforesaid for seven clear days after the other party, having appointed his arbitrator, has served the party making default with notice to make the appointment, the party who has appointed an arbitrator may appoint that arbitrator to act as sole arbitrator in the reference, and his award shall be binding on both parties as if he had been appointed by consent: Provided that the court or a judge may set aside any appointment made in pursuance of this section."

Does the submission here so provide? I think it does. The submission is in these terms: "Should any dispute arise under this charter-party, same to be settled in London by arbitrators, one to be appointed by each of the parties to this agreement, if necessary the arbitrators to appoint a third, whose decision to be final and binding upon both parties to the agreement. And it is further agreed the submission hereby made shall be made a rule—if in the United Kingdom or Continent—of Her Majesty's High Court of Justice, upon the application of either party." In my opinion until the arbitrators differ, and it becomes necessary to appoint a third arbitrator, the reference is to two arbitrators, and one is to be appointed by each party. It is none the less a reference to two arbitrators because it may at a later stage be necessary to call in a third. It is said on the other side that this is a reference to three arbitrators, and that two cannot make an award; it must be made by the three. That would be an absurd construction of the submission because in that case to enable a valid award to be made it must always be necessary to nominate a third whether the two differ or not, whereas the submission contemplates that it may be necessary to nominate a third. It is further said that if a third arbitrator is nominated the award must be made by all three. I do not agree with this. It would make an award almost impossible, because the third arbitrator is only to be appointed when necessary, that is, when the first two differ, and the dissenting arbitrator by refusing to join could make an award impossible. I ought to read this submission so as to make it workable if I can do so without unduly straining the language. I have no difficulty in reading this submission as entitling the two originally appointed to make an award, and if they have to appoint a third, as entitling the third to make an award. Read thus, I think the submission comes within sect. 6.

I now come to the second point, and as to this it is sufficient to say that, reading the affidavits and correspondence, I come to the conclusion that Galbraith, Pembroke, and Co. were the plaintiffs' agents to receive the notices; but even if this were not so, the plaintiffs in fact received the notice on the 2nd Nov., which was seven clear days before the notice of 10th Nov.

The last point is the real point between the parties. It was said for the plaintiffs that they are impeaching the agreement which contains the arbitration clause, and that on the authority of *Kitts* v. *Moore* (71 L. T. Rep. 676; (1895) 1 Q. B. 253) I am bound to restrain the arbitration till this question has been determined. Two answers are made: (1) that the plaintiffs are not impeaching the agreement, but are merely saying that one of the obligations under it has ceased; and (2) that I have all the facts before me to enable me to decide whether the obligation has ceased, and I ought to decide that now. I think I have all the facts, and, sitting as the judge in the Commercial Court, I think I ought, in order to save delay and expense, to decide this now. If I decide wrongly the case can go, if necessary, to the House of Lords. Being of that opinion I adjourned the summons into court so that I might have it thoroughly argued. Having heard the arguments and considered them, I have come to the conclusion that the right to claim damages if there has been a short delivery still remains in the first defendants.

The charter-party provides that the ship being loaded shall proceed to a certain port or certain ports and there deliver the cargo agreeably to bills of lading. The first defendants say that the plaintiffs have broken their contract contained in the charter-party by not delivering the whole quantity shipped. Mr. Atkin, for the plaintiffs, says that the obligation ceased, but he had some difficulty in saying when. First, he said it ceased when the defendants received the bills of lading with the intention of assigning them. That obviously raised a difficulty because, so far as the owners were concerned, that would leave them in doubt as to whether the charterers had the intention or not, and it might happen that they had one intention at one time and another later. Mr. Atkin was then driven to this: that it ceased when the charterers received assignable bills of lading. Now, as in practice all bills of lading are now assignable, the contention really amounts to this that the obligation ceases as soon as bills of lading are given. I asked Mr. Atkin how he would frame his plea to the defendant's claim, and I understood him to say that the original contract was varied by the bills of lading. I think, perhaps, another and better way of putting it would be that the giving of the bills of lading operated as an exoneration and discharge before breach. Could either plea be heard? Now the charter party contemplates that bills of lading will be issued, but it contains no provision that the liability under the charter-party shall cease. There is the usual clause (clause 15) providing for the cesser of the charterers' responsibility, but none for any cesser of the owners' responsibility. Both parties relied on the words "there deliver the cargo agreeably to bills of lading." These words seem to me to be in favour of the charterers, because this obligation cannot commence until there are bills of lading, yet according to Mr. Atkin it is to cease the moment they are given. Practically the obligation would never exist at all. Why am I to imply any cesser of liability? I have no right to so imply it unless I can see clearly that both parties so intended. If I am to look at the circumstances of this case there was certainly no such intention on the part of the charterers

Under the contract of the 27th April, as I read it, the buyers were only to pay for what was delivered. It is "Basis Delivered" contract, and by clause 10 the contract is to be void as regards any portion shipped that may not arrive. The charterers, therefore, will lose the value of any portion short delivered. Their object, therefore, would be to retain the remedy against the owner, not to give it up.

Nor can I see any sufficient reason why the shipowner should ask that his liability should cease. He cannot in any event be liable for more than the value of the goods short delivered. If the charterer has parted with his interest in all the goods shipped, he can only recover, at most, nominal damages. If, as here, he has not parted with his interest in any goods that do not arrive, the holder of the bill of lading can at most recover nominal damages. I doubt if he would have any cause of action. It was said that he could bring an action for conversion and recover the value of the goods. In my opinion he could not. He was not entitled to the bill of lading under the contract, and he did not in fact have it till the ship arrived, and for any conversion before that day he could not sue, for any conversion after arrival he could, of course, sue; but in such a case he would have to pay the charterers the price of the goods, as they arrived, and the charterer could only recover nominal damages. I do not think it is necessary to decide whether, when a bill of lading is indorsed under a contract of this kind where it is to be void as regards goods that do not arrive, the property in the goods passes to the indorsee. That point might be left to be decided at some future time. It is sufficient for me to say that I can find nothing in the circumstances of the case to satisfy me that it was the intention of the shipowner and charterer that their liability should cease, and apart from authority I can find no ground for making the implication.

Then what authority is there in favour of the implication? Although it is more than fifty years since the passing of the Bills of Lading Act there is no authority whatever in favour of it. I must hold that the obligation by the shipowners to the charterers for short delivery still remains. The parties have agreed that any dispute shall be referred to arbitration, and there is no ground for restraining the first defendants from proceeding with the arbitration. No sufficient ground has been shown for revoking the submission, or setting aside the notices.

If I am right the question is reduced to one of fact whether there has been a short delivery, and to what extent. Mr. Leck, for the defendants, has offered to allow the plaintiffs to appoint an arbitrator, and they shall have an opportunity of doing this within seven days, but they must pay the costs of this application in any event.

Solicitors for the plaintiffs, *Lightbound, Owen, and Co.*

Solicitors for the defendants, *Waltons* and *Co.*

HOUSE OF LORDS.

Nov. 24, 27, *and Dec.* 19, 1911.

(Before the Lord Chancellor (*a*) (Earl Loreburn), the Earl of Halsbury, Lords Atkinson, Gorell, and Shaw.)

Crawford and another v. Allan Line Steamship Company. (*b*)

ON APPEAL FROM THE SECOND DIVISION OF THE COURT OF SESSION IN SCOTLAND.

Bill of lading—Through carriage—Liability of shipowner for damage.

Goods were dispatched from Minneapolis to Glasgow, viâ New York, under a through bill of lading which covered the whole transit both by land and water carriers.

The bill of lading was signed by an agent representing both the inland carriers and the shipowners "on behalf of carriers severally, but not jointly," and contained clauses that the goods were "received in apparent good order except as noted," and that "no carrier shall be liable for loss or damage not occurring on his own road or his own portion of the straight route, nor after the property is ready for delivery to the next carrier or consignee."

The receipt given at New York by the respondents—the shipowners—to the inland carrier stated that a small quantity of the total shipment was damaged. On discharge from the respondents' vessel at Glasgow a much larger quantity was found to have similar damage. There was evidence to show that at New York the goods were hurriedly shipped without adequate examination as to the condition of delivery from the inland carrier, and there was also some evidence that during the shipment at New York rain had fallen which might have caused the damage.

Held, that the shipowners were liable for the whole loss except that notified to the inland carriers at New York.

By Lord Shaw: The principle of The Peter der Grosse (3 *Asp. Mar. Law Cas.* 195 (1876); 1 *P. Div.* 414; 34 *L. T. Rep.* 749) *as to onus of proof approved.*

Judgment of the Court of Session reversed and decision of the Lord Ordinary restored.

Appeal from a judgment of the Second Division of the Court of Session in Scotland, consisting of the Lord Justice-Clerk (Macdonald), Lords Ardwall and Salvesen, who had reversed a decision of the Lord Ordinary (Lord Mackenzie) in favour of the appellants, the pursuers below, in an action brought by them against the respondents to recover damages for injury to a cargo of flour, under circumstances which appear sufficiently from the head note above, and from the judgments of their Lordships. The case is reported (1911) Sess. Cas. 791; 48 Sc. L. Rep. 648.

Bailhache, K.C. and *D. P. Fleming* (of the Scottish Bar), appeared for the appellants.

T. B. Morison, K.C. and *C. H. Brown* (both of the Scottish Bar) for the respondents.

Campania Naviera Vascongada v. *Churchill* (10 Asp. Mar. Law Cas. 177; 94 L. T. Rep. 59;

(*a*) The Lord Chancellor was present during the argument, but took no part in the judgment.

(*b*) Reported by C. E. Malden, Esq., Barrister-at-Law.

(1906) 1 K. B. 237) was referred to in the course of the arguments.

Fleming was heard in reply.

At the conclusion of the arguments their Lordships took time to consider their judgement.

Dec. 19, 1911.—Their Lordships gave judgment as follows :—

The Earl of Halsbury. — My Lords: The importance of this case depends not so much on the amount sued for as the effect to be given to what is called a bill of lading, a document which goes somewhat beyond what in commercial circles is generally known by that name. It is a written document dealing with the carriage of a cargo of bags of flour to be carried from Minneapolis, in Minnesota, one of the Northern States of America, to Glasgow. This transit, involving, as it does, carriage by railroad, inland lake, and ocean voyage, comprehends the handing over of the goods to be carried by several independent carriers. It has been found convenient both to the carriers and to the owners of merchandise to devise this which is in some respects a novel form of bill of lading, so as to fix the responsibility of each of the successive carriers in turn for any damage or loss of or to the goods so carried under this contract during the period of transit.

The facts may be very briefly stated. The flour was in 41,000 bags, in good order and condition, and was so delivered to the first carrier. Its route was prescribed. It was to go *viâ* New York, and each carrier in turn was to certify by a system of checking the state and condition of the goods carried in handing them over to his successor, and the succeeding carrier was to receive them in like order and condition, and to be responsible for himself delivering them to his own successor on the route, except so far as they were checked. It is proved that this course was pursued at New York (whether this was accurately done is another matter with which I will deal presently). A somewhat trifling number were checked at New York, but a very large number, upwards of 4000 bags, were discovered at Glasgow to have been damaged.

Here I may say that it appears to me irrelevant to discuss what is the nature of the damage done. In respect of the question as applicable to these 4000 bags and upwards which were caked, the question of principle may be separated entirely from the question of the amount of damages which may be recovered. It is enough to say that there is no doubt that these 4000 and odd bags had been damaged, and the sole question, to my mind, is the responsibility which arises upon these bills of lading. It seems to me that the whole question is one of law, because, as a matter of fact, it does not appear to me that upon the facts stated there is any real dispute between the parties. The sole question is the validity of this form of bill of lading.

It is proved, as I have said, that this course of business was pursued from New York to Glasgow, and whether what I have described as the course of business was carried out accurately or not at New York does not appear to me (if the bill of lading as it is called is valid at all) to be very material, because, as I think the Lord Ordinary has pointed out, it is quite clear that the liability is one which follows. One must assume that each of these carriers in turn receives the things in good order and condition except so far as they were marked and checked in the manner which has been described.

The Lord Ordinary decided after proof that the defenders were liable by reason of the contractual engagement by the two documents called bills of lading, one signed at Minneapolis and the other at New York, but both signed by authorised agents.

Of course this part of the arrangement was most important, since but for this neither carrier nor merchant could fix responsibility for loss or damage, as there is an express engagement that no one of the independent carriers should be responsible for loss or damage except on his own part of the line. This obligation amongst others was duly signed by Mr. P. R. Jarvis on behalf of the defenders. The successive obligations and responsibilities of each succeeding carrier are absolutely essential to such a system as is established by the through bill of lading, enforced as it is by the contract to which all are parties, that none of them shall be held answerable for loss or damage beyond his own line, and I am wholly unable to agree to the passage in Lord Salvesen's judgment in which he says that no bill of lading of any kind was signed by the master or agent of the steamer at New York. Of course, the learned judge does not merely mean that it must have been signed at New York. He has, I think, omitted to notice that the bill of lading which is given to us as a specimen of all the bills of lading was signed by the master or agent expressly on behalf of the steamer which was to carry the flour from New York to Glasgow—that is, on behalf of the defenders themselves—is the only question which can arise in the cause. He appears not to have noticed this fact upon which the whole question turns. If this bill of lading is valid according to its true construction, I do not think it necessary to go into the question of the incorporation of the contract, because it seems to me that the bill of lading described with considerable accuracy what is to be done and what is to be assumed if no such marks as are indicated are found upon the bags on their arrival. This has been done, and it appears to me that the judgment of the Lord Ordinary is perfectly right and ought to be restored.

Lord Atkinson.—My Lords: This is an appeal from an interlocutor of the Second Division of the Court of Session, pronounced on the 17th March 1911, recalling an interlocutor of the Lord Ordinary dated the 23rd Dec. 1909. The action in which the last mentioned interlocutor was pronounced was raised to recover damages alleged to amount to 167*l.* 12*s.* 6*d.* for injury done to 4132 bags of flour, portion of a cargo of 41,110 bags loaded at New York on the 19th Dec. 1903 and following days on the respondents' steamship *Corinthian*, and carried by her for freight to the port of Glasgow, and there delivered to the consignees, the appellants, on the 11th Jan. 1904 and the days following.

It was not disputed by the respondents that these 4132 bags of flour were, when delivered in Glasgow, "caked." Caking was the damage complained of, and means that, the texture of the bag getting wet, the wet got through the bag and wetted a portion of the flour immediately contiguous to its inner surface, turning the flour into dough, which, when dry, hardened and became

what was called a cake. It was admitted on both sides that this caking did not injure the uncaked portion of the flour contained in the bag; and it was further admitted that the caking in this case resulted from the bags having been wetted by fresh water, and that this wetting did not take place in the hold of the steamer *Corinthian*, though, of course, the caking might and almost certainly would take place there if the bags were wet when placed in the hold.

It was admitted further that the bill of lading was not drawn up, delivered, or signed by the master of the ship, and that it was not conversant exclusively with the ocean voyage from New York to Glasgow. The goods had been purchased from the Pilsbury Washburn Flour Mills Company Limited, carrying on business at Minneapolis. Minn., in the United States of America, and were on the 10th Oct. 1903, delivered to the Lehigh Valley Transportation Company, consigned to Glasgow, to the order of this milling company, to be carried, as the appellants alleged, the entire way to this Scotch port under the terms of certain bills of lading. somewhat peculiar in form, for a through freight. It was signed P. R. Jarvis, agent, "on behalf of carriers severally but not jointly," and immediately above this signature appeared the following paragraph: "In witness whereof the agent signing on behalf of the said Lehigh Valley Transportation Company, and of the said Ocean Steamship Company or ocean steamer and her owner severally, and not jointly, hath affirmed two bills of lading, all of this time and date, one of which bills being accomplished, the other to stand void."

The sum sued for is of small amount, but the proper construction of through bills of lading such as this, which are common, and the determination of the rights and obligations of the parties concerned under them, are of vast importance. It is for the purpose of getting these matters finally decided that this litigation was, admittedly, commenced. The bill of lading contains on the face of it a statement that the flour was received "in apparent good order except as noted." The provision immediately following is to the effect that the goods so received "are to be carried to the port of New York, and thence by Allan State Line to the port Glasgow, Scotland . . . and to be there delivered in like good order and condition as above consigned, or to the consignee's assign." It then proceeds to provide that in consideration of the freight named, the service stipulated for is to be performed thereunder subject to the conditions, whether printed or written, contained in it. Then follow eleven conditions dealing with the service up to the port of New York.

It is only necessary to refer to three of these—namely, No. 1, providing that no carrier shall be liable for loss or damages caused, amongst other things, by "heat, frost, wet, or decay." No. 3 providing that "no carrier shall be liable for loss or damage not occurring on his own road or his portion of the straight route, nor after the property is ready for delivery to the next carrier or consignee" . . . and also that "claims for loss or damage must be made in writing to the agent at point of delivery promptly after arrival of the property, and if delayed for more than thirty days after the delivery of the property or after due notice of delivery thereof, no carrier should be liable thereunder," and No. 11 providing that the contract is executed and accomplished, and all liability thereunder terminates on the delivery of the property to the steamer, her master, agents, or servants, or to the steamship company, and that the inland freight and charges should be a just lien due and payable by the steamship company.

The second part of the bill of lading deals with the service after delivery at New York, and until delivery at Glasgow. It contains nineteen separate paragraphs. Of these No. 1 provides, amongst other things, that the steamer should not be liable for inland damage, and No. 11 that the steamer should only be responsible for such part of the goods as are actually delivered to her at the port of New York, and should not be liable for any loss or damage that might have occurred before such delivery, while agreeing to present promptly to inland carriers for account of owners of the goods any claim for shortage, loss, or damage that may have occurred before delivery of goods at the port of New York. It is, I think, plain that by these provisions for the prompt delivery of claims for damage, contained in par. 3 (dealing with inland carriage) and in par. 11 (dealing with ocean carriage), it was designed to set up machinery to protect on the one hand each carrier from claims for damages not occurring on his portion of the through route, and to secure on the other hand for the owner of the goods the means of enforcing any claim which he might have against the carrier on whose portion of the through route his goods were, in fact, lost or damaged. The shippers contracted with the transport company to carry these goods in the way and by the means stipulated for to their destination at Glasgow. The shippers were neither bound nor entitled to interfere with the cargo *en route*, and if, on the arrival of the goods at Glasgow in a damaged condition, the consignees were left to discover for themselves on what part of the route the damage was caused, they would be absolutely at the mercy of the carriers. It suits the interest of these carriers to carry goods in this way for through freights; but if they adopt that method of doing business for their own gain, it is but reasonable that, if they are to escape liability themselves, they should be bound by noting the condition of the goods when received by them in order to protect the interest of their customers, the shippers.

The second part of the bill of lading contains two other important provisions: first, by par. 2 it provides that the shipment until delivery at Glasgow is to be subject to all the provisions of the American statute of 1893, called the Harter Act. By sect. 4 of that Act the owner, master, or agent of every vessel transporting goods from an American port to any foreign port is bound to issue to the shippers a bill of lading containing, amongst other things, a statement of the apparent order and condition of the property delivered and received by the owner, master, or agent of the vessel for transportation, which document is thereby made *primâ facie* evidence of the receipt of the merchandise described in it; and, secondly (par. 18), a condition to the effect that the property covered by the bill of lading is to be subject to all the conditions expressed in the regular forms of bill of lading in use at the time by the steamship company. One of these so-called

ocean bills of lading is printed. It commences with the statement, "Received in apparent good order and condition by the Allan State Line from the . . . to be transported by the good British ship *Corinthian* . . . to be delivered" in like order and condition at the port of Glasgow.

Unless, therefore, the respondents violated the American law the bill of lading so signed by Jarvis must be taken to be a bill of lading issued by them or their agent for the ocean voyage, and Jarvis must be taken to be their agent for that purpose. I am quite unable, therefore, to follow the reasoning of Lord Salvesen when he says, as he is reported to have said, that the admission contained in the through bill of lading as to the condition in which the flour was received applies, and can only apply, to Minneapolis. That condition is that the goods are in apparent good order and condition except as notified. It is more restricted than what is required by the Harter Act or by the ocean bill of lading. Neither can I follow his reasoning where he says; "It would, of course, have been different if there had been a bill of lading signed on behalf of the ship acknowledging receipt of the flour in good order, and undertaking to deliver it on the same order, for there would have been a contractual obligation which it would lie on the ship to excuse itself from discharging. Here, as I hold, there was nothing of the kind." But what are the facts? The flour arrived at New York in due course. It was there warehoused. On the 12th Nov. 1903 H. C. Davis, the foreign freight agent of the Lehigh Valley Railway, wrote to Austen Baldwin and Co., the agents of the respondents, to notify them of the arrival of flour "engaged with you for Glasgow," and asking for a shipping permit.

The only way in which the flour was "engaged" with the respondents for Glasgow was under the through bill of lading. On the 12th Dec. these same agents of the respondent sent a permit authorising the receiving clerk of the *Corinthian* to receive this flour from the Lehigh Valley Company. That is followed by the delivery of the goods to the steamer on the 19th and subsequent days of Dec. 1903, in presence of the respondents' officials, their receiving clerk having been sent there for the purpose of checking the delivery and giving receipts therefor. He gave receipts on a printed form, I presume, headed "received for shipment on board steamship *Corinthian*, bound to Glasgow, subject to the exceptions and restriction contained in the usual bills of lading of the company." But these latter are the bills of lading incorporated into the through bill of lading by par. 18 of the latter. It would therefore appear to me impossible to hold that whether or not Jarvis, when he signed the general bill of lading purporting to act as agent for the respondents, amongst others, had antecedent authority from them so to do, they have not adopted, acted upon, and taken the benefit of the contract of carriage into which he purported to enter on their behalf, and can no more be permitted now to disclaim any liability which it may by its terms impose upon them then if they had placed the seal of the company under Jarvis's name on the 10th Oct. 1903. Neither can I concur in the suggestion of Lord Salvesen, that the inland carrier who tendered this flour to the ship was, as regards the loading, the agent of the original shipper, and that accordingly the consent of this carrier to have the goods loaded in rain binds the appellants. I think that Mr. Bailhache is quite right in his contention that the shippers had contracted with the first carrier to transport and deliver these goods to the steamship, just as the steamship had contracted to receive them when delivered, that the relation between the shipper and the inland carrier was the contractual relation thereby created, and that the carrier was no more the agent of the shippers to see to the proper delivery of the goods than was the steamship company their agent to see to the proper reception and stowage of them.

It is not suggested that this flour got wet in the warehouse. If it did it must have been caked when delivered, and this should have been readily detected. It is admitted that it must have got wet before it was placed in the hold of the steamer, though the caking might, and possibly did, take place there. I concur with the Lord Ordinary in thinking that the respondents have failed to prove that these bags of flour had either caked before they came into their custody or got so wetted before they came into their custody that as a necessary consequence they caked afterwards. If anything of that kind occurred the evidence, I think, shows that it could have been readily detected in the process of loading, and, if detected, it should have been notified so as to preserve the appellants' remedy against the wrongdoer. It has not been notified, and, that being so, I think that the respondents are bound by the statement contained in the bill of lading, that the flour was received in good order and condition save as noted—*i.e.*, save as to the 111 bags which were noted and are not included in the 4132 for which damages are claimed. I think that the interlocutor appealed against was, therefore, erroneous, and that of the Lord Ordinary was right, and should be restored, and this appeal allowed with costs.

Lord Gorell.—My Lords: The appellants in this case claim for damage to certain sacks or bags of flour carried on the respondents' steamship *Corinthian* from New York to Glasgow. The Lord Ordinary found that the respondents were liable to the appellants in respect of 4022 bags "caked," but the Second Division recalled the interlocutor of the Lord Ordinary, and assoilzied the respondents from the conclusions of the action. The summons in the action was as far back as May 1904, and the amount in dispute is not large, but the Lord Ordinary states that the object of the action was to stop the loading of flour at New York in wet weather. The flour was dispatched under through bills of lading from Minneapolis for Glasgow. It is admitted that the sacks or bags of flour when delivered to the inland carriers were apparently in good condition. According to the bills of lading the goods were stated to be received at Minneapolis "in apparent good order (except as noted) contents and condition of contents of package unknown," to be carried to New York, and thence by the Allan State Line to Glasgow, and there delivered in like good order and condition." The conditions of the bills of lading were divided into two parts. The first dealt with the service by the inland carriers, the Lehigh Valley Transportation Company, to the port of New York which terminated with delivery to the steamer

(clause 11). The delivery in this case was from the inland carrier's lighters, when the sacks or bags were placed in the steamer's slings to be hoisted on board the steamer. The second part dealt with the service after delivery to the steamer until delivery at Glasgow. By condition 1 of the second part the steamer was not liable for inland damage, and by condition 2 of that part the shipment was subject to all the terms, provisions, and exemptions in what is known as the "Harter Act," an Act of the United States of 1893. By condition 11 of the same part the steamer was only responsible for such part of the goods as were actually delivered to her at New York, and not liable for any loss or damage which might have occurred before such delivery, "while agreeing to present promptly to inland carriers for account of owners of goods any claims for shortage, or loss of goods, or damage which may have occurred before delivery of goods at the port first above mentioned," that is at New York. Condition 18 of the said second part provided "that the property covered by this bill of lading is subject to all conditions expressed in the regular forms of bills of lading in use by the steamship company at time of shipment, and to all local rules and regulations at port of destination not expressly provided for by the clauses herein." The through bill of lading was signed by an agent on behalf of the carriers severally but not jointly.

The receipts given by the respondents at New York to the inland carriers were headed "Received for shipment on board steamship *Corinthian*, bound to Glasgow, subject to the exceptions and restrictions of liability contained in the usual bills of lading of the company." I understand that these receipts notified that twenty-six sacks or bags were "caked," and that eighty-four were wet; but on delivery at Glasgow it was found that 4132 were "caked." "Caking" appears to be a well-recognised form of damage to flour resulting from wet. A layer next to the covering becomes hard, and the covering seems to be hard and firm to the touch. It is not disputed that the caking in question was caused by fresh water. Caked flour requires to be reconditioned, and the expense of this process to 4022 sacks or bags, the difference between 4132 bags found caked at Glasgow, and the 110 notified at New York as wet or caked, 167*l.* 2*s.* 2*d.*, is claimed in this action. The Harter Act, which will be found given conveniently in the late Judge Carver's work on Carriage by Sea, sect. 103, requires the giving of an ocean bill of lading or shipping document in case of goods carried out of the United States by sea, and such bill of lading must state, *inter alia*, "the apparent order and condition of such merchandise or property delivered to and received by the owner, master, or agent of the vessel for transportation, and such document shall be *primâ facie* evidence of the receipt of the merchandise therein described." The through bill of lading in question in effect incorporates, by clause 18 of the second part, the respondents' form of ocean bill of lading, which begins: "Received in apparent good order and condition," and provides for delivery "from ship's deck, where the shipowner's responsibility shall cease, in like order and condition at the port of Glasgow," and it also incorporates the Harter Act.

In my opinion the effect of these documents is to charge the respondent with the receipt of the flour in apparent good order and condition, except so far as they notify the inland carrier that this is not the case. Here they notified 110 sacks or bags as caked or wet. There were also notifications in respect of other matters not material to the case. Thus the appellants have an admission that the goods were received by the respondents in apparent good order and condition, except to the extent of 110 sacks or bags, and except as to other matters not material, and I think that it would be for the respondents to show, if they could, that the damage complained of was in fact done before they received the goods. The Lord Ordinary found that they had not discharged the onus of proving this.

During part of the time during which the cargo was loaded, after intimation from the steamship agents that the steamer was ready for cargo, the weather was wet, and precautions appear to have been taken to prevent the goods from being wetted as they were being taken on board from the lighters in which they came alongside. The Lord Ordinary found that there had not been negligence in the attempts to protect the goods, but it seems reasonably clear that they, in fact, became wetted in the loading, although it is said the loading was stopped when heavy showers or storms came on. If the bags were wet when taken on board the steamer it would be apparent, and if they were at that time caked the Lord Ordinary finds that "caking is damage to the contents of the bag indicated by external appearance."

In these cases of through bills of lading the consignors and consignees have no control over the transit, and the convenience of business requires that the shipowner, when he receives from the inland carrier, shall be careful to see what the apparent order and condition of the goods then is. If he accepts them as in apparent good order and condition, he takes the responsibility of delivering them in that order and condition, except so far as it is shown that the damage complained of was done before he received the goods or was caused by perils excepted in his part of the contract. None were relied on in this case. If they are not in apparent good order and condition he must notify the inland carrier, against whom the owner of the goods may claim, subject to any answer which that carrier has. It is said that this imposes a heavy duty on the shipowner, but I do not see that it places him in any worse position than would be the case were he the first receiver of the goods, as in any ordinary case of shipment from port to port, where for his own protection he must be careful not to sign bills of lading for goods as in apparent good order and condition when the goods are not so in fact.

The result is that in this case goods are admitted to have been received by the respondents in apparent good order and condition, to have been discharged in a damaged state, and no sufficient proof is given by the respondents that the damage was in fact done before they had possession of the goods, or by perils excepted after they had such possession.

If it had been established that the damage had in fact been done before the steamer took delivery of the goods, the question would arise as

to the duty imposed on the respondents to notify the inland carriers, and I think that they would be liable for breach of duty in this respect if they did not make a reasonable and proper inspection in the circumstances, and notify the results to the inland carrier by qualifying the receipts accordingly.

The Lord Ordinary finds that the loading of what was a very large cargo was pressed on, with the result that the examination, which would have disclosed caking, was not properly made. It seems to me that the evidence shows this. An experienced witness, Mr. Maloney, states it was about the biggest shipment of flour that he ever saw. The owners were evidently anxious to get the steamer away on her sailing day, and it would seem that they could not do this without going on loading notwithstanding the state of the weather, and that the result was an inadequate and hurried examination. It is not an excuse that the respondents desired to keep to the steamer's sailing date. If the shipowners do not notify, they in effect admit that the goods are received by them in apparent good order and condition, and if they wish to protect themselves they must make a proper examination. If they do notify, then the cargo owners must look to the inland carriers so far as the latter are not excused by the terms of their contract.

I am of opinion that the appeal should be allowed, and the decision of the Lord Ordinary restored.

Lord Shaw.—My Lords: There are two questions in this case. One is a question of law—namely, what is the proper construction of a document called in these proceedings a "through bill of lading." The other is a question of fact—as to the time and cause of certain damage suffered by a cargo covered by that bill. On both of these questions I agree with all of your Lordships that the conclusions reached by the learned Lord Ordinary were correct, and with the greatest respect to the learned judges of the Second Division, that their judgment, as expressed in the opinion of Lord Salvesen, was erroneous, and falls to be recalled.

The "through bill of lading" was for the transport of goods from Minneapolis to Glasgow *viâ* the Great Lakes. It was most natural that the consignor in such a case should make a contract for the entire journey and know his rights throughout, and most natural that the transporting interests should combine to facilitate such business. Your Lordships have given the details of the document. It was signed by P. R. Jarvis, agent, "on behalf of carriers severally but not jointly," the document bearing that the agents signed "on behalf of the said Lehigh Valley Transportation Company and of the said Ocean Steamship Company or ocean steamer and her owner." There are stipulations in it, also perfectly natural, that no carrier is to be liable for loss or damage by causes beyond his control, or not occurring on his own road or his portion of the through route; and it is provided that claims must be made in writing to the agent at the point of delivery promptly after the arrival of the goods, and if delayed for more than thirty days after delivery no carrier to be liable.

A special branch of contract with a special series of provisions applies to the sea-going portion of the route, and the earlier portion just referred to only bears upon this case as illustrating that the provisions of the entire contract point to liability for damage being promptly localised and the damage being paid, the particular carrier being thus ascertained, by that carrier. In the second portion of the contract, into which the form of an ocean bill of lading is imported by reference, it is provided, entirely in accordance with the general scheme of the bargain just mentioned, that the steamer is not to be liable for loss which may have occurred before delivery to it, while the ocean carrier agrees to present promptly to the inland carriers "any claims for shortage or loss or damage that may have occurred before delivery of goods at the port."

In the document as a whole the flour, which was the cargo, was acknowledged as received at Minneapolis in apparent good order, and it is further admitted by the joint minute of parties that each bag and sack of flour when delivered to the inland carrier was in good condition. In the adopted form of ocean bill of lading precisely the same language—"Received in apparent good order and condition"—was used. It is admitted that the Allan Line Company, the respondents, accepted delivery of the goods at New York, taking exception to the caked condition of about only 100 sacks (I proceed upon the concessions as to figures quite properly made in argument), and that when the goods were ready for discharge at Glasgow over 4000 sacks were discovered to be caked.

Were it not for the judgment of the Second Division, it would be rather difficult to discover what, upon the facts, constitute difficulties in the way of construing this contract. These difficulties, however, in so far as they have led to the reversal of the Lord Ordinary's judgment, appear to be reduced to two. It has been held, to use Lord Salvesen's words, that "the admission contained in the through bill of lading as to the condition in which the flour was received applies, and can only apply, to Minneapolis, and the obligation to deliver in the like good order and condition, while it is undertaken by the agent who signs it on behalf of all the carriers severally, but not jointly, does not apply in terms to successive carriers." I can only say that the very opposite appears to me to be the case. "In the second place, I think," says the same learned judge, "it may well be argued that the inland carrier, by whose servants the flour is tendered for shipment, is the agent for that purpose of the original shipper." It humbly appears to me that this is not the contract of the parties. Under a proper construction of this contract the several carriers must, in the view which I entertain, be held bound, unless notification to the contrary is promptly made, to the fact that the goods were received in apparent good order; and with regard to the shipowners for the Atlantic voyage, it appears to me, first, that they are expressly bound by the terms of the through bill of lading signed by Jarvis, who was agent for them as well as for the other carriers, that bill of lading stating that the goods were received in apparent good order and condition; while, further, it must be borne in mind that, under the law of the United States, such an obligation could not be dispensed with. It would appear to me to be a curious

result if, by the device of a through bill of lading, a means of escape could be provided from the general shipping law of the United States. Once, however, the point of law is settled in the sense which I have indicated, I do not find in Lord Salvesen's opinion that there would be any doubt in the mind of that learned judge as to the legal consequences which would follow. "If there had been a bill of lading, signed on behalf of the ship, acknowledging receipt of the flour in good order, and undertaking to deliver it in the same order . . . this would have been a contractual obligation which it would lie on the ship to excuse itself from discharging." I entirely agree in that view. As, accordingly, I am, along with your Lordships, of opinion, that there was such a bill of lading on behalf of the ship in this case, I think that the contractual obligation referred to rests upon the respondents. When the judgment of the Inner House is analysed, it is, however, to be observed that a consideration of the facts and of points as to the onus of proof is made from the opposite point of view—namely, that there was no such contractual obligation, and that the onus under a contract, worded like the present, for through carriage by land, lake, and ocean, rests upon the consignor to prove how the damage was caused, and to localise where it occurred. This might be singular as a matter of business; and it appears to me to be out of keeping, not only with the provisions, but with the scheme of the bargain of the parties.

The construction of the contract being as stated, the determination of the case upon fact is greatly simplified. If there had been no proof whatever, notwithstanding the contract, the principle of *The Peter der Grosse* (3 Asp. Mar. Law Cas. 195 (1876); 34 L. T. Rep. 749; 1 P. Div. 414) would apply. That principle is thus expressed by that very learned judge Sir Robert Phillimore: "Fairly construed and giving all due weight to the legal effect of the marginal note, the result must be that apparently and so far as met the eye and externally they were placed in good order on board this ship. Well, then, if that be so, if the plaintiffs have shown by *primâ facie* evidence, that having placed these bales and bags in good order on board the ship, they were taken out in bad order externally and internally. I agree with the observation which was made that it is not incumbent on them to show either how or when the damage was done." I may add, however, that quite apart from any question of onus, I could not have seen my way to differ from the view of the evidence taken by Lord Mackenzie. It appears to me that the respondents were extremely anxious for business reasons for the speedy loading of the *Corinthian* with this exceptionally large cargo of flour, and that they took weather risks, they, however, having the complete option on the documents, under "the condition that such cargo can, in the judgment of the steamer's agent (having regard to weather and other circumstances) be put on board the steamer in proper time." I do not follow the reasoning as to the weather not being exceptionally rainy for New York, or the introduction into this case of the custom of the port. If it had been necessary to fix time and cause for the damage to this cargo of flour, I think that it is fairly established that the appellants have done so, and that the responsibility rests with the shipowners.

Judgment appealed from reversed. Judgment of the Lord Ordinary restored, with costs in this House, and the courts below.

OWNERS OF THE FRANCES v. OWNERS OF THE HIGHLAND LOCH; THE HIGHLAND LOCH. (a)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Collision — Launch — Right of shipbuilders to launch—Duty of ship at anchor to get out of the way.

Where a person, through no fault of his own, is placed in a position in which he is obliged to take one of two risks, he is justified in taking what appears to be the lesser risk, and will not be held liable for damage so caused to the party whose act occasioned the risk.

Shipbuilders were preparing to launch a ship, and had given all the necessary notices that they intended to launch at a certain hour on a certain day. About two hours before the time fixed for the launch a vessel anchored in a position in which it was possible, though not probable, that she might be injured by the launch. Her master was warned that the launch was about to take place, and was requested to move, but refused to do so. There was evidence that if the launch had not taken place at the time fixed it must have been delayed for twenty-four hours, and that, after all preparations had been made, such delay would have caused considerable risk to life and property. The launch took place, and the vessel launched collided with the vessel at anchor and injured her.

Held, that the vessel at anchor was solely to blame for the collision.

Judgment of the court below affirmed.

APPEAL from a judgment of the Court of Appeal (Vaughan Williams, Fletcher Moulton, and Buckley, L.JJ.) with nautical assessors, who had reversed a judgment of the President of the Admiralty Division (Sir S. Evans) with nautical assessors.

The case is reported 12 Asp. Mar. Law Cas. 68; 105 L. T. Rep. 764; (1911) P. 261.

The action was brought by the appellants for damage sustained by their ketch *Frances* by reason of a collision between that vessel and the steamship *Highland Loch*, which was alleged to have been caused by the negligence of the respondents.

The respondents denied the alleged negligence on their part, and counter-claimed for the damage sustained by the *Highland Loch* in the collision.

(a) Reported by C. E. MALDEN, Esq., Barrister-at-Law.

The respondents were shipbuilders who had a shipbuilding yard and slipways known as Tranmere Yard, on the river Mersey. The steamship *Highland Loch*, a vessel of 7493 tons gross and 4729 tons net register, was built by the respondents in this yard; and her launch was fixed to take place at 12.30 p.m. on the 17th Jan. 1911. The usual and proper notices had been given of the impending launch, and all usual precautions were taken on the day of the launch to prevent danger to vessels in the river.

On the morning of the 17th Jan. 1911 the final preparations for launching the *Highland Loch* were made by removing the shores and keel blocks from under her, so as to let the vessel rest on the sliding ways. This work of removal was begun at 6 a.m., and was so timed as to be completed only just before the hour fixed for the launch. Whilst these preparations were in progress the *Frances*, which was proceeding up river, was observed by those in charge of the launch to bring up, at about 10.30, in a position, out in the river, a little below—*i.e.*, to the northward of—the line of the launch. A message was at once sent out from the yard to the master of the ketch, informing him of the impending launch, and warning him to move away, so as to be clear of all danger. The master was unable to get his vessel away without slipping his anchor, which was foul of some moorings at the bottom; and this he failed to do.

About 11.30 a.m. another message was sent out, urging the master to slip and buoy his anchor, and shortly after twelve noon the assistant yard manager of the respondents was sent out with a third message to the same effect, which was accompanied by an offer to tow the ketch away, if the master would slip his anchor. The master refused to slip, unless the respondents would undertake to be answerable for the anchor or to pay for a new one. The respondents, after causing the usual warning guns to be fired, then launched the *Highland Loch* at 12.45—a quarter of an hour later than the time originally fixed.

Contrary to expectation, the *Highland Loch*, after taking the water, instead of turning up river, took a turn down river, in the direction of the *Frances*, being caught by the tide, which had begun to ebb, in consequence of the delay in the launch, and came in contact with the latter vessel, giving her a sliding blow on her starboard side.

On the 20th Jan. 1911 the appellants commenced an action *in rem* against the respondents in the Admiralty Division of the High Court of Justice, claiming judgment against the respondents and their bail for the damage so caused, and a reference to the registrar and merchants to assess the amount thereof; and the respondents put in a counter-claim in such action claiming judgment against the appellants and their bail for the damage sustained by the *Highland Loch* in the collision, and a reference to the registrar and merchants to assess the same.

The President of the Admiralty Division found as a fact that the respondents ordered the *Highland Loch* to be launched when they knew the danger to the *Frances*; that they deliberately disregarded such danger, and launched her when they knew that she would almost certainly cause loss of life or injury to property.

The President was of opinion that the master of the *Frances* ought to have slipped his anchor, and had no right to make it a condition that the anchor should be paid for, but that his conduct did not excuse the respondents, because they could, by the exercise of care, have avoided the mischief which their deliberate action caused.

The case was carried to the Court of Appeal which reversed the judgment of the court below, and pronounced the collision to have been solely caused by the fault of the *Frances*.

There was evidence that if the launch had not taken place when it did it must have been delayed for twenty-four hours, till the daylight tide on the following day, and that there would have been considerable danger to the ship and to the men employed in the yard if she had been left on the sliding ways, for that time after the removal of the shores and keel blocks.

Bailhache, K.C. and *C. Robertson Dunlop* appeared for the appellants.

F. Laing, K.C. and *G. D. Keogh*, who appeared for the respondents, were not called on to address their Lordships.

At the conclusion of the argument for the appellants their Lordships gave judgment as follows:—

The LORD CHANCELLOR (Earl Loreburn).—My Lords: I think that there are no nice questions of law in the case, nor any questions of law at all. It is purely a question of fact. It is very clear to me that the ketch was to blame for acting unreasonably. It is unnecessary to dwell upon that, because all the learned judges have agreed upon that subject. I should say, if the vessel could get out of the way fairly, finding herself in this position, that acting as this ketch did, offers a typical illustration of unreasonableness. Then you have to see whether the defendants were at fault. I cannot see where negligence or breach of duty on their part arises in the circumstances. It is an exceptional state of things when a launch is to take place, because temporary and exclusive use is required for a short time of the water by those who have to launch the vessel. Others must do what is reasonable to facilitate that lawful and exceptional use of the water, and the owner of the ship to be launched must do the same. I have been watching to see what grounds were alleged of neglect of duty on the part of the owners of the launch. So far as I can see, these are the things suggested: that they ought to have taken precautions to see that the mooring chains should not be a source of obstruction at the bottom of the river. That suggestion was made by the junior counsel for the appellant, but I find it nowhere suggested in any other part of the case. That, I think, is so remote that we need not trouble ourselves about it. The defenders were not owners of the buoy or the mooring chains. The second suggestion was in not warning the ketch against the trap lying at the bottom of the river. That is also a great deal too remote. You could not imagine that the vessel would drag her anchor, and that she would come foul of a mooring chain. The next complaint was that there was not a ship below the yard to warn coming vessels. This ketch was warned after she got into difficulty two hours before the launch. The fourth suggestion was continuing the removal of blocks and shores after

it was known that the ketch could not be cleared. I do not see how the respondents could have been supposed to know that anyone would act in so unreasonable a manner. The next thing was that the owners of the launch ought to have paid the value of the anchor. That is a most unreasonable contention. I see nothing in that, nor in the complaint that there should have been a tug to move the ketch and keep her till she got back to her anchor. If the master of the ketch thought that desirable, he could have asked for it and he might have got it, but it never occurred to him until the litigation. In regard to the last point, that the launch ought not to have taken place, and that, having taken place, the collision was caused without any inevitable necessity, I have only to say this: The owners of the launch were placed in an extremely difficult position. I am quite satisfied, upon the evidence, that it would have been a dangerous thing to the men in the shipbuilding yard, and also to this craft in the river, if this launch had been postponed. The master of the ketch was thoroughly unreasonable in refusing to move her, as he could have done by slipping his anchor. The owners of the launch were placed in a position in which they had to take one of two risks. It seems to me that they took the lesser risk. Under the circumstances, they did nothing to which the law can attach any blame, or fix any penalty in the way of damages. I say no more, because I am entirely satisfied with the judgment of the Court of Appeal.

The Earl of HALSBURY.—My Lords: I am entirely of the same opinion. This is a question of fact. I am quite satisfied that the judgment which the Lord Chancellor has given disposes of all the facts which it is necessary to dispose of in order to arrive at the same conclusion as was arrived at by the Court of Appeal.

Lords MACNAGHTEN and ATKINSON concurred.

Judgment appealed from affirmed and appeal dismissed with costs.

Solicitors for the appellants, *Holman, Birdwood*, and *Co.*

Solicitors for the respondents, *Rawle, Johnstone*, and *Co*, for *Laces* and *Co.*, Liverpool.

OWNERS OF THE HERO v. LORDS COMMISSIONERS OF THE ADMIRALTY, and Cross-appeal; THE HERO. (a)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Ship—Collision—Both to blame.

A merchant steamship met a flotilla of warships proceeding upon an opposite and parallel course. The warships were proceeding in two columns each divided into three subdivisions. The merchant ship passed inside the first subdivision of the starboard column, which was a little out of its station to starboard, and outside the second subdivision, passing it green to green. On approaching the third subdivision she ported her helm, and ran across the bows of the leading vessel of that subdivision, causing risk of collision. The helm of the warship was first ported, and then starboarded, and a collision took place by which the warship was sunk.

Held, that both vessels were to blame as both had contributed to the accident.

Judgment of the court below affirmed.

CROSS-APPEALS from a judgment of the Court of Appeal (Vaughan Williams, Farwell, and Kennedy, L.JJ.) finding both vessels to blame for a collision which took place between the steamship *Hero* and H.M.S. *Blackwater* in the English Channel on the 6th April 1909.

The case is reported 12 Asp. Mar. Law Cas. 10; 105 L. T. Rep. 87; (1911) P. 128.

The President of the Admiralty Division (Sir S. Evans), sitting with Nautical Assessors, held the *Blackwater* alone to blame.

H.M.S. *Blackwater* was a twin-screw torpedo-boat destroyer, and at the time of the collision was proceeding up the English Channel to the eastward of Dungeness in the course of a voyage from Portland to the Firth of Forth. The *Hero* was a steel screw steamship of 1812 tons gross and 1164 tons net register, and at the time of the collision was proceeding down the English Channel in the course of a voyage from Rotterdam to Bristol laden with a cargo of general goods.

On behalf of the respondents and cross-appellants it was proved or admitted that shortly before 11.20 p.m. on the 6th April 1909, the wind being from E. to N.E., force 2 4, the weather fine and clear, and the tide running to E.N.E. about $1\frac{1}{4}$ knots, a flotilla of twenty-one of His Majesty's ships was proceeding up channel in two columns, disposed abeam to starboard. The ten vessels in the starboard column were somewhat out of position; the leading subdivision being to starboard of their position, the second subdivision being in position, and the third subdivision to port of their position. H.M.S. *Blackwater* was the leading ship of the rear subdivision in the starboard column, and, like the rest of the flotilla, was steering a course of N. 63 E. magnetic; she was making about 11-12 knots through the water, her regulation lights and also those of the entire flotilla were duly exhibited and burning brightly, and a good look-out was being kept.

In these circumstances, the *Hero*, which was meeting the fleet on practically an opposite and parallel course, passed down between the subdivisions of the starboard column, passing port side to port side with the leading subdivision and starboard side to starboard side with the second subdivision, and it was when she was passing this subdivision that those on board the *Blackwater* observed the masthead and green lights of the *Hero* at a distance estimated about 8-10 cables away and bearing about one point on the starboard bow. This was a position of perfect safety so that each vessel could pass starboard side to starboard side by keeping on their respective courses, and the *Hero* could have passed the rear subdivision just as she had passed the second one.

(a) Reported by C. E. MALDEN, Esq., Barrister-at-Law.

The *Blackwater* therefore kept her course and speed, but the *Hero*, when about two or three cables away, suddenly ported without giving any signal to indicate her manœuvre and tried to cross the bows of the *Blackwater*.

The helm of the *Blackwater* was immediately ported to try to go clear of the *Hero*, but the vessels being too close together for this to be effective, the helm was changed to nearly hard-a-starboard. The *Hero*, however, came on and with her starboard bow struck the starboard quarter of the *Blackwater* such a severe blow that she sank shortly afterwards.

F. Laing, K.C. and *Adair Roche* appeared for the owners of the *Hero*, appellants in the first appeal and respondents in the cross-appeal.

The *Attorney-General* (Sir R. Isaacs, K.C.), *Butler Aspinall*, K.C., and *Bateson*, K.C. for the respondents and cross-appellants.

At the conclusion of the argument their Lordships gave judgment as follows:—

The Lord Chancellor (Earl Loreburn).—My Lords: I do not think that there is any necessity for entering upon the history of what took place in this case, all of which has been most admirably presented by counsel for the appellants and respondents. The Court of Appeal found that there was statutory blame, and, therefore, thought that both vessels were in fault. In my opinion, and I think it is shared by your Lordships, I arrive at the same conclusion, upon the ground that both these vessels were, in fact, at fault. The *Hero* ported at the time, and under circumstances which have not been explained, and, to my mind, are, as presented, quite unintelligible. She ran across the bows of three torpedo destroyers, which were coming in an opposite direction. I think that in the ordinary, plain common-sense of this business, the *Hero* not only contributed, but mainly contributed, to this accident. On the other hand, the *Blackwater*, I think, also was not free from fault, because after she had ported, her commander came on the bridge and gave other orders, which contributed to the accident. I am quite aware of the disinclination —I will not enter upon it further—which has been expressed in this House, to differ in matters of fact from conclusions arrived at by both tribunals below. In this instance they have not agreed together upon their view of the facts. Besides that, I do not think that we are differing from any particular fact in this case which has been found by the President. We rather differ from the conclusion and the aspect which they ought to bear when those facts were ascertained. I accordingly move that this appeal be dismissed, coming as I do, not upon the same ground, but a different ground, to the identical conclusion of law to that arrived at by the Court of Appeal.

The Earl of Halsbury and Lords Macnaghten and Atkinson concurred.

Judgment appealed from affirmed. Appeal and cross-appeal dismissed with costs.

Solicitors for the appellants, *Thomas Cooper and Co.*

Solicitor for the respondents, *The Solicitor to the Treasury.*

Supreme Court of Judicature.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Nov. 8, 9, 10, 11, 16, 1910, *and Feb.* 3, 1911.

(Before Madden, Kenny, and Wright, JJ.)

Langham Steamship Company Limited v. James Gallagher. (a)

Charter-party—Strike clause, effect of—"Workmen essential to the discharge of the cargo,"—"Loading" and "discharge"—Demurrage.

A charter-party contained a "strike" clause: "If the cargo cannot be discharged by reason of a strike or lock-out of any class of workmen essential to the discharge of the cargo, the days of discharging shall not count during the continuance of such strike or lock-out." On the arrival of the ship at the port of discharge, a strike of carters was in existence, in consequence of which the docks had become congested; this condition of affairs rendered it impossible for the defendant, who was consignee, to accept delivery of the cargo, there being neither space for the cargo in the docks nor means of taking it away when tendered over the ship's rail.

Held, in the circumstances, that the carters were not a "class of workmen essential to the discharge" within the meaning of the clause, and that the defendant was not protected by the clause as discharge was not made impossible by the strike.

Held, also, that "discharge" is a joint act, necessitating co-operation on the part of the ship and the receiver of the cargo, and that the obligation of the ship under this term is fulfilled when its crew or its stevedore's men are in a position to offer, and do offer, delivery to the consignee over the ship's side.

Motion for a new trial.

The plaintiffs claimed demurrage at the rate of 4*d*. per ton on their steamer's gross register tonnage for seventeen days from the 30th July to the 17th Aug. 1907. The action was tried before Gibson, J., without a jury, at the Spring Assizes 1909. The trial commenced at Belfast and was adjourned to Dublin, owing to the illness of his Lordship.

The material facts of the case appear in the judgments of the court, and in the following report of the judge at the trial, which was as follows:—

This action was tried by me at Belfast and Dublin, the trial having begun at Belfast Spring Assizes 1909, and having, in consequence of my illness there, been adjourned to Dublin, I thought that the case had been settled, when in April I was asked to resume the hearing, and dispose of the action. The action was for demurrage. Three defences were relied on: (1) That the defendant was protected by the strike clause in the charter-party; (2) that there was a special contract that defendant was not to be liable for demurrage beyond three and a half days (which amount was lodged in court); (3) that there was a special contract that partial days were not to count as full days. The notice of motion impugns findings, and conclusions of fact and law, on all points.

(a) Reprinted by kind permission of the Council of Law Reporting for Ireland from the Irish Law Reports.

A shorthand writer was, by consent, sworn. I refer to his note for the oral evidence. In addition to such evidence all the correspondence (letters, telegrams, &c.) was entered, with bill of lading and charter-party, and the following proofs: (1) An analytical summary of the discharge, with days and modes of disposition; (2) the number of gangs employed, with days and hours of work; (3) summary of defendant's sales; (4) the ship's log; (5) the official record of the various vessels discharging in Dufferin and York Docks respectively, during the period in controversy.

I gave a written judgment, to which I refer. The main questions argued before me were on the first and second defences.

The material dates were as follows: "The carters' strike began about the 4th July; defendant bought the cargo afloat on the 15th July; the vessel arrived on the 26th July, and was ready for discharge in Dufferin Dock on the 27th July; the discharge began on Monday, the 5th Aug., and was completed on the 17th Aug.; and the strike ended on the 16th Aug.

There were important interviews between Ballingall (manager of plaintiffs) and defendant on the 24th July and the 10th Aug., and between Hamilton (representing plaintiffs) and defendant on the 7th Aug.

The charter-party fixed sixteen running days as the time for loading and unloading, and threw on the consignees (apart from the strike clause) an absolute obligation to discharge within two and a half days, thirteen and a half days having been spent in loading.

There were two questions on the strike clause— (1) Did it apply to demurrage after the running days had expired? In the absence of authority the other way, I held that it did apply to the contract period of demurrage, though no doubt the exclusion of Sundays in the demurrage periods may supply an adverse argument, Sundays being expressly excluded from the running days.

The second question was as to the effect of the strike clause, within which, as an exception, the defendant had to bring himself.

There never was a strike of stevedore's men at the ship save on part of one day, and the difficulty of disposing of the cargo was argued to be a reflex or indirect consequence of the carters' strike.

I held that defendant was liable for the ten days, from Thursday, the 8th Aug., to Saturday, the 17th Aug., as discharge overside was not shown to be impossible by defendant, on whom the onus lay, but I allowed credit for half a day, when work was stopped by partial strike. I also thought that defendant, in any view, was responsible for not slabbing on the quay at an earlier period, and also probably for the 8th Aug., on which day no work at all was done. Whether defendant might or might not be excused by stoppage of outlets caused by external strikers, whether in carting, railway service, or otherwise, appeared to me a difficult question, and I did not deem it necessary to decide it.

Assuming that defendant might be so excused for at east a portion of the ten days, I found that in existing conditions, as regards land discharge at that particular dock, defendant had done all in his power and was not to blame save to the limited extent above indicated. I found against the special contracts.

The case was treated in argument on the basis that defendant's liability, if it existed, extended to the entire number of days sued for; but I held that, on the course of dealing, demurrage could not be carried further back than the 8th Aug. I stayed execution and extended time for moving.—(Signed) J. G. Gibson.

The strike clause referred to is set out in the judgments of Madden, J. and Kenny, J., *infra*.

The following judgment was delivered by Mr. Justice Gibson at the trial:—

The defendant being sued for demurrage in respect of a cargo of wheat carried by the *Langham*, which he bought on the 15th July 1907, on the terms that he should have six days to discharge, relies on three defences, two going to the entire cause of action, one only an answer in part. They are — (1) He is absolutely protected by the strike clause in the charter-party; (2) there was a special contract that demurrage should be calculated at three and a half days only; (3) portions of days should not be reckoned as full days.

The charter-party, incorporated in the bill of lading, by clause 7, gave sixteen running days for loading and unloading, and ten days for demurrage at 4*d.* per ton; and clause 13 contained an exemption from liability where the cargo could not be discharged by reason of strike of any class of workmen essential to discharging, the days for discharging not to count during the continuance of such strike. Thirteen and a half days having been spent in loading, there were only two and a half running days left for discharge, as between the ship and the consignee, though the latter had, has against his vendor, the right to six free days.

But for the strike clause, under a charter-party of this type with a rigid time limit, there was an absolute obligation on the cargo owner to discharge, which could not be affected by strikes, inability to handle or dispose of the cargo from want of shed accommodation, or of cartage, or otherwise: (*Budgett* v. *Binnington*, 6 Asp. Mar. Law Cas. 549, 592; (1891) 1 Q. B. 35; *Hick* v. *Raymond and Reid*, 7 Asp. Mar. Law Cas. 23, 97, 233; (1893) A. C. 22; *Hulthen* v. *Stewart*, 9 Asp. Mar. Law Cas. 285, 403; (1903) A. C. 389). The *Langham* was an arrived vessel on the 27th July, whether she was in berth or not: (*Leonis Steamship Company Limited* v. *Rank Limited*, 10 Asp. Mar. Law Cas. 398; 11 Asp. Mar. Law Cas. 142; (1908) 1 K. B. 499).

The strike clause must be read as an exception from the unqualified obligation on the charterer. Two questions arise on it: (1) Does it apply to a strike outside the ship's and stevedore's work, affecting the ability of the charterer to get away and dispose of the cargo? (2) Does it apply to demurrage after the running days had expired? With regard to this latter question, as the running days might be exhausted in loading, and there is an agreed-on period of demurrage at a price, I am inclined, in the absence of authority the other way (and none was cited), to hold that the strike clause, where applicable, extends to the demurrage days proper.

The first, the large, question is one of difficulty. The onus is on the defendant to bring himself within the exception. Does the word "discharged" cover the time and series of acts outside the vessel after the merchant would in ordinary course have received and possessed disposing power over the cargo, the ship's duty having been completely performed?

The process of discharge is accomplished on board, partly by the ship's gang, who fill, hoist, and carry; and partly by the merchant's gang, who receive bags, weigh, and carry out. Here there was the same stevedore for ship and consignee, with double duty. The normal mode in which the consignee disposes of cargo when received is by shedding, carting, trucking, by putting overside into lighters, usually for purchasers *ex* ship; and towards the end of discharge, portion may be slabbed on the quay. Such modes of handling the cargo, when discharged from the ship, are, I suppose, common in most ports, and can hardly be described as customs binding the ship's discharge.

In the *Helios* case (8 Asp. Mar. Law Cas. 244; (1897) 2 Q. B. 83), cited by Mr. M'Grath, there was a true custom in relation to the ship's duty in discharging. Here there is no question as to the extent and duration of such duty, the point raised relating to inability of the merchant to take away the cargo if, and when, delivered. Ordinary business methods are not custom—that is a local law binding all coming to the port. But for the strike clause, the defendant would, beyond doubt, have been liable for all

detention not attributable to fault or breach of contract on the ship's part. In the present case, there was no strike of the dock labourers' gangs employed in discharge, save for half a day on the 13th Aug. They worked perhaps with less willingness than usual; but there is no tangible proof of delay from this cause. The ship would have been discharged without substantial delay, if there had been sufficient shed accommodation and there had been no cartage obstruction. Mr. Gordon contends that these matters are entirely outside the scope of the strike clause, and he points out that discharge over side was always practicable, as I think it was. The congestion of the sheds, as a consequence of the carters' strike in relation to the cargoes of other vessels, is also said to be merely an indirect consequence, which could not be treated as caused by such a strike as the clause contemplates. Before I state my conclusion as to the effect of the strike clause, I shall first briefly summarise the facts. There has been some controversy in the oral evidence, but many facts are admitted, or are established by certain proof; such as (1) the admittedly accurate summary of quantities discharged, with dates, and modes of discharge; (2) the defendant's sales book; (3) the list of gangs at the various holds, with days and hours; (4) the official records as to vessels discharging in the York and Dufferin Docks; (5) the log; (6) the correspondence. All this last was treated as entered; most of the letters, &c., not passing between the parties would have been evidence on cross-examination, or could have been used to refresh the memory; or, as in *Reg.* v. *Coll* (24 L. Rep. Ir. 522), not as substantive evidence, but to set up the credit of the witness, and to show that his evidence was not the result of subsequent invention.

The history of the case is as follows: The dock labourers' strike began early in July, but was at first confined to a certain class of business and to a certain area. It had not affected Burns' ability to discharge up to the 17th July (see his letter of that date). M'Cann's evidence is to the same effect. Events marched, or were supposed to be marching, rapidly, for on the 22nd July Burns wrote to the plaintiffs that work into sheds was completely stopped, and, save into lighters or coasters, discharge was then impossible. But that Burns' statement was exaggerated, or, at least, falsified in result, appears from the actual discharges proved to have taken place. On the 15th July the defendant had bought the cargo, so that both he and the plaintiffs were faced with an anxious and difficult problem. Ballingall having received from the Shipping Federation a telegram, dated the 23rd July, to the same effect as Burns' letter of the 22nd July, came over and had an important interview with the defendant (which I postpone for the present). The vessel arrived on the 26th, and would have berthed in the York Dock but for want of available shed accommodation there (see Burns' letter, the 26th July).

She was brought to the Dufferin Dock, east side, on the 27th July, when she was ready to discharge, and was an "arrived" ship. Another vessel, the *Gael* was already at that side; the quay was partly incumbered with cargo; there was no shed accommodation; and for that reason, and not directly on account of the strike, no discharge was attempted at the east side. Tinsley's evidence shows this. The dilatory behaviour of the *Gael* is not easy to account for in view of what was being done in the case of other vessels. There were on the 26th, 27th, and 29th July, in Dufferin Dock discharging, the following vessels besides the *Gael*: the *Helder* with a wood cargo, the *Noemi*, and the *Bardowie*. This last vessel was consigned to the defendant, and was occupying a shed berth at the west side. Her captain refused to move out until his cargo was unloaded, which was done on Saturday, the 3rd Aug., when the *Langham* moved in and took that berth. No discharge was attempted that day for want of bags, which the defendant alleged he could not get to the dock in consequence of the carters' strike. How the bags were brought afterwards does not appear. At this time the west shed was largely filled with the *Bardowie's* grain.

The discharge began on Monday, the 5th Aug., and was continued at various rates of progress and with varying gangs till Saturday, the 17th Aug., when the vessel, being completely unloaded, went away, having been chartered on the 12th Aug. for a voyage to begin on the 19th. The analysis of each day totals, and of the disposal of the output over the side, into sheds, waggons, carts, and on the quay is important. No work at all was done on Thursday, the 8th Aug. This is variously explained. The log states that the shed was full, though the telegram of the same day says that the shed would hold 300 tons more. Burns' letter of the 8th Aug. accounts for the cessation, in part, by the non-arrival of a coaster—a risk obviously to be borne by the defendant. On the 13th half a day was lost owing to the men refusing to carry to the Midland waggons. This was the only direct strike in connection with the discharge. The quantities each day varied considerably, and my conclusion is that the delay was caused, not by the refusal of men to hire or work, but by shed accommodation not being adequate, carting being restricted, and over-side discharge not being employed more extensively.

Important interviews took place on the 7th Aug. between Hamilton, representing the plaintiffs, and the defendant; and between the plaintiffs and the defendant on the 10th, which I will refer to in connection with the contract to forego demurrage relied on by the defendant.

The strike ended on the 16th. On that and the following day a large proportion was carted. On the 15th and 16th slabbing was resorted to for the first time 127 tons 10cwts. being so disposed on the former day, 40 tons 16cwts. on the latter. In my opinion at least 400 tons could have been slabbed without obstructing egress or circulation; and, had this expedient been adopted earlier, two days would have been saved. For slabbing, permission was required, but this was more or less a formal matter. Such permission was asked for on the 14th Aug., and given on the 15th. Had it been asked before, it would have been granted in the same way.

With regard to other vessels being discharged in the Dufferin Dock, the history of the *Noemi* and the *Gael* shows how hard it is to draw any satisfactory inference as to the effect of the carters' strike. The *Noemi*, a sailing vessel with wheat cargo, arrived in the middle of June, and her discharge, with a short interruption for repairs, took thirty-five days. The *Gael* arrived on the 15th July (at a time when Burns and M'Cann were operating without difficulty), and was left without any attempt at discharge till the 16th Aug., when the strike was over. In both these cases it is hard to suppose that what was possible for the *Langham*, arriving later, was not equally possible for them if they had wished, and had made any real effort to unload. The case of these two vessels shows how difficult it is to bring shed congestion into the strike clause, when such congestion may have resulted from default of other owners, and their lack of resource and energy. It would be an impossible inquiry to ascertain how far the fact of the sheds being full was due to strike, or to apathy and default of shed-owners. The *Gael*, after the strike was over, took fifteen days to discharge 2700 tons. In the Dufferin Dock there were unloading, besides the *Langham*, from the 13th to the 17th Aug., inclusive, one or two other vessels, as we know from the harbour figures, but no details as to discharge of these are given in the evidence.

The York Dock had a number of vessels discharging continuously from the 26th July to the 17th Aug., sometimes five, sometimes more. Discharge was also going on in the Spencer Dock.

The gangs employed on the *Langham* all belonged to the Dockers' Union, which, though in sympathy with the Carters' Union, was not part of, or identified with,

the latter union. No striking carters were included in these gangs; but such strikers were included in the gangs of other vessels, their object being apparently to make up for the loss of their carters' wages—an object which could only be obtained by the discharging gangs neither going on strike themselves nor obstructing the free passage of the cargo discharged. Still there was a certain amount of restlessness and insubordination.

With regard to the shed capacity in the Dufferin Dock, and the available accommodation there, and as to the impossibility of getting away the cargo by carting to a greater extent than the defendant did, I accept the evidence of the defendant and his witnesses. Given the weather conditions and the strike dangers, I also think that slabbing would not have been a safe or reasonable mode of disposing of the cargo as a whole, though towards the end of the discharge such mode was reasonable, and I find that slabbing, owing to the state of the quay, could not have been used to a greater extent than I have already indicated.

I also find that the defendant, as regards landward discharge, did what was reasonably possible to dispose of the cargo, and did not intentionally, or for any purpose of his own, delay the unloading. Burns, however, his stevedore, only put on the gangs necessary to discharge the quantity which could be accommodated and dealt with; and had there been available shed space, I have no doubt that, as far as gangs were concerned, the cargo could have been unloaded in six days or thereabouts. The ship could not unload if there was no one to receive; and the duty of ordering gangs, if dependent on the capacity of the receiver, would rest on Burns as merchant's stevedore, not on Burns as stevedore of the ship. It is not necessary to discuss the strike evidence in detail. The effect, influence, and contagion of the strike are exaggerated on the one side, and minimised on the other. In result the strike proved more restricted in character and extent than was at first feared, as the history of the various docks in relation to discharge shows. It is sufficent to state my conclusions of fact.

I am of opinion that defendant is not protected by the strike clause, as discharge was not made impossible by the strike. On the authorities cited by Mr. Gordon it is doubtful whether the clause applies to obstructions affecting the disposal of the discharged cargo, especially where such obstructions consist of want of storage accommodation caused by the congestion of cargoes, the result of the carters' stoppage. Here there was no strike of stevedore's men, or of any directly employed, in discharge. Assuming, however, that the clause may apply to stoppage of outlets by external strikers, I think that overside delivery never was impossible, and that slabbing, to the limited extent above stated, was possible, and should have been resorted to at an earlier date in order to accelerate the clearing of the steamer. I see great difficulty in bringing shed congestion within the strike clause. The degree and cause of such congestion—particularly in the York Dock, where there was continuous discharging—are uncertain. The defendant preferred the Dufferin Dock. Possibly, if in the York Dock, the vessel could have been unloaded more speedily. Again, sheds might be occupied for an unnecessarily long time owing to apathy, or for the convenience of merchants. Further, supposing that the strike of carters had been over on the 27th July, but sheds were then full, would that have fallen within the strike clause? Or, suppose the sheds were burnt in course of a carters' riot? When the clause is extended to obstruction, external to the ship and her duty of discharge, the difficulty of application is very great, depending, as it would, on accidental conditions outside the ship, after the ship's duty had been discharged. Subject to the question of the special contract to forego demurrage, the defendant is liable for demurrage. But where does the liability begin? The defendant had only two and a half days to unload. Looking at the whole evidence, the atmosphere of compromise in this critical situation, the defendant's letter of the 6th, and the plaintiffs' letter to Hayes of the 6th Aug., and his telegram, and the demurrage notices, I think the plaintiffs dealt with the defendant on the footing that, though further demands might be open, the two and a half days were not to be taken to expire before the 7th Aug.; and that demurrage, as per charter-party, only began to run on and from the 8th Aug. The question of liability on and from the 8th Aug. was let stand over, but both parties acted on the faith and assumption that the discharge was to be taken as beginning on the 5th. It would be contrary to good faith and the accepted course of discharge to go behind that date and carry the defendant's liability further back. The 5th was adopted as the first day of discharge proper, and represents a tacit compromise of doubtful rights as to which neither party was confident. The defence can, if necessary, be amended to carry out this view, if the point is not open on the traverse of demurrage. The 5th was accepted on both sides as the starting-point from which the unexhausted residue of running days was to be reckoned. The arrangement as to partial days not being reckoned as full days is explicable only in the view that the days before the 5th (during which there was no discharge whatever) were to be struck out altogether, so as to make the 5th the first lay-day. This point was not argued by counsel, who assumed that it was a question of all or none.

As against such demurrage, the defendant is fairly entitled to credit for half a day on the 13th, as on that occasion I think the gangs on board would not, in any circumstances, have worked. I decide this on the assumption that the strike clause applies to the contractual period allowed for demurrage. With regard to the special defences as to portions of days not being reckoned as full days, I have incidentally dealt with it above. The plantiffs' concession was expressly limited to the past, and cannot be enlarged to embrace the whole period of delivery—the future as well as the past. The repeated demurrage notes excluded any possibility of misunderstanding. The defendant is bound by the terms of the telegram, which he accepted without objection.

This brings me to the last point in the case, on which, if the defendant succeeds, the action fails, and must be dismissed with costs. Did the plaintiffs contract on the 24th July, that the defendant was to be relieved from all demurrage liability beyond three and a half days? At the time the alleged bargain was made the vessel had not arrived; the future was alarming, but quite uncertain. I think neither party knew their exact rights under the charter-party and the operation of the strike clause. The defendant believed — honestly believed—that the strike freed him from liability for demurrage. Did the plaintiffs contemplate that if and though the defendant was unprotected by the strike clause, he was to be absolved from all demurrage if he paid three and a half days, and did what he could to expedite delivery?

Ballingall struck me as a rather stolid, unimpulsive man, hardly likely to enter hastily into such an apparently one-sided bargain; the defendant was already bound to do what was reasonably possible, and there is nothing in the proof to indicate that he ever did anything in excess of the duty thrown on him by the charter-party. The defendant's defence rests on his own oral evidence, supported to some extent by Tinsley, Burns' foreman. The plaintiffs' denial is based on their own oral testimony, and that of Captain Hayes and Mr. Hamilton, aided by the correspondence and acts of the parties. Some confusion was caused by the method of cross-examination in Belfast. I think Ballingall supposed that the alleged contract was founded on something that took place on the 10th Aug., and he was not asked in detail as to the terms of the conversation of the 24th July. At this distance of time it is difficult to be

certain as to sequence, or the words of question and answer; the only thing anyone could be confident about would be the object and result of the interviews. As to the interview of the 7th Aug., Hamilton was not cross-examined about it in Belfast. Hence at the close of the case I allowed Ballingall and Hamilton to be recalled at the end of the defendant's case. Without going into minute details, I am satisfied that the defendant has put a false construction on the conversation, and has mistakenly turned what took place into a contract to forego contractual rights. Mr. Ballingall was not a good witness; he was dull in appearance and manner; he was influenced to some extent by a desire to evade anything that might tell against his case—a remark which, in some degree, applies to the defendant also. On the whole, I accept the version of Ballingall, Hayes, and Hamilton respectively, in preference to that of the defendant and Tinsley. The latter represented Burns, and it is hard to understand why the plaintiff wrote to him as he did, knowing that Tinsley had been present at the interview of the 24th, if there had been any such firm concluded bargain as the defendant now states. In the face of the repeated demurrage notes the defendant only disclaimed liability generally, and made no distinct reference to any contract till the 19th Aug., when in his letter to Messrs. Burns he states that on the first day of discharge he made an arrangement with them, and that the owner had confirmed such arrangement. This letter shows how unreliable is his present professedly accurate recollection of these conversations with question and answer. With the facts fresher in his mind he puts the initial bargain on the first day of discharge, which would be the 5th Aug., whereas the contract of the 24th July was before the vessel had arrived. The primary bargain is stated to have been with Burns' and to have been confirmed by the plaintiffs, Of such initial bargain there is no trace in the evidence. Why does not the writer appeal to his correspondent's own representative, Tinsley, who was present at the alleged bargain of the 24th? He speaks of the confirmation as of something not known to Burns. The interview of the 24th only took a few minutes, and resulted in a letter to Derry which might have solved all difficulty. The conduct of both parties appears quite inconsistent with the supposed contract; see letters of the 26th July, Ballingall to Hayes; 27th July, Burns to Ballingall; 31st July, Ballingall to Hayes; 1st Aug., Hayes to plaintiffs; telegram, 3rd Aug., plaintiffs to Burnes, "without prejudice to all questions on either side"; 6th Aug., Gallagher to Burns; 6th Aug., plaintiffs to Burns; 6th Aug., plaintiffs to Hayes; 7th Aug., telegram; 7th Aug., notice of demurrage; 7th Aug., Hamilton to plaintiffs; 7th Aug., plaintiffs to Hamilton; 8th Aug., plaintiffs to Burns; 8th Aug., Burns to Gallagher; 8th Aug., plaintiffs to Burns; 10th Aug.; 12th Aug.; defendant's letter of the 19th. Mr. M'Grath, for the defendant, suggested that in writing to Burns on the 6th Aug., as he did, the defendant's object was to spur Burns to exertion as, if he had stated his bargain with Ballingall, Burns might have relaxed his efforts. But Tinsley knew all about the alleged contract, and the defendant's letter of the 19th Aug. entirely disposes of the suggested explanation. I find it impossible to reconcile these letters with such a contract as is now relied on—a contract that, even if the defendant was not protected by the strike clause, the plaintiff was to release the defendant from all demurrage claims beyond three and a half days. The limited concession made as to the two and a half days seems decisive that demurrage *ultra* was not abandoned or released. To prove rescission or variation of a charter-party or any other written business contract, the clearest proof would be necessary. The defendant's counsel suggested that Ballingall was wilfully and knowingly seeking to evade a bargain he had made. On the letters no other course was open. The plaintiffs' counsel made no similar counter-charge. Colouring the past by the present, and misunderstanding his legal rights, the defendant construed what was said in his own interest, and has come to believe that the idea which was behind his own mind was expressed in words and became a contract. Whatever the defendant may have thought, the plaintiffs did not assent to discharge demurrage: they were never *ad idem* with the defendant. The defendant is not consciously misrepresenting, but intrinsic probability is strong, and the letters seem to me decisive, against the defendant's version and understanding of the interview. He, no doubt, all through believed that he was protected by the strike clause. I therefore find for the plaintiffs for demurrage, as claimed in the notice of the 17th Aug., from the 8th Aug. to the 17th Aug., inclusive, less half a day on the 13th, making altogether 435*l.* 2*s.*, and give judgment for that amount with costs. The amount lodged in court, 160*l.* 6*s.* will be paid in part satisfaction. The costs will include the shorthand writer and his notes.

The judge found for the plaintiffs for demurrage on and from the 8th Aug. to the 17th Aug. 1907, inclusive, as per charter-party, less half a day on the 13th Aug., making together the sum of 435*l.* 2*s.*, and gave judgment for the plaintiffs for the sum of 274*l.* 6*s.* over and above the sum of 160*l.* 6*s.* lodged in court by the defendant, with costs.

Defendant now moved to have this judgment set aside, or for a new trial, on the grounds that the findings of the learned judge were wrong in law and contrary to evidence and the weight of evidence, and that the learned judge misdirected himself in law.

The arguments and authorities cited appear fully from the judgments.

The Right Hon. *J. H. Campbell*, K.C., *Ronan*, K.C., *M'Grath*, K.C., and *Hanna* for the defendant.

Gordon, K.C., *Chambers*, K.C., *M'Gonigal*, and *Fitz Stephen Burke* for the plaintiffs.

Cur. adv. vult.

Madden, J.—The plaintiffs in this action are the owners of the steamship *Langham*, in which certain goods were carried from Selina to the Port of Belfast under a bill of lading of which the defendant was assignee. By the terms of the charter-party, which were incorporated with the bill of lading, sixteen running days (Sundays and certain holidays excepted) were allowed for loading and unloading, and ten days on demurrage at a certain rate per running day calculated on the tonnage. The charter-party contained the following clause: "If the cargo cannot be discharged by reason of a strike or lock-out of any class of workmen essential to the discharge of the cargo, the days for discharging shall not count during the continuance of such strike or lock-out. A strike of the receiver's men only shall not exonerate him from any demurrage for which he may be liable under this charter if, by the use of reasonable diligence, he could have obtained other suitable labour; and, in case of any delay by reason of the before-mentioned causes, no claim shall be made by the receivers of the cargo, the owners of the ship, or by any other party under this charter."

The plaintiffs allege that the goods were carried in their ship from Selina to Belfast, the port of discharge, and there delivered to the defendant, who kept the ship on demurrage for the full period of ten days, from the 1st to the 10th Aug., at the rate of 45*l.* 16*s.* *per diem*.

The ship arrived in Belfast, and was ready for discharge on the 27th July. Discharge com-

menced on the 5th Aug. and was finished on the 17th. Of the sixteen running days allowed by the charter-party, thirteen and a half days had been spent in loading, leaving only two and a half days for discharge. It was part of the agreement between the vendor and the assignee of the cargo that the latter should have six days for discharge. This agreement did not affect the mutual rights of the shipowner and the charterer or his assignee, and if there were nothing more in the case, the plaintiffs would clearly be entitled to claim for demurrage. No question has been argued before us as to the amount allowed by the learned judge. As against the claim of the shipowner, the defendant relies on the following defences, each going to the entire right of action. First, he relies on the clause of the charter which I have quoted, alleging that the delay was caused by a strike of workmen essential to the discharge of the cargo; and, secondly, he alleges an agreement between the plaintiffs and the defendant that, in consideration of the defendant making special efforts and arrangements for the discharge of the cargo during the continuance of the strike, the demurrage should be calculated at three and a half days only, and they bring into court an amount for demurrage calculated on this basis.

There is no substantial controversy as to the condition of affairs at the Port of Belfast when the *Langham* arrived on the 27th July. A strike of carters had been for some days in progress, which did not terminate until the 16th Aug. There was no strike of dock labourers. The slackness in working on their part was the result of there being little work for them to do; and, when the carters' strike was over, the vessel was rapidly discharged. The cargo of the *Langham* consisted of grain in bulk. It was found as a matter of fact that a cargo of this kind when discharged over the ship's rail to the quay in sacks is customarily disposed of as follows: (1) It may be conveyed to its destination on carts; (2) stored in sheds; or (3) "slabbed" on the quay. The last-mentioned mode of disposal is under the direction of the quay authority. The harbour-master on the 16th Aug. gave permission for slabbing on the quay to a limited extent, and, as the cargo amounted to about 4000 tons, it is evident that only a small proportion of the cargo could be disposed of, after discharge, in this manner. Another mode of discharge is over the ship's rail into lighters. It is stated that this practice is resorted to only for the purpose of conveying to purchasers grain which had been already sold; this is intelligible, for if a destination was not thus provided for the grain, it would have to be utimately discharged from the lighters to the quay, and then disposed of by cartage, shedding, or slabbing. Carting was impossible during the continuance of the strike. I am satisfied upon the evidence that there was not sufficient accommodation in the sheds, and that this congested condition was in consequence of the strike of carters. Gibson, J. was of opinion that at least 400 tons could have been slabbed without obstructing egress or circulation. Even adopting this estimate, the conclusion is irresistible that the cargo, if discharged from the ship's rail on the quay or into lighters, could not have been carried away or disposed of by the consignee. In this state of facts, it was practically impossible for him to accept discharge of the cargo. I say "practically," for it was physically possible that the sacks should have been delivered over the ship's rail into lighters, regardless of its ultimate destination, or discharged on the quay, and thence dropped into the water. But for all practical purposes there was no alternative open to the consignee of the cargo other than the detention of the ship to the termination of the strike.

That this view of the position was taken by all parties concerned appears from the correspondence. On the 22nd July the stevedores (Burns Brothers) wrote to the plaintiffs' agents: "Work in the sheds is now completely stopped, as there is not an inch of spare ground. . . . The open quays are similarly situated with timber . . . the carters are on strike, so that conveyance by this means from the ship's side is impossible . . . unless cargo was going overside into lighters or coasting steamers, we may tell you candidly, discharging would be impossible as matters are at present." It appears from a letter written by the defendants on the 24th July that an attempt was made to have the ship discharged in Londonderry, and that the owner was ready to order her from Belfast to Londonderry, on the terms of the charter-party, without any extra freight, 'six days to be allowed for discharge.'" This suggestion could not be carried into effect in consequence of the opposition of the Londonderry dock labourers. The owners' proposal is relied upon as evidence that they did not believe that the expense of detention at Belfast by reason of the strike would fall on the consignees. I do not take this view of the correspondence. Both parties were involved in a common difficulty, and it was in the interest of both to avoid the risk of detention at Belfast for an indefinite period, by which the ship might be prevented from fulfilling engagements elsewhere. However this may be, the view of their rights under the charter-party taken by the owners of the ship could not affect the construction of this document, although it would be a matter to be taken into account in considering the evidence relating to the special agreement alleged by the defence.

I now proceed to consider the terms of the charter-party, and their application to the state of facts disclosed by the evidence. Sixteen running days are to be allowed "for loading and unloading." "Unloading" and "discharge" are in this document convertible terms. This appears from the use of the phrase "port of loading" in par. 1, and "port of discharge" in par. 10, as denoting the port where the vessel is to be unloaded. If there were nothing more in the charter, the contract to pay demurrage would be an absolute one. The nature and effect of such a contract are clearly pointed out by Lord Esher in *Budgett and Co.* v. *Binnington and Co.* (6 Asp. Mar. Law Cas. 549, 592; (1891) 1 Q. B. 37): "It has been held that the demurrage contract, where a fixed number of lay days is mentioned, is a contract by the freighter, that, if the ship is detained over those days, he will pay demurrage for so long as the ship is in such a condition that she cannot be handed back for the use of the shipper. This has been called an absolute and independent contract, and it is obvious that a contrast is intended to be drawn between such a contract and a conditional one, and that by an absolute contract is meant an un-

conditional one. The only condition attached to it is that lay days shall have commenced and run out, and that condition being fulfilled the obligation arises. Directly the shipowner shows this state of facts he has proved his case, and it lies on the other side to show, not that there has been no breach of contract, but that he is excused from the performance—in other words, his case is one of confession and avoidance, and the whole burden of proof is on him."

If the shipowner were by any act of his own, or one for which he was responsible, to prevent the discharge, the charterer or consignee would be excused on the general principle that a breach of contract is excused when the party committing the breach has been prevented from carrying out his contract by the other party to it. But where the nonperformance of his part of the contract by the shipowner is the consequence of the acts of persons over whom he has no control, as, for example, a strike of dock labourers, this principle does not apply, and the contract to pay demurrage being absolute and unconditional, must be performed by the consignee of the cargo.

It is, of course, open to the parties to a contract for demurrage to import into the contract such express conditions and exceptions as they think proper. In the present case an exception has been inserted in the charter-party, which would have excused the consignee if it had been present in *Budgett* v. *Binnington* (*ubi sup.*) and which may have been introduced into contracts of this kind in view of the state of the law as laid down in that case.

Dock labourers are certainly essential to the discharge of the cargo, for it would be impossible without them to carry out the process, as described in the evidence. The question for our decision is, whether carters are essential to the discharge of the cargo; or, it may be stated in more general terms, are appliances of any kind, used for the purpose of disposing of the cargo when delivered over the rail of the vessel, essential to the discharge of the cargo, within the meaning of the clause in the charter under consideration.

In order to answer this question, it is necessary to ascertain the precise meaning of the word "discharge" in the charter-party. And here we get assistance from the consideration of the correlative term "loading." Loading and unloading, or discharge, have this in common, that they depend on the joint action of the shipowner and another person. What, then, is this joint action in the case of loading, and how far does it extend? This question was considered by the House of Lords in *Grant and Co.* v. *Coverdale* (5 Asp. Mar. Law Cas. 74, 353 (1884); 9 A. C. 470). A ship was to proceed to Cardiff, East Bute Dock, and there load in the customary manner a complete cargo of bar-iron. There was a fixed number of lay days, and ten days on demurrage over and above. The charter-party contained an exception in the following terms: "Except in case of hands striking work, or frost or floods, or any other unavoidable accidents preventing the loading or unloading, in which case owners to have the option of employing the steamer in some short-voyage trade until receipt of written notice from charterers that they are ready to resume employment without delay to the ship." A substantial portion of the iron, without which a complete cargo could not be loaded, was to be supplied by a firm named Crawshay. When the ship arrived at the East Bute Dock, the Crawshays had their portion of the cargo ready to be conveyed to the ship and there loaded. It was proved that the only practicable mode of conveying this portion of the cargo from the Crawshays' wharf to the ship as she was lying in the East Bute Dock was in lighters, along a canal which was rendered impassible by ice during the days in question. The East Bute Dock was never frozen over, and the ship would have been loaded with slight delay only, and dispatched to sea if the iron could have been conveyed from Crawshays' wharf to the unfrozen dock where the ship lay. The referee, to whom matters of fact had been referred at the trial, found as a fact that the delay in loading was caused by the frost alone. The House of Lords, affirming the decision of the Court of Appeal, held that in this state of facts the case was not taken out of the demurrage clause by the exceptions. "The exception in the contract being limited to 'accidents preventing the loading,' the only question is what is the meaning of 'loading,' and whether this particular frost did in fact prevent the loading. There are two things to be done; the operation of loading is the particular operation in which both parties have to concur. . . . No doubt, for the purpose of loading, the charterer must also do his part; he must have the cargo there to be loaded, and tender it to be put on board the ship in the usual and proper manner. Therefore, the business of both parties meets and concurs in that operation of loading. When the chartererer has tendered the cargo, and when the operation has proceeded to the point at which the shipowner is to take charge of it, everything after that is the shipowner's business, and everthing before the commencement of the operation of loading, those things which are so essential to the operation of loading that they are conditions *sine quibus non* of that operation—everything before that is the charterer's part only. It would appear to me to be unreasonable to suppose, unless the words made it perfectly clear, that the shipowner has contracted that his ship may be detained for an unlimited time on account of impediments, whatever their nature may be, to those things with which he has nothing whatever to do, which precede altogether the whole operation of loading, which are no part whatever of it, but which belong to that which is exclusively the charterer's business." Lord Selborne would appear from these words to have been influenced to some extent by the generality of the words in the exception; but it is evident from his judgment that the decision of the House would have been the same if the exception had been limited, as in the present case, to a single cause of delay. This appears even more clearly from the judgments of Lords Bramwell and FitzGerald —"The words, to my mind, are tolerably plain; they relate entirely to something which prevents the loading—that is to say, the actual putting on board of the cargo, and I think when you couple that with the expression in the earlier part of the charter-party, that the vessel is to 'proceed to the East Bute Dock, or so near thereunto as she may safely get, and there load,' the exemption or exception really does relate to the very act of loading. Then that being so, in the present case frost did not prevent the loading: what it did

was to prevent the particular cargo which the charterer had provided from being brought to the place where the loading would not have been prevented" (per Lord Bramwell, at p. 478). "It seems to me that the exception applies only where the accident prevents the loading at the place of loading, and not where it prevents or retards the transit or conveyance of the cargo to the place of loading" (per Lord FitzGerald, at p. 479).

These conclusions, and the reasoning upon which they are founded, are applicable, *mutatis mutandis*, to the operation of unloading. The operations of loading and unloading have this in common that they are both conducted jointly by the charterer and by the shipowner. The receivers in loading are the shipowner and his servants, and, in unloading, the charterer and his servants. The exception deals in terms with the receiving of the cargo at the port of discharge. It provides that a strike of the receiver's men only shall not exonerate him from demurrage if by the use of reasonable diligence he could have obtained other suitable labour. The sixteen lay days are expressly allowed for the joint operation of "loading and unloading." An exception in any instrument must be read and construed in the light of the provision on which it is engrafted, and the extension, under certain circumstances of the lay days, must be read as referable to the same operations.

The strike in the present case was of a class of labourers who were required not for the unloading of the cargo, but for disposing of it after it had been unloaded, and delivered over the rail of the ship. This strike was undoubtedly the cause of the delay in unloading and the consequent detention of the ship, as the frost was the cause of the failure to load in *Grant* v. *Coverdale* (*ubi sup.*). The argument addressed to the House of Lords in that case is the same, *mutatis mutandis*, as that which was addressed to us on behalf of the defendant. "The exception," it was said, "applies to all cases in which the loading was directly and in fact prevented by frost, and in which the cargo would in fact have been duly loaded but for the occurrence of such frost." The House of Lords recognised that operations connected with the bringing of the cargo to the ship's side "are so essential to the operation of loading that they are conditions *sine quibus non* of that operation." But they held that everything before the operation of loading is the charterer's part only. On the same principle everything after the operation of unloading is the part of the charterer, and applying to the case of unloading the observations of Lord Selborne, it would be unreasonable, in the absence of express words, to suppose a contract on the part of the shipowner that his ship might be detained for an unlimited time on account of impediments to those things with which he has nothing whatever to do, which follow on the operation of unloading, are no part of it, and belong to that which is exclusively the charterer's business. The decision of the House of Lords in *Postlethwaite* v. *Freeland* (4 Asp. Mar. Law Cas. 129, 302 (1880); 5 A. C. 599) was strongly relied on in the able argument addressed to us on behalf of the defendant. The question in that case was a different one from that which we have to decide; there were no fixed lay days, and the question was as to the extent of the obligation cast upon the charterer under the following stipulation: "The cargo is to be discharged with all dispatch according to the custom of the port," the House of Lords, affirming the decision of the Court of Appeal, held that the obligation under such a contract is fulfilled if the consignee employs all the means and facilities for discharge available at the port. It appears that the result would have been the same in the absence of express reference to the custom of the port. The case is expressly distinguished from one in which lay days are prescribed by the charter. "For whatever reason the parties who framed the charter-party in this case, and that in the case of *Wright* v. *New Zealand Company* (4 Asp. Mar. Law Cas. 118 (1878); 4 Ex. Div. 165), did not choose to have lay days for the discharge of the vessel, and, consequently, it is left to the court to say what is the contract implied by law" (per Lord Blackburn, at p. 619). No such question arises when lay days are defined; there is then an express contract, absolute and unconditional as to any question of diligence or available means of discharge. The case of *Postlethwaite* v. *Freeland* (*ubi sup*) is an authority for the proposition that in considering the question of reasonable dispatch in discharging a cargo the existence of appliances for the purpose of taking the cargo from alongside the ship should be taken into consideration. If the contract in the present case were the same as in *Postlethwaite* v. *Freeland* (*ubi sup.*), I should certainly hold that the action for demurrage would not lie, inasmuch as reasonable dispatch had been used by the assignee of the cargo, having regard to the absence of the means customarily available, and used for the purpose of moving the cargo when discharged alongside the ship.

Postlethwaite v. *Freeland* (*ubi sup.*) is the leading authority as regards the agreement which is implied on the part of the charterer when no fixed time for unloading is prescribed by the charter to discharge the cargo within a reasonable time. It was followed by a number of cases conversant with an obligation of a similar character, most of which are referred to in the judgment of the Court of Appeal in England in *Lyle Shipping Company* v. *Cardiff Corporation* (9 Asp. Mar. Law Cas. 23, 128; (1900) 2 Q. B. 638). In that case and in *Good* v. *Isaacs* (7 Asp. Mar. Law Cas. 148, 212, 366; (1892) 2 Q. B. 555) there were no fixed lay days. We have been referred to passages in the judgments in several of these cases. But it will be found, on examination, that the observations which were relied on were directed to an implied contract such as I have referred to, and that they are inapplicable to an absolute and unconditional agreement to discharge within a definite limit of time. Nor do they afford any assistance in construing an exception such as that which exists in the present case. In cases of this kind the courts had to consider what was practically possible, not whether an absolute undertaking had been violated. In *Ford* v. *Cotesworth* (L. Rep. 5 Q. B. 544) the discharge of the goods was rendered practically impossible by an order of the authorities of the port. Kelly, C.B. says: "Although it might not have been rendered physically impossible to put the goods over the side of the ship, yet the whole process of landing was prevented by a cause over which neither party had any control." Mr. Ronan quoted the follow-

ing passage from the judgment of Lord Blackburn in *Sheppard* v. *Henderson* (7 App. Cas. 69), in which, adopting the language of Maule, J. in *Moss* v. *Smith* (9 C. B. 94), he says: "We are dealing with a mercantile matter, we are dealing with mercantile law, and where a thing cannot be practically done in a mercantile contract, we think it cannot be done at all. If you cannot practically get a ship out, it is impossible to get her out." This principle was applied by the Court of Exchequer in *Ford* v. *Coatesworth* (*ubi sup.*) to the performance of the implied obligation imposed on a charterer when there are no fixed lay days prescribed. That it is inapplicable to an absolute and unqualified obligation in regard to loading has been decided by the House of Lords in *Grant and Co.* v. *Coverdale* (*ubi sup.*), for reasons which, in my opinion, are equally applicable to unloading or discharge. Loading was practically impossible in that case, as in the present instance unloading or discharge was impossible.

The case of *Hulthen* v. *Stewart* (*ubi sup.*) before the House of Lords cited on behalf of the defendants is only relevant to the present case in so far as it illustrates the distinction between the absolute and unconditional obligation when fixed days are prescribed, and the implied obligation to discharge within a reasonable time. An attempt was made to read into the charter a limitation of time involving an unconditional liability. This was unsuccessful, for, in the words of Lord Macnaghten, "In order to impose such a liability the language used must in plain and unambiguous terms define and specify the period of time within which delivery of the cargo is to be accomplished." It was there found that the charterers had done all they reasonably could to discharge the vessel, and the claim for demurrage was dismissed.

We have been referred to a case decided by the Court of Sessions in Scotland which involved the consideration of an exception to a demurrage clause in a charter-party, similar to that in the present case. The general system of jurisprudence in Scotland differs from ours, but a decision of the Court of Session upon the construction of mercantile contract, although not binding on us, is entitled to respectful consideration. There the charter-party, which allowed forty-eight lay days, contained an exemption in very wide terms, "in case of strikes . . . detention by railway or cranes . . . or any other cause beyond the control of the charterers which may impede the ordinary loading and discharge of the vessel." There was evidence that the charterers could not have removed the cargo, which consisted of coal, faster than they did, owing to a railway strike, and they contended, citing *Postlethwaite* v *Freeland* (*ubi sup.*) that their case was covered by the word "strikes" or by the general clause in the charter-party. The court held that a strike of railway servants was not covered by the exception. The observations of some of the members of the court are applicable, in principle, to the present case. Lord Young, dealing with the suggestion that it would be unreasonable to say that the charterers should have taken delivery on the quay, though there were no means available for removing the cargo, says, "I should rather have been disposed to say that it was unreasonable to expect the ship to remain till the charterers found means for removing the cargo." Lord Traynor says, "It has not been shown that any of the excepted causes existed which prevented the cargo in question being discharged in the ordinary way, over the ship's side. The owner of the vessel has absolutely no concern with the difficulties which the charterer may have in removing the cargo from the quay on which it has been discharged."

For these reasons I am of opinion that the defendant has failed to bring himself within the terms of the exception on which he relies. It remains to consider his second line of defence; a contract on the part of the shipowner that, in consideration of the defendant making special efforts and arrangements for the discharge of the cargo during the continuance of the strike, the demurrage should be calculated at three and a half days only. The proof of this alleged agreement rests on oral evidence only. The most that can be said of the lengthy correspondence that is in evidence on behalf of the defendant's case is, that it is not absolutely inconsistent with the existence of such an agreement, although it is difficult to reconcile the existence of such an agreement with the formal notices of demurrage running from day to day that were served on behalf of the shipowner. The burden of proving the alleged agreement rested on the defendant, who was encountered with the extreme improbability that the shipowner exchanged valuable rights for a shadowy undertaking. Gibson, J. held that no such agreement had been proved. He had the advantage of hearing the examination and cross-examination of the witnesses. A study of the notes of the evidence and of the correspondence has led me to the same conclusion at which he arrived.

On this branch of the case, I am satisfied to adopt his conclusion, and the reasoning upon which it is founded.

Kenny, J.—It has been settled beyond question that, in the case of a charter-party which provides a distinct time limit for the discharge of the cargo, there is an obligation on the consignee to discharge within that time, no matter what obstacle—other than the act of God, the King's enemies, or any other specially excepted occurrence—presents itself. The charter-party in the present case is of that character. It provides a certain number of running days for loading and unloading and thus fixes a distinct period from which the ship is to be on demurrage. If there were no strike clause, no question could possibly arise as to the liability of the consignee for demurrage from the expiration of the running days, provided the ship was ready to carry out its portion of the duty of discharge, and the case could not come into the category of those where the custom of the Port or the reasonableness of the time for discharge entered into consideration. The bargain between the shipowner and charterer would be regarded as a hard and fast one in which the latter took all the risks for the delay beyond the stipulated free time under any circumstances that were not under the control of the ship. *Budgett* v. *Binnington* (*ubi sup.*) is strongly illustrative of a contract where the principle was applied. In such cases as *Ford* v. *Cotesworth* (*ubi sup.*), *Postlethwaite* v. *Freeland* (*ubi sup.*), *Good* v. *Isaacs* (*ubi sup.*), and *Hulthen* v. *Stewart* (*ubi sup.*) the contract was an open one in the sense that there was no

definite time agreed on for the conclusion of the discharge and the commencement of the liability for demurrage, and the decisions turned on the special facts in relation to custom and reasonable time. No such considerations are applicable in the present case, and the meaning and applicability of the strike clause alone have to be determined.

The clause is a somewhat elaborate one, and it will be remarked that, while it draws a distinction between the ship's men and the consignee's men, it confines its operation most strictly to men engaged in the work of discharge. The exact wording of the clause is important:

"If the cargo cannot be discharged by reason of a strike or lock-out of any class of workmen essential to the discharge of the cargo, the days for discharging shall not count during the continuance of such strike or lock-out. A strike of the receiver's men only shall not exonerate him from any demurrage to which he may be liable under the charter, if, by the use of reasonable diligence, he could have obtained other suitable labour; and, in case of any delay by reason of the before-mentioned causes, no claim for damages shall be made by the receivers of the cargo, the owners of the ship, or by any other party under this charter."

The clause applies to the men of both parties—shipowner and consignee—but extends to no class other than those essential to the work of discharge. In my judgment the wording of the clause is quite clear in this respect, and the only subject of controversy possible is the meaning of the word "discharge" in the connection in which it is here used. The consignee took the risk of a strike or lock-out of men in that category—but, if "discharge," so far as the shipowner is concerned, means delivery of the cargo over the ship's side, it seems to me that the shipowner never took the risk of a lock-out or strike of any section of the community except stevedore's men employed in the actual reception of the cargo from the ship's men. What, then, was within the contemplation of the parties when they used the phrase "essential to the discharge" of the cargo? Is it to be confined to the stevedore's men alone employed in the direct transfer from the ship's side, or is it to be extended to a class outside and beyond these—who, though most essential to the removal or disposal of the cargo after receipt by the stevedore's men, were not men employed in the actual receipt and removal of the goods from alongside the ship?

The act of "discharge" is a double or joint one. It necessitates co-operation on the part of the ship and of the receiver of the cargo. The primary obligation of the ship, in the absence of agreement to the contrary, is delivery over the ship's side. That obligation is fulfilled when its crew or its stevedore's men are in a position to offer, and do offer, delivery to the consignee over the ship's side. If there were any doubt about that—the nature of the ship's duty in the present case—it seems to me to be removed by the provision in the charter-party that the cargo is to be "brought and taken from alongside the steamer at freighter's expense and risk." The class to whom it is sought to extend the protection of the clause are carters whose duty it was to remove the cargo after the stevedore's men had taken it from alongside. They are a class who no doubt were essential in the interest of the consignee to the ultimate removal of the cargo from the quay—but how can they be said to be essential to the "discharge" of the cargo from the ship? They were essential to its "disposal," but its transfer from the vessel did not come within their duties, and I find it impossible to enlarge the meaning of the word "discharge" so as to include any acts beyond those of delivery by and receipt from the ship. If the word be capable of greater expansion, the true construction of the charter-party would make the liability to demurrage conditional not only on there being no strike amongst the stevedore's men—but on there being no delay caused by the action of other more remote parties, such as railway companies or lightermen, who could not be regarded as within the control of the shipowner. Furthermore, I am of opinion that the charter-party affords internal evidence that the process of carting was not regarded as the only one capable of being resorted to for the disposal of the cargo. Lighters were within the contemplation of the parties for the purpose of lightening the vessel when necessary, and though their use is only stated to be in connection with the work of lightening, still they are regarded as a possible means of landing portion of the cargo—and there were no words which would restrict their service to lightening.

I concur, therefore, in holding that the strike clause does not in the circumstances of the case afford any protection to the consignee or save him from a demurrage claim.

I need only add a few words on the other branch of the defendant's case, which relied on a special contract at the port of discharge that the delay caused by the strike was not to result in a claim for demurrage. Gibson, J. in his judgment at the trial dealt very exhaustively with the evidence put forward in support of the alleged contract, and he came to the conclusion on the correspondence and the oral evidence that there had never been a concluded bargain for the surrender or abandonment of the plaintiffs' rights. I am of opinion that his finding on this branch of the case is well founded, and that the minds and intentions of the parties were never *ad idem*, and consequently that the alleged special contract cannot be supported.

Wright, J.—By the charter-party in the present case (clause 7) sixteen running days, Sundays, &c., excepted, are to be allowed the freighters for loading and unloading, and ten days on demurrage over and above the said lay days at 4*d.* per ton on the steamer's gross register tonnage per running day.

Apart from the strike clause, there is here an absolute and independent contract on the part of the defendant to discharge within a fixed specified number of day, and in default to pay demurrage, unless he can show that he was prevented from discharging within the time allowed for that purpose by the act of the master or those for whom he was responsible: *Budgett* v. *Binnington.* To quote shortly from *Postlethwaite* v. *Freeland* (*ubi sup.*), at p. 608: "If by the terms of the charter-party he has agreed to discharge within a fixed period of time, that is an absolute and unconditional engagement for the non-performance of which he is answerable, whatever may be the nature of the impediments which prevent him from performing it, and which cause the ship to

be detained in his service beyond the time stipulated.

Clause 13 of the charter-party is in the following words: "If the cargo cannot be discharged by reason of a strike or lock-out of any class of workmen *essential to the discharge of the cargo*, the days for discharging shall not count during the continuance of such strike or lock-out."

The first question, or one of the two questions, raised and argued in the case is, whether on the facts proved and on the proper construction of this clause, the delay in discharging the cargo came within the strike clause, so as to absolve the charterer from damages for the period during which discharge was impossible.

Several modes of discharging or unloading of a cargo were, by the evidence—which seems to me to be on this point rather loose and inexact—stated to be usual and customary in the port of Belfast, I think four in all, discharge into sheds; discharge overboard into lighters or barges alongside—this generally applied only to portions of the cargo previously sold; slabbing or dumping the grain on the quay—only a very small portion of this cargo could have been so discharged; and discharge into carts. Several of these modes of unloading or discharging were either physically impossible, or under existing conditions were so inconvenient as to be practically impossible, and the contention of the defendant is, that there remained only one practical method of getting the cargo from the ship—namely, by carriers' carts, and that this was rendered impossible owing to a strike of carters, that this is within clause 13, the "strike" clause, and that he is hereby protected. The evidence proves that there was no strike of dock labourers, with the possible exception of a strike for portion of one day, and the learned judge has so found. There was slackness among the dock labourers, and they worked badly, but it is certain that they did not strike. The strike which caused the delay and kept the ship idle was a strike of carters, which began on the 4th July, and accordingly was in full operation when defendant bought the cargo on the 15th July, and did not terminate until the 16th Aug.

The mode of discharging grain is described in the evidence. Tubs are put into the hold, filled there with grain, and hoisted up by the winch; the contents are then canted into the merchant's sacks, the bags are weighed and tied, and taken from the bridge and delivered unto the rail. Carts are largely used for taking the grain away from the ship's side.

Is this cartage, or removal of the grain in carts from the ship's side, part of the unloading or discharging within the meaning of the strike clause in the charter-party?

The learned judge has left this question undecided. A decision of this question seems to me to be essential. On the other and earlier operation, that of loading, the case of *Grant and Co. v. Coverdale, Todd, and Co.* (*ubi sup.*) may be usefully referred to. By the charter-party in that case the vessel was to proceed to East Bute Dock, Cardiff, and there load, time to commence from the vessel being ready to load and unload, and ten days on demurrage, over and above the lay days, at 40*l.* per day (except in the case of hands striking, or frosts or floods, or any other unavoidable accidents preventing the loading and unloading).

The ship reached the East Bute Dock, and part of the cargo was loaded; a frost then set in, and made a canal which communicated with the dock impassable, so that the remainder of the cargo, which was ready at a wharf on the canal, could not for several days be brought in lighters to the dock. The cargo could not have been brought into the dock by carting or otherwise at any reasonable expense. The dock itself was not frozen over, and if the cargo had been in the dock the loading might have proceeded. It was argued for the charterers that, the canals being frozen, the frost in fact prevented the loading as much as if the East Bute Dock had been frozen over. The House of Lords unanimously held against that contention. Lord Selborne discusses the meaning of loading, which, he says, is an act in which both parties have to concur.

The shipowner has to do his part, and so must the charterer. "He must have the cargo there to be loaded, and tender it to be put on board the ship in the usual and proper manner. . . . When the charterer has tendered the cargo, and when the operation has proceeded to the point at which the shipowner is to take charge of it, everything after that is the shipowner's business, and everything before the commencement of the operation of loading—those things which are so essential to the operation of loading that they are conditions *sine quibus non* of that operation—everything before that is the charterer's part only" (p. 475); and he cites as specially applicable to mercantile cases the maxim *Causa proxima non remota spectatur*.

Clause 7 of the charter-party in the present case gives sixteen days for "loading and unloading." Clause 9 declares that freight is to be paid on "unloading and delivery of the cargo," if in the United Kingdom in cash, &c., and clause 13 ("strike" clause) deals with the case of the discharge of the cargo being prevented by strike or lock-out of workmen essential to the discharge of the cargo. I construe this in exactly the same way as if the word used had been "unload" and not "discharge." Unloading and discharging have, in my opinion, exactly the same meaning.

In *Petersen* v. *Freebody* (8 Asp. Mar. Law Cas. 55; (1895) 2 Q. B. 294) the charter-party speaks of "loading or discharging," and of the "delivery" of the cargo by the ship, "the ship to discharge over side into lighters or otherwise if required by the consignees." Lord Esher, in his judgment, treats discharging the cargo and delivery of the cargo as synonymous. He says that the delivery under the charter-party was to be a delivery in the ordinary way by a joint operation in which each was to take his part, and A. L. Smith, L.J. says that, in ordinary cases of discharging cargo, the ship's crew does the work, until the goods are over the rail, and then the receiver takes his part in the operation.

The taking away of the bags in carts is no part of the unloading or discharging. It is a further stage in the process of bringing the goods to their destination; it is an act of the consignee solely and for his purposes; and while, in a sense, it is a fact that what prevented discharging was the strike of the carters, it was not, in my judgment, the cause within the meaning of the strike clause.

The services of carters and carts which, according to the evidence, were at some distance from the ship, only arose after the delivery to the consignee, and when the unloading or discharging had been completed and ended. Accordingly, I am of opinion that the discharge of the cargo was not prevented by a strike of workmen essential to its discharge. As to the second question—this is a question of fact. It is a question which depends on the evidence. I have come to the conclusion on reading the evidence, and on looking at the notes, that the written agreement was not given up. And I may say that upon this matter it would take the very clearest evidence to convince me that the parties abandoned their rights under a written contract, and substituted for that contract a mere parol one.

For all these reasons, I have come to the conclusion that the learned judge was right in his conclusion, and I see no reason for disturbing it.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Nov. 7 *and* 8, 1911.

(Before Sir S. EVANS, President, and BARGRAVE DEANE, J., and Elder Brethren.)

THE KENNET (*a*)

DIVISIONAL COURT.

Collision—Navigation round bend of river—Duty of vessel proceeding with tide to whistle—Duty of vessel proceeding against tide to stop—Speed.

Where vessels are approaching each other at Baldwin Point in Bow Creek, which is a blind corner and a difficult bend to navigate, good seamanship requires that a vessel going up with the tide shall give such warning as will enable vessels which may be coming down against the tide to approach the bend in such a way as to prevent any collision.

It is the duty of vessels coming down against the tide to proceed cautiously, and if necessary stop above the bend altogether.

In the City of London Court the learned deputy judge held that a vessel going up with the tide approaching this bend was alone to blame for a collision with a down-comer for failing to warn her. The Divisional Court varied this order on appeal, holding that both vessels were to blame, the one going up for not giving sufficient warning, and the one coming down for proceeding carelessly at such a speed that she could not have avoided a collision with an innocent vessel if she met one at the bend.

APPEAL from a decision of the deputy judge of the City of London Court, Sir John Paget, K.C., by which he held the *Velox* alone to blame for a collision which occurred between the dumb barge *Ribble*, which was in tow of the *Velox*, and the steam tug *Kennet*. The collision occurred about 10.35 p.m. on the 28th March 1911 off Baldwin Point, Bow Creek.

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

The case made by the appellants was that the dumb barge *Ribble*, in tow of the steam tug *Velox*, was proceeding up Bow Creek, and about 10.35 p.m. on the 28th March 1911 was at the bottom of Glasshouse Reach, Bow Creek, about abreast the Great Eastern Railway Wharf. The wind was from the north-east a light air, the weather was fine and clear, and the tide flood of the force of about one knot. The *Velox* was proceeding up the creek with engines going easy ahead and slowly rounding the bend off the railway wharf, making about two knots. The *Velox* was carrying the regulation under-way and towing lights for a tug and her craft, and there was a white light aft on the *Ribble*, and a good look-out was being kept on board of her.

In these circumstances those on the *Velox* saw the masthead and towing lights of the *Kennet* 100 yards off bearing broad on the port bow of the *Velox*. The *Velox* sounded one short blast on her whistle, to which the *Kennet* replied with a short blast. The *Velox* was then rounding the bend under slight starboard helm, and the *Kennet* was coming down the creek hugging the point. When the *Kennet* cleared the point, those on the *Velox* saw the *Kennet's* green light. The *Velox* was kept as close as possible to her side of the channel, and sufficient way was kept on the tow to prevent them getting out of position, but the *Kennet*, which appeared to smell the ground, shot off the point and with her stem struck the port bow of the *Ribble*, doing her damage.

The owners of the *Ribble* charged those on the *Kennet* with bad look-out; with approaching the point at too high a speed; with failing to pass port to port; with failing to stop and reverse her engines in due time; with neglecting to wait above the point until the vessels bound up had rounded clear; and with navigating too near to the south side.

The case made by the respondents, who were defendants and counter-claimants in the court below, was that the tug *Kennet* with a barge in tow was proceeding down Bow Creek and about 10.35 p.m. on the 28th March 1911 was approaching Baldwin Point. The wind was westerly, light, the weather fine and clear, and the tide flood of the force of about a knot. The *Kennet* was rounding Baldwin Point on her starboard side of the channel, making about three knots. The *Kennet* was exhibiting the regulation masthead, side, and towing lights, and a good look-out was being kept on board of her. In these circumstances those on the *Kennet* saw the masthead and towing lights and almost immediately the port light of the *Velox* 200ft. off broad on the starboard bow. The helm of the *Kennet* was put hard-a-port and her engines full speed ahead for the purpose of forcing her on to the mud bank on her side of the channel, there being no other measure which she could take to avoid collision; but the fore part of the *Kennet* would not remain on the bank, so her engines were put full speed astern, and the stem of the *Kennet* collided with the port quarter of the *Ribble*. The *Velox* sounded one short blast when she was first seen, which was at once answered by the *Kennet* with one short blast.

The owners of the *Kennet* charged those on the *Velox* with failing to keep a good look-out; with navigating at an excessive speed; with failing to stop and reverse; with failing to give any warning

of their approach; and with failing to keep to the starboard side of the channel.

The following Thames by-laws were referred to:

39. When two steam vessels are in sight of each other and are approaching with risk of collision, the following steam signals shall be intimations of the course they intend to take: (a) One short blast of the steam whistle of about one second's duration to mean "I am directing my course to starboard." (b) Two short blast of the steam whistle, each of about one second's duration, to mean "I am directing my course to port." (c) Three short blasts of the steam whistle, each of about two seconds' duration, to mean "My engines are going full speed astern."

42. The words "short blast" used in this by-law shall mean a blast of about one second's duration. When vessels are in sight of one another, a steam vessel under way in taking any course authorised or required by these by-laws shall indicate that course by the following signals on her whistle—viz.: One short blast to mean "I am directing my course to starboard." Two short blasts to mean "I am directing my course to port." Three short blasts to mean "My engines are going full speed astern."

46. When two steam vessels or steam launches proceeding in opposite directions, the one up and the other down the river, are approaching each other so as to involve risk of collision, they shall pass port side to port side.

49. Every steam vessel and steam launch when approaching another vessel so as to involve risk of collision shall slacken her speed and shall stop and reverse if necessary.

The deputy judge gave the following judgment:

Aided by my assessors, I have come to the conclusion that in this action the *Velox* was solely to blame for the collision, on the ground that she did not give the customary warning before rounding this point, which involved both ships in damages. There will therefore be judgment for the defendants, the owners of the *Kennet*, on the claim and counter-claim. We find that the *Kennet* did everything possible to avoid the collision.

From that decision the owners of the *Ribble* appealed.

Bateson, K.C. and *Balloch* for the appellants.—The *Kennet* came up to this blind corner and rounded it at too high a speed; she also should have given warning of her approach, and should not have gone ahead to try to put herself on the mud. The *Velox* was held to blame for not sounding a customary signal. Even if the custom is held to be proved, it was a custom for a vessel proceeding towards the point to sound a warning signal. The *Velox* was only starting from a wharf which is on the edge of the curve opposite the point. If the *Velox* is to blame for not sounding a warning signal, the *Kennet* is also to blame for the same reason. The alleged custom is really contrary to the Thames rules, for rule 43 provides that no other signal by whistle or sound signal except those mentioned in rules 32 and 49 shall be made by any vessel. [BARGRAVE DEANE, J.—Do you say it would have been wrong for you to sound a signal at all?] Yes, for there is no rule which directs it to be done. If it is to be done, both should sound one, for each should warn the other. The *Kennet* clearly did wrong to approach this point at such a speed that the only chance of avoiding a collision was to run ashore.

Laing, K.C. and *Nelson* for the respondents.—The speed of the *Kennet* was moderate. She had only just started from the opposite end of the wharf from which the *Velox* had started, though neither could see the other owing to Baldwin Point shutting them out from each other's view; it was quite impossible, therefore, for the *Kennet* to have much way. The custom that was proved was a custom for the vessel navigating with the tide to sound a signal to warn other vessels coming against the tide, that they may stop above the point. The custom is reasonable, and, whether it was proved or not, seamanship demands that such a signal should be given. The manœuvre the *Kennet* adopted was the best one possible. The *Velox* cannot complain; the absence of her signal put the *Kennet* into a difficulty, and those on board the *Velox* did all they could to avoid the collision. There can be no doubt that the *Velox* should have given some warning of her approach.

Bateson, K.C. in reply.—The *Kennet's* case in the court below was that the *Velox* was coming too fast. There is no charge in the preliminary act of not sounding a customary signal.

The PRESIDENT.—The collision in this case took place at a very sharp bend in the river, and it is obvious that vessels either proceeding up the river or coming down the river ought to navigate very carefully in approaching the bend, because craft may have to pass each other at that particular spot.

The learned deputy judge in this case has found that the *Velox* was to blame because she, going with the tide, did not give any warning to any ship or vessel which might be on the other side of the bend, upon which, of course, the duty would be to stop or take steps to prevent a collision. I see no reason at all for disturbing the judgment of the learned judge, which he came to upon the evidence and upon which he was advised by the nautical assessors. On the contrary, I entirely agree with it. I think, whether this vessel, the *Velox*, was starting with a couple of barges from the wharf or whether she was proceeding straight up, it was her duty to give such a warning as would enable the vessel upon the other side to approach the bend in such a way as to prevent any collision. Therefore, the *Velox* was to blame for this collision.

The question which has raised difficulty in my mind, in this case, is whether or not the other vessel is to blame. She was going down river. The tide, which was one knot in favour of the *Velox*, was one knot against the *Kennet*. The collision, in fact, took place by reason of a manœuvre on the part of the *Kennet* just in the bend, which threw her on to a sloping bank, where she could not stick and where it was hardly to be supposed, I think, that the master thought she would stick, though he probably hoped perhaps she would. She consequently went athwart the river, which is narrow at that point. Counsel for the respondents says, and it is his case, that that manœuvre was the best manœuvre which could be executed by those navigating the *Kennet*, in the circumstances. Assuming, without deciding, that it was the best manœuvre, we find this: The *Velox* was in a place in the bend where any innocent vessel might be. In this particular case, as I have said, the *Velox* was to blame, but there might have been in that particular spot an innocent vessel, a sailing vessel or a barge; and we find that the *Kennet* proceeds

down in such a way that at this particular juncture she has got to take what is described by counsel for the respondents as the best possible manœuvre, but which nevertheless brings about the collision. In my view the evidence establishes this, that the *Kennet* in approaching this difficult bend must have been navigated carelessly before she got herself into such a position, which made a collision inevitable, on her own story, if any innocent vessel happened to be where the *Velox* was. In the result the appeal must be allowed, and both vessels must be held to blame.

BARGRAVE DEANE, J.—I am of the same opinion. I think that under arts. 27 and 29 the rules of good seamanship, at this particular place approaching this bend, or in the bend, it is the duty of a vessel going up with the tide to give a warning blast or blasts—more than one, if necessary, because the bend is a long one—to warn vessels which may be coming down that she is proceeding up on the tide. My impression is that she ought to have done that before she got up to the place where she dropped some of her barges, and certainly she ought to have done it when she started on after dropping her barges. That would have given a warning to any vessel coming down that there was this obstruction in the way, and she should not only proceed cautiously, but, if necessary, stop above the bend altogether. It is perfectly clear—and the court below was right in holding—that the warning should have been given, not because it is the practice—I do not care about the practice—but under the rules of good seamanship. So much for the judgment of the court below with regard to the *Velox*.

But I am strongly of opinion that the other vessel, the *Kennet*, coming down against the tide, with a barge in tow, and knowing the place as she did, should have been proceeding at very much less speed than four knots over the ground. She was going over three and probably nearly four knots. She knew perfectly well that she could not tell, till she got a very short distance from the bend, whether there was any obstruction in the bend or not. There might have been sailing vessels, or dumb barges, which could not signal in the bend, and the *Kennet* might at any moment be called upon to pull up and keep out of the way of something. She admittedly went on at such a speed that she could not pull up, and she tried to do that which we must not blame her for doing, because she did it at the last moment in the hope of avoiding the collision. I think both tugs were to blame for this collision—initially the *Velox* for not giving warning blasts, and the *Kennet* for coming at too great a speed to a spot where admittedly she could not see more than 100 yards or so ahead.

(Before Sir S. EVANS, President.)

THE DUPLEIX. (*a*)

Collision—Action in rem*—Arrest of foreign ship—Appearance by foreign defendants—Bail—Liability of defendants—Actual value of ship and freight—Statutory limit of liability.*

The owners of a British ship instituted an action in rem *to recover the damage they had sustained by reason of a collision between her and a French barque. The French barque was arrested and her owners, foreigners, entered an appearance in the action and gave bail to obtain the release of the vessel, the amount of the bail being equal to the appraised value of the barque and the agreed amount of the freight. The foreign owners defended the action and counter-claimed for the damage they had sustained.*

On the hearing of the action the French barque was held alone to blame, and a decree was drawn up condemning the defendants and their bail in the amount of the damage sustained by the plaintiffs with the costs of the claim and counter-claim.

On motion by the defendants to vary the decree by limiting its terms so that the plaintiffs should not be entitled to recover more under it than the appraised value of the vessel, the freight, and costs:

Held, on the authority of the principles laid down in The Dictator (67 *L. T. Rep.* 563; 7 *Asp. Mar. Law Cas.* 251; (1892) *P.* 304), *approved by the Court of Appeal in* The Gemma (81 *L. T. Rep.* 379; 8 *Asp. Mar. Law Cas.* 585; (1899) *P.* 285), *that, as the appearance of the defendants was voluntary and they had submitted to the jurisdiction of the court, the decree had been rightly drawn up and judgment should be given against them personally for the whole of the damage sustained by the plaintiffs, subject to the right of the defendants to limit their liability under the provisions of the Merchant Shipping Act* 1894.

MOTION to vary a decree in an action *in rem* to recover damage caused by a collision.

The plaintiffs were the Anglo-American Oil Company Limited, owners of the British barque *Eclipse*.

The defendants and counter-claimants were the owners of the French barque *Dupleix*.

On the 4th June 1910 a collision between the two vessels occurred in the South Atlantic, about 400 miles east of Pernambuco, while the *Eclipse* was on a voyage from New York to China, and the *Dupleix* was bound from Port Victoria, South Australia, to Falmouth.

The *Eclipse* put into Pernambuco for temporary repairs and then went to New York, where the repairs were completed, and she then resumed her voyage.

The *Dupleix* after the collision came into Falmouth, where she was arrested in an action *in rem* brought by the owners of the *Eclipse* for the purpose of recovering the damage they had sustained by the collision. The owners of the *Dupleix* entered an appearance and gave bail in an amount which was equal to the appraised value of the vessel and the agreed value of the

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law

freight. A statement of claim was delivered by the plaintiffs, and the defendants delivered a defence and counter-claim seeking to recover the damage they had sustained.

On the hearing of the action the *Dupleix* was found alone to blame, and judgment was given for the plaintiffs against the defendants and their bail with costs, the counter-claim was dismissed with costs, and the amount of the damage was referred to the registrar and merchants.

The decree as drawn condemned the defendants and their bail for the amount of the damage sustained by the plaintiffs and for the plaintiffs' costs of claim and counter-claim.

On the 10th Nov. 1910 the defendants moved to vary the decree by limiting its terms so that the plaintiffs should only be entitled to recover an amount equal to the appraised value of the *Dupleix* and the value of the freight and costs.

The claim filed by the plaintiffs amounted to 24,000*l.* The value of the *Dupleix* as appraised and the agreed value of the freight was not more than 9900*l.*

The statutory amount which the defendants would have to pay if they limited their liability under the provisions of the Merchant Shipping Act 1894 was about 15,000*l.*

On the hearing of the motion it was pointed out that if the claim was cut down by the registrar below the figure of 9900*l.* the motion might be unnecessary, so by consent it stood over until the claim had been assessed.

The motion was restored and came on for hearing on the 26th June 1911.

Laing, K.C. and *C. R. Dunlop*.—The foreign owner could not have been served with a writ in an action *in personam*. Their appearance was not voluntary; their property had been seized by the court, and they appeared to defend it and the value of it, and the plaintiffs cannot recover judgment in this action *in rem* for more than the value of the *res* and the freight and costs. *The Dictator* (*ubi sup.*) and *The Gemma* (*ubi sup.*), which will be relied on by the plaintiffs in the action, are not decisive of this point. The case of *The Dictator* (*ubi sup.*) is wrong. It rests on a misconception of the early practice. This is pointed out in

Williams and Bruce's Admiralty Practice, 3rd edit., 1902, pp. 18 to 26.

The case of *The Gemma* (*ubi sup.*) really turns on the form of the decree.

The following cases were referred to on the point that an action *in rem* became a claim *in personam* on the owners entering an appearance:

The Bold Buccleuch, 7 Moo. P. C. 267;
The Parlement Belge, 42 L. T. Rep. 273; 4 Asp. Mar. Law Cas. 234; 5 P. Div. 197;
The Longford, 60 L. T. Rep. 373; 6 Asp. Mar. Law Cas. 371; 14 P. Div. 34;
The Mullingar, 26 L. T. Rep. 326; 1 Asp. Mar. Law Cas. 252.

And on the point that in an action *in rem* judgment could not be obtained for more than the value of the *res*, the following cases were cited:

The Volant, 1 W. Rob. 383;
The Hope, 1 W. Rob. 154;
The John Dunn, 1 W. Rob. 159
The Triune, 3 Hagg. 114;
The Dundee, 1 Hagg. 109;
Clerke's Praxis, 1743 edit.

H. C. S. Dumas (*Aspinall*, K.C. with him).—Unless the defendants limit their liability under the provisions of the Merchant Shipping Act 1894, the plaintiffs should recover from them the full amount of the damage, and judgment should be given for that sum. The cases of *The Dictator* (*ubi sup.*) and *The Gemma* (*ubi sup.*) are authorities for the proposition that in a collision action *in rem* where the defendants appear to contest their liability and judgment passes against them it can be enforced to the full amount of the claim if the damage claimed is proved by the plaintiffs. It is not limited to the value of the *res* or the bail given for the release of the *res*.

Dunlop in reply.—The appearance by the defendants makes them liable for the costs over and above the value of the *res*. With that exception judgment should in this case be limited to the value of the *res* and the freight.

Judgment was reserved and was delivered on the 28th July.

The PRESIDENT.—This was a collision action. The defendants' ship was arrested. The defendants entered appearance in the action, and gave the usual bail. They defended the action and also counter-claimed against the plaintiffs.

I found upon the trial that the defendants' vessel was solely to blame, and pronounced judgment in favour of the plaintiffs on the claim and counter-claim with costs. This entailed, in the ordinary course, a judgment against the defendants and their bail for the damages sustained by the plaintiffs and for the plaintiffs' costs on the claim and counter-claim. The defendants, however, applied that the judgment should be so framed as to be limited to the value of the defendants' arrested ship and freight, and to the costs.

The proposition of the defendants was that in an Admiralty action *in rem* in which the defendants appear and contest the action the plaintiffs cannot obtain judgment for, or recover, more than the value of the *res*, that is, the ship found to blame, and which was, arrested, and her freight—or the bail that represents the ship and freight—together with the costs.

The plaintiffs opposed the defendants' application and asked for judgment against them personally and their bail for the full amount. They relied upon the case of *The Dictator* (*ubi sup.*) and *The Gemma* (*ubi sup.*).

The defendants argued that those cases did not determine the point now raised, as they were not decisions directly upon the point. Speaking strictly, it may be true that these two cases are not binding decisions upon the matter in question, but in *The Dictator*, after an elaborate examination of the authorities, Sir F. Jeune stated that the law was that in a collision action *in rem* where the defendants appeared to contest or reduce their liability, judgment passed against them, and could be enforced against them, to the full extent of the damages proved by the plaintiffs, and was not limited to the value of the *res*, or of the value of the bail which represented the *res*. In *The Gemma* the Court of Appeal approved of that statement of the law. In the course of

his judgment A. L. Smith, L.J. said: "Now, apart from authority, it appears to me that when persons, whose ship has been arrested by the marshal of the Admiralty Court, think fit to appear and fight out their liability before the court, the form of the proceedings in the Admiralty Court show—and it is not disputed that the forms I have referred to are those which have been in use, according to the practice of the court, from olden times—that the persons so appearing, as the defendants have done in the present case, become parties to the action, and thereby become personally liable to pay whatever in the result may be decreed against them; and the action, though originally commenced *in rem*, becomes a personal action against the defendants upon appearance. For what purpose does a party appear to an action *in rem?* There are, as it seems to me, three reasons for the appearance: first, to release the ship, so that it may go on trading for the owner; secondly, to contest the plaintiffs' allegations that the ship had been in default; and, thirdly, in order to prevent its being sold. The President, in a judgment full of learning and research, in which he dealt with all the cases from the earliest time, whether in conflict or not with each other, has held in the case of *The Dictator* that a person appearing in an action *in rem* becomes personally liable, and considering that no real argument was addressed to us to impeach this judgment, and having considered it, and the principles appertaining to the present case, I do not doubt that the President came to the correct conclusion, and I adopt it."

In that case, as in the present one, the owners were foreigners domiciled abroad, who could not have been served with process in an action *in personam.*

Whether the two cases referred to were decisions directly in point or not, it would not be respectful of me to disregard the elaborate and precise statements of the law to be found in the judgments and to treat them as *obiter dicta,* even if I ventured to hold views differing from them. Where general principles of law have been laid down by learned judges in considered judgments, it does not appear to me to be right, or in the public interest, to look minutely at the facts of the particular case, and to say that the case might have been decided on narrower grounds, and that the general principles need not have been enunciated, and that therefore they are to have no judicial authority. In saying this I do not wish it to be supposed that I hesitate to adopt the views expressed by the learned judges in the two cases referred to. On the contrary, having given my best consideration to the question, I desire humbly to express concurrence in them without reservation.

Regarding the matter historically, and legally, the form of judgment, which has been adopted for generations, where owners appear in an Admiralty action *in rem,* whether in cases of collision or otherwise, is right in fixing liability upon the owners personally to the full extent of the claim established in the action.

The origin of commencing Admiralty suits by arrest is stated, I believe, correctly, in the volume of the Selden Society Series containing Select Pleas in the Court of Admiralty (vol. 1, p. 71) in the following passage: "The ordinary mode of commencing the suit was by arrest either of the person of the defendant, or of his goods. Arrest of goods was quite as frequent as arrest of the ship; and it seems to have been immaterial what the goods were, so long as they were the goods of the defendant, and were within the Admiral's jurisdiction at the time of the arrest . . . scarcely a trace appears of the modern doctrine of arrest founded on a maritime lien: the fact that goods and ships had no connection with the cause of action, except as belonging to the defendants, were subject to arrest, points to the conclusion that arrest was mere procedure, and that its only object was to obtain security that judgment should be satisfied. The form of the article upon first decree shows that the defendant was always cited 'at'—*apud*—the goods or ship arrested, and that if he did not give bail to satisfy judgment the suit proceeded against him in his absence, as well as against the *res.*"

Moreover, upon general principles applicable to the effect of entering appearance, I think that where the defendants appear, as in this case, not only to obtain the release of the ship which happens to have been arrested upon giving sufficient bail, but also to contest their liability, and to endeavour to exonerate themselves from any claim for damages and further to put forward, by counter-claim, and try to establish a claim for damages against the plaintiffs, they submit themselves to the jurisdiction of the court, and thereby become liable personally for the full damages.

It is no doubt true that the law as to the effect of appearance in the courts of this country by foreigners, or in the courts of foreign countries by our citizens, where the appearance is not voluntary is not clearly settled. In *Schilesby* v. *Westenholz* (L. Rep. 6 Q. B. 155) the court said: "We think it better to leave this question open, and to express no opinion as to the effect of the appearance of a defendant where it is so far not voluntary that he only comes in to try to save some property in the hands of the foreign tribunal." In the words of Bowen, L.J. in *Voinet* v. *Barrett* (55 L. J. 39, Q. B.), "The stream of authority is to the effect that appearance, unless it be appearance under duress, is an election to submit to the jurisdiction from which the process issued."

In my opinion, an appearance not merely for the purpose of obtaining a release of property arrested, but also for the purpose of attempting to obtain a judgment freeing defendants from all liability for a collision and for the further purpose of trying to recover a judgment upon a counter-claim—which is equivalent to a cross-action—is not an appearance "only to save property in the hands of a foreign tribunal," nor an "appearance under duress." In these proceedings the plaintiffs' vessel was not arrested to answer the counter-claim. If the plaintiffs had failed in their action, and their vessel had been found solely to blame, the defendants would have been entitled to recover the whole of their damages against the plaintiffs personally. It would be a strange inequality in the event of the defendants failing, if the plaintiffs could only recover such part of their loss as the *res* might be sufficient to meet. It is true that by statute there is a possible limitation of liability in cases of collision, but apart from the cases to which the statute applies a sense of justice seems to demand that persons should be liable to the full extent of the damage caused by them or their

servants, and that no technicality should protect them from such a liability, or should prevent persons injured from obtaining judgment for the whole of their loss and from recovering it so far as possible by due process of execution.

The law as stated in *The Dictator* and *The Gemma* is in consonance with this sense of justice, and I am of opinion that it is sound. The application of the defendants is accordingly dismissed with costs, and the judgment is to be drawn up in the accustomed form, condemning the defendants and their bail in the plaintiffs' damages, and in costs.

Supreme Court of Judicature.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION

Dec. 14 *and* 15, 1911.

(Before Lord Alverstone, C.J., Hamilton and Bankes, JJ.)

Deacon (app.) *v.* Quale (resp.).

Neate (app.) *v.* Wilson (resp.). (a)

Seamen — Desertion—Excess wages paid to substitutes — Net saving of wages to owner — Detention of ship caused by desertions—Expenses due to detention—Reimbursement account —"Expenses caused by desertion"—Merchant Shipping Act 1894 (57 *&* 58 *Vict. c.* 60), ss. 221, 232 — *Merchant Shipping Act* 1906 (6 *Edw.* 7, *c.* 48), *s.* 28, *sub-s.* 1.

During a voyage which was not to exceed three years, a number of the seamen who had signed articles for the whole voyage deserted from the ship at San Francisco, thereby forfeiting the wages then due to them. After these desertions the vessel was chartered for six months to be used as a store ship for coals. For more than five months of this period no new seamen were engaged to take the places of the deserters, and the owners thereby saved a considerable sum in wages. The master then engaged new seamen for the homeward voyage in place of the deserters and these were paid at a higher rate of wages, but the total excess pay of these men amounted to much less than the total of the wages saved to the owners, and in consequence of the desertions the owners saved in wages above 260l.

Held, that the extra pay of the new men engaged was "excess wages" within sect. 221 *of the Merchant Shipping Act* 1894, *and was "expenses caused by the desertion" within sect.* 232 *of the Act, and was therefore properly included in the reimbursement account under sect.* 28, *sub-sect.* 1 (*b*) *of the Merchant Shipping Act* 1906, *and could be set off against the forfeited wages, notwithstanding that the owners had saved a large sum in wages in consequence of the desertions; and, further, that the seamen so engaged were, within the meaning of sect.* 221, *"substitutes" engaged in place of the seamen who had deserted, although they had not been engaged for more than five months after the desertions.*

During a voyage a number of seamen deserted in Melbourne, and in consequence of these desertions the vessel was detained one day while the master was engaged in finding substitutes, incurring personal expenses in doing so, and as the vessel was ready to sail in order to save further pier dues he moved to an anchorage in the bay, thereby incurring an expense for pilotage and for the cost of coal to take the vessel to the anchorage. In his reimbursement account the master included (in addition to the cost of pilotage and personal expenses which were allowed) a sum representing the wages and cost of food of the crew for one day and the cost of the coal to take the vessel from the pier to the anchorage. Justices having allowed these items as being expenses caused to the master by the absence of the seamen due to desertion within sect. 28 *of the Act of* 1906:

Held, that these items were not "expenses caused by the desertion," and ought not to be included in the reimbursement account.

Deacon (app.) *v.* Quale (resp.).

Case stated by the metropolitan police magistrate sitting at the Thames Police-court.

At the Thames Police-court an appeal was entered by Samuel Quale, being the master of the sailing ship *Beacon Rock* (hereinafter called the respondent), under 6 Edw. 7, c. 48 (the Merchant Shipping Act 1906), s. 28, against the decision of William H. G. Deacon (hereinafter called the appellant) for that the appellant had wrongfully refused to allow certain sums amounting to 109*l.* 10*s.* shown on the reimbursement accounts to be deducted from the amounts due on account of wages shown in the delivery accounts of sixteen seamen of the crew of the said ship who had deserted from the said ship at San Francisco in the United States of America.

Upon the hearing of the appeal the following facts were admitted or proved before the magistrate:—

(*a*) The respondent is and was at all times material the master of the sailing ship *Beacon Rock*. The appellant was the superintendent of the mercantile marine office, Dock-street, London, and was the proper officer referred to in sect. 28 of the Merchant Shipping Act 1906.

(*b*) Between the 12th and 15th Aug. 1907 the captain and a crew of twenty-five officers, seamen, and apprentices signed articles, a copy of which was appended to the case, at Antwerp.

(*c*) In the course of the voyage the ship arrived at San Francisco, in the United States of America, on the 19th Jan. 1908.

(*d*) Between the 25th Jan. 1908 and the 26th March 1908, while the ship was at San Francisco engaged in discharging her cargo and taking in ballast, the sixteen seamen in question deserted.

(*e*) At the time of the last desertion—namely, the 26th March 1908—there were due to all the said seamen wages to the total amount of 89*l.* 13*s.* 9*d.*

(*f*) The facts of the desertions were duly entered in the official log (a copy of which was

(a) Reported by W. W. Orr, Esq., Barrister-at-Law.

appended to the case) in accordance with the provisions of the Merchant Shipping Acts.

(*g*) On the 17th Feb., on the instructions of the owners, the master began to take in ballast in anticipation of proceeding under canvas, and by the 13th March, 365 tons of ballast had been shipped. On the 13th March 1908 (by which date fifteen men had deserted) the master (the respondent) received the following cablegram from his owners in Glasgow:

Combined with homeward charter at combination rates, have chartered at a lump sum for a period of six months at five hundred dollars per month to be used for store ship, this is your authority for signing contract on our behalf,

and the respondent did sign such contract.

(*h*) From time to time the owners in Glasgow had been advised by the master that desertions were taking place among his crew, and they had also been advised by cable on the 22nd Jan. that the vessel would be ballasted and ready to proceed on the 28th Feb.

(*i*) From the 23rd March 1908 until the 23rd Sept. 1908 the ship was used as a store ship or hulk for coals, and was stationed at Sansalito Bay near San Francisco.

(*j*) Between the 26th March 1908 and the 2nd Sept. 1908, a period of five months and seven days no seamen were engaged to take the places of any of the sixteen deserters.

(*k*) The wages of sixteen seamen for the said period of five months and seven days would have amounted to more than the sum of 109*l*. 10*s*. mentioned in sub-sect. (*o*) of this paragraph.

(*l*) It was at all times possible for the master to secure additional seamen by giving two or three weeks' notice to a shipping master at San Francisco, and the master did secure additional seamen when he wanted them for his voyage homeward. On the 2nd Sept. Wilson, the cook, and on the 12th Sept. 1908, two new seamen Maitland and Harris, were signed on and sailed with the ship on her homeward voyage.

(*m*) Between the 12th Oct. 1908 and the 24th Oct. 1908, according to the articles of agreement, produced with this case, fourteen other new seamen were signed on, and sailed with the ship on her homeward voyage.

(*n*) The ship sailed from San Francisco on the 27th Oct. 1908, and arrived at London on the 7th April 1909.

(*o*) Upon the ship's return to London on the termination of her voyage the respondent furnished to the appellant, the proper officer under sect. 28 of 6 Edw. 7, c. 48 (the Merchant Shipping Act 1906): (1) Delivery accounts, showing the total wages due to the sixteen deserters up to the time of desertion—namely, 89*l*. 13*s*. 9*d*. (2) Reimbursement accounts, showing the expenses alleged to have been caused by the desertion of the sixteen seamen and the hiring and excess pay of their alleged substitutes—namely, 109*l*. 10*s*. [Copies of these accounts were appended to and formed part of this case.]

(*p*) The appellant disallowed the sums shown in the reimbursement accounts.

(*q*) No evidence or proof was asked for by the appellant, nor supplied to him, save the said accounts.

(*r*) The excess pay of the alleged substitutes was no more than would have been paid if the substitutes had been hired immediately after the desertion.

On the part of the appellant it was contended that the said sum of 109*l*. 10*s*., the total of the reimbursement account, was not properly chargeable against the wages, *videlicet*, 89*l*. 13*s*. 9*d*., of the sixteen deserters because: (i.) Having regard to the lapse of time (five months and seven days) between the last of the desertions and the engagement of the sixteen other seamen to work the ship, the sixteen other seamen could not be said to be substitutes within the meaning of sects. 221 and 232 of the Merchant Shipping Act 1894, and the expenses of engaging and employing such seamen were not, within the meaning sect. 28, sub-sect. 1 (*b*) of the Merchant Shipping Act 1906, expenses caused to the master or owners of the ship by the absence of the seamen. (ii.) Alternatively, that if the sixteen other seamen were substitutes within the meaning of sects. 221 and 232 of the Merchant Shipping Act 1894, the proper officer was entitled to take into consideration the saving made by the master or owners of the ship by reason of the non-engagement and employment of any seamen during the said period of five months and seven days, and to set off the sum so saved against the expenses of and incidental to the engagement and employment of the sixteen other seamen.

On the part of the respondent it was contended that the said sum of 109*l*. 10*s*. was an expense due to the desertion of the sixteen seamen within sect. 28, sub-sect. 1 (*b*), of 6 Edw. 7, c. 48 (the Merchant Shipping Act 1906), and that that sum was properly chargeable by the respondent in his reimbursement accounts against the wages of the sixteen deserters, and that the appellant should have allowed the same.

The learned magistrate was of opinion that the said sum of 109*l*. 10*s*. ought to have been allowed in the reimbursement accounts and was properly chargeable against the wages, *videlicet*, 89*l*. 13*s*. 9*d*., of the sixteen deserters. With regard to the first contention of the appellant, he found that there was no abandonment of the adventure by the master or owners; and with regard to the second contention, there was no evidence that it was either more or less profitable to use the ship as a coal hulk than in the ordinary way.

In the articles of agreement the voyage was described as "a voyage from Antwerp to San Francisco and (or) any ports or places within the limits of 75 degrees north and 65 degrees south latitude, the maximum time to be three years' trading in any rotation and to end at the final port of discharge of cargo in the United Kingdom or continent of Europe between the Elbe and Brest inclusive, calling for orders if required."

In the accounts appended to the case the total amount of wages saved by the absence of the sixteen seamen who deserted was put down as 370*l*. 6*s*. 8*d*.; the increased cost of the substitutes as claimed on account was 109*l*. 10*s*. The saving to the owners on wages was 260*l*. 16*s*. 8*d*., and the saving to the owners on keep, at 1*s*. 6*d*. per day, was 281*l*. 2*s*. Total saving to owners on wages and keep 541*l*. 18*s*. 8*d*. The account was made out with regard to each one of the sixteen seamen, and the amount of wages saved by the absence of the seaman, the increased cost of the substitute for that seaman, the saving to the owners on wages as to that seaman, and the saving to the owners on

keep at 1*s.* 6*d.* per day, were given, making the totals above mentioned.

Neate (app.) *v.* Wilson (resp.).

Case stated by justices of the peace for the city of Cardiff on the hearing of an appeal as provided by sub-sect. 3 of sect. 28 of the Merchant Shipping Act 1906 (6 Edw. 7, c. 48) by A. E. Wilson, master of the British steamship *Mountby*, of West Hartlepool (hereinafter called the respondent) against a decision made by Reginald Neate, an officer of the Board of Trade, superintendent of the mercantile marine office at the port of Cardiff (hereinafter called the appellant), when dealing as the proper officer under sect. 28 of the Merchant Shipping Act 1906 with the reimbursement account of certain seamen who had deserted from the said British steamship in the course of a voyage which terminated at the port of Cardiff on or about the 27th June 1910.

The appellant was the superintendent of mercantile marine, an officer of the Board of Trade at the port of Cardiff, and the proper officer referred to in sect. 28 of the Merchant Shipping Act 1906, and the respondent was A. E. Wilson, master of the British steamship *Mountby*, of West Hartlepool.

The appellant appeared before the justices on an appeal entered against his decision as the proper officer under sect. 28 of the Merchant Shipping Act 1906, with reference to the reimbursement accounts of the respondent in respect of alleged expenses amounting to a sum of 25*l.*, caused to the respondent or the owners of the British steamship *Mountby*, by the absence of certain seamen—namely, W. Main, W. Woolward, John Casey, B. Lally, J. Blakeman, H. Smith, J. Martinson, and G. Chappell, belonging to the British steamship *Mountby*, due to the desertion of the said seamen.

Upon the hearing of the appeal by the justices the following facts were proved:—

(1) That the steamship *Mountby* was a British ship registered at the port of West Hartlepool, and that at the times material to this case the respondent was her master.

(2) That by articles of agreement entered into at the port of South Shields on the 14th Dec. 1909—which articles, together with the official log of the steamship for the voyage and the delivery and reimbursement accounts of the seamen and the summary of those accounts were produced in evidence before the justices, and were appended to and formed part of this case—there were engaged as members of the crew of the steamship, amongst others, for a voyage "not exceeding three years' duration to any ports or places within the limits of 75 degrees north and 60 degrees south latitude, commencing at the Tyne, proceeding thence to Melbourne and (or) any other ports within the above limits, trading in any rotation and to end at such port in the United Kingdom or Continent of Europe (within the home trade limits) as may be required by the master," the following seamen: Main (mess-room steward), Woolward (fireman and trimmer), Casey (fireman and trimmer), Lally (fireman and trimmer), Blakeman (sailor), Smith (A.B.), Martinsen (sailor), Rodgers (A.B.), and Stewart (fireman and trimmer).

(3) The G. Chappell, mentioned in par. 5, signed the articles at Melbourne or Williamstown, in the State of Victoria, on the 23rd March 1910, and deserted from the steamship at Durban, in the Union of South Africa, on the 2nd May 1910.

(4) That on the 2nd March 1910 the *Mountby* arrived at the port of Melbourne or Williamstown aforesaid, where four members of the crew (Martinsen, Casey, Rodgers, and Main) deserted from the ship, and the master of the *Mountby* was compelled to employ four substitutes in their stead.

(5) That the master endeavoured to have entered on the articles the names of the substitutes in place of the deserters, but the superintendent of mercantile marine at Melbourne refused to indorse the articles certifying the four members of the original crew to be deserters until the day of sailing. Accordingly the four substitutes were engaged to work on the vessel day by day on the understanding that they would be engaged for the voyage in the event of the deserters failing to return, and it was agreed that they were to be "signed on" for the voyage immediately the superintendent indorsed the articles.

(6) That on the 21st March, when the *Mountby* had completed loading and was in readiness to sail early on the 22nd March 1910 from the port of Melbourne or Williamstown aforesaid, four more members of the original crew (namely: Blakeman, Smith, Lally, and Stewart), together with the four substitutes mentioned in pars. (4) and (5) deserted from the ship *Mountby*.

(7) That in consequence of these desertions the *Mountby* was unable to sail from the port of Melbourne or Williamstown aforesaid on the 22nd March, and the master, in order to save payment of further pier dues, arranged that the steamer be moved from the pier whilst substitutes were being found to take the places of the eight men who had deserted.

(8) That on the 22nd March the master and mate of the *Mountby* were engaged in finding substitutes, and at 8 p.m. on that day—the 22nd March—they returned to the steamer with eight substitutes.

(9) That upon the return of the master and mate to the *Mountby* on the evening of the 22nd March, it was discovered that another member of the original crew—(namely, Woolward), had deserted, for whom a substitute was found by twelve o'clock on the same night.

(10) That on the 23rd March the *Mountby* sailed from the port of Melbourne or Williamstown aforesaid, having been detained one whole day by reason only of the desertions mentioned in pars. (4), (6), and (9) hereof.

(11) That on the 1st May 1910 the steamship touched at the port of Durban (Port Natal) in the Union of South Africa, where G. Chappell deserted.

(12) That the steamship arrived at the port of Cardiff aforesaid on the 26th June 1910, and on the day following the crew were paid off before a deputy superintendent of mercantile marine, the master being then called upon to render to the appellant as proper officer, accounts of the wages and effects of the ten seamen aforesaid who had been left behind abroad by reason of desertion.

(13) That in accordance with the provisions of sub-sect. 4 of sect. 28 of the Merchant Shipping Act 1906, the respondent elected to deal with the accounts collectively; and the accounts were

furnished to the appellant as proper officer on the 30th June 1910. No vouchers for any of the sums claimed in the reimbursement account were furnished or demanded, save that a copy of an account dated the 21st March 1910, containing an item of 2*l.* 10*s.* for Bay removal, was shown to the appellant.

(14) That in the reimbursement account of G. Chappell no item was claimed.

(15) That in each of the accounts of Main, Woolward, Casey, Lally, Blakeman, Smith, Martinsen, Rodgers, and Stewart, the sum of 3*l.* 2*s.* 2*d.* was claimed in the reimbursement account. The total of these nine sums of 3*l.* 2*s.* 2*d.* amounted to 27*l.* 19*s.* 6*d.* The particulars of these sums in the respective reimbursement accounts were "Proportion of detention as per master's letter."

(16) That the master's letter in the last paragraph mentioned was dated the 30th June 1910, and was addressed to the superintendent, Mercantile Marine Offices, Cardiff. It contained the following statements:

Please note the *Mountby* finished loading at Williamstown, Australia, on the afternoon of Monday, the 21st March 1910, and in the ordinary course of events should have sailed the following morning, but, owing to the great difficulty in engaging substitutes for the deserters, it took me from 10 a.m. to 5 p.m. on the 22nd. *Mountby* did not sail until the morning of Wednesday, the 23rd March 1910. I therefore claim reimbursement for one day's detention, 25*l.* During this detention, in order to avoid payment of extra quay dues, I had to shift *Mountby* to an anchorage in Hobson's Bay, the cost of pilotage being 2*l.* 10*s.*, as per enclosed account. I also claim reimbursement for this amount, together with 9*s.* 6*d.* as my personal expenses incurred.

(17) That the total of the items in the last paragraph mentioned was 27*l.* 19*s.* 6*d.*, and the total of the nine sums of 3*l.* 2*s.* 2*d.* made up an equal amount.

(18) That the appellant as proper officer disallowed the said sum of 25*l.*, claimed by the master as "detention of the ship, &c.," and accordingly struck out from the reimbursement account of each of the men mentioned in par. (15) the item of 3*l.* 2*s.* 2*d.* But in substitution therefor there was inserted and allowed by the appellant as proper officer in each of the said reimbursement accounts a sum of 6*s.* 7*d.* for proportion of pilotage and expenses. The total of these nine sums of 6*s.* 7*d.* amounted to 2*l.* 19*s.* 3*d.*, which approximately made up the total of the two items for the cost of pilotage when shifting the ship—2*l.* 10*s.*, and 9*s.* 6*d.* for the master's personal expenses claimed in the letter of the 30th June.

(19) That the wages of the crew of the steamship amounted to 4*l.* 16*s.* 2*d.* *per diem*, and the cost of food for the crew was 1*l.* 16*s.* 3*d.* *per diem.* Eight tons of coal of the value of about 10*l.* were consumed in getting up steam to take the steamship from the pier to the anchorage where she lay under banked fires from the 22nd to the 23rd March 1910.

It was contended by counsel for the respondent that the damage suffered by the master of the *Mountby* flowed from the desertion, and should be reimbursed from any money that might be due to the seamen who had deserted at Williamstown. The sum claimed for deduction in the letter of the 30th June 1910 had been made up in a particular way, but he (counsel) was not satisfied that that was the proper basis upon which the damages ought to be made out. He submitted that the proper basis was the amount of expenses proved to be caused to the master by reason of the desertion. The claim was the same—namely, one for damages or expenses caused by desertion—but the mode of arriving at the correct amount had been changed. He contended that the said sums of 4*l.* 16*s.* 2*d.*, 1*l.* 16*s.* 3*d.*, and 10*l.* (making a total of 16*l.* 12*s.* 5*d.*) were out-of-pocket expenses incurred by the master, and that inasmuch as they were expenses that would not have been incurred but for the desertion of the men, but were expenses directly attributable to the desertion, they fell within the meaning of sect. 28 of the Merchant Shipping Act 1906, and as such should be allowed by the court.

It was contended by counsel for the appellant (*a*) that the sums of 4*l.* 16*s.* 2*d.*, 1*l.* 16*s.* 3*d.*, and 10*l.* were not expenses caused to the master by reason of the desertion of the seamen within the meaning of sect. 28; (*b*) that the detention, if any, was due, at least in part, to causes other than the absence of the seamen; (*c*) that one of the causes of such detention, if any, was the failure on the part of the substitutes, who promised to take the place of some of the seamen, to fulfil their promises, and that it was against the meaning of the statute to charge the wages of those seamen with the expenses caused by the default of other persons, or to apportion the expenses between the varying classes of persons other than the said seamen by whose default they had been incurred, and that on that account the claim was bad on account of remoteness of damage; (*d*) that there had been an amendment of the original claim, and under sub-sect. 3 of sect. 28 of the Merchant Shipping Act 1906, under which the hearing before the justices took place, the hearing was an appeal and not a rehearing and therefore it was not open to the justices to allow an amendment of the claim and a substitution of other items for those which had been disallowed. He relied on the words in sub-sect. 3 aforesaid contained, that "the master of the ship shall be entitled to be reimbursed any sums shown in the reimbursement account," as excluding the power to introduce on appeal substituted items not originally shown in the accounts. Further, he submitted that damages for detention were not expenses within the meaning of the section. "Expenses" meant out-of-pocket expenses already incurred at the time of the rendering of the accounts and capable of being vouched by existing vouchers. Damages, on the other hand, were something which had to be assessed by authority.

With regard to the contention of the appellant's counsel that it was not open to the justices to allow an amendment of the claim and a substitution of other items for those which had been disallowed, the justices were of opinion that there was no amendment of the claim inasmuch as the claim before them was the same as that originally presented to the superintendent of mercantile marine at Cardiff—namely, a claim by the master to have reimbursed to him from the wages of certain seamen such expenses as were caused to him by reason of the desertion of the seamen.

The original claim presented to the superintendent of mercantile marine was for 27*l.* 19*s.* 6*d.*, of which sum 2*l.* 19*s.* 3*d.* was allowed in respect of cost of towage and personal expenses of the master; but with regard to the sum of 25*l.* for detention of the vessel, particulars as to how the amount was made up were neither asked for nor given, but the claim was disallowed. The justices were further of opinion that it was competent to them, on hearing the appeal, to inquire whether the sum of 25*l.* or any lesser amount had been incurred by the master as expenses caused to him by the desertion of the seamen, and to allow him such sum as they found to be properly chargeable. Having regard to the facts that the vessel was detained for one day by reason only of the desertion of the seamen, and that owing to such detention the master had incurred an expense of 16*l.* 12*s.* 5*d.*, being 4*l.* 16*s.* 2*d.* for extra wages to the crew, 1*l.* 16*s.* 3*d.*, cost of food supplied to the crew, and 10*l.*, the cost of coal consumed, the justices decided that that sum of 16*l.* 12*s.* 5*d.* was an expense caused to the master by the absence of seamen due to desertion within the meaning of sect. 28, and they accordingly allowed such sum to be reimbursed to him out of the wages due to those seamen who had deserted from the vessel at Melbourne.

The Merchant Shipping Act 1894 (57 & 58 Vict. c. 60) provides:

Sect. 221. If a seaman lawfully engaged, or an apprentice to the sea service, commits any of the following offences he shall be liable to be punished summarily as follows: (*a*) If he deserts from his ship he shall be guilty of the offence of desertion and be liable to forfeit all or any part of the effects he leaves on board, and of the wages which he has then earned, and also, if the desertion takes place abroad, of the wages he may earn in any other ship in which he may be employed until his next return to the United Kingdom, and to satisfy any excess of wages paid by the master or owner of the ship to any substitute engaged in his place at a higher rate of wages than the rate stipulated to be paid to him; and also, except in the United Kingdom, he shall be liable to imprisonment for any period not exceeding twelve weeks with or without hard labour. (*b*) If he neglects, or refuses without reasonable cause, to join his ship, or to proceed to sea in his ship, or is absent without leave at any time within twenty-four hours of the ship's sailing from a port, either at the commencement or during the progress of a voyage, or is absent at any time without leave and without sufficient reason from his ship or from his duty, he shall, if the offence does not amount to desertion, or is not treated as such by the master, be guilty of the offence of absence without leave, and be liable to forfeit out of his wages a sum not exceeding two days' pay, and in addition for every twenty-four hours of absence, either a sum not exceeding six days' pay or any expenses properly incurred in hiring a substitute; and also, except in the United Kingdom, he shall be liable to imprisonment for any period not exceeding ten weeks with or without hard labour.

Sect. 232 (1). Where any wages or effects are under this Act forfeited for desertion from a ship, those effects may be converted into money, and those wages and effects, or the money arising from the conversion of the effects, shall be applied towards reimbursing the expenses caused by the desertion to the master or owner of the ship, and subject to that reimbursement shall be paid into the Exchequer, and carried to the Consolidated Fund. (2) For the purpose of such reimbursement, the master or the owner or his agent may, if the wages are earned subsequently to the desertion, recover them in the same manner as the deserter could have recovered them if not forfeited; and the court in any legal proceeding relating to such wages may order them to be paid accordingly. (3) Where wages are forfeited under the foregoing provisions of this Act in any case other than for desertion, the forfeiture shall, in the absence of any specific provision to the contrary, be for the benefit of the master or owner by whom the wages are payable.

The Merchant Shipping Act 1906 (6 Edw. 7, c. 48)—an Act to amend the Merchant Shipping Acts 1894 to 1900—provides:

Sect. 28 (1). If a seaman belonging to any British ship is left behind out of the British Islands, the master of the ship shall, subject to the provisions of this section, (*a*) as soon as may be, enter in the official log-book a statement of the effects left on board by the seaman and of the amount due to the seaman on account of wages at the time when he was left behind; and (*b*) on the termination of the voyage during which the seaman was left behind, furnish to the proper officer within forty-eight hours after the arrival of the ship at the port at which the voyage terminates, accounts in a form approved by the Board of Trade, one (in this section referred to as the delivery account) of the effects and wages, and the other (in this section referred to as the reimbursement account) of any expenses caused to the master or owner of the ship by the absence of the seaman in cases where the absence is due to desertion, neglect to join his ship, or any other conduct constituting an offence under section two hundred and twenty-one of the principal Act. The master shall, if required by the proper officer, furnish such vouchers as may be reasonably required to verify the accounts. (2) The master of the ship shall deliver to the proper officer the effects of the seaman as shown in the delivery account, and subject to any deductions allowed under this section, the amount due on account of wages as shown in that account, and the officer shall give to the master a receipt, in a form approved by the Board of Trade, for any effects or amount so delivered. (3) The master of the ship shall be entitled to be reimbursed out of the wages or effects any sums shown in the reimbursement account which appear to the proper officer, or, in case of an appeal under this section, to a court of summary jurisdiction, to be properly chargeable, and for that purpose the officer, or, if necessary, in the case of an appeal, the Board of Trade, shall allow those sums to be deducted from the amount due on account of wages shown in the delivery account, and, so far as that amount is not sufficient, to be repaid to the master out of the effects. The proper officer, before allowing any sums to be deducted or repaid under this provision, may require such evidence as he thinks fit as to the sums being properly chargeable to be given by the master of the ship, either by statutory declaration or otherwise. Where the master of a ship whose voyage terminates in the United Kingdom is aggrieved by the decision of the proper officer as to the sums to be allowed as properly chargeable on his reimbursement account, and the amount in dispute exceeds ten pounds, he may appeal from the decision of the proper officer to a court of summary jurisdiction. (4) Where during the voyage of a ship two or more seamen have been left behind, the delivery and reimbursement accounts furnished as respects each seaman may at the option of the master of the ship be dealt with, as between him and the proper officer, collectively instead of individually, and in that case the master of the ship shall be entitled to be reimbursed, out of the total amount of the wages and effects of the seamen left behind, the total of the amounts allowed under this section as properly chargeable on the reimbursement accounts, and shall be required to deliver to the proper officer on account of wages only the sum by which the total of the amounts shown on the delivery

accounts to be due on account of wages exceeds the total of the amounts allowed as properly chargeable on the reimbursement accounts. . . . (9) Any sums remitted under this section or arising from the sale of effects under this section shall be paid into the Exchequer, and any sums payable by the Board of Trade under this section shall be paid out of moneys provided by Parliament. (11) The proper officer for the purpose of this section shall be (*i*) at a port in the United Kingdom, a superintendent ; . . .

Sir *Rufus Isaacs* (A.-G.) (with him Sir *John Simon* (S.-G.), *Rowlatt*, and *Hamar Greenwood* in the first case, and Sir *John Simon* (S.-G.), *B. W. Ginsburg*, and *Rowlatt* in the second case) for the appellant.—The material sections upon which the question turns are sects. 221 and 232 of the Merchant Shipping Act 1894 and sect. 28 of the Merchant Shipping Act 1906. Sect. 221 enacts that if a seaman deserts from his ship he shall be liable to be punished as provided in that section. He is liable to forfeit his effects left on board and the wages which he has then earned, and also to satisfy any excess of wages paid by the master or owner of the ship to any substitute engaged in his place at a higher rate of wages. Then sect. 232 deals with the application of the wages and effects so forfeited, and provides that the wages and effects which under the Act are forfeited for desertion "shall be applied towards reimbursing the expenses caused by the desertion to the master or owner of the ship," "and subject to that reimbursement shall be paid into the Exchequer, and carried to the Consolidated Fund," so that under that section what has to be reimbursed to the master or owner out of the forfeited wages and effects is "the expenses caused by the desertion." Then the next important section is sect. 28 of the Merchant Shipping Act 1906, which deals with the wages and effects of seamen left behind; and in sub-sect. 1 (*b*) it says that on the termination of the voyage the master must furnish to the proper officer accounts, one, called "the delivery account," of the effects and wages of the seaman left behind, and the other, called "the reimbursement account," "of any expenses caused to the master or owner of the ship by the absence of the seaman in cases where the absence is due to desertion." Sub-sect. 3 says that the master shall be entitled to be reimbursed out of the wages and effects any sums shown in the reimbursement account which appear to the proper officer to be properly chargeable, and under sub-sect. 4 the master may deal with the delivery and reimbursement accounts collectively instead of individually. Upon these sections the question is one of reimbursement of "expenses" caused by the desertion; it is not a question of damages for breach of contract. If the master was not out of pocket by the desertions, then there were no "expenses," and that is really the test. In this case the fact was that the shipowners gained some 500*l.* in consequence of the desertion; and, that being so, they cannot recover these expenses amounting to 109*l.* 10*s.*, as being "expenses caused by the desertion." The word "expenses" is not co-extensive with loss, because all that a shipowner can recover is the expenses which he has been put to in consequence of the desertion. If the owner got a better freight by the delay of the ship, then he would have suffered no loss by the desertion and there would be no "expenses caused" by it. The expenses here were caused, not by the desertion, but by the new contract entered into, and there is no finding of fact that this contract was made in consequene of the desertion, and before there is a right to reimbursement of expenses it must be shown that they are expenses caused by the desertion. During the five months in question several hundred pounds were saved to the owners in wages, because if the desertions had not taken place the owners would have had to pay the wages of these sixteen men for that period of five months. If we add up the wages that would have been paid if there had been no desertion, and then add up the wages that have in fact been paid, the "excess wages" is the sum by which the wages in fact paid exceeds the wages that would have been paid but for the desertion. Here there was no "excess of wages" within the meaning of sect. 221 (*a*), because although the master may have had to pay 1*l.* a month more to the alleged substitutes, there has to be set against that the saving in wages, amounting to 370*l.*, during the whole of the time when no wages were paid either to these men or to any substitutes for them. It therefore cannot be said that he has paid any "excess wages" or that he has suffered "expenses" in that respect caused by the desertion. He has in fact gained by the desertion. The expenses to come into the reimbursement account must be a loss in respect of wages or excess wages paid in consequence of the desertion. Secondly, the excess of wages referred to in sect. 221 is an excess of wages paid to a "substitute." The seamen engaged here were not within the meaning of that section substitutes at all for the men who had deserted some five months before. They were simply men who were employed to bring the vessel home under a newcontract and a new voyage, and although in one sense they were substitutes to bring the vessel home, they were not substitutes within the meaning of the Act. In the case of *Deacon* v. *Quale*, therefore, the magistrate was wrong in allowing the 109*l.* 10*s.*, the excess wages, to be included in the reimbursement account and charged against the forfeited wages.

With regard to the case of *Neate* v. *Wilson*, the same principles apply. It is submitted that the proper officer was right, on the facts before him, in disallowing the claim for the one day's detention of the ship, and that the justices were wrong in allowing a sum which in fact included damages for the detention. The expenses so allowed were not "expenses caused by the desertion" within sect. 232 of the Act of 1894, because, so far as the act of any one of the seamen was concerned, the vessel would have remained there in any case, and it cannot be said that the act of any one of the seamen in deserting caused the detention. In fact it was a case of expenses being caused to the master by the absence of all those who deserted, and not by the absence of any one of the seamen in particular, and if any expenses arose therefrom they cannot be divided between the seamen so deserting, so as to include in the reimbursement account of each seaman a porportionate part of such expenses. Again, it was never contemplated that the master should recover damages for detention, because if the section is so construed it would make expenses mean damages for breach of contract, which it certainly does not. These so-called expenses represent profits which the master has failed to make. The loss of those

profits is not expenses within the meaning of these sections, and the master is not entitled to them.

Alexander Neilson (*W. Norman Raeburn* with him) for the respondent in each case.—The fallacy in the argument advanced on behalf of the appellant is that in order to arrive at the "excess wages" which the deserting seaman is to satisfy, you must add up the wages saved in consequence of all the desertions and compare the total amount with the total amount of the wages paid to the substitutes and see what the net result is. That cannot be the meaning of sect. 221 of the Act of 1894. Sect. 221 defines what the offence of desertion is and specifies the consequences of it, and it provides that the deserting seaman, in addition to forfeiting his wages then due and his effects on board, is to satisfy any "excess of wages" paid to any substitute, so that the forfeited wages are made liable to satisfy the excess wages paid to a substitute. That means that in the case of any particular seaman who deserts he is to satisfy any excess of wages paid to the substitute who takes his place, and there is an "excess of wages" if the substitute is paid a higher sum, but that is very far from saying that in order to see whether there is an excess of wages you must add up the wages saved to the master and deduct therefrom the total of the wages paid. Then sect. 232 refers to wages which under the Act are forfeited (that is under sect. 221), and says that the forfeited wages are to be applied towards reimbursing the expenses caused by the desertion. The "expenses caused by the desertion" must refer to the excess wages paid to a substitute, and must include those excess wages at least, and probably something more: (*Halliday* v. *Taffs*, 104 L. T. Rep. 188; (1911) 1 K. B. 594). Sect. 28 of the Act of 1906 deals with the wages and effects of a seaman who is left behind, and in sub-sect. 1 (*b*) provides for a delivery account and a reimbursement account, and the reimbursement account is to be an account of the expenses caused to the master or owner by the absence of the seaman where the absence is due to desertion. Those expressions in the two sections, "expenses caused by the desertion" in sect. 232 of the Act of 1894, and "expenses caused by the absence of the seaman . . . due to desertion" in sect. 28, sub-sect. 1 (*b*), of the Act of 1906, mean the same thing. The word used in both these sections is "expenses," and sect. 28, sub-sect. 1 (*b*), in terms refers to sect. 221 of the Act of 1894, because it says that the reimbursement account is to include the expenses caused by the absence of the seaman due to desertion, "or any other conduct constituting an offence under sect. 221 of the principal Act," and it is therefore to include the excess wages mentioned in sect. 221. Therefore, if there was any excess of wages paid to the new men shipped on board—as there was in this case—the forfeited wages were liable to satisfy this excess, and these excess wages must come within sect. 232 as "expenses caused by the desertion," and within sect. 28 as "expenses caused by the absence of the seaman due to desertion." Secondly, it is said that these new men were not "substitutes," but the magistrate has found that they were substitutes, and it was a question for him to find. It was all one voyage, and the names of the new men appeared in the articles. They were, within the meaning of sect. 221, "substitutes" engaged in the place of the men who had deserted, and as they were engaged at a higher rate of pay there was an "excess of wages" which the forfeited wages were liable to satisfy. The magistrate was therefore right in allowing the 109*l*. 10*s*. in the reimbursement account. In the case of *Neate* v. *Wilson*, the ship was delayed one day in consequence of the desertions, and the expenses allowed by the justices were properly allowed as being expenses coming within sect. 28. The expenses caused by desertion are not limited to the mere excess wages paid to the substitutes. The intention of the Legislature was that any expenses that could fairly be said to have been caused by the absence of the men who deserted should be paid. Under sect. 28 these sums if not allowed to the master in the reimbursement account are to be paid into the Exchequer, and that is a reason for saying that the words ought not to receive so narrow a construction as in other cases. The justices have found that the sums representing the one day's wages to the crew, the cost of one day's food, and the 10*l*. as the cost of the extra coal, were "expenses" caused by the absence of the seamen due to desertion within sect. 28, and from a business point of view they were right.

Rowlatt in reply.

Lord ALVERSTONE, C.J.—These two cases raise important points under somewhat different circumstances. The question which we have to consider is whether certain payments or expenses charged by the master of the ship in his reimbursement account are properly chargeable against the wages of the seamen who deserted; and it turns practically or entirely on sects. 221 and 232 of the Merchant Shipping Act 1894. We have to consider a section of the later Act of 1906, but only for the purpose of seeing whether there is any light thrown on the main question before us.

The facts in the first case may be very simply stated. There were a certain number of seamen who had shipped on articles for a voyage not exceeding three years to go to San Francisco and different ports and places, and to be finally discharged on the vessel coming to the United Kingdom or certain ports in Europe. At San Francisco sixteen of these men deserted, and, there being a difficulty as to what should be done and the vessel not having a charter at the time, the master commenced to put on board ballast in order that she might go elsewhere seeking cargo. At that time the master received a cablegram from his owners in Glasgow stating, "Combined with homeward charter at combination rates, have chartered at a lump sum for a period of six months at 500 dollars per month to be used for store ship, this is your authority for signing contract on our behalf." The result of that combined state of circumstances was this: the men having deserted and the vessel being partly loaded with ballast and the owners having made that arragement, the vessel remained for nearly six months at San Francisco employed as a store ship. Before the vessel left San Francisco sixteen men were shipped in the place of the sixteen who had deserted, and to those sixteen men so shipped in the place of the deserters a higher rate of

wages per month had to be paid. The vessel then came home with cargo under a new charter to some port in the United Kingdom. The state of things then was that there was a sum of about 87*l*. odd due in respect of wages to the men who had deserted, and who had therefore forfeited their wages. One hundred and nine pounds ten shillings was the extra amount said to have been paid by the master, made up of expenses in obtaining substitutes, boat hire, shipping fee, and extra wages at an extra 1*l*. per month.

In these circumstances it has been contended by the Attorney-General that although he would admit that the 109*l*. 10*s*. is *primâ facie* a proper item to be included in a reimbursement account, yet it ought not to be included in that account in this case for two main reasons: first, that these seamen who were taken on could not be said to be in substitution for those who had deserted; and, secondly, in respect of wages paid to the crew on the whole account being taken, there was a saving to the ship of some amount, as he said between 400*l*. and 500*l*. He agreed that this was to be in respect of wages only, and I think he was bound to limit it to that But at any rate, dealing with the finding in par. (*k*) of the case that "the wages of sixteen seamen for the said period of five months and seven days would have amounted to more than the sum of 109*l*. 10*s*.," he said that inasmuch as on that transaction of wages in connection with this voyage and in the circumstances of this desertion the master has saved five months' payment of sixteen men—although he had to pay 1*l*. per month for the extra men that came home with the vessel—he has not been put to any loss or expense, and therefore he ought not to include these payments in the reimbursement account.

With regard to the question as to the men being substitutes, the first point taken before the magistrate was that having regard to the lapse of time between the last of the desertions and the engagement of the sixteen other men, these men could not be said to be substitutes, and that the expenses of engaging these seamen were not, within the meaning of sect. 28, sub-sect. 1 (*b*), of the Act of 1906, expenses caused to the master or owner of the ship by the absence of the seamen where the absence was due to desertion. As to that contention the magistrate found that there was no abandonment of the adventure by the master or owners, and he has found that the men were in substitution for those who had deserted. I am not disposed to differ from that finding. I think I should probably have come to the same conclusion myself, but at any rate I see no ground for differing from it. The men who deserted would have been bound by their articles to have stayed on the ship and to have come home in her. The men who were shipped to bring her home were undoubtedly shipped in place of the sixteen men who deserted. Therefore, *primâ facie*, they were men taken on in substitution for those who had deserted. The magistrate has found, and I agree with him, that the adventure was not abandoned, and in these circumstances it seems to me that we ought not to differ from the view that the men were men shipped in substitution and came within sect. 221 of the Act of 1894 as substitutes engaged in the place of those who had deserted.

The second question is more difficult, and in order to consider it we must look at the sections of the Act dealing with the matter. Sect. 221 of the Merchant Shipping Act 1894, which is the first section, says if a seaman "deserts from his ship he shall be guilty of the offence of desertion and be liable to forfeit all or any part of the effects he leaves on board, and of the wages which he has then earned, and also, if the desertion takes place abroad, of the wages he may earn in any other ship in which he may be employed until his next return to the United Kingdom, and to satisfy any excess of wages paid by the master or owner of the ship to any substitute engaged in his place at a higher rate of wages than the rate stipulated to be paid to him." That is a section strongly in favour of the master and the shipowner, and intended to be so, because not only does it forfeit the wages and not only does it forfeit the effects and say that the seaman is to be liable to satisfy the excess of wages, but it says that they may also take proceedings against the owner of any other ship in which the seaman so deserting may earn wages until his next return to the United Kingdom.

Sect. 232 deals with reimbursement. It says: "Where any wages or effects are under this Act forfeited for desertion from a ship . . . those wages and effects . . . shall be applied towards reimbursing the expenses caused by the desertion to the master or owner of the ship, and subject to that reimbursement shall be paid into the Exchequer." For the purposes of such reimbursement, the master or his agent may, if the wages are earned subsequently to desertion, recover them in the same way as the deserter could have recovered them if they had not been forfeited.

To my mind those sections deal with the simple question of wages forfeited (which will go to the Exchequer unless the master gets them reimbursed to him) and of expenses incurred in connection with the substituted men. There is nothing in either of those sections, to my mind, to open up the general question as to whether there has been with the wages account, including or not including the food account, a saving of expense to the master of the ship. The common instances of desertion are where there is a higher rate of wages at the port of arrival, and men do constantly desert at such port soon after the vessel has arrived there. The vessel is not infrequently there for a month, six weeks, or even two months, and in cases of desertion fresh men are not shipped to take the vessel home until the end of that time. Therefore in a great majority of cases some question could be raised by the Board of Trade as to whether there had not been a saving in respect of wages, or less expense than the master claims in respect of the wages account. There is nothing in either of those two sections—sects. 221 and 232—to indicate to me that such an inquiry was ever intended to be entered upon.

Then the Merchant Shipping Act of 1906 is mainly, if not entirely, by sect. 28, machinery for carrying out this previous scheme. That section says that if any seaman is left behind out of the British Islands, on the termination of the voyage during which the seaman was left behind, the master shall within forty-eight hours after the

arrival of the ship deliver accounts in a form approved by the Board of Trade, one, of the effects and wages, "and the other (in this section referred to as the reimbursement account) of any expenses caused to the master or owner of the ship by the absence of the seaman in cases where the absence is due to desertion, neglect to join his ship, or any other conduct constituting an offence under section two hundred and twenty-one of the principal Act." That is obviously dealing with sect. 221 of the Act of 1894, and in my opinion that again points to the conclusion that what was intended to be dealt with was the comparatively simple question of what expenses have been incurred by the master in connection with the desertion of that particular seaman. I do not find any indication of the suggestion made that you might enter into the sort of account which is illustrated by the table put in by the Board of Trade of the number of days' wages saved, and of the food saved, and of the net result to the employer of the men having left the ship. I think that would open up a question of very great difficulty, and would render this comparatively simple matter as to how much of the wages was to be paid over to the Treasury a question of great difficulty not intended to be entered into upon such a proceeding.

I do not think the later sub-sections of sect. 28 have much bearing upon this matter, but I think sub-sect. 4, what I may call the collective section, has some bearing on this very point. It provides that where during the voyage two or more seamen have been left behind, the delivery and reimbursement accounts as respects each seaman may at the option of the master of the ship be dealt with as between him and the proper officer collectively instead of individually, and in that case the master shall be entitled to be reimbursed out of the total amount of the wages and effects of the seamen left behind the total of the amounts allowed under this section as properly chargeable on the reimbursement accounts, and shall be required to deliver to the officer on account of wages only the sum by which the total of the amounts shown on the delivery accounts to be due on account of wages exceeds the total of the amounts as properly chargeable on the reimbursement accounts.

That, to my mind, points in the same direction. It was intended that it should be a collective calculation of how much was due in respect of the total amount of wages of these particular seamen and how much was due in regard to the reimbursement accounts, and I think that if it had been intended to open up the general question as to how much had been gained or lost by the shipowner very different provisions would have been made. That appears to me to be practically the view which was expressed, although only expressed as *obiter*, by my brother Hamilton in the case of *Halliday* v. *Taffs* (*ubi sup.*) in the following passage (1911) 1 K. B., at p. 602): "When one looks at the use of the word 'expenses' in both sect. 221 and sect. 232 of the Act of 1894 it seems to me clear from the context that the word refers to expenses directly caused, such as disbursements in the nature of payments for service substituted for that which the deserter ought to have rendered." I think that that view expressed in anticipation is supported by the arguments we have heard in this case.

Therefore in the first case—the case of *Deacon* v. *Quale*—I am of opinion that the contention for the respondent is right, and that the appeal must be dismissed upon the ground that these expenses were properly incurred in substituting seamen for those who had deserted, and that, in order to prevent the reimbursement of these items from being allowed, the Attorney-General can only succeed by entering into an inquiry as to what was the net result, upon the whole adventure, of these men deserting. I am of opinion that that was not an inquiry which was intended to be entered upon, and that therefore the claim of the Board of Trade to disallow those particular expenses must fail.

Applying that principle, which I need not enumerate again, to the second case—the case of *Neate* v. *Wilson*—the facts there were somewhat different. The facts were that a certain number of men having deserted, and some further desertions having taken place, the vessel was detained a day. I do not enter into the question as to what may be called the degree of expense caused by the desertion of the particular men. The Attorney-General contended very strongly that you could not make the claim at all because you had to apportion the amount according to the master's contention between a number of seamen, as to some of whom their desertion might have contributed very largely to the delay, and as to some others very little to the delay; and that is rather an instance of the difficulty of entering into such an inquiry.

The items disallowed here by the proper officer were the proportion of the sum claimed, which was originally put at 25*l.*, for the detention of the ship for one day, and which was then changed before the magistrates to 16*l.* 12*s.* 5*d.* This latter sum was made up of wages, the cost of food, and coal; that is to say, it amounted to 16*l.* 12*s.* 5*d.*, which was said to be the actual damages for the detention on that day. I think this again is too remote and not a part of the inquiry intended to be entered upon. It is quite true the vessel was detained a day, and in respect of the expenses actually incurred in getting the men—namely, the pilotage and personal expenses—they have been allowed. Possibly that is not quite so plain, but there is no real dispute about that matter. It is a very small matter, but in regard to the other part of the claim it is in fact a claim that the result of the men's desertion was to detain the ship, and therefore to put the ship to an extra day's expense.

I think that that is not the class of expenses intended to be allowed and to be included in the reimbursement account. In my opinion those again are damages for detention of the vessel, remote from what may be said to be the actual expenses incurred in getting the seamen, and might sometimes involve considerations as to whether there might not have been a little saving by sailing on a later day instead of the earlier one. In those circumstances I think the items included in the second account were improperly included, and the appeal must be allowed.

Hamilton, J.—I am of the same opinion. We start with sect. 221 of the Act of 1894, which imposes upon the deserting seaman, by way of punishment for his offence, three classes of liability: first, the forfeiture of wages and effects; secondly, the personal liability to satisfy

any excess of wages paid by the master or owner of the ship to any substitute engaged in his place at a higher rate of wages than the rate stipulated to be paid to him; and, thirdly, in the United Kingdom a liability to be imprisoned. As a result of enforcing that section there is created a fund consisting of the wages earned up to the date of desertion, often a very considerable sum, which, after forfeiture and until the end of the voyage, will be in the hands of the shipowner or the master on his behalf.

That, therefore, brings us to sect. 232, under which primarily these cases arise, although it is necessary to bear in mind the provisions of sect. 221, because that is the foundation of the whole matter. "Where any wages or effects are under this Act forfeited," provision is made for their destination. And as, under sect. 233, forfeiture does not involve the adjudication of a forfeiture in a criminal proceeding against the seaman, but may be decided and "determined in any proceeding lawfully instituted with respect to those wages" (such as this proceeding), notwithstanding that the seaman himself has not been proceeded against, it has been common ground throughout these cases that upon the admitted desertion of the seamen in question their wages were not liable to forfeiture, but were forfeited. Under sect. 232, sub-sect. 3, where wages are forfeited otherwise than for desertion, the forfeiture shall, "in the absence of any specific provision to the contrary, be for the benefit of the master or owner by whom the wages are payable." Comparatively, however, those are trivial matters because in the case of desertion, which is much the more frequent offence, the amount of the forfeiture is also immensely greater than anything which can be forfeited for such matters as offences against discipline under sect. 225, and the seaman who, after a voyage of several months, yields to the temptations of the shore and deserts, constantly leaves behind in the master's hands a very substantial sum indeed for wages honestly earned and forfeited by this desertion.

Accordingly, as regards such wages a separate provision is made, probably because the circumstances I have indicated might lead to the forfeiture of wages upon desertion being an unintended source of revenue to the shipowner, and in those cases under sub-sect. 1 of sect. 232 it is provided that the forfeited wages shall be paid into the Exchequer and carried to the Consolidated Fund, subject to a right—and the word is imperative—on the part of the master or owner to have them first of all applied towards reimbursing the expenses caused by the desertion to the master or owner of the ship. That subsection is the root of the shipowner's right to reimbursement. The machinery, and to a certain extent a further definition of the right, is to be found in the whole of sect. 28 of the Merchant Shipping Act 1906. In both those sections—sect. 232 of the Act of 1894 and sect. 28 of the Act of 1906—a practically identical expression is used: "Shall be applied towards reimbursing the expenses caused by the desertion to the master or owner of the ship"; and the reimbursement account, under sect. 28, is to be one "of any expenses caused to the master or owner of the ship by the absence of the seaman in cases where the absence is due to desertion." Then those sums becoming properly chargeable in the reimbursement account, the officer or, in the case of an appeal, the Board of Trade shall allow sums shown in the reimbursement account and properly chargeable to be deducted from the amount due on account of wages shown in the delivery account.

It is to be observed that although the expression in sect. 232 "expenses caused by the desertion to the master or owner of the ship" is in itself somewhat wider than the words of sect. 221, and is wide enough to include not only the excess of wages paid to the substitute, but also incidental expenses connected with the hiring of the substitute, the word used is still "expenses" and not "damages," or anything in which the principles governing the measure of damages would be applicable. It appears to me that in the present case what is to be observed noticeably with regard to the case of *Deacon* v. *Quale*, but also with regard to the other case of *Neate* v. *Wilson*, is that the expense which is incurred by the master in connection with the engagement of the substituted seaman is in itself an expense incurred in a self-contained and complete transaction long subsequent to the termination of the master's liabilities to the seaman who has deserted.

As soon as the master engages and subsequently pays in pursuance of his engagement the substituted seaman in consequence of the desertion of the original seaman, to the extent of the excess rate of pay which he agrees to pay to the substituted seaman he incurs an expense, and he incurs it through the desertion, and, in this particular case, the expense is the extra sum that he has to pay. Had there been any question of rebate or discount, no doubt that might have been taken off in order to ascertain the real expense of paying the substituted seaman, but as there is none, the expense which consists of the excess wages to the substituted seaman is then and there a complete "expense caused" within the wording of sect. 232.

It is quite true that six months earlier in the first of these cases, but not so much earlier in the second case, the master had been saved another expense in consequence of the desertion, because he had been saved the expense of continuing to pay wages to the seamen who had quitted the ship; but that is no part of the transaction of engaging a substitute. It is a different expense. It is measured by different figures, and it arises at a different time, although it arises from the same cause. It appears to me, therefore, that upon the words "reimbursing the expenses caused by the desertion to the master or owner," the facts in both these cases fully satisfy those words by taking into account in the one case the excess wages paid to the substituted seaman, and in the other case the expenses that are properly incurred in dealing with the ship because of the desertion.

If the Crown is to succeed in its contention in *Deacon* v. *Quale*, a much wider meaning has to be attributed to the word "expenses," a meaning so wide that it seems to me it must be made almost equivalent to "damages for the breach of contract caused by the desertion," or to "compensation for the desertion," or to "an indemnity at the conclusion of the contract of service with the seaman against prejudice caused upon the whole by his desertion," all of them expressions perfectly well

known to the law, and perfectly easy to have inserted, and quite distinct from "expenses caused by the desertion." It is probably true that the Legislature, when this section was being framed, had no intention of enabling shipowners to make a windfall out of the circumstances of desertions. It is certain that the expression "reimbursed" is used throughout in this connection, and that that expression is not used in sect. 221, but is only used in sect. 232 of the Act of 1894 and sect. 28 of the Act of 1906.

It does not, however, appear to me that the word "reimbursement" can be strained so far as to enable the Crown to set off against an expense which was caused by the desertion in connection with the engaging of the substitute, a saving effected at an earlier date by reason of the deserter having ceased to earn any wages; and it appears to me that it could never have been intended that the reimbursement should involve the taking of a voyage account, possibly two years or more after the desertion in question, because this was an engagement which might last for three years. It would be a voyage account differing from a ship account—the account of a voyage from a *terminus a quo* to a *terminus ad quem*—and it would be a voyage account co-extensive with the engagement between the master and the deserting seaman, and one as to which all sorts of considerations of a very complicated kind would have to be taken into account before it could be ascertained whether, upon the whole, the desertion had caused the master some expense that had not been ultimately adeemed by other circumstances in the course of the voyage. I think an expense was none the less caused to the master by engaging the substitute in September, although another expense was saved to the master at another date, by—it is true—the same cause, namely, the desertion, and if it had been intended to sweep both those matters into the one account so as to ascertain a balance in the end, some language ought to have been used which would connote a debtor and creditor survey of the entire transactions of this protracted voyage.

If "expense" were used in a sense sufficiently wide to support the argument for the Crown in *Deacon* v. *Quale*, it appears to me that that would be a sense so wide that in *Neate* v. *Wilson* the shipowner would be entitled to reimbursement, under his reimbursement account, of the distinctly problematical and controversial amount that might be claimed in an action for breach of contract by detaining the vessel at the port of loading. The suggestion made when first the reimbursement account in *Neate* v. *Wilson* was presented to the proper officer was the ordinary suggestion that damages by way of demurrage to the extent of 25*l.* ought to be allowed because the ship was detained one day, a claim which in an ordinary civil action is constantly made and has to be investigated having regard, on the one hand, to the ship's running expenses, coal, wages, provisions, and so forth, plus an insurance and plus an allowance for capital sunk, and, on the other hand, to freight earned and received at the port of discharge, a dispute which involves some kind of allowance for the uncertainties of the voyage and for the risk, for although the ship appeared to be detained one day in port she may thereby escape many more days' detention by adverse winds, and so forth. That sort of inquiry the argument for the Crown in the second case convinces me has never been intended. What is intended is that those expenses which are directly caused to the owner or master by the desertion, not confined to the excess wages paid to the substitute, but other expenses due to this desertion, should be reimbursed.

With regard to the facts of the two cases, applying the view I take of the sections, the matter can be rapidly disposed of. The question of the causation came before the magistrate in considering whether the excess expense of the substituted seamen engaged in September in San Francisco was an expense caused by the desertion. Causation is a matter of fact. The tribunal which decides that matter of fact must direct itself correctly in law, and it has not been suggested in this matter that there is any principle of law which says that the engagement of a substituted seaman would be too remote to be a legal consequence of the original desertion. Therefore, to my mind, the decision of the magistrate is conclusive. But I would further say that it seems to me to be an inevitable conclusion which one as a matter of mercantile experience must draw, because the seamen who deserted were engaged to serve for the whole round voyage. The intermediate employment of the vessel on this voyage must be left to the owner and is often made by cablegram, and often made at a time when the master himself is at sea and is not informed as to what his next employment is going to be. It is true the combined employment as a hulk for six months with a homeward charter is somewhat unusual, but it is a legitimate employment, and had this vessel been detained by some necessity for repairs, or by taking the opportunity to prepare her to pass some portion of one of her Lloyd's surveys whilst waiting for another engagement, or had she been making a ballast voyage down the coast and then returning to San Francisco for the carriage of the autumn wheat, this interval of time would have been part of the service of the seamen, and the number of men to be engaged would be dependent upon the service that was going to be performed. When she makes her final homeward ocean voyage her complement must be made up. In the meantime there is no necessity and no obligation to make it up.

With regard to the other case of *Neate* v. *Wilson*, as I understand the facts, the expenses which were contended for on behalf of the master and were allowed are to be treated as being found in fact by the justices to have been direct and exceptional expenses caused in this way. With regard to the items I wish to say this: the 4*l.* 16*s.* 2*d.* wages of the crew *per diem* is a claim as to which it cannot be said that the expenditure of that sum of money in paying the crew was caused by desertion. The crew had to be paid just the same. The same is true as to the 1*l.* 16*s.* 3*d.*, the cost of food for the crew *per diem*, and, although it may be said that the voyage was prolonged for a day and therefore the master had to pay in respect of one day—though not that day—more for the expenses of the voyage than otherwise would have been incurred, that is a matter of uncertainty and one to be considered in connection with damages and not in connection with expenses directly caused by the desertion. I take the same view as

to the expenditure on coal, because, although the facts are not as clear as they might have been, it would appear that the expenses were all treated in the same way, and it was said that as there was an additional expenditure on coal in the course of the voyage that ought to be treated as part of the sum to be reimbursed. There is no contract to show that the voyage might not have taken in any case long enough to involve precisely the same coal bill as it in fact did.

Therefore on the view I take of those facts, it appears to me that the claim in the second case was in principle one of damages for detention of the vessel in port whereby the voyage was prolonged, and therefore the profit side of the account was diminished, and consequently those expenses are not to be included in the expenses caused by the desertion, whereas the sums to be allowed, the small sums of personal expenses in going to seek substitutes, are all illustrations of the kind of expenses which ought to come within the wording of the section.

There is only one other observation to be made. A point was made, but only faintly, upon the words "any sums shown" in the reimbursement account, in sub-sect. 3 of sect. 28 of the Act of 1906, and it appears to me that those words have been rightly treated ultimately on both sides as equivalent to "any items shown." The word "sum" is used throughout, but is manifestly not intended to be limited to the figures of the claim stated, but is intended to refer to the claim for that item, indicating both its nature and its amount.

BANKES, J.—I agree that the first appeal should be dismissed and that the second appeal should be allowed.

The questions which have been argued before us on these two appeals depend upon what is the true construction of sects. 221 and 232 of the Merchant Shipping Act 1894 and sect. 28 of the Merchant Shipping Act 1906. Sect. 221 (*a*) deals with the offence of desertion by seamen. It provides first of all, for the forfeiture of the effects and wages of a deserting seaman, and then proceeds to deal with the case where the owner has had to pay an increase of wages to a substitute procured to take the deserter's place. It is important to notice the particular form of words used in this part of the section. It speaks of any excess of wages paid by the master or owner to any substitute engaged at a higher rate of wages than the rate stipulated to be paid to the deserter. The excess there spoken of is an excess of wages paid to the substitute, which seems to me to limit the period of time over which a calculation of wages for the purposes of this section is to be made, to the period during which wages are paid to the substitute.

The only thing indicated in the section as to what constitutes an excess is a comparison between the rate of wages paid to the substitute with the rate of wages payable to the deserter. If the former is higher than the latter, then according to the language of the section there is an excess of wages. The sum total of that excess will be determined when the period over which that excess is paid is ascertained. If this section had stood alone, the owner's remedy to recover the excess would have been by action against the deserter. Sect. 232, however, provides that the owner shall have a further remedy—namely, a remedy by way of set-off—and it enacts that the owner may convert the deserter's effects into money, and out of that money and any forfeited wages he may reimburse himself any expenses caused by the desertion. Those expenses may, of course, include matters other than excess wages, but if they consist to any extent of excess wages the excess must, in my opinion, be ascertained in manner provided by sect. 221. The section further provides that subject to this right of set-off the forfeited wages and the effects, or their proceeds, shall be paid into the Exchequer and carried to the Consolidated Fund. It is material to notice that the expenses which are referred to in this section are strictly limited. They are expenses, and not damages. They are expenses caused by the desertion, and not expenses of and occasioned by the desertion.

We now come to sect. 28 of the Act of 1906. This section provides machinery for carrying out the above-mentioned provisions by means of accounts to be furnished by the master to the Board of Trade, and does not, in my opinion, extend the rights of an owner against the deserting seaman. These accounts are called respectively "delivery account" and "reimbursement account," and these are to contain, on the one hand, a statement of what would have been due to the seaman had he not deserted, and, on the other hand, a statement of the set-off claimed by the owner, which has been given to him under the provisions of the earlier statute to which I have already called attention.

We were invited to read these sections as though they provided for the taking of a voyage account in respect of wages, in which account it would be ascertained, on the one side, what sum would have become payable to the deserter for the full voyage had he not deserted, and, on the other side, an account of what sum would, but for the desertion, have become payable to the deserter down to the time of desertion, and what sum had become payable to the substitute for the remainder of the voyage. It was argued that no excess would arise under the section unless the two last-mentioned sums added together were greater in amount than the first-mentioned sum. I cannot so read the section, as I do not find in it any words which admit of any such interpretation.

If the above is the correct construction of the sections in question, it follows in the case of *Deacon* v. *Quale* that there was an excess of wages paid by the owners or master to the substitutes who were engaged at a higher rate of wages than the rate stipulated to be paid to the deserters to the extent claimed by the owners and allowed by the magistrate, and that the matters sought to be introduced by the Board of Trade in order to show that no such excess in fact existed, are not matters which are under the statute admissible to establish a contrary conclusion.

I have nothing to add to what has been said in the case of *Neate* v. *Wilson* with regard to the character of the alleged expenses which it is sought to set off because, in my opinion, they were not expenses at all; they were damages, and not expenses which come within the strict language of the section to which I have referred, and which limits the right of set-off or

reimbursement to the expenses caused by the desertion.

Appeal in Deacon *v.* Quale *dismissed. Appeal in* Neate *v.* Wilson *allowed. Leave to appeal.*

Supreme Court of Judicature.

COURT OF APPEAL.

July 10, 11, 12, 13, *and Dec.* 1, 1911.

(Before VAUGHAN WILLIAMS, MOULTON, and BUCKLEY, L.JJ., and Nautical Assessors.)

THE DEVONSHIRE. (a)

Collision—Steamship and barge in tow of a tug—Steamship and tug to blame for collision—Barge not to blame—Admiralty rule as to division of loss—Joint tortfeasors—Right of barge owners to recover whole damage against either wrongdoer—Judicature Act 1873 (36 & 37 *Vict. c.* 66), *s.* 25, *sub-s.* 9.

A tow is not liable in law for the wrongful act of her tug merely because of the relation of tug and tow. Whether a tow is liable or not depends upon the facts in each case.

A barge in tow of a tug which had control of the navigation came into collision with a steamship. The collision was brought about by the joint negligence of the tug and the steamship. The tug and the steamship were both found to blame. The barge was free from blame.

The owners of the barge and her master and crew claimed to be entitled to recover the whole of their damage against the steamship, contending that they had been injured by the wrongful act of two joint tortfeasors and that they were entitled to recover their loss in full against either wrongdoer. The defendants contended that in accordance with the Admiralty rule as to the division of loss in cases of damage arising from collisions between ships when both vessels were to blame, laid down in The Milan (Lush. 388), *affirmed in* The Drumlanrig (103 *L. T. Rep.* 773; 11 *Asp. Mar. Law Cas.* 520; (1911) *A. C.* 16), *the plaintiffs could only recover half their loss from the owners of the steamship and the balance against the other wrongdoer, the tug.*

The President held that there was no Admiralty rule in existence before the passing of the Judicature Act 1873, *which prevented an innocent person injured by a collision produced by the joint negligence of two other persons from recovering the whole of his loss from either of the wrongdoers, and gave judgment in favour of the plaintiffs for the whole of their damage against the owners of the steamship.*

The steamship owners appealed.

Held, by the Court of Appeal, Fletcher Moulton and Buckley, L.JJ. (Vaughan Williams, L.J. dissenting), affirming the decision of Sir S. Evans, President, that before the passing of the Judicature Act 1873 *the rule in force in the Admiralty Court as to the division of loss applied only to damage caused by collision between two ships when both ships were to blame, but that there was no such rule with regard to cases of collision causing loss to the owners of a vessel which was towed into collision but which was not to blame, and that the plaintiffs were therefore entitled to recover the whole of their damages from either of the wrongdoers.*

APPEAL from a decision of Sir S. Evans, President, by which he held that the owners, master, and crew of the barge *Leslie* were entitled to recover the whole of the damage they had sustained by reason of a collision between their barge *Leslie* and the steamship *Devonshire,* which collision was caused by the joint negligence of the tug *St. Winifred,* towing the barge *Leslie,* and the *Devonshire,* from the owners of the *Devonshire.*

The appellants, defendants in the court below, were the owners of the steamship *Devonshire*; the respondents, plaintiffs in the court below, were the owners of the barge *Leslie,* and her master and crew suing for their lost effects.

The case made by the plaintiffs in the court below was that shortly before 4.50 a.m. on the 4th Feb. 1911 the *Leslie,* a wooden dumb barge of eighty tons register, manned by two hands, was in the river Mersey off Woodside bound from Runcorn to Morpeth Dock, Birkenhead, with a cargo of Manchester goods. The weather was fine and clear, the wind about N.E. a light breeze, and the tide ebb of the force of about three knots.

The *Leslie,* in tow of the steam tug *St. Winifred,* which had the control and management of the navigation, was proceeding towards the Morpeth Dock, having just crossed the river from the Brunswick Dock, Liverpool, where the *St. Winifred* had left two barges she had been towing with the *Leslie.* The *Leslie,* which was following her tug, was heading down the river with a slight angle towards the Cheshire shore and was making about three knots through the water. She carried the regulation side and stern lights and her tug the regulation masthead towing and side lights and a white light abaft the funnel, all duly exhibited and burning brightly, and a good look out was being kept.

In these circumstances those on the *Leslie* heard the *St. Winifred* sound two short blasts on her whistle, and thereupon the helm of the *Leslie* was starboarded to follow her tug, which was approaching the entrance to Morpeth Dock. Shortly afterwards those on board the *Leslie* observed distant between a quarter and half a mile and bearing on the starboard bow the red light of a steamship, which proved to be the *Devonshire,* and which, had she kept her up-channel course, would have passed the *Leslie* and her tug well clear starboard side to starboard side. After a short interval the *St. Winifred* again sounded two short blasts on her whistle, and afterwards the usual docking signal—one prolonged blast—and the *Leslie* continued to follow her tug. Notwithstanding the signals made by the *St. Winifred,* the *Devonshire* came on at great speed under a port helm, and with her stern struck the *Leslie* on the starboard side

(a) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

about amidships, cutting into her and causing her to founder.

Those on the barge *Leslie* charged those on the *Devonshire* with bad look-out; with improperly porting; with failing to keep her course; with neglecting to ease, stop, or reverse; and with neglecting to keep clear of the *Leslie*.

The case made by the appellants, the defendants in the court below, was that shortly before 4.50 on the 4th Feb. 1911 the *Devonshire*, a screw steamship of 500 tons gross and 176 tons net register, manned by a crew of twelve hands, was proceeding up the river Mersey, well on the west side of the river below the Woodside Ferry stage, in the course of a voyage from Belfast to Manchester with a general cargo. The *Devonshire* was on an up-river course, heading about south magnetic, and was making about ten knots through the water with her engines working full speed. Her regulation lights for a steamship under way were duly exhibited and burning brightly, and a good look-out was being kept on board of her.

In these circumstances the masthead, towing, and red lights of a tug which proved to be the *St. Winifred*, with the *Leslie* in tow, were seen about a point on the port bow of the *Devonshire*, and about a mile off. The helm of the *Devonshire* was ported slightly, and one short blast was sounded on her whistle. Shortly afterwards the *St. Winifred* opened her green light, but no signal was heard from her. The *Devonshire* repeated her one short blast signal and ported her helm a little more, which signal she shortly afterwards repeated as the *St. Winifred* kept her green light open. The *St. Winifred* then sounded two short blasts, and came on swinging under starboard helm, disclosing the green light of the *Leslie*, which was being towed astern of her. As soon as the *St. Winifred* sounded two short blasts the engines of the *Devonshire* were stopped and put full speed astern, and her helm was put to starboard. The *St. Winifred* continued to come on under starboard helm, crossing the bows of the *Devonshire*, and as she then appeared to be losing headway she was loudly hailed to go ahead as the only chance of drawing her tow clear, and when it was seen that the flat would not go clear she was hailed to slip the tow rope, but the *Leslie* with her starboard bow struck the stern of the *Devonshire* and afterwards sunk.

Those on the *Devonshire* charged those on the *St. Winifred* and the *Leslie* with bad look-out; with improperly starboarding; and with not keeping to the starboard-hand side of the fairway. They charged the *St. Winifred* with neglecting to indicate her course by whistle signal, and with neglecting to slacken her speed or stop or reverse, and they charged those on the *Leslie* with neglecting to cast off the tow rope and failing to port.

The case was heard by the President on the 9th and 10th May 1911, when he delivered judgment, finding both the *Devonshire* and the *St. Winifred* to blame. The following is the material part of the judgment:—

The PRESIDENT.—I have come to the conclusion on the evidence, looking also at the preliminary act and pleadings of the defendants, who do not call any witnesses, that this is a case of crossing vessels.

That being so, I think the tug, to whose navigation I must look in this case, because the barge, of course, was navigated by the tug, must be held to blame, because she did not observe arts. 19 and 22 of the collision regulations, which are in force as statutory rules in the river Mersey. Art. 19, of course, prescribes that: "When two steam vessels are crossing, so as to involve risk of collision, the vessel which has the other on her own starboard side shall keep out of the way of the other," and art. 22 is the ancillary article: "Every vessel which is directed by these rules to keep out of the way of another vessel shall, if the circumstances of the case admit, avoid crossing ahead of the other."

The duty, therefore, of the tug, which was responsible for the navigation of the tow here, was to keep out of the way of the *Devonshire*, and her duty also was, if the circumstances of the case admitted it, to avoid crossing ahead of the *Devonshire*. It is quite clear here that the circumstances of the case did admit it. There was a tug with some barges in tow, which had gone a little ahead of this tug, which did the right thing, and avoided crossing ahead by going under the stern of the *Devonshire*. That could have been done, and ought to have been done by the tug in this case, and therefore, whatever the legal position is, I find that the tug is to blame for a breach of arts. 19 and 22.

With regard to the *Devonshire* her duty was to keep her course and speed. She did not keep her course, she ported more than once. Counsel for the plaintiffs held his opponents closely to the preliminary act, and said that she ported to a green light. The answer of counsel for the defendants is "not necessarily to a green light, but probably to the three lights—the red, green, and white lights." I think that is rather too fine a point. I am advised that if the three lights continued to be visible, and it was not a case where the green light alone came into view, shutting out the red, there was not any danger of collision at all. She might have gone on. However, I think on the evidence, and reading fairly the preliminary act and the defence, that the green light alone was showing at this time. As I have said, they were porting on more than one occasion; it is said to be a slight porting at first, and a further porting, I think is the way it is stated, with regard to the second manœuvre, porting further. I think she must have ported very considerably, she would not be coming down the river as close to the stages as the spot where this collision took place; that spot has been pretty accurately defined by the witnesses as being 250ft. or 300ft. out from the northern end of the Woodside Ferry Stage. She came into that position, trying, no doubt, to get past the tug and the barge. She got into that position by porting twice, according to her own story. That was, of course, not keeping her course, and, therefore, I think, she is also to blame for a breach of the rule which prescribes that she ought to keep her course and speed. I also think, with regard to the *Devonshire*, that, in any case, she failed to stop, or reverse, soon enough, under the rules of good seamanship. The decision, therefore, is, that both the tug, which was in charge of the tow, and the *Devonshire* the defendants' vessel are to blame for this collision.

The plaintiffs then contended that they were entitled to recover the whole of their loss against

the owners of the *Devonshire* as they had been injured by the joint negligence of the *Devonshire* and the *St. Winifred.*

The defendants contended that the plaintiffs could only recover half their loss against the *Devonshire* as they alleged that the Admiralty rule as to division of loss applied.

The President reserved his judgment on this point, which was delivered on the 29th May 1911.

The President.—This action is brought by the owners of the dumb barge *Leslie*, and her master and mate, against the owners of the steamship *Devonshire*, for damages sustained by the barge in a collision between the barge and the steamer. Upon the facts I found that the collision was due to the fault of the steamer and of the steam tug, the *St. Winifred*, which was towing the barge. Applying the principles adopted in *The Quickstep* (6 Asp. Mar. Law Cas. 603 (1890); 63 L. T. Rep. 713; 15 P. Div. 196) and the cases following it, I decided that the tow was not in any way to blame and that the plaintiffs were entitled to judgment. The question now is, whether the plaintiffs are entitled to recover the whole of the damages against the defendants, or only a moiety. This depends upon whether, in the circumstances of the case, there was an Admiralty rule, giving a moiety only, in force before the coming into operation of sect. 25, sub-sect. 9, of the Judicature Act 1873: (see *The Drumlanrig*, 11 Asp. Mar. Law Cas. 451, 520; (1911) A. C. 16). If there was, only a moiety can be recovered against the defendants. The plaintiffs would, of course, in that event, have a claim for the other moiety against the tug, apart from any special contract. If there was not any such rule, the common law rule applies, by which the plaintiffs would be entitled to recover the whole of the damages against the defendants. They would in such a case be entitled to recover the whole damages either against the defendants, or against the tug which was in fault, or against both, if they framed their action for that purpose. As between two ships both to blame and in collision, the Admiralty rule is of course established beyond question. As between innocent cargo-owners in in a ship to blame and another ship also to blame, it is now settled by *The Drumlanrig* that the same rule applies. How far does the rule extend? Is the rule in a case of innocent sufferers confined to cargo owners whose cargo is in one of the negligent vessels; or does it extend to cases of innocent owners of craft or of cargoes not being, or in, a vessel in fault? Does the case of *The Drumlanrig* define and comprehend the rule, or is it only an instance of the application of the rule? Various opinions have been held and expressed as to whether the Admiralty rule or the common law rule is the more conformable in the average case to fairness and justice. I think, upon the whole, that in Admiralty cases the division of the damages recoverable into moieties, where an innocent person suffers from the negligence upon two other ships at fault, is fairer and more conducive to cautious navigation.

When the Act of Parliament speaks of "rules hitherto in force in the Court of Admiralty," I should be glad to find a rule applicable on some general principle to various instances of innocent owners suffering loss by collisions, and not to have the "rule" confined to what would appear to be only an instance or illustration of a rule, as in the case of an innocent owner of cargo laden on one of the ships at fault. Lord Esher in *The Bernina*, in the Court of Appeal (5 Asp. Mar. Law Cas. 577 (1886); 12 Prob. Div. 58), in referring to *The Milan* (Lushington, 388), does use terms of general import when he says that the decision of Dr. Lushington in *The Milan* proceeded upon the ground that "it has always been the practice there [in the Admiralty Court] instead of saying that an innocent plaintiff might recover his whole loss against any one wrongdoer, to say that he must recover part from one and part from the others; and if there are only two, half from each." But he immediately adds: "He (Dr. Lushington) said in terms that the plaintiff must sue the owner or owners of the ship in which his cargo was for the other half." I see no logical distinction between the case of an innocent owner of cargo in a ship at fault and an innocent owner of a dumb barge attached to a tug at fault; or why in the one case only a moiety of the loss sustained can be recovered against a vessel to blame, and in the other the whole. But in our jurisprudence we cannot always find logic; and indeed for the particular rule of "moieties if both to blame" in the special system of jurisprudence prevailing in the Admiralty Court, no logical basis can be stated.

I must therefore inquire whether there was, in fact, before the Judicature Act of 1873 any rule adopted in practice which would justify me in saying that the innocent owners of the dumb barge in this case are restricted to a moiety of the damage sustained in an action brought by them against any one of the ships whose negligence jointly produced the collision. The somewhat strict application of the doctrine of identification between tug and tow which obtained in years gone by might account for the absence of instances exactly like the present case. The eminently sensible doctrine which was adopted in *The Quickstep* (*sup.*) from the decision of the Supreme Court of the United States of America in *Sturgis* v. *Boyer* (1860, 24 How, 110), although its adoption had been foreshadowed by Sir James Hannen in *The Stormcock* in 1885 (5 Asp. Mar. Law Cas. 470), was not applied until 1890. Until then in most cases, and for almost all purposes, a tug and tow were considered as one vessel. That being so, it is not a matter of surprise that examples of innocent owners of tows attached to guilty owners of tugs are wanting. I have therefore to inquire how other innocent owners of craft (apart from innocent owners of cargo in negligent vessels, as in *The Milan, sup.*) were treated in the Admiralty Court. I have been unable to find a single case of an innocent sufferer by a collision at sea (other than the aforesaid cargo-owner) who was restricted to the recovery of a moiety of his loss. In the Supreme Court of the United States of America ("whose decisions," as Lord Herschell has said, "on account of its high character for learning and ability, are always to be regarded with respect"), in an action brought by a vessel at anchor against a tug and tow, claiming damages for a collision between the vessel at anchor and the tow, it was found that the vessel at anchor and the tug were both to blame, and that the tow was not; and it was held that the tow was not liable, but that the loss was to be equally divided

between the former vessel and the tug: (*The James Gray* v. *The John Fraser* (1858, 21 How, 184). In that case the tow was defendant and succeeded It does not aid in showing whether as plaintiff, if damaged, she could recover all or half. In America also in *The Sterling* and *The Equator* (1882, 16 Otto, 647), and in *The City of Hartford* (1877, 7 Otto, 323), it was held that in actions by innocent owners of the tow and her cargo, against a third vessel and the tug both found to blame, the decree should be against each for a moiety of the damage, the right being reserved to collect the entire amount from either in case of the inability of the other to answer for her portion. Sir Charles Butt refused to apply these cases in England.

In *The Stormcock* (*sup.*), to which I have already referred, a tug and tow, both to blame, collided with an innocent vessel, The plaintiffs, owners of the latter (having obtained by an agreement a provisional payment of some of the damage from the tow, which accepted responsibility for the tug) brought an action against the tug alone. The plaintiffs were held entitled to recover all the damages occasioned by the collision from the defendant tug. In *The Niobe* (6 Asp. Mar. Law Cas. 300; 59 L. T. Rep. 257; (1888) 13 P. Div. 55), the plaintiff's steamer collided with a tug, by reason of the negligence of the tug and her tow. The case is reported as between the plaintiffs and the owners of the tow. I have looked up the files and records and I find that the owners of the tug admitted liability; and that after the finding against the tow, the plaintiff recovered judgment for full damage against both the tug and the tow. In *The Avon and Thomas Joliffe* (6 Asp. Mar. Law Cas. 605; 63 L. T. Rep. 512; (1891) P. 7) an action was brought by an innocent vessel against a tug and tow, both found to blame. The decree condemned the owners of both in the full damages. The court was afterwards moved to amend the decree by making each set of owners liable severally only for half the damages. Sir Charles Butt refused to adopt the decisions in the American cases of *The Sterling* and *The Equator* and *The City of Hartford* (above referred to), and declined to alter the decree or to apply the Admiralty rule "as to the apportionment of damages, where both vessels, that of the plaintiffs and of the defendants, are to blame." In *The Englishman and The Australia* (7 Asp. Mar. Law Cas 603, 605; 72 L. T. Rep. 54; (1894) P. 239) the plaintiffs' steamer collided with the defendants' tug, and the plaintiffs' vessel and the tug and tow (both defendants) were all found to blame. The President (Sir F. H. Jeune), in adjusting the cross-claims, was asked to draw up the judgment so as to make the tug and tow primarily liable for a moiety only of the sum recoverable against them, with a remedy over against each in default of the other, but he declined to do so, saying that the point was concluded by the judgment in *The Avon and Thomas Joliffe*. In *The Morgengry and The Blackcock* (8 Asp. Mar. Law Cas. 591; 81 L. T. Rep. 417; (1900) P. 1) the plaintiffs' vessel and the defendants' tug and tow were all held to blame. Judgment was signed by default against the tow for the whole of the damage. The tow was sold and the proceeds brought into court. It was held that the plaintiffs were entitled to the proceeds in court in part satisfaction of the whole of their damage under the decree by default against the tow, and were also entitled to a moiety of their damage as against the tug under the decree of both to blame. That is not a decision in point, but it is an instance where, apparently, it was admitted that one of two vessels to blame was liable for the whole loss. In the foregoing cases it will be observed that the third vessel was not connected with another as a tug with a tow. In the last case to which I shall refer—viz., *The Harvest Home* (10 Asp. Mar. Law Cas. 18; (1904) P. 409; and in the Court of Appeal (10 Asp. Mar. Law Cas. 118; (1905) P. 177), a pilot cutter, held in the court of first instance to be innocent, was lashed alongside the tow on which the pilot was. It was a complicated case. The action was brought by the owners of the pilot cutter against the owners of a vessel held to be innocent of blame and against the owners of two tugs, found to blame, both of which belonged to the same owners. The owners of the innocent vessel counter-claimed against the owners of the pilot cutter and the owners of the tugs. It was held in the court of first instance that the pilot cutter and the innocent vessel were entitled to succeed against the tugs. In the Court of Appeal, on the appeal of the owners of the tugs, it was held that the pilot cutter was also to blame; and accordingly the liability of the tugs was reduced to a moiety of the claim of the pilot cutter. It appears that although the tow to which the pilot cutter was lashed was not sued, she was admitted or decided to be guilty of blame. In the court of first instance, therefore, although the pilot cutter was lashed to a guilty tow, she recovered her full damages against the owners of the two guilty tugs, and her claim was only reduced in the Court of Appeal to a moiety because she was also found to blame.

In reviewing the authorities I have come to the conclusion that it cannot be said that there was before the Judicature Act 1873 or that there has been since, an Admiralty rule in force which would entitle the defendants to say that the plaintiffs could only recover a moiety of the damage they suffered by the collision. If this is so, *The Drumlanrig* prevents my saying that the plaintiffs are only entitled to a moiety. I refrain from saying anything as to whether it follows that the common law doctrine of no contribution between tortfeasors applies, or whether the defendants would be entitled on the principle adopted in *The Frankland* (9 Asp. Mar. Law Cas. 196; (1901) P. 161), or otherwise, to any claim over against the owners of the tug. The question may be raised in a case which I understand is now pending. In the present case I have come to the conclusion that the plaintiffs are entitled to judgment as against the defendants for the whole of their loss, and I decree accordingly, and order the usual reference to the registrar and merchants. The plaintiffs are also entitled to their costs.

On the 3rd June the owners of the *Devonshire* delivered a notice of appeal seeking to set aside the judgment of the President and to obtain a decree that they were liable only for a half of the damage.

The appeal was heard by the Court of Appeal on the 10th, 11th, 12th, and 13th July when judgment was reserved.

Leslie Scott, K.C. and *Dawson Miller* for the appellants, the owners of the *Devonshire*.—The tug and the steamship have been held to blame, and the barge in tow of the tug has been held free from blame. The collision regulations in force in the Mersey are statutory regulations, and the barge is a vessel within the meaning of the rules. The tug had the control of the navigation. If the barge owners choose to delegate their statutory duty to a tug they remain responsible for the performance of it. [Vaughan Williams, L.J.—I suppose you say that *Hardaker* v. *Idle District Council* (74 L. T. Rep. 69; (1896) 1 Q. B. 335) is an authority for that proposition?] That is so. [Fletcher Moulton, L.J.—Then it is impossible for a tow to escape liability if a tug is guilty of a breach of a statutory regulation.] That may be so; a tow cannot divest itself of responsibility for a breach of a statutory rule by the tug by saying that the tug had the motive power and control, and the owner cannot escape liability by voluntarily handing over the control to some one else. If the motive power is in the tug and the governing power is in the tow, tug and tow are considered to be one vessel and the tow is responsible:

> *The Cleadon*, 4 L. T. Rep. 157; 1 Mar. Law Cas. O. S. 5; Lush. 158; (1860) 14 Moo. P. C. 92;
> *The Englishman and Australia*, 70 L. T. Rep. 846; 7 Asp. Mar. Law Cas. 605; (1894) P. 239;
> *The Devonian*, 84 L. T. Rep. 675; 9 Asp. Mar. Law Cas. 179; (1901) P. 221.

The common law rule of no contribution between tortfeasors had no application in Admiralty cases:

> *The Milan*, Lush. 388.

And now sect. 25, sub-sect. 9, of the Judicature Act 1873 provides that the rules hitherto in force in the Admiralty Court, if at variance with the rules in force in the courts of common law are to prevail in cases such as this. The words "rules in force," mean the principles to be found in the cases which are instances of the rule. The rule as to the division of loss was recognised by the House of Lords in *Hay* v. *Le Neve* (2 Shaw's Scotch App. Cas. 395). That rule is to prevail in proceedings for damages, and it is to apply in every court, even in inferior courts: (Judicature Act 1873, s. 91). The Admiralty Court had jurisdiction to try this case, for it was damage done by a ship. (Admiralty Court Act 1861, s. 7):

> *The Malvina*, Lush. 493; (1865) Br. & L. 57.

Thorogood v. *Bryan* (8 C. B. 115) was never followed in Admiralty cases. The common law said that where damage was done by two joint tortfeasors there should be no contribution between them; in the Admiralty Court the rule was that the wronged person recovered half against each wrongdoer. *The Drumlanrig* (103 L. T. Rep. 773; 11 Asp. Mar. Law Cas. 520; (1911) A. C. 17) is an instance of this rule. The basis of the rule is half of the loss from each wrongdoer. Another instance of the rule is that of damage to ships when one of the ships has a compulsory pilot on board. In such a case if one ship has a compulsory pilot on board and both vessels are to blame and the fault of one is the fault of the pilot alone the ship with the compulsory pilot on board only recovers half her loss. The same rule applies to cases where masters and crew sue for their lost effects. The principle contended for is stated in the argument in *The Avon and The Thomas Joliffe* (63 L. T. Rep. 712; 6 Asp. Mar. Law Cas. 605; (1891) P. 7). The history of the rule is set out in Marsden's Collisions at Sea, p. 140. *The Drumlanrig* (*ubi sup.*) decided this case. That case recognises that the Admiralty Court administered a rule which recognised a quantitative liability for the wrong done, and this rule is now stereotyped into half from each of two wrongdoers. The cases which give rise to actions for negligence are stated by Lindley, L.J. in *The Bernina* (5 Asp. Mar. Law Cas. 577; 6 Asp. Mar. Law Cas. 112; (1886) 12 P. Div. 58, at p. 59). In America the Admiralty rule has been worked out logically and *The Avon and Thomas Joliffe* (*ubi sup.*) would have been decided differently in that country. *The Hector* (48 L. T. Rep. 890; 5 Asp. Mar. Law Cas. 535; 8 P. Div. 218) is an instance of the rule applied in the case of a collision between ships on one of which there is a compulsory pilot. When the vessel which has the compulsory pilot on board is alone to blame but the fault is the fault of the pilot, the owners are not liable for anything at all:

> *The Maria*, (1839) 1 W. Rob. 95;
> *The Annapolis*, 1 Mar. Law Cas. O. S. 69; 4 L. T. Rep. 417; (1861) Lush. 295.

The single ship only recovered a moiety of her damages against the tug and tow in *The Englishman and Australia* (*ubi sup.*). The case of *The Avon and Thomas Joliffe* was wrongly decided. The owner of the barge here has voluntarily handed over his barge to a tug and must suffer if the tug is negligent. This case is not like the case of *The Bernina* (*ubi sup.*), which was not within sect. 25, sub-sect. 9, of the Act of 1873, nor is it similar to *The Quickstep* (63 L. T. Rep. 713; 6 Asp. Mar. Law Cas. 603; 15 P. Div. 196), for no statutory rule was broken in that case. The following cases were also referred to

> *The Energy*, 3 Mar. Law Cas. O. S. 503; (1870) 23 L. T. Rep. 601; L. Rep. 3 A. & E. 48;
> *The Mary*, (1879) 41 L. T. Rep. 351; 4 Asp. Mar. Law Cas. 183; 5 P. Div. 14;
> *The Lemington*, (1874) 32 L. T. Rep. 69; 2 Asp. Mar. Law Cas. 475.

Bailhache, K.C. and *Stephens* for the respondents, the owners of the barge *Leslie*.—The judgment is right. The tow is not to blame at all. The question is whether the Admiralty rule has any application in this case. The respondents ought not to be called on to argue this case on the footing that the barge is to blame, but if the barge is to blame the point on *The Milan* (*ubi sup.*) will not arise, for the tug and tow will both be to blame. The liability to compensate must be fixed, not merely on the property, but also on the owner through the property:

> *The Castlegate*, 68 L. T. Rep. 99; 7 Asp. Mar. Law Cas. 284; (1893) A. C. 38, at p. 52.

Tug and tow are not necessarily considered one for all purposes:

> *The W. H. No.* 1, 103 L. T. Rep. 677; 11 Asp. Mar. Law Cas. 497; (1911) A. C. 30.

The Admiralty rule as to division of loss is confined to cases in which the colliding ships are both in fault:

> *The Woodropp Sims*, (1815) 2 Dods. 83, at 85.

Though it has been extended to cargo on a ship:

The Milan (*ubi sup.*).

In that case it is said that identification is not the reason for the judgment, but it is difficult to believe it was not the reason for it. Some doubt was thrown on the decision in *The Milan* case in the case of

The Frankland, 84 L. T. Rep. 395; 9 Asp. Mar. Law Cas. 196; (1901) P. 161, at 167.

[Vaughan Williams, L.J.—It is wrong to say that *The Milan* rests on the principle of identification.] It is extremely difficult to see what principle the rule rests on. See the observations in

The Drumlanrig, (1910) P. 249, at p. 260.

The true origin of the rule is probably to be found in the fact that ship and cargo often belonged to the same man. The case of *The Lord Melville* (2 Shaw's Scotch App. Cas. 402) mentioned by Lord Blackburn in *The Khedive* (4 Asp. Mar. Law Cas. 567; 47 L. T. Rep. 198; 7 App. Cas. 795, at 819) shows that this rule had not always been recognised even in cargo cases. The rule has no application to cases arising under Lord Campbell's Act:

The Vera Cruz, 52 L. T. Rep. 474; 5 Asp. Mar. Law Cas. 386; 10 App. Cas. 59.

It never could apply to a case of damage to the person such as occurred in *The Sylph* (3 Mar. Law Cas. O. S. 37; 17 L. T. Rep. 519; L. Rep. 2 A. & E. 24), for though the court had jurisdiction under the statute to try such a case, it is impossible to conceive a case in which the injured man and the ship were both to blame. The rule as to the division of loss does not apply to a case in which two ships are to blame for a collision with a third. In *The Frankland* (*ubi sup.*) the two wrongdoers were in collision, and the damage caused by the collision between one of them and the barge was damage which was consequential on the collision between the two ships. A tug and tow are not always regarded as one ship:

The American and Syria, 31 L. T. Rep. 42; 2 Asp. Mar. Law Cas. 350; L. Rep. 6 P. C 127.

It is suggested that the tow must be to blame if the tug breaks a statutory rule, but the cases show that such a contention is wrong:

The Harvest Home, 93 L. T. Rep. 395; 10 Asp. Mar. Law Cas. 118; (1905) P. 177;
The Millwall, 93 L. T. Rep. 426; 10 Asp. Mar. Law Cas. 15; (1905) P. 155;
The W. H. No. 1 (*ubi sup.*).

The general statements of Alverstone, C.J. (in *The Devonian* (*ubi sup.*) must be read in the light of the facts in that case. The essence of the rule is that the two ships which collide are both in fault. The rule in *The Milan* (*ubi sup.*) has no application in the case of a third ship injured by the negligence of two others; such a case is not within sect. 25, sub-sect. 9, of the Judicature Act 1873.

Leslie Scott, in reply, referred to

Boucher v. *Clyde Shipping Company*, Ir. Rep. 1904, II., 129.

The court reserved judgment, and it was delivered with the judgment in *The Seacombe* reported *post* on the 1st Dec. 1911.

June 19, 27, 28, 30, *and Dec.* 1, 1911.

(Before Vaughan Williams, Fletcher Moulton, and Buckley, L.JJ., and Nautical Assessors).

The Seacombe. (a)

Collision—Steamship and barge in tow of a tug—Steamship and tug to blame for collision—Barge not to blame—Admiralty rule as to division of loss—Joint tortfeasors—Right of barge owners to recover whole damage against either wrongdoer—Judicature Act 1873 (36 & 37 *Vict. c.* 66), *s.* 25, *sub-s.* 9—*Preliminary acts—Character of statements contained in them.*

A tow is not liable in law for the wrongful act of her tug merely because of the relation of tug and tow. Whether a tow is liable or not depends on the facts in each case.

A barge in tow of a tug collided with a steamship. The control of the navigation of the tug and barge was in the hands of those on the tug. In an action for damage brought by the barge owners, the owners of her cargo and the master and crew against the owners of the steamship, the defendants called no evidence, and on the evidence called by the plaintiffs it was held that the tug and tow were to blame and that the steamship was not to blame.

In the preliminary act filed on behalf of the defendants, and in the defence it was stated that the steamship slowed her engines and starboarded when she saw the tug and barge, but the judge disregarded the statements made in the preliminary acts and defence, and, deciding the case on the evidence given, found the tug and barge alone to blame. The plaintiffs appealed.

On the hearing in the Court of Appeal the barge owner obtained leave to call the master of the steamship.

Held, by the Court of Appeal, that, on the evidence given, the steamship was to blame for not keeping her course and speed, and that as the tug was also to blame and the barge was not to blame, the plaintiffs, following the decision in The Devonshire *reported above, were entitled to recover the whole of their damage from the owners of the steamship.*

Observations by Fletcher Moulton, L.J. as to the binding character of statements made by parties in the preliminary acts filed by them.

Appeal from a decision of Bargrave Deane, J., dismissing a claim made against the owners of the steamship *Seacombe* by the owners, master and crew of the barge *Dolly* and the owners of her cargo for damage caused by a collision between the *Dolly* while in tow of the tug *J. M. Stubbs* and the steamship *Seacombe*.

The appellants, plaintiffs in the court below, were the owners of the barge *Dolly*, and her master and crew, and the owners of her cargo and freight; the respondents, defendants in the court below, were the owners of the steamship *Seacombe*.

The case made by the appellants, plaintiffs in the court below, was that shortly before 8.5 a.m. on the 9th Jan. 1911 the *Dolly*, a barge laden with about 100 tons of maize, manned by a crew of two hands, was being towed by the tug *J. M. Stubbs* from the Huskisson Dock to Birkenhead. The tug was in sole control of the navigation. The

(a) Reported by L. F. C. Darby, Esq., Barrister-at-Law.

weather was hazy, the wind light southerly airs, and the tide ebb of the force of from two and a half to three knots. The *Dolly* was being towed across the Mersey to the southward and westward at a speed of about seven knots through the water. The regulation lights were being duly exhibited and burning brightly, and a good look-out was being kept.

In these circumstances the ferry steamer *Seacombe* showing her masthead and red lights, was seen about quarter of a mile off and broad on the starboard bow. The *Dolly* was kept in the wake of her tug, and shortly after the *Seacombe* was seen the tug starboarded and sounded two short blasts, and the *Dolly* also starboarded. The *Seacombe* did not reply to the tug's signal, but came on under starboard helm towards the *Dolly*, and although the bargeman just before the collision ordered the tow rope to be let go and put his helm hard-a-port to try, if possible, to let the *Seacombe* pass between the *Dolly* and the tug, the *Seacombe* with her stem struck the starboard bow of the *Dolly* near the stem and sank her immediately.

Those on the *Dolly* charged those on the *Seacombe* with not keeping a good look out; with not keeping clear of the barge; with not starboarding; with not easing, stopping, or reversing their engines; with not indicating their course by whistle signal; and alternatively with not keeping her course and speed.

The case made by the respondents, defendants in the court below, was that about 8 a.m. on the 9th Jan. 1911 the *Seacombe* was proceeding from the Seacombe Landing-stage to the Liverpool Landing-stage, the tide being ebb of the force of from three and a half to four knots. The *Seacombe* was proceeding about south-east at full speed making about seven knots. Her regulation lights were duly exhibited and burning brightly, and a good look-out was being kept.

Under these circumstances those on the *Seacombe* saw the tug *J. M. Stubbs* with the *Dolly* in tow about two to three points on the *Seacombe's* port bow, at a distance of about 500 yards. The *Seacombe* starboarded her helm, slowed her engines, and then stopped them. The tug and *Dolly*, however, instead of keeping clear of the *Seacombe*, ported her helm, whereupon the port engine of the *Seacombe* was reversed full speed, and the tug altered her course to port, and went across the *Seacombe's* bows. The *Dolly* came on under a port helm and with her starboard bow struck the *Seacombe* on her starboard bow.

The respondents alleged that the servants of the appellants on the *Dolly* and the tug *J. M. Stubbs* were negligent in not keeping a good look out; with not keeping out of the way of the *Seacombe*; in first porting and then starboarding across the bows of the *Seacombe*; in not easing, stopping, or reversing the engines of the *J. M Stubbs*; in not indicating their course by whistle signals; and in not casting off the tow rope of the *Dolly* and in porting her helm after the tug starboarded.

The case was heard in the Admiralty Court on the 22nd March.

The appellants in the court below called the master of the tug *J. M. Stubbs* and the man on the barge *Dolly*. Their evidence showed that the *Seacombe* kept her course and only reversed her engines at the last moment.

The respondents called no evidence.

The following judgment was delivered by Bargrave Deane, J.:—

BARGRAVE DEANE, J.—This was a collision between the *Seacombe* ferry boat and the flat *Dolly* in tow of a tug called the *J. M. Stubbs* about mid-river, in the Mersey at 8 a.m. on the 9th Jan. last, when it was to all intents and purposes, daylight, although both vessels still had their lights up. The tug and the tow having passed up the river on the east side as far as Princes Landing Stage, then started to get across the river to the Birkenhead side, and I have not the smallest doubt that, instead of cutting straight across, they, whom I will call the plaintiffs, cut across in a sort of bend, under a slight port helm, heading up-river, and gradually coming across. I do not say the plaintiffs were always under a port helm, but porting their helm, and going in the ordinary course to get across the tideway, and when they had got very nearly half way across they saw the *Seacombe*, which had just left the Seacombe Landing Stage on her way across. They were approaching each other at a fairly broad angle. The tug describes the *Seacombe* as being about four points on her starboard side, 300 to 400 yards away. That would put them on crossing courses, and the rule, although the tug master does not accept it, is that the vessel that has the other crossing on her starboard side shall keep out of the way, and that the other vessel shall keep her course and speed. That rule applies in this case, although the master of the tug will not have it; he quietly tells us that it was the duty of the *Seacombe* to keep out of his way, and he says he expected her to starboard and she did not. He says if she had starboarded there would have been no collision. She did not starboard. He blames her for not starboarding and keeping out of the way. The plaintiffs, on the other hand, instead of keeping out of the way as the rule directs, kept on at full speed, starboarded a couple or three points, and dragged the tow right across the bows of the *Seacombe*, causing imminent risk of collision, and, at the last moment, there not being time, although it was intended, to let go the rope from the bow of the tow, the helm of the tow was hard aported, which threw her bow on to the bow of the *Seacombe*. In all probability, if that had not been done, the *Seacombe* would have struck the tow somewhere amidships, with probably the same result—namely, that the tow would have sunk.

The only evidence that I have before me is the evidence from the tug and tow. Neither of those people say that anything was done except to starboard on the part of the tug, and the final porting. The tug and tow did not keep out of the way of the *Seacombe* and did not obey the rule; therefore the plaintiffs are to blame. I am not dealing now with the question of the tug or the tow, but the tug and tow combined are to blame for not keeping out of the way of the *Seacombe*. But apart from that, I have to deal with the question of the *Seacombe*. I have no evidence whatever from the *Seacombe*. I have got before me a preliminary act, and I have got before me

a statement of defence, and in those two documents certain statements are made. There have been cases in which this court has been asked to deal with the case, by consent, on the pleadings, but that is not this case. I have got no consent to treat the pleadings as being accurate, and, without that consent I cannot treat the pleadings as being anything more than certain statements put before the court by pleaders, who have pleaded certain facts which, as we know in this court, are often not supported by evidence. The evidence is all one way, that the *Seacombe* did not starboard, and there is evidence from the plaintiffs' witnesses that the *Seacombe's* engines were reversing just at the time of the collision. Assuming that I act on the evidence, and do not act on the preliminary act and defence, the evidence is all one way, that the *Seacombe* did not starboard, but that the *Seacombe* did reverse at the last moment, but not before, and kept her course and speed until the last moment. In these circumstances, acting as I do on the evidence, and not acting on the pleadings, I am of opinion that the *Seacombe* is not to blame for this collision.

That is all I can decide. I cannot decide any question between the tug and the tow at all. If the tug were the servant of the tow, I suppose she might be responsible, but that is not a question which I have to decide. I only have to decide whether the *Seacombe* is responsible. The action is brought against the *Seacombe*, and I am of opinion that the plaintiffs are to blame, and, on the other hand, the *Seacombe* is not to blame. Therefore the action will be dismissed and there will be judgment for the defendants.

On the 8th April the plaintiffs delivered a notice of appeal seeking to obtain an order reversing the judgment and praying that judgment should be entered for the plaintiffs.

The case was before the Court of Appeal on the 19th, 27th, 28th, and 30th June, when judgment was reserved.

During the hearing of the appeal the appellants obtained leave from the court to call the master of the ferry boat the *Seacombe*.

Laing, K.C. and *C. R. Dunlop* for the appellants, the owners of the barge *Dolly* and her master and crew and the owners of the cargo on board her.—The *Seacombe* was to blame as well as the *St. Winifred*. The *Seacombe* did not keep her course and speed and she did not indicate her course by whistle signal:

The Corinthian, 101 L. T. Rep. 265; 11 Asp. Mar. Law Cas. 264; (1909) P. 260.

If both the steamship and the tug are to blame the barge owner is entitled to recover the whole of his loss against either steamship or tug for the tow is not liable for the negligence of the tug:

The Quickstep (*ubi sup.*);
The W. H. No. 1 (*ubi sup.*).

The barge is not in the position cargo on the tug would be in. *The Drumlanrig* (*ubi sup.*) has no application. The respondent must show that the Admiralty rule as to the division of loss applied to a case such as this before the passing of the Judicature Act 1873. [VAUGHAN WILLIAMS, L.J.—The rule might be in force, although facts had not arisen which admitted of its application.]

Bateson, K.C. and *Maxwell* for the respondents the owners of the *Seacombe*.—The *Seacombe* is not to blame; the story of the tug or the story of the *Seacombe* is untrue. The tug's story is the one which should be accepted. The appellants' witnesses deny the truth of the *Seacombe's* story as told in the Court of Appeal. The argument as to whether the barge owners could recover the whole of their loss against the *Seacombe* or only half of it against the *Seacombe* and half against the tug, followed the same lines as the argument in the *Devonshire*.

Dunlop in reply.

The following cases were cited on the point that the defendants were bound by statements made in their preliminary act:

The Inflexible, (1856) Swab. 32, at p. 34;
The Vortigern, 1 L. T. Rep. 307; (1859) Swab. 518;
The Biola, 34 L. T. Rep. 185; 3 Asp. Mar. Law Cas. 125 (1876);
Tildesley v. *Harper*, 39 L. T. Rep. 552; 10 Ch. Div. 393.

On the points whether the tow was liable for the fault of the tug and the amount of damage recoverable by the tow the following cases, in addition to those cited in the *Devonshire*, were referred to:

The Niobe, 65 L. T. Rep. 502; 7 Asp. Mar. Law Cas. 89; (1891) A. C. 401;
The Ticonderoga, (1857) Swab. 215;
The Ripon City, 77 L. T. Rep. 98; 8 Asp. Mar. Law Cas. 304; (1897) P. 226;
The Snark, 82 L. T. Rep. 42; 9 Asp. Mar. Law Cas. 50; (1900) P. 105;
The Ruby Queen, (1861) Lush. 266.

At the conclusion of the arguments judgment was reserved for the case of the *Devonshire* to be argued, and judgment dealing with both cases was delivered on the 1st Dec.

VAUGHAN WILLIAMS, L.J.—We have been considering two cases, *The Seacombe* and *The Devonshire*, which raise somewhat similar and difficult questions as to the survival and area of the application of the rule of Admiralty jurisprudence which divides the loss arising from collision of ships at sea. It is, I think, beyond controversy that this rule applies as between two ships both to blame, and it has now been decided by the House of Lords in *The Drumlanrig* that, as between innocent cargo-owners in a ship to blame which has come in collision with another ship to blame, the same rule applies. This is the doctrine of *The Milan* case—decided by Dr. Lushington in 1861. The subjection of the cargo-owner to this rule of Admiralty jurisprudence has nothing to do with any negligence of the cargo-owner or any relation of master and servant existing between him and the master of the ship carrying his goods. It is a doctrine which flows largely from the Court of Admiralty having always treated the ship as a *res* or subject-matter on which a ship injured by a collision at sea has a lien for the satisfaction of the loss or damage arising from the collision. The frequent epithet of "innocent" applied to the cargo-owner shows that innocence and blame have nothing to do with the application of the Admiralty rule of division to cargo-owners to whom neither of the colliding ships

belong. Admiralty jurisprudence holds that those whose goods have been injured by the collision of ships at sea can only recover damages for loss on the same basis that rules recovery for loss by collision of ships at sea between the ships themselves. Originally, as between the colliding ships at sea, those who administered marine law throughout the world tried to apportion liability for loss to quantum of blame. After a time the High Court of Admiralty in England, and many other courts administering marine jurisdiction in various parts of the world, substituted, in consequence of the difficulty of ascertaining with anything like precision the quantum and therefore the just apportionment of blame, equal division—*judicium rusticorum*, as it has been called, for precise apportionment.

This Admiralty rule has, of course, always been in conflict with the common law of England. The ships to blame were in a sense joint tortfeasors — at common law, of course, an individual, being one of several joint tortfeasors, might be sued alone and compelled by execution to pay the damages compensating for the whole loss; nay, more, if all were sued, and judgment obtained against all, execution might go against one and the whole of the damages might be obtained from him, and in no case would there be any contribution among tortfeasors obtainable by action at law. I have neither obligation nor right to discuss which of these conflicting systems of law—the common law and the Admiralty law—is the more just. Perhaps the one may be more just on land and the other at sea.

I have only to consider what portion of Admiralty jurisprudence has survived the Judicature Act 1873. Sect. 25 (9) of that Act provides: "In any cause or proceeding for damages arising out of a collision between two ships, if both ships shall have been found to be in fault, the rules hitherto in force in the Court of Admiralty, so far as they have been at variance with the rules in force in the courts of common law, shall prevail." This sub-section was much discussed in the House of Lords in *The Drumlanrig.* The discussion in that case, so far as it affects the case now before us, related mainly to the question whether the effect of the Judicature Act 1873, sect. 25 (9) is to stereotype the Admiralty rules which were in force in 1873, where they varied from the common law rule, even if it should afterwards appear that they ought not to have been in force, and it was held in the House of Lords that the opposite construction would ignore altogether the words of the Act "hitherto in force," and the House refused to do this. The judgments in *The Drumlanrig* do not seem to me to decide definitely what is the meaning of the words in the section "rules hitherto in force," although the question of the meaning of these words was more or less touched upon in the respective judgments of the noble Lords. There is no suggestion that "rules in force" means rules published or formally adopted by the court, and I think the question is left open whether the area included in the words "rules hitherto in force" is limited or defined by the particular cases determined hitherto from time to time before the Judicature Act 1873, or whether such cases are to be regarded as instances of a rule, or I would rather say "principle of jurisprudence," upon which such cases have been decided. Lord Halsbury, in his speech, says "the real truth is that the Court of Admiralty—that is to say, the Court of the Lord High Admiral—administered a different system of jurisprudence, and it is not apt language to speak of an alteration of the law as a rule of court; but I have come to the conclusion that what the legislature meant was that there should be from henceforth a change in the law if there was any difference." Again he says: "There is no doubt that the difference of administration of the Lord High Admiral by this court was not a question simply of practice such as would be appropriately described as a rule of court, but it was a different system of jurisprudence . . . administered differently from the law of England." And again he says later, after tracing the cosmopolitan rise of the system of jurisprudence administered in the Court of Admiralty, without reference to what was the true view of the law, "I agree that it is only the jurisdiction of the court to lay down what is the existing law, and not to attempt to alter or even improve it," and concludes his judgment by saying that "the Legislature says that what was constantly called (whether rightly or wrongly) the rule of the Admiralty Court as laid down is that which we are now to accept as the law; and, although I feel very strongly the effect of the argument of counsel for the appellants on the subject, I think that these words "hitherto in force" stopped me from going further than this to ascertain if I can what was the rule of the Court of Admiralty, and if I can ascertain it I am to apply it in such a case as this."

These quotations throw some light on the question which the President puts to himself in his judgment in the *Devonshire,* the case which we are considering together with the *Seacombe.* "Does the case of *The Drumlanrig* define, or comprehend, the rule, or is it only an instance of an application of the rule?" The House of Lords in *The Drumlanrig,* in my opinion, were not, by their decision, defining or comprehending the rule which they held was in force in 1873, but were merely deciding that, according to a practice in force at that date, the Admiralty rule under which a plaintiff is only entitled to recover a moiety of the damages sustained by him from a collision of two ships both to blame extended to a case of an innocent cargo-owner plaintiff, whose goods were "cargo" on board one of the colliding ships. The House of Lords did not decide that the Admiralty rule substituting division for apportionment only applied in cases where the ships to blame for the collision were the two colliding ships. I do not think that the House of Lords intended by their decision to exclude from their operation of sub-sect. 9 every rule of Admiralty jurisprudence excepting so far as it had, prior to 1873, been applied in particular or specific cases. New cases, as time progresses, must raise the question of the application of the respective Admiralty rules regarding apportionment of liability between tortfeasors in navigation, unless, indeed, such apportionment is in future to be superseded by the common law rule.

Thus far I have dealt only with the question of the survival, after the passing of the Judicature Act of 1873, of the rules or principles of Admiralty jurisprudence, but both the cases with which we

have to deal raise questions as to the respective liabilities or responsibilities of tug and tow where there has been a collision with a third ship, and raise the question of the identity of the tug and tow—that is to say, whether for the purposes of navigation tug and tow are to be regarded as one vessel. Of course, if they are to be so regarded, there is in the case of a collision between the composite vessel, constituted by tug and tow, and another vessel, a collision between two vessels, the composite vessel and the independent vessel, but if the tug and tow are to be regarded as separate vessels, to the extent that the one may be to blame and the other not, according as one has the control of the navigation, there will be three vessels and not two, and it will follow that a vessel, be it tug or tow, which has not the control of the navigation, may, in a case of collision with an independent ship to blame, sue such independent ship. But we have to consider whether the tow, in a case where the collision results from the bad navigation respectively of the tug and the third vessel, can recover the whole damage, or whether it can only recover half from each of the tortfeasors according to the Admiralty rule.

This question of identity of tug and tow is of vital importance in the cases we have to consider. In *The Seacombe*, the composite vessel, constituted by the tug *J. M. Stubbs* and the tow *Dolly*, on the one hand, and the *Seacombe* on the other hand, were each to blame; and in *The Devonshire* the composite vessel, constituted by the tug *St. Winifred* and the tow, *Leslie*, on the one hand, and *The Devonshire* on the other hand, were each to blame, and the Admiralty rule of division beyond question will apply; but if there is no indentification of tug and tow, either on the ground that safety of navigation requires that tug and tow should be under one command, as Dr. Lushington used to hold, or on the ground that the tow is the master whom the tug has to obey, then one has to deal with three ships: (1) the tug, (2) the tow, (3) the innocent independent ship. And the main question in the present case is whether the Admiralty rule of division applies. In both cases the statement of claim alleges the navigation of the tug and the tow to be in the sole control and management of the respective tugs. In the case of *The Devonshire* the President finds in terms that it is to the navigation of the tug that he must look in that case, because the barge *Leslie* was navigated by the tug *St. Winifred*. In the case of the *Seacombe*, Bargrave Deane, J. made no express finding as to the control of the navigation, because, as he did not find the *Seacombe* to blame, the question whether the tug or the tow had the control of the navigation became immaterial. I am of opinion that in both cases the respective tugs had the control of the navigation. I do not propose to deal with the question raised by the President as to whether the Admiralty rule or the common law rule is the more conformable in the average case to fairness and justice, seeing that, in my opinion, we have no obligation or right to raise any such question. As to the doctrine of identification between tug and tow, the President says that until 1890, in most cases and for almost all purposes, a tug and a tow were considered one vessel. In 1890 Sir James Hannen and Butt, J., in the case of *The Quickstep* (*sup.*), decided that the question whether a tow is liable for the negligence of the tug which causes a collision is a question of fact in each case, and depends upon whether in the circumstances those in charge of the tug were so far under the control of the master of the tow as to be the servants of the owners of the tow. It does not seem to me that this decision is consistent with the Admiralty cases decided prior to 1873, nor do I think that the decision of Dr. Lushington in *The Milan* case, whereby he decided that the Admiralty rule of division applied to an innocent owner of cargo carried in one of two ships to blame for a collision, was in any way based on negligence or blame of the cargo-owner, but on the refusal in Admiralty jurisprudence to adopt the common law rule.

This being my opinion, I shall ask myself in each of these cases of *The Seacombe* and *The Devonshire* the question whether the circumstances bring the case within the principle upon which Dr. Lushington, in the case of *The Milan*, or the Court of Admiralty, in any other case prior to the Judicature Act 1873, held that the innocent cargo-owner could only recover from each of the ships to blame for the collision half the damage his cargo sustained. I do not think that the cargo case was decided upon the ground of identification of the cargo with the ship. In fact, Dr. Lushington, when criticising the judgment in *Thorogood* v. *Bryan*, distinctly repudiates the doctrine of identification of cargo with carrying ship. So I doubt in these two cases which we have to decide the conclusiveness of the case of *The Quickstep* and other cases turning upon the identity of tug and tow on this question of division of loss. The basis of the Admiralty rule of division, as I have already said, is, in my opinion, the right of arrest, the right *in rem* by which the cargo-owner can only get a remedy in the Court of Admiralty compatible with the rights, remedies, and liabilities of the two colliding ships *inter se*. I am uncertain on the authorities whether the lien for damages caused by collision, or the arrest of the ship, extends to the loss of or damage to the cargo. If it does, this would itself be a ground for restricting the claim on behalf of the owner of cargo damaged in a collision to the recovery against each of the ships to blame and their owners of one half only of the damage. Be this how it may, there can be no doubt but that in the case of damage caused by collision at sea the Court of Admiralty does not recognise the common-law principle that each tort feasor is liable to be sued for the whole of the damage caused by the joint tort. It was because those who had to administer maritime law did not recognise the justice of the common-law principle when applied to damage arising from collisions of ships at sea that they in early days of administration of maritime law adopted the principle of apportionment of liability in proportion to the quantum of blame in cases where two ships were to blame. Then the difficulty, in the case of ships colliding at sea, of apportioning with any precision the blame led to the Admiralty rule of division. The application of the rule in cases where the blame lies with two colliding ships, and the application of it to cargo on board one of the two colliding ships to blame, although no blame or responsibility can be attached to the cargo-owner is, of course, well-established, and what we have

to determine is, does this rule of division, based on the consideration which I have set forth, apply to a case where only one of the two ships to blame is in collision with a third ship not to blame? The principle of apportionment of blame, whether carried by precise apportionment or by *judicium rusticorum*, seems of the essence of maritime law. The difficulty of precise apportionment of blame in the case of collision at sea is the foundation of the Admiralty rule of division.

What the court has to decide on these appeals is whether this rule applies to a case where one of the two ships to blame and a third ship come into collision—*i.e.*, in *The Seacombe* case, where the flat *Dolly* comes into collision through the faults of the tug *Stubbs* and the *Seacombe*, and in *The Devonshire* case, where the barge *Leslie* comes into collision through the faults of the tug *St. Winifred* and the *Devonshire*. I have come firmly to the conclusion that the principles of law, based on the considerations to which I have referred, logically extend to the case in which the damage complained of results from the collision of a ship to blame and an innocent ship caused by the negligence of two ships, one of which is not a colliding ship, but which renders both liable to be sued by the innocent ship in collision as both, by the negligent navigation of their respective ships, contributed to the accident. Every principle of law which leads to and justifies the division of the damages between two colliding ships "to blame" applies, in my opinion, to the case of two ships to blame for the collision, one of which only is a colliding ship. I cannot believe that the Admiralty Court, which, in the case of damage caused by the collision of two ships, refused to recognise the common-law rule making each tort feasor liable for the whole of the damage without any right of contribution from the other tort feasor, would have recognised the self-same common law rule in a case in which one of the tort feasors was not a colliding ship, but only one of the two ships whose negligence caused the collision. Apart from any difficulty arising from the construction of sect. 25, sub-sect. 9 of the Judicature Act 1873, I should certainly come to the conclusion that the innocent ships injured in the respective collisions could not recover from one of the ships to blame the whole damage, but only half. I have already expressed my opinion, not without doubt, that this section saves or preserves Admiralty practice and rules as flowing from the principles of Admiralty jurisprudence, and not merely as applied in particular cases. With regard to the construction of sub-sect. 9 of sect. 25 of the Judicature Act 1873, the decisions in *The Quickstep* and the other cases, subsequent to 1873, rejecting the decisions of Dr. Lushington treating, at all events *primâ facie*, the tug as the agent or servant of the tow, and identifying for almost all purposes the tug and the tow as one vessel, throw some light on the construction of this sub-section, for it is clear, as pointed out by the President in his judgment in *The Devonshire*, that "until then, in most cases, and for almost all purposes, a tug and tow were considered as one vessel," and "that being so, it is not a matter of surprise that examples of innocent owners of tows attached to guilty owners of tugs are wanting." Dr. Lushington treated the tug as the agent or servant of the tow, and did so on the ground that the tug and the tow ought to be considered as one vessel; but the fact that there are Admiralty decisions to the effect that the tug and the tow are not so identified with one another that the tow cannot recover against the tug that which the tow has been obliged to pay as compensation for the negligence committed by the tug: (see per Sir James Hannen in *The Stormcock*, 1885, 5 Asp. Mar. Law Cas. 472) made Sir James Hannen doubt Dr. Lushington's decisions on this point, and made Sir James Hannen and Butt, J. arrive in *The Quickstep* at the conclusion that "whether the relation of master and servant exists between the owners of the vessel in tow and the crew of the tug, so as to make the former liable, depends upon the circumstances of each case." This conclusion, in my opinion, could only have been justified in 1890 upon the basis that the words "Rules hitherto in force" mean not rules affirmed in particular cases but the rules to be inferred from the principles adopted in Admiralty jurisprudence on an examination of all the previous decisions.

I will now try and apply the conclusions of law at which I have arrived to the facts of the two cases before the court. First then, I will take the case of *The Seacombe*. In that case Bargrave Deane, J. found for the defendant on the ground that there was no evidence that the *Seacombe* was to blame. We have had before us an additional witness, and I am of opinion that the ferry steamer *Seacombe* was also to blame for the collision between it and the *Dolly* (the tow). Bargrave Deane, J. also found that the tug *J. M. Stubbs* and the tow (the *Dolly*) combined were to blame for not keeping out of the way of the *Seacombe*. I think this is wrong. There is no evidence showing that the tow (*Dolly*) was to blame. The learned judge also found the *Dolly* to blame because of her combination with the tug *J. M. Stubbs*, which clearly was to blame. This decision conflicts with *The Quickstep* (*sup.*), which decides that the question whether a tow is liable for the negligence of the tug which causes a collision is a question of fact in each case and depends upon whether, in the circumstances, those in charge of the tug were so far under the control of the master of the tow as to be the servants of the owners of the tow. But, on the other hand, the decision in *The Quickstep* is hard to reconcile with the numerous cases decided before the passing of the Judicature Act 1873, which cases, as the President, Sir Samuel Evans, points out in his judgment, show that the Court of Admiralty, until *The Quickstep*, 1891, in most cases and for almost all purposes considered the tug and the tow as one vessel, and suggested that the somewhat strict application of this doctrine may account for the absence of instances raising the point which is raised before us both in the *Seacombe* and the *Devonshire*. I think that we ought to act upon the decision in *The Quickstep*, not as a new rule since the Judicature Act, 1873, nor as a rule to be found in the decision of any prior reported cases, but because the judgment in *The Quickstep* is justified by consideration of the principles of the decisions prior to 1873, which, as pointed out by Sir James Hannen in *The Stormcock* (*sup.*) negatived the universality of the identity of the tug and tow asserted in the prior decisions in the Court of Admiralty.

Having arrived at this conclusion, the only question I have to deal with is the quantum recoverable, and, for reasons which I have already given, I think that in the case of a collision between one of two ships both to blame for the collision and a third vessel in collision, but not to blame, the Admiralty rule as to division of damages applies, and the plaintiffs, the owners of the innocent vessel, can only recover half the damages from each tortfeasor.

Secondly, I will take the case of *The Devonshire*, which collided with the barge *Leslie*, which was not to blame, but collided through the combined negligence of the tug *St. Winifred* and the *Devonshire*. The only point to be decided is the same point which I have already dealt with in *The Seacombe*. The result is in my opinion that in each case the Admiralty rule of division applies, and the plaintiffs can only recover half the damages from each tortfeasor.

I want to add a statement, that I think it is of the utmost importance, having regard to the international character of Admiralty law, that nothing should be done to so alter the Admiralty law as to make it a part of the common law and not a part of a separate system of jurisprudence in which all the nations of the world are interested. It is true that the half-and-half rule is not adopted by all nations, but the principle is accepted that the liability must be divided between the wrong-doing ships by apportionment as distinguished from the *judicium rusticorum*; but precise apportionment and apportionment in the rougher English method was equally inconsistent with the common law rule negativing contribution between joint tortfeasors.

FLETCHER MOULTON, L.J.—This is my judgment in *The Devonshire*.

In this case the *Leslie* was a dumb barge adapted solely for being towed. At the time of the accident it was being towed by the tug *St. Winifred* down the river Mersey. The *Devonshire* was a steamer proceeding up the Mersey, and a collision took place between the *Devonshire* and the *Leslie*. The court below has held both the steamship *Devonshire* and the *St. Winifred* to blame, and this decision is not appealed against. The negligence of which the steamship *Devonshire* and the *St. Winifred* have been found guilty consisted in the steamship *Devonshire* not keeping her course and speed and the *St. Winifred* not giving way. The persons managing the *Leslie* are not guilty of any negligence. The control of the navigation was necessarily in the tug entirely, and nothing that those on board the *Leslie* could have done would under the circumstances have affected the matter of the collision. In a considered judgment the President of the Admiralty Division, who tried the case, has declared the plaintiffs—namely, the owners of the barge *Leslie*—and her master and mate, suing for the loss of their effects, entitled to recover from the defendants—namely, the owners of the steamship *Devonshire*—the whole of their loss. It is from this judgment that the present appeal is brought.

The appellants put forward two contentions: (1) That the negligence of the tug is constructive negligence on the part of the tow, at all events in cases where the tug has been found guilty of a breach of the statutory regulations; (2) that even if the tow is entitled to sue as an innocent vessel, the rules of law that prevail in the Court of Admiralty require that the blame of the collision should be apportioned equally between the tug and the colliding vessel; the tow, therefore, can recover only one-half of the loss from the latter. In support of the first contention the appellants rightly pointed out that it has long been laid down in the Admiralty Court that for many purposes the tug and the tow must be regarded as one vessel. It is evident that this must be the case in deciding what is the duty incumbent on the tow and the tug with regard to the other vessel, as, for instance, the course that they should steer. Inasmuch as they are physically connected, it would be impossible to allow such a matter to be indenendently decided for each vessel, lest the result should not be the same for both. In all such matters, therefore, what the tug does the tow must also do. But neither the reason upon which such a principle is based nor the decisions in which it has been applied go so far as to say that for all purposes the tow and the tug must be identified, so that the blameworthy conduct of the one must be treated as bringing blame on the other. In considering this question it is necessary to bear in mind that the relations between the tow and the tug vary in different cases. In the case of sea-going ships that are in tow the whole direction is as a rule in the hands of the persons navigating the tow, and the tug and her crew are for navigating purposes in the position of their servants. In such a case the tow is clearly responsible for herself and the tug. But an equally well-known operation is the towing of barges or other craft of the like kind, either singly or in groups. In such cases the tow has no control over those navigating the tug. The tug is in the position of an independent contractor who performs the service of towing the barge to its destination, and who chooses for himself how he shall perform that service. I can see no reason why the misconduct of such an independant contractor should be imputed to the innocent tow, who is, in fact, no party to the wrongful act. So to impute it, would be inconsistent with the general principles of our common law, and I should decline to do so unless I found a well-settled principle of Admiralty jurisprudence evidenced by a course of consistent decisions which required me to do so.

When the decisions are examined, the contrary is found to be the case. In the year 1874 the case of *Union Steamship Company* v. *Owners of the Aracan, the American, and the Syria* (*ubi sup.*) came before the Privy Council on appeal from the Court of Admiralty in England. The plaintiffs were the owners of two steamships, the *Syria* and the *American*. On calling at Ascension the master of the *American* found the *Syria* lying there disabled, and proceeded to tow her home. On the voyage a collision occurred between the *Aracan* and the *Syria* by reason of the negligence of the *American*. In the Admiralty Court the judge held that the *Syria* was not to blame for the collision, but that she and the *American* were by intendment of law one ship, and therefore he gave judgment against her. Their Lordships reversed this decision and held that, inasmuch as the governing power was wholly in the *American*, the *Syria* could not be

deemed in intendment of law one vessel with *The American*, or liable for her negligence. In 1890 the Court of Admiralty (Sir J. Hannen and Butt, J.) applied the same law in the case of *The Quickstep*, holding that, where a barge is in tow, and the governing power is wholly in the tug, the tow is not liable for the negligence of the tug. Finally, in 1910, the House of Lords, in the case the *Owners of the Comet* v. *Owners of the W. H.* 1 (*ubi sup.*), held a barge not to blame where it was in tow, although the tug was held to blame, a decision utterly inconsistent with the contention that under such circumstances a tow and its tug are by intendment of law one vessel for all purposes of legal liability. Other cases of a like kind are *The Mary* and *The Millwall*. Lord Watson's remarks in his opinion in the case of *The Niobe* (*sup.*) fully sum up the law on this point. The appellants sought to establish that this rule does not apply where the fault of the tug is a breach of the regulations. I wholly fail to appreciate the contention. The grounds on which the courts have held that in such circumstances the tow and the tug are not in intendment of law one vessel do not depend on the nature of the misconduct of the tug or its relation to the regulations. Indeed, in this case of *The American* the negligence was actually a breach of those regulations. But apart from this I am of opinion that the object and effect of the regulations is to fix duties and not to apportion legal liabilities. It is absurd, therefore, to say that a barge, which *ex concessis* has done all that it ought to do, is by reason of the regulations made legally liable for the negligence of a tug that has not. Towing is a lawful and well-recognised operation, and is even referred to in the regulations, and I can see nothing whatever in them which bears in any way on the question whether, where the governing power is wholly in the tug, there should be an intendment of blame in the tow where those on board it have performed all their duties. I am, therefore, of opinion that the first contention of the appellants wholly fails.

The second contention raises a point of great legal importance. It is put very broadly by the appellants. They contend that it is principle of the Admiralty law, if there is a collision due to the negligence, concurrent negligence, of two ships, then for all purposes, whether affecting the delinquent ships themselves or outsiders, each ship has to bear only half the blame and has to pay only half the damages. Before examining the argument by which it is sought to support the legal proposition, there are certain general considerations which will tend to throw light on the question under discussion. In the first place such a principle as that contended for could only have arisen in the Admiralty Court. No such principle as apportioning liability is to be found in our common law. If, therefore, it exists at all, it exists in that court only, unless by statute it has been made to obtain in courts of common law also. In the next place the alleged principle does not come within the provisions of sect. 25 (9) of the Judicature Act 1873, by which the Admiralty rule laid down and acted on in the well-known case of *The Milan* was preserved and made of general application in all the courts. The sub-section reads as follows: "In any cause or proceeding for damages arising out of a collision between two ships, if both ships shall be found to have been in fault, the rules hitherto in force in the Court of Admiralty, so far as they have been at variance with the rules in force in the courts of common law, shall prevail."

The collision in this case was between the *Leslie* and the *Devonshire*, and both those ships were not held to blame—the *Leslie* having been completely exonerated. The facts of this case do not, therefore, bring it within the scope of the sub-section. This is not mere verbal criticism. The language of the sub-section exactly represents the rule as applied in all the cases to which we have been referred, or which I have been able to discover, which were decided before the Judicature Act. I have no doubt that the language of the sub-section was deliberately chosen so as to apply solely to cases where the two colliding ships are both to blame, to which cases alone had any special rule of the Admiralty Court been theretofore applied. Even if I was of opinion that the restricted ambit of the sub-section was due to mere inadvertence (for which view I can find no warrant either in the history of the then condition of the Admiralty practice or otherwise) it would make no difference to my judicial duty. The restriction is clearly expressed in the language used in the Act, and we have no right to substitute for the language of an Act of Parliament other language which we may think the Legislature might have employed with more advantage. It follows, therefore, that the rule contended for even if it did exist in the Admiralty Court prior to 1873 is not preserved or extended to the courts by sub-sect. 9 of sect. 25 of the Judicature Act of that year. This is a matter of great importance, because the decision of the House of Lords in the case of *The Drumlanrig*, which finally established the rule in *The Milan* in all its fullness, was entirely based on the principle that the rule in question was expressly preserved by sub-sect. 9 of sect. 25 of the Judicature Act 1873. This decision, therefore, can afford no assistance to the contention of the appellants in this case.

But the effect of this consideration goes much deeper. The Admiralty Court did not possess exclusive jurisdiction in the matter of collisions between ships. Actions for collisions between ships in territorial waters might be, and in fact were, occasionally brought in courts of common law. But prior to the Judicature Act the law administered in such cases was different in the two courts. If contributory negligence was proved, the plaintiff lost his cause in the court of common law; whereas in the Admiralty Court the losses were borne in equal halves. It is evident from sect. 91 of the Judicature Act 1873, that one of its objects was to provide that one and the same law should be administered in all the divisions of the Supreme Court, and it was evidently for this purpose that sub-sect. 9 of sect. 25 was inserted. By reason of its presence the law administered by the courts of common law in the case of collisions between ships where both are to blame was changed, and those courts are now bound to administer in such cases the law which had previously been administered by the Admiralty Court alone. If the contention of the appellants is to prevail, we re-introduce a conflict of law in the different branches of the court. This action might have been brought in a court of common law, and the plaintiff would then have been entitled to recover full damage as he now does under the judgment appealed from. If we give

effect to the contention of the appellants and vary the judgment by giving to the plaintiffs only half his damages, we shall therefore be making the Admiralty Court administer a different law to the court of common law. I should be very loath to hold that the Judicature Act had so signally failed in one of its main objects. I see no ground whatever for holding that this is the case. I am of opinion, on the contrary, that by sub-sect. 9 the only point of difference in the law administered concurrently by the two courts was finally removed, and that from that time the rights of the plaintiffs in cases arising out of collisions of ships have been and are the same in whatever division of the Supreme Court they may bring their actions.

The contrast between the rule suggested by the appellants and the rule of the common law is very striking. The proposition put forward by them is that where there are three ships A, B, and C (as in the present case), and without any fault on its part, A is run into by B through the combined negligence of B and C, A can only recover half of its damages from B, the ship that has committed the trespass. At common law B and C are at the highest joint tortfeasors, and either can be sued separately. Even if sued jointly the judgment could be enforced in full against either. This is to my mind far more just than that which it is proposed to substitute for it. But for B's own negligence he would not have committed the trespass on A. The negligence of C may have caused or increased the difficulties of B's position, just as any other sudden danger of the sea might do, whether caused by the misfeasance of others or not; but B has the full value of this as a defence. If he behaved reasonably—namely, without negligence under the new difficulties, he is entitled to succeed in the action. A only succeeds if he proves that, after making all allowance for the difficulties of his position, B was negligent and the accident was due to that negligence. I am not enamoured of a rule that would under such circumstances prevent A from recovering from the ship that has committed the trespass the full amount of the damages caused thereby. The whole argument of the appellants rested in truth on a passage in the judgment of Dr. Lushington in the well-known case of *The Milan*. That was an action brought by the owners of cargo on board the *Lindisfarne*, which was sunk by a collision with the *Milan*. The defendants were the owners of the *Milan*. Both ships were held to blame, and the question for the decision of the court was whether the plaintiffs were entitled to recover any, and if so what part, of the damage caused by the collision. At that time the decisions at common law had established a doctrine, since pronounced by the House of Lords to be erroneous, that a passenger (and by analogy cargo) on board a vehicle was so far identified with the vehicle as to be unable to recover damages on account of a collision if there had been negligence on the part of those in charge of the vehicle. The defendants sought to apply this principle to collisions at sea, and they claimed that the defendants were in the position of joint tortfeasors with the owners of the ship on which the plaintiffs' cargo was carried, and that therefore the plaintiffs could recover no damages from the defendants. On the other hand, the plaintiffs contended that they were innocent parties, and entitled to recover the whole of the damage against the defendants under the rule of the common law that one of two joint tortfeasors can be sued separately and is liable for the whole of the damage. In delivering judgment Dr. Lushington went fully into the questions raised, but dealt more especially with the questions of the practice of the Court of Admiralty. He expressly declined to follow the rule of common law in preference to such practice. He decided that there was a settled rule and practice in the Admiralty Court that the plaintiff under such circumstances could recover damages from the delinquent ship, but that only one half of the actual damage suffered could be so recovered, by reason of the fact that the ship in which the plaintiffs cargo was carried was also to blame.

It is in dealing with this last point that there appears a passage which it seems, it is suggested, gives support to the appellants' contention, and, as it is so important in this respect, I shall give it in full: "It remains, then, only to determine whether the plaintiffs can recover damage for the whole loss. There is, I apprehend, no doubt at common law that they could so recover, if they could recover at all; but I must be governed, where they apply, by the rules and practice of the Court of Admiralty. It is true, as I think, that the owner of a cargo is to be considered a perfectly innocent person, and that he does not stand in the same position as the owner of one of two delinquent ships; and if the sole ground upon which the Admiralty rule rests is the joint culpability of the plaintiff and the defendant, it might well be that the owner of a cargo would recover his whole damage against the adverse ship, but this is not exactly the view taken by the Admiralty law; it endeavours, whether wisely or not I do not say, to administer more equitable justice, and generally, where both ships are delinquent, it makes the owner of each bear a moiety of the loss, and a moiety only. I apprehend that, carrying out this principle, the Court of Admiralty must say, 'You, the innocent owners of cargo, proceeding against one only of two delinquent ships, shall recover only half your damage, because we can affix to this vessel proceeded against only half the blame, and you shall be left, with respect to the other half of your loss, to your remedy against the owner of the other vessel, which we hold to be equally delinquent.' It may be very true that this conclusion is not conformable with the rule of common law, and much might be said as to its equity, or otherwise, but I think it is most conformable to the Admiralty rule acted upon in *Hay* v. *Le Neve* and other cases, and, therefore, my decree must be that the plaintiffs do recover a moiety of the damage only." Upon this passage the appellants found the argument that it was in 1861 the rule and practice of the Admiralty Court that, in a case of a collision between ships where two vessels (not necessarily the two colliding ones) are to blame, each vessel is liable as against all parties, whether connected with any one of the vessels or not, to bear half the liability of the collision. I am of opinion that this contention is not supported by the judgment in *The Milan* for the following reasons: (1) The case before the court did not involve the decision in any way of the rights of the parties not connected with one of the delinquent ships. There

is no word from the beginning to the end of the judgment which refers in any way to the rights of such parties. Indeed, the language of the judgment, if it be closely scanned, makes it clear that the learned judge was thinking only of the two delinquent ships and the cargoes carried thereon. Moreover, he does not purport to be administering new law, but on the contrary, expressly states that he is only applying a settled rule of the Admiralty Court, and he quotes cases in support, all of which deal with the same question. And when the learned judge formulates the questions which he considers to be before the court, and to which, of course, his judgment is directed, he does so in these words: "It is this. Whether apart from the statute, both ships being to blame, the owner of goods carried in one ship is entitled to recover against the other ship, and, if so, whether the whole of his loss or a moiety only"—language which is only applicable to the narrower question, and clearly does not refer in any way to the rights of outsiders. Nor is there any case on record in which the old Court of Admiralty applied the rule as to division of liability to cases other than those of collision between two delinquent ships. (2) The passage, which for the reason I have already given could only be regarded as a dictum so far as the rights of third parties are concerned, does not purport to lay down that there was any rule or practice of the Admiralty Court to the effect contended for by the appellants. It only purports to explain the reasoning by which the learned judge considers the Admiralty Court must have arrived at the rule or practice which existed in the limited case before him.

Such a statement, though entitled to all respect, does not rise above the status of a dictum, and does not justify the contention that this suggested explanation of an existing rule was itself in all its breadth an existing rule at that date. Indeed, the learned judge guards himself by the introduction of the word "generally" in his statement of the practice of the Admiralty Court with regard to division of liability. The cases that have been decided since the Judicature Act show no indication of an extension of the rule as it prevailed before that Act, which would make it affect third parties. The appellants, therefore, are asking the court for the first time to introduce a rule of law conflicting with the rules of the common law as amended by sect. 25 of the Judicature Act. To my mind they have shown no justification for our so doing, or indeed, any jurisdiction so to do.

Accordingly, I have come to the following conclusions: I find that prior to 1873 there was a clear rule and practice in the Admiralty Court relative to apportionment of the damages in actions arising out of the collision of two ships where both are to blame, but none applying to any other cases. I find a statutory enactment preserving the Admiralty rules in the above case, but in none other, and directing that they should be observed in all courts. It is not competent for the Admiralty Court since the Judicature Act to introduce, and it has not introduced, any new rules of law at variance with the rules of law obtainable in other branches of the Supreme Court. It follows, therefore, that the plaintiffs are entitled to recover their full damages from the defendants in this case, and that the judgment appealed against was correct, and that this appeal must be dismissed with costs.

This is my judgment in *The Seacombe.*

In this case the owners of the barge *Dolly* and her master and crew are suing for their lost effects, and the owners of her cargo and freight sue the owners of the steamship *Seacombe* in respect of the sinking of the barge by collision with the *Seacombe* in the river Mersey in January last. The *Dolly* was a flat without any means of propulsion of her own, carrying two hands and laden with about 100 tons of maize, and at the time of the accident it was being towed by the tug *J. M. Stubbs* from the Huskisson Dock to Birkenhead. The tug was necessarily in sole control of the navigation The collision took place about eight o'clock in the morning. The *Seacombe*, which was a large ferry steamer, had just left the Seacombe landing stage on the Birkenhead side on her way across. There is no dispute that when the vessels first saw one another they were about 400 yards off, and the tug had the *Seacombe* about four points on its starboard bow. Under these circumstances the respective duties of the two ships are clear. They were on crossing courses, and therefore it was the duty of the tug to keep out of the way, and for the *Seacombe* to keep her course and speed. Unquestionably the master of that tug did not do his duty in this respect. His evidence on the point is most remarkable. He insisted that it was the duty of the *Seacombe* to keep out of his way, and deposed that he kept on at full speed. The learned judge in the court below accordingly found that the tug was to blame, and this decision of fact was not contested before us. No evidence was called on behalf of the *Seacombe*, but in the preliminary act of the defendants it was stated that when the barge was sighted the engines of the *Seacombe* were slowed and her helm starboarded, which was in violation of her duty, which was to keep her course and speed; and the allegations in the statement of defence were to a like effect. At the conclusion of the case the learned judge refused to act on the statements in the preliminary act, treating them as being nothing more than statements put before the court as in pleadings, which could not in the absence of consent be treated as accurate. Accordingly, seeing that the evidence of the plaintiffs' witnesses did not support the starboarding of the *Seacombe*, he held that it was not to blame. In my opinion the learned judge took a wrong view of the nature and status of the statements in the preliminary act. They are not mere pleading allegations. They are statements of fact made under such circumstances that they rank as formal admissions of fact, binding the parties making them, perhaps, as strongly as any admissions of fact can do. Admission of fact, as such, does not constitute an estoppel. It may be shown that it was made under a mistake, and the court may be satisfied that such was the case. But it is evidence against the party making it, its strength varying according to the conditions under which it is made. An admission, under circumstances which necessitate that it must have been made after full consideration, has an eventual value far higher than a casual admission made without any opportunity of such reflection or verification. The statements of fact in a pre-

liminary act are statements which must be presumed to be made after the most careful examination and consideration. To my mind they carry such weight, from the nature of a preliminary act and from the circumstances under which it is made, that I should doubt whether otherwise than under the most special circumstances, and with the special leave of the court, a party would be allowed to depart from the admissions in his preliminary act, at all events as far as evidence-in-chief in concerned. The judge was therefore, in my opinion, wrong in refusing to take the statements in the defendants' preliminary act into consideration in arriving at his decision. On hearing of the appeal, plaintiffs' counsel asked leave to call the master of the *Seacombe* as his own witness, and under the circumstances permission was granted. His evidence left no doubt in my mind that the statement in the preliminary act was correct, and that the *Seacombe* starboarded and did not keep her course and speed as it was her duty to do. I therefore am of opinion that the *Seacombe* was also to blame for the collision. No one suggests that the barge did anything which contributed to the collision, or was itself to blame in any way. Hence the case is one in which a barge which is being towed by a tug which has complete control of the navigation suffers collision from a third vessel by the joint negligence of the tug and the third vessel. It is thus identical in all respects with the case of *The Devonshire*, on which we have just given our decision. I am of opinion, therefore, that the plaintiffs are entitled to recover from the defendants the whole of their respective damages, with costs of action, and that this appeal must be allowed, with costs.

Buckley, L.J.—The dumb barge *Leslie* was in tow of the tug *St. Winifred*. The *Leslie* and the steamship *Devonshire* came into collision. The *St. Winifred* and the *Devonshire* were both to blame. The *Leslie*, in a cause of collision brought by her against the *Devonshire*, to which the *St. Winifred* is not a party, has recovered judgment against the *Devonshire* for the whole of her damage. The learned President has not in so many words said that, but from his judgment it necessarily follows that he held the *Leslie* not to blame. The appellants say that the Admiralty rule of division of loss applies, and that the *Leslie*, although innocent, can recover against the *Devonshire* only half her loss. We have to determine whether this contention is right.

The *Leslie* was a tow. For some purposes tug and tow are, by intendment of law, regarded as one ship. The judgment under appeal has of course, not treated them as one. If they were one, the *Leslie* would have been to blame, and could not have recovered more than half. The first question is whether, for the present purpose, the *St. Winifred*, which was to blame, and the *Leslie*, which was not, are to be treated as one ship. As matter of fact, tug and tow are two separate floating bodies. Each may be, and generally is, furnished with separate means of propulsion. Each may be, and generally is, furnished with separate means of steering. The tow may be a steamship or a sailing vessel, and she may, and sometimes does, use her own means of propulsion to assist the tug in their joint voyage. The tow can, by her helm, command, within limits, her direction of motion. She does, in fact, owe the maritime duty towards other vessels of using her helm and, under circumstances, her steam or other means of propulsion or control, so as to avoid collision. She is not, like cargo, a passive spectator of the manœuvres. She owes a duty to play a part in them, and is to blame if she plays a wrong part. In this I am not speaking of the responsibility of the tow for the conduct of the tug, but of her responsibility for her own conduct. Upon the principle which often applies, that the tug is the servant of the tow, the latter may be to blame for the acts of the former. Of this *The Ticonderoga* (*sup.*), where the collision was between a third vessel and the tow, is one example, and *The Niobe* (*sup.*), where the collision was between a third vessel and a tug, is another. *The Niobe* came up again (1891) A. C. 401) in an action against the underwriters upon the policy of insurance. In that instance the question of the meaning of the policy was, of course, involved. But the tow is not necessarily liable. If the governing as well as the motive power is wholly with the tug, the tow may not be liable in damages for the collision, even where the tow has herself been in collision with the third vessel: (see *The American and The Syria; The W. H. No.* 1, *sup.*). The last-mentioned case is instructive upon the existence in the tow, as distinguished from the tug, of duties of manœuvring by the use of her own helm. *The Quickstep* (15 P. D. 196) was again a collision between tug and third vessel. The County Court judge found the tug only to blame, but held tug and tow both liable. On appeal by the tug, and on appeal by the tow, the third vessel and the tug were pronounced both to blame, and the tow was held exempt from liability for the negligence of the tug. From these decisions it results, unless we are prepared to differ from them, that tug and tow are not necessarily one vessel, and that even a tow in collision may successfully say that not she, but the tug, was to blame. The proposition is easier when not the tow, but the tug, has been in collision, and the fault is with the tug. Of this *The Mary* (*sup*) is an instance. The tow was there not liable, because she was in charge of a compulsory pilot. The collision was between the tug and a third vessel. The tug was found alone to blame. It was held that she was not exonerated by the fact that the tow was in charge of a compulsory pilot, and judgment was given for the third vessel against the tug. If the collision had been between tow and third ship by the fault of those on board the tow, there is no difficulty. The tow is liable to the third ship for damage caused by those on board the tow.

From these considerations it is, I think, clear that if there are three floating bodies, tug, tow, and third ship, there are *primâ facie* three ships, and not two ships, for the purpose of investigating liability for collision between any two of the three, and that it is only under circumstances of which there are many illustrations in the books, that two out of the three—viz., tug and tow—are to be regarded as one vessel, so as to reduce the number of vessels constructively for purposes of liability from three to two. The appellants are not in a position to argue, and have not argued that, as a matter of fact, the tow was here to blame, for the judge has found her not to blame, and they have not sought to review his finding of

fact. They have sought to argue that, as matter of law, she is responsible for the wrongful acts of the tug. But this, I think, is not open to them. No part of the evidence has been brought before us. We have been invited to deal with the case upon the judgment alone, and upon the points of law involved in the judgment. It follows from what I have said that a tow is not, in my opinion, liable in law for the tug, merely because of the relation of tug and tow. Whether she is liable or not depends upon facts, and by finding the tow free from blame the learned judge must have found those relevant facts in favour of the tow.

The result thus far is that the right to damages is here to be considered upon the footing that there are three ships, and that the innocent ship has been injured by one of the two ships to blame: A innocent; B and C to blame. Collision between A and C. Is A entitled to recover from C whole or half damages? The origin and history of the Admiralty rule as to division of loss, as laid down in *Hay* v. *Le Neve* (2 Shaw's Scottish Appeals, 396) and subsequent cases, might form the subject of a treatise. If the case be one of collision between two ships, both to blame, the rule that each shall pay half the loss of the other may rest upon either of one of two principles, if it rests upon any principle at all: The one is that neither wrongdoer shall be rendered liable for more than his share of the injury. This, if adopted, would logically lead to proportional incidence of loss, a result which has prevailed in the maritime codes of other countries, but not of this country. The Admiralty Court has abandoned proportion and adopted equality. The rule is that, as both are to blame, a rough division shall prevail, and, as each caused some of the injury, each shall bear half the loss. It does not require much argument to show that in such a rule there is not much principle. The principle (if it be one) is a principle which looks at the misfortune from the wrongdoer's point of view and holds him free from liability, except to such fraction as is to be attributed to him, and arbitrarily fixes that fraction at one half. The other principle is that in a loss arising from a common fault equality of participation is justice. Mr. Leslie Scott urged the former strongly upon us, and said truly that this principle, if adopted as of application, not only to collision between two ships, both to blame, but also to all cases of collision, will furnish an explanation for the decisions that cargo (although innocent) is within the rule of division of loss—*The Milan* (*sup.*) —and that where one of two ships is in charge of a compulsory pilot she can recover but half damages, although not liable herself in damages at all: (*The Hector*, *sup.*). There are, I think, grounds for saying that it was upon such a principle that *The Milan* was decided. The judgment emphatically repudiates identification of cargo with ship, and proceeds, I think, upon that which is found in the concluding words of the judgment: "You, the innocent owners of cargo proceeding against one only of two delinquent ships, shall recover only half your damage, because we can affix to the vessel proceeded against only half the blame." But, on the other hand, if this be the principle which the Court of Admiralty has regarded as right, then it seems to me to follow that in the Admiralty Court a plaintiff who claims damages for personal injury not resulting in death, and an innocent third ship which suffers injury from the wrongful acts of two other ships, which are to blame, ought each to recover from either of the two wrong-doers but half his damages. In the former case, however, the plaintiff recovers full damages, although we have not been referred to any reported case in which his right so to do has been considered and affirmed, and in the latter there is express authority in *The Avon and Thomas Joliffe* (*sup.*) that at the suit of the innocent third ship each of the two ships to blame is liable for the whole. The last-mentioned case is open to review in this court, but I cannot see that the present appellant can succeed, and that case remain good law. It is true that the two ships to blame were tug and tow, but nothing turned upon that fact. Butt, J. decided the case upon the footing that the Admiralty rule as to apportionment (I prefer to say division) of damage where both vessels are to blame did not apply. The fact that where the injury results in death damages under Lord Campbell's Act are recoverable in full (*The Bernina*, *sup.*) does not assist the matter one way or the other, for the Court of Admiralty had no jurisdiction to entertain such an action, and the Judicature Act 1873, s. 25 (9), did not apply.

The second supposed principle, that in a loss arising from a common fault equality of participation is justice, is one which furnishes an explanation applicable in the case of two ships both to blame, but fails to explain any other case. This origin of the rule seems to be traceable in Sir William Scott's words in *The Lord Melville* (2 Shaw's Scottish Appeals, 402): "The ancient rule of the Admiralty was that it should be considered a common loss to which they (the two parties) were jointly (not justly) liable"; and in *The Woodroop Sims* (2 Dods, 85), "the loss must be apportioned between them as having been occasioned by the fault of both of them." Mr. Marsden says that "The principle of the rule is said to be equality in participation in a loss arising from a common fault." It is obvious, however, that this principle by its very terms is applicable only as between parties who are guilty of a common fault. To an innocent party it has no application. It cannot be that the Court of Admiralty applied to the case of an innocent cargo owner a principle which for its application required that he should be regarded as party to a common fault, unless it attributed to him a fault by identification. Identification, however, is expressly disclaimed in *The Milan.* The principle fails altogether to explain the case either of cargo or of compulsory pilotage, and contains within it nothing which can govern the case of a person who has been no party to a common fault.

Neither of these suggested principles being capable of satisfying a critical investigation, I should, even if the case with which I had to deal fell within the Judicature Act 1873, s. 25 (9), have hesitated to say that neither of them constituted a "rule hitherto in force in the Court of Admiralty." I agree that those words import not merely concrete cases, in which a particular course has been taken—*e.g.*, the particular case of cargo—but import a rule of which concrete cases furnish an illustration, and if I had to deal with a case within those words, I should look for a principle, and not confine myself to

looking for concrete cases. But it seems to me that sect. 25 (9) does not apply here. It is confined to the case of "collision between two ships, if both ships shall be found to have been in fault." The present is the case of a collision between two ships, of which only one has been found to be in fault. There was a third ship, which was also in fault, but she was not in collision. I am therefore left unfettered by the Judicature Act to say what is the liability of the *Devonshire* to the *Leslie*, when the *Leslie* was not to blame.

First, in principle: If A had suffered by the combined effect of wrongs done by B and C the case may differ according as B and C concur in doing one and the same wrongful act (*e.g.*, concur in assaulting A), or as B and C each do separate acts, with the result that from the combined effect of their separate negligent or unlawful acts A suffers injury (*e.g.*, where one omnibus negligently sets A down in the middle of the road, and another negligently runs over him). The present case is one of the latter kind. As between A, on the one hand, and between B and C on the other, why should not each be liable for the whole, although as between B and C, *inter se*, it may be just that each should only bear his share. This, which would be theoretical justice as between all parties, has at common law been defeated by the common-law rule forbidding contribution between tort feasors. But the common law did not, by reason of that fact, refrain from giving A that to which he, as an innocent party, was entitled. On principle it seems to me that A is entitled to recover the whole from either one, and is not to go unsatisfied because one of the tort feasors may be insolvent; or that at any rate, he is entitled to the whole from that one which did him the injury by in fact wrongfully coming into collision with him. At common law A would be entitled to recover the whole. Is there any tide of authority to show that he has not the same right in the Court of Admiralty? There are these authorities to show that he has: *The Avon and The Thomas Joliffe, The Englishman and The Australia* and *The Frankland* (*sup.*). We have not been referred to any authority to show that he has not. In this state of the authorities I feel myself at liberty to adopt the rule which seems to me to be right, and to hold that the innocent *Leslie* is entitled, as against the blameworthy *Devonshire*, which wrongfully collided with her, to recover, not half, but the whole of her damage; and I so hold. The result is that the appeal should, in my judgment, be dismissed, with costs.

This is my judgment in *The Seacombe*. The *Seacombe*, in my opinion, was to blame. Her duty was to keep her course and speed. By their preliminary act her owners stated that, after the *Dolly* was first seen, the engines of the *Seacombe* were slowed, and her helm starboarded. By par. 3 of their defence they stated that, having observed the tug and tow at a distance of about 500 yards, the *Seacombe* starboarded her helm, slowed her engines, and then stopped them. The owners of the *Dolly* called the master of the *Seacombe*, who stated that his order was "starboard, we will work astern of the flat," and that by starboarding he was going to get out of the way of the flat, and in cross-examination that he did not think it necessary to give that order so as to avoid a collision, and that he starboarded before the tug altered her course; and in re-examination that, inasmuch as the tug and tow showed no signs of going astern of him, he thought he would go astern of her, and, further, that he blew no helm signal. The *Seacombe* has no answer to these admissions on the pleadings and this evidence of her own master, except that some evidence called by the *Dolly* was to the effect that those on board the *Dolly* did not see the starboarding by the *Seacombe*. It is, in my opinion, really impossible to contend that upon these pleadings and this evidence the *Seacombe* was not to blame. This being so and the tug being also to blame, it remains to determine what are the rights of the owners of the tow, and the owners of the cargo and effects on board the tow, when no blame is attached to the tow as distinguished from the tug. I have discussed this point at length in my judgment in *The Devonshire*. It results that the appellant is, I think, entitled to succeed, and that judgment ought to be entered for the whole of their damages, with the costs of the action and of this appeal.

Solicitors for the appellants the *Devonshire*, *Collins, Robinson*, and *Co.*, Liverpool.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Nov. 1 *and* 6, 1911.

(Before Lord Coleridge, J.)

Jenkins v. Great Central Railway Company. (*a*)

Railway—Steamer—Bill of lading—Carriage wholly by sea—Exemption of liability for negligence—Validity—Railway and Canal Traffic Act 1854 (17 & 18 *Vict.* c. 31), s. 7—*Railways Clauses Act* 1863 (26 & 27 *Vict.* c. 92), ss. 30, 31.

By sect. 31 *of the Railways Clauses Act* 1863 *the provisions of the Railway and Canal Traffic Act* 1854 *are extended to the steam vessels of the railway company, and to the traffic carried on thereby.*

Therefore a railway company, whose private Act incorporates the Railways Clauses Act 1863, *is not protected by a condition in a bill of lading in respect of goods carried by them by sea only that they shall not be liable for the negligence of the master or mariners navigating their steam vessels, as such a condition is not reasonable.*

Action.

The plaintiffs, who are merchants at Belfast, dispatched goods by sea to Grimsby for carriage thence by sea by the defendants, by the steamship *Blackburn*, to consignees at Antwerp. Messrs. Sutcliffe and Son signed the bill of lading at Grimsby. It was contended by the plaintiffs that they signed the bill of lading as agents for the defendants, not as agents for the plaintiffs.

(*a*) Reported by W. de B. Herbert, Esq., Barrister-at-Law.

The bill of lading contained the following exception:

Any act, neglect, default, or error in judgment whatsoever of the pilot, master, or mariners in navigating the ship, the owners of the ship being in no way liable for any of the consequences of the causes above excepted.

The steamship *Blackburn* sailed from Grimsby on the 7th Dec., and that night foundered owing to a collision for which both the *Blackburn* and the ship that collided with her were found to blame, and the goods were lost.

The question was whether the defendants were liable for the loss.

By their private Act—the Manchester, Sheffield, and Lincolnshire Railway Act 1864 (27 & 28 Vict. c. ccexx.)—the defendants were authorised to work steam and other vessels between Great Grimsby and (*inter alia*) Antwerp. Part 4 of the Railways Clauses Act 1863 was incorporated in that private Act.

By sect. 30 of the Railways Clauses Act 1863:

Where a railway company incorporated either before or after the passing of this Act is authorised (by a special Act hereafter passed and incorporating this part of this Act) to build, or buy, or hire, and to use, maintain, and work, or to enter into arrangements for using, maintaining, or working, steam vessels, then and in every such case tolls shall be at all times charged to all persons equally and after the same rate in respect of passengers conveyed in a like vessel passing between the same places under like circumstances; and no reduction or advance in the tolls shall be made in favour of or against any person using the steam vessels in consequence of his having travelled or being about to travel on the whole or any part of the company's railway, or not having travelled or not being about to travel on any part thereof, or in favour of or against any person using the railway in consequence of his having used or being about to use or his not having used or not being about to use the steam vessels, and where an aggregate sum is charged by the company for conveyance of a passenger by a steam vessel and on the railway, the ticket shall have the amount of toll charged for conveyance by the steam vessel distinguished from the amount charged for conveyance on the railway.

And by sect. 31:

The provisions of the Railway and Canal Traffic Act 1854, so far as the same are applicable, shall extend to the steam vessels, and to the traffic carried on thereby.

By sect. 7 of the Railway and Canal Traffic Act 1854:

Every such company as aforesaid shall be liable for the loss of or for any injury done to any horses, cattle, or other animals, or to any articles, goods, or things in the receiving, forwarding, or delivering thereof occasioned by the neglect or default of such company or its servants, notwithstanding any notice, condition, or declaration made and given by such company contrary thereto, or in anywise limiting such liability, every such notice, condition, or declaration being hereby declared to be null and void: Provided always, that nothing herein contained shall be construed to prevent the said companies from making such conditions with respect to the receiving, forwarding, and delivering of any of the said animals, articles, goods, or things as shall be adjudged by the court or judge before whom any question relating thereto shall be tried, to be just and reasonable: Provided always, that no greater damages shall be recovered for the loss of or for any injury done to any of such animals beyond the sums hereinafter mentioned—(that is to say) for any horse, fifty pounds; for any neat cattle, per head, fifteen pounds; for any sheep or pigs, per head, two pounds; unless the person sending or delivering the same to such company shall, at the time of such delivery, have declared them to be respectively of higher value than as above mentioned, in which case it shall be lawful for such company to demand and receive by way of compensation for the increased risk and care thereby occasioned a reasonable percentage upon the excess of the value so declared above the respective sums so limited as aforesaid, and which shall be paid in addition to the ordinary rate of charge, and such percentage or increased rate of charge shall be notified in the manner prescribed in the statute eleventh George Fourth and first William Fourth, chapter sixty-eight, and shall be binding upon such company in the manner herein mentioned: Provided also, that the proof of the value of such animals articles, goods, and things, and the amount of the injury done thereto, shall in all cases lie upon the person claiming compensation for such loss or injury: Provided also, that no special contract between such company and any other parties respecting the receiving, forwarding, or delivering of any animals, articles, goods, or things as aforesaid shall be binding upon or affect any such party unless the same be signed by him or by the person delivering such animals, articles, goods, or things respectively for carriage: Provided also, that nothing herein contained shall alter or affect the rights, privileges, or liabilities of any such company under the said Act of the eleventh George Fourth and first William Fourth, chapter sixty-eight, with respect to articles of the descriptions mentioned in the said Act.

Radcliffe, K.C. and *H. W. Liversidge* for the plaintiffs.

Sankey, K.C. and *H. M. Robertson* for the defendants.

The following cases were referred to in the course of the arguments:

Riggall v. *Great Central Railway*, 11 Asp. Mar. Law Cas. 303 (1909); 14 Com. Cas. 259;

Doolan v. *Midland Railway Company*, 37 L. T. Rep. 317; 2 App. Cas. 792;

The Stella, 9 Asp. Mar. Law Cas. 66; 82 L. T. Rep. 390; (1900) P. 162.

Nov. 6, 1911.—Lord COLERIDGE, J. read the following written judgment:—[His Lordship, after stating the facts, continued:] The first point is whether sect. 7 of the Railway and Canal Traffic Act 1854 applies, and whether the provisions in sect. 7 are applicable to the case.

It is said by the defendants that this section does not apply, and for this reason: The Railway and Canal Traffic Act 1854 only applied to land carriage and canal navigation, and this is neither.

Historically, dealing with this point, I come to the Railways Clauses Act of 1863, of which Part 4 applies to steam vessels, and sect. 31 enacts that "the provisions of the Railway and Canal Traffic Act 1854, so far as the same are applicable, shall extend to the steam vessels, and to the traffic carried on thereby." That, therefore, makes the provisions of the Railway and Canal Traffic Act 1854 contained in sect. 7 applicable to the Railways Clauses Act 1863, which deals in Part 4 with steam vessels. Then by a private Act in 1864, the year after the Railways Clauses Act came into operation, the defendants, who were then the Manchester, Sheffield, and Lincolnshire Railway, by sect. 2 incorporated Part 4 of the Railways Clauses Act 1863 with the private Act, and it was made to form part of the private Act. If the matter rested there, no dispute could arise as to whether

or not the provisions of sect. 7 of the Railway and Canal Traffic Act 1854 were applicable to steam vessels, for by sect. 31 of the Act of 1863 those provisions were extended to that nature of carriage. The Act of 1863, however, was a Clauses Act not applicable generally, but only to such persons as chose to incorporate it, and thereby gain the benefit of its provisions.

Next in order of date came the Regulation of Railways Act 1868, which was a public Act of general application to railways, and by sect. 16 of that Act it was enacted that "the provisions of the Railway and Canal Traffic Act 1854, so far as the same are applicable, shall extend to the steam vessels, and to the traffic carried on thereby." It therefore took the clause above quoted out of the Act of 1863 and embodied it in the Act of 1868. The identical clause to which I am referring then remained in both Acts.

I come to the next point. After 1868 came the Railway and Canal Traffic Act of 1888, and that repealed the above provision—namely, that portion of sect. 16 which I have quoted in the Act of 1868. What is the effect of that repeal? The identical clause remained at one time in both Acts; it remained in the private Act and it remained in the Act of 1868; it remained in the Act of 1863, applicable to those companies which incorporated that Act in their private Act, and it remained in the Act of 1868, applicable also to those which did not. Is the effect of this course of legislation to strike out of the defendants' private Act the incorporated clause from the Railways Clauses Act of 1863? I have had no authority quoted to me to show that the one is merged in or absorbed by the other. No authority has been quoted to me for the proposition that where a clause from a public Act has been incorporated with and forms part of a private Act, that part of the private Act is repealed by a subsequent repeal of the public Act.

A local and personal Act may incorporate into its clauses the provisions of a former Act although that former Act has been repealed (*Boden* v. *Smith*, 18 L. J. 121, C. P.), and the repeal of a statute does not repeal such portions of the statute as have been incorporated into another statute: (*Clarke* v. *Bradlaugh*, 46 L. T. Rep. 49; 8 Q. B. Div. 63). Nor in general is a local Act of Parliament, in the absence of any indication of intention on the part of the Legislature, repealed or superseded by a general Act subsequently passed: (*Fitzgerald* v. *Champneys*, 5 L. T. Rep. 233; 30 L. J. 777, Ch).

Here the Act of 1888 expressly repeals only the portion of sect. 16 of the Act of 1868 which was taken from sect. 31 of the Act of 1863. In the first place, sect. 31 of the Act of 1863 is not expressly repealed by the Act of 1888. It can only be said to be impliedly repealed because similar words in the Act of 1868 have been repealed. There is, therefore, no indication of intention on the part of the Legislature to repeal sect. 31 of the Act of 1863. It cannot be said that the reason is because sect. 31 of the Act of 1863 was already repealed by the Act of 1868. You do not repeal an Act by putting words from that Act into a later Act. I have already said that I can find no authority for the doctrine of merger or absorption, and under such circumstances I think the legal effect is to leave the defendants bound by the private Act and their incorporation into it of the Act of 1863 so far as it applies to this case.

Then it follows that the Railway and Canal Traffic Act 1854 is still in force, with the extension of sect. 7 of that Act to steam vessels under Part 4 of the Act of 1863. Does that include sea carriage *simpliciter*, or only carriage by sea where carriage by land forms one part of a continuous transit? I can see no valid ground in the statute for such a limited interpretation. Sect. 30 of the Act of 1863 contemplates carriage from port to port, and I can see no valid reason for putting so absurd a construction on the statute as to say it applies where the whole carriage except an infinitesimal portion is by sea, yet that infinitesimal portion of the carriage by land is necessary to make the Act apply.

On these grounds I must hold that sect. 7 of the Act of 1854, as enlarged by the Act of 1863, applies to carriage by sea only.

If so, are the conditions of the contract of carriage reasonable? It was not seriously contended that they were. Without giving an alternative rate, the defendants exempted themselves from all liability for damage due to their own negligence, and I do not think the conditions in the bill of lading binding on the plaintiffs. Whether Sutcliffes signed the bill of lading as agents for the plaintiffs or for the defendants, or for both, seems to me to be in this respect immaterial, but I have arrived at the conclusion that they were agents for the defendants at any rate. They so describe themselves on their note-paper, and they write on the 9th Jan. 1911 saying, "We say we do make the statement 'the ship is not responsible' as authorised agents of the railway company," and the plaintiffs do not pay any commission for their services to Messrs. Sutcliffe as forwarding agents.

Judgment for the plaintiffs.

Solicitors: *Leader, Plunkett,* and *Leader; D. H. Davies.*

DAMPSKEBSSELSKABET SKJOLDBORG AND C. K. HANSEN *v.* CHARLES CALDER AND CO. (a)

Charter-party—Cargo when signed for to be at ship's risk until shipped on board—"In all other respects the act of God," &c., excepted—Loss before cargo shipped on board—Liability of shipowner.

A charter-party contained the following clause: "The cargo to be ordered by the captain as required, and when signed for to be at ship's risk until shipped on board . . . but in all other respects the act of God, perils of the sea . . . are always mutually excepted." The cargo, consisting of sleepers, was brought alongside the vessel in rafts and a number of sleepers were lost after being signed for on behalf of the shipowner through certain excepted perils before they were shipped on board.

Held, that "at ship's risk" meant that the sleepers were at the absolute risk of the shipowner during the period between their being signed for and

(a) Reported by LEONARD C. THOMAS, Esq., Barrister-at-Law.

being shipped on board, as the excepted perils did not apply to that period.

Commercial Court.

Action tried by Bray, J. sitting without a jury.

Action brought by the plaintiffs, the owners of the steamship *Skjoldborg*, to recover 22*l.* 3*s.* 9*d.*, balance of freight, from the defendants as receivers of a cargo of wood goods carried in the steamship *Skjoldborg* under two bills of lading dated the 31st Dec. 1910 and the 2nd Jan. 1911, which incorporated the terms of a charter-party dated the 31st Dec. 1911, made between the plaintiffs and the defendants, of which bills of lading the defendants were indorsees and to whom the property in the goods passed by such indorsement. In the alternative the plaintiffs claimed to recover the sum of 22*l.* 3*s.* 9*d.* as freight payable by the defendants under the charter-party.

By way of defence and counter-claim the defendants alleged that the plaintiffs short delivered fifty-two blocks and thirty-eight sleepers of the value of 22*l.* 3*s.* 9*d.*

The charter-party provided (*inter alia*) that the *Skjoldborg* should, with all convenient speed, proceed to Memel, and there load

A full and complete cargo of square fir sleeper blocks . . . and being so loaded shall therewith proceed to King's Dock, Swansea, and deliver the same in the customary manner. . . . The cargo to be ordered by captain as required, and when signed for to be at ship's risk until shipped on board, and to be delivered to the ship free alongside, as customary, and taken from alongside the ship at merchants risk and expense, but in all other respects, the act of God, perils of the sea, loss or damage from fire on board, in hulk, or craft, or on shore, damage howsoever or by whomsoever caused, barratry of the master and crew, enemies, pirates and thieves, arrests and restraints of princes, rulers and people, collisions, stranding, and accidents of navigation, strikes and (or) combinations of workmen, whether partial or general, are always mutually excepted, even when occasioned by negligence, default, or error in judgment of the pilot, master, mariners, or other servants of the shipowners, or of the charterers, or their stevedores or servants. . . . The freight to be paid in cash, on unloading and right delivery of cargo . . . less value of any goods lost or damaged. The bills of lading shall be conclusive evidence against the owners of the quantity of cargo shipped on board as stated therein; and in case of short delivery the owners shall produce the log book and an extended protest, showing the cause of such short delivery, before the balance of freight becomes due or payable.

The following facts were admitted:—

1. On the arrival of the vessel at the loading port, the sleepers mentioned in the bill of lading were brought alongside of her in rafts. The rafts were composed of 1000 to 2000 pieces and were secured by ropes.

2. Immediately after the sleepers were brought alongside, and before the loss hereinafter mentioned occurred, the sleepers were signed for on behalf of the shipowners, mate's receipts being given for them.

3. After the sleepers were brought alongside they were handled exclusively by stevedores employed by the shipowners' agent. The said stevedores were skilled and experienced persons, being well accustomed to the handling of wood cargoes.

4. At the time of loading the sleepers the weather was snowing and very stormy. There was a strong wind and a strong current running with ice drifts. In order to load the sleepers the lashings of the rafts had to be cast off, and in consequence of the wind and current some of the sleepers floated away and could not be recovered, and the remainder of the sleepers that were lost disappeared and could not be recovered.

5. The value of the sleepers that were lost amounted to 22*l.* 3*s.* 9*d.*, and this sum had been deducted by the defendants from the amount of the freight paid to the plaintiffs.

It was stated in evidence by the master of the *Skjoldborg* that some of the sleepers sank as soon as the rafts were unlashed, being too heavy to float; that other sleepers slipped out of the slings by which they were being hoisted on to the ship owing to their being very slimy from lying long in the water and from their being covered with ice and snow. Some of these sleepers came down with so much force into the water that they stuck in the mud at the bottom, and other sleepers were carried away by the current and lost. The master was unable to say how many sleepers were lost in respect of each of those classes.

Bray, J. held that the plaintiffs had not proved that any of the sleepers were lost because they were too heavy to float. The master signed the bills of lading under protest for sleepers lost during the loading.

Bailhache, K.C. and *Jowitt* for the defendants.—During the period between the signing for the goods and being shipped on board they are at the absolute risk of the ship. Having regard to the fact that the words "but in all other respects" come before the excepted perils, the exceptions can only apply to the voyage after the goods are shipped. The expression "at ship's risk" does not mean at the absolute risk of the shipowner, but at such risk as is attachable when the goods are on board:

Nottebohn v *Richter*, 18 Q. B. Div. 63.

In *Salvesen* v. *Gabriel* which is unreported except in the *Timber Trades Journal*, June 22, 1901, Mathew, J. held on the construction of a similar charter-party that the ship was responsible for goods lost during the loading and that none of the exceptions applied.

Maurice Hill, K.C. and *Dawson Miller* for the plaintiffs.—The risks for which the shipowner would be liable if there were no excepted perils is covered by the expression "at ship's risk." The words "but in all other respects" which come before the excepted perils do not prevent the common law exception for "act of God" from applying. The sleepers were lost by natural causes and therefore come within the common law exception of "act of God." In *Nugent* v. *Smith* (3 Asp. Mar. Law Cas. 87, 198 (1876); 34 L. T. Rep. 827; 1 C. P. Div. 423) James, L.J. said: "The 'act of God' is a mere short way of expressing this proposition. A common carrier is not liable for any accident as to which he can show that it is due to natural causes directly and exclusively, without human intervention, and that it could not be prevented by any amount of human foresight and pains and care reasonably to be expected from him."

Bray, J.—In this case the plaintiffs, in my opinion, are not entitled to recover. The first

thing I have to do is to construe this charter-party, and I do not find any difficulty in doing so. It is quite true that but for the words "but in all other respects the act of God, &c.," I might have to construe the words "at ship's risk" differently from what I propose to do. The charter-party provides that the cargo when signed for is "to be at ship's risk" until shipped; those words are certainly quite capable of meaning that the ship is responsible for anything which may happen during that period. The words, however, do not necessarily bear that meaning, so that I must look at the rest of the clause in order to see whether in fact they do bear that meaning. But when I find that the clause goes on to provide "but in all other respects the act of God, the perils of the seas . . . are always mutually excepted," then I am obliged to come to the conclusion that the earlier part of the clause does mean that the goods, when signed for, are "to be at ship's risk" until shipped in the sense that the ship is to be responsible for anything which may happen during the period between the time when the goods are signed for and when they are shipped. That clause, therefore, deals with perils of the seas and any such act of God, if there was any such act, as occurred here. The loss was not caused by an extraordinary storm; there was nothing more than an ordinary storm coupled with frost which, I expect, always happens at Memel at this period of the year. I can quite understand that the loading of the sleepers is a very difficult matter, and that is why the parties when they entered into the agreement provided that the loading should be undertaken by the ship, and that the ship was to be responsible for anything that might happen during the loading. The shipowner could protect himself if the weather was too rough or too dangerous to continue loading by the captain refusing to proceed with the loading, but, of course, in that case the shipowner runs the risk of his ship being delayed, and, therefore, one can quite well understand why it pays him to run a certain risk. My interpretation of the words "at ship's risk" is that the shipowner is to be responsible for everything that happens during the loading; but that they do not make him responsible for a loss which is really the fault of the shipper, and, therefore, if I could see that the plaintiffs had proved that the sleepers were lost because they would not float, I should say that to that extent the ship was not responsible, but, looking at the evidence given on behalf of the plaintiffs, I am unable to come to that conclusion. There must therefore be judgment for the defendants.

Dec. 12, 13, *and* 19, 1911.

(Before BRAY, J.)

HALL *v.* HAYMAN. (a)

Marine insurance—Constructive total loss—Cost of repair—Value of wreck—Marine Insurance Act 1906 (6 *Edw.* 7, *c.* 41), *ss.* 60, 91 (2).

By reason of the provision contained in sub-sect. 2 (*ii.*) *of sect.* 60 *of the Marine Insurance Act* 1906, *there is a constructive total loss of a ship where she is so damaged by a peril insured against that the cost of repairing the damage would exceed the value of the ship when repaired.*

The effect of the section is to alter the law as laid down by the House of Lords in Macbeth v. Maritime Insurance Company Limited (11 *Asp. Mar. Law Cas.* 52; 98 *L. T. Rep.* 594; (1908) *A. C.* 144).

For the purpose of determining whether a ship can be treated as a constructive total loss within the meaning of the above Act, the value of the wreck cannot be taken into consideration, and the assured is not entitled to add the value of the wreck to the cost of repairs.

COMMERCIAL COURT.

Action tried by Bray, J. sitting without a jury.

The case set up in the pleadings by the plaintiffs was that by a policy of marine insurance dated the 30th June 1908 Mr. James Holliday, the owner of the *King Edward*, insured the vessel for fourteen months from the 23rd May 1908 against all the usual perils. The policy was for 5000*l.* upon the steamer, which was valued at 34,000 dollars, and it was underwritten by the plaintiffs for 1313*l.*

The plaintiffs reinsured themselves by a policy dated the 31st July 1908, for 1044*l.*, upon the *King Edward*, for twelve months from the 13th May 1908. This policy was expressed to be a reinsurance of the original policy, and to pay as may be paid thereon; was on a steamer valued at 34,000 dollars, and was against the risk of total or constructive total loss only.

On or about the 16th Nov. 1908 the *King Edward* was driven ashore by a gale at English Bay, Anticosti, and on the 12th March 1909 Mr. Holliday gave notice of abandonment to the plaintiffs.

On the 25th March 1909 he issued a writ against the plaintiffs, claiming for total loss under the policy. Subsequently the *King Edward* was floated by salvors employed by the Salvage Association on behalf of the plaintiffs and other underwriters, and was brought to Quebec. The ship proved to be a total constructive loss by reason of the fact that the cost of repairing her, plus the cost of salvage and other expenses, and plus the value of the unrepaired wreck, would exceed the repaired value, or, alternatively, the insured value of 34,000 dollars. The plaintiffs paid Mr. Holliday 90 per cent. of their subscriptions under the insurance policy, and also paid to the Salvage Association in respect of the expenses incurred a further sum amounting to more than 10 per cent. of the subscriptions.

The plaintiffs pleaded that in the circumstances the defendant became liable to pay to the plaintiffs a total loss on the policy taken out by them, and

(a) Reported by LEONARD C. THOMAS, Esq., Barrister-at-Law.

that they were asked to do so on the 14th Oct. 1909, but refused.

By his defence, the defendant asserted that the policy subscribed by him was against the risk of total and (or) constructive total loss only, no claim to attach thereto for salvage charges, and it provided that the insured value should be taken as the repaired value in ascertaining whether the vessel was a constructive total loss. The *King Edward* was not a constructive total loss, and the defendant denied that he became liable to the plaintiffs. The defendant further said that the *King Edward* was not a wreck, and that the value of the vessel should not be added.

In the plaintiffs' particulars it was stated that the repaired or insured value was 34,000 dollars, while the cost of repairs, salvage charges, &c., amounted to 37,733 dollars, to which they added the value of the wreck—viz., 14,000 dollars, the total being thus 51,733 dollars.

The following were the material sections of the Marine Insurance Act 1906 to which reference was made:

Sect. 60 (1). Subject to any express provision in the policy, there is a constructive total loss where the subject-matter insured is reasonably abandoned on account of its actual total loss appearing to be unavoidable, or because it could not be preserved from actual total loss without an expenditure which would exceed its value when the expenditure has been incurred. (2) In particular, there is a constructive total loss (i.) where the assured is deprived of the possession of his ship or goods by a peril insured against and (*a*) it is unlikely that he can recover the ship or goods, as the case may be, or (*b*) the cost of recovering the ship or goods, as the case may be, would exceed their value when recovered; or (ii.) in the case of damage to a ship, where she is so damaged by a peril insured against that the cost of repairing the damage would exceed the value of the ship when repaired. In estimating the cost of repairs, no deduction is to be made in respect of general average contributions to those repairs payable by other interests, but account is to be taken of the expense of future salvage operations, and of any future general average contributions to which the ship would be liable if repaired.

Sect. 91 (2). The rules of the common law, including the law merchant, save in so far as they are inconsistent with the express provisions of this Act, shall continue to apply to contracts of marine insurance.

Bailhache, K.C. and *Mackinnon* for the plaintiffs.—In determining whether there has been a constructive total loss of the vessel the value of the wreck must be added to the cost of repairs. It was decided in *Angel* v. *Merchants' Marine Insurance Company* (9 Asp. Mar. Law Cas. 406; 88 L. T. Rep. 717; (1903) 1 K. B. 811) that the value of the wreck ought not to be added to the cost of repairs, but prior to that decision it had been decided that the value of the wreck should be added to the cost of repairs:

Young v. *Turing*, (1841) 2 Man. & G. 593;
Marten v. *Sydney Lloyds*, *Times* Dec. 19, 1896;
Beaver Line v. *London and Provincial Marine Insurance Company*, (1899) 5 Com. Cas. 269;
Wild Rose Steamship Company v. *Jupe*, (1903) 19 Times L. Rep. 289.

In *Macbeth* v. *Maritime Insurance Company* (*sup.*), which arose before but was decided after the passing of the Marine Insurance Act 1906, the case of *Angel* v. *Merchants' Marine Insurance Company* (*sup.*) was overruled. It follows, therefore, that at common law the value of the wreck must be added to the cost of repairs. Sect. 60 of the Marine Insurance Act 1906 is silent on the point, and there would be no inconsistency in applying the common law rule as laid down in *Macbeth* v. *Maritime Insurance Company* (*sup.*) to marine insurance contracts. In that case Lord Collins, referring to the wreck, said that: "She is a necessary factor in the formation of the repaired ship which it is proposed to bring into being; at whose cost, it may be asked, except that of her owner, is she contributed to the new entirety which is to be formed by the process of reparation?" The prudent uninsured owner would certainly take the value of the wreck into account, and that common law rule is imported into marine insurance contracts by sect. 91 (2) of the Marine Insurance Act 1906.

Maurice Hill, K.C. and *Leck* for the defendant.—The value of the wreck ought not to be taken into account in determining whether a vessel is a constructive total loss. Prior to the Marine Insurance Act 1906, there were two tests as to whether a vessel was a constructive total loss: (1) whether a prudent insured owner would repair her, having regard to all the circumstances; and (2) whether the cost of repairs would exceed her value when repaired. These tests were distinguished by Lord Loreburn, L.C. in *Macbeth* v. *Maritime Insurance Company* (*sup.*), where he says that if it were an open matter there seemed to him ground for arguing that the latter is the sound view. The Court of Appeal in *Angel* v. *Merchants' Marine Insurance* (*sup.*) chose the test as to the cost of repairs exceeding the value of the ship when repaired, and that test is now embodied in sect. 60 of the Marine Insurance Act 1906, and it follows that the value of the wreck ought not to be taken into account. In sect. 60 (1) the word "expenditure" suggests an expenditure of money, and the value of the wreck is not an expenditure. The test laid down in sect. 60 (2) (ii.) is that there is a constructive total loss of the ship where the cost of repairing the damage would exceed her value when repaired. The clause proceeds to state what may be included in the cost of repairing the damage, and the value of the wreck is not specified. The observations of Lord Collins in *Macbeth* v. *Maritime Insurance Company* (*sup.*) proceeded on the reasoning that the test of the prudent uninsured owner and the test of the cost of repairs are really the same, and with this view Lord Loreburn, C. did not agree. As sect. 60 of the Act is clear and unambiguous, the common law as laid down in *Macbeth* v. *Maritime Insurance Company* (*sup.*) does not apply, because sect. 91 (2) provides that the common law rules only apply where they are consistent with the express provisions of the Act. Lord Herschell in *Vagliano* v. *Bank of England* (61 L. T. Rep. 419; (1891) A. C. 107, at pp. 144, 145) stated that in such cases it was necessary to examine the language of a codifying statute and to ask what is its natural meaning uninfluenced by any considerations derived from the previous state of the law. He then stated that where a statute contained a provision of doubtful intent, resort might be had to the previous state of the law for the purpose of aid in the construction of the code. There is nothing ambiguous

in sect. 60 of the Act of 1906, and therefore as its provisions are inconsistent with *Macbeth* v. *Maritime Insurance Company* (*sup.*), the statutory provisions must prevail, and it follows that the value of the wreck must not be taken into consideration.

Bailhache in reply.

Cur. adv. vult.

BRAY, J.—In this case the plaintiffs claimed under a reinsurance policy dated the 31st July. The original policy was dated the 30th June, and was an insurance on the ship *King Edward* for twelve months. It was an insurance which covered not only total loss, but, under particular circumstances, partial loss also, and it did not contain any clause with reference to the repaired value being taken as the insured value. The plaintiffs paid on that policy as on a total loss, and they sought to recover that amount from the underwriters under the reinsurance policy. The reinsurance policy contained a clause that the repaired value was to be taken as the insured value; the insured value in this case was 34,000 dollars. It was a policy against total loss only, of course either actual or constructive. There was also a clause with reference to salvage. The plaintiffs had to prove, first of all, not only that they paid the shipowner under the original policy, but that they were liable to pay; and, secondly, they had to prove not only that there was a constructive total loss under the first policy, but that there was a constructive total loss under the second policy, which contained the clause that the insured value was to be taken as the repaired value.

The first thing they would have to prove would be that notice of abandonment was given, because it is not suggested that this was an actual total loss; that the notice of abandonment was given by the shipowner to the plaintiffs, the original underwriters. That point, I considered, was not raised by the defendant upon the pleadings as they stood, but I thought that under the circumstances I ought to allow them to amend, of course, allowing the plaintiffs to make any necessary amendment in their reply or in their original statement of claim in consequence of the new defence being raised. I am not quite sure whether I was right in allowing an amendment, and if this case goes to the Court of Appeal I should like them to exercise their judgment and say whether I was right or wrong. However, I have got to treat it as upon the footing that the new notice of abandonment was put in issue. In their statement of claim the plaintiffs alleged that notice of abandonment was given on the 12th March, and there was undoubtedly a notice given on that date, but it was practically conceded by the plaintiffs that that notice was too late, and they sought to rely upon a notice given on the receipt in this country, or soon after a receipt in this country, of a letter dated the 9th Dec. The evidence was not very satisfactory upon that point—first, because nobody could be called who had been to the underwriters with that letter of the 9th Dec. The persons who had given, on behalf of Messrs. Sedgwick and Co., who in that matter were acting under the instructions of the shipowner, the notice were no longer in their service, and their attendance could not be procured. There was a letter dated the 24th Dec. which was relied upon as sufficient evidence that, at all events, some notice was given to the underwriters. There had been an order in this case that the letters should not be merely evidence of themselves, but should be evidence of the facts referred to. The letter was in these words: "Reverting to your letter of the 9th inst., we beg to advise you that we have presented this claim to the leading insurance companies for payment, but they tell us that they have received advices through the Salvage Association that the vessel is ashore in a very comfortable position, and that there will be no difficulty in her getting off in the spring. In these circumstances they decline to pay as for a total loss, and we accordingly await your further advices on the subject." I think I am entitled, therefore, under the order that was made to treat that as evidence that, at all events, some notice was given to the underwriters. There was also some evidence that the practice would be to submit any papers that they got, and, amongst others, the letter of the 9th Dec., and I think I ought to accept it that the substance, either the letter itself or the facts contained in that letter of the 9th Dec. was communicated to the underwriters.

One point that I have to decide—and it is not a simple one—is whether under the Marine Insurance Act, supposing Sedgwick and Co. did, in fact, communicate to the underwriters the substance of what is there stated, that was a good notice of abandonment. Sect. 62 (2) of the Marine Insurance Act provides: "Notice of abandonment may be given in writing, or by word of mouth, or partly in writing and partly by word of mouth, and may be given in any terms which indicate the intention of the assured to abandon his insured interest in the subject-matter insured unconditionally to the insurer." It need not, therefore, be in writing; it need not be in any specified form; it need not contain any direct statement of abandonment; it is sufficient if it implies it, or if an underwriter receiving it ought to infer that the shipowner has decided to abandon the vessel. A total loss was claimed; that fact alone, I think, is not sufficient; but when I look at the terms of this letter, which I will not read now, and the fact that the underwriters, so far as one can see, never raised the question at any time that no sufficient notice of abandonment had been given, I think, although there is some doubt, I ought to take this letter as sufficient intimation that the assured had decided to abandon the vessel to the underwriters. I must take into consideration not only this letter, but what had gone before, the information which the underwriters had received and what happened afterwards; and, taking all those matters into consideration, I find a sufficient notice of abandonment was given on the 9th Dec. If it was given on the 9th Dec. it was not really contested that that was not in time. Up to that time sufficiently full information had not been received by the assured. He had received that on the 7th Dec., and he wrote on the 9th Dec., or rather his brokers wrote, to the broker in London, and the notice would be given of course not by the receipt of this letter, but by the communication in London after this letter arrived in London. I find that issue, therefore, in favour of the plaintiffs.

There is no doubt that there was a constructive total loss within the original policy; the difficulty is whether there was a constructive total loss

within the reinsurance policy. It is claimed that there was a constructive total loss under both branches of sect. 60 (2) which says this: "In particular there is a constructive total loss (1) where the assured is deprived of the possession of his ship or goods by a peril insured against, and (*a*) it is unlikely that he can recover the ship or goods, as the case may be, or (*b*) the cost of recovering the ship or goods, as the case may be, would exceed their value when recovered." Mr. Bailhache contended that the assured was deprived of the possession, and that it was unlikely that he could recover the ship. That, of course, is a question of fact. I assume that he was deprived of the possession of the ship, it was ashore, and by the 9th Dec. it was quite plain that it could not be removed for a considerable number of months—it could not be removed until the spring. That would not be, perhaps, a serious matter, because the ship was apparently not to be used after the 30th Nov. until the river St. Lawrence reopened on account of the ice; but still I think I must take it that the shipowner was deprived of possession.

Was it unlikely that the shipowner could recover his ship? That was for the plaintiff to prove. In the letter of the 25th Nov. from Fry to Lowrey he says: "If ice forms on the bay before storms seriously increase the injury to vessel, the general opinion is that she will winter safely, and if such proves to be the case, we hope to have her afloat and in the harbour next spring, under a 'No cure no pay' contract." After that date there was a storm, and, in fact, the vessel was not damaged by that storm; and I learn from the letter of the 7th Dec. this: "During the past four days our temperature has been zero to 10 degrees below, or 30 to 40 degrees of frost, so that we conclude she is now firmly and securely frozen in for the winter, in which case gales or seas will not have any effect upon her. On the north shore of our Gulf the ice breaks up much later than along the south shore, so that salvage operations cannot be commenced before about the 1st May next. Meantime we will communicate with salvage contractors, in accordance with your request, and write you on the subject at a later date. The owners will be placed in a very awkward position without a steamer to prosecute their coasting trade and mail service next spring under their contract with our Government. They are much disappointed, as their calculations were she would become a total loss, and with insurance funds purchase another steamer this winter." I have got a little more evidence, but it is impossible for me to find, under the circumstances, that the plaintiff had proved that the shipowner was unlikely to recover his ship. It was not contended that the cost of recovering the ship would exceed her value when recovered, and I shall have to deal with the figures later, but I think it is pretty plain that there would be a slight surplus. The value of the ship, not the repaired value, turned out to be 14,000 dollars, or somewhat more than the actual expense of recovering her. Therefore it seems to me that the plaintiff's claim, so far as it rests on sect. 60, sub-sect. 2 (i.), fails.

Then the next question is, whether there is a constructive total loss under sub-sect. 2 (ii.): "In the case of damage to a ship, where she is so damaged by a peril insured against that the cost of repairing the damage would exceed the value of the ship when repaired." I shall come to that later.

I now take the figures that I have before me and deal with them. The first salvage is 1830 dollars. That was the attempt that was made to salve her between the date of stranding, the 16th Nov., and the date the 9th Dec.; in fact, it was made very soon after the ship stranded, and it was a failure. It is said that I ought to allow that nevertheless. Mr. Bailhache conceded that if that had been done by the shipowner, he could not have claimed that as part of the repairs, because they were not future salvage operations, but he said it had in fact been done by the underwriters, and therefore I ought to include it. I do not see that. In estimating the cost of repairs, I do not think I have anything to do with the underwriters. It is all upon the assumption as to what a prudent uninsured owner would do, and I have got to see whether on the 9th Dec. the cost of the repairs, as stated in the Act, including those items which are mentioned in the Act, would or would not exceed the value when repaired. I cannot take into consideration anything that was done before, which, as a matter of fact, neither improved the position nor worsened it. Therefore I cannot allow 1830 dollars.

The next is the second salvage operation, which took place at the beginning of May. The Salvage Association, or Messrs. Fry acting for them, tried to make a "No cure no pay" contract. They could not succeed in doing that; I think they did their best, but they made a contract with Messrs. Davie under which they were to pay 2000 dollars in any event, but in case of success they were to pay 40 per cent. of the value when recovered. Those operations were a failure, but the 2000 dollars was paid. It is said that those operations were carelessly performed; that a failure should have been anticipated: and that it was not a reasonable expense. I do not agree with that at all. The ship was in a very difficult position, and you cannot tell at once which is the best way to deal with it. It seems to me that that is a reasonable and proper expense to be allowed, so I allow 2000 dollars. Now there is, practically speaking, no dispute I must allow 9800 dollars. Messrs. Fry made the best contract they could. It was a "No cure no pay" contract, and in case of success they were to pay 70 per cent. of her value when she reached Quebec. Those operations were successful, and they paid or allowed in account the sum of 9800 dollars: that must be allowed. The next is charges on materials and stores landed at Anticosti. Anticosti is the place where the vessel stranded, and it was thought advisable, prudent, and proper to take the removable outfit from the ship and have it properly stored and watched. That seems to me a prudent and necessary course to have taken, and forms part of the cost of the salvage operations in recovering the ship. I think I must allow that, both the 458 dollars and the 109 dollars. The next item is agency cables, &c. First, with regard to cables, the cables were mainly between Messrs. Fry at Quebec and this country. They were communications made between them on behalf of the Salvage Association and the underwriters. I do not think I ought to allow those, because what I have got to consider is what the shipowner would have to expend in order to recover and repair the vessel The shipowner was in Canada himself, and very

little expense of cabling would have been sufficient. Therefore I could only allow a very small portion of that at the most. It is conceded that the commission on advances ought not to be allowed. Then there is a claim for the services of Messrs. Fry amounting to 800 dollars. I must knock off, at all events, part of that, certainly all that took place before the 9th Dec. It seems to me a large sum, and I think if I allow 500 dollars for the work, including any letters or cables of that kind, I am allowing sufficient. Therefore, in respect of that 1288 dollars I allow 500 dollars.

I come now to the repairs to the vessel. They were estimated at 15,700 dollars, and it is not denied that that sum must be allowed, but the plaintiffs are claiming more. They say that those repairs provided only for scarfing the stern-post, and scarfing the stern-post would not be a good job. They further say that the specification did not include any damage which it might be found that the engines or boilers had received, and it was reasonably certain that they would have had some damage from corrosion and other causes, and additional expense would be incurred in consequence of that, and they claim 4300 dollars. I am in a difficulty as to this item, because the evidence is so slender upon it. The ship was eventually repaired, the boilers and machinery were inspected, and there would have been no difficulty in procuring evidence as to what, in fact, had been done and what additional expense had been incurred. The persons who repaired the vessel were Messrs. Davie, and the defendants produced an affidavit by Messrs. Davie which did not refer to this at all. Messrs. Davie must have known, and at first I was inclined to think that that was very strong indeed against the defendants, and almost sufficient to lead me to the inference that very considerable additional expense was incurred; but then it was pointed out to me that the plaintiffs produced an affidavit by Mr. Samson, Lloyd's surveyor, who himself says in his affidavit that he superintended the repairs, and he would know equally. So that the plaintiffs have brought into court, as it were, a witness and have not asked him a single question about that. I offered the parties, if either of them chose, to adjourn the case for further evidence; however, they both elected not to call any further evidence. I am left, therefore, in a very difficult position, and I have to do something which is very like guessing. I must guess as well as I can, always bearing in mind that it is for the plaintiffs to prove their case. I am satisfied — in fact, the evidence was clear upon that point—that mere scarfing, although it would make the ship seaworthy, would not make the ship as good a ship as she was before. I think, when I am dealing with the question of the insured value being taken as the repaired value, the ship must be taken as repaired so as to be practically as good a ship as she was before. It is practically conceded that the scarfing would not be as good; but then what would? It was said that a new stern-post was necessary, but a witness who was called for the plaintiffs and a witness who was called for the defendants admitted that welding would have made a sufficiently good job, and that the mere welding would probably not cost more than the scarfing; but it was said for the plaintiffs by this witness that it was quite plain that they could not do welding except at increased expense, otherwise they would have so provided. I have come to the conclusion that on that point I ought to accept the evidence of the plaintiffs' witness, and that I ought to allow some sum; but what sum? I do not think I ought to allow any large sum; I think if I allow 500 dollars for that, that is quite sufficient.

As regards the machinery, there I am almost in a worse position, and I certainly must not allow the plaintiffs any large sum. I am satisfied that there would have been some additional expenditure, but I do not think I really ought to put it higher than 500 dollars, so that the effect of it is that I allow 1000 dollars in respect of the claim of 4200 dollars. The outfit was estimated at 1500 dollars—that is, the expense of putting the outfit in order. I have got an affidavit by Mr. Fry, without any particulars or any means of testing it, that it would be 1000 dollars. That is obviously very vague, and I find from the correspondence that it seemed to be estimated at the time at about 500 dollars. I do not think I ought to allow more than 500 dollars. Now we come to the survey fees, and the question there is whether I am to allow the three sums or only two sums. Mr. Russell was the surveyor for the owner, Mr. Black was the surveyor for the underwriters, and it is said I ought not to allow two fees. If I am to estimate what the cost of repairing is, I have only to look at the expense which the owner would have incurred. The underwriters might, if they liked, employ a surveyor, but I have not to consider that. What I have to consider is what would it cost an owner to repair, and under the circumstances it seems to me I ought only to allow one surveyor. That will be 250 dollars, or 248 dollars the actual figure. I think I ought to allow the further fees for the repairs, because they clearly would be necessary, 250 dollars more, so I allow in respect of that 498 dollars.

Now, I add up those figures, and, if I recollect right, I find they come to 30,500 dollars. That falls short, of course, of the 34,000 dollars, the insured value, but it is said I ought to add to that the value of the wreck—that is, the value of the wreck on the 9th Dec. That depends on the true construction of the Marine Insurance Act, and I have got to consider two sections, sect. 60, which I will deal with more particularly presently, and sect. 91 (2), which provides: "The rules of the common law, including the law merchant, save in so far as they are inconsistent with the express provisions of this Act, shall continue to apply to contracts of marine insurance." It was laid down by Lord Herschell, also dealing with a code—the code of the law with reference to bills of exchange—that one ought to look at the Act first, and if you find that there is no ambiguity, that the words are clear, and that they are inconsistent with the common law, then that plain interpretation must be followed. Sect. 60 first of all by sub-sect. 1 says this: "Subject to any express provision in the policy, there is a constructive total loss where the subject-matter insured is reasonably abandoned on account of its actual total loss appearing to be unavoidable, or because it could not be preserved from actual total loss without an expenditure which would exceed its value when the expenditure had been incurred." It seems to me the word "expenditure" is a perfectly plain word, and

I cannot construe it as including the value of the wreck. It is expenditure, no doubt, by the owner, but the value of the wreck is not an expenditure by the owner. It was said that I ought to look at what Lord Collins said in giving judgment in *Macbeth* v. *Maritime Insurance Company* (*sup.*). But Lord Collins was not construing the statute; he was endeavouring to reconcile certain decisions and certain language which had been used by the judges, to make that language consistent with the decision which he was giving. You do not look at the words used by a judge in the same way as you look at the words which are put down after very great consideration in a statute. Further, the words of Lord Collins referred to were mainly restoration and repair—totally different words. None of the other Lords took the same view that Lord Collins did; on the contrary, they seem to have taken the other view, that there were two distinct and separate sets of decisions, one one way, and one the other. Therefore, it seems to me that I must construe this word "expenditure" as being expenditure and nothing else.

But I have also got, undoubtedly, to look at the words in sub-sect. 2 in the second branch of it: "In the case of damage to a ship, where she is so damaged by a peril insured against that the cost of repairing the damage would exceed the value of the ship when repaired." I cannot come to the conclusion that there is any ambiguity about these words at all. Then: "In estimating the cost of repairs, no deduction is to be made in respect of general average contributions to those repairs payable by other interests, but account is to be taken of the expense of future salvage operations, and of any future general average contributions to which the ship would be liable if repaired." It seems to me that this section is plain. It is inconsistent with what is now admitted to have been the common law or the law merchant before, because it has now been decided by the House of Lords since the passing of this Act that, with reference to a wreck that had occurred before it came into operation, according to the common law the value of the wreck should be included in the calculation that I am making; but, as I have said, I have come to the conclusion that the words of the statute are inconsistent with that, and, therefore, I have no right to import the common law. It is very unfortunate; it is one of the consequences that sometimes happens as the result of codifying the law, which is a very difficult process. It certainly is unfortunate, because I do not suppose that those who were the authors of this Act thought that they were repealing the common law. The truth is that the decision in the case of *Angel* v. *Merchants' Marine Insurance Company* (*sup.*) had been given in 1903, only three years before this, where the opposite view had been taken, and the result was that in the statute the Legislature took the opposite view, and it may be that it will be necessary in all future cases of insurance for shipowners to stipulate—they can get out of the statute in that way, because it is all subject to any express provisions in the policy—that the value of the wreck shall be included in the valuation, just in the same way that underwriters have insisted upon putting in in many cases that the insured value shall be taken as the repaired value, a very proper provision. If it is found for the interest of shipowners and underwriters generally that an alteration should be made in policies, so as to exclude the effect of this sect. 60, they can do it, and they must do it. I ought to have said that I construed the Act without looking at what had happened before; but if I had looked at what happened before I think I should have found my task still easier, because Lord Loreburn, in *Macbeth* v. *Maritime Insurance Company*, points out this. He says: "This question admits of ready answer as soon as it is ascertained what is the true test by which a court is to be guided. Really the choice lies between two. One is that a ship has become a constructive total loss if the cost of repairing her would exceed her value when repaired. The other is that she has become so when a prudent uninsured owner would not repair her, having regard to all the circumstances. If the former test be adopted, then this appeal must be dismissed, because the cost of repairs here is 11,000*l.*, and the repaired value is 12,000*l.* If the latter test be adopted, then the appeal must be allowed; for no sensible man would have repaired this ship if he could have made a better thing of it by selling her as a wreck, and it is found that he could have done so."

Therefore I must decide that the value of the wreck cannot be taken into consideration. But perhaps I ought to express my opinion as to what the value of the wreck was. I do not see how I could put it higher than 3000 dollars. Mr. Fry in his affidavit puts it in November at from 2000 dollars to 3000 dollars. In December, owing to the fact that the ship had sustained no further loss because it became embedded in the ice, it would be worth a little more, and therefore I ought to take the higher value; but I cannot see for myself how I could put a higher value than 3000 dollars. The value which I ought to put upon it, it seems to me, ought to be the break-up value; that is the proper value to put upon it. I do not think I could put it higher than 3000 dollars, although I really have had very little evidence which would enable me to do that, but such evidence as I have would enable me to put it as high. As this matter will probably go to the Court of Appeal, I thought I ought to express my opinion. The result of it is that I find in fact that there was no constructive total loss within the reinsurance policy, and, therefore, the claim must fail. There must be judgment for the defendants, with costs.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Monday, Nov. 13, 1911.

(Before Sir S. EVANS, President, and Elder Brethren).

THE MONICA. (a)

Collision — Practice — Lights — Preliminary act — Form of answer—Order XIX., r. 28.

Order XIX., r. 28, of the Rules of the Supreme Court 1883 *directs that in actions for damage by collision between vessels, the plaintiff and defendant are to file with the registrar a document to be called a preliminary act, which, among other information, is to contain the following statements concerning the lights seen on the vessel collided with : " (k) The lights (if any) of the other vessel which were first seen. (l) Whether any lights of the other vessel, other than those first seen, came into view before the collision." The defendants' preliminary act contained the following statements in answer to (k) : " The masthead, towing, and both side lights of the* Tavistock *" ; and in answer to (l), " None." In fact the master of the defendants' vessel, after seeing all the lights on the plaintiffs' vessel, saw the green light shut in, leaving the red open alone, and then the red was shut in and the green light alone left open.*

Observation by the President : It is desirable that practitioners should state, in answer to par. (l) in the Preliminary Act Forms in Collision Actions, the lights in the sense of the combination of lights seen on the other vessel and the alterations therein.

DAMAGE ACTION.

The plaintiffs were the owners of the dumb barge *C. I. V.*; the defendants were the owners of the steamship *Monica*.

The case made by the plaintiffs was that the *C. I. V.* was with five other barges in tow of the tug *Tavistock* proceeding up the Thames, when she saw, about half a mile off and about one point on the starboard bow of the *Tavistock*, the masthead and green lights of the *Monica*, which was coming down river well over to the north shore. The *Tavistock*, which was under slight starboard helm, sounded two short blasts. The *Monica* replied with two short blasts, and the *Tavistock* kept on, shaping with her craft to pass the *Monica* all clear, starboard side to starboard side. The *Monica* passed the *Tavistock* all clear, but, after doing so, sheered to starboard as if under port helm, causing danger of collision with the craft in tow of the *Tavistock*, and, coming on at high speed and opening her red light to the *C. I. V.*, with her stem and starboard bow struck the starboard bow of the *C. I. V.*, breaking her adrift and doing her such damage that she shortly afterwards sank.

The case made by the defendants was that the *Monica* was proceeding down the river, heading straight down Blackwall Reach, making about nine knots, when those on board her saw, three-quarters of a mile off and about ahead and on the port bow withal, the masthead, towing, and both side lights of the *Tavistock*; that shortly after the lights of the *Tavistock* were sighted the engines of the *Monica* were eased to slow, and shortly afterwards, as the *Tavistock* continued to approach, the whistle of the *Monica* was sounded one short blast and her helm was ported a little, and when the *Tavistock* sounded two short blasts the engines of the *Monica* were stopped and put full speed astern, her whistle being sounded three short blasts and her helm steadied, but the *Tavistock*, acting under a starboard helm, came on at considerable speed across the bow of the *Monica*, and, although she cleared the *Monica*, she caused the *C. I. V.* to strike with her starboard side the stem of the *Monica*.

Laing, K.C. and *H. C. S. Dumas* for the plaintiffs.

Bateson, K.C. and *D. Stephens* for the defendants.

While the master of the *Monica* was being examined, he was asked whether he had seen any alteration in the lights of the *Tavistock*.

The PRESIDENT.—The preliminary act filed on his behalf says he saw none.

Bateson, K.C.—That is the ordinary form of answer. When all the lights that are carried by a vessel are seen when the vessel is first sighted, no other lights could come into view. The article referred to only applies to different lights being seen, and not to changes in lights already seen. [The PRESIDENT. — The practice is obviously wrong.] It has existed for a considerable time. [The PRESIDENT.—In future I shall expect that if there is any difference in the condition or position of the lights it shall be stated. In the present case it ought to be put in this form: Afterwards the green was shut in, showing the red only; afterwards the red was shut in, showing the green only.]

The PRESIDENT in giving judgment dealt with the facts of the case, and found the *Monica* alone to blame for porting into the barge *C. I. V.*, and then continued: I want to say a word in this case about pars. (*k*) and (*l*) of the preliminary act. After the explanation that was given by counsel for the defendants as to the practice in pleading, I have not drawn any conclusion from the answer which was given to par. (*l*) adverse to the defendants in this particular case. The observation I am going to make is a perfectly general one. Par. (*k*) requires the parties to state " the lights (if any) of the other vessel which were first seen." Par. (*l*) requires a statement as to " whether any lights of the other vessel, other than those first seen, came into view before the collision." The answer of the defendants here to par. (*k*) is that they first saw " the masthead, towing, and both side lights of the *Tavistock* "—that is to say, all the lights—and that is accurate. Then to the question in (*l*), if it can properly be called a question, " Whether any lights of the other vessel, other than those first seen, came into view before the collision," the answer is " None." The evidence was that, having seen all four lights at first, the defendants afterwards saw only the red—that is to say, the green was shut in and the masthead—and a little afterwards they saw only the green, the red having been shut in. In a sense, it is quite right to say that they saw no other light, because they had seen all the possible lights that could be seen first, but I cannot believe, whatever the practice has been, that the intention was to answer it in that way. I do not think the question

(a) Reported by L. F. C. DARBY, Esq., Barrister-at-Law

need be altered at all, in order that the view may be acted upon. My view is that the intention in par. (*l*) was that the combination of lights should be stated. Let me just put a case. Supposing the first lights had been the masthead and green, and that afterwards there had been seen the masthead and red. I do not think it would be right in answer to par. (*l*) to say "red" simply; it ought to be "masthead and red." Illustrating it from the evidence in this case, the defendants ought to have said that, having first seen the masthead and both side lights of the *Tavistock*, they afterwards saw the masthead and red only, and then the masthead and green only; that would have indicated to everybody what the situation was, so far as their observation of the defendants' vessel was.

Therefore, whatever the practice has been, I should like very much if the practitioners hereafter would indicate in par. (*l*) the lights, in the sense of the combination of lights, seen on the other vessel, after the lights which were first seen.

Solicitors for the plaintiffs, *Ballantyne, McNair, and Clifford.*

Solicitors for the defendants, *Thomas Cooper and Co.*

Friday, Feb. 2, 1912.

(Before BARGRAVE DEANE, J. and Elder Brethren.)

THE FAIRPORT. (*a*)

Salvage — Steam trawlers as salvors — Loss of fishing — Right of salvors to recover loss of profit.

Three steam trawlers while engaged in fishing in the North Sea fell in with a vessel in distress and towed her to a place of safety. In salvage suits brought by the steam trawlers they each made a claim of varying amounts for loss of profit on their fishing voyages which were ended or interrupted by rendering the services.

Held, that they were not entitled to recover a sum representing loss of the prospective profit on the fishing voyage interrupted to render the salvage services.

THE plaintiffs were the owners, masters, and crews of the steam trawlers *Diamond, Oriole*, and *Köln.*

The defendants were the owners of the steamship *Fairport.*

The *Diamond* is an iron screw trawler of Hull of 149 tons gross and 61 tons net register, fitted with compound engines of 250 horse-power indicated, is manned by a crew of nine hands all told, and when she rendered the services was on a fishing voyage in the North Sea. The value of the *Diamond* is 2500*l.*

The *Oriole* is a steel screw trawler of 172 tons gross and 52 tons net register, fitted with triple expansion engines of about 400 horse-power indicated; she is one of the *Gamecock* fleet of steam trawlers, the combined catch of which fleet is daily taken by fish-carriers from the fleet in the North Sea to the market in London. She is manned by a crew of nine hands all told, and when she rendered the services was fishing in the North Sea fully coaled and provisioned for six weeks' fishing. The value of the *Oriole* is 5600*l.*

The *Köln* is a German steel screw steam trawler of 32 tons net register, fitted with compound engines of 225 horse-power indicated, and when she rendered the services was on a fishing voyage in the North Sea. The value of the *Köln* is 3500*l.*

The *Fairport* is a steel screw steamship of 3838 tons gross and 2433 tons net register, is fitted with triple expansion engines of 316 horse-power nominal, is manned by a crew of forty-eight hands all told, and when the services were rendered to her was on a voyage from Hamburg to Newcastle-on-Tyne in water ballast, carrying one passenger. The value of the *Fairport* is 27,000*l.*

The defendants admitted that salvage was due to the plaintiffs. The defendants' case was that on the 31st Oct. 1911 the *Fairport* left Hamburg for Newcastle in water ballast. She encountered very bad weather, and on the 2nd, 3rd, 4th, and 5th Nov. the engines were stopped from time to time to economise coal, and the vessel was allowed to drift. On the 5th Nov. wood was cut up and mixed with the coal, there being 30 to 35 tons of wood and 112 tons of coal on board, but at 6 p.m. the *Fairport* anchored. She hove up her anchor on the 6th Nov. at 4 a.m. The *Diamond* came up about noon on the 6th Nov., the *Oriole* about 1 p.m on the 7th Nov., and the *Köln* about 7.30 p.m. on the same day. The services terminated about 5.30 a.m. on the 11th Nov.

The details of the services sufficiently appear in the judgment.

The *Diamond* claimed 150*l.* for loss of fishing, the *Oriole* claimed 299*l.* 9*s.* 9*d.* for loss of fishing, and the *Köln* 292*l* 8*s.* for loss of fishing.

Bailhache, K.C. and *Dawson Miller* for the *Diamond.*

Batten, K.C. and *J. B. Aspinall* for the *Oriole.*

Bateson, K.C. and *D. Stephens* for the *Köln.*

Laing, K.C. and *Balloch* for the *Fairport.*

BARGRAVE DEANE, J.—This case is one which gives me some trouble with regard to the proper thing to do in awarding salvage and expenses.

The *Fairport* was in water ballast bound from Hamburg to the Tyne. She started from Hamburg with 112 tons of coal on board. The master says that that was amply sufficient, because he had done the voyage in twenty-four hours, and he had sufficient for forty-eight. However, meeting with head-winds, he found himself short of coal, and, the weather continuing bad, he allowed his vessel to drift. With a westerly wind she was driven towards the northern coast of Denmark. It is quite true that, although he had a lee shore, as long as he kept some coal in hand it would have enabled him in the last emergency to make for Frederikshaven, where he could get a supply of coal, or, if the wind shifted to the northward, to turn on his tracks and make for Hamburg, but he was really in a position which was one of some nervousness, and which required great care on his part, and which he naturally thought it would be better to avoid.

The result was that as soon as he sighted a trawler he made signals to her, and the *Diamond* went to him. The *Diamond* is not an old vessel by any means. She was built in 1907, she has

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

engines working up to 250 h.p., and she has a crew of nine hands. The *Diamond* went to the *Fairport*, and got connection with her three times by means of her own wire-warps. These do not seem to have been sufficiently strong, because they parted soon after connection was made. Why the ship's rope, a part of which was put in, was not sent out to the trawler by means of her warps I do not know, but if it had been I think the *Diamond* might have done more good service than she did. The *Diamond* lay by all night in very bad weather, and again the next day, and did really good service, although, unfortunately, until the last day, she was not able to move the vessel towards the Tyne.

The *Oriole* came up next day, and she again was unable to do anything on the first day. Her rope parted, and she had to lie by all night. These two vessels, therefore, lay by on the second night.

On the third day the *Köln* came up, and with the *Köln* and the *Oriole* towing ahead, and the *Diamond* on her starboard bow, the *Fairport* was eventually brought to the Tyne. There the trawlers were cast off, and the vessel went i to the river under her own steam.

The weather was extremely bad on the 7th, and it was bad on the 8th. It began to moderate on the afternoon of the 8th, and gradually moderated until it died away altogether, and then the wind came from the eastward. The bulk of the bad weather was borne by the *Diamond*, next by the *Oriole*, and practically very little of it by the *Köln*. Therefore, in arriving at the awards to be made to these three vessels for their services, apart from the expenses, I am inclined to take what counsel for the defendants suggested as the proper view—namely, to say what would be a fair sum to award for the whole service, and then distribute it as reasonably as one can according to the services, the time occupied, and the work done. I have arrived at the figure of 2300*l.* as the total award. Of that I give 900*l.* to the *Diamond*, 800*l.* to the *Oriole*, which is the most powerful vessel of the three, and 600*l.* to the *Köln*.

Then comes the question of expenses. I at once dismiss the question of the loss of fishing. When seamen render salvage services they abandon their ordinary occupation for the purpose of another occupation, which is salvage, and they cannot be paid for both. I hope it will be a long time before English or German seamen will hesitate to render salvage services to vessels in distress, but they must do it with full knowledge, when they choose to do it, that they have chosen, and they are thereby abandoning their ordinary occupation, and they cannot expect to be paid for both. A salvage award is made in respect of services rendered, and we must take into account the whole story, and not separate it into two or three separate items.

The question of damage and loss directly attributable to the rendering of the services is, however, another matter. This court will always recognise where, in rendering salvage services, damage is occasioned to one of the salving vessels, that that has to be taken into account as actual damage. It is not like loss of fishing, which is prospective damage. In this case these vessels have proved certain damage, and counsel for defendants does not, in fact, dispute the claim put in by the *Diamond* as set out in her statement of claim. The result is that 136*l.* represents the actual damage of the *Diamond*, and this makes her total award 1036*l.* With regard to the *Oriole*, her claim is, first of all, loss of fishing, which I disallow, extra coal—I do not allow that, because it is part of the services rendered—and provisions destroyed. That is another matter. It is loss occasioned to the owners directly by reason of the salvage, and after consulting with the Elder Brethren, they advise me that 15*l.* might reasonably be allowed. The last item is loss of trawl. I have taken the Elder Brethren's view, and, acting upon their advice, I allow the whole of the damage for loss of trawl and gear. Therefore, I allow the *Oriole* 74*l.* for her damage, or 874*l.* in all. Then comes the *Köln*. I disallow the claim for loss of fishing and wages. I allow 222*l.* 10*s.* 6*d.* for repairs; 24*l.* 7*s.* 4*d.* for the cable chain; I do not allow travelling expenses; I allow surveyor's fees and telegrams; I do not allow wear and tear of the engines, because I think there is no evidence to satisfy me there was any wear and tear occasioned by the salvage services; coal I do not allow, except that I am advised by the Elder Brethren that, perhaps, while she was laid up, it might be reasonable to allow a certain amount of coal being used on board, and I allow 10*l.* for that. Then comes the item "expenses, expenses including insurance, equipment." That I do not allow. Then comes the last item, demurrage. It would be difficult to know what would be a fair sum to allow for demurrage while the vessel was under repair. We have to do what is reasonable, and I have allowed 100*l.*, or something under 10*l.* per day. These items which I have allowed make 367*l.* 2*s.* 5*d.* I allow 367*l.*, or 967*l.* in all. The total expenses allowed come to 577*l.*, and, therefore, the total sum awarded will be 2877*l.*

Feb. 27 *and* 28, 1912.

(Before BARGRAVE DEANE, J. and Elder Brethren.)

THE ROSALIA. (*a*)

Collision—Fog—Collision Regulations 1910, *arts.* 15, 16—*Both to blame—Initial wrong—Degree of fault—Apportionment of damage or loss—Maritime Conventions Act* 1911 (1 & 2 *Geo.* 5, *c.* 57), *s.* 1—*Costs.*

In an action for damage by collision, in which both vessels were found to blame for negligent navigation in fog, the vessel which was found guilty of the initial fault was ordered to pay 60 *per cent. of the damage, the other vessel* 40 *per cent., under the provisions of sect.* 1, *sub-sect.* 1, *of the Maritime Conventions Act* 1911.

No order was made as to costs.

[NOTE.—This was the first case to be tried under the Maritime Conventions Act 1911.—ED.]

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

DAMAGE ACTION.

The plaintiffs were the owners of the steamship *Woodmere*, her master, and crew; the defendants were the owners of the steamship *Rosalia*.

The case made by the plaintiffs was that shortly before 4.15 a.m. on the 7th Feb. 1912 the *Woodmere*, a steel screw steamship of 682 tons gross and 328 tons register, manned by a crew of thirteen hands all told, was to the northward and westward of the *Newarp* light vessel, in the course of a voyage from North Woolwich to Goole in water ballast. The weather was hazy, of varying density, and the engines of the *Woodmere*, which had been working full speed since passing the *Newarp*, had just been reduced to slow as the weather was coming in thicker ahead. The *Woodmere* was steering a course of N.W. ½ N. magnetic. The tide was ebb, setting to the northward and westward, of about three knots, and the wind was a light breeze from the south-west. The *Woodmere's* masthead, side, and stern lights were duly exhibited and burning brightly, and a good look-out was being kept on board her. In these circumstances the steamship *Spero*, which had overtaken the *Woodmere* and was about a quarter of a mile ahead of her and on the port bow withal, was heard to sound two short blasts, and in reply a vessel, which afterwards proved to be the *Rosalia*, was heard to sound two short blasts on the starboard bow of the *Woodmere*. The helm of the *Woodmere* was accordingly starboarded, and she replied with two short blasts. Shortly afterwards the *Rosalia* again sounded two short blasts and the helm of the *Woodmere* was ordered hard-a-starboard, and two short blasts were again sounded on her whistle and her engines were put full speed ahead. About the same time the masthead light of the *Rosalia* came in sight, about two points on the starboard bow of the *Woodmere*, distant about a quarter of a mile. She again sounded two short blasts, to which the *Woodmere* again replied with two short blasts at the same time keeping her helm hard-a-starboard. The *Rosalia*, however, came on at a great speed, apparently acting under port helm, and her second masthead light and then her red light came in sight, and although she afterwards sounded three short blasts, she continued on at a great speed, heading for the *Woodmere*, and, although the helm of the latter was at the last moment put hard-a-port to ease the force of the blow, the *Rosalia* with her stem struck the starboard side of the *Woodmere* abaft amidships a violent blow, inflicting such damage that the latter sank in ten minutes.

Those on the *Woodmere* charged those on the *Rosalia* with not keeping a good look-out; with sounding misleading whistle signals; with failing to go at a moderate speed; with improperly porting; with failing to ease, stop, or reverse her engines; with neglecting to stop and navigate with caution on hearing a fog signal forward of her beam; and with neglecting to sound her whistle for fog in accordance with the regulations.

The case made by the defendants was that the *Rosalia*, a steel screw steamship of 4308 tons gross and 2673 tons net register, 360ft. in length, manned by a crew of twenty-eight hands, was in the North Sea, in the course of a voyage from Tyne Dock to Genoa, laden with a cargo of coal. The wind was southerly, light, and the tide ebb of the force of about a knot. There was a dense fog, and the *Rosalia*, with engines working dead slow, was steering S.E. by S. magnetic, making about two knots. Her whistle was being duly sounded long blasts for fog, she carried the regulation lights for a steamship under way, including a second masthead light, which were being duly exhibited and were burning brightly, and a good look-out was being kept on board of her. In these circumstances a number of two short-blast signals had been exchanged with a steamer passing on the starboard side bound north, and the *Rosalia* was steadying on her course when two short blasts were heard on the port bow, which signal was sounded by the *Woodmere*. The engines of the *Rosalia* were immediately put full speed astern and her helm was put hard-a-starboard to keep her head straight, and three short blasts were sounded on her whistle. The *Woodmere* replied with another signal of two short blasts, which signal she repeated several times, and the *Rosalia* replied to each signal of the *Woodmere* by sounding three short blasts. The *Rosalia* had nearly, if not quite, lost all headway when the green light of the *Woodmere* came in sight, bearing about three points on the port bow, not a hundred yards off. The *Woodmere* continued to come on across the bow of the *Rosalia*, still sounding two short blasts, and with her starboard side aft struck the stem of the *Rosalia*, doing her considerable damage and so injuring herself that she shortly afterwards sank, all of her crew being taken on board the *Rosalia*.

Those on the *Rosalia* charged those on the *Woodmere* with failing to keep a good look-out; with navigating at too great a rate of speed; with failing to stop and navigate with caution on hearing the whistle of the *Rosalia*; with starboarding; and with failing to sound her whistle in accordance with the regulations for fog.

The following are the collision regulations which the vessels were alleged to have infringed:

15. All signals prescribed by this article for vessels under way shall be given: 1. By "steam vessels" on the whistle or siren. . . . The words "prolonged blast" used in this article shall mean a blast of from four to six seconds duration. A steam vessel shall be provided with an efficient whistle or siren, sounded by steam or some substitute for steam, so placed that the sound may not be intercepted by any obstruction, and with an efficient fog-horn to be sounded by mechanical means, and also with an efficient bell. . . . In fog, mist, falling snow, or heavy rainstorms, whether by day or night, the signals described in this article shall be used as follows, viz.: (*a*) A steam vessel having way upon her shall sound, at intervals of not more than two minutes, a prolonged blast.

16. Every vessel shall, in a fog, mist, falling snow, or heavy rainstorms, go at a moderate speed, having careful regard to the existing circumstances and conditions. A steam vessel hearing, apparently forward of her beam, the fog signal of a vessel, the position of which is not ascertained, shall, so far as the circumstances of the case admit, stop her engines, and then navigate with caution until danger of collision is over.

28. The words "short blast" used in this article shall mean a blast of about one second's duration. When vessels are in sight of one another, a steam vessel under way, in taking any course authorised or required by these rules, shall indicate that course by the following signals on her whistle or siren, viz.: One

short blast to mean "I am directing my course to starboard." Two short blasts to mean "I am directing my course to port." Three short blasts to mean "My engines are going full speed astern."

Sect. 1 (1) of the Maritime Conventions Act 1911 (1 & 2 Geo. 5, c. 56) was also referred to, and is as follows:

1 (1). Where, by the fault of two or more vessels, damage or loss is caused to one or more of those vessels, to their cargoes or freight, or to any property on board, the liability to make good the damage or loss shall be in proportion to the degree in which each vessel was in fault: Provided that (*a*) if, having regard to all the circumstances of the case, it is not possible to establish different degrees of fault, the liability shall be apportioned equally.

Laing, K.C. and *Dawson Miller* for the plaintiffs.—The *Rosalia* was coming down the North Sea, and, when meeting the *Spero* going up the North Sea, sounded a starboard-helm signal to her, but probably did not starboard at all. It was wrong of her to sound any such signal, for it was impossible for her to see the *Spero* in that state of the weather; it was too thick. The *Rosalia* and the *Spero* escaped a collision. The *Woodmere* was following the *Spero* up the North Sea, and had in fact been passed by her. The whistles sounded by the *Rosalia* misled those on the *Woodmere* into starboarding when she could not see the *Rosalia*. The speed of the *Rosalia* was also excessive. She admittedly had a speed of about two and half knots at the moment of collision; if she had been reversing for anything like the four minutes spoken to by her witnesses she must have had a speed of six knots when she began to reverse. The look-out on the *Rosalia* was bad. The *Woodmere* was not to blame.

A. D. Bateson, K.C. and *Lewis Noad*.—The *Woodmere* is solely to blame for her speed and for starboarding in a fog. If the whole blame for the collision is not that of the *Woodmere*, at all events 99 per cent. of it is. On the evidence there can be no doubt the *Woodmere* was going too fast. [BARGRAVE DEANE, J.—How do you excuse yourself for not stopping and blowing the two-blast signal?] There is no hard-and-fast rule that when ships are approaching each other in fog neither should ever take helm action; each case must depend on its own circumstances:

The Vindomara, 63 L. T. Rep. 749; 6 Asp. Mar. Law Cas. 569; (1891) A. C. 1.

The starboard-helm signal was blown to the *Spero*, and the *Spero* was passed and the *Rosalia* was steadying under port helm when the *Woodmere* sounded a two-blast signal. The *Woodmere* was quite wrong to starboard; if she had not done so the vessels would have passed clear.

Laing, K.C. in reply.

BARGRAVE DEANE, J.—This is a case in which I have to refer to three ships. The action is brought by the owners of a smallish steamer, the *Woodmere*, against the owners of the *Rosalia*, a large Italian ship, for damage caused by a collision in the North Sea, between the Newarp and the Would Lightships, on the morning of the 7th Feb. in this year. The result of the collision was that the *Woodmere* was sunk, but her crew were all saved by getting on board the *Rosalia*. In the course of the case I have been forcibly struck by the fact that counsel on both sides have been oppressed by the new Act. This is the first case under the Maritime Conventions Act 1911, and the court has the duty of apportioning the blame and saying what proportion of the damage should be borne by either ship; and whereas in the old days counsel were content to make out that both vessels were to blame, knowing what the result would be, in this case I cannot help thinking that both learned counsel were fighting hard for a proportion. I have under the new Act to say what I think was right.

The two ships were bound one up and the other down the North Sea. The *Woodmere* was upon a course of N.W. ¼ N., and the *Rosalia* on a course of S.E. by S., very nearly opposite courses, and, in my opinion, they were as nearly as possible end-on to each other. I think the *Woodmere* was slightly on the port bow of the *Rosalia*—very slightly. There was another ship also proceeding up—a ship which was a little faster than the *Woodmere*, and which passed her on her port side shortly before the collision—and I think that that vessel was a little on the starboard bow of the *Rosalia*, so that the *Rosalia*, coming down, had two vessels very nearly ahead of her, one a little on the port bow and the other a little on the starboard bow; but the vessel on the starboard bow was the nearer. First of all, what was the weather? The *Rosalia* admits that it was a dense fog. The *Woodmere* says: "It had been a fog, but at the Newarp it cleared up so that we could see two or three miles, and we went on at full speed." The first fact which I find in the case is against the *Woodmere*. I am satisfied from the evidence of the lightship that it was a dense fog, and that that part of the *Woodmere's* case is not proved. She had slowed down for fog just before she got to the Newarp. She admits there was fog to the southward of the Newarp, and there is no doubt there was fog at the time of the collision, and that was only a very short distance from the Newarp, and, in my opinion, there was a fog all the time.

I will deal with the facts as I find them. The *Rosalia*, coming down in a fog, is said to have been blowing her whistle, and blowing it for fog. She heard on her starboard bow another vessel blowing her whistle for fog, and that vessel, after blowing for fog once or twice and being answered by the *Rosalia* once or twice with fog signals, changed her signal into two short blasts. The *Rosalia* responded with two short blasts, and I think on two or three occasions those two short-blast signals were exchanged between the *Rosalia* and the vessel on her starboard bow, the *Spero*. The first thing which I notice in that is this, that the *Rosalia* admits that, hearing in a fog a whistle on her starboard bow forward of her beam, she did not obey the rule and stop her engines. That is the initial fault of the whole case. If the *Rosalia* had stopped her engines and continued blowing a long blast for fog, and then proceeded cautiously, I do not know that I could have blamed her for that; but she did not. She proceeded on, as they say on board her, "slightly giving her a touch of starboard helm," and they eventually passed the *Spero* starboard to starboard, very close—I think something like a ship's length apart. That was a fortunate escape for the *Rosalia* and also for the

Spero, because, although I have not to deal with the *Spero,* there is no doubt that the *Spero* was very badly navigated in foggy weather. That, however, is not the whole of the story, because I have to do with the *Woodmere.* The *Woodmere* heard the *Rosalia* and the *Spero* exchanging two-blast signals. What should the *Woodmere* have done? She should at once have obeyed the rule and stopped her engines. She did not do it. She did not blow a long blast for fog, but repeated the two-blast signals which she heard the other vessels blow. That was utterly wrong according to the rules. She heard two whistles—one she knew was blown by a vessel going the same way as herself, and the other by a vessel coming in the opposite direction—and she had no excuse for not stopping her engines then and there. But I think she was misled. When she heard two vessels ahead of her both blowing the starboard-helm signals, and very nearly ahead of her, she did what perhaps was not unreasonable at the moment—she hard-a-starboarded her helm and put her engines on full speed ahead; but she ought to have stopped, and she is to blame. Both vessels are to blame.

Another matter I have to deal with is the speed of the two vessels. I should think that the *Woodmere* was probably going about nine knots. Her full speed was ten and a half knots, but she probably lost some of the pressure on her boilers and could not attain that, although she was going for some minutes full speed ahead under starboard helm. The *Rosalia,* I am satisfied, was going faster than she admits. I have had the evidence of Mr. Steele on behalf of the *Rosalia,* and he has to admit that, having surveyed the *Rosalia* and seen the damage upon her, and knowing the fact that the other vessel was sunk very shortly after the contact by reason of the damage caused to her, he is forced to the conclusion that there was at least two knots speed on the *Rosalia* at the time of the collision, although she says she was going full speed astern for four minutes, from dead slow, before the collision. Mr. Steele admits that it is impossible to avoid the conclusion that the *Rosalia* was going at least six knots before she reversed her engines. Did she reverse her engines for four minutes? It is true the document say so, but I am forced to the conclusion that I cannot accept the documents and the evidence which has been given. Why? Because I know there was fog further up, by the Haisboro', and the *Rosalia* did not slow down then, but not till a later period, when, according to the pilot and the master, it got so thick that they were obliged to slow.

The fact is that here were three vessels navigating in foggy weather in the North Sea and not obeying the rules. But for the initial fault of the *Rosalia* I do not think there would have been any collision; but. on the other hand, I cannot absolve the *Woodmere* from blame for breaking the rules herself and doing what she ought not to have done. Therefore I must find her also to blame. What am I to do about this new Act of Parliament, the Maritime Conventions Act 1911, which says that "Where, by the fault of two or more vessels, damage or loss is caused to one or more of those vessels, to their cargoes or freight, or to any property on board, the liability to make good the damage or loss shall be in proportion to the degree in which each vessel was in fault." It is very difficult to say exactly what the court is to do in such a case, but there is a proviso that "if, having regard to all the circumstances of the case, it is not possible to establish different degrees of fault, the liability shall be apportioned equally." This is the first case of the sort, and therefore I have to start the new practice; the Court of Appeal may say, if this case goes to that court, that they "would not have done that; they would have done something else." I have never heard in the common law of the principle which has now come upon us as a sudden blow, but we have got to obey the Act of Parliament, and the way in which I shall deal with this case is this: as the initial fault was in the *Rosalia* I shall order her to pay 60 per cent. and the *Woodmere* the other 40 per cent.

Laing, K.C.—I submit that the costs of the action should be treated in the same way. The *Rosalia* should bear 60 per cent. of them. [BARGRAVE DEANE, J.—That is another point. There is nothing in the Act on the point.] That is so; but my submission is that when one party to the litigation has to pay 60 per cent. and the other 40 per cent., the costs should be paid in the same proportions.

A. D. Bateson, K.C.—If the Act of Parliament had intended to make any alteration in the well-recognised rule as to costs in cases in which both vessels are held to be in fault it would have done so explicitly. There is not a word in the Act as to costs; they are not dealt with at all. The cost of getting the *Woodmere* found to blame to the extent of 40 per cent. is exactly the same as getting her found to blame to the extent of 50 per cent. The costs are a matter of discretion, and there is no ground for departing from the usual rule.

BARGRAVE DEANE, J.—Both vessels are to blame, and nearly equally to blame, although one was guilty of the initial fault. I shall make no order as to the costs in this case.

Solicitors for the plaintiffs, *W. A. Crump* and *Son.*

Solicitors for the defendants, *Thomas Cooper* and *Co.*

Supreme Court of Judicature.

COURT OF APPEAL.

Jan. 12, 13, *and* 15, 1912.

(Before VAUGHAN WILLIAMS, FARWELL, and KENNEDY, L.JJ.)

STEAMSHIP DEN OF AIRLIE COMPANY LIMITED *v.* MITSUI AND CO. LIMITED AND BRITISH OIL AND CAKE MILLS LIMITED. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Charter-party—Bills of lading—Assignment—Cesser of shipowner's liability—Submission to arbitration —Injunction to restrain arbitration—Arbitration Act 1889 (52 *&* 53 *Vict. c.* 49), *s.* 6.

The plaintiffs, owners of the steamship Den of Mains, *chartered her by charter-party dated the*

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law.

26th April 1911 to the defendants M. and Co., to load a cargo of beans at Vladivostock, and to proceed to a port in the United Kingdom and there deliver the cargo "agreeably to bills of lading." On the 10th June a cargo of about 6000 tons was loaded, and bills of lading made out to the order of M. and Co. or their assigns were signed by the master and handed to M. and Co.'s representative. M. and Co. had, by a contract dated the 27th April 1911, sold the cargo to the defendants the B. Company on the terms of a "basis delivered" contract, by clause 10 of which the contract was to be void as regarded any portion shipped which might not arrive. On the 12th June the defendants M. and Co., under the contract of the 27th April, declared to the B. Company that the beans had been shipped by steamship Den of Mains. *On arrival of the vessel at Liverpool, the port of discharge, M. and Co. handed to the B. Company the bills of lading indorsed against a payment. When the discharge had been completed it was alleged that there was a shortage of 171 bags, and, the B. Company having paid only in respect of the quantity actually delivered, M. and Co. instructed them to make a corresponding deduction from the freight, but the plaintiffs refused to acknowledge the claim for short delivery. A dispute having thus arisen, M. and Co. gave notice that they demanded an arbitration under a clause in the charter-party which provided for arbitration "by arbitrators, one to be appointed by each of the parties to this agreement, if necessary the arbitrators to appoint a third," and formally required the plaintiffs within seven clear days to appoint their arbitrator.*

The plaintiffs did not appoint an arbitrator, and the defendants after the expiry of the seven days gave notice of the appointment of a gentleman to act as sole arbitrator.

The plaintiffs thereupon took out a summons for further directions, asking (inter alia) *for an injunction to restrain the first defendants from proceeding with the arbitration, alternatively that leave be given to the plaintiffs to revoke the submission to arbitration.*

Held, without deciding the point of law decided by Bray, J., (1) *that there was no jurisdiction in the court to grant the injunction asked for; and* (2) *that in the exercise of its discretion the court ought not to give leave to revoke the submission to arbitration.*

Decision of Bray, J, reported 12 Asp. Mar. Law Cas. 97 (1912); 105 *L. T. Rep.* 823, *affirmed on other grounds.*

APPEAL by the plaintiffs from a decision of Bray, J.

The facts as found by the learned judge are shortly these: The defendants, Mitsui and Co. Limited, on the 26th April 1911 chartered from the plaintiffs the steamship *Den of Mains*, to load a cargo of beans at Vladivostock, and to proceed to a port in the United Kingdom or other ports, and there discharge. The charter-party contained an arbitration clause, which was as follows:

Should any dispute arise under this charter-party, same to be settled in London by arbitrators, one to be appointed by each of the parties to this agreement; if necessary the arbitrators to appoint a third, whose decision to be final and binding upon both parties to the agreement. And it is further agreed the submission hereby made shall be made a rule—if in the United Kingdom or Continent—of His Majesty's High Court of Justice, upon the application of either party.

On the 27th April the first defendants, by a contract of that date, sold 6100 tons of beans, more or less, to the defendants the British Oil and Cake Mills Limited, upon certain terms.

On the 10th June the cargo (about 6100 tons) having been loaded, two bills of lading, comprising the whole cargo, were signed by the master and handed to the first defendants' representative. They were made out to the order of the first defendants, or to their assigns.

On the 12th June the first defendants, under the contract of the 27th April, declared to the second defendants that the beans had been shipped by the steamship *Den of Mains*.

On the arrival of the *Den of Mains* at Liverpool, the port of discharge, the first defendants, under clause 4 of the contract, handed to the second defendants the bills of lading duly indorsed against a payment.

When the discharge had been completed it was alleged that there was a shortage of 171 bags, representing about 14 tons, and a difference in weight of 36 tons. The second defendants only paid in respect of the quantity actually delivered, and the first defendants, in consequence of the shortage, instructed the second defendants to deduct from the freight a sum of 103*l.* 1*s.* 6*d.*, the value of the bags alleged to be short delivered, and this was done.

The plaintiffs refused to acknowledge the first defendants' claim for short delivery, and eventually the first defendants gave notice that they demanded arbitration under the charter-party, and on the 1st Nov. gave a formal notice to Galbraith, Pembroke, and Co., on behalf of the plaintiffs, that they had appointed Mr. Glover their arbitrator, and formally required the plaintiffs within seven clear days to appoint their arbitrator.

The plaintiffs did not appoint an arbitrator, and on the 10th Nov. the first defendants gave notice of the appointment of Mr. Glover as sole arbitrator.

On the 8th Nov. the plaintiffs issued their writ claiming (1) balance of freight 103*l.* 1*s.* 6*d.*; (2) a declaration that the defendants, Mitsui and Co. Limited, having indorsed over to the defendants the British Oil and Cake Mills Limited the bills of lading for 27,132 and 44,280 bags of oil beans under circumstances in which the property in the goods referred to in such bills of lading passed to the indorsees, have no further rights under the contract evidenced in such bill of lading; (3) a declaration that the notice dated the 1st Nov. 1911, purporting to be given by H. D. Blyth and Co., on behalf of the defendants Mitsui and Co. Limited, calling upon the plaintiffs to appoint an arbitrator under the terms of a charter-party of the steamship *Den of Mains*, dated the 26th April 1911, is bad in law and of no effect; (4) an injunction to restrain the defendants Mitsui and Co. Limited from proceeding with the threatened arbitration.

On the 17th Nov. the plaintiffs issued, by special leave, a summons for further directions, asking that the first defendants be restrained until after the hearing of the action from proceeding with the arbitration; alternatively, that leave be given to the plaintiffs to revoke the submission to

arbitration; and, alternatively, that the notice appointing G. as sole arbitrator be set aside, and for the plaintiffs to have seven days in which to appoint their arbitrator.

Meanwhile the second defendants, on the instructions of the first defendants, paid the balance of freight claimed into court.

The points made on behalf of the plaintiffs were three: (1) That the first defendants had no power to appoint Mr. Glover as sole arbitrator; (2) that the notice of the 1st and 10th Nov. were bad as they were not served on the plaintiffs, but only on Galbraith, Pembroke, and Co.; and (3) that the obligation of the plaintiffs under the charter-party to deliver the beans had ceased.

The Arbitration Act 1889 (52 & 53 Vict. c. 49) provides:

Sect. 6. Where a submission provides that the reference shall be to two arbitrators, one to be appointed by each party; then, unless the submission expresses a contrary intention, (a) if either of the appointed arbitrators refuses to act, or is incapable of acting, or dies, the party who appointed him may appoint a new arbitrator in his place; (b) if, on such a reference, one party fails to appoint an arbitrator, either originally or by way of substitution as aforesaid, for seven clear days after the other party, having appointed his arbitrator, has served the party making default with notice to make the appointment, the party who has appointed an arbitrator may appoint that arbitrator to act as sole arbitrator in the reference, and his award shall be binding on both parties as if he had been appointed by consent. Provided that the court or a judge may set set aside any appointment made in pursuance of this section.

Bray, J. held (1) that there was nothing in the contract or the circumstances of the case to satisfy the court that it was the intention of the shipowners and charterers that the responsibility of the former under the charter-party had ceased; and (2) that the submission to arbitration came within sect. 6 of the Arbitration Act 1898.

The plaintiffs appealed.

The arguments sufficiently appear from the judgments.

Atkin, K.C. and *Keogh* for the appellants.

Leck for the respondents.

The following cases were cited:

North London Railway Company v. *Great Northern Railway Company*, 48 L. T. Rep. 695; 11 Q. B. Div. 30.

VAUGHAN WILLIAMS, L.J.—Bray, J. thought it right to deal with what has just been referred to as the main point. Now, the main point, as it has been called, was a question of the area of the arbitration, the agreement for which was contained in the charter-party, and the particular question was whether it extended to the case where there had been a bill of lading, and there was a claim by the charterers in the circumstances set forth in the judgment of Bray, J., who, sitting as commercial judge, thought it was desirable to deal with this point, and did make it the main point of his decision. But I do not think we are bound to adopt that course, because I think that there are sufficient grounds wholly independent of this question of commercial law for supporting the refusal by Bray, J. to either grant the injunction or make an order for the revocation of the submission to arbitration.

I do not think it is necessary for me to prolong my judgment by making any lengthened statement of the facts as a preliminary part of my judgment. I state generally that there is the action between the Steamship Den of Airlie Company Limited and Mitsui and Co. Limited and the British Oil and Cake Mills Limited, and that the plaintiffs' claim in that action was, first, for "balance of freight, 103*l*. 1*s*. 6*d*."; secondly, "a declaration that the defendants Mitsui and Co. Limited, having indorsed over to the defendants the British Oil and Cake Mills Limited the bills of lading for 27,132 and 44,280 bags of oil beans under circumstances in which the property in the goods referred to in such bills of lading passed to the indorsees, have no further rights under the contract evidenced in such bills of lading"; and, thirdly, "a declaration that the notice dated the 1st day of Nov. 1911, purporting to be given by H. D. Blyth and Co. on behalf of the defendants Mitsui and Co. Limited, calling upon the plaintiffs to appoint an arbitrator under the terms of a charter-party of the steamship *Den of Mains* dated the 26th day of April 1911 is bad in law and of no effect," and, lastly, "an injunction restraining the defendants Mitsui and Co. Limited from proceeding with the said threatened arbitration."

A summons was taken out at chambers applying, as an interlocutory proceeding, for the injunction to restrain these people from going on with the arbitration, and, secondly, for revocation of the submission to arbitration. So far as the injunction is concerned, in our judgment there is no jurisdiction to grant that injunction. That really was decided first in the case of the *North London Railway Company* v. *Great Northern Railway Company* (48 L. T. Rep. 695; 11 Q. B. Div. 30). That was a case which was decided before the passing of the Arbitration Act 1889. It was decided in 1883, and the headnote, which is quite accurate, says: "The Judicature Act 1873, s. 25, sub-s. 8, has given no power to the High Court to issue an injunction in a case in which no court before that Act had power to give any remedy whatever. Therefore the High Court has no jurisdiction to issue an injunction to restrain a party from proceeding with an arbitration in a matter beyond the agreement to refer, although such arbitration proceeding may be futile and vexatious." That being the headnote, I will now read a short passage from the judgment of Brett, L.J., at p. 35 of 11 Q. B. Div. 30: "The respondents contend that they have a right to maintain that injunction because they say it is clear that the subject-matter of dispute is not one within the arbitration clause in the

agreement, and that therefore the arbitrators have no jurisdiction to proceed so as to bind the respondents, and if the arbitration is allowed to proceed the proceedings will be futile and vexatious, and cause delay." That is very like what is said in the present case. The Lord Justice then continues: "On the other side it is said that if the subject-matter of arbitration is beyond the jurisdiction of the arbitrators, then the respondents may stay away, and then, though it may be true that the arbitration will be futile, it will do no injury to the respondents, and put them to no expense, nor stop them from proceeding in due course with the present action, and if it be vexatious it is not a vexation of which the law can take notice. The question is whether, under those circumstances, the court can issue an injunction. Now, the cases before the Judicature Act would seem to show that no court would have issued an injunction in a case where if the thing went on there would be no legal injury. It is obvious, as it seems to me, that where, as it is here assumed, the whole matter is beyond the jurisdiction of the arbitrators, the fact of the appellants going on with that futile arbitration is no legal injury. Suppose an award was made the respondents could not bring an action on that account against the appellants. It would not be a cause of action known to the law. If they could not bring an action for it after the award they certainly could not bring an action before the award. Therefore it seems to me that before the Judicature Act neither the Court of Chancery nor any common law court would have had any jurisdiction to issue an injunction to enjoin the appellants from proceeding with this futile arbitration, and I doubt whether under the circumstances of this case any court before the Judicature Act would have had any right to put the appellants to an election." Then he says later, upon p. 36: "I personally have a very strong opinion that the Judicature Act has not dealt with jurisdiction at all, but only with procedure; that it has given to the one division the procedure of the other division, or to the two divisions reciprocally the procedure of the other division, and that in some cases it has amended the procedure of both divisions, but that it has not given to any court a jurisdiction which no court had before. Individually I should be inclined to hold that if no court had the power of issuing an injunction before the Judicature Act, no part of the High Court has power to issue such an injunction now," and he says it is not necessary to decide that. Then Cotton, L.J. in his judgment deals with the cases where an injunction in these arbitration cases was sometimes granted by the Court of Chancery; but that was, as he points out, only where there was an equity justifying that interference, and it cannot be suggested in this case that there was any such equity. I ought to refer to the case of *Re Intended Arbitration between Smith and Service and J. Nelson and Sons* (*sup.*). The headnote was as follows: "Where an agreement to refer disputes to arbitration provides for a reference to three arbitrators, one to be appointed by each of the parties and the third by the two so appointed, and one of the parties refuses to appoint an arbitrator, the court has no power, either under or apart from the Arbitration Act 1889, to order him to do so," and in the course of that case judgments were delivered by Lord Esher, M.R., Lindley, L.J., and Bowen, L.J. It will be noticed that the observations of Bowen, L.J. apply not only to the case of an injunction, but also to the question of revocation Lindley, L.J. says, at p. 552: "It has been said that the law has been altered in that respect by the Act of 1889." Really he is dealing there with revocation, and I will not read the passage again. He points out that the law has not been altered. Under those circumstances, in my judgment, the law stands as it did before the Judicature Act and before the Arbitration Act 1889, in such a position that in respect of the injunction there is absolutely no jurisdiction in this court to grant such an injunction.

Having said that I now propose to deal with the question of revocation. With regard to the question of revocation I think it is undoubted, and really it was admitted on both sides, that there is power to revoke; in fact, sect. 1 of the Arbitration Act 1889 by its terms recognises this power. But what is said, and what practically is not denied on either side, is that although the court has power to give leave for the revocation of a submission to arbitration, that is a power which, as was said in *Scott* v. *Van Sandau* (1 Q. B. 102) is to be exercised with great caution. The last words in the case of *Scott* v. *Van Sandau* (*sup.*), at p. 110, are: "We will only observe that the discretion of the court to which this appeal is made ought to be exercised in the most sparing and cautious manner, lest an agreement to refer, from which all might reasonably hope for a speedy end of strife, should only open the floodgates for multiplied expenses and interminable delays." In that case the ground upon which it was sought to obtain an order for revocation of the submission was the declared intention of the arbitrator to admit inadmissible evidence. When the matter came before the court they were far from saying that there were no grounds on which it might reasonably be argued that the evidence was inadmissible; but although that was so the court refused to make the order or grant the leave for revocation, and they held there was no sufficient ground for giving leave (under stat. 3 & 4 Will. 4, c. 42, s. 39) to revoke the submission, though the objections to evidence might be well founded. I take it that was accepting the proposition of the court at the end of Lord Denman's judgment in that case—namely, that this power of giving leave for revocation is a power which ought to be exercised in a most sparing and cautious manner; and I say further, speaking of *Scott* v. *Van Sandau* (*sup.*) itself, as far as I recollect the judgment, and speaking generally of arbitration, that when you are considering whether you shall make an order for leave to revoke or not, one matter that you ought always to bear in mind is that you should make no order which is likely to lengthen the arbitration proceedings, and, obviously, in a case where a question of construction of the submission to arbitration arises, you will be very likely to lengthen the proceedings enormously if you do not allow first the facts to be found to which the submission to arbitration when ultimately construed, will apply. Under those circumstances I am of opinion in the present case that, although the ground upon which it was sought to say that the submission to arbitration in the charter-party had no application, it is an arguable ground, and more than that, it raised a

question which ultimately, either in this case or in another case, must be decided, yet, *primâ facie* having read the judgment of Bray, J., I feel that there is most cogent ground for saying that the submission to arbitration would apply to such a case as this in which the holder of the bill of lading comes to be concerned.

Under these circumstances, in the exercise of our discretion in this case I think that we ought not to give leave or make an order for the revocation of this submission; and I repeat once more, so that there shall be no mistake, that we also decide that we ought not to grant the injunction that was asked for, for, in our opinion, we have no jurisdiction to grant such an injunction. The result is this appeal is dismissed, and dismissed with costs.

Farwell, L.J.—I am of the same opinion. The appeal is from the refusal of the learned judge to grant an interlocutory injunction, and also from refusing to revoke the submission to arbitration. On the first question of injunction I think we are bound by authority. It is not disputed that there was and is no remedy at common law against a party to arbitration who goes on at his own risk with the arbitration proceedings. As Lord Esher (then Brett, L J.) puts it, at p. 36 of the case of *North London Railway Company* v. *Great Northern Railway Company* (*sup.*), whether before or after the award has been made, no one, he says, has ever heard of an action against a man who procured the arbitrator to make the award because he did it; and, secondly, as he also says, if you could not maintain that action for damages afterwards you could not get an injunction from a common law court before. In the same way there were no means in which equity could have interfered, because the matter was one purely of common law arising under the circumstances of a proceeding in an arbitration when it was doubtful whether there was jurisdiction or not; even although there was no jurisdiction there was no equity which enabled the court to interfere in aid of the common law. Then it was said there was an exception to that in equity, and so there was, because if there was any equity arising out of fraud or mistake, or anything of that sort on which you could impeach or seek to set aside the agreement containing the reference to arbitration, then as incident to that equity the court could restrain interim proceedings on the arbitration clause. That is apparent from *Kitts* v. *Moore and Co.* (*sup.*). There is nothing of that sort here, because there is no ground upon which the agreement can be impeached. It is a perfectly fair and proper agreement, there is no mistake, no fraud, nothing of the sort, and no equity whatever. No bill could possibly have been filed to raise any such question in the old Court of Chancery as is sought to be raised here. That being so, the question of injunction goes. Then it is said that we have jurisdiction under the Arbitration Act to revoke the submission. The words of the Act are general, and I think that it is a question for the judicial discretion of the court in each case whether there should be any such revocation or not, but, as has been pointed out in the case of *Re Intended Arbitration between Smith and Service and J. Nelson and Sons* (*sup.*), what is revoked is not the submission to arbitration, but the authority of the particular arbitrator; and underlying that there always must be something in the nature of a personal disqualification of some sort or other which renders it improper for that particular arbitrator to act. The submission would remain. An action for refusal to carry out an agreement for arbitration will always lie. The submission remains, although the arbitrator who is to act under it may be removed.

In the present case it is said that the arbitrator has no authority on the true construction of this agreement to proceed to make any such award as is asked. On the construction of the document there is no question that the original submission to arbitration does extend to all matters, and what is alleged is that by reason of matters subsequent, documents and dealings between the parties, there is a question whether this submission does or does not apply to the circumstances as they now exist. In my opinion, having regard to the cases referred to by the President, it would be wrong for us to exercise our discretion by cutting short a matter of this sort which is certainly open to serious question, and cutting short the arbitration and saying it shall not go on simply because there may be a question whether, when the person who obtains the award comes to sue upon it, it may be a defence that the matter of the award was outside the arbitrator's jurisdiction.

I think there are three ways in which you can raise a question of this sort. I am not prepared to say in a perfectly plain case it would not be right to revoke the submission if the arbitrator was proceeding to deal with a matter absolutely and clearly outside his jurisdiction altogether. There is always power to state a special case, and there is the power to defend on the ground that the award was made without jurisdiction. In the case of *East and West India Dock Company* v. *Kirk and Randall* (*sup.*) the House of Lords put it to the parties to agree to the statement of a special case, and if they failed to do so the House intimated that the appointment of the arbitrator would be revoked, and the parties agreed to state a case. It only shows that it is the convenience of the parties that the court has regard to in considering what is the best way in which the question could be determined. In my opinion it would be wrong for us here, not knowing the facts which the arbitrator would have to find, to consider whether this ought to be revoked on a question of construction alone, especially when a learned judge like Bray, J. has himself, although I confess I think on the question of the injunction at any rate he had no jurisdiction to do it, expressed his opinion that there is nothing in the contention. It is not necessary for us to review that now. It is sufficient that he has so stated it, and certainly on the first blush of the matter I see no reason to doubt the correctness of that decision. The question really is a very small one of fact, whether there has been short delivery or not. Whether that question is left to this particular arbitrator or not can be determined altogether in one matter in the most expeditious and cheapest manner. I think, therefore, that this appeal should be dismissed.

Kennedy, L.J.—I am of the same opinion, and I have little to add. I have nothing to add upon the question of the injunction which is asked for. I think that is clearly a matter in

which we have no jurisdiction to do that which the appellant asks us to do.

With regard to the other question I think Mr. Leck was right in saying it was a question of discretion. It is also a case in which, as far as I can understand, on the authorities which have been cited to us, or to which we have been referred directly or indirectly, the discretion is one which must be very carefully exercised. It is quite clear to me that the revocation of a submission, whether it was under the old Common Law Procedure Act or under the Arbitration Act, is a revocation of a submission where the reference is made to an arbitrator. It has no application to a general agreement to refer matters in dispute to arbitration. That was very clearly laid down in a case under the Common Law Procedure Act in 1879 by the Court of Appeal in *Piercy* v. *Young* (42 L. T. Rep. 710; 14 Ch. Div. 200). In that case there was, as here, a general agreement to refer any differences or disputes to be settled by an arbitrator to be agreed upon, whose decision was to be final, and in the very opening words of his judgment Jessel, M.R. says: "With respect to the last point, we are all clearly of opinion that a general agreement to refer matters in dispute to arbitration cannot be revoked. The authorities cited have no application. They all relate to cases in which the reference has been actually made to a particular arbitrator."

It is said that that position is the position here, and I agree that since the appointment of an arbitrator there is a position of affairs in which the question of revocation could be considered; but I certainly, speaking for myself, see no sort of ground for discretion in the case that is made, which is not that the submission to refer is itself one which shows that the matter which it is said is going to be dealt with by the arbitrator is outside the submission. Clearly there is no such case. The agreement to refer is as wide as wide can be, but it is said that by reason of some subsequent facts the condition or relation, perhaps, I should call it, of the parties has ceased to be such that that which was a perfectly good agreement of arbitration has no application. No case has been suggested to us or shown to us in which the court has been asked to exercise a discretion to revoke under any such circumstances as those. The nearest that can be put or suggested is a case in which an arbitrator is shown to be going to deal with something which is outside the submission. The difference between that case and this seems to me very strong. Even in that case I understand the courts to have said, and my brothers have already quoted the relevant authorities, that they would be very slow to exercise their discretion and revoke the submission, and very careful in the exercise of its jurisdiction, but here without saying more, because we have not heard Mr. Atkin's argument on the point, nor the argument of his opponent, we have before us a case in which, upon the facts in the considered judgment of Bray, J., he held that this ground was entirely illusory when you come to examine it by the light of facts, and to say the least, therefore, it is a case in which there is no strong probability of the alleged excess beyond the jurisdiction of the submission being likely to take place. And as a member of the court that has to exercise the discretion, I say most certainly there is no ground shown for the exercise of such discretion, and I think this appeal fails and must be dismissed.

Appeal dismissed.

(Before VAUGHAN WILLIAMS, FARWELL, and KENNEDY, L JJ.)

THE UMSINGA. (*a*).

Collision—River Thames—Thames By-laws 1898, *arts.* 4, 14—*Meaning of "master"—Look-out—Whistle—Port of London—Compulsory pilotage—General Pilotage Act* 1825 (6 *Geo.* 4, *c.* 125), *s.* 59.

(1) *A steamship belonging to the port of London while going down the Thames in charge of a duly licensed Trinity House pilot on a voyage from London to East Africa with a cargo and passengers collided with some barges and tugs. The master had been absent from the bridge for some time before the collision, and only returned shortly before the collision. In a damage action brought by the owners of the injured craft it was held that the master was not negligent in not being on the bridge in accordance with art.* 14 *of the Thames Rules, that the pilot was solely in fault, and that, following the case of* The Hankow (40 *L. T. Rep.* 335; 4 *Asp. Mar. Law Cas.* 97 (1879); 4 *P. Div.* 179), *the owners of the steamship were not liable for the damage as the pilot was compulsorily in charge, as the steamship was navigating in the port of London, a place in relation to which particular provision as to the appointment of pilots had been made by charter and by Act of Parliament within the meaning of the statute* (6 *Geo.* 4, *c.* 125, *s.* 59). *On appeal to the Court of Appeal:*

Held, affirming the decision of Sir S. Evans, P. (*reported below and in* (1911) *P.* 234) *that the owners of the steamship were not liable as the pilot was compulsorily in charge, for the steamship was navigating within a port in relation to which particular provision as to the appointment of pilots had been made.*

The Hankow (*ubi sup.*) *approved.* (*b*)

(2) *Observations by the President* (*Sir Samuel Evans*) *in the Admiralty Court as to the effect of rule* 14 *of the Thames Rules and as to the duties of masters of ships in charge of pilots.* (*c*)

DAMAGE ACTION.

Appeal from a decision of Sir S. Evans, President, by which he held that the owners of the *Umsinga* were not liable for the damage caused by a collision which occurred between the

---

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

(*b*) A note as to the charters of the Trinity House will be found in the report of *The Hankow*, at p. 97 of 4 Asp. Mar. Law Cas. The charters have been printed and published (1730), and there is a copy of the publication in Lincoln's-inn Library. The case of *The Cayo Bonito*, reported in 9 Asp. Mar Law Cas. 445 and in (1903) P. 203, contains much valuable information.

(*c*) In the course of the case in the Admiralty Court *The St. Paul* (1908) P. 320; (1909) P. 43; 11 Asp. Mar. Law Cas 152) was referred to as to the duties of masters and pilots with regard to whistling. The point was left open by the learned President. *The Shakkeborg* (1911) P. 245, and in *Shipping Gazette* April 11, 1911) was also cited, in which case Bargrave Deane, J. decided, upon the advice of the Elder Brethren, that the duty of a look out in the river Thames is to report every material light as soon as it becomes material.

Umsinga and certain barges and tugs owned by the appellants on the ground that at the time of the collision the *Umsinga* was in charge of a compulsory pilot who was alone to blame for the collision.

The appellants, plaintiffs in the court below, were the owners of the tugs *Harlow*, *Grappler*, *Reliance*, and *Growler*, and the barges *Apollo*, *Edwin*, *Turkey*, and *Aqua*.

The respondents, defendants in the court below, were the owners of the steamship *Umsinga*.

The case made by the appellants was, that about 8.35 p.m. on the 8th Oct. 1909 the barges and tugs mentioned above were lying, properly moored, in their barge and tug roads off Charlton, swung head up river. There was a light on the outside tug, and a watch was being kept on the roads.

In these circumstances, the *Umsinga*, instead of keeping clear of the roads as she could and ought to have done while coming down the river, struck the barge *Apollo*, breaking through the barge roads and breaking some of the craft adrift and driving the *Aqua* against the tug *Harlow*, breaking her adrift and damaging all the other craft mentioned above. When first seen by those on the barge roads she was close to and those on the tug roads saw her masthead and side lights one to two cables distant up river.

The appellants charged those on the *Umsinga* with bad look-out and with failing to keep clear of the roads.

The respondents admitted colliding with the craft, but denied that their servants had been guilty of negligence. The case they made was that the *Umsinga*, a steamship of 2958 tons gross and 1869 tons net register, manned by a crew of sixty-eight hands all told, was proceeding down Bugsby's Reach of the river Thames, on a voyage from London to Beira with a general cargo and passengers. The *Umsinga* was in charge of a duly licensed Trinity House pilot, and was making three to four knots an hour. Her regulation lights were duly exhibited and burning brightly, and a good look-out was being kept on board of her.

In these circumstances as the *Umsinga* was rounding into Woolwich Reach under slight starboard helm and keeping to the southward of mid-channel, the white lights of craft and tugs lying moored at the plaintiffs' barge and tug roads were seen a little on the starboard bow from 300 to 400 yards off. A sailing barge showing a green light was also observed standing to the southward about 400 to 500 yards distant on the port bow, and a tug showing masthead and red lights was observed apparently coming out from the tug roads and bearing a little on the starboard bow. The helm of the *Umsinga* was then ported by the pilot's orders and steaded, and when the tug, having got on to the port bow of the *Umsinga*, began to go astern the helm of the *Umsinga* was again ported as ordered by the pilot.

Shortly afterwards, in order to clear the craft at the barge roads, the helm was by the pilot's orders put hard-a-starboard, but the stem of the *Umsinga* first collided with the craft moored at the barge roads, and directly afterwards with the tugs in the tug roads. Just before the collision the engines of the *Umsinga* were stopped.

The respondents alleged that if and in so far as the collisions and damage were caused by fault on the *Umsinga*, such fault was solely that of the pilot of the *Umsinga* who was compulsorily in charge.

The case was tried on the 27th April 1911, and, so far as the question of compulsory pilotage was concerned, turned upon the effect of the provisions of sect 59 of the General Pilotage Act 1825 (6 Geo. 4, c. 125). (a)

The following Thames rules were referred to:

4. The word master when used in relation to any vessel means any person whether the owner, master, or other person lawfully or wrongfully having or taking the command, charge, or management of the vessel for the time being.

14. The master of every steam vessel navigating the river shall be on one of the paddle boxes or on the bridge of such steam vessel, and shall keep or cause to be kept a proper look-out during the whole of the time it is under way, and shall remove or cause to be removed any person other than the crew, who shall be on the paddle boxes or bridge of such steam vessel.

49. Every steam vessel and steam launch when approaching another vessel so as to involve risk of collision shall slacken her speed, and shall stop and reverse if necessary.

The following cases were also cited:

The Velasquez, 2 Mar. Law Cas. O. S. 544; 16 L. T. Rep. 777; L. Rep. 1 P. C. 494;
The Tactician, 97 L. T. Rep. 621; 10 Asp. Mar. Law Cas. 534; (1907) P. 244;
The St. Paul, 100 L. T. Rep. 184; 11 Asp. Mar. Law Cas. 152; (1909) P. 43.

The appellants during the course of the case on finding that the master of the *Umsinga* had been absent from the bridge for some time before the collision, and had only returned to it just before the collision, alleged that art. 14 of the Thames Rules had been broken.

Judgment was reserved and was delivered on the 3rd May.

The President.—The defendants' steamship, the *Umsinga*, came into collision with certain barges and tugs belonging to the plaintiffs properly moored in barge and tug roads in Bugsby's Reach, on the south side of the Thames, and caused damage.

The *Umsinga*, outward bound, was proceeding down Bugsby's Reach in charge of a pilot duly licensed by Trinity House. He was one of the choice pilots of the defendants' line. The weather was fine. Neither weather, nor wind, nor tide played any material part in the collision.

There were hardly any craft under way in the reach. In fact, only two such craft were proved to be in the reach. One was a sailing barge; she was to the northward of the *Umsinga*, and at one time headed south, showing her green light; but she afterwards put about. The pilot said, and repeated positively, that the sailing barge gave him no trouble, and had nothing to do with the collision. The other was a tug, the *Rotifer*, with which I will deal hereafter. It was said that another craft, a barge under oars, was near at the time. A witness named Davies, who described himself as an "outside witness," gave evidence as to this barge. He never saw the sailing barge above referred to, nor the tug *Rotifer*. No

(a) The section is set out in the judgment of Vaughan Williams, L.J. (*infra*).

witness for the plaintiff saw or made any mention of Davies or his barge. I cannot accept Davies' testimony, and this barge under oars can be dismissed from further consideration.

The tug *Rotifer* had brought up river a dumb barge (the *Rivulet*), lashed to her starboard side. She had intended to make fast and leave this barge on the outside of the coaling station on the south side of the river, where some of the damaged barges were moored. She turned round under a starboard helm, so as to get the barge alongside on the outside of the roads. The watchman of the coaling station, however, directed the *Rotifer* to bring the barge inside the roads. The *Rotifer* thereupon went on a port helm under the stern of the coaling station, and she had got inside the roads before the collision happened.

There was no difficulty in the way of the safe navigation of the *Umsinga*. Nevertheless she headed right into the roads and collided with various barges and tugs which were moored there. This can only be accounted for by negligence, or error, in her management. The pilot said he did not manœuvre her in relation to the sailing barge. I am of opinion, however, upon the verbal evidence and the documents, that he did give an order to port with reference to the green light of that barge. Later, he ported still more, intending to go astern of the *Rotifer*, whose lights he saw. He stated that the *Rotifer* had gone out of the roads, was making way to the northward, and came to bear a little on his port bow; that the tug afterwards went astern, causing him difficulty, and that he therefore starboarded his helm.

Upon the whole of the evidence I cannot accept this story. I have come to the conclusion that the pilot ported too much, starboarded too late, and failed to stop and reverse his engines in proper time. I am clearly of opinion, and in this opinion the Elder Brethren fully concur, that the collision was due to the error or fault of the pilot. The defendants pleaded and contended that the pilot was solely to blame, and that they were relieved from liability by the statute. On the part of the plaintiffs it was contended that the defendants had not shown that the pilot was solely to blame. On the contrary, it was said that the master and officers of the *Umsinga* were negligent, or partly in fault, in that they had not performed their duties, and had not rendered the assistance which they ought to the pilot. Firstly, it was argued that there was a bad look-out on board the *Umsinga*. The chief officer was on the look out on the forecastle head, with the ship's carpenter standing by the windlass. The chief officer was a competent and experienced man. I am satisfied that he kept a good look-out, and made all the necessary reports to the bridge at the proper time. On the bridge were the pilot, the third officer (at the telegraph) and a lascar (at the wheel). The third officer held a first mate's certificate, and it was not suggested that he was not a capable and reliable officer. The orders of the pilot were duly attended to and obeyed. Secondly, it was argued that the sound signals were not given, in accordance with the Thames Rules, when the helm was ordered to be ported twice; and at the last to be starboarded; and that the officers of the vessel were to blame for this. In fact, no order to whistle was given by the pilot. Counsel for the plaintiffs argued, nevertheless, that the ship's officer on the bridge should have blown the whistle signals when the helm orders were given, although the pilot did not direct this to be done. The contention, on the other hand, was that the direction to sound the whistle should come from the pilot, and that he had a discretion as to whether, and when, they should be given. But this point, as counsel for the plaintiffs said, did not arise if the story put forward by the *Umsinga* that the *Rotifer* was making for the north bank, outside the roads, and that she afterwards went astern, was not accepted. I do not accept that story. The point, therefore, does not arise for decision in this case, and need not be further discussed. A similar point appears to have been expressly left open by the Court of Appeal in *The St. Paul*; (11 Asp. Mar. Law Cas. 152; 100 L. T. Rep. 184; (1909) P. 54, 56).

The remaining contention—which was put by counsel for the plaintiffs as part of the alleged bad look-out—was that the master of the *Umsinga* was not on the bridge at the time of the collision and that, therefore, he was in fault. He had left the bridge four or five mintues before the collision. It was not suggested that necessity required him to go. He said he told the pilot that he was going down for a few minutes. The pilot did not remember this; but he did not miss the master. The master was on his way back just about the time the accident happened.

The third officer, who was on the bridge, was a competent officer. He pointed out various matters to the pilot. The pilot did not pretend that he required any further assistance, or that the circumstances called for the attendance on the bridge of the master himself, in addition to the officer and the man at the wheel.

I have said that the navigation of the vessel in the state of the weather, and in the conditions which prevailed in the reach, was singularly free from difficulty; but it was argued on the part of the plaintiffs that rule 14 of the Thames Rules makes it obligatory for the master himself to be on the bridge at all times within the limits to which the rule extends It has never been held, or contended, so far as I am aware, that this rule requires the presence of the master on the bridge at all times and in all circumstances—within the range of the rule—when the vessel is in charge of a compulsory pilot. It is easy to conceive cases in which, even apart from any such rule, a master must be on the bridge before it can be rightly said that all the assistance which the law requires to be given to the pilot by the master and crew is given, and in which his absence might be evidence of negligence or of default. Indeed, in most rivers like the Thames I should consider it very advisable that the master should be on the bridge with the pilot, although the pilot is in charge of the vessel for the time being. But, in my opinion, it cannot be held as a matter of law, or as an inflexible rule of good navigation, that the master must be there, and that his absence amounts to default for which the owners are liable, when he provides a competent officer, or where there are no special circumstances of difficulty, or no special matters within his knowledge of which he ought to be ready to inform the pilot. It is very doubtful whether, when a compulsory pilot is in charge, the pilot is not "the master" within the meaning of rule 14 (*vide* the definition of "master" in rule 4). If by "master" in rule 14 is meant

"the master of the vessel," the rule apparently requires him to remove the pilot himself from the bridge, as he is a person "other than the crew."

It is beside the question to inquire whether the master, if on the bridge, might by suggestion, or advice, or other legitimate intervention, have caused the pilot to avoid the collision. If he is not there, and is not bound by law, or by the rules of good navigation, to be there, the court cannot surmise what he would have done if he was there, in order to fasten liability on the owners for the fault of the compulsory pilot.

In the circumstances of this case, I find that the collision was solely due to the fault of the pilot. I understand that counsel for the plaintiffs wishes to argue that pilotage was not compulsory in this case. If he does, I postpone my formal judgment until that question has been argued and determined.

The point as to whether the pilotage was compulsory was argued on the 17th May, when judgment was reserved.

Judgment was given by the President on the 19th May.

The PRESIDENT.—The collision in this case took place in Bugsby's Reach in the river Thames. Bugsby's Reach is between Lea Ness and Hook Ness. This is the portion of the river which lies, broadly speaking, between the West India Docks at the one end and the Royal Victoria Docks at the other.

I found that the collision was due solely to the fault of the pilot on the *Umsinga*, the defendants' vessel. The defendants say that at the place of collision pilotage was compulsory; the plaintiffs contended that it was not. Sect. 603 of the Merchant Shipping Act 1894 provides that (subject as therein mentioned) the employment of pilots should continue to be compulsory in all districts where it was compulsory immediately before the commencement of the Act, but that all exemptions from that compulsory pilotage should continue to be in force.

Upon the authorities, the question whether the *Umsinga* was at the time and place where the collision occurred exempted from compulsory pilotage depends upon sect. 59 of 6 Geo. 4, c. 125. The *Umsinga* belonged to the port of London. She was outward bound and carried passengers. The collision took place within the port of London. She was, in fact, in charge of a Trinity House licensed pilot at the time.

The question is, did the collision occur in a port or place in relation to which particular provision was made before the statute of 6 Geo. 4, c. 125, either by any Act or Acts of Parliament, or by any charter or charters, for the appointment of pilots. If yea, pilotage was compulsory. If nay, the vessel was within the exemption from compulsory pilotage.

In my opinion this question was decided by the case of *The Hankow* (40 L. T. Rep. 335; 4 P. Div. 197; 4 Asp. Mar. Law Cas. 97). That decision was pronounced in 1879. Fifteen years ago the Merchant Shipping Act 1894 (which no doubt is almost, but not quite, a purely consolidating statute) was passed. Both long before, and ever since, 1879 the practice has been to treat the Thames as a place where pilotage is compulsory. Whether I thought the *Hankow* was rightly decided or not, I should feel bound to follow it in these circumstances, and after this lapse of time. Other cases which were cited and said to be inconsistent with it—namely, *The Killarney* (Lushington, 427) *The Stettin* (Brown and Lushington, 199) and *General Steam Navigation Company* v. *British, &c., Company* (19 L. T. Rep. 357; L. Rep. 3 Ex. 330; 20 L. T. 581; L. Rep. 4 Ex. 238)—were not decisions on the same point. But I wish respectfully to add that in my opinion the decision in *The Hankow* was right, not only on the ground upon which it was rested—namely, that the locus of the collision was in a port or place in relation to which particular provision for the appointment of pilots had been made by charter before the passing of 6 Geo. 4, c. 125, but also on the ground that such a provison had also been made before that time by an Act or Acts of Parliament. The Act then in force was 48 Geo. 3, c. 104. Other Acts to a similar effect had preceded this.

I hold upon the authority of *The Hankow*, and upon the words of sect. 59 of the 1825 Act, that at the place where the collision happened there was no exemption from compulsory pilotage in the case of the *Umsinga*. The defendants are accordingly entitled to judgment, as the compulsory pilot was solely to blame.

On the 7th July 1911 the plaintiffs served a notice of appeal on the defendants appealing against the decision given on the 19th May, and asking for an order that judgment should be entered for the plaintiffs with costs.

The appeal was heard on the 27th and 29th Jan. 1912.

Bateson, K.C. and *Balloch* for the appellants, William Cory and Son Limited.—The question raised in this case is whether the pilot in charge of the *Umsinga* was compulsorily in charge. The *Umsinga* was in her own port proceeding down the Thames with cargo and passengers on board on a voyage to East Africa. The question turns on sect. 603 of the Merchant Shipping Act 1894 which reproduces sect. 503 of the Merchant Shipping Act 1854, and sect. 59 of 6 Geo. 4, c. 125, is the section in which the exemptions from compulsory pilotage are to be found. The judgment in this case which follows *The Hankow* (*ubi sup.*) is wrong. *The Hankow* (*ubi sup.*) was wrongly decided, for though a provision had been made for the appointment of pilots for the river Thames no such provision had been made for the port of London, and the port of London was not a place for which particular provision had been made for the appointment of pilots within the meaning of sect. 59 of 6 Geo. 4, c. 125. To understand the meaning to be attached to that Act it is necessary to see how this matter was dealt with in earlier Acts. The preamble and sects. 1, 8, 9, 11, and 12 of 5 Geo. 2, c. 20 passed in 1732 shows the origin and powers of the Trinity House, but there is no compulsion on any ship to take a pilot under that Act. Then, in 1808, 48 Geo. 3, c. 104 was passed, that Act is the first General Pilotage Act. It deals with the powers of the Trinity House and makes pilotage compulsory. It is in this Act that the exception in question in this case first appears. Sect. 55 imposes penalties on masters of vessels piloted by any other than a licensed pilot, but excepts from the penalty masters of any vessels who shall act as a pilot within the limit of the port or place to which the ship belongs, not being a port or place

in relation to which provisions hath heretofore been made by an Act or Acts of Parliament or by any charter or charters for the appointment of pilots. That Act only remained in force for four years, but in 1812 was replaced by 52 Geo. 3, c. 39, and sect. 59 of that Act reproduces the same section. Then, in 1825, 6 Geo. 4, c. 125 was passed. Sect. 5 of that Act gave the Trinity House power to appoint sub-commissioners, but they are not permitted to do this in ports or places within or for which particular provision shall have been made for the appointment of pilots, and sect. 59 provides that a master . . . of any other ship or vessel whatever, whilst the same is within the limits of the port or place to which she belongs, the same not being a port or place in relation to which particular provision hath heretofore been made by any Act or Acts of Parliament or by any charter or charters for the appointment of pilots, shall and may conduct or pilot his own vessel. The port at which a British ship is registered is deemed to be the port to which she belongs:

> Merchant Shipping Act, 1894 (57 & 58 Vict. c. 60), s. 13.

The words particular provision mean provision made by an authority other than the Trinity House. The correctness of the decision in *The Hankow* (*ubi sup.*) has been questioned. See

> Marsden's Collisions at Sea, 6th edit., p. 244, note *z*, and the note to the *Hankow*, in 4 Asp. Mar. Law 97, note *a*.

The charter of James II. only relates to vessels taken into and out of the river, and does not refer to the Port of London. In *The Killarney* (Lush. 427) a particular provision was proved to have existed:

> 52 Geo. 3 c. 39, s. 21.

In *The Stettin* (Br. & L. 199) it was held that no Act of Parliament applied.

Dawson Miller (*Laing*, K.C. with him) for the respondents.—Pilotage is compulsory in this case unless the appellants can bring this vessel within the exception. Such a provision was made by the charter of James II. referred to in *The Hankow* (*ubi sup.*), and apart from the charter 3 Geo. 1, c. 13, also contained particular provisions in relation to this port or place. After the lapse of thirty years the decision in *The Hankow* should not be departed from.

Vaughan Williams, L.J.—This case has been argued at considerable length, but I am far from saying that it does not raise questions of difficulty. I can express the difficulty, I think, best in this way. Sir Samuel Evans, the President, includes among the grounds of his decision the case of *The Hankow* (40 L. T. Rep. 335; 4 Asp. Mar. Law Cas. 97; 4 P. Div. 197). The decision in *The Hankow* is a decision which has been questioned, and, although *The Hankow* was decided in 1879, it would be untrue to say that *The Hankow* has always been accepted as a sound decision under the Acts of Parliament relating to compulsory pilotage, and the authority of Trinity House, and of the corporations, whom I may speak of as the local pilotage authorities. In fact, not only has the case of *The Hankow* not always been accepted as a clear exposition of the law, but the decision in *The Hankow*, and the decisions in the cases which are referred to in the course of a judgment by Dr. Lushington, have been questioned in various cases which have come before us, including, if I recollect rightly, the question raised by Lord Chelmsford in the House of Lords and the question raised in the Exchequer Chamber, in *General Steam Navigation Company* v. *British and Colonial Steam Navigation Company*, which is reported first in 19 L. T. Rep. 357; (1868) L. Rep. 3 Ex. 330—a case in which the decision was not unanimous—and reported also, on appeal, in 20 L. T. Rep. 581; (1869) L. Rep. 4 Ex. 238, where one can fairly say that the decision in the Exchequer Chamber may be read and accepted without in any degree affirming or expressing approval of certain cases which had been cited, and are cited also, I think, in Mr. Marsden's book, as throwing a doubt upon the decision in *The Hankow*. The cases have been referred to, and they are fairly summarised, in the note at p. 244, note (*z*), in Mr. Marsden's book, sixth edition. That note says: Sir R. Phillimore considered that the case was governed by *The Killarney* (Lush. 427), and that *The Stettin* (Br. & Lush. 199) was not to be followed. The question as to the construction of the Act of George IV. was decided in accordance with *The Stettin* (*ubi sup.*), in *General Steam Navigation Company* v. *British and Colonial Steam Navigation Company* (*ubi sup.*). It seems doubtful whether the decision in *The Hankow*, that the charter of James II. was a particular provision within the meaning of the Act of George IV., is correct."

Having read those authorities, I do not see that they really cast any doubt upon the decision in *The Hankow*, or any doubt upon the efficacy of the charter, as constituting the pilotage authority; but, at the same time, there has been sufficient doubt raised to prevent us in any way dealing with this matter on the basis of saying that we are not going to interfere with the decision of *The Hankow*, since this is a decision which has stood unchallenged for forty years. I do not think one can properly take up that position.

I will now proceed to deal with the judgment of the President of the Admiralty Division in this case. He says: "Upon the authorities, the question whether *The Umsinga* was, at the time and place where the collision occurred, exempted from compulsory pilotage depends upon sect. 59 of 6 Geo. 4, c. 125. *The Umsinga* belonged to the Port of London. She was outward bound, and carried passengers. The collision took place within the Port of London. She was, in fact, in charge of a Trinity House licensed pilot at the time." I would like to say a word about the reference by Sir Samuel Evans to the fact that *The Umsinga* was outward bound, and carried passengers. The importance of that is that there is continuously in these Acts an exemption, in respect of pilotage, which applies to outward-bound ships not carrying passengers. That is why the President here refers to the fact that this particular ship was carrying passengers. His judgment proceeds: "The question is: Did the collision occur in a port or place in relation to which particular provision was made before the statute of 6 Geo. 4, c. 125, either by any Act or Acts of Parliament, or by any charter, or charters, for the appointment of pilots? If yea, pilotage was compulsory; if nay, the vessel was within the exemption from compulsory pilotage." I think the word "exemption" should be read "exception."

I have already said that, in my opinion, both the Act of Parliament and the charter leave the jurisdiction of Trinity House in the Port of London, in respect of compulsory pilotage, unaffected, as it existed before the Act, and nothing has occurred, subject to the exceptions which I have just named, in any way to impair that power vested in the corporation of Trinity House. I hesitate to repeat again the observations which I made just now, in order to ascertain whether I had exactly grasped the steps in the argument—I will say the excellent and clear argument—of counsel for the respondent, in dealing with that which I wish to say, in my opinion, was a question which really, having regard to the authorities and the expressions of many judges in those authorities, was a question of considerable difficulty, and one which really required a decision to solve which view was right.

I think, in those circumstances, I ought to deal with the question. The Act of 1808 (48 Geo. 3, c. 104), was a repealing Act, which repealed the antecedent statutory authorities. That being so, one has to look to see whether the Act of 1808, although it repeals all antecedent authorities, in terms re-enacts antecedent powers given to the Trinity House not by a general reference, but by verbal expression; and, in my opinion, the first result of the words of the Act is such as to leave unimpaired, having regard to the new words of enactment in the statute itself, the power of the corporation of Trinity House, and also, in my opinion, to leave unimpaired their powers under the charter. It is really common ground that, subject to anything else which appears in the Act of Parliament, the result was that the powers of the corporation of Trinity House were preserved. I had better read first the words which appear at the end of the recital, and then the words of sect. 2. After the recital come these enacting words: "That all and every the clauses, provisions, powers, penalties, forfeitures, matters, and things relating as well to pilots appointed by the said corporation of Trinity House, of Deptford Strond, as to pilots of the fellowship of Dover, Deal, and the Isle of Thanet, and to the pilotage by and regulation of all such pilots as aforesaid, and also as to the conduct of all persons in matters of pilotage, within the jurisdiction of the said Corporation of the Trinity House of Deptford Strond, and the Liberty of the Cinque Ports, which are contained in any Act or Acts of Parliament heretofore made, shall be, and the same are hereby repealed, except only so far as such Acts relate to any rates of pilotage due, or to become due, before the commencement of the respective new rates to be established under the provisions of this Act, or to any penalty or forfeiture incurred or to be incurred, or any other Act, matter, or thing done, or to be done, before the establishment of the new rules and regulations which are to be made under the provisions of this Act, or before the commencement of the operations of any of the provisions of this Act, in relation to any such matters as aforesaid." There is nothing in that first section which in any way repeals the powers under the charter. Sect. 2 is as follows: "It shall be lawful for the Master, Wardens, and Assistants of the Guild Fraternity, or Brotherhood of the Most Glorious and Undivided Trinity, and of St. Clement in the Parish of Deptford Strond in the county of Kent (commonly called the Corporation of the Trinity House of Deptford Strond), and they are hereby required to appoint and license under their common seal, fit and competent persons, duly skilled, as pilots, for the purpose of conducting all ships and vessels sailing, navigating, and passing up and down or upon the rivers of Thames and Medway, and all and every the several channels, creeks, and docks thereof or therein, or leading or adjoining thereto, as well between Orfordness and London Bridge, as from London Bridge to the Downs, and from the Downs westward as far as the Isle of Wight, and in the English Channel from the Isle of Wight up to London Bridge, which vessels shall be conducted and piloted by such pilots so appointed and licensed, and by no other pilots or persons whomsoever, except pilots appointed by" bodies which, without disrespect, I may call the minor Trinity Houses.

I do not think there is any suggestion that those words, if they stood alone, would not cover, among other things, the Port of London, in respect of ships entering or going out.

Then sect. 20 reads thus: "And be it further enacted that it shall be lawful for the said Corporation of Trinity House of Deptford Strond, and they are hereby required to appoint from time to time (as often and for such periods as they in their discretion shall think fit) proper and competent persons at such ports or places in England as they may think requisite (except within the liberty of the Cinque Ports, and all such other ports and places within or for which provision shall have been made by any Act or Acts of Parliament, or by any charter or charters for the appointment of pilots) not to exceed five nor less than three persons at each port or place for which any such appointment shall be made, which persons so to be appointed, shall be called Sub-Commissioners of Pilotage," &c. Now, the argument of counsel for the appellants is that, by reason of the words I have just read, the Port of London itself is excepted from the powers, which I have already read, under sect. 2, given to Trinity House. Apart from certain observations in the cases which have been cited to us, I should have thought that that construction, which would deprive the Trinity House of its jurisdiction in respect of pilotage, particularly in respect of compulsory pilotage, was a very difficult construction to accept. Then we were not invited to deal with this matter merely upon the section of the Act of 1808, but we were invited to deal with it under the provisions of sect. 59 of 6 Geo. 4, c. 125. I have already alluded to the powers which were given under the Act of 1808, and sect. 59 of the Act of 1825 says: "Provided always and be it further enacted that for and notwithstanding anything in this Act contained, the master of any collier, or of any ship or vessel trading to Norway, or to the Cattegat or Baltic, or round the North Cape, or into the White Sea, on their inward or outward voyages, or of any constant trader inwards, from the ports between Boulogne, inclusive, and the Baltic (all such ships and vessels having British registers, and coming up either by the North Channel, but not otherwise), or of any Irish trader using the navigation of the rivers Thames and Medway, or of any ship or vessel employed in the regular coasting trade of the Kingdom, or of any ship or vessel wholly laden with stone from Guernsey, Jersey, Alderney,

Sark, or Man, and being the production thereof, or of any ship or vessel not exceeding the burthen of 60 tons, and having a British register, except as hereinafter provided; or of any other ship or vessel whatever, while the same is within the limits of the port or place to which she belongs, the same not being a port or place in relation to which particular provision hath heretofore been made by any Act or Acts of Parliament, or by any charter or charters for the appointment of pilots, shall and may lawfully, and without being subject to any of the penalties by this Act imposed, conduct or pilot his own ship or vessel when and so long as he shall conduct or pilot the same without the aid or assistance of any unlicensed pilot or other person or persons than the ordinary crew of the said ship or vessel." It has been suggested that sect. 59 must be read in relation to the section of the earlier Act, in such a way as that the Port of London does not come within the enacting part of the statute, but comes within the exemption part of this section. I think I may say that, even apart from shrinking from a decision which construes a section of an earlier Act of Parliament by the provisions in a later Act of Parliament, I cannot come to the conclusion that the argument of counsel for the appellants is a good one.

Before dealing with any fresh subject in any way, I wish to say that in my own judgment, even if the jurisdiction of the Trinity House were affected by those words in the way which counsel for the appellants has suggested, I think that the words of sect. 2 of the Act of 1808 are so strong that they really are not affected by sect. 59. Dealing with sect. 2 itself, it seems to me it would be very strange to put such a construction upon the exception in that section as to deprive the corporation of the Trinity House of this jurisdiction in the Port of London itself, which, as I have already stated, is not really a new jurisdiction, but an old jurisdiction taken away by the earlier words of the Act, but re-enacted again, and which really contains this very power, with some additional powers under the charter granted in the reign of James II.—as to the existence and extent of which there can be no sort of doubt, a copy of the charter having actually been produced in court before Sir R. Phillimore, in the case of *The Hankow*. The learned president, in his judgment, goes on thus: "In my opinion, this question was decided by the case of *The Hankow* (*ubi sup.*). That decision was pronounced in 1879. Fifteen years afterwards, the Merchant Shipping Act 1894 (which, no doubt, is almost, but not quite, a purely consolidating statute), was passed. Both long before and ever since, 1879, the practice has been to treat the Thames as a port or place where pilotage is compulsory. Whether I thought *The Hankow* was rightly decided or not, I should feel bound to follow it in these circumstances, and after this lapse of time."

I have already said that I am not sure that I should recognise that obligation quite to the extent Sir Samuel Evans has, because of the comments made in high places as to the value of *The Hankow*. The President proceeds: "Other cases which were cited, and said to be inconsistent with it—viz., *The Killarney* (Lush. 427), *The Stettin* (Br. & Lush. 199), and *General Steam Navigation Company* v. *British, &c., Company* (*ubi sup.*)—were not decisions on the same point"—I entirely agree—"But I wish respectfully to add that, in my opinion, the decision in *The Hankow* was right, not only on the ground upon which it was rested—viz., that the locus of the collision was in a port or place, in relation to which particular provision for the appointment of pilots had been made by charter before the passing of the Act of 6 Geo. 4, c. 125—but also on the ground that such a provision had also been made before that time by an Act or Acts of Parliament. The Act then in force was 48 Geo. 3, c. 104. Other Acts to a similar effect had preceded this. I hold upon the authority of *The Hankow*, and upon the words of sect 59 of the 1825 Act, that, at the place where the collision happened, there was no exemption from compulsory pilotage in the case of the *Umsinga*."

I wish most emphatically to say that I agree with Sir Samuel Evans. I should have been content to base my decision upon 48 Geo. 3, c. 104, even though there had been no charter at all; and I wish, also, to say that my construction of 48 Geo. 3, c. 104, has been in no way displaced by sect. 59 of 6 Geo. 4, c. 125, upon which counsel for the appellants laid such stress. I think this appeal must be dismissed.

Farwell, L.J.—I also am of opinion that this appeal fails. We are asked to reverse the decision of the learned President, who has not only followed but expressly agreed with the decision of Sir Robert Phillimore in *The Hankow*—a decision which has been acted upon ever since 1879 without dissent. It differs, no doubt, from the decision in *The Stettin* of Dr. Lushington, but Sir Robert Phillimore explained his reason for not following that decision, and the reason seems to me to be amply sufficient.

This present case, as argued, has turned upon the construction of 6 Geo. 4, c. 125. It appears from the preamble to that Act that for centuries the Trinity House has had jurisdiction over pilots. The Act then proceeds to deal with pilotage, leaving charters untouched, but repealing former Acts, and setting out fresh regulations, leaving to the Trinity House the appointment of pilots in the London district. Then it creates what are now known as, I believe, the Trinity Outports; and sect. 5 empowers the Trinity House to appoint sub-commissioners, who are to make inquiries, and give their certificates as to pilots in the outports—that is to say, places which have no pilotage authority, and where it is deemed expedient should have provision made for future pilotage. By this section of the Act Trinity House is enabled to appoint pilots in the Port of London and various other specified places, and also to appoint pilots in other districts, and the exception upon which reliance is placed is as follows: "That it shall be lawful for the said corporation of Trinity House . . . and they are hereby required to appoint from time to time . . . proper and competent persons, at such ports or places in England as they may think requisite (except within the liberty of the Cinque Ports, and all such other ports and places within or for which particular provision shall have been made by any Act or Acts of Parliament, or by any charter or charters for the appointment of pilots) . . . which persons so to be appointed shall be called sub-commissioners of pilotage," &c.

It is seriously argued that that exception does not apply to London; and, therefore, that this Act of Parliament, first of all, empowered Trinity House to appoint pilots for London, and then went on to treat London as an outport, and authorises them to appoint commissioners, who are to recommend the appointment of pilots for the outports—one of them London. It seems to me that that construction is contrary to the clear intent of the Act of Parliament itself. But the words "any charter or charters" are perfectly clear, and, to my mind, it is a clear case so far as sect. 5 is concerned. I do not think sect. 59 has anything to do with it. It refers back to the same exception, and does not in any way alter or enlarge that exception.

If that be so, the whole of the rest of the argument for the appellants falls to the ground because their argument is that the words of the later Act of George IV. are to be construed in the same way as the Act of 1808. If the words of the 1808 Act do extend to London, then sect. 59 of the later Act does not help. I have already said that, in my opinion, it is clear that sect. 20 of the Act of 1808 (sect. 5 of Act of 1825) does not extend to the Port of London, because it is already specifically dealt with by the Act itself; but in my opinion it is not a proper method of construction to fasten on words in a later Act which bear some resemblance to words in an earlier Act and apply them as if they were a definition clause to be read into the subsequent Act. The word "particular" appears to me to have very great importance, and to show that different considerations apply to the later Act. I entirely agree with what the President has said on this point. In the case before Dr. Lushington—*The Stettin*—the charter of James II. was not referred to, and in the Privy Council it went off on another point, and nothing was said about this particular question. I fail to find anything in the case which throws doubt on the decision in *The Hankow*.

KENNEDY, L.J.—I am of the same opinion. We are asked to reverse the decision of the President of the Admiralty Division upon a question which is no doubt of some importance, but as to which, in the first place, there is a decision now thirty-two years old which has never been, as far as I am aware, questioned in any court of law before. The cases referred to, of *The Stettin* and of the *Steam Navigation Company*, in the Exchequer, were earlier cases, and *The Hankow*, as far as I know, and as far as counsel can tell us, is a case that has never been assailed before in regard to the correctness of its principle. It is true that in the learned work of Mr. Marsden doubt is thrown on the correctness of the principle, but there is nothing to be found in any case which followed *The Hankow* which has cast any sort of doubt upon its correctness.

How, then, does the case stand apart from authorities? We have got in the case of the *Umsinga* a vessel carrying cargo and passengers. She was outward bound, and was no doubt a vessel which was registered in the port of London. Therefore she was a vessel which in terms of the statutes was a vessel belonging to the port or place of London. She pleaded compulsory pilotage, and that plea was upheld. It is said that decision is wrong, and the question of its being right or wrong depends, as argued before us, upon the true construction and meaning of sect. 59 of 6 Geo. 4, c. 125, which I need not read at length because it has been read fully already. The gist of that section, so far as it is material, is this, that in regard to a vessel which is within the limits of the port or place to which she belongs there is an exemption from compulsory pilotage subject to this, that that port or place to which she belongs is not a port or place "in relation to which particular provision has heretofore been made by Act or Acts of Parliament, or by charter or charters, for the appointment of pilots."

It is argued by counsel for the appellants that the *Umsinga* does not fall within that limitation of the exemption, because he says that the Port of London is not a place in relation to which a particular provision has heretofore been made by any Act or Acts of Parliament, or charter or charters, within the meaning of the section.

Certain things have to be admitted. In the first place there is a charter of James II., and it is not contended by counsel for the appellants that that is not a charter which can properly be described as a charter which does contain provisions for the appointment of pilots. But more than that, there is also the Act of 48 Geo. 3, c. 104, which by sect. 2 expressly gave the Trinity House powers to appoint and license under their seal fit and proper persons as pilots, for the purpose of conducting all ships and vessels sailing, navigating, and passing up and down or upon the rivers of Thames and Medway, &c. That Act was an Act which, by its last section, was expressed to have a duration of only four years, and so when the four years were up, in 1812, came a section, which is practically to the same effect, in the Act of 52 Geo. 3, c. 39, s. 2, which enacts, practically in the same terms, the appointment and licensing of pilots by the Trinity House.

In face of those facts it is said that none the less is this particular Port of London not a place in relation to which particular provisions have heretofore been made by any Act or Acts of Parliament, or by charter or charters. I hope I have done the learned counsel justice. As I understand them they say you must not construe "particular provision" in sect. 59 (6 Geo. 4, c. 125) as it would otherwise be construed, because if you do you thereupon strike out all the places to which the exemption can apply—you must except the Port of London, because if you do not except it, then you show that there is really no place in which a vessel belonging to a port or place will have the benefit of the exemption.

I decline altogether, because a difficulty may arise in finding something to which the section applies, to give the words "particular provision," &c., any other than their natural meaning. I do not myself, however, think that difficulty exists.

Before I point out why I do not, I will just say that the argument for the appellants in saying that the words "particular provision" do not apply, is to say that you are to construe them by the light of sect. 20 of the Act of 48 Geo. 3, c. 104, in which it was enacted that it should be lawful for the corporation of Trinity House to appoint from time to time proper and competent persons at such ports or places in England as they may think requisite, "except within the Liberty of the Cinque Ports, and all such other ports and places within, and for which provision shall have been made by any Act or Acts of Parliament, or by any charter or charters for the appointment

of pilots." I think that the word "provision" in the earlier statute and the words "particular provision" in the later statute were in each case properly used, and that each set of words has its natural and appropriate meaning. I think that by sect. 2 of the Act of 1808, as well as by charter, the Port of London was a place for which provision had been made when that Act of George III. was passed.

There were three classes of places at that time. There were certain places for which there had been an express provision, such as I think was made by charter for the Port of London, and such as had been made by the Cinque Ports. There were also places outside London and the Cinque Ports altogether which had special charters—I do not know whether any have special Acts of Parliament—and there were also places for which no provision had been made, and for the benefit of which, no doubt, this statute was passed. It was felt that there should be pilotage provision made for those places, and pilotage provision taking the form of the licensing of pilots, whose services should be employed by those who travel in or out of those ports by ship. So that the Trinity House was dealt with as a central authority, in whose hands authority might be put to appoint commissioners to appoint pilots in those places for which no provision had been made. Those places did not include the Cinque Ports or those places for which there had been express provision, but for all such other places there was to be a pilotage jurisdiction created for the first time; and then that is, as counsel for the respondent pointed out, supplemented by sect. 55 of the Act of 1808, by which, with regard to the matter we have discussed—namely, the position of the master of a vessel, who is navigating the waters of his own port—protects such a person from being prejudiced by the creation of pilots and compulsory pilotage in a district in which it had not existed before. It was provided that the masters of vessels belonging to those ports thould still be able to navigate in those ports without taking a pilot on board. So, when you come to the statute of 6 Geo. 4, sect. 59, what the Legislature said was this: There shall be an exemption generally or from compulsory pilotage of vessels within the limits of the port to which those vessels belong, but we are not going to interfere with the operation of other Acts of Parliament, or charters, where they have made particular provision, in other words, we are not going by this section of 6 Geo. 4, c. 125, to alter the law whereby under those Acts of Parliament and charters, by particular provision it is at present compulsory to employ a pilot even on a vessel which belongs to that port. Therefore, the Legislature created a large class of outports for which pilots were hereafter to be appointed, but which could not say they had particular provision, but only the general provision of sect. 20 of the Act of 1808.

To my mind it is as clear as I can reasonably expect anything to be that this Act of Parliament was specially drafted to leave a large class of places in which the masters would still enjoy the privilege left them by sect. 55 of the Act of 1808 which by a general provision made them pilotage districts, but still meant to prevent the exemption applying to places in relation to which there had been a particular provision made either by Act of Parliament or by charter. Counsel for the appellants says if London is excepted from the exemption, there is nothing to which the section can apply. I think there is.

For these reasons I think that the learned President was perfectly right, and, if I may, I will add to what my lord has said my concurrence in the view that even without the charter of James II. these two successive Acts of 1808 and 1812 make particular provision for pilotage in the Port of London.

Solicitors: for the appellants, *Keene, Marsland, Bryden* and *Besant*; for the respondents, *Thomas Cooper* and *Co.*

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Jan. 25 *and* 26, 1912.

(Before SCRUTTON, J.)

LANDAUER AND CO. *v.* CRAVEN AND SPEEDING BROTHERS (*a*)

Sale of goods—C.i.f. contract—Bill of lading—Transhipment—Tender of one bill of lading—Right to reject goods.

Where there is a contract of sale on c.i.f. terms, it is, by mercantile usage, unless otherwise agreed, the duty of the seller to provide by a contract of affreightment for the carriage of the goods from the port of shipment to the port of destination named in the contract, and by an indorsed bill of lading or otherwise to transfer to the buyer the benefit of those rights created by the contract of affreightment between the shipper and the shipowner for the entire voyage from port of shipment to port of destination.

In the case of a shipment of goods under a c.i.f. contract from Manila to London viâ Hong-Kong under the bills of lading, one from Manila to Hong-Kong and the other from Hong-Kong to London respectively, where the seller tendered to the buyer the Hong-Kong to London bill of lading:

Held, that this was not a good tender, and the buyer was entitled to reject the goods.

COMMERCIAL COURT.

Special case stated for the opinion of the court.

The facts and arguments are sufficiently stated in the special case and the judgment of Scrutton, J.

AWARD AND SPECIAL CASE.

Whereas by a written and printed contract . . . dated the 5th May 1909 the plaintiffs sold to the defendants 500 bales of Manila hemp . . . at the price of 21*l.* 10s. plus ½ per cent. per ton of eight bales cost freight and usual f.p.a. insurance on the following (amongst other) terms: (*a*) Shipment to be made from a recognised shipping port or ports in the Philippine Islands or from Hong-Kong or Singapore by steamer or steamers direct or indirect to London between the 1st Oct. and the 31st Dec. 1909, both inclusive. (*b*) Declaration was to be made with due dispatch, but not later than sixty days from date of bill of lading. (*c*) Extension of time for shipment was to be allowed to the seller at a reduction of price of 1¼ per cent. up to seven days and 2½ per cent. up to fourteen days. (*d*) Bills of lading were to be made out in sets of not exceeding 250 bales each. (*e*) Payment was to be made

(*a*) Reported by LEONARD C. THOMAS, Esq., Barrister-at-Law.

by cash within fourteen hours of vessel reporting at Custom House in exchange for shipping documents, but should arrival of vessel be delayed beyond the due date of the draft at three months' sight drawn against the original Manila invoice the seller to have the right to call on the buyer to take up the documents at the maturity of the said draft less usual rebate. (*f*) A provision for arbitration under the Arbitration Act 1889, with restrictions, and (*g*) A supplementary clause providing that the date of the bill of lading attached to the shipper's draft should be conclusive evidence of the date of shipment. . . .

And whereas 100 bales of the said hemp, part of the 500 bales comprised in the said contract, were duly declared in writing by sellers to the buyers per steamship *Oanfa* and were duly tendered and accepted by the buyers and paid for by them on the 18th Feb. 1910 and no question or dispute arose in connection with the said 100 bales. And whereas a dispute arose between the buyers and the sellers whether two parcels of 150 bales and 250 bales of Manila hemp tendered by the sellers to the buyers under the said contract to make up the balance of the said 500 bales were a good tender under the contract. And whereas the buyers appointed Mr. Francis Agar arbitrator in the said dispute and after certain proceedings by originating summons under the Arbitration Act 1889 the sellers appointed Mr. H. W. F. Ide as arbitrator in the said dispute on the terms embodied in the consent order dated the 15th June 1910 made on the said summons that the arbitrators or their umpire should state an award in the form of a special case if required by either party. And whereas the said arbitrators with the consent of the parties appointed me the undersigned Samuel Garrett, of St. Michael's Rectory, Cornhill, London, solicitor, as the umpire in the said reference. And whereas by consent of the parties I sat on the said reference with the arbitrators. And whereas both parties required the award in the said reference to be stated in the form of a special case for the opinion of the court. And whereas the said arbitrators being unable to agree upon an award referred the said dispute to me as umpire by writing under their hands dated the 6th Nov. 1911. Now I the said Samuel Garrett, having take upon myself the burden of the said reference and having considered the evidence adduced by the said parties and the arguments by their respective counsel, do hereby (subject to the opinion of the court on the special case hereinafter stated) award and determine that the said 150 and 250 bales of hemp tendered by the sellers to the buyers as aforesaid under the said contract of the 5th May 1909 were not a good tender and that the buyers were not bound to accept the same and are entitled to recover damages from the sellers for breach of the said contract and that the sellers do bear and pay their own costs of the said reference and do pay to the buyers their costs of the said reference, including the costs of the said originating summons, and do also pay the costs of this award, which I assess at 79*l.* 19*s.* 4*d.*, and that if the buyers shall in the first instance pay the costs of the award the sellers shall forthwith repay to the buyers the amount so paid, but this award is subject to the opinion of the court in the following:—

Case.

1. On or about the 28th Dec. 1909 Warner, Barnes, and Co., of Manila, shipped on board the steamship *Rubi* at Manila under two bills of lading, both dated Manila the 28th Dec. 1909, 150 and 250 bales of Manila hemp . . . for delivery to shipper's order at Hong-Kong. . . . Manila is a recognised shipping port in the Philippine Islands.

2 The said hemp was invoiced by Warner, Barnes, and Co. to Bibby Brothers and Co., London, under two invoices on printed forms, both dated Manila the 28th Dec. 1909, and reading: "Shipped on board the steamship *Rubi*, master, bound for Hong-Kong, for transhipment thence per other steamers to London per account and risk of the concerned and consigned to order." . . . The said hemp at the time of shipment was *bonâ fide* intended by the shippers to be transhipped at Hong-Kong to London, and the shippers caused to be forwarded to Mr. J. C. Moxon, a shipping agent in Hong-Kong, the said Manila bills of lading with the requisite instructions for him to ship the goods forthwith to London. The said J. C. Moxon, however, did not procure ship room for forwarding the said hemp from Hong-Kong to London until the 25th March 1910 as hereinafter mentioned.

3. The buyers contended on the said reference that Warner, Barnes, and Co. and the said J. C. Moxon did not use reasonable endeavours to find ship room for the said hemp from Hong-Kong, and that if reasonable efforts had been used room might have been found at an earlier date than the 25th March 1910. The evidence, however, did not satisfy me that this contention was well-founded, and I find as a fact that there was no want of due diligence on the part of Warner, Barnes, and Co. or the said J. C. Moxon in endeavouring to find room for the forwarding of the said hemp from Hong-Kong to London, and that the delay of nearly three months at Hong-Kong was due to causes beyond the control of Warner, Barnes, and Co. and the said S. C. Moxon.

4. Warner, Barnes, and Co. drew two bills of exchange, dated the 28th Dec. 1909, upon Bibby Brothers and Co. in respect of the said hemp. The said bills of exchange were attached to duplicates of the said Manila bills of lading dated the 28th Dec. 1909 and the policies mentioned in the next clause. . . .

5. The said Warner, Barnes, and Co. on the 28th Dec. 1909 effected insurances on the said hemp on the usual f.p.a. terms "at and from Manila to Hong-Kong per steamship *Rubi* and thence per other steamer to London with leave to call at ports *en route*, including risk of transhipment and of fire while at transhipping port." The two policies by which such insurances were effected were both in the same form. . . .

6. The sellers purchased the said 250 and 150 bales of hemp from Bibby Brothers and Co. on cost freight and insurance terms.

7. On the 3rd Feb. 1910 the sellers declared in writing to the buyers in part and further part fulfilment respectively of the above contract the said 250 and 150 bales of Manila hemp . . . per steamship *Rubi* to Hong-Kong thence per steamer to London. Bill of lading dated the 28th Dec. 1909. . . .

8. On the 25th March 1910 the said 250 and 150 bales were shipped by the said J. C. Moxon on board the steamship *Antilochus* at Hong-Kong for London under two bills of lading for 250 and 150 bales respectively to order, both dated the 25th March 1910. . . .

9. By letter dated the 4th May 1910 the sellers gave notice to the buyers that the said 150 and 250 bales of Manila hemp per steamship *Rubi* and steamer c/o 5.5.09 were arriving per steamship *Antilochus* "due in London on the 12th inst.," and that "as shipper's draft covering these goods will expire to-morrow, we beg to inclose invoice herewith which we trust you will find in order. . . ."

10. On the 7th May 1910 the buyers paid the sellers for the said hemp, but without prejudice to the buyers' rights, and before the arrival of the goods under clause 15 of the said contract, and subsequently claimed arbitration upon the ground that the said goods were not a valid tender against the said contract.

11. The steaming distance from Manila to Hong-Kong is 630 miles or thereabouts, and the goods after arriving in Hong-Kong lay in warehouse there until shipment on board the *Antilochus* on or about the 25th March 1910. The steamship *Antilochus* arrived in London on the 17th May with the said goods on board.

12. The only bills of lading in London on which delivery of the said goods could be taken and on which

delivery was in fact taken were the said two duly indorsed bills of lading for 250 and 150 bales of hemp respectively per steamship *Antilochus*, both dated in Hong-Kong the 25th March 1910, and these were the only bills of lading held by the sellers and the benefit of which they were in a position to transfer to the buyers.

13. It is quite usual for goods shipped from Manila to London to be carried *via* Hong-Kong and to be there transhipped to London. Such goods are usually shipped at Manila under a through bill of lading providing for the carriage on the whole journey from Manila to London *viâ* Hong-Kong. No evidence was given before me of any custom affecting the Manila hemp trade or varying in any way the well-known mercantile usage with regard to contracts of sale of goods on cost, freight, and insurance terms. If and so far as it is a question of fact, I find that on a contract of sale of goods on cost, freight, and insurance terms it is by mercantile usage, unless otherwise agreed, the duty of the seller to provide by a contract of affreightment for the carriage of the goods from the port of shipment to the port of destination named in the contract, and by an indorsed bill of lading or otherwise to transfer to the buyer the benefit of the rights created by the contract of affreightment between the shipper and the shipowner for the entire voyage from port of shipment to port of destination, so that if during any part of that voyage the goods should be lost or damaged by default of the shipowner or of those for whom he is responsible the buyer may have a remedy against the shipowner.

14. The buyers contended that the tender of the said 250 and 150 bales of hemp by the sellers was not a good tender upon the ground that the said goods were not shipped to London direct or indirect between the 1st Oct. and the 31st Dec. 1909, both inclusive, and that, even if they were so shipped, the documents in London which were transferred to the buyers under clause 15 of the contract did not include any bill of lading from Manila, but only bills of lading from Hong-Kong dated the 25th March 1910, and that the documents so transferred were accordingly not the documents to which the buyers were entitled under the contract.

15. The sellers contended that the tender of the said hemp was a good tender under the said contract, and alleged that the said hemp was shipped directly or indirectly from Manila to London between the 1st Oct. and the 31st Dec. 1909 within the meaning of the said contract, and that the buyers were only entitled to a bill of lading entitling them to take delivery in London from the ship, and were not entitled to a bill of lading for the whole voyage from Manila to London.

16. The question for the opinion of the court is whether the tender of the said goods on the 4th May 1910 was a good tender under the said contract. If the court should be of opinion that the tender of the said 250 and 150 bales of hemp was a good tender under the said contract, then my award as above is to be set aside, and in that case I award that the buyers do bear their own costs of the reference and that they also do pay to the sellers their costs of the reference, including the costs of the said originating summons, and do also pay the costs of this award, and that if the sellers shall have previously paid the costs of this award the buyers do forthwith repay to them the amount so paid; but if the court should be of opinion that the said tender was not a good tender, then my award in favour of the buyers will stand, and I respectfully submit that unless the parties should otherwise agree the matter should be remitted to me to ascertain the amount of damages which the buyers are entitled to recover from the sellers.

Dated this 21st day of November 1911.

(Signed) S. GARRETT.

Bailhache, K.C. and *Leck* for the plaintiffs.

Atkin, K.C. and *Chaytor* for the defendants.

SCRUTTON, J.—This is a special case, stated by the umpire, a well-known commercial solicitor, to determine whether a tender of certain hemp on the 4th May 1910 was, as regards the hemp and the documents tendered, a good tender.

The original seller shipped the hemp at Manila, which is a recognised shipping port in the Philippines, to Hong-Kong, per steamship *Rubi*, on the 28th Dec. 1909, under a bill of lading to the shippers' order at Hong-Kong. He sent a copy of such bill of lading forward to London, attached to the seller's draft to the original buyer. He had at the time of shipment no contract for conveyance of the hemp to London, but intended to tranship the goods at Hong-Kong and make such a contract there. But, owing to circumstances beyond his control, he was unable to make such a contract until the 25th March 1910, when the goods were shipped from Hong-Kong by the steamship *Antilochus* under a fresh bill of lading, dated the 25th March 1910, and arrived in London about the 12th May 1910. Meanwhile, the sellers in this case, on the 3rd Feb. 1910, declared the goods per *Rubi* to buyers, referring by date to the Manila bill of lading of the 28th Dec., and on the 4th May the sellers, under clause 15, tendered as shipping documents the Hong-Kong bill of lading of the 25th March, and the policy of insurance covering the goods from Manila to London. The Manila bill of lading was not in London at the time. The buyer subsequently claimed to reject, on the grounds that the goods were not good tender under the contract: (1) because they had not been shipped to London within the contract time, as at the time of the shipment to Hong-Kong there was no contract for carriage to London, but only an intention to make such a contract in the future; (2) because the documents tendered did not include a contract of affreightment covering the goods from Manila to Hong-Kong. The arbitrator found that the bills were not a good tender, without specifically stating his view as to the two contentions put forward, and he states a case on the first question whether the tender of the goods on the 4th May 1910, which was a tender by the documents referred to, was a good one.

Mr. Bailhache, for the sellers, called my attention to a decision of Hamilton, J. in the case of *Cox v. Malcolm and Co.* (unreported), decided in the Commercial Court on the 1st July 1910. This was a special case, relating to hemp, the contract being in the same terms. The goods were shipped within the contract period at Manila, but under a contract to Hong-Kong, and with no contract for carriage to London. They were forwarded to Hong-Kong, and rejected in London on the ground that they had not been shipped to London within the contract period, and that the date of the Hong-Kong bill, which was after the contract period, was conclusive. Hamilton, J. held that there was no necessity in law for the shipment to be under a through bill of lading. He said: "In my opinion the contract does not require in order that a shipment may be made from Manila indirect to London that there shall be a through bill of lading or a bill of lading stating on its face that the shipment to the intermediate port is for the purpose of transhipment by the carrier to a London steamer."

If on this point I had only to deal with law, I should, of course, follow this decision, leaving

it to be examined, if the parties desired, in the Court of Appeal. But I should very respectfully express my doubts of its correctness. Hamilton, J., at p. 220 of his judgment in *Biddell Brothers* v. *Clemens Horst* (103 L. T. Rep. 661; (1911) 1 K. B. 214), states the first two duties of the sellers c.i.f. as follows: "A seller under a contract to sell containing such terms has, firstly, to ship at the port of shipment goods of the description contained in the contract; secondly, to procure a contract of affreightment, under which the goods will be delivered at the destination contemplated by the contract." I should myself add to the first requisite the words, "within the time named in the contract"; and, to the second, that such a contract must be procured on shipment. I should make the last addition for the reason that the seller must, as soon as possible after he has sent the cargo, send forward the documents to the consignee: (see per Lord Esher in *Sanders* v. *Maclean*, 5 Asp. Mar. Law Cas. 160; 49 L. T. Rep. 462; 1 Q. B. Div., at p. 337). If, when he ships goods sold c.i.f. London, but has no contract for carriage to London, but only an intention to make one, he cannot forward this and tender an intention to the buyer. Further, the buyer frequently wants not to take delivery of the goods, but to sell them afloat to other people. And, but for the decision of Hamilton, J., I should have thought that the seller c.i.f. must ship his goods under a contract for conveyance to the port of destination which can be transferred, not under a contract part of the way, and an intention to make another which cannot be transferred, which, as in this case, may not become effective for three months. I should have been disposed to read the words of the contract, "shipment at the port in one or more steamers which are going to London direct or indirect," or, at any rate, "shipment to London—*i.e.*, under a contract to carry to London either direct by the same steamer, or indirect by transhipment to another steamer"; in other words, under a through bill of lading, which both arbitrators find is the usual method of forwarding.

But, while prepared to follow Hamilton, J.'s judgment on this point, as deciding the question of law in this court, I have a finding of the arbitrator on (I was told) evidence given before him, which, in my view, leaves me free to follow my own opinion. The arbitrator finds: "No evidence was given before me of any custom affecting the Manila hemp trade or varying in any way the well-known mercantile usage with regard to contracts of sale of goods on cost, freight, and insurance terms. If and so far as it is a question of fact, I find that on a contract of sale of goods on cost, freight, and insurance terms it is by mercantile usage, unless otherwise agreed, the duty of the seller to provide by a contract of affreightment for the carriage of the goods from the port of shipment to the port of destination." I read this as a finding of fact that, by mercantile custom, a seller c.i.f. must obtain on shipment a through contract of affreightment to the ultimate destination. If so, what would be the law in the absence of mercantile custom does not apply. If, therefore, the decision of the arbitrator proceeded on the ground that there was no contract to carry to London made before the 31st Dec. 1909 in respect of goods shipped at Manila, I hold it is correct.

But the other objection was to the documents tendered, which only included the bill of lading from Hong-Kong, and not the bill of lading from Manila to Hong-Kong. This point might have been raised in *Cox* v. *Malcolm* (unreported), but was not. Hamilton, J. does not deal with it, and, indeed, expressly limits himself to the points raised by the arbitrator. If the arbitrator's decision has proceeded on this ground, I am of opinion it was also correct. The buyer wants the bill of lading for two purposes: (1) to take delivery, for which purpose the Hong-Kong bill will suffice; (2) to claim on the shipowner for any breach of the contract of affreightment. As Lord Blackburn says in *Ireland* v. *Livingston* (1 Asp. Mar. Law Cas. 389 (1872); 27 L. T. Rep. 79; L. Rep. 5 H. L. 395, at p. 407): "Should the goods not be delivered in consequence of a peril of the sea, he is not called on to pay the freight, and he will recover the amount of his interest in the goods under the policy. If the non-delivery is in consequence of some misconduct on the part of the master or mariners, not covered by the policy, he will recover it from the shipowner." He therefore wants a policy and contract of affreightment, covering the whole adventure. Supposing in this case the transhipment had been at Hamburg, would it have been enough to tender the bill of lading from Hamburg to London? If the transfer of the bill of lading from Manila to Hong-Kong is necessary to enable the buyers to sue the shipowners, it should have been tendered; if, being spent, its indorsement will not have that effect, this is another argument in favour of the tender of one contract of affreightment of the whole voyage. On this point Mr. Bailhache suggested that while it need not be tendered, the buyer might be entitled to claim its transfer afterwards, and he cited a sentence from Kennedy, L.J.'s judgment in *Biddell's* case in the Court of Appeal (12 Asp. Mar. Law Cas. 1; 104 L. T. Rep. 577; (1911) 1 K. B. 834). He said: "How is such a tender to be made under a c.i.f. contract? By tender of the bill of lading, accompanied, in case the goods have been lost in transit, by the policy of insurance." I shall not be supposed to be lacking in appreciation of a judgment which has not been adopted by the House of Lords when I say that I am unable to follow this *obiter dictum*. At the time of tender the goods are generally at sea, and nobody knows whether they are afloat or at the bottom, and, in my view, the buyer is entitled to require the policy in his shipping documents, whether it is known that there has been a loss or not. In my view, therefore, the arbitrator was right on both the grounds argued before him, and his award must stand. The buyers may have the costs of the hearing.

(Before Scrutton, J.)

Cantiere Meccanico Brindisino *v.* Janson and others.

Cantiere Meccanico Brindisino *v.* Constant. (*a*)

Marine insurance—Policy on floating dock—"Seaworthiness admitted"—Concealment.

The plaintiffs effected an insurance on a floating dock, which was to be towed from Avonmouth to Brindisi, against all the usual risks, and the policy contained a clause "seaworthiness admitted."

Although the plaintiffs believed that the dock was fit for the voyage, it was not in fact seaworthy, as it required special strengthening in order to fit it for the voyage. During the voyage the dock sank and was totally lost. In an action on the policies:

Held, that the underwriters were by reason of the admission of seaworthiness put on inquiry as to its construction, and the plaintiffs were not bound to disclose the want of special strengthening.

Commercial Court.

Actions tried by Scrutton, J. sitting without a jury.

Cantiere Meccanico Brindisino *v.* Janson and others.

In the first case the plaintiffs, who carried on business at Brindisi as shipbuilders and repairers, claimed to recover under certain policies of insurance against certain underwriters and insurance societies in respect of the loss of a floating dock.

The dock, which was constructed of iron, was built in 1896 for the Bristol Corporation, and was originally stationed inside the old dock at Avonmouth. The dock was 365ft. long, 85ft. wide, and 19ft. deep. It was constructed with six pontoons, the depth of each being 8ft., and the height of the side walls above the pontoons 29ft. The side walls were connected to the pontoons by strong angle irons on both sides.

The dock was purchased in 1910 by Mr. Constant, the defendant in the second case, for 5000*l.* for the purposes of resale. The pontoons and walls had to be taken apart to enable the structure to be floated out, each wall being floated out on two pontoons. The dock was then examined and re-erected, 28,000 bolts which had been used for connecting the walls of the pontoons having been renewed, and new joining material being fitted to all watertight joints.

On the 29th Aug. 1911 Mr. Constant sold the dock to the plaintiffs for 19,000*l.*, the price to include cost of towing from Avonmouth to Brindisi, and cost of insurance, fittings, strengthening, and towing gear; 1000*l.* to be paid on the signing of the contract, 15,000*l.* when ready for sea, and the balance was to be placed on deposit and released on the safe arrival of the dock at Brindisi. The vendor agreed to hand over to the buyers, before the voyage commenced, Lloyd's policies of insurance for 16,500*l.*

The plaintiffs said that Mr. Constant employed a firm called Lotinga and Co. to make inquiries as to the cost of insurance for the voyage. Lotinga and Co. employed Tozer and Co., insurance brokers at Lloyd's, to effect the insurances, and Tozer and Co. effected insurances on the dock for 12,000*l.* at 80*s.* per cent., and for 6000*l.* at 100*s.* per cent. For the information of the underwriters, Tozer and Co. made inquiries of Lotinga and Co. as to the dock, and, in particular, if it was new, and, if not, when it was surveyed last. In reply, Lotinga and Co. furnished the following particulars: "Just been newly repaired; pontoons taken abroad and thoroughly repaired and strengthened to make the voyage." This information was passed on to the underwriters by Tozer and Co., who initialled the slips on the 23rd and 24th Aug.

The insurance being a matter of some difficulty to arrange, a report was obtained from a Mr. Watkins, a surveyor, who said that he found every part of the dock in good order, and that in his opinion its condition was practically as new. He stated that he had compared the construction and strength of the dock with that of other floating docks which had been towed to various ports, and found this dock as strong and well fitted as any. He also expressed the opinion that the vessel might be safely towed to a Mediterranean port, provided that suitable arrange ments for towing were made. This report was shown to the underwriters who underwrote the risk.

The insurances were effected as upon a floating dock in tow of two tugs from Avonmouth to Brindisi against all the usual risks, the policies also containing a clause: "Seaworthiness admitted."

On the 13th Sept. the dock left Avonmouth in tow of two tugs, and on the 16th Sept., when about 100 miles west of Ushant, the dock sank in two pieces, the walls and pontoons having parted amidships.

The defendants set up the defence that they had been induced to subscribe the policies by reason of the concealment of a material fact—viz., that the dock was being sent on the voyage without the additional strengthening usual and necessary for the dispatch of a dock on an ocean voyage. Also, that they had been induced to subscribe the policies by a material misstatement of fact at the time when the slips were initialled by the broker through whom the insurance was effected—viz., that the dock had been nearly rebuilt and thoroughly repaired and strengthened for the voyage.

Bailhache, K.C. and *Mackinnon* appeared for the plaintiffs.

Atkin, K.C., *Holman Gregory*, K.C., and *R. A. Wright* for the defendants.

Leslie Scott, K.C. and *Roche* watched the case on behalf of Mr. Constant, the defendant in the second action.

At the conclusion of the evidence and arguments the learned judge intimated that he would not deliver judgment until he had heard the second case.

Cantiere Meccanico Brindisino *v.* Constant.

In the second case the plaintiffs alleged that they agreed to buy from the defendant a pontoon, to be delivered by him at Brindisi, for the price of

(*a*) Reported by Leonard C. Thomas, Esq., Barrister-at-Law.

19,000*l.*, and that it was provided that, if default should be made in the performance of the contract by the defendant, he should repay any sum paid by the plaintiffs. They said they had paid the defendant the sum of 15,950*l.*, and alleged that they were entitled to repayment of that amount as the defendant had failed to deliver the pontoon at Brindisi.

The contract made between the parties provided (*inter alia*) that before the pontoon sailed for Brindisi the defendant should assign and hand over to the plaintiffs Lloyd's policies for 16,500*l.*, duly indorsed over to them, and that they should receive the full benefit thereof. The plaintiffs alleged that it was an implied term of the agreement that the insurance policies should be valid and effective policies upon which, in the event of a total loss, the plaintiffs should be able to recover 16,500*l.* from the underwriters thereon. The defendant on the 13th Sept. 1911 handed to the plaintiffs certain policies of insurance effected at Lloyd's and with insurance companies for 16,500*l.* On the 16th Sept. 1911 the pontoon, while on the voyage to Brindisi, was totally lost by perils of the sea. They said that they put forward claims against the underwriters for 16,500*l.*, and that the underwriters alleged that they were entitled to avoid the policies by reason of some misrepresentation in effecting the policies. The plaintiffs claimed from the defendant payment of the sum of 16,500*l.*, less the amount paid by some of the underwriters, if judgment in the first action against the underwriters was given in favour of the underwriters. Alternatively, they said that the defendant, under the agreement of the 29th Aug., agreed as the plaintiffs' agent to procure insurances for 16,500*l.* on the pontoon, and they alleged that it was the duty of the defendant as such agent to use all reasonable care and skill to procure valid and effective policies on which the plaintiffs should be able to recover in the event of loss. They said that if the allegation of the underwriters were successful the defendant had committed a breach of such duty whereby they had suffered damage by the loss of the insured amounts and the costs they might incur or have to pay to the underwriters, and they claimed a declaration that they were entitled to such damages.

The defendant, by his defence, said he was under no obligation to deliver the pontoon at Brindisi; that it was at the risk of the plaintiffs when lost; and that he was therefore not liable to repay the sums paid to him by the plaintiffs. He also pleaded that the handing over of the policies was an actual fulfilment of the contract and of his obligations thereunder, and he denied that he had been guilty of any misrepresentation or breach. The learned judge found the following facts on the question of concealment: (1) That the dock was not at the time of sailing as fit for the voyage as was usual and proper for such an adventure, or as it could have been made by ordinary available means—in other words, that it was not seaworthy; (2) that the dock had not been strengthened for the voyage in the sense in which the term would be ordinarily understood; (3) that the fact that the dock had not been strengthened for the voyage was clearly material to the question whether, and at what premium, the underwriters would insure—if they had been told it, they would either have refused the insurance or have made further inquiry as to the construction of the dock; (4) that none of the parties knew or believed that the dock was not seaworthy—they all thought the dock was fit for the voyage.

Bailhache, K.C. and *Mackinnon* for the plaintiffs.

Leslie Scott, K.C. and *Roche* for the defendant.

SCRUTTON, J., after stating the facts, proceeded:—On these findings the question arises as to the extent of disclosure necessary by an assured who asked underwriters to insure, "seaworthiness admitted," a subject-matter such as a river steamer or a floating dock, which could never be seaworthy in the ordinary sense of the term, for it was not intended for sea risk, but which could have additional strengthening for a voyage built into it, or added to it.

If the assured knows of any specific defect in the dock he must disclose it in asking for an insurance "seaworthiness admitted"; so also if the assured knew or believed that the dock was not fit to go to sea owing to the absence of some strengthening usually added; or if he had a report or opinion to the effect that the dock was not fit to go to sea he must disclose it, although he might think that the report was erroneous. But suppose none of these facts exist, but the assured and his servants honestly believe the dock is strong enough to go to sea, and tell the underwriters she is a "floating dock," in this case one of some age, must they disclose anything else? If the policy did not admit seaworthiness they need not disclose anything, for the implied warranty excludes the necessity of disclosure of facts which would break it: (Marine Insurance Act, s. 18, sub-s. 3 (*d*). But if the warranty is excluded by the words "seaworthiness admitted," must they give the underwriter, without his asking for it, a full statement of the construction of the structure which they have informed him is a floating dock, or when they tell the underwriter it is a floating dock, and therefore not an ordinary sea-going vessel, and ask him to admit its seaworthiness, do they put him on inquiry as to its construction and the means adopted to send it to sea, with the result that if he does not ask he waives the information? Lord Mansfield in *Carter* v. *Boehm* (3 Burr. 1905, at pp. 1910, 1911) took this view of the insurance of a privateer, so described, which the underwriter must know by its description was engaged on secret enterprises, of which, if he did not ask about them, he waived disclosure. He said: "If an underwriter insures private ships of war, by sea and on shore, from ports to ports, and places to places, anywhere—he need not be told the secret enterprises they are destined upon; because he knows some expedition must be in view; and from the nature of his contract, without being told, he waives the information." The House of Lords in *Seaton* v. *Burnand* (82 L. T. Rep. 205; (1900) A. C. 135) had a case where the solvency of a surety for a loan was insured, and it was urged by the underwriters that it was material to disclose that the loan was at an interest of over 30 per cent. One of the reasons given by the members of the House was that by Lord Shand. At p. 147 of (1900) A. C. he said: "I must further add that I am of opinion, as Mr. Joseph Walton very

forcibly put it, there was enough to put members of Lloyd's on inquiry. It was for them to inquire if they thought further information was required. The very circumstance that a guarantee of Sir Frederick Seager Hunt's obligation was asked for indicated that at all events security, which was ample and substantial, was required, and that circumstance was sufficient to put them upon inquiry—such inquiry as they made by going to the manager of the bank, from whom they ascertained what Sir Frederick Seager Hunt's circumstances were." Other cases are collected in sect. 618 of the last edition of Arnould's Marine Insurance.

The clause "seaworthiness admitted" is put into these insurances of floating docks and river steamers not ordinarily engaged in sea voyages to avoid the doubtful and difficult inquiry whether sufficient temporary strengthening for an unusual service has been applied to a subject-matter not originally intended for that service; and in my view the proposal of such an insurance to an underwriter, while requiring the disclosures I have already suggested, puts him on inquiry as to the actual construction and strengthening, if any, of the subject-matter if he wants to investigate it. The defence of concealment in my view therefore fails.

As to the second defence. The defendants have not satisfied me that the alleged misrepresentation was made, and as both defences fail there will be judgment for the plaintiffs.

With regard to the second action, if I had set aside the policies in the first action, I should have found that the contract by Constant was to give valid policies; that that contract had been broken; and that Constant would have been liable in damages. As, however, I have not set aside the policies in the first action, it follows that the second action also fails.

(Before Scrutton, J.)

Produce Brokers' Company Limited v. Furness, Withy, and Co. Limited. (a)

Bill of lading—Loading charges—London clauses—Discharge of ship at riverside wharf.

By the "London clause" shipowners are entitled to exact certain charges from consignees of cargo in respect of discharge of vessels.

On the construction of a bill of lading:

Held, that these charges could only be exacted by the ship when she discharged her cargo in a dock, and not when she discharged at a riverside wharf.

Action raising a question as to the rights of shipowners under the London clause incorporated in bills of lading.

The plaintiffs were the indorsees and holders of certain bills of lading for rosin and turpentine in barrels on board the defendants' steamship *Malinche* for carriage from Savannah to London.

(a) Reported by Leonard C. Thomas, Esq., Barrister-at-Law.

The bills of lading acknowledged that the barrels were received in apparent good order and condition, and were to be delivered at the port of London unto order or to his or their assigns, he or they paying freight in cash for the said goods,

Freight payable on delivery. . . . The goods to be taken from alongside by the consignee immediately after the vessel is ready to discharge, or otherwise they will be landed by the master at the merchant's risk and expense, the collector of the port being hereby authorised to grant a general order to discharge immediately after the entry of the ship. . . . In accepting this bill of lading, the skipper or other agent of the owner of the property carried expressly accepts and agrees to all its stipulations, exceptions, and conditions, whether written or printed.

London clause (A). The shipowners shall, at their option, be entitled to land the goods within mentioned on the quays, or to discharge them into craft hired by them, immediately on arrival and at consignees' risk and expense, the shipowner being entitled to collect the same charges on the goods entered for landing at the docks as on goods entered for delivery to lighters. Consignees desirous of conveying their goods elsewhere shall, on making application to the ship's agents or to the dock company within seventy-two hours after steamer shall have been reported, be entitled to delivery into consignee's lighters at the following rates, to be paid with the freight to the ship's agents against release, or the dock company, if so directed by the ship's agents. . . .

(B) Grain for overside delivery is to be applied for within twenty-four hours of ship's docking, or thereafter immediately it becomes clear. In the absence of sufficient consignees' craft, with responsible persons in charge, to receive as fast as ship can discharge overside into lighters during dock working hours, the master or agent may land or discharge into lighters at the risk and expense of the consignee. The shipowner may land or discharge continuously day and (or) night, any grain landed or discharged for ship's convenience during usual dock hours, consignees' craft being duly in attendance, and any grain that may be landed or discharged before or after usual dock hours (whether craft are then in attendance or not) is to be given up free to consignees' craft applying for same within seventy-two hours from its landing or discharge, otherwise it will be subject to the usual dock charges. . . .

(C) Hay, flour, illuminating and lubricating oil.—Consignees to have craft in attendance immediately on ship's docking to take delivery from ship or quay, at shipowner's option, working continuously day and (or) night, paying in any case 1s. 3*d*. per ton weight, or otherwise the goods will be put into captain's entry craft at consignees' risk and expense.

These London clauses (A), (B), and (C) are to form part of this bill of lading, and any words at variance with them are hereby cancelled. The shipowners shall have the same lien, rights, and remedies on goods or grain referred to in the above clauses, or under any other clauses of the bills of lading, as they have by law in respect of freight.

The exceptions and conditions enumerated in this bill of lading shall apply during the voyage, and while on the quays or sheds of the dock, for any purpose whatever, and until the goods and (or) grain are actually delivered to the consignees or their agents.

Upon the arrival of the vessel in London she proceeded to Mark Brown's Wharf, a riverside wharf, and there discharged the turpentine into the plaintiffs' craft, and the rosin partly into the plaintiffs' craft and partly on the wharf. The bill of lading freight was paid by the plaintiffs, and they also had to deposit in court a sum of 36*l*. 7*s*. 6*d*. in respect of a claim put forward by

the defendants for charges under the London clauses in the bill of lading, and in respect of which claim the defendants exercised a lien on a portion of the plaintiffs' rosin for the 36*l.* 7*s.* 6*d.*

The plaintiffs pleaded that the London clauses had no application when the cargo was discharged in the river and not in the dock, and they claimed payment out of court of 36*l.* 7*s.* 6*d.*; a declaration that the defendants were not entitled to impose the charges upon them or to exercise any lien upon their goods in respect thereof; and damages for the wrongful detention of the rosin.

By their defence the defendants said that owing to congestion at the Surrey Commercial and other docks, in order to save expense and delay to the consignees, they berthed the vessel on her arrival in London at Mark Brown's Wharf, where the operation of landing on the quay, sorting, and delivery from the quay or overside into lighters would be, and was in fact, quickly carried out. They pleaded that in the circumstances the charges claimed were properly made and enforced under the London clauses in the bills of lading; or, in the alternative, that the expenses incurred in discharging at the wharf instead of at a quay in the dock were reasonably incurred on behalf of the consignees, and that the sum of 36*l.* 7*s.* 6*d.* was the contribution thereto properly due from the plaintiffs.

Adair Roche and *Cuthbertson* for the plaintiffs.

Dunlop for the defendants.

Scrutton, J.—In this case, which is a test action, the Produce Brokers' Company Limited sue Messrs. Furness, Withy, and Co. Limited, the well-known shipowners, and the subject-matter of the action is to ascertain whether the shipowners were entitled, in the case of a ship called the *Malinche*, of the Furness Line, coming from the Savannah, and discharging at Mark Brown's Wharf above the Tower Bridge, to make certain charges under clauses known as the London clauses.

Somewhere about the end of the eighteenth century there were no docks in London, and all ships, which were all sailing ships of course, used to discharge in the river. Between 1790 and 1810 several Acts were passed under which docks were constructed, and it was a matter of great controversy in connection with each Act whether the lightermen who brought their barges alongside ships in the river and the wharves to which the goods came from ships in the river were to be interfered with as a matter of trade by the creation of new docks, and the lightermen and the wharves were protected by what is called the free-water clause in the Dock Acts, under which lighters had a right of entry to the docks to take goods overside whenever the consignee wanted it. Ships were then sailing ships, and they were very leisurely, making one or two voyages a year, and it did not matter very much how long a barge waited alongside a sailing ship to take discharge; and also discharging was claimed by the dock companies as their sole right, and the dock companies, if they were in difficulties as to sorting, used to discharge on their own quay without making any particular claim on anybody When steamers came in, and more capital was invested in each steamer, and time became of more importance, because each steamer could then make more voyages in a year, for some time the question did not arise acutely as to this sorting on the quay, because the dock was doing the whole work, and it did not become material to ascertain who the dock was doing it for.

But after the great dock labourers' strike—I think the date was 1886—the docks suddenly refused to discharge ships except on their own terms. The shipowner then had to face the problem of discharging his own ship himself in the dock, and he found that he could not discharge his ship quickly by sorting on his own ship, and he wanted to use the dock quay, but the dock said that he could not use it unless certain charges were paid, and there was for some ten years a very prolonged fight between the dock and the shipowners. It came before the courts in 1892 in a number of other cases, in most of which I was concerned for the shipowners. The result was that the shipowner had to pay the docks for using their quay for sorting. It was for his convenience to sort quickly on the quay rather than on the deck of his ship, and the docks made him pay if he wanted to use the quay for sorting overside goods as to which otherwise the docks would not have had any right to make any charge.

Not unnaturally the shipowner, having to pay these charges, cast about to see if he could find somebody else to pay them, and he invented the London clause, which was done for the purpose of putting some of the charges which he had to pay the docks for sorting on to consignees taking their cargo overside in craft, who, said the shipowner, benefited as much as he did by the increased quickness in discharge, saving demurrage on lighters, and getting their goods quicker. So various forms of the London clause were invented, all of which, as far as I know, had reference, and had reference only, to discharge in docks, because it was only at docks that the question arose.

The question in this case and on this bill of lading comes to this—and what I say only applies to this bill of lading and to other cases similar to it — supposing that the steamer does not go into dock, but discharges at the wharf in the river, can it still collect, under the London clause, the charges which it could collect from the consignee who wanted his goods overside if the discharge was in a dock where the question originally arose? That, in my view, must turn on the terms of the clause used, which must be read against the shipowner who is seeking to claim them. These goods are turpentine and rosin, and there is an agreement of the parties that they have, when the ship has been in the dock, treated turpentine and rosin as coming under clause (*c*), I suppose under the head of illuminating and lubricating oil. Clause (*c*) is: "Consignees to have craft in attendance immediately on ship's docking to take delivery from ship or quay, at a shipowner's option, working continuously day and (or) night, paying in any case 1*s.* 3*d.* per ton weight, or otherwise the goods will be put into captain's entry craft at consignees' risk and expense." Clause (*c*) is the third of three London clauses, which, without reading through it carefully, appear to me on reading them, from my knowledge of the history of the matter, to have been drafted entirely with reference to docks. I am told in this case in evidence that this is the

first time that one of the Furness Line ships has discharged at a wharf in the river. In my view, therefore, having regard to the language used, which throughout was language speaking of docks —"usual dock hours," "dock working hours," "land at the docks," "apply to the dock company"—this clause as at present drafted only entitles the shipowner to make these charges when the ship discharges in a dock. On the reason of the thing there is no particular reason why he should not have it if the ship discharges at a wharf, but he has not said so, in my view; and if he wants to get these clauses when a vessel goes to a wharf he must say so in clear terms, because he is putting a charge on the consignee. The result is that, in my opinion, the plaintiffs' claim succeeds. There must be judgment for the amount claimed, and 3*l.* 10*s.*, the agreed sum for damage, with costs.

(Before Scrutton, J.).

Martineaus Limited v. Royal Mail Steam Packet Company Limited. (a)

Bill of lading—"Shipped in apparent good order and condition"—Incorrect statement—Liability of shipowner—Estoppel.

The master of a ship signed bills of lading by which he acknowledged to have received a cargo of sugar in "apparent good order and condition."

In an action by the indorsees of the bills of lading against the shipowners in respect of damage to the sugar:

Held, that, as the bill of lading contained a statement that the goods when shipped were in "apparent good order and condition," they were estopped from saying that the goods when shipped were not in apparent good order and condition.

Compania Naviera Vasconzada v. Churchill and Sim (10 *Asp. Mar. Law Cas.* 177; 94 *L. T. Rep.* 59; (1906) 1 *K. B.* 237) *followed.*

Commercial Court.

Action tried by Scrutton, J. sitting without a jury.

The plaintiffs were indorsees of two bills of lading, dated the 24th and 25th Aug. 1911, under which 2160 bags of sugar were shipped on board the defendants' steamship *Catalina* at Puerto, Mexico, for carriage to London.

By their points of claim the plaintiffs pleaded that by the bills of lading the defendants acknowledged to have received the goods at Puerto in apparent good order and condition to be conveyed to and delivered in London, and they thereupon became bound to deliver the goods in the like good order and condition. They alleged that the defendants failed to deliver the goods in the like good order and condition, but delivered the entire shipment damaged and deteriorated by sea water; and they claimed 189*l.* 16*s.* 10*d.* as difference between the weight invoiced and weight received, and 628*l.* 11*s.* 8*d.* in respect of depreciation, making a total of 818*l.* 8*s.* 6*d.*

(a) Reported by Leonard C. Thomas, Esq., Barrister-at-Law.

By their points of defence the defendants alleged that the contents of the bags were moist and liable from their inherent nature or vice to leak, melt, evaporate, or lose weight during the voyage; the bags were also leaky and were marked with a red stripe causing the sugar to be discoloured by red stains, and that if the sugar or any part thereof was delivered in a damaged condition, such damage arose from one or other of these causes. They further stated that they would, if necessary, rely upon the following terms and conditions in the bills of lading:

3. The company will not be responsible . . . for any act, neglect, or default whatsoever of the pilots, masters, engineers, mariners, stevedores, or other servants or agents, or other persons for whose conduct the company would otherwise be liable whether in relation to the navigation, management, or stowage of any carrying vessel or otherwise, nor for unseaworthiness of the ship (provided all reasonable means have been taken by the shipowners or their agents to provide against such unseaworthiness), nor for any consequences arising from any of the foregoing exceptions. . . .

8. Nor for any leakage, breakage (however caused), loss, or damage to packages or their contents through badness or insufficiency of package or packing, effects of climate, sweating, heat of holds, contact with or smell or evaporation from other goods, or decay, nor for anything that may occur after the packages have come within the control of any public authorities, dock, railway, or other carrier, or have reached a custom house.

15. The weight, contents, marks, value, and numbering of the packages are unknown to the company, who are not bound by the description in the margin.

On the day before the trial the plaintiffs gave notice of their intention to rely upon a plea that, even if the goods were not shipped in apparent good order and condition, the statement in the bills of lading that the goods were so shipped was made with the knowledge and intention that it should be acted upon by any buyers into whose hands the bills of lading might come, and they said they had acted on the statement in the bills of lading as to the condition of the goods to their detriment, and that therefore the defendants were estopped from saying that the goods when shipped were not in apparent good order and condition. In support of this plea they relied on the judgment of Channell, J. in *Compania Naviera Vasconzada* v. *Churchill and Sim* (*sup*).

At the time of shipment the mate made the following note upon the receipt which he gave for the goods: "Very wet and stained by contents."

The plaintiffs admitted that no part of the damage was occasioned by water getting into the ship during the voyage, and the defendants admitted that it was not caused after the goods left the ship.

The remaining facts and arguments are sufficiently stated in the written judgment of Scrutton, J.

Bailhache, K.C. and *Leck* (*Raeburn* with them) for the plaintiffs.

Holman Gregory, K.C. and *Dunlop* for the defendants.

Scrutton, J.—In this case the plaintiffs, Messrs. Martineaus Limited, who are well-known importers of sugar, alleged that the defendants, the Royal Mail Steam Packet Company, had received for carriage at Puerto, Mexico, in

apparent good order and condition, 2160 bags of sugar, but had delivered them in London badly damaged and deteriorated by sea water, and they claimed damages. The defendants pleaded that the sugar was damaged by its own inherent moisture. On the eve of the trial the plaintiffs admitted that no part of the damage was occasioned by sea water getting into the ship during the voyage, and the defendants admitted that it was not caused after the goods left the ship; but the plaintiffs gave notice that they would rely on the decision of Channell, J. in *Compania Naviera Vasconzada* v. *Churchill and Sim* (*sup.*).

In that case a shipowner, whose master had untruly stated that timber was shipped in good order and condition, whereas in fact it was shipped damaged by oil, was held liable in damages to an indorsee of the bill of lading, who paid for the timber on the faith of the admission of shipment in good order and condition.

I find the facts to be as follows:

Certain sugar was brought in lighters alongside the steamer in a river in Mexico close to the sea. The bags were then in such a state that the mate recorded at the time, "Very wet and stained by contents." When the vessel arrived in London it was found that the bags were much stained and the contents damaged partly by moisture and partly by the red paint on the bags, which had by reason of the moisture stained the sugar. One of the controversies at the trial was whether this state of the sugar was due to its own inherent moisture oozing out as molasses, staining the bags through which it percolated and damaging the bags and sugar below it; or to salt and (or) fresh water getting on the bags from some external source before shipment. I heard experts and other witnesses on each side, and having carefully considered their evidence and the documents I find that the sugar had been externally damaged before shipment by water both fresh and salt probably coming from some leakage in the lighters and from rain; and that the sugar itself was a dry (as opposed to a wet) sugar, with no molasses in it or appreciable drainage from it. I find, therefore, that the mate's note recorded the fact that the bags had been wetted by water and that the wetted sugar draining through the bags had stained them.

Mr. Gregory, for the defendants, argued that as the bill of lading contained the words "contents unknown," the master might accurately sign the bill, "Sacks of sugar shipped in apparent good order and condition," for the contents might be wet sugar, the drainage from which would wet and stain the bags, which would yet be in apparent good order and condition as bags of wet sugar. The master and mate in the box gave this explanation of the note in the receipt and the failure to make a note on the bill of lading. But in my view the mate did not mean only this when he made the note. I think the explanation of the captain's conduct is to be found in his owner's letter of the 10th Nov. 1911: "If all these notations were to appear in B/L there would be, as there has been in the past, a great outcry about unnecessary clauses of bills of lading." And I suspect that some instructions to this effect, possibly misunderstood by the captain in this case, have not been modified since the decision of Channell, J. drew attention to the importance of an accurate statement of condition on shipment. If the mate's and master's view was the one they took at the time, it yet resulted in a misstatement of fact, for the bags were not in apparent good order and condition. And in my view if masters made such statements of fact, they must not guess at the nature of the contents and their effects, but must ask, before drawing inferences from the assumed nature of the contents and making statements of fact based thereon.

The plaintiffs therefore received in London an apparently clean bill of lading, containing an untrue statement of fact.

I am relieved from considering many of the difficult questions which arise as to the position of an indorsee who took such a bill in relation to the shipowner, by their discussion and decision in the judgment of Channell, J., by which I am bound.

But Mr. Gregory endeavoured to distinguish this case from the previous one by pointing out there the indorsee paid the whole price against the bill of lading in ignorance of the damage, while here, though he was bound by contract to pay cash against documents on arrival of the vessel, by arrangement with the sellers he only paid 600*l.* against documents; then made a series of payments against goods delivered, and had at the trial not yet paid a final balance of 115*l.*, or more. But in my view he had acted on the documents to his prejudice; he had accepted the bill of lading, and begun to pay for it, and if he was to resist further payment he must prove that the damage happened before shipment, contrary to the statement in the bill of lading. If the bill of lading had contained the mate's statement, he would have been warned and could have resisted payment. This, within Channell, J.'s decision is sufficient, in my opinion, to raise the estoppel which prevents the ship from proving, in accordance with the fact, that the goods were in bad condition externally when shipped and obliges them to admit that the bags were apparently in good external condition, which is inconsistent with their then being wet from external causes and stained by sugar melting owing to the wet. If so, goods shipped apparently in good order and condition were delivered damaged by an external cause, and the shipowner cannot prove that an excepted peril caused the damage.

The shipowners could, in *Churchill's* case, have proved that no oil got at the timber during the voyage, and here there is an admission that no water got at the sugar during the voyage; but under *Churchill's* case the defendants were prevented from using the proof or admission because it was inconsistent with their own statement to the contrary, on which the indorsees had acted to their detriment.

Under Channell, J.'s decision the plaintiffs are entitled to the difference between the value of sound sugar and the sugar as delivered, which I assess at 628*l.* 11*s.* 8*d.* They are also entitled as holders of the bills of lading to the value of three bags short delivered, 5*l.* 16*s.* 1*d.* But they further claimed 184*l.* 0*s.* 9*d.* difference between the invoice weight of the sugar and the weight delivered. They had, however, only to pay for "delivered weight," and there was no evidence before me of the weight actually shipped. On this ground I dismiss this part of the claim.

I have considered whether I should deal with the plaintiffs' costs in view of the fact that their points of claim did not expressly raise the question of estoppel under *Churchill's* case, and that they only gave express notice in writing of this line of claim the day before the trial. I have come to the conclusion that no harm has thereby been done to the defendants, who, anyhow, would have resisted the claim, and that justice will be done by refusing the plaintiffs any costs of the amendment, or of the extra discovery rendered necessary by it. I therefore give judgment for the plaintiffs for 634*l.* 7*s.* 9*d.* with costs.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Feb. 5 *and* 19, 1912.

(Before BARGRAVE DEANE, J.)

THE RIGEL. (a)

Collision — Personal injury—Shock to seaman —British ship—Workmen's Compensation Act 1906 (6 *Edw.* 7, *c.* 58), *ss.* 6, 7*—Claim by seaman against employer—Claim by employer against wrongdoer—Action* in rem*—Damage done by any ship—Admiralty Court Act* 1861 (24 *Vict.* c. 10), *s.* 7*—Remoteness of damage.*

A lightship owned by the Commissioners of Irish Lights was run into and damaged by a German sailing ship which was in tow of a tug. The sailing ship was arrested in England in an action in rem *instituted by the owners of the lightship to recover the damage they had sustained, and an undertaking was given in the action to appear and put in bail to answer the claim. After the writ was issued and the undertaking was given, one of the crew on the lightship made a claim under the Workmen's Compensation Act* 1906 *against her owners for compensation for injury caused by shock by fright before the collision actually took place, and an award was made in his favour in proceedings before an Irish County Court judge. The owners of the German ship were not represented at the County Court and were not parties. The owners of the lightship claimed an indemnity for any sum paid or payable to the workman in respect of his injury, and sought to recover the sum so paid from the owners of the German sailing ship. On the claim coming before the registrar he dismissed it. The owners of the lightship appealed from his decision. On appeal :*

Held, affirming the decision of the registrar, that even assuming that the seaman had in fact sustained the shock alleged and was entitled to recover compensation under the Act from the commissioners, and though the ship was for the purposes of the Act to be considered a British ship, the owners of the German sailing ship were not bound by the decision in the arbitration.

Held, further, that the damage was not " done by any ship " within the meaning of sect. 7 *of the Admiralty Court Act* 1861, *and that the claim was too remote.*

PETITION in objection to the report of the registrar dismissing a claim made by the Irish Lights Commissioners against the owners of the German sailing ship *Rigel.* The claim disallowed by the registrar was a claim for an indemnity in respect of sums paid to one of the crew of the lightship under the Workmen's Compensation Act 1906 which the commissioners sought to recover in an action *in rem* as damages caused by a collision which occurred between the two vessels.

On the 5th Aug. 1910 James Keating was serving on the lightship *Petrel* as a seaman, and was acting as cook and gunner. About 7.10 a.m. on the 5th Aug. he was on watch, when the *Petrel* was struck a glancing blow by the sailing ship *Rigel,* which was in tow of a tug. Keating was not knocked down, but he alleged he was very much frightened and suffered from shock and could not sleep. On the 29th Aug. Keating left the lightship, his employment, which was of a temporary character, having come to an end. During his employment on the lightship he made no complaint to the master or mate, but he went to see a doctor the day after he left the lightship and complained of sleeplessness and shock.

On the 9th Aug. the commissioners issued a writ *in rem* against the *Rigel,* claiming the sum of 1000*l.* against the *Rigel* for damage by collision.

On the 15th Oct. a solicitor acting on behalf of James Keating wrote to the commissioners alleging that his client had sustained injury from an accident which had happened to him while in their employ.

On the 20th Oct. the commissioners replied to that letter stating that it was the first they had heard of the accident.

On the 31st Oct. the solicitors acting on behalf of the *Rigel* admitted liability " for the damages, the subject-matter of the action, and pray a reference to the registrar and merchants to assess the amount thereof."

On the 8th and 11th Nov. the commissioners received letters from the mate and master of the *Petrel* stating that Keating had discharged his duties up to the 29th Aug., when he left the ship. The mate stated that after he had been put ashore he asked for a letter to the Irish Lights doctor, but that this was refused him as he had left the service.

On the 17th Nov. the commissioners forwarded their claim in the damage action to the solicitors for the *Rigel.* The claim contained twenty items, amounting to 365*l.* 19*s.* 5*d.*, and ended as follows :

> The plaintiffs also claim an indemnity against the defendants for any sum for which they may be liable in respect of injury alleged to have been sustained by one James Keating, a seaman employed on board the lightship *Petrel* at the time of the collision the subject of this action by reason of the said collision.

On the 23rd Jan. 1911 a further letter was received by the commissioners from the solicitor acting for Keating stating that he was prepared to settle his claim for 250*l.*

On the 25th March 1911 the plaintiffs filed their claim in the Admiralty registry, and when

(a) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

the reference came on on the 29th March 1911 the first twenty items were either agreed or admitted and the reference was adjourned as no formal claim had been put forward by Keating against the commissioners.

On the 31st March Keating started proceedings under the Workmen's Compensation Act 1906 to recover compensation from the commissioners, alleging that he was totally incapacitated by shock and claiming half-pay during his incapacity.

On the 6th April the solicitors acting for the commissioners wrote to the solicitors for the defendants giving them notice that a claim had been made, asking them if they would take over the defence of the claim, and saying that, if they would not defend, the commissioners would do so and claim anything they had to pay from the owners of the *Rigel*.

On the 10th April the solicitors for the owners of the *Rigel* replied that if the commissioners sought an indemnity they must proceed strictly in accordance with the Act, and stated that Keating had no claim as he had not received any injury; he was not a workman or a seaman, and that no such claim as that suggested could be made in the action against the *Rigel*.

On the 11th April the solicitors for the commissioners acknowledged the letter and stated that the three points mentioned would be put forward at the arbitration, but they did not know how the court could issue a notice of indemnity to third parties resident in Germany.

The arbitration took place before Judge Orr, of the County Down County Court, and, as the medical evidence was conflicting, he referred the case to the medical referee of the district, who reported that Keating was suffering from shock, and that he thought he ought to be able to resume work as a seaman in about two months.

On the 16th June the County Court judge made an award in Keating's favour, awarding him 12*s*. 3*d*. a week from the 31st Aug. 1910.

On the 31st Oct. the adjourned reference was held, and on the 6th Nov. the registrar made his report dismissing the claim of the Irish Lights Commissioners.

The material parts of the eivdence given before the registrar on the hearing of the reference appears in the report, which is as follows:

Whereas the defendants have admitted their liability for the damages occasioned to the plaintiffs by reason of the collision in question in this action, subject, however, to a reference to the registrar assisted by merchants to assess the amount thereof. Now I do hereby report that the said claim was agreed between the parties with the exception of item No. 21, a claim for an indemnity for personal injury which came before me on the 29th March and the 31st Oct. 1911. The plaintiffs in this action were the Commissioners of Irish Lights, the owners of the lightship *Petrel*. On the 5th Aug. 1910 the *Petrel* was stationed on what is known as the South Rock Station. She was in her proper charted position in latitude 54·24 N and longitude 5·21 W, being then about two miles from the South Rock disused lighthouse tower off the coast of the county of Down. Shortly before 8 a.m. on the 5th Aug. the defendants' ship *Rigel* came into collision with the lightship, inflicting damage to her. On the 9th Aug. 1910 the plaintiffs issued a writ in an action *in rem*. The endorsement of this writ was "the plaintiffs as owners of the lightship *Petrel* claim the sum of 1000*l*. against the ship *Rigel* for damage by collision which took place on the 31st Oct 1910." The defendants' solicitors admitted liability in the following terms: "We hereby admit their liability for the damages, the subject matter of this action." On the 25th March 1911, the plaintiffs filed their claim in the reference. The several items of this claim were subsequently admitted or agreed, except item twenty one, which was as follows: "the plaintiffs also claim an indemnity against the defendants for any sum for which they may be liable in respect of injury alleged to have been sustained by one James Keating a seaman employed on board the lightship *Petrel* at the time of the collision, the subject of this action by reason of the said collision." On the 29th March, the day appointed for the reference, it was agreed by counsel for the plaintiffs and the solicitor for the defendants, that the reference should be adjourned until the damages, if any, the subject of item 21, had been assessed. The adjourned reference was held on the 31st Oct. when the plaintiffs were represented by Mr. Balloch and the defendants by Mr. Dunlop, who contended that the plaintiffs could not recover any sum in respect of the compensation paid by them to Keating under the Workmen's Compensation Act 1906. The circumstances under which the claim arose are stated in Keating's affidavit. "On the 5th Aug. I was keeping watch from 4 till 8 a m. At that time a very heavy fog prevailed and I was engaged in firing the lightship's fog signal. Shortly before 8 a.m. a tug boat appeared out of the fog on our starboard beam about half a cable's length away, almost immediately afterwards I saw a large ship coming down on us about one point on our port bow and a quarter of a cable's length away. The said ship, which I afterwards ascertained to be the *Rigel*, struck the lightship's stem, and subsequently struck a glancing blow on her starboard bow. When I saw the *Rigel* approaching, I was very much frightened, as I thought the lightship was about to be sunk by the collision, and I suffered a severe shock and fright by reason thereof." And in his evidence before the County Court judge, Keating said: "The vessel was a large sailing vessel, she was coming on to our port bow to sink us. I said: 'All hands on deck,' and fired the gun. She struck us right on the stem with her starboard bow. We turned and struck him with our starboard bow to his starboard bow, and rasped along to his stern. The sailing vessel was in ballast and much higher than the lightship, I was not knocked down, but I was very much frightened. I suffered from shock, and could not sleep at night. I told the mate and all the others, they laughed and put me off." Numerous objections were raised to this head of the claim, to all of which it is not necessary to refer. The conclusion to which I have come to is that the defendants are not liable in this action. The claim is for damage by collision. Counsel for the plaintiffs argued that the real ground of action was negligent navigation, of which the contact of the two ships was a result. This is, in a sense, true, but the negligent navigation does not give the plaintiffs any ground of action until and unless they or their property are injured. It is not proved that the actual collision caused the nervous shock to Keating—rather it was the approach of the *Rigel*, but in either event the claim is, I think, too remote. It is, I think, clearly now the law that a person may recover from another person guilty of negligence damages resulting from a nervous shock unaccompanied by any actual impact: (*Dulieu* v. *White* (1901) 2 K. B. 669). But this general proposition has a qualification which is stated in the above case. The shock, where it operates through the mind, must be a shock which arises from a reasonable fear of immediate personal injury to oneself. A. has, I conceive, no legal duty not to shock B.'s nerves by the exhibition of negligence towards C. or towards the property of B. or C. The fear which Keating had in the first place was injury to the lightship by the *Rigel*; as soon as the collision took place, it was nothing more than a grazing

blow which could not injure Keating. It is impossible to say that as a seaman there was a reasonable fear of personal injury such as existed in the mind of the plaintiff in *Dulieu* v. *White*. Keating has, however, recovered compensation under the Workmen's Compensation Act 1906 for injury in the course of his employment. But this fact does not thereby enable the plaintiffs to recover damages from the defendants in this action, since the obtaining of the compensation results solely from the provisions of a special statute, and the case of *The Circe* (10 Asp. Mar. Law Cas. 149; (1906) P. 1, at p. 13) would apply. It was argued on behalf of the plaintiff that *The Annie* (1909) P. 176) (*infra*) governed the case. But from the statement of counsel it appears that *The Annie* was a case under sect. 6 of the Workmen's Compensation Act 1906, and it is admitted in the present case that the formalities necessary to make that section applicable have not been complied with. There is also a further point which is adverse to the plaintiffs. The plaintiffs' action is for damage done by a ship (Admiralty Court Act 1861, s. 7), that is by a ship as the noxious instrument, see *The Vera Cruz* (L. Rep. 9 P. Div. 96) (*infra*). Under the circumstances already stated, I am of opinion that this claim is not one in respect of damage done by a ship; it is one which must be distinguished from an action by Keating himself against the owners of the *Rigel* for negligent navigation, whereby he suffered a nervous shock causing physical injury. Stating the result of the previous opinions shortly, the conclusion is that in order to enable the owners of a ship who have paid compensation under the Workmen's Compensation Act 1906 to recover against the owners of the wrong-doing ship, if they can recover at all, except under the provisions of sect. 6, the claim must either be one for damage done by the wrong-doing ship, and not excluded by the rules as to remoteness of damage irrespective of the fact of a payment under the statute, or it must be a proper claim for indemnity under the statute as in *The Annie*, in which case also it might perhaps be said that there was actual damage by the ship. The present case does not fall under either of these heads, and therefore this particular claim must be disallowed. I have referred above to the case of the *Circe*. After a careful perusal of Lord Gorell's judgment, I think it is an authority that a payment under the Workmen's Compensation Act cannot be recovered as part of the damages suffered by the owners of an innocent ship against the owners of a wrong-doing ship. Since the decision in *The Dupleix* (*Shipping Gazette*, the 29th July; 12 Asp. Mar. Law Cas. 122; (1911) and (1912) P. 8; 106 L. T. Rep. 347) it appears to me immaterial whether the action in which the claim is made be one *in rem* or *in personam*, and, if there is a conflict between the *Circe* and the *Annie*, I must follow the reasoned judgment of Lord Gorell in the former case. Apart, therefore, from the opinions I have already expressed, the view I take of the *Circe* would be sufficient to exclude this claim. Having regard to the above opinion, it is unnecessary for me to give a decision on the various other points which were argued before me, some of which may also well form a bar to this claim. I was asked to assess the damages irrespective of any decision to which I might come on the point of law. As, however, the claim is not even yet accurately formulated, it is undesirable that I should do so at this period, as the claim, if it should in future be desirable to assess it, can be more accurately and without expense assessed at a later date. Having regard to the above decision the defendants are entitled to the costs of the reference since the date of payment to the plaintiffs of the undisputed items of the claim.

On the 13th Nov. the plaintiffs' solicitors gave notice that the plaintiffs objected to the report.

On the 25th Nov. the plaintiffs presented a petition in objection to the report submitting that the report was wrong and ought to be rejected because Keating was entitled to recover compensation from the plaintiffs; because the plaintiffs had been duly compelled to pay compensation to Keating under the Workmen's Compensation Act 1906; because the plaintiffs were entitled to recover damages in the action in respect of compensation payable by them to Keating, the injuries to Keating in respect of which such compensation had been ordered to be paid having been caused by the wrongful acts of the defendants; and because the conclusions of the registrar were wrong in fact and in law.

On the 8th Dec. the defendants delivered an answer to the petition submitting that the report was right, because compensation paid or payable under the Workmen's Compensation Act 1906 was not recoverable as damages in this action; because Keating was not entitled to recover compensation from the plaintiffs; because the award under which the plaintiffs were compelled to pay compensation to Keating was not binding on the defendants, because no personal injury by accident was caused to Keating, or, if caused, was not caused under circumstances creating a legal liability in the defendants to pay damages to Keating, because the registrar had no jurisdiction to grant the relief claimed, and because his conclusions were right in fact and in law.

On the 5th Feb. 1912 the petition came before the court for argument.

Bateson, K.C. and *Balloch* for the plaintiffs, the Commissioners of Irish Lights.—This case is covered by authority; it is clear that this sum is recoverable:

> *The Annie*, 100 L. T. Rep. 415; 11 Asp. Mar. Law Cas. 213; (1909) P. 176.

That action was an action *in personam*; this is an action *in rem*, but as the defendants have entered an appearance in the action, there is no difference between the cases:

> *The Gemma*, 81 L. T. Rep. 379; 8 Asp. Mar. Law Cas. 585; (1899) P. 285;
> *The Dictator*, 67 L. T. Rep. 563; 7 Asp. Mar. Law Cas. 251; (1892) P 304;
> *The Dupleix*, 106 L. T. Rep. 347; (1912) P. 8.

The lightship was struck by the *Rigel* and received damage. The defendants appeared unconditionally and admitted they were liable to pay damages whether they were direct or consequential. It is unnecessary that the damage should be caused by an actual striking of the thing injured:

> *The Port Victoria*, 86 L. T. Rep. 804; 9 Asp. Mar. Law Cas. 314; (1902) P 25.

[BARGRAVE DEANE, J.—The question here is does it reasonably flow from what happened?] The shock is the natural and probable consequence of the careless navigation, and the damage is recoverable:

> *Dulieu* v. *White*, 85 L. T. Rep. 126; (1901) 2 K. B. 669.

The Circe (93 L. T. Rep. 640; 10 Asp. Mar. Law Cas. 149; (1906) P. 1) was decided before the Workmen's Compensation Act 1906 was passed, and seamen were not within the Act then. The claim in the *Annie* (*ubi sup.*) was not a claim for an indemnity under sect. 6 of the Act; it was an action for damages. The owners of the *Petrel*

are entitled to recover any sums paid as a consequence of the collision:

> *The Frankland*, 84 L. T. Rep. 395; 9 Asp. Mar. Law Cas. 196; (1901) P. 161.

Instances of such payments are the cost of raising a wreck caused by collision, and salvage necessitated by collision, which are always recovered as damages in collision cases.

Laing, K.C. and *Dunlop* for the defendants, the owners of the *Rigel*.—The defendants are not bound by the arbitration proceedings. In order to bind the defendants notices should have been given under rules 19-24 of the Workmen's Compensation Act Rules, and they were not given. To succeed in this action the plaintiffs must show that this man had a good claim against them and that the money paid to satisfy it is damage done by a ship. This man is not within the Act, for he is not a seaman on a British ship, for the ship is not registered and is not recognised as a British ship:

> Merchant Shipping Act 1894, s. 2 (2).

And is entitled to none of the benefits enjoyed by British ships:

> Merchant Shipping Act 1894, s. 72.

The seaman did not give the notices necessary under the Act:

> Workmen's Compensation Act 1906, s. 7 (1) (*a*).

And the incapacity did not commence on board, so notice is necessary. The admission of liability made by the defendants did not include this claim, for when the admission was made no one knew of this claim:

> *The General Havelock*, (1906) P. 4.

The Port Victoria (*ubi sup.*) was an action for damage received by a ship and was brought under the Admiralty Court Act of 1840. This is an action for damage done by a ship and is brought under the Admiralty Court Act of 1861. In fact the damage sued for was not done by a ship, it was done before the collision took place at all and had nothing to say to the collision:

> *The Theta*, 71 L. T. Rep. 25; 7 Asp. Mar. Law Cas. 480; (1894) P. 280;
> *The Vera Cruz*, 52 L. T. Rep. 474; 5 Asp. Mar. Law Cas. 386; 10 App. Cas. 59.

[BARGRAVE DEANE, J.—It is said that after appearance the action *in rem* becomes an action *in personam.*] The fallacy in that statement is that though the judgment obtained in an action *in rem* is also obtained against the person of the owner and may be enforced against other property of his, appearance gives no greater right against the bail than there was against the *res*. *The Annie* (*ubi sup.*) was a common law action for negligence and was not an action *in rem* brought under the Admiralty Court Act 1861, and the compensation was in such an action clearly recoverable. In *The Circe* (*ubi sup.*) Lord Gorell clearly thought that such a case as this would not be a case of damage done by a ship. This sum cannot be recovered unless the plaintiffs bring themselves within the words of the statute. The collision between the ships was not the proximate cause of the damage:

> *Cory and Son* v. *France Fenwick*, 103 L. T. Rep. 649; (1911) 1 K. B. 114.

Bateson, K.C. in reply.—Damage done by a ship includes any sort of damage done by it:

> *The Zeta*, 69 L. T. Rep. 630; 7 Asp. Mar. Law Cas. 369; (1893) A. C. 468, at p. 478;
> *The Sylph*, 17 L. T. Rep. 519; L. Rep. 2 A. & E. 24;
> *The Guldfaxe*, 19 L. T. Rep. 748; L. Rep. 2 A. & E. 325.

Judgment was reserved and was delivered on the 19th Feb.

BARGRAVE DEANE, J.—This is an appeal from a report of the registrar on a reference, in which he refused to allow a claim by the Commissioners of Irish Lights, as owners of the lightship *Petrel*, to include as damages occasioned by a collision between the *Petrel* and the defendants' vessel *Rigel* an award made by the judge of the Newtownwards County Court, County Down, in Ireland, in favour of one James Keating, under the provisions of the Workmen's Compensation Act 1906.

On the 5th Aug. 1910 the *Petrel* was stationed on what is known as the South Rock Station, off the coast of Ireland. On the morning of that day the defendants' vessel *Rigel* collided with the *Petrel*, causing some slight damage to her. It was a dense fog at the time, and James Keating, who was a member of the crew of the *Petrel*, serving as cook and gun firer, was on watch. Keating saw the *Rigel* approaching—looming through the fog. Keating was not knocked down or physically injured by the collision, but alleged that he was very much frightened when he saw the *Rigel* "coming on our port bow to sink us." The County Court judge held that this fright so occasioned had caused a nervous breakdown, accepting the evidence of a medical witness, Dr. Tate, that he was temporarily quite incapacitated from his ordinary work as a seaman, and awarded him a weekly payment of 12*s*. 3*d*., being the half of his weekly wages while in the commissioners' employment, to commence from the 31st Aug. 1910.

Keating had been engaged to serve on the *Petrel* from the 1st Aug. to the 29th Aug. in place of another man temporarily absent, and he served to the end of his engagement, the 29th Aug.. when in due course he was put ashore. The captain of the *Petrel* deposed that no complaint was made to him of any shock or injury by Keating, and the solicitor of the commissioners had no information till he received a letter from Keating's solicitor on the 18th Oct. The mate of the *Petrel* deposed that he had no complaint made to him by Keating at any time, and that if he had it was his duty to, and he would have, put it in the log. There is no such entry proved.

It is very difficult to believe that an experienced seaman, such as Keating was, could have been so seriously affected "by fright," or that he could have been so frightened, as to sustain a shock such as he described, and yet to go on performing his duties on board from the 5th Aug. to the 29th Aug. without any complaint. I am not bound by the finding of the County Court judge, and I have very grave doubts. I certainly should not, on the evidence, have felt that Keating had proved his case. But, assuming for the sake of argument that the judgment is right, and the commissioners have to pay, can they recover the amount over from the owners of the *Rigel?* The registrar

has reported that they cannot. Many reasons were given to me in support of the registrar's decision. Sect. 7 of the Admiralty Court Act 1861 gives jurisdiction to the High Court of Admiralty "for damage done by any ship." In this case was damage done to Keating by the ship *Rigel?* His own story is that he was frightened not by the collision, but before the collision took place, when he saw the *Rigel* looming out of the fog. Supposing that the *Rigel* had passed by, just avoiding a collision. Keating, according to his own account, would have had his fright all the same, but could it be then said to be damage caused by a ship? I do not think so, and in Keating's case as put it was his own nervousness which caused his fright, and, in my opinion, as a seaman, it is hardly credible that what he saw could have created such a fright in him as he describes. I am of opinion that his claim is too remote as against the owners of the *Rigel*.

I have not forgotten to notice the case of *Dulieu* v. *White* (1901) 2 K. B. 669), but I agree with the words of the registrar in his report. It is impossible to say that, as a seaman, there was a reasonable fear of personal injury, such as existed in the mind of the plaintiff in *Dulieu* v. *White*.

But the further difficulty in the commissioners' way in seeking to recover from the owners of the *Rigel* the amount due to Keating under the County Court award is a statutory one. Keating gave notice of his intention to proceed in the County Court to get an award against the commissioners, as his employers, under the Act, on the 4th and 8th Nov. 1910 and the 23rd Jan. 1911 and on the 6th April 1911, the commissioners' solicitors wrote to the *Rigel's* solicitors a letter containing the first intimation of Keating's claim. The answer was on the 10th April, repudiating any liability, and adding: "If your clients seek an indemnity from our clients they must proceed strictly in accordance with the Acts and rules governing such a case." Then followed the letter of the 10th April from the commissioners' solicitors, but no notice was given by the commissioners' solicitors to the *Rigel's* solicitors pursuant to pars. 19-24 of the rules under the Act (form 23), and the owners of the *Rigel* were therefore, not represented at the County Court were not parties, and are not bound by the decision. It was also admitted in argument that the admission of liability in the Admiralty action *in rem* was given before this question was put before the owners of the *Rigel*.

One point raised by counsel for the defendants was that the *Petrel* was not a registered British ship under sub-sect. 1 of sect. 2 of the Merchant Shipping Act, and therefore not a British ship, under sub-sect. 2. It is agreed that she was not registered, although the County Court judge was informed (wrongly) that she was; but was she a British ship? I think this question is not material, because in my opinion sect. 2 (1) (2) of the Merchant Shipping Act 1894 only apply to the provisions of that Act, and that for determining whether the *Petrel* was or was not a British ship or vessel we must look to the wording of sect. 7 of the Workmen's Compensation Act 1906: "Any British ship or vessel of which the owner, or, if more than one, the managing owner resides or has his principal place of business in the United Kingdom." Counsel for the defendants further urged that Keating could not recover from the commissioners because he had failed to follow the provisions of sub sect. (*a*) of sect. 7 of the Workmen's Compensation Act 1906. I do not think the words "may give notice" are to be read "shall give notice" to the master; but, as I have already said, the fact that the man did not give any notice to his master, although he remained at his duties on board more than three weeks after his supposed shock, is a fact in the case of great weight. I therefore confirm the registrar's report.

Solicitors for the plaintiffs, *Williamson, Hill, and Co.*, for *Ingledew, Sons,* and *Phillips*, Swansea.

Solicitors for the defendants, *Stokes* and *Stokes*.

Feb. 28, 29, *and March* 1, 1912.

(Before BARGRAVE DEANE, J. and Elder Brethren.)

THE BROMSGROVE. (*a*)

Collision—Steamship aground in the Thames—Signals—Thames Rules 30, 40, *and* 52.

A vessel proceeding up the Thames grounded. She sounded four short blasts on her whistle to signify that she was not under command, but, before she could put up the lights required by art. 30 *of the Thames Rules, she was run into by a steamship which had been coming up the river about a quarter of a mile astern of her. In a damage action:*

Held, that the steamship which got aground was not to blame for not putting up the lights required by art. 30, *as that rule was not applicable, and, even assuming that she was, there was not sufficient time in which to put them up before the collision, and she had sounded a four-blast signal signifying that she was not under command.*

Held, further, that the overtaking ship was alone to blame for not keeping out of the way and for bad look-out.

Observations on the want of a signal to be made by vessels temporarily aground in the Thames.

DAMAGE ACTION.

The plaintiffs were the owners of the steamship *Holywood*; the defendants and counter-claimants were the owners of the steamship *Bromsgrove*.

The case made by the plaintiffs was that shortly before 8.17 p.m. on the 5th Nov. 1911 the *Holywood*, a screw steamship of 1546 tons gross and 965 tons net register, manned by a crew of eighteen hands all told, was, whilst on a voyage from Hull to London with a cargo of coal, in Erith Rands, River Thames, in charge of a Trinity House pilot. The wind was a gale from the west, the weather was fine and clear moonlight, and the tide first of the flood, of little force. The *Holywood* was proceeding straight up the Rands, a little to the north of mid-channel, shaping to pass to the northward of the dredger which was at work in the upper part of the reach and to the northward of mid-channel, and was making about nine and a half to ten knots through the water. Her regulation double mast-

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

head, side, and stern lights were being duly exhibited and were burning brightly, and a good look-out was being kept on board of her.

In these circumstances those on the *Holywood* observed the stern light of the *Armadale* clear to the northward of the dredger and just touching on the port bow of the *Holywood*, and very shortly afterwards the stern light of the *Bromsgrove* a little to the northward of the light of the *Armadale* and about ahead of the *Holywood*, and distant from half to three-quarters of a mile. Shortly afterwards, when the *Holywood* was about a quarter of a mile below the dredger, and when it was found that she was overhauling the two steamers which were showing their stern lights, her engines were stopped. Shortly afterwards the *Bromsgrove* was seen to be angling to the southward, as if intending to cross over to the south side of the river. The *Holywood* kept on with engines stopped, intending to pass under her stern, until it was seen that the *Bromsgrove* was not drawing across the river, but was stationary, the *Armadale* being also stationary and further to the southward than the *Bromsgrove*, when the engines of the *Holywood* were set on full speed ahead and her helm put hard-a-port to give her steerage way so as to try to run her aground as the best chance of avoiding collision with the *Bromsgrove*, having regard to the position of the *Armadale*. Shortly afterwards, as soon as the *Holywood* began to answer her port helm, her engines were stopped and reversed full speed astern and three short blasts were sounded on her steam whistle, but with her stem and port bow the *Holywood* struck the starboard side of the stern of the *Bromsgrove*, receiving considerable damage.

Those on the *Holywood* charged those on the *Bromsgrove* with keeping a bad look-out; with failing to exhibit anchor lights; with exhibiting a misleading light; and with failing to sound warning signals.

The case made by the defendants and counter-claimants was that shortly before 8.5 p.m. on the 5th Nov. 1911 the *Bromsgrove*, a steel screw steamship of 1445 tons gross and 833 tons net register, manned by a crew of seventeen hands all told, was proceeding up Erith Rands, River Thames, while on a voyage from Port Talbot to the Atlas Derrick, Bugsby Reach, with a cargo of coal. The tide was flood of the force of two to three knots. The *Bromsgrove*, in charge of a duly licensed Trinity House pilot, was following the line of the channel, keeping a little to the north of mid-channel, and was making about eight and a half knots. She carried the regulation masthead, side, and stern lights, which were all electric, and they were being duly exhibited and were showing brightly, and a good look-out was being kept on board of her.

In these circumstances the *Bromsgrove*, whose engines had been eased to slow and her helm ported a little in order to pass to the northward of the *Armadale*, which she had overtaken and which appeared to be aground, was also found to be touching the ground and then came to a stop on the starboard quarter of the *Armadale*. At this time the *Holywood*, which had previously been noticed following the *Bromsgrove*, was astern from a quarter to half a mile. As soon as the *Bromsgrove* grounded, her whistle was sounded four short blasts in rapid succession, which signal was repeated at very short intervals several times, but, notwithstanding the warning thereby given, the *Holywood* came on at great speed and with her stem struck the stern of the *Bromsgrove*, whose engines had been stopped as soon as she was found to be fast on the ground, such a heavy blow that her starboard quarter was completely demolished.

Those in charge of the *Bromsgrove* charged those on the *Holywood* with bad look-out; with neglecting to keep clear; and with neglecting to ease, stop, or reverse their engines.

The following Thames Rules were referred to:

30. With the exceptions hereinafter named, a vessel under 150ft. in length when at anchor or moored shall carry forward where it can best be seen, but at a height not exceeding 20ft. above the hull, a white light (hereinafter called the riding light) in a lantern so constructed as to show a clear uniform and unbroken light visible all round the horizon at a distance of at least one mile. A vessel of 150ft. or upwards in length when at anchor shall carry in the forward part of the vessel at a height of not less than 20ft. and not exceeding 40ft. above the hull one such light, and at or near the stern of the vessel and at such a height that it shall be not less than 15ft. lower than the forward light another such light. . . . A vessel of 150ft. or upwards aground in or near a fairway shall carry the above light or lights.

40. When a steam vessel in circumstances other than those mentioned in by-law 36 is turning round, or for any reason is not under command and cannot get out of the way of an approaching vessel, or when it is unsafe or impracticable for a steam vessel to keep out of the way of a sailing vessel, she shall signify the same by four blasts of the steam whistle in rapid succession, each blast to be of about one second's duration.

49. Every steam vessel and steam launch when approaching another vessel so as to involve risk of collision shall slacken her speed and shall stop and reverse if necessary.

52. Every vessel overtaking another vessel shall keep out of the way of the overtaken vessel, which latter vessel shall keep her course. Every vessel coming up with another vessel from any direction more than two points abaft her beam, *i.e.*, in such a position with reference to the vessel which she is overtaking that at night she would be unable to see either of that vessel's side lights, shall be deemed to be an overtaking vessel, and no subsequent alteration of the bearing between the two vessels shall relieve the overtaking vessel of the duty of keeping clear of the overtaken vessel until she is finally past and clear. As by day the overtaking vessel cannot always know with certainty whether she is forward or abaft this direction, she shall if in doubt assume she is an overtaking vessel and keep out of the way.

Laing, K.C. and *R. H. Balloch* for the plaintiffs.

Batten, K.C. and *D. Stephens* for the defendants.

BARGRAVE DEANE, J.—This is a curious sort of case. At first sight art. 52 seems to be the one to apply. It is the overtaking rule, which says: "Every vessel overtaking another vessel shall keep out of the way of the overtaken vessel, which latter vessel shall keep her course." It does not say speed, but I take it to mean speed. Therefore, *primâ facie*, the *Holywood* had to keep out of the way of the other vessel.

Then the other vessel by accident got aground, and was unable to keep her course and speed, and therefore one has to look to see how the other vessel when she got aground was to give notice

to the vessel coming up astern of her that she was aground.

I do not think, myself, that this is provided for in the rules. I do not think there is provision made in the rules, and I think there ought to be provision made, for often it happens in the Thames that a vessel goes aground when there is very little water in the river, and she requires to indicate that she has temporarily gone aground. Very often she has not time to change her lights, and I think it would be advisable if the rules stated that she should give some particular signal to indicate that which has happened. Whether it might be by continuing to blow the whistle until the lights were got up or the vessel was got off I do not pretend to dictate, but that there should be some rule I am clear.

The *Bromsgrove*, when she found herself aground, blew four blasts, according to her story, and continued to blow them. That is supposed to be under by-law 40, which says: "When a steam vessel, in circumstances other than those mentioned in by-law 36, is turning round or for any reason is not under command and cannot get out of the way of the approaching vessel . . . she shall signify the same by four blasts." Well, she was not turning round. She could not get out of the way of the approaching vessel, but as I say that is not what the rule, I think, had in mind. The rule had in mind, I think, a steamer whose gear is out of order, or whose engines are broken down, or something of the sort, and not a steamer which has temporarily run aground.

Art. 30 certainly does not apply, because I think it is meant to apply to vessels anchored or on the ground permanently near the fairway. That is not at all the same thing as this, where a vessel, owing to the lowness of the tides, had temporarily got herself on a bank. Did the *Bromsgrove* blow four blasts? That is a question of fact which I have to decide. Now counsel for the plaintiffs called my attention to the fact that none of the witnesses called for the *Holywood* say the *Bromsgrove* sounded four blasts. I think, however, this case is a very good example of the difference between affirmative and negative evidence, and the conclusion I have come to is that the evidence of those who say "I did not hear" is not of very much value in this particular case. Did this vessel blow four blasts? It is sworn to by the master, the pilot, the chief officer, the second officer, the man at the wheel, the pilot on the *Armadale*—who swears positively to it—the pilot's brother, and the man from the *Axwell*, who speaks to hearing four blasts from the *Bromsgrove*. That they were not heard by the plaintiffs' witnesses may be, but that is not the point. The point is did she blow them, and give the only notice open to her under the rules—namely, blow four blasts to indicate that she was not under command. I think she did. If she did you cannot impute blame to her, and if she did all that it was possible to do then the other vessel had to keep out of her way and did not do it.

I cannot help coming to the conclusion that the chief officer on the look-out on the *Holywood* was inattentive to his duties; that the people on the bridge trusted to him and he failed them, and their attention was not directed to the whistles and they did not hear them, and they got too close before they realised the *Bromsgrove* was there, and then had not time to keep clear of her. That is the conclusion I have come to, and it is one in which I am supported by the Elder Brethren, on whose advice I rely.

The Elder Brethren strongly urge upon me the importance of having some new rule—and I believe new rules are being prepared—in accordance with which a vessel which gets temporarily aground in the Thames—or in any other river where these shallows exist—shall indicate her position, and it seems to me that if she keeps blowing her whistle until she gets her lights up or gets off the ground, that might be sufficient. I ought to add a word on the question of putting up the anchor lights. You cannot put up lights in a moment. I do not know that vessels are bound to carry their lights ready lighted on deck in case of such an accident as this. It might be advisable to do so, but you have got to consider what distance these vessels were apart when first it came to their notice that the *Bromsgrove* was ashore. The other vessel was only something like a quarter to half a mile astern. That is not three minutes. In my opinion there was no time between the *Bromsgrove* getting aground and the other vessel running into her for the lights to be got out, lighted and put up to indicate that she was, under art. 30, aground near the fairway. I do not think, myself, that any blame can be attributed to the *Bromsgrove* on that account, and in my opinion the whole blame for the collision must be attributed to the *Holywood*. I do not think in this case there was time to put up the lights, but I do not think their absence affected the collision.

Solicitors for the plaintiffs, *Botterell* and *Roche*.

Solicitors for the defendants, *Thomas Cooper and Co.*

April 18 *and* 19, 1912.

(Before Sir S. Evans, President, and Elder Brethren.)

The Elysia. (*a*)

Collision—Lights—Tug lying by a ship and in attendance on her—Look-out—Sound signals—Compulsory pilot—Proper assistance from crew.

A tug in attendance on, but not fast to, a vessel at anchor with anchor lights, in the Mersey was stemming the tide, and carrying the usual under-way lights. Her green light was open to an upcoming steamship in charge of a compulsory pilot in such a position that the pilot navigated the upcoming ship towards the vessel at anchor and her tug under the impression that he was approaching one vessel under way showing her green light. A collision and damage resulted.

In a damage action brought by the owners of the ship at anchor, the defendants pleaded compulsory pilotage:

Held, that the tug was properly exhibiting her green light as she was under way, and that the defendants could not properly complain of having been misled by the green light; that the collision was brought about by the negligence

(*a*) Reported by L. F. C. Darby, Esq., Barrister-at-Law.

of the pilot, but that the plea of compulsory pilotage failed upon the grounds : (1) *That the master of the defendants' ship in fact appreciated the true position of things in time to warn the pilot that he was under a misapprehension and failed to do so as was his duty in accordance with the decision in* The Tactician (10 *Asp. Mar. Law Cas.* 534; 97 *L. T. Rep.* 621; (1907) *P.* 244). (2) *That the master of the defendants' ship knew what the pilot was doing and failed to call his attention to the fact that no sound signals had been given as was his duty.* (*a*)

DAMAGE ACTION.

The plaintiffs were the owners of the steamship *Explorer*; the defendants and counter-claimants were the owners of the steamship *Elysia*.

The case made by the plaintiffs was that the *Explorer*, a steel screw steamship of 4871 tons net register, manned by a crew of eighty-three hands all told, was, while on a voyage from Calcutta to Liverpool lying at anchor in the Sloyne, River Mersey, heading north, about two lengths from the Cunard buoy in a position selected by the pilot who was compulsorily in charge. The wind was S.S.E. a moderate breeze, the weather was fine and clear, and the tide was half flood of a force of about two to three knots. The *Explorer's* anchor lights were being duly exhibited and were burning brightly, and a good look-out was being kept on board.

In these circumstances those on board the *Explorer* saw the masthead and side lights of the *Elysia* coming up the river, nearly end-on, about two miles off, in charge of the steam tug *Toxteth.*

When the *Elysia* had approached to within about half a mile, her green light opened a little on the port bow of the *Explorer.* Then her red light opened, and with the tug ahead she continued to come ahead showing her red light as if intending to pass on the port side of the *Explorer*, but when the *Elysia* was half a length to a length distant she suddenly swerved to port as if acting under a starboard helm, showing her green light and shutting out her red light, and, coming on, with her stem struck the port bow of the *Explorer* a heavy blow, causing damage.

Those on the *Explorer* charged those on the *Elysia* with keeping a bad look-out and with failing to drop her anchor in due time or to take any measures to keep clear, and they charged those on the *Elysia* and her tug with starboarding and with failing to slacken their speed or stop or reverse.

The case made by the defendants and counter-claimants was that shortly before 6.28 a.m. the *Elysia*, a steamship of 6368 tons gross and 3994 tons net register, 440ft. in length, whilst on a voyage from Bombay to Liverpool with a cargo and passengers, and manned by a crew of 120 hands was in the River Mersey. The weather was dark but clear, and the wind a moderate southerly breeze. The *Elysia*, in charge of a duly licensed pilot, was proceeding straight up the river on the west side of the channel, with a tug fast ahead, and was making about two knots through the water. The regulation lights for a steamship under way were being duly exhibited on the *Elysia* and her tug, and they were burning brightly, and a good look-out was being kept. In these circumstances white and green lights, which were taken to be the lights of a steamship underway were seen about a mile off, and bearing slightly on the starboard bow. The green light was in fact the light of a tug fast to or attached along the starboard side of the *Explorer.* After the white and green lights were seen the helm was starboarded, and shortly afterwards the engines, which had previously been stopped, were put half speed ahead. When it was seen that the *Explorer* was at anchor the helm was put hard-a-port, the following orders were given to the engines in succession: "Full astern," "full ahead," and then "full astern," the starboard anchor was let go, and the tug towed off the starboard bow. Notwithstanding these measures the port bow of the *Elysia* struck the port bow of the *Explorer.*

Those on the *Elysia* charged those on the *Explorer* and those on the tug in attendance on her with keeping a bad look-out, with wrongly exhibiting, or allowing to be exhibited on the tug, a green light in such a position as to be mistaken for the starboard side light of the *Explorer*, with not exhibiting anchor lights on the tug, with not exhibiting towing lights on the tug if she was towing or attached to the *Explorer*; if the tug was not fast to the *Explorer* they charged those on board her with a breach of the end on rule, with not keeping to the starboard hand side of the channel. Alternatively they alleged that if there was any negligence on the part of those on the *Elysia* it was the negligence of her pilot who was compulsorily in charge.

The plaintiffs in their reply and defence to the counter-claim set up the defence of compulsory pilotage.

The other facts appear in the judgment.

The following collision regulations were referred to during the course of the hearing:—

1. The rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other lights which may be mistaken for the prescribed lights shall be exhibited.

3. A steam vessel when towing another vessel shall, in addition to her side lights, carry two bright white lights in a vertical line one over the other, not less than 6ft. apart, and when towing more than one vessel shall carry an additional bright white light 6ft. above or below such lights, if the length of the tow, measuring from the stern of the towing vessel to the stern of the last vessel towed exceeds 600ft. Each of these lights shall be of the same construction and character, and shall be carried in the same position as the white light mentioned in art. 2 (*a*), except the additional light which may be carried at a height of not less than 14ft. above the hull.

11. . . . A vessel of 150ft. or upwards in length, when at anchor, shall carry in the forward part of the vessel, at a height of not less than 20ft., and not exceeding 40ft., above the hull, one such light, and at or near the stern of the vessel and at such a height that it shall not be less than 15ft. lower than the forward light, another such light.

18. When two steam vessels are meeting end on, or nearly end on, so as to involve risk of collision, each

(*a*) This case seems to decide the point left open by Lord Alverstone, L.C.J. in *The St. Paul* (11 Asp. Mar. Law Cas. 169; 100 L. T. Rep. 184; (1909) P. 43) as to whether it is the duty of a master to call the attention of a compulsory pilot to the fact that sound signals ought to be given. It does not, however, decide the other point left open in that case as to whether the responsibility for giving sound signals rests with a master or a pilot.—ED.

shall alter her course to starboard, so that each may pass on the port side of the other.

25. In narrow channels every steam vessel shall when it is safe and practicable keep to that side of the fairway or mid-channel which lies on the starboard side of such vessel.

27. In obeying and construing these rules, due regard shall be had to all dangers of navigation and collision, and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

28. The words "short blast" used in this article shall mean a blast of about one second's duration. When vessels are in sight of one another, a steam vessel under way, in taking any course authorised or required by these rules, shall indicate that course by the following signals on her whistle, or siren—viz.: One short blast to mean, "I am directing my course to starboard." Two short blasts to mean, "I am directing my course to port." Three short blasts to mean, "My engines are going full speed astern."

29. Nothing in these rules shall exonerate any vessel, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look out or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

The following Mersey rules were also referred to:—

1. Every vessel, of whatever description, used in navigation, when in any part of the river Mersey, or in the sea channels or approaches thereto as above defined, shall, on and after the 17th day of September 1900, observe and obey the "regulations for preventing collisions at sea" made in pursuance of the Merchant Shipping Act 1894, hereinafter called "the general regulations" which may from time to time be in force, with the exceptions and additions mentioned in the following rules.

4. (*a*) A steam vessel when towing another vessel or vessels or when attached for the purpose of towing or manœuvring such vessel or vessels, shall carry the compulsory lights prescribed by article 3 of the general regulations, and such steam vessel when towing or attached as aforesaid to a vessel 450 feet or upwards in length shall carry the additional bright white light prescribed by the said article 3.

6. In lieu of article 11 of the general regulations, a vessel when at anchor, except when lying at any stage, shall carry in the forward part of the vessel, at a height of not less than 20, and not exceeding 40 feet above the hull, a white light, in a lantern so constructed as to show a clear, uniform and unbroken light visible all round the horizon at a distance of at least a mile, and at or near the stern of the vessel and at such a height that it shall not be less than 15 feet lower than the forward light, another such light.

11. Every steam vessel under way shall, when it is safe and practicable, keep to that side of the fairway or mid-channel which lies on the starboard side of such vessel.

Laing, K.C. and *Kennedy* for the plaintiffs—Whether the *Explorer* is to blame depends on whether her tug was made fast to her and on the construction to be placed on 4 (*a*) of the Mersey rules. [*Batten*, K.C.—My point is that the tug should have had anchor lights up.] On the evidence the tug was not in fact fast to the *Explorer*. The tug was dodging round the ship waiting to be made fast and she was not at anchor. It is said that the tug was carrying wrong lights. The contention is based on *The Romance* (83 L. T. Rep. 488; 9 Asp. Mar. Law Cas. 149; (1901), *P.* 15). The lights exhibited by the tug were correct, for she was not at anchor, or made fast to the shore or aground, and therefore she was under way. It was further contended that those on the *Explorer* had a duty to see that the tug had proper lights up:

The Devonian, 84 L. T. Rep. 675; 9 Asp. Mar. Law Cas. 179; (1901) P. 221.

But in that case the tug was actually fast to the *Devonian*; in this case the tug was not fast. The fault on the *Elysia* was not that of the pilot alone, either the *Explorer* was not reported soon enough, in which case there was a bad look out, or if she was reported in proper time, the master should have seen that the pilot heard and acted on the report and told him that he was going wrong:

The Tactician, 97 L. T. Rep. 621; 10 Asp. Mar. Law. Cas. 534; (1907) P. 244.

The vessel was not reported till very late, and those on the bridge never mentioned her to the pilot until a minute before the collision, though they had seen her for about twelve minutes.

Batten, K.C. and *Dunlop* for the defendants.—Those on the *Elysia* were misled by the green light of the tug; they thought it belonged to the *Explorer*, and that that vessel was under way. The practice is that tugs attending on steamships at anchor should exhibit anchor lights. The tug was exhibiting wrong lights. The tug in this case, though made fast to the big ship, was not towing her, so the facts here differ from those in *The Romance* (*ubi sup.*). If the anchor of the big ship supports the weight of the tug, the tug is at anchor and should exhibit anchor lights. *The Devonian* (*ubi sup.*) shows that the master and pilot are responsible for the lights of the tug. The tug here was in fact fast to the ship.

Laing, K.C. in reply.

The PRESIDENT.—It is not necessary for me to recapitulate the facts of this case. It is enough for me merely to state the conclusions of fact at which the court has arrived.

The collision took place, as we know, between the *Elysia*, a vessel under way, travelling at about five knots over the ground and two knots through the water, and the *Explorer*, a vessel which was in fact at anchor. *Primâ facie*, therefore, an explanation must be given by the defendants for the collision which took place. The explanation which they offer is this: We were misled by a green light which was allowed to remain, improperly allowed to remain, on the tug which was in some way in attendance upon the *Explorer*. Having regard to the argument of counsel for the defendants, I must at once consider whether or not it has been shown in this case that the tug was made fast to the *Explorer*. The only witness produced for the defendants to establish that fact was the master of the tug *Nelson*. He had every opportunity of seeing the rope which he says he saw at one time, after the crash of the collision, with the tug away from the starboard side of the *Explorer*. He was expecting a collision to take place between these two big vessels, and I doubt very much whether he was observing or could see whether the tug was made fast to the *Explorer*, or whether he was paying attention to anything but the collision which was impending, and which actually took place between the two vessels. On the other hand, there is the evidence of the chief officer of the *Explorer*, there is the evidence of the

master of the tug *Westcock*, and the evidence of the man who was called the mate. Their evidence stands in this way. The tug would hardly make fast without instructions from the chief officer on the bridge of the *Explorer*. The chief officer says not only that the tug was not in fact made fast, but that he gave no instructions for making fast. In the same way the master of the *Westcock* says that in fact there was no rope between the tug and the *Explorer*; and that statement is also made by the mate, at any rate up to a time within two minutes of the collision, when he went below. They further say this, that "before we would make fast instructions would have been given by me, the master of the *Westcock*, to the mate to make fast the rope." The master of the tug says "I gave no instructions to the mate." The mate says: "I received no instructions from the master." Putting this evidence on the one side, and comparing it with the evidence on the other, I am bound to come to the conclusion, and I do without hesitation come to the conclusion, that for some reason or other the tug had not been actually made fast on this occasion. Then counsel for the defendants went further, and argued that, even if the tug was merely in attendance, being there at the request of the master of the *Explorer*, she ought not to have had the green light burning at all. Well, no case has gone as far as that, and I do not think that the argument is a sound one. She, in fact, was steaming two knots in order to stem the tide, and I have come to the conclusion, and I am advised by those who assist me, that if she were not carrying her under-way lights in those circumstances she would be carrying improper lights.

So far as the pilot of the *Elysia* is concerned, I think the navigation of the *Elysia* was faulty, and that blame for the collision rests with the pilot of the *Elysia*; but another question, and a more difficult one to determine in this case, is whether or not the collision is solely attributable to the fault or negligence of the pilot, or whether it was contributed to by negligence on the part of somebody on the *Elysia* whose assistance ought to have been given to the pilot. The case which has gone furthest in the direction of doing away with the defence of compulsory pilotage is the case of *The Tactician* (97 L. T. Rep. 621; 10 Asp. Mar. Law Cas. 534; (1907) P. 244), and in that case it was laid down by the Court of Appeal, in the judgments of Lord Alverstone, that side by side with the principle that the navigation must be intrusted, without any undue interference, to the pilot alone, there is another principle—namely, "that the pilot is entitled to the fullest assistance of a competent master and crew, of a competent look-out, and a well-found ship"; and Fletcher Moulton in his judgment says that "just as the pilot is entitled to the assistance of the master and crew of the ship in obtaining information as to the surrounding circumstances, so in the present case he was entitled to the assistance of the master in calling his attention to the fact that the inferences he was drawing from the surrounding circumstances were such as a competent mariner ought not to draw."

In this case, the question being whether the pilot was given the assistance of a proper look-out, we must consider what the look-out was. It consisted, as counsel for the defendants admitted in terms, of the chief officer on the forecastle head, of the man in the crow's-nest and of the master on the bridge. The master on the bridge formed part of the look-out on the vessel, and therefore the pilot was entitled to the assistance not only of the chief officer on the forecastle head and of the man in the crow's-nest, but also the assistance of the master, forming part of the system of look-out. With regard to the forecastle head, I do not think the plaintiffs have shown that there was any negligence on the part of the man on the look-out on the forecastle head. I have come to the conclusion that I cannot disbelieve him when he says that at a considerable distance away—about a mile—he saw the vessel and reported her upon three occasions. One thing, though, is quite certain, and that is that the man on the forecastle head did not appreciate the fact that the light of the vessel which he saw, and which he called, "the vessel ahead," was the light of a vessel at anchor. He apparently thought, as did the others—by reason, so he explained, of the presence of the green light of the tug—that those lights belonged to one ship, and that that ship was in some way under way. What was his position in the circumstances? A man on the look-out on the forecastle head is not in as good a position to judge as a man on the bridge, with reference to the lights which he sees, as to whether they change their bearing to other lights or to his vessel; but whether he was or not, I think he did perform his duty by reporting the lights of a vessel ahead—that it was not his duty to go arguing with the people on the bridge, the pilot or the master, as to whether the lights which he reports are the lights of a stationary vessel at anchor or of a vessel under way. He shouted out, "Lights of a vessel ahead?" and I think he performed all that could reasonably be expected of him. On the bridge was a look-out consisting of the two eyes of the captain himself, and he ought to be a competent mariner. I daresay he is, and it was much easier for him, if he had been careful in his examination of the lights, to see whether that white light was the light of a vessel at anchor. Could a competent mariner have seen it earlier than the captain did? Unquestionably he could, because we have had the evidence, called by the defendants themselves, of the master of the tug *Nelson*, who says he appreciated, when he was a quarter of a mile distant, that the light of the *Explorer* was the light of a vessel at anchor. He mentioned the Wallasey Stage as his position when he appreciated that fact, and that is much nearer a mile away than a quarter of a mile; but it is enough for me to say, for the purpose of my judgment, that he did appreciate at least a quarter of a mile away, and probably at a much further distance away, that the light was the light of a vessel at anchor. If he did, the master could, and if the master could, he ought to have appreciated the same thing. He did not. Therefore I think that the look-out of the master was not as careful as it could and ought to have been. He could have, and ought to have, appreciated much earlier than he did that the light was the light of a vessel at anchor. He did, according to his own evidence, appreciate two minutes before the collision took place that that was the fact. The distance between the two vessels at that time was about a thousand feet. During the whole of this time the master knew that the

pilot was navigating towards the other vesels under the impression that she was under way, whereas in fact she was at anchor. If he ought to have appreciated the fact, as I think he ought to have, and if he had done what he ought to have done in that respect, he would have known that the pilot was navigating under a misapprehension; and in these circumstances, according to the decision in *The Tactician* (*ubi sup.*) it was his duty to have told the pilot, "You are going, apparently, towards that vessel as if she was a vessel under way. I can see she is a vessel riding at anchor," and he did not do so. If he had done so, even two minutes before the collision, I do not doubt something might have been done to alter a state of things which produced the collision, and that indeed the collision might have been avoided.

I know how difficult it is for a master to appreciate exactly, in the present state of the law, when he ought to, I will not say interfere, but say anything to the pilot which would seem to show he was interfering with the navigation by the pilot, or throwing any doubt upon the propriety of it. I appreciate to the full that it is a very dangerous thing to divide responsibility, but in this case, where the master was in doubt, and where, if he had kept a careful look-out, he would have appreciated what the tug appreciated, he ought to have told the pilot that he was under a misapprehension. I think it shows that the master himself in this case was to a certain extent responsible for the accident, and therefore the collision was not solely the fault of the pilot.

There is one other matter I ought to mention with reference to the master. I think in the case of *The St. Paul* (100 L. T. Rep. 184; 11 Asp. Mar. Law Cas. 169; (1909) P. 43.) the point was left open as to whether the duty of giving sound signals rested with the master as well as with the pilot; but there was a very strong indication of opinion by Lord Alverstone in that case that whosoever duty it was to order sound signals to be given, it probably is the duty of the master to call attention of the pilot to the fact that sound signals have not been given if in fact they ought to have been given. What was done in this case? There was a movement of the helm ordered upon three different occasions, according to the story of the defendants themselves—"starboard," some distance off; "starboard" again; and again "hard-a-starboard." It may be it is not often that sound signals are given to a vessel which is at anchor, but the pilot who was navigating the *Elysia* in this case thought he was approaching a vessel under way, and certainly these signals ought to have been given. The master himself knew what the pilot was doing, and, notwithstanding these three different orders to the helm, he did not call the attention of the pilot to the fact that he had not ordered any sound signals to be given. If sound signals had been given, what would have happened? No answer would have been given, clearly, from the *Explorer* of any movement of the helm on her part; but some kind of signal could be given, and in all probability would have been given, to the approaching vessel that the *Explorer* was not in a position to alter her course at all. In that way it would have been brought to the notice of those on the *Elysia*—and very likely have been brought to their notice in time—that this vessel was at anchor. Then this collision might have been avoided at the last. That is my decision.

I am clearly of opinion that the *Elysia* is to blame, by reason of the negligence of the pilot, for the collision, and for the reason I have given I have come to the conclusion that the collision would have been avoided if the proper assistance had been given by the master to the pilot in the direction which I have already indicated.

Therefore in this case the defence of compulsory pilotage fails, and the plaintiffs are entitled to recover judgment against the defendants. The defendants' counter-claim is dismissed.

(Before Sir S. T. EVANS, President, and Elder Brethren.)

THE SARGASSO. (*a*)

Collision—Fog—Tug attached to a steamship but not towing—Sound signals in fog for steamship and for tug—Collision Regulations, art. 15 (*a*) *and* (*e*)*—Division of loss—Maritime Conventions Act* 1911 (1 *&* 2 *Geo.* 5, *c.* 57), *s.* 1.

Where a tug was during fog accompanying a vessel in from sea to the Tyne, and was made fast alongside her but was not towing her, it was held in the circumstances: (1) *That the tug was not bound to comply with sub-sect.* (*e*) *of art.* 15 *of the Sea Rules as she was not towing.* (2) *That she was not bound to comply with sub-sect.* (*a*) *of the same article as safe navigation demanded that she should not sound any signals as if she were a separate vessel having way upon her.*

In this case both the plaintiffs' and defendants' vessels were found to blame for excessive speed. The defendants' vessel was found to blame in addition for bad look-out and for not stopping. The court, in applying sect. 1 *of the Maritime Conventions Act* 1911 (1 *&* 2 *Geo.* 5, *c.* 57), *apportioned two-thirds of the blame to the defendants' vessel and one-third to the plaintiffs', and gave no costs on either side.*

DAMAGE ACTION.

The plaintiffs were the owners of the steamship *Mary Ada Short*; the defendants and counter claimants were the owners of the steamship *Sargasso.*

The case made by the plaintiffs was that about 4.35 p.m. on the 18th April 1912 the *Mary Ada Short*, a screw steamship of 3605 tons gross and 2335 tons net register, manned by a crew of thirty hands, all told, was, whilst on a voyage from Brake, on the River Weser, in water ballast, quarter to half a mile to the eastward, and a little to the southward of the entrance to the River Tyne, in charge of a duly licensed Tyne pilot. The wind was south east, light, the weather was very foggy, and the tide was flood setting to the south south-west of the force of about a knot. The *Mary Ada Short* was proceeding slow ahead and stopping at intervals, and was making about three and half knots through the water, heading

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

N. by W. ½ W. magnetic. Her steam whistle was being sounded, a long blast at intervals of about a minute, and a good look-out was being kept on board her.

In these circumstances, those on the *Mary Ada Short* heard the sounds of whistles of steamers on the port bow. The engines of the *Mary Ada Short* were immediately stopped, and a long blast was sounded on her whistle, and she was kept on the same heading. About a minute later a long blast from the whistle of the *Sargasso* was heard nearer to the *Mary Ada Short*, and finer on the port bow. The whistle of the *Mary Ada Short* was immediately sounded one long blast in reply, and the steam tug *Triton*, which had a rope fast from the starboard bow of the *Mary Ada Short*, but was not towing, was directed to come on the port bow with a view of keeping the *Mary Ada Short*, which had a right-handed propeller straight. The *Triton* sounded one long blast on her syren, the engines of the *Mary Ada Short* were at the same time put full speed astern, and three short blasts sounded on her steam whistle. Shortly afterwards the *Sargasso* came into sight, distant about 100 yards, bearing about two points on the port bow, heading for the port bow of the *Mary Ada Short*. The *Sargasso* sounded two short blasts on her steam whistle, and appeared to be acting under a starboard helm. The *Triton*, which was then on the port bow of the *Mary Ada Short*, slipped the rope by which she was fast to the *Mary Ada Short*, hard-a-starboarded her helm, and set her engines ahead, and gave two short blasts in reply, and three short blasts were again sounded on the steam whistle of the *Mary Ada Short*, her engines were kept working full-speed astern, and her helm was kept steady, but the *Sargasso* coming on at a considerable speed, and apparently attempting to cross the bows of the *Mary Ada Short*, with her starboard side about amidships, struck the stem of the *Mary Ada Short*, doing her considerable damage.

Those on the *Mary Ada Short* charged those on the *Sargasso* with not keeping a good look-out, with proceeding at an excessive speed, with failing to stop their engines and navigate with caution on hearing a fog signal forward of their beam, with failing to slacken their speed or stop or reverse, and with attempting to cross ahead of the *Mary Ada Short*.

The case made by the defendants and counter-claimants was that shortly before 4.35 p.m. the *Sargasso*, a screw steamship of 1508 tons gross and 884 tons net register, manned by a crew of twenty-one hands, whilst proceeding on a voyage from Howdon Dock, on the River Tyne, to Carthagena with a cargo of coals, was outside the entrance to the River Tyne about a quarter of a mile nearly due east from the end of the south pier. The wind was easterly—a light breeze—and there was a thick fog and the tide was about half an hour after high water, with very little if any force. The *Sargasso* was heading due east, and, with the engines working at slow, was making about two and a half to three knots, the regulation long blast for fog was being sounded on the whistle at intervals of about one minute, and a good look-out was being kept on board her.

In these circumstances those on the *Sargasso* heard a long blast from the *Triton's* syren and one from the *Mary Ada Short's* whistle bearing on the starboard bow, and immediately replied with a long blast and stopped the *Sargasso's* engines. In a short time the *Triton* and the *Mary Ada Short* each blew two short blasts, and about the same moment came into view, distant about 100 yards, and bearing between two and three points on the starboard bow. The *Sargasso* immediately replied with two short blasts and put her helm hard-a-starboard, and her engines were put slow ahead to give her steerage way, but, before her speed could be increased, the *Triton* replied with two short blasts and the *Mary Ada Short* with three. The *Sargasso* immediately replied with three short blasts, and her engines were put full speed astern and her helm amidships. The tow rope between the *Triton* and the *Mary Ada Short* parted, and the *Triton* cleared the *Sargasso*, but the *Mary Ada Short* came on at a considerable speed, and with her stem struck the *Sargasso* on the starboard side abreast of No. 2 hatch with considerable force, cutting into her and doing her so much damage that the *Sargasso* rapidly sank and one of her crew was drowned.

Those on the *Sargasso* charged those on the *Mary Ada Short* with not keeping a good look-out, with proceeding at an excessive speed, with failing to stop their engines and navigate with caution on hearing a fog signal forward of their beam, with failing to slacken their speed or stop or reverse, with improperly approaching and entering the Tyne on the south side of mid-channel, and with failing to sound their whistles for fog in accordance with the sea regulations.

The following collision regulations were referred to:

15. All signals prescribed by this article for vessels under way shall be given: 1. By "steam vessels-" on the whistle or siren. 2. By "sailing vessels and vessels towed" on the fog horn. The words "prolonged blast" used in this article shall mean a blast of from four to six seconds duration. A steam vessel shall be provided with an efficient whistle or siren, sounded by steam or some substitute for steam, so placed that the sound may not be intercepted by any obstruction, and with an efficient fog horn, to be sounded by mechanical means and also with an efficient bell. . . . In fog, mist, falling snow, or heavy rainstorms, whether by day or night, the signals described in this article shall be used as follows, viz.:—(*a*) A steam vessel having way upon her shall sound, at intervals of not more than two minutes, a prolonged blast. . . . (*c*) A sailing vessel under way shall sound, at intervals of not more than one minute, when on the starboard tack one blast, when on the port tack two blasts in succession, and when with the wind abaft the beam three blasts in succession. . . . (*e*) A vessel when towing, a vessel employed in laying or in picking up a telegraph cable, and a vessel under way, which is unable to get out of the way of an approaching vessel through being not under command, or unable to manœuvre as required by these rules shall, instead of the signals prescribed in sub-divisions (*a*) and (*c*) of this article, at intervals of not more than two minutes, sound three blasts in succession—viz.: one prolonged blast followed by two short blasts. A vessel towed may give this signal and she shall not give any other.

16. Every vessel shall, in a fog, mist, falling snow, or heavy rainstorms, go at a moderate speed, having careful regard to the existing circumstances and conditions. A steam vessel hearing apparently forward of her beam, the fog signal of a vessel the position of

which is not ascertained, shall, so far as the circumstances of the case admit, stop her engines, and then navigate with caution until danger of collision is over.

29. Nothing in these rules shall exonerate any vessel, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals or of any neglect to keep a proper look out, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

The following local (Tyne) rule was also referred to :

20. Every steam or other vessel (whether towing any other vessel or not, or being towed) shall, unless prevented by stress of weather, be brought into the port to the north of mid-channel, and be taken out of the port to the south of mid-channel.

The following section of the Maritime Conventions Act (1 & 2 Geo. 5, c. 57) 1911 was cited during the course of the arguments.

Sect. 1 (1). Where, by the fault of two or more vessels, damage or loss is caused to one or more of those vessels, to their cargoes or freight, or to any property on board, the liability to make good the damage or loss shall be in proportion to the degree in which each vessel was in fault. . . .

Batten, K.C. and *R. H. Balloch* for the plaintiffs.

Bateson, K.C. and *A. E. Nelson* for the defendants and counter-claimants.

The case of *The Devonian* (84 L. T. Rep. 675: 9 Asp. Mar. Law Cas. 179; (1901) P. 221), was referred to as showing when a steam tug might be said to be towing a vessel.

The PRESIDENT.—The collision in this case took place on the 18th April of this year between two vessels, one the *Mary Ada Short*, proceeding on her way towards the entrance into the Tyne, and the *Sargasso* steamship, proceeding out from the Tyne on a voyage to Carthagena.

The place of collision is approximately—I will not say exactly—fixed in this case by the wreck which is now visible of the *Sargasso*, the distance away from the South Pier Head being 630 yards. I believe that the vessel was pushed by the *Mary Ada Short* going full speed on her engines, and, acting very wisely in the circumstances after the actual collision, she did that in order to keep her bows in the wound, whereby to prolong the very short period during which the vessel remained afloat, so that the lives might be saved, and fortunately all the lives were saved except that of one man, who apparently in some way was overlooked.

A good deal of evidence has been gone into as to the courses of the two vessels, and as to the angle of the blow. This court seldom gets much assistance from the consideration of the angle of the blow because very often very experienced men on the one side say the angle was a small one, and very experienced men on the other side persuade themselves that in that particular case the angle was a broader one. There is, however, in this case one matter not in dispute, and that is that the *Mary Ada Short* entered the hull of the other vessel to the extent of about 7ft. 10in. on one side of the *Mary Ada Short's* bows and 5ft. 3in. on the other.

The *Mary Ada Short* was a light vessel, she was the larger vessel, and was riding light, the other was the smaller vessel, but was fully laden with coal on her outward journey. I have come to the conclusion that it is more important in this case to consider carefully the speeds of the two vessels, and the look-out of the two vessels, than the courses or the angle of the blow.

The defendants are attacked by the plaintiffs, first of all, for a deficient look-out, and in the next place for excessive speed. These really are the two material allegations which are made by the plaintiffs against the defendants. The defendants, on the other hand, retort against the plaintiffs, and counterclaim against the plaintiffs on the ground that the speed of the plaintiffs' vessel was excessive, and on the ground that the signals given by the plaintiffs, and by the tug in attendance on the plaintiffs' vessel, were not the appropriate signals. So far as the defendants' conduct is concerned, I have come to the conclusion that their look-out was a bad look-out—whatever the reason for that may have been—in the result there was not the careful look-out there ought to have been on that vessel, either by the look-out man, the mate, a young man of twenty-three on the forecastle head, or by the captain who remained on the bridge after the pilot left.

I accept the account which is given of the various signals by the witnesses for the *Mary Ada Short*, and I was impressed by the character of the evidence given as to the conduct of the vessel in the fog, particularly by the account given by the master of the tug. It appears that she passed two steamers before anything was known or heard from the *Sargasso*. Various whistles were given by these two steamers—about three each, I think —fog whistles, and when those whistles were heard the *Mary Ada Short* stopped her engines. The first steamer was seen, and thereafter she proceeded on her way; the second steamer was heard, she was not seen, but when her signals were heard I think the *Mary Ada Short* again stopped her engines, and kept them stopped until she was satisfied that the sound signals of the second steamer were abaft the *Mary Ada Short's* beam. That shows, if it is an accurate story—and I am accepting it—that the navigation of this vessel—apart from the question of speed—when she heard those sound signals was careful navigation, and it shows not merely that those on the look-out were attending to the signals which could be heard, but it shows also they were taking the appropriate steps when those signals were heard.

So far as the *Sargasso* is concerned, two long blasts were heard about the same time, proceeding from about the same direction, and they were regarded as two different blasts, one blast coming from one steamer and another blast from another steamer. There is some doubt about it in the minds of some of these people, but I think almost every one of them said there was some difference in the sound, and the probability is one long blast of those two which were first described came from the *Sargasso*, and the other it is said now was a blast of another steamship now known to have been in the neighbourhood. These were reported and answered with a long blast from the *Mary Ada Short*, then there was another report and there was an answer given by the *Mary Ada Short* of a long blast, then the tug was ordered round from the starboard bow to the port bow, with the accompanying hail from the bridge to get on to that side, so as to hold the head of the

vessel straight, as her engines would be put astern. The tug thereupon blew a signal—the first signal which the tug gave, and the signal was a long blast. I think it was not unreasonable for the tug to give that blast in the circumstances. I do not know that there was any obligation on her; whether that be so or not, this signal was properly given, she was moving then, so to speak, independent of the *Mary Ada Short*, and it was an indication to anybody that some steamer possessing a siren was in the locality, and was giving a signal for fog. Immediately that was done the three short blasts were given on the *Mary Ada Short*. I have said the very object of sending the tug from the starboard side to the port side was that she should prevent the vessel canting her head when going astern, and I believe in the circumstances that those three whistles were given.

Now comes the question which it is important to determine here. At this stage, according to the evidence of the *Mary Ada Short*, the vessels came into view, and after the vessels came into view the account given by the plaintiffs' witnesses is that the *Sargasso* gave two short blasts—that is, a starboard helm signal—and it is admitted by the *Sargasso* that she did give a starboard helm signal at some time, and that she did order and put the helm to starboard: but did the *Sargasso* give the starboard helm signal first before the two short blasts were given from the tug? The evidence from the defendants is that it was the tug which first gave the two short blasts, and that it was in answer to the starboard helm signal from the tug that the *Sargasso* gave her starboard helm signal. I have come to the conclusion that that account is not an accurate account, and that the first starboard helm signal was given by the *Sargasso*, and it was then that the tug, having slipped her rope, gave her two blasts. The other signal—the only signal left—was the three short blasts again given on the whistle of the *Mary Ada Short*. It is said that that signal was not the appropriate signal for two reasons. Counsel for the defendants say, first of all, that the tug is towing this vessel, and that although the vessel need not have given any signals at all for a vessel in tow during a fog, yet if she gave signals as she did, she gave wrong signals, and the only signal she ought to have given was a signal of a prolonged blast followed by two short blasts, being three blasts in succession, under the sub-head (*e*) of art. 15 of the Regulations for Preventing Collisions at Sea. They also say that that article applies to the tug, and that the tug is in fault for not blowing any signal at all appropriate in these circumstances, and that the plaintiffs are responsible for that omission on the part of the tug.

The articles with reference to the signals to be given in time of fog are difficult to follow, and I can quite conceive the signals themselves may be misleading, because one particular signal is a signal for three different situations — three different manœuvres. But for the purpose of this case I hold in fact that the tug was not towing the vessel. It may be a question of mixed law and fact; if so, I hold in law and I hold in fact that the tug was not towing—that the vessel was not being towed. The tug had gone out to sea in order to deliver some message to this vessel, and she accompanied the vessel on her way back, intending to be her tug when it was necessary to tow the vessel along. In the circumstances a rope was passed from the vessel to the tug, the scope of which was about fifteen fathoms, and I find in fact that there was no towing at all by means of that rope during any times material in this case, and that the point of time had not arrived when it had been intended that these vessels should become a tug and tow. That being so, I do not think that the sub-head (*e*) of the article is applicable. It is said that if that be so, then the tug was a steam vessel having way on her, and ought herself to give the appropriate signals, which in this case, of course, would be one long blast on her siren. I doubt very much whether in the circumstances of this case this tug is to be regarded as a separate vessel requiring separate signals; but whether that be so or not, I am clearly of opinion, and I have taken careful advice from the Elder Brethren who are assisting me in this case, that from the point of view of navigation—safe navigation—warning to others, it would be less confusing for the vessel to give the signals she did, unaccompanied by any signals by the tug, than for the tug to have sounded any signals as if she was a separate vessel, having way upon her. In any event, I have come to the conclusion that that omission on the part of the tug—if it be an omission—did not in any way contribute to the collision in this case.

The next thing to consider is how these signals, which I have found were given in this way from the *Mary Ada Short*, were observed or heard by the *Sargasso*, and how such signals as were observed on the *Sargasso* from the *Mary Ada Short* were acted upon? I have said I have come to the conclusion that the look-out on the *Sargasso* was bad. The sounds which ought to have been heard were not heard, and many other blasts from the *Mary Ada Short* ought, in the circumstances, to have been heard both on the forecastle and on the bridge. Some sounds of craft in this fog were heard, as is admitted, without any action at all being taken by the *Sargasso*. One or two, if not more, vessels' signals were reported and heard, but there was no order to stop the *Sargasso*. That is a breach of the rule, and if the *Sargasso* had heard, as she ought to have heard, the signals given from the *Mary Ada Short*, she would have stopped before she did. Only two reports were given from the forecastle head, one was a steamer's whistles on the starboard bow, and the other, I think, was given very shortly afterwards, "There is the vessel." Those are the only reports given from the forecastle head. The look-out did not therefore report the sounds which he did hear. He ought to have heard more. The account now given by those on the *Sargasso* of the signals is entirely inconsistent with the account given by the master in his deposition before the Receiver of Wrecks.

Now comes the question whether the speeds of the vessels were excessive. I have come to the conclusion with regard to both that the speed was excessive. With regard to the defendant vessel, the *Sargasso*, their pleaded speed is two and a half to three knots at the time when the other vessel was first heard. Comparing that with the times given and distances run from the pier head, which is a fixed point, and the place

about 630 yards. away, which is also a fixed point, I have come to the conclusion that the speed of this vessel was certainly over four knots. After she stopped, that speed, of course, became lessened, but the speed does not go from the vessel all at once. With regard to the *Mary Ada Short*, her speed spoken to by her captain was a speed of three knots; that is probably a smaller speed than she had a good deal, and in this regard, apart from the angle of the blow, I have come to the conclusion from the nature of the wound that the speed at which this vessel was going was a good deal more than she says she had. If vessels could only see each other at a distance of 100yds. and if they had to be under way at all, they ought to proceed as slowly as they possibly can. It is impossible to say what the speed ought to be in figures in every case, but it is obvious if the vessel was proceeding at a speed which would not allow her to pull up in something like her own length in the circumstances of this particular afternoon, and if a vessel could proceed and have steerage way at a smaller speed than she was going, she ought to have gone at that speed, and in so far as that speed is exceeded it is excessive.

I think in this case I ought to distribute the fault between the vessels in different degrees—to proportion the degree which each vessel was in fault, and having come to the conclusion there was fault by reason of excessive speed on one vessel, and having come to the conclusion that the conduct of the other vessel was a good deal worse, including excessive speed, I have come to the conclusion that the liability to make good the damage or loss in this case shall be in proportion to the degree in which each vessel was at fault, and I find that the *Sargasso*—if the fault was as to three-thirds—must bear two-thirds of the blame, and that the other third of the blame attaches to the *Mary Ada Short*. That means, I suppose, that the degree which each vessel was in fault was that the *Sargasso* was twice as much at fault as the *Mary Ada Short*.

In respect of costs I make no order, so that each party will bear their own costs.

JUDICIAL COMMITTEE OF THE PRIVY COUNCIL.

April 23, 24, *and May* 17, 1912.

(Present: The Right Hons. Lords MACNAGHTEN ATKINSON, SHAW, and MERSEY.)

SASSOON AND CO. v. WESTERN ASSURANCE COMPANY. (*a*)

ON APPEAL FROM THE SUPREME COURT OF CHINA.

Marine insurance—Perils of seas—Goods stored in hulk—Damage by leakage.

Goods belonging to the appellants were stored in a hulk moored in a tidal river, in smooth water, and were insured (inter alia) *against perils of the seas.*

In consequence of natural decay, which could not be detected by ordinary examination, the hulk became leaky, and the goods were injured by water which found its way through the decayed woodwork of the bottom of the hulk.

Held, that though the damage was due to sea water it was not due to sea perils, which were the perils insured against.

Judgment of the court below affirmed.

APPEAL from a judgment of His Britannic Majesty's Supreme Court for China, dated the 28th Jan. 1911, in an action in which the appellants were plaintiffs and the respondents were defendants. The learned judge gave judgment for the respondents with costs.

The claim of the appellants was for a loss under a contract of marine insurance issued by the respondents. There was no dispute as to the facts, and the only question was whether the damage sustained by the goods of the appellants which were insured was a loss caused by a peril insured against.

The appellants were insured by a risk note dated the 6th July 1908, and issued by the agents of the respondents for 200,000 taels on opium per the *Corea* from noon of the 6th July to noon of the 6th Aug. 1908, with average as customary. The risk note referred to and incorporated the respondents' form of insurance policy, which was (*inter alia*) against perils of the sea.

The *Corea* mentioned in the insurance was a hulk owned by the appellants in which as a bonded warehouse they stored their opium. She had been moored as a fixture for many years in the river Huang-Pu, off the Canton Road jetty at Shanghai. She was there in smooth water and did not move.

On the 20th July 1908 the *Corea* was found to be leaking. A considerable quantity of water from the river found its way into her, and the appellants' insured opium was damaged by this water to such an extent that if such damage constituted a loss under the respondents' contract of insurance they would be liable to pay to the appellants the amount claimed in the action—namely, taels 7418.05.

The leaking of the *Corea* and the consequent incursion of water from the river arose in the following way. The *Corea* was built of wood, and her sides and bottom were sheathed with copper. Though the appellants caused her condition to be examined from time to time it was impossible by such examination to ascertain the condition of the woodwork inside the copper sheathing. Owing to the great age of the *Corea*, and from natural causes, the woodwork under the sheathing had become so perished or decayed (in particular the wooden trenails which fastened her timbers together) that ultimately about the 20th July 1908 the decayed woodwork could no longer keep out the water which percolated through the joints of the sheathing or otherwise, and the water so found its way into the interior of the hulk.

In these circumstances the appellants claimed on the insurance contract for the damage to the opium by water as for a loss caused by perils insured against. The respondents contended that the damage was not a loss caused by "perils of the seas."

De Sausmarez, C.J. decided in favour of the respondents, and held that the damage to the opium was not a loss caused by any peril insured against.

(*a*) Reported by C. E. MALDEN, Esq., Barrister-at-Law.

Leave to appeal to His Majesty in Council was given to the appellants on the 20th Feb. 1911 upon terms.

Atkin, K.C., *Bailhache*, K.C., and *Raeburn*, for the appellants, contended that in the case of a time policy, such as this was, there is no implied warranty of seaworthiness, and the insurance was not upon the hulk, but on the goods stored in it. The incursion of the salt water which damaged the goods is *primâ facie* a "peril of the sea." If goods at sea in an unseaworthy ship are injured by sea water they are injured by a peril of the sea, and in a time policy unseaworthiness does not avoid the policy. "Peril of the sea" has not the same meaning in a policy on goods as it has in a policy on the ship. The natural decay of the hulk was a peril within the contemplation of both parties. They referred to

Blackburn v. *Liverpool Steam Navigation Company*, 9 Asp. Mar. Law Cas. 263 (1901); 85 L. T. Rep. 783; (1902) 1 K. B. 290.

Sir *R. Finlay*, K.C. and *Mackinnon*, for the respondents, maintained that the loss was not by a peril of the sea. The appellants are seeking to make the policy apply to a loss by the natural decay of the hulk, and the judgment of the court below was right. They referred to

Bailhache, K.C. was heard in reply.

At the conclusion of the arguments their Lordships took time to consider their judgment.

May 17.—Their Lordships' judgment was delivered by

Lord MERSEY.—This is an appeal from a judgment of His Majesty's Supreme Court for Shanghai, dated the 28th Jan. 1911, dismissing the plaintiffs' claim.

The facts of the case are as follows: The plaintiffs were the owners of a wooden hulk moored in the river Huang-Pu, which they used as a store. In this hulk they placed some opium on which they effected an insurance with the defendants against marine risks. The policy was a time policy running from the 6th July to the 6th Aug. 1908. On the 20th July the hulk sprang a leak, and the opium was damaged by the percolating water. The leak was wholly due to the rotten condition of the hulk. The condition of the hulk was unknown to the plaintiffs, the weak place being covered up by some copper sheathing. In these circumstances the plaintiffs brought their action. The defendants by their plea denied that the damage to the opium was by the perils insured against. This denial raised the only question in the case.

The risks covered by the policy were the risks usually described in such a contract—namely, "perils of the sea and all other perils, losses, and misfortunes that have or shall come to the hurt, detriment, or damage of the said . . . goods." It was not contended on the plaintiffs' behalf (nor could it have been) that these words covered any risk except the risk of damage by perils of the seas; but it was said that the loss was due to such a peril. The learned judge held that the damage was not due to a sea peril at all, but was solely due to the weakness of the hulk, and he thereupon dismissed the action. Their Lordships are of opinion that the learned judge was right. There was no weather, nor any other fortuitous circumstance, contributing to the incursion of the water; the water merely gravitated by its own weight through the opening in the decayed wood and so damaged the opium. It would be an abuse of language to describe this as a loss due to perils of the sea. Although sea water damaged the goods, no peril of the sea contributed either proximately or remotely to the loss. There is ample authority for so holding, but it is sufficient to cite the judgment of Lord Herschell in *The Xantho* (*sup.*), where he says: "I think it clear that the term 'perils of the sea' does not cover every accident or casualty which may happen to the subject-matter of the insurance on the sea. It must be a peril 'of' the sea. Again it is well settled that it is not every loss or damage of which the sea is the immediate cause that is covered by these words. They do not protect, for example, against that natural and inevitable action of the winds and waves which results in what may be described as wear and tear."

An attempt was made during the argument to attribute a different meaning to the expression "perils of the sea" when used in a policy on goods from that which it bears when used in a policy on ship; but no authority was cited for the distinction, nor would it be right in principle to make any such distinction. In the case above cited an attempt was made to draw a distinction between the meaning to be given to the words when used in a bill of lading and in a policy of insurance, but Lord Herschell said, "It would, in my opinion, be very objectionable unless well settled authority compelled it to give a different meaning to the same words occurring in two maritime instruments."

In this case the damage, though doubtless proximately due to sea water, was not in any sense due to sea peril. It does not therefore fall within the policy.

Their Lordships are of opinion that the appeal should be dismissed, and they will advise His Majesty accordingly. The appellants must pay the costs of the appeal.

Solicitors: for the appellants, *William A. Crump and Son*; for the respondents, *Thomas Cooper and Co.*

April 23 *and July* 3, 1912.

(Present: The Right Hons. Lord Macnaghten, Atkinson, Shaw, and Mersey.)

White *v.* Williams. (*a*)

ON APPEAL FROM THE SUPREME COURT OF NEW SOUTH WALES.

Charter-party—"Consignees to effect discharge of cargo steamer paying 1s. *per ton"—Sale of cargo by consignee—"Cost of stevedoring to be paid by" purchaser—Right to sum payable by steamer.*

The appellant had chartered a steamer to load a cargo of coal for Sydney. The charter-party contained the following clause: "Consignees to effect the discharge of the cargo, strike or no strike, steamer paying 1s. *per ton of* 20cwt." *Before the ship arrived the appellant sold the cargo to the Government of New South Wales on the terms* (inter alia) *"The Government to guarantee to discharge the vessel at not less than* 500 *tons per day, strike or no strike. The cost of stevedoring to be paid by the Government."*

Held, that the Government were entitled to retain the 1s. *per ton payable as against the appellant.*

Judgment of the court below affirmed.

Appeal from an order and judgment of the Supreme Court of New South Wales dated the 1st March 1911.

The action was brought by the appellant as plaintiff against the respondent, who was appointed nominal defendant on behalf of the Government of New South Wales under the Claims against the Government and Crown Suits Act of 1897.

The writ of summons was issued on the 10th Oct. 1910, and by an order of Pring, J., dated the 21st Nov. 1910, it was by consent ordered that the action should be entered in the list of commercial cases, and that pleadings should be dispensed with.

The action was tried before Pring, J. on the 15th Dec. 1910, and the facts proved or admitted were as follows: In Dec. 1909 the appellant was acting as agent for Andrew Weir and Co. in connection with the sale of coal to the Government. By letter dated the 16th Dec. 1909 the appellant offered to supply to the Government (*inter alia*) the following shipments of coal—viz., from Japan a cargo of coal about 6000 tons to be dispatched per steamship *Strathfillan*, price 28s. 9*d*. per ton c.i.f., Sydney Harbour, and about 4700 tons of Indian coal to be shipped per steamship *Evandale*, price 31s. 6*d*. per ton c.i.f. Sydney. "The Government to guarantee to discharge the several vessels at not less than 500 tons per day, strike or no strike. The cost of stevedoring to be paid by the Government, and vessels to have free wharfage." This offer was accepted by the Government by a letter from the Colonial Treasurer also dated the 16th Dec. 1910. Prior to the making of this contract Andrew Weir and Co. had chartered the *Strathfillan* by charter-party dated the 14th Dec. 1910 to load a cargo of coal at Moji for Sydney, and the charter-party after providing for discharge at the rate of 500 tons per day, strikes not excepted, contained the following words: "Consignees to effect the discharge of the cargo, strike or no strike, steamer paying 1s. per ton of 20cwt."

(*a*) Reported by C. E. Malden, Esq., Barrister-at-Law.

Prior to the making of the aforesaid contract Andrew Weir and Co. had also chartered the *Evandale* by charter-party dated the 15th Dec. 1909 to load a cargo of coal at Calcutta for Adelaide, Melbourne, or Sydney at charterers' option, and the charter-party which did not contain any provision as to the rate of discharge provided as follows: "Consignees to effect discharge of steamer irrespective of strike or labour trouble steamer paying 1s. per ton towards cost of the same." The coals shipped by the *Strathfillan* and the *Evandale* were supplied to the Government, and received by them under the said contract of the 16th Dec. 1909. The freight of the *Strathfillan* was paid by the appellant, and the freight of the *Evandale* was prepaid by or for Andrew Weir and Co. at Calcutta. The Government, when paying the appellant demurrage incurred on the *Strathfillan*, claimed a right to deduct, and deducted a sum in respect of the 1s. per ton payable by the steamer under the charter-party. The Government also received from the agents of the *Evandale* 1s. per ton under the charter-party of that steamship, and refused to pay the same to the appellant.

Pring, J. on the 15th Dec. 1910 gave his verdict and decision in favour of the defendant, for whom judgment was entered accordingly.

Pursuant to notice of motion dated the 21st Dec. 1910 the appellant moved the Supreme Court of New South Wales to grant a new trial, or to enter a verdict for the appellant. The motion was heard on the 1st March 1911 by the Supreme Court, consisting of Cullen, C.J. and Cohen and Gordon, JJ. when the court dismissed the motion with costs.

Bailhache, K.C. and *D. C. Leck*, for the appellant, argued that the contract between the parties was contained in the letters of the 16th Dec., and the charter-party cannot vary the terms of that contract by imposing either more or less onerous conditions. The Government agreed to pay the whole cost of discharging the cargoes, and the appellant is entitled, under the charter-party, to make this profit out of the transaction. They referred to

Houlder Brothers and Co. v. *Commissioner of Public Works*, 11 Asp. Mar. Law Cas. 61; 98 L. T. Rep. 684; (1908) A. C. 276.

Sir *R. Finlay*, K.C. and *Austen-Cartmell*, for the respondent, maintained that upon the true construction of the contract the Government were entitled to retain these sums as against the appellant The Government had undertaken to relieve the appellant and his principals from liability in regard to the discharge of these ships, and were entitled to receive all contributions which were payable by third persons towards the cost of such discharge.

Bailhache, K.C. was heard in reply.

At the conclusion of the arguments their Lordships took time to consider their judgment.

July 3. — Their Lordships' judgment was delivered by

Lord Mersey.—This is an appeal from an order and judgment of the Supreme Court of New South Wales dated the 1st March 1911.

The question in the case turns entirely on the meaning to be given to the words "cost of stevedoring" as used in a contract for the sale by

the plaintiff to the defendant (representing the Government) of two cargoes of coal on c.i.f. terms.

The contract is contained in two letters of the 16th Dec. 1909. The first of these letters is in the following terms: "I have the honour to offer to supply to your Government . . . from Japan a cargo of . . . lump coal, about 6000 tons . . . to be dispatched per steamship *Strathfillan* . . . price 28*s.* 9*d.* per ton c.i.f. Sydney Harbour (and) about 4700 tons of Indian coal . . . to be shipped per steamship *Evandale* . . . at Calcutta . . . price 31*s.* 6*d.* per ton c.i.f. Sydney. The Government to guarantee to discharge the several vessels at not less than 500 tons per day, strike or no strike. The cost of stevedoring to be paid by the Government and vessels to have free wharfage." The second letter, which was from the Government to the plaintiff, contained an acceptance of this offer.

Before entering into this contract the plaintiff had chartered the two vessels the *Strathfillan* and the *Evandale* by charter-parties dated the 14th and 15th Dec. 1909. These charter-parties contained clauses relating to the discharge of the coal to be carried. The clause in the *Strathfillan's* charter-party was as follows: "Consignees to effect the discharge of the cargo, strike or no strike, steamer paying 1*s.* a ton . . . and providing only steam, steam winches, winchmen, gins, and falls." And the clause in the *Evandale's* charter-party as follows: "The cargo to be taken from the steamer's tackles at the risk and expense of the charterers and consignees, who will bear all risk and expense of lighterage, if any, at port of discharge. . . . Consignees to effect discharge of steamer irrespective of strike or labour trouble, steamer paying 1*s.* per ton towards cost of same.

The wording of these two clauses differs slightly, but they both mean the same thing. The ship is to provide the discharging appliances and the steam power required for working them; but all the other labour in the hold (which but for the clause would fall to the ship to provide) is to be found by those who receive the cargo, the ship paying 1*s.* per ton towards the cost. It appears that these or similar clauses are printed as part of the common form of charter-party in use in the coal trade, a blank being left for the sum to be contributed by the ship, which may vary according to circumstances.

The cargoes arrived and delivery of them was taken by the Government, who did all that part of the work of discharging which is customarily done by the ship except in so far as that work consisted of providing gear and keeping up steam for winches. The Government paid the c.i.f. price to the plaintiff, but claimed a right to have credit for the 1*s.* a ton. The question is, are they entitled to it? The learned judge who tried the case held that they were and the Court of Appeal affirmed the judge's decision.

It is said by the appellant that the Government were no parties to the charter-party contracts and cannot therefore claim any benefit under them, and this no doubt is true. But it is upon the construction to be put on the contract of the 16th Dec. for the sale of the coal that the respondent relies. What is the "cost of stevedoring" which the Government are to pay? It is certainly not all the money which would have to be disbursed if the ship did not contribute, for if it were the Government would have to pay for the use of the discharging appliances and for the supply of steam for working them. These are as much part of the cost of stevedoring as the wages of the men who work in the hold. But the plaintiff makes no claim to be paid either for the use of the appliances or for the steam. And why not? It is because when making the c.i.f. contract both parties knew that the ship was to contribute to the stevedoring by providing these things, and they contracted on that footing. They would also know of the practice or custom evidenced by the common form of charter-party that the ship would contribute towards the cost of wages, and they contracted on that footing also. Thus, when in the contract it is stipulated that the Government is to pay the "cost of stevedoring" the expression must, in their Lordships' opinion, be read as meaning so far as such cost is not provided by the ship in the way of tackle or steam or in money. The Chief Justice in delivering the judgment of the Supreme Court says: "The possibility, however, of some part of the cost of discharging being paid by the shipowners must have been present to both parties, and although there was then no certainty about it, they would have that possibility in contemplation when bargaining about the cost of discharge."

This finding of fact by the Supreme Court is probably in accordance with the understanding on which business men contract in the trade. It appears clear from the terms of the two charter-parties that both the plaintiff and the shipowners contemplated that the shilling a ton should be paid to those who undertook the work of discharge; and if the shipowners had paid the money to the respondent they could as against the plaintiff have justified the payment as being exactly in accordance with the charter-party contracts. As between plaintiff and shipowner it was never contemplated that the plaintiff, who did no part of the discharging, should receive and retain the ship's contribution towards the cost of it; and though it is true that the charter-parties create no privity as between plantiff and the defendant, their terms which are in common use in the trade serve to throw light upon the meaning to be put on the words "cost of stevedoring" as used in the contract of sale.

The question is more one of fact than of law and their Lordships do not think it right to interfere with the finding of the courts below. They will therefore advise His Majesty that the appeal should be dismissed. The appellant will pay the costs.

Solicitors for the respondent, *Light* and *Fulton*.

HOUSE OF LORDS.

June 17, 18, 20, *and July* 19, 1912.

(Before the LORD CHANCELLOR (Viscount Haldane), the Earl of HALSBURY, Lords ASHBOURNE, MACNAGHTEN, and ATKINSON.)

OWNERS OF STEAMSHIP DEVONSHIRE *v.* OWNERS OF BARGE LESLIE AND OTHERS; THE DEVONSHIRE. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Tug and tow — Admiralty rule as to division of loss.

A barge in tow of a tug which had control of the navigation collided with a steamship. The tug and the steamship were both found to blame in the Admiralty Court. The barge was freed from blame.

Held, that, as the barge in tow was completely under the control of the tug and did not stand to the latter in the relation of master and servant, the barge was to be considered as an innocent ship in no sense identified with the delinquent tug, and that there was no rule in force in the Court of Admiralty before the passing of the Judicature Act 1873 which would prevent the owner of the innocent barge from recovering the whole of the damage which he had sustained from either wrongdoer.

Judgment of the Court of Appeal (reported 12 Asp. Mar. Law Cas. 137; 106 *L. T. Rep.* 241; (1912) *P.* 21), *affirming the judgment of the President, Sir Samuel Evans, set out in the report of the case in the Court of Appeal, affirmed.*

The appeal dismissed with costs.

APPEAL from a decision of the Court of Appeal (Fletcher Moulton and Buckley, L.JJ., with nautical assessors), Vaughan Williams, L.J. dissenting, who had affirmed a judgment of Sir S. Evans, President of the Admiralty Division.

The case is reported 12 Asp. Mar. Law Cas. 137; 106 L. T. Rep. 241; (1912) P. 21.

On the 4th Feb. 1911 the barge *Leslie*, of which the respondents were owners, was in the river Mersey, in tow of a tug which had the control and management of the navigation. She came into collision with the steamship *Devonshire*, and was so injured that she sank, and was totally lost. The owners, master, and crew brought an action in the Admiralty Division to recover their loss, and the learned President found that both the *Devonshire* and the tug, which was in charge of the barge, were to blame for the collision.

The plaintiffs then contended that they were entitled to recover their whole loss from the owners of the *Devonshire* as they had been injured by the joint negligence of the *Devonshire* and the tug. The defendants contended that the *Devonshire* was only liable for half the loss, alleging that the Admiralty rule as to division of loss applied.

The President held that the plaintiffs were entitled to recover their whole loss, and gave judgment accordingly, and his judgment was affirmed on appeal as above mentioned.

The owners of the *Devonshire* appealed.

(*a*) Reported by C. E. MALDEN, Esq., Barrister-at-Law.

Leslie Scott, K.C. and *Dawson Miller* for the appellants contended that by the rule of the Admiralty Court where both ships are to blame the damage is divided. This rule was in force at the time of the passing of the Judicature Act 1873, and by sect. 25, sub-sect. 9, of that Act it must prevail over the common law rule in cases to which it is applicable. It has been extended to the case of innocent cargo owners, and to cases of compulsory pilotage, and was recognised by the House of Lords in *Hay* v. *Le Neve* (2 Shaw's Sc. App. 395). All vessels are under a statutory liability to obey the rules for preventing collisions, and it is no defence to say that a tow had engaged a competent tug to control the navigation. See

> *Hardaker* v. *Idle District Council*, 74 L. Rep. 69; (1896) 1 Q. B. 335.

The Admiralty rule is not superseded by the Judicature Act. The scheme of that Act is not to abolish the Admiralty law except where it is expressly retained, but to retain it except where it is expressly abolished. Sect. 16 gives to the High Court the former jurisdiction of the Admiralty Court, and is the governing section. As to a collision at common law, see

> *Tuff* v. *Warman*, 2 C. B. N. S. 749; 5 C. B. N. S. 573.

The contention of the respondents is that except in the case of cases which fall under sect. 25, sub-s. 9, which this case does not, the common law rule, and not the Admiralty rule is to prevail. But see the rule laid down in *The Milan* (Lush. 388), which was recognised in *Owners of Cargo in Steamship Tongariro* v. *Astral Shipping Company*; *The Drumlanrig* (11 Asp. Mar. Law Cas. 451, 520; 103 L. T. Rep. 773; (1911) A. C. 16). See also *The Hector* (5 Asp. Mar. Law Cas. 101 (1883); 48 L. T. Rep. 890; 8 P. Div. 218), which was a case of compulsory pilotage. *The Bernina* (5 Asp. Mar. Law Cas. 577 (1886); 6 Asp. Mar. Law Cas. 75, 257 (1888); 58 L. T. Rep. 423; 13 App. Cas. 1), *Boucher* v. *Clyde Shipping Company* (1904, 2 Ir. 129), and *The Vera Cruz* (5 Asp. Mar. Law Cas. 386 (1887); 52 L. T. Rep. 474; 10 App. Cas. 59) were cases under Lord Campbell's Act, not under the original Admiralty jurisdiction, and therefore the rule did not apply. It applies in all proceedings *in rem*. The authorities show that before the Judicature Act whenever the Admiralty Court found that both vessels were in fault, the damages were divided. As to the history of the rule see the preface to Abbott on Shipping, and Marsden on Collisions at Sea, 5th edit., pp. 132-144. The cases are all explicable on the view of the Admiralty law that each ship is liable to the extent to which it is in fault. No other principle is to be found. Before the Judicature Acts there was a body of Admiralty law distinct from common law, and the burden is on the respondents to show that this law has been superseded. *The Lemington* (2 Asp. Mar. Law Cas. 475 (1874); 32 L. T. Rep. 69) shows the existence of the Admiralty law after the passing of the Judicature Acts, and Admiralty law is to a large extent international law. Where a collision occurs between a tow and a third vessel through the faulty course of the tug, and the negligence of the third vessel, for the purposes of the collision rules the navigation of the tow may be in fault so as to bring the case within sect. 25,

sub-sect. 9, of the Judicature Act 1873. It is analogous to the case of a ship in charge of a compulsory pilot, which has been held to be within the rule. The tug and tow broke the crossing rule in this case, and it is no defence for the owner of the tow to say that he had delegated the navigation to an independent contractor. See

Hardaker v. *Idle District Council (ubi sup.)*.

Down to the case of *The Stormcock* (5 Asp. Mar. Law Cas. 470 (1885); 53 L. T. Rep. 53), the view that the tug and tow were one vessel was not questioned. See

The American and The Syria, 2 Asp. Mar. Law Cas. 350 (1874); 31 L. T. Rep. 42; L. Rep. 6 P. C. 127.

The point was discussed in *The Quickstep* (6 Asp. Mar. Law Cas. 603 (1890); 63 L. T. Rep. 713; 15 P. Div. 196), but that case turned on the local regulations in the river Tees. In *Owners of the Comet* v. *Owners of Hopper Barge W. H. No.* 1 (11 Asp. Mar. Law Cas. 497 (1910); 103 L. T. Rep. 677; (1911) A. C. 30) the point was left open. The tow may be free from liability as defendant, and yet only able to recover half damages as plaintiff. See also

The Niobe, 6 Asp. Mar. Law Cas. 300 (1888); 65 L. T. Rep. 502; (1891) A. C. 401.

Bailhache, K.C. and *D. Stephens* for the respondents maintained that the appellants could only succeed by establishing the identity of the tug and the tow, or if they could make out that, by the Admiralty rule, each of two tort-feasors was only liable for half the damage, and there is no authority in their favour on either point. Sect. 25, sub-sect. 9, of the Act of 1873 only applies to the case of a collision in which both ships are to blame, for the Court of Admiralty did not apply the common law doctrine of "contributory negligence." The position of the innocent cargo owner was in dispute till the decision in the *Drumlanrig* (*ubi sup.*). If the tug and tow can be considered as identical, the appellants are entitled to succeed, but they are not necessarily so. It is a question of fact in each case. See

The America and Syria (*ubi sup.*);
The Quickstep (*ubi sup.*);
The Niobe (*ubi sup.*).

Therefore the discussion is narrowed down to the question whether the Admiralty rule as to cases of collision where both ships are to blame applies to this case. The *Lemington* (*ubi sup.*) is only explicable on the ground that the charterers were held to be the agents of the owners. See also

Morgan v. *Castlegate Steamship Company*, 7 Asp. Mar. Law Cas. 284 (1892); 68 L. T. Rep. 99; (1893) A. C. 38;
The Utopia, 7 Asp. Mar. Law Cas. 408 (1893); 70 L. T. Rep. 47; (1893) A. C. 492.

The supposed Admiralty rule is to be found in *Hay* v. *Le Neve* (*ubi sup.*), but it was not really discussed there, and if it had been a settled practice, Dr. Lushington would not have thought it necessary to examine the authorities at such length in *The Milan* (*ubi sup.*). The foundation of the rule is the identification of the cargo with the ship, and it had its origin in the time when, as a rule, the merchant owned both ship and cargo. The argument does not go so far as to ask the House to overrule *The Milan*. See

The Thomas Joliffe, 6 Asp. Mar. Law Cas. 605 (1890); 63 L. T. Rep. 712; (1891) P. 7;
The Englishman and The Australian, 7 Asp. Mar. Law Cas. 605 (1894); 70 L. T. Rep. 846; (1894) P. 239;
The Frankland, 9 Asp. Mar. Law Cas. 196; 84 L. T. Rep. 395; (1901) P. 161;
The Harvest Home, 10 Asp. Mar. Law Cas. 118; 93 L. T. Rep. 395; (1904) P. 409.

The common law rule and the Admiralty rule are the same in every case except that of contributory negligence. The appellants allege that the cases of the innocent cargo owner and compulsory pilotage are examples of the rule, but they are rather exceptions from the true rule. The rule should not be extended to the case of an innocent tow.

Leslie Scott, K.C. in reply.—The rule is that the defendant does not pay more than half the loss when he has only caused half the damage, which explains all the cases. It has been extended in America, but in *The Thomas Joliffe* (*ubi sup.*), Butt, J. refused to follow the American decisions. The cases which establish the rule are *The Milan* (*ubi sup*) and *The Hector* (*ubi sup.*). See also *Palmer* v. *Wick Steamship Company* (71 L. T. Rep, 163; (1894) A. C. 318), per Lord Herschell, L.C., as to contribution between joint tort-feasors. If the cases are explicable on a principle which is just, and consonant with public policy, such principle should be followed. All the cases cited for the respondents are founded on *The Thomas Joliffe*, which was wrongly decided. The case of a tug and tow is analogous to the cases of compulsory pilotage and the innocent cargo owner to which the rule has been held to apply. The case of two ships not tug and tow jointly causing injury must be very rare.

At the conclusion of the arguments their Lordships took time to consider their judgment.

July 19.—Their Lordships gave judgment as follows:—

The LORD CHANCELLOR (Viscount Haldane).—My Lords: [His Lordship went through the facts of the case as set out above, and continued:]

The defendants have appealed to this House. They accept the decision on the facts of the judge of first instance, and their appeal is confined to the question of law, whether, under the circumstances, they ought to have been condemned in the whole of the damages or merely in half.

Shortly stated, their case is that the tug as well as the *Devonshire* having been found to be in fault, the Admiralty rule as to division of loss applies, and the *Devonshire*, as one only of two delinquents, was liable for merely a moiety of the damage. They contend further that the owners of the tow having committed its navigation to the tug, cannot be treated as though the tow was in the position of a wholly innocent ship, and, at all events, cannot be in a better position than the owner of cargo on board a ship which is partly to blame, such owner being, they say, precluded from recovering more than half the damage to his cargo from the owners of the other delinquent ship. The questions thus raised involve to some extent consideration of the principles which govern the relations of the Admiralty Court jurisdiction to that of the

common law, for by the common law, if the respondents were entitled to succeed, they would plainly be entitled to recover the whole of the damage, and this right can be cut down only by showing that there exists an Admiralty rule which displaces it.

It is not necessary for the purposes of this appeal to investigate in detail the origin of the jurisdiction of the Admiralty Court. It is sufficient to say that this jurisdiction had its origin mainly in the authority of the Lord High Admiral of England, the *custos maris*, who exercised the jurisdiction of the Crown in respect of the command and charge of the sea. The Admiralty judge of later years was in theory his deputy. By degrees the Court of the Lord High Admiral acquired an extensive jurisdiction in civil suits relating to the sea and the estuaries of rivers, and a body of maritime law grew up founded on the unwritten usages of seafaring men and on the traditions of other countries, such as the so-called law of Rhodes and the customs of Oleron. It was inevitable that sharp conflict should arise between this jurisdiction and that of the courts of common law, and accordingly, from the period of Richard II. downwards, statutes were from time to time passed which endeavoured to limit the title of the Court of Admiralty to take cognisance of rights relating to maritime matters, but arising out of transactions on land. The popularity of the Court of Admiralty appears to have rested in a considerable measure on its freedom from certain technical rules of procedure which were applied inexorably by the court of common law, and on its power of proceeding *in rem*.

This power was so different from the procedure of the common law courts that the latter did not attempt prohibition against its exercise, and in consequence the system of initial arrest of the ship and cargo in order to found jurisdiction gradually developed into an extensive practice. Some account of its growth is to be found in the judgments in this House in *Mersey Docks and Harbour Board* v. *Turner* (7 Asp. Mar. Law Cas. 369 (1893); 69 L. T. Rep. 630; (1893) A. C. 468). When the Judicature Act of 1873 was passed the Admiralty Court had thus come to possess a well-defined and large jurisdiction, which had frequently been recognised by statute, and a body of law which it alone administered. By sect. 16 of the Act of 1873 the jurisdiction of the High Court of Admiralty was transferred to the new High Court of Justice, and the effect of sect. 24 (6) was to bind this court to give effect to all rights and duties existing by custom, as did those under Admiralty law. Sect. 25 (9) which is an important section for the purposes of this appeal, however, enacted that in any cause or proceeding for damages arising out of a collision between two ships, if both ships shall be found to be in fault, the rules hitherto in force in the Court of Admiralty, so far as they have been at variance with the rules in force in the courts of common law, shall prevail.

At common law, unless the tow in the present case is to be regarded as having been so identified with the tug as to have been guilty with her of faulty navigation, there is no doubt that the owners of the tow, as being an innocent vessel, would be entitled to recover the whole of the damage from the appellants.

The first question which arises is, therefore, whether the tow is to be regarded as thus being in fault like the tug. Then there is the further question whether, if the tow is not in fault, an Admiralty rule precludes her from recovering more than half her damage from the *Devonshire* by reason of the latter having been only one of two guilty ships, the tug having been the other. It seems clear that by Admiralty law the whole of that damage to an innocent ship by collision could be recovered if the party defendant was exclusively to blame, and that whether his proceedings were *in rem* or *in personam*. If, however, the owner of one ship brought an action against the owner of another for damage by collision, and both the plaintiff and defendant ships were found to blame, the party proceeding recovered only a moiety of the damage. Perhaps the best exposition of the principles on which these rules rest was given by Lord Stowell in the case of *The Woodropp Sims* (2 Dods. 83), which was approved in this House in *Hay* v. *Le Neve*, decided in 1824, and reported in 2 Shaw, Scotch App. 395.

In *The Milan* (Lush. 388) Dr. Lushington did not extend the fourth of Lord Stowell's principles to the case of an innocent cargo owner whose cargo was on board one of two ships in fault, and decided that the cargo owner could only recover half his damage against the particular ship sued. He came to this conclusion, however, not on the ground that the owner of the cargo was constructively to blame, as had been contended in reliance on the common law case of *Thorogood* v. *Bryan* (8 C. B. 115), but because he held that the Admiralty rule limited the liability to half of the damage in the case of each of two ships both to blame, and that the cargo owner was not entitled to affix to the ship which he had selected as defendant more than half the blame and damage. In so far at least as he refused to follow *Thorogood* v. *Bryan*, his decision was approved by this House in the case of *The Bernina* (6 Asp. Mar. Law Cas. 257 (1888); 58 L. T. Rep. 423; 13 App. Cas. 1).

I have now to consider whether the principle thus applied to cargo on board one of two ships both to blame applies also to a tow under the control of a tug which is equally to blame with a defendant third ship. In the case of *The Quickstep* (6 Asp. Mar. Law Cas. 603 (1890); 63 L. T. Rep. 713; 15 P. Div. 196), Butt, J., in delivering the judgment of Sir James Hannen and himself, laid down that where a tug and its tow come into collision with an innocent ship the question whether the owners of the latter can recover damages against the owners of the tow depends on whether the relation of master and servant obtains between the owners of the tow and those on the tug. Unless this relation is established, he said that there was no liability on the part of the tow.

I think that, as the doctrine of identification as enunciated in *Thorogood* v. *Bryan* has now been swept away, the principle so laid down was right and that it is a simple application of the rule established in the well-known case of *Quarman* v. *Burnett* (6 M. & W. 499). No relation such as that of master and servant was established in the present case, and the tow was therefore an innocent ship, and its owners are at common law entitled to recover the whole of their damage from the owners of the *Devonshire*. This disposes of

one of the appellants' contentions, and on principle I think that it also disposes of the contention that blame for breach of sailing regulations can be affixed to the tow: (*Morgan* v. *Castle Gate Steamship Company*, 7 Asp. Mar. Law Cas. 284 (1892); 68 L. T. Rep. 99; (1893) A. C. 38, per Lord Watson; and *The W. H. No.* 1 and *The Knight Errant*, 11 Asp. Mar. Law Cas. 497 (1910); 102 L. T. Rep. 643; (1910) P. 199; 103 L. T. Rep. 677; (1911) A.C. 30).

The second point made by the appellants is that the analogy of the decision in *The Milan*, as to the right of the owners of cargo on board one of two ships to blame being limited to one half the damage as against the other ship, applies to the case of the *Leslie*.

The first question which arises on this point is whether there was a rule in force in the Court of Admiralty which limited the right of an innocent tow to recover in such a case as the present. I have examined the authorities such as they are, and I do not think that they establish any general rule which covers the case. *The Milan* is the authority which comes nearest to suggesting what the appellants contend for. But when the judgment of Dr. Lushington is examined I think that it appears that while he rejected the case for identification so far as based upon the common law principle said to be laid down in *Thorogood* v. *Bryan* with reference to a passenger in an omnibus, he still may be taken to have considered that the fact of the cargo having been on board one of the ships to blame was a circumstance material to be taken into account in deciding whether the cargo owner could so dissociate his cargo from the ship as to be outside the Admiralty rule.

The language of his judgment appears to me to be open to the criticism that he does not make it plain whether he was influenced by a view, which would account for his conclusion if he held it, or whether he meant to lay down the much broader principle now contended for, to be applied in all cases where an innocent third party sued one of two delinquent ships. If the former, then the decision in *The Milan* is an authority for the application of the rule to the case of cargo on board one of two delinquent ships, an application which was approved by this House in *The Drumlanrig* (11 Asp. Mar. Law. Cas. 451, 520 (1910); 103 L. T. Rep. 773; (1911) A. C. 16), but for nothing further. If he meant to lay down the more general proposition it is sufficient to say that it was unnecessary for a decision concerned merely with cargo forming one *res* with the ship, though differently owned, and that the general proposition is, to say the least, by no means clearly borne out by either the older or the subsequent authorities.

Where, as in the present case, the tow was completely under the control of the tug, and did not stand to the latter in the relation of master and servant, I think that the tow is to be considered as an innocent ship in no sense identified with the delinquent tug, and I see no reason for extending to a tow so situated the analogy of cargo on board a ship to blame. I agree with the reasoning on this point in the judgments of Fletcher Moulton and Buckley, L.JJ.

I have come to the conclusion that the appellants have failed to show that there was a rule in force in the Court of Admiralty that the owners of an innocent ship could not recover the whole of the damage which she had sustained against one or two ships both to blame for a collision with her. Apart from sect. 25 (9) of the Judicature Act 1873, I am, therefore, of opinion that the respondents are entitled to succeed. This renders it unnecessary to decide the point whether when the conclusion has once been reached that the tow was innocent, the section in question entitles them to succeed on another ground. This is not a case in which the ships of the appellants and respondents have both been found to be in fault, and, if not, the section does not apply to the case.

It has been argued that the words mean to go further, and to exclude any other case than that of ships both to blame, and that the Legislature intended to provide that as between ships both to blame, and in such cases only the Admiralty rule should prevail if these were at variance, and it is said that this may well have been because those who framed the statute considered that it was only in such instances that there was substantial variance in the rules as to liability for collision. On this question I think it best to express no opinion in the present case. I have arrived at the result which I have indicated independently of any conclusion about it. I move your Lordships to dismiss the appeal with costs.

The Earl of Halsbury, Lords Ashbourne, Macnaghten, and Atkinson concurred.

Judgment appealed from affirmed, and appeal dismissed with costs.

Solicitors for the appellants, *Pritchard* and *Sons*, for *Collins*, *Robinson*, *Driffields*, and *Kusel*, Liverpool.

Solicitors for the respondents, *Alfred Bright* and *Sons*, for *Batesons*, *Warr*, and *Wimshurst*, Liverpool.

Supreme Court of Judicature.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Monday, May 20, 1912.

(Before Hamilton, J.)

Smeed, Dean, and Co. Limited v. Port of London Authority. (a)

Port of London—"Barge"—Sailing barge—By-laws—Registration — Merchant Shipping Act 1894 (57 & 58 *Vict. c.* 60)—*Port of London Act* 1908 (8 *Edw.* 7, *c.* 68), *s.* 11 (2) (*f*).

A sailing barge is a "barge" within the meaning of the Port of London Act 1908, *s.* 11 (2) (*f*), *and therefore liable to registration under by-law No.* 4 *of the Port of London* (*Registration of River Craft*) *By-laws* 1910.

Commercial Court.

Action tried by Hamilton, J., sitting without a jury.

The plaintiffs claimed to recover the sum of 1*l.* 0*s.* 9*d.* as money received by the defendants to the plaintiffs' use, as money paid under duress, and also for a declaration as to the true intent

(a) Reported by Leonard C. Thomas, Esq., Barrister-at-Law.

and meaning of by-law No. 4 of the Port of London (Registration of River Craft) By-laws 1910.

Bailhache, K.C. and *Cranstoun* appeared for the plaintiffs.

George Wallace, K.C. and *C. B. Marriott* appeared for the defendants.

The facts and arguments are sufficiently stated in the judgment.

Hamilton, J.—This action is brought to recover 1*l.* 0*s.* 9*d.* as money received by the defendants to the plaintiffs' use, money paid under duress, and also for a declaration as to the true intent and meaning of by-law No. 4 of the Port of London (Registration of River Craft) By-laws 1910, and a declaration that if its meaning is such as to justify the charge in question, then the bye-law is itself *ultra vires.* The by-law in question is: "Every person shall on applying to the port authority for the registration or for the renewal of the registration of a steam tug, lighter, or barge, other than a steam barge or canal barge or canal boat registered by the port authority as such, respectively pay to the port authority the sum specified in this by-law," and then the mode of calculating the sum payable is added, which results in the sum 1*l.* 0*s.* 9*d.* for this particular barge. No question is raised as to the amount that was imposed. What enables the Port of London Authority to constrain persons to apply to the port authority for the registration of a steam tug, lighter, or barge is the combined effect of the Port of London Act 1908, s. 11, sub-s. 2, par. (*f*), and of sect. 7 of the Thames Watermen's and Lightermen's Act 1893, which gave the late Thames Watermen's Company certain powers which by sub-sect. 1 of sect. 11 of the Act of 1908 have now been transferred to the Port of London Authority with respect to, among other things, the registration and licensing of craft and boats.

The plaintiffs' vessel was called the *George.* She is a "ship" within the definition of a vessel in the Merchant Shipping Act, because she is propelled otherwise than by oars—namely, by sails. She is accordingly registered at the port of Rochester under the Merchant Shipping Act, and under her registry she has a registered tonnage of 41·45 tons. She has, however, a much more important capacity than that registered tonnage might imply; she carries as much as 110 tons dead weight, and she makes voyages regularly from the river Swale into London and back. She occasionally goes along the East Coast as far as Harwich, or further; she has been up the Thames as far as Walton on-Thames. She has the characteristics which in the evidence of the experienced harbourmaster for the lower district of the Port of London, Captain Kershaw, are important as determining how she should be named. She is nearly square in section; she has wing boards; she has the typical rig of a Thames sailing barge; she has a rudder outside the lines of the hull. She is regularly loaded down to a very small freeboard, and has her cargo in her central compartment battened down and tarpaulined down, and no doubt she relies for her stability of flotation on the inclosed spaces in the bow and stern. I think there is no doubt that the term by which seamen and waterside characters would describe her is the term by which she has been described throughout these proceedings—that is to say, as a "sailing barge." She is so described in the pleadings, and although she might be laxly described as a ship, and might be described as a sailing vessel of some particular rig, "sailing barge" is her most appropriate description. The plaintiffs, however, contend they are not compellable to register her, and by navigating within the limits of the Port of London Authority they commit no breach of statute or of by-law, although they have not registered her, and they rely upon the character of the vessel as well as the trade, and the somewhat lengthy voyages that she embarks upon.

I think that the first question to be considered is: What is the power of the Port of London Authority? The matter is necessarily an intricate one because the Port of London Authority was a successor, with certain amendments and variations, to the powers of the Watermen's and Lightermen's Company, which company in its turn was regulated by at least two Acts of the reign of Queen Victoria, and whose proceedings have also been the subject of various legal decisions.

The Port of London Authority say that among other powers and duties of the Watermen's Company with regard to the registration and licensing of craft and boats transferred to them, there were transferred to them the powers under the provisions of the Act of 1893 as amended by sect. 11, sub-sect. 2, par. (*f*) of the Act of 1908: "The provisions of the 1893 Act as amended by this Act so far as they relate to craft shall extend to all lighters, barges, and other like craft for carrying goods . . . navigating either wholly or partially within the limits of that Act as so amended." It is admitted that the *George* comes to London too regularly and too much as a matter of course to be within the words "navigating exceptionally or occasionally only within those limits." Therefore, no question now arises on that phrase. The case for the defendants is, that sect. 7 of the Act of 1893, so far as it relates to craft, extends to all lighters, barges, and other like craft for carrying goods, and steam tugs navigating either wholly or partly within the limits of that Act as so amended. There is no doubt that partly, at any rate, and constantly the *George* navigates within the limits of the Act of 1893 as subsequently amended, which however, does not cover the river Swale, which is the regular *terminus a quo* of the *George's* voyages. She navigates, therefore, partly within the limits of the Act. She is engaged in carrying goods. Is she within the words "all lighters, barges, and other like craft for carrying goods"? If so, the provisions of sect. 7 of the Act of 1893, so far as they relate to craft, extend to her.

The provisions of sect. 7 of the Act of 1893 are that "no craft shall be worked or navigated within the limits of this Act, unless: (1) A certificate relating to such craft shall have been issued in pursuance of this Act, and shall for the time being be in force. The circumstance that the *George* is registered under the Merchant Shipping Act is by no means conclusive, because it is clear that registration under the Merchant Shipping Act is not necessarily exclusive of registration under the Port of London Authority Act, and the reference in sect. 11, sub-sect. 2 (*f*), to the river steamboat negatives such a conclusion.

Primâ facie as this sailing barge is a barge, it is within the words "all barges," and "all" cannot be limited, I think, to an enumerative use of the word "all," but it is wide enough also to cover all descriptions of barges, all manner of barges. If the clause only meant all barges, enumerating them or without enumerating, it would be enough to say it extended to "lighters, barges, and other like craft," and I think, therefore, on the plain construction of these words, all barges must include this sailing barge, and she is a barge none the less because she sails, though in fact she can bring her masts down parallel with the deck and then be propelled like any other barge, by tug, by poling, by warping, by sweeps.

The plaintiffs, however, answer this by saying that not only are there a number of considerations which show that this construction is very inconvenient, but that there are some which show that it cannot have been intended. For example, it is pointed out that under the Thames Conservancy by-laws, which, of course, within the Thames Conservancy limits the *George* must conform to, "lighter" and "sailing barge" are used antithetically, and the lights and signals required on a lighter are different from those required from a vessel under sail. There is no doubt that is true. I do not, however, think that that carries the matter much further, because I think the words "all barges and other like craft" are so explicit that I should need more than the mere use of other terms in other Acts or by-laws having statutory authority to enable me to depart from the meaning of these explicit words. The same observation, I think, applies to the very just comments that were made that there is danger, if there be two registers, of discussion and doubts, at any rate, as to whether a person on board such a craft as this is a seaman, and whether or not he is entitled to the benefit of the Employers' Liability Act, whether the *George* herself is a ship and entitled or not to limitation of liability, and whether or not the *George* is amenable to Admiralty jurisdiction, or is a ship and subject to it.

I have not been satisfied that in any of those connections any contention could be raised that would not be readily disposed of upon the principles to which Mr. Cranstoun drew my attention in connection with the case he cited. Conversely, I do not derive, unfortunately for myself, any guidance from the decision in *Burham Brick, Lime, and Cement Company Limited* v. *London and India Docks Joint Committee* (unreported) in 1899, because there, though no doubt it was assumed that a sailing barge was a "lighter, barge, or other like craft" for the purpose of being entitled to free entrance into the London and India Docks, that appears to have been rather a matter of assumption than argument, and the decision turned on other grounds for disputing her exemption. I understand that in practice from 1894 till 1910, though great numbers of sailing barges were regularly registered, as they were all barges navigating wholly within the limits of the Watermen's Company's Act, they may have been registered upon an entirely different ground from the one that I have to consider, which turns upon the difference between a "barge" and a "sailing barge." The more formidable considerations turn upon what is to be done to a vessel, which being *ex hypothesi* a barge carries her full burthen of tonnage in goods, and does not carry a licensed lighterman in charge when within the limits of the Port Authority. I am satisfied, however, that as regards the carrying of any particular deadweight, the matter is not affected by the necessary provision in the certificate issued by the Port of London Authority of a blank in which to fill up the weight-carrying capacity or burthen tonnage of the vessel, or the filling of it up in blank. Sect. 19 of the Act of 1893 is the penalty section for working or navigating in contravention of the provisions of sect. 7 of the Act, and I think "in contravention of the provisions of sect. 7 of the Act" only means without having taken out and kept out a certificate in pursuance of this Act, and without having affixed to the vessel the particulars that that section requires, and whatever may have been the object with which the burthen tonnage is provided for in sects. 5 and 6, and the calculation of it provided for in sched. 3, I do not think that sect. 19 constitutes a penalty section that navigating with a load on board which though safe enough is in excess of the burthen tonnage of the certificate. It is very likely the case that those sections are introduced in order that there may be a mode provided for calculating and recording each craft's burthen tonnage, which in its turn, under by-law 27 of the Thames Conservancy by-laws or the preceding bye-laws to the same effect, would regulate the number of lightermen which the given craft must carry. But under the Watermen's Company Act 1859, in a section repealed by the Act of 1893, s. 53: "The owner for the time being of any lighter, or lighters, barge, or barges, or other boat or craft used, or to be used, within the limits of this Act, for the carrying of goods, wares, or merchandise, without passengers, from or to any place, ships, or other vessels, shall cause his name and place of abode to be registered." And there are further provisions in subsequent sections with regard to registering. Then under sect. 54: "If any person not being licensed"—I am reading it now as subsequently amended—"in pursuance of this Act (except as hereinafter mentioned), shall at any time act as a waterman or lighterman, or ply, or work, or navigate any wherry, passenger boat, lighter, vessel, or other craft, upon the said river, from or to any place or places, or ship or vessel, within the limits of this Act, for hire or gain (except as hereinafter is mentioned) every such person shall forfeit and pay, for every such offence, any sum not exceeding forty shillings." And by sect. 66: "No barge, lighter, boat, or other like craft, for the carrying of goods, wares, or merchandise, shall be worked or navigated within the limits of this Act, unless there be in charge of such craft a lighterman licensed in manner hereinbefore mentioned; or an apprentice qualified as hereinbefore mentioned; and if any such craft be navigated in contravention of this section, the owner thereof shall, in respect of such offence, incur a penalty not exceeding five pounds." Then, when one looks to see what kind of person "a lighterman licensed in manner hereinbefore mentioned" must be, sects. 56 and 57 show that "No person shall be deemed qualified for a lighterman's licence, unless he is of the age of nineteen or upwards, is of good character, and has served an apprenticeship of five years at the

least, to some person authorised by this Act to take apprentices, for the purpose of having them instructed as lightermen, and has, for a period of two years at the least immediately preceding his application, been continuously engaged in working a barge, lighter, or other like craft, within or through the limits of this Act"; and similar provisions with regard to an applicant for a waterman's licence. It is said if the *George*, being a sailing barge, is yet a barge within sect. 11 (2) (*f*) of the Act of 1908, she must also be a barge within sect. 66 of the Act of 1859. The result of that might be that when the vessel reached the limits of the Port Authority, though still under sail, and still requiring even more careful navigation than before, as the waters were getting closer, the sailing master who understands how to sail her is to stand by her and the licensed waterman is to take charge of her, though there is no guarantee and no great probability of his knowing anything whatever about sailing, and although the most that can be learned about him under that Act is that he will have been five years apprenticed to some lighterman under the Act, that he will spend two years before getting his licence within the limits of the Act, or mostly within the limits of the Act, and that in addition he will be more than nineteen, and, for whatever it may be worth, of good character.

This, I think, is a formidable point. The answer given is that those sections have no application to a sailing barge, but are limited to that to which they were always limited—lighters applying wholly within the limits of the Act. The words vary a little in the different sections, because whilst sect. 66 says "worked or navigated within the limits of this Act," the other penalty section—that is to say, the penalty section on the navigator, says: "Work, or navigate any wherry, passenger boat, lighter, vessel, or other craft, upon the said river from or to any place or places, or ship or vessel within the limits of the Act." And sect. 56, which qualifies the lighterman, speaks of his having been continuously engaged in working the lighter within or through the limits of the Act. The natural meaning of that, I think, may be assisted in considering that the Act of 1859, and still more the Act of 1893, were continuing but controlling the privileges of the master, wardens, and commonalty of watermen and lightermen of the River Thames as they had come down at any rate since 7 & 8 Geo. 4, and they had therefore two objects in view: one to impose proper regulations upon the privileged navigators, the other to secure their privileges to those navigators. Hence, I think, on reading the section in question, it is reasonable to suppose that no more was intended than to deal with such barges and other craft as navigated wholly within the limits of the Act—that is to say, wholly within the area of privilege, and which, being bound to carry licensed lightermen, were the subject of the lightermen's privilege; whereas the same reason does not apply to the interpretation of sect. 11 (2) (*f*) of the Act of 1908, which gives to the Port of London Authority the independent and extended right of issuing certificates and controlling the registration of craft, and which is extended, it is true in terms, by the addition of two other classes of vessels, but, I think, also extended in substance by the use of the word "all" which is prefixed to "lighters, barges, and other like craft." No craft was to be worked without a certificate, "no craft," meaning thereby any lighter, barge, or other like craft for carrying goods within the limits of this Act. That now is phrased "the provisions so far as they relate to craft shall extend to all lighters, barges, and other like craft for carrying goods and steam tugs," and I do not think, having regard to the much wider function the Port of London Authority has than the Lightermen's Company had, and to the fact that the powers of the Watermen's Company are transferred to the Port of London Authority primarily for disciplinary and regulating purposes, the difficulty is insuperable of treating "barge, lighter, boat, or other like craft" in sect. 66 of the Act of 1859 as more limited than "all lighters, barges, and other like craft" in sect. 11 (2) of the Act of 1908. In sect. 66 the words are slightly different, because it is no barge or other lighter, and the inclusion of the word "boat" so far as it goes seems to me to be restrictive of the sizes and seagoing importance of the different craft, and to indicate a dividing line which would exclude the *George*. It is, however, forcibly pointed out that the Legislature seems to have thought either that "within the limits of this Act" in sect. 66 meant wholly or partly, but at any rate they might be so understood, though erroneously, because in sect. 311 of the Thames Conservancy Act 1894 Parliament has apparently enacted that "nothing in sect. 66 of the Watermen's Company Act shall apply to lighters passing entirely through the limits of that Act," and sect. 11, sub-sect. 2 (*d*), of the 1908 Act says that to the words of sect. 311 of the Act of 1894 there shall be added the words "or to any lighters on a voyage commencing or ending at any place eastward or westward of the limits of that Act, whether or not goods are in the course of the voyage taken in or discharged at any place within those limits." It is urged that those provisions were entirely unnecessary if the words "within the limits of this Act" in sect. 66 of the Act of 1859 meant "wholly within the limits of the Act." It may well have been thought necessary to include those provisions, not because there was a doubt as to the meaning of sect. 66, but in order that those who wished to be protected from the necessity of employing London lightermen might have the provision clearly stated on the face of the enactment.

I have come to the conclusion that the construction of sect. 66 as not applicable to this sailing barge is not unsound, in spite of what is pointed out with regard to the Thames Conservancy Act, s. 311, and the Act of 1908, s. 11 (2) (*d*), but, even if it is not sound, I think that the words of the Act of 1908, s. 11 (2) (*f*), are too explicit to warrant me in restricting their scope and in saying that although the provisions as to registration extend to "all barges," still they do not extend to this barge merely because the consequence might follow that at a certain point of her voyage within the area ordinarily navigated by barges she might have to be placed in charge of a qualified licensed lighterman instead of being left in charge of her master. I know not in how many cases qualified licensed lightermen are able to sail barges. I daresay in many, and probably very many, and I do not think, in fact as I have no evidence to guide me on the subject, I can say

that the consequence would be so formidable if the charge of this sailing barge had to be made over to a licensed lighterman on entering the limits of the Act, as to warrant me in excluding this sailing barge, which is a specimen of the class "barges," from a provision which in terms covers all barges sailing or not sailing. Accordingly my judgment must be for the defendants with costs.

HOUSE OF LORDS.

Feb. 5, 8, *May* 10, *and July* 26, 1912.

(Before the LORD CHANCELLOR (Earl Loreburn), the Earl of HALSBURY, Lords MACNAGHTEN and ATKINSON.)

KISH AND ANOTHER v. TAYLOR, SONS, AND CO. (a)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Charter-party—Bill of lading—Failure to load complete cargo—Unseaworthiness—Deviation to port of refuge—Dead freight—Lien—Unliquidated damages.

By the terms of a charter-party the shipowners had a lien on the cargo for dead freight, and by the bills of lading the cargo was to be delivered to the shippers' order, or to their assigns, "all other conditions as per charter-party."

The charterers failed to load a complete cargo, and the owners loaded other cargo, at a lower rate than the chartered freight, in order to minimise the loss. An excessive quantity of deck cargo was loaded so as to make the ship in fact unseaworthy at the time of sailing, and she was in consequence compelled to put into a port of refuge for repairs, after which she completed her voyage.

In a claim by the owners against the bill of lading holders for a lien on the cargo for loss sustained in consequence of the charterers' failure to load a complete cargo:

Held, that the right to compensation having accrued before the ship sailed, and the deviation to a port of refuge for repairs being justifiable under the circumstances, the contract of affreightment was not put an end to by the unseaworthiness or the deviation, and the owners retained their rights under it, and that a claim for dead freight included a claim for unliquidated damages.

Judgment of the Court of Appeal reversed.

APPEAL from a judgment of the Court of Appeal (Cozens-Hardy, M.R., Fletcher Moulton, and Farwell, L.JJ.) reported 11 Asp. Mar. Law Cas 544 (1910); 103 L. T. Rep. 785; (1911) 1 K. B 625, who had reversed a judgment of Walton, J., sitting in the Commercial Court without a jury, reported 11 Asp. Mar. Law Cas. 421; 102 L. T. Rep. 910; (1910) 2 K. B. 309, in favour of the appellants, the plaintiffs below.

The action was brought by the plaintiffs, the owners of the steamship *Wearside*, against the defendants, who were holders of a bill of lading dated 23rd June 1908, claiming a declaration that they were entitled to a lien upon the cargo under the bill of lading, and a charter-party dated 18th Dec. 1907 for dead freight.

The facts appear fully in the reports in the courts below, and in the judgment of Lord Atkinson.

Bailhache, K.C., *Adair Roche*, and *Spratt* appeared for the appellants, and argued that the only point decided in the Court of Appeal was the question of deviation. In this case the deviation was justifiable, and did not destroy the right to a lien for dead freight which had accrued under the charter-party before the deviation took place at all. It is said that the deviation was not justifiable because it was due to the unseaworthiness of the vessel, and that the owners are seeking to take advantage of their own wrong. But it was necessary to take steps to protect lives and property which were in danger, no matter how caused, and the master was performing a paramount duty in deviating, and was not taking advantage of his own wrong, as alleged. Even if unjustifiable a deviation does not avoid a charter-party *ab initio*, but only from the point of departure, and cannot take away a lien which had already accrued. There is not much authority as to the effect of a deviation caused by unseaworthiness, but there is an unbroken series of authorities that the unseaworthiness must be the cause of the damage complained of. The Court of Appeal relied on *Strang, Steel, and Co.* v. *Scott and Co.* (6 Asp. Mar. Law Cas. 419 (1889); 61 L. T. Rep. 597; 14 App. Cas. 601), but they misunderstood the effect of that decision, which is not really in point here at all. See *Guibert* v. *Readshaw, The Nancy*, a case decided by Lord Mansfield in 1781, and reported only in 2 Park on Insurance (8th edit.), p. 637. The dictum of Lord Eldon in *Woolf* v. *Claggett* (3 Esp. 257) is the only direct authority against the appellants' contention on this point. See also

Weir v. *Aberdeen*, 3 B. & Ald. 320;
Forshaw v. *Chabert*, 3 Brod. & Bing. 158;
Quebec Marine Insurance Company v. *Commercial Bank of Canada*, 22 L. T. Rep. 559; L. Rep. 3 P. C. 234.

The Marine Insurance Act 1906 (6 Edw. 7, c. 41), by sect. 46 enacts that the insurer is discharged "as from the time of deviation," and by sect. 49 deviation is excused where it is "reasonably necessary for the safety of the ship." In any case it cannot relate back so as to destroy rights which had already come into existence under the charter-party. The Court of Appeal held that this was decided by the cases of *Balian and Son* v. *Joly, Victoria, and Co.* (6 Times L. Rep. 345) and *Joseph Thorley Limited* v. *Orchis Steamship Company* (10 Asp. Mar. Law Cas. 431; 96 L. T. Rep. 488; (1907) 1 K. B. 660), and *International Guano Company* v. *Macandrew* (11 Asp. Mar. Law Cas. 271; 100 L. T. Rep. 850; (1909) 2 K. B. 360), but it only gives a right of action, and does not destroy the contract of affreightment *ab initio*. The precise point was decided in *The Europa* (11 Asp. Mar. Law Cas. 19; 98 L. T. Rep. 246; (1908) P. 84). See also

Schloss v. *Heriot*, 8 L. T. Rep. 246; 14 C. B. N. S. 59;

(a) Reported by C. E. MALDEN, Esq., Barrister-at-Law.

Baumvoll Manufactur v. *Gilchrest*, 66 L. T. Rep. 66; (1892) 1 Q. B. 253; affirmed in the House of Lords, 68 L. T. Rep. 1; (1893) A. C. 8;
Kopitoff v. *Wilson*, 3 Asp. Mar. Law Cas. 163 (1876); 34 L. T. Rep. 677; 1 Q. B. Div. 377;
Steel v. *State Line Steamship Company*, 3 Asp. Mar. Law Cas. 516 (1877); 33 L. T. Rep. 333; 3 App. Cas. 72;

The Court of Appeal did not touch the question whether a lien for dead freight applies to a claim for unliquidated damages. Contradictory opinions were expressed by the House of Lords in *McLean* v. *Fleming* (1 Asp. Mar. Law Cas. 160 (1871); 25 L. T. Rep. 317; L. Rep. 2 H. L. Sc. 128), and the Court of Exchequer Chamber in *Gray* v. *Carr* (1 Asp. Mar. Law Cas. 115 (1871); 25 L. T. Rep. 215; L. Rep. 6 Q. B. 522), which were heard about the same time, but the former decision is to be preferred.

Atkin, K.C. and *Holman Gregory*, K.C. for the respondents contended that the obligation of the bill of lading holder was to pay the bill of lading freight, and the obligation of the shipowner was to deliver the goods on such payment. The bill of lading does not incorporate the provisions of the charter-party as to dead freight. In this case the deviation displaced the contract of affreightment. It is displaced if it can be shown that the ship deviated from the contract voyage, and did not perform the contract. The only point is whether the deviation was justifiable, and the onus of proving that it was is on the owner. It is not a sufficient justification that the necessity arose from unseaworthiness caused by the default of the owner. But for his default the necessity would not have existed, and he is seeking to take advantage of his own wrong. It is analogous to a case of general average. See

Strang, Steel, and Co. v. *Scott and Co.* (*ubi sup.*).

The appellants must contend that though the deviation would not be justifiable in a case of general average, it is justifiable for charter-party purposes, which cannot be a sound construction. [The Earl of Halsbury referred to the judgment of Willes, J. in *Dakin* v. *Oxley* (10 L. T. Rep. 268; 15 C. B. N. S. 646).] See

Kettell v. *Wiggin*, 13 Massachusetts Rep. 68;
Woolf v. *Claggett*, 3 Esp. 257.

As to the contention that the deviation only avoids the contract from the date of the deviation, and does not affect rights which have accrued earlier, the analogy from insurance is fallacious. The lien can only be exercised if the ship is brought to the port of destination on the contract voyage. If the contract is not performed the shipowner is not entitled to freight at all, and therefore cannot rely on any lien. See

Balian and Son v. *Joly, Victoria, and Co.* (*ubi sup.*);
Joseph Thorley Limited v. *Orchis Steamship Company* (*ubi sup.*).

The right had not accrued before the deviation, and was lost when the contract was displaced by the unjustifiable deviation. The warranty of seaworthiness is the same in a contract of affreightment and in a contract of insurance. See

Lyon v. *Mells*, 5 East, 428, per Lord Ellenborough, C.J.

It is the foundation of both contracts. The appellants' contention that it is not a condition precedent going to the validity of the contract, but is only a collateral term for the breach of which damages are the only remedy, is not sound. See

Stanton v. *Richardson*, 30 L. T. Rep 643; L. Rep. 9, C. P. 390; affirmed in the House of Lords, 33 L. T. Rep. 193;

Schloss v. *Heriot* (*ubi sup.*) cited by the appellants is distinguishable. It was a case of general average not of affreightment. Further this is not a claim for dead freight at all. The whole contract has been repudiated by the charterer, and the only right of the owner is to sue him for the breach. Dead freight was never meant to cover a case of this kind. It does not include unliquidated damages for breach of contract. See *Gray* v. *Carr* (*ubi sup.*) in which *McLean* v. *Fleming* (*ubi sup.*) was distinguished. The holder of the bill of lading is only liable to pay the bill of lading freight. Any difference between that and the chartered freight should have been settled at the port of loading. See

Gardner v. *Trechmann*, 5 Asp. Mar. Law Cas. 558 (1884); 53 L. T. Rep. 518; 15 Q. B. Div. 154.

If a complete cargo had been loaded the appellants could not have recovered from the respondents the difference between the charter-party freight and the bill of lading freight, but because a complete cargo was not loaded they contend that they can recover. The learned judge at the trial did not arrive at the amount which he found to be due from the respondents on correct principles. [The Lord Chancellor.—That question must be decided by the Court of Appeal.]

Bailhache, K.C. was heard in reply.

At the conclusion of the arguments their Lordships took time to consider their judgment.

May 10.—Their Lordships gave judgment as follows:—

Lord Atkinson.—My Lords: In this case the appellants, the owners of the ship *Wearside*, claim a lien upon the goods of the defendants, the indorsees of a bill of lading, dated the 23rd Jan. 1908, which purported to incorporate all the conditions, provisos, and exceptions contained in a certain charter-party, dated the 18th Dec. 1907, made between these owners and the Mississippi Transportation Company of Gulfort, Mississippi.

By this charter-party the *Wearside* was bound to proceed to Mobile, and there or at Pensacola load a full and complete cargo of timber of the kind described, and being so loaded to proceed to a port on the Continent between Bordeaux and Hamburg (Rouen excluded), and, at charterer's option, to discharge at two ports on the continent and one port in the United Kingdom. The port of Liverpool was ultimately selected as the port of discharge in the United Kingdom. The charter-party contained the following clauses, amongst others: (1) A clause authorising the *Wearside* to deviate for the purpose of saving life and property; (2) a clause to the effect that the master or owners of the ship were to have an absolute lien on the cargo for all freight, dead freight, demurrage, and average; and (3) a clause that any difference between charter-party and bills of lading freight was to be settled at the port of loading before the vessel sailed; if in favour of vessel, to be paid in cash at current

rates of exchange less insurance; if in the charterer's favour, by captain's bills payable ten days after arrival at port of discharge.

The vessel duly arrived at Mobile, and subsequently went to Pensacola to load. The charterers were admittedly under this charter-party absolutely bound to furnish a full cargo. They failed to do this. They only shipped 801¼ standards, all of which were properly stowed in the hold of the vessel. Fully loaded she would have carried 1390½ standards; the cargo shipped was therefore short by 589¼ standards. Now it is not suggested that at the time when the charterers thus broke their contract the vessel was not perfectly seaworthy, was not fit in every way to receive her full cargo, or that her owners had, up to that time, failed in any respect to carry out, or were not ready and willing to carry out their contract fully. There was, therefore, nothing to justify or excuse this breach of contract by the charterers, and the right to recover damages for the breach had accordingly accrued to the owners. These damages are what is styled dead freight. In Carver on Carriage, par. 666, dead freight is defined to be the compensation payable to the shipowner when the charterer has failed to ship a full cargo. Freight is the recompense which the shipowner is to receive for carrying the cargo to its port of discharge. The two things are wholly dissimilar in their nature, though, of course, the freight which the shipowner would have earned if the charterers had fulfilled his contract will in most cases be a fair measure of the damages which he is entitled to recover, and it is in my view clear, from the decision of your Lordships' House in *McClean* v. *Fleming* (*sup.*), that an agreed lien does not cover such damages though they be unliquidated.

Walton, J. states in his judgment that it was not disputed before him that the words occurring in the bill of lading—"all other conditions as per charter"—import into that document the provision of the charter-party giving to the owners of the vessel an absolute lien on the cargo for dead freight amongst other things. Indeed, in the face of the authorities this could not be disputed successfully. They are, I think, clear upon the point. So that before the vessel had loaded more than the 801 standards the right to recover this compensation had accrued to the owners, and they had become entitled to a lien on the cargo in respect of it. The master of the vessel, after the default of the charterers, and in their relief, obtained additional cargo from other sources. Unfortunately, he overloaded his ship with deck cargo to such an extent as to make her unseaworthy. She proceeded to sea, encountered bad weather, and, by reason of her overloaded condition, her master was obliged, in order to save his vessel and the lives of his crew, to take refuge in the port of Halifax. Some of the deck cargo was carried overboard, other portions were jettisoned, other portionsdamaged, and the vessel herself was so much damaged that it was absolutely necessary to have some repairs done upon her and to have a portion of her cargo restowed. The owners have paid for these repairs, and have compensated the owners of the lost, jettisoned, and damaged cargo for the loss which they have sustained, and do not claim from anyone concerned any contribution on foot of the expenditure thus resulting from their improper act in overloading their ship. They do not seek in any way to take, in this respect, any advantage of their own wrong, in the proper sense of that expression.

The *Wearside* duly arrived at Liverpool. The respondents' portion of the cargo was uninjured, and the ship was ready to deliver it. The respondents, however, dispute the existence of the shipowners' lien for dead freight to any amount, mainly on two distinct grounds. First they contend that as every shipowner is held to warrant the seaworthiness of his ship, the breach of that warranty puts an end to the contract of affreightment contained in the bill of lading, which becomes, they say, void *ab initio*, and consequently that though the goods *in specie* have been duly carried to their destination undamaged, the indorsees of the bill of lading are only obliged to pay the shipowners for their services such sum as they may be entitled to as common carriers by sea instead of the remuneration stipulated for in the bill of lading.

Second, they contend that the deviation to the port of Halifax was unjustifiable in this respect, that however necessary it may have been in order to save the ship and cargo and the lives of the crew owing to the perilous condition to which the vessel was in fact reduced, yet, as that condition was in part due to the act of the master in overloading her with deck cargo to such an extent as to make her unseaworthy, the deviation must be treated as a deviation made without any necessity whatever, a gratuitous alteration of the voyage rendering the contract of affreightment contained in the bill of lading void *ab initio*. Of the several points raised by the respondents in the Court of Appeal this latter was the only one decided. The Lords Justices held that the respondents' contention was right, that the deviation constituted a new voyage different from that with which the bill of lading and charter-party were conversant, and that the former of these documents, if not both, were therefore void *ab initio*.

Mr. Atkin, on behalf of the respondents, was driven to admit that if his contention on the first point were sound, it would be competent for every indorsee of a bill of lading, whose goods had, in fact, been carried safely and with due expedition to the appointed port of discharge, to contend that, by reason of some of those comparatively trifling omissions on the part of the master, which have been held to render a vessel unseaworthy—such as sailing without two anchors, sailing without an adequate supply of medicines and medical appliances for the crew—he was released from all the obligations imposed upon him by the bill of lading, the argument being that the provision of a seaworthy ship was a condition precedent, and, not having been performed, the contract of affreightment was entirely displaced. No authorities were cited in support of this proposition. I think that it is in conflict with the principles of English law.

In *Dakin* v. *Oxley* (*sup.*) Willes, J. deals exhaustively with the question whether, under the laws of different continental and other foreign countries, the indorsee of a bill of lading is relieved from his contract where the cargo arrives at the port of lading in specie, though damaged through the negligent navigation of the ship by her master and crew; and as to the law of

England on this point he speaks thus: "The test to the right to freight is the question whether the service in respect of which the freight was contracted to be paid has been substantially performed, and, according to English law, freight is earned by the carriage and arrival of the goods, though they be in a damaged condition when they arrive. Freight must be paid even where the damage is culpable, and the parties must be left to their cross-action."

The case of *The Europa* (*sup.*) is, I think, an authority against the respondents' contention. There the action was brought by the shipowner against the charterer in respect of goods damaged by one of the perils of the sea excepted by the charter-party, not by the unseaworthiness of the ship, which was admitted. It was held by Bucknill and Bargrave Deane, JJ., on a line of reasoning which appears to me convincing, that the charter-party, notwithstanding this unseaworthiness, was not displaced; that, on the contrary, the clause excepting perils of the sea was alive and operative; and that the shipowner, despite his breach of warranty, was protected under it from liability for the injury done to the goods.

Neither in *Steel* v. *State Line Steamship Company* (*sup.*) nor in *Gilroy, Son and Co.* v. *Price and Co.* (7 Asp. Mar. Law Cas. 314; 68 L. T. Rep. 302; (1893) A. C. 56) was it suggested that the breach of warranty of seaworthiness put an end to the contract of affreightment, and relegated the shipowner to his rights as a common carrier by sea. On the contrary, the observations of Lord Blackburn, in the former case, seem to indicate that the indorsee of the bill of lading might be disentitled to recover, despite the fact of unseaworthiness, unless that unseaworthiness caused the damage. He is reported to have used these words: "So here I think that if this failure to make the ship fit for the voyage, if she really was unfit, did exist then, the loss produced immediately by that, though it was a peril of the seas which would have been excepted, is nevertheless a thing for which the shipowner is liable, unless by the terms of his contract he has provided against it"; and further on he says, "I have no doubt what the result will be; it will be a question whether, taking the whole circumstances together, this ship was reasonably fit when she sailed to encounter the perils, and whether the damage that happened was a consequence of her being unfit, if she was unfit," which appears to me to imply that if the damage was not a consequence of this unfitness, the shipowner's liability must be determined by the provision of his contract of affreightment so far as it dealt with that liability.

In *Baumvoll Manufactur von Scheibler* v. *Gilchrest and Co.* (*sup.*), Lord Esher, M.R. is reported to have used these words: "The first cause of action which they allege is for breach of the bills of lading, and, secondly, they allege negligence in sending the ship to sea from New Orleans is an unseaworthy condition. It is not a sufficient breach of a bill of lading that a ship went to sea in an unseaworthy condition, but it must always be shown that the unseaworthiness was the cause of the loss." The fact that a ship is not in a fit condition to receive her cargo, or is from any cause unseaworthy when about to start on her voyage, will justify the charterer or holder of the bill of lading in repudiating his contract and refusing to be bound by it, and, of course, the parties can, by mutual consent, rescind their contract of affreightment, but repudiation or recission are questions of fact. They have not been found upon by the judge at the trial in this case. It lay upon the respondents to procure findings upon them, if they wished to escape on these grounds from the obligations of their contract.

Having regard, therefore, to the authorities which I have cited, and to the absence of all authority to support the respondents' contention on their first point, it is, I think, unsound and unsustainable according to the law of this country.

On the second point it is not disputed that it is *primâ facie* not only the right but the duty of the master of a ship to deviate from the course of his voyage and seek a harbour or place of safety, if that course be reasonably necessary in order to save his ship and the lives of his crew from the perils which beset them. Neither is it disputed by the appellants that they are answerable in damages to every person who sustains loss or injury by reason of the breach of their warranty of the seaworthiness of their ship, and they further admit that they cannot require the owners of the cargo or any portion of it to recoup them to any extent for any loss which they may have sustained or expense to which they may have been put as a result of this breach of warranty, or of any course which they may have had to take in consequence of it. The appellants further admit that voluntary or unwarranted deviation may render the contract of affreightment void *ab initio*, as was decided by the Court of Appeal in *Joseph Thorley Limited* v. *Orchis Steamship Company* (*sup.*). What they contend is, in effect, this, that justifiable deviation does not avoid the contract; that, to use the language of Lord Watson in a case presently to be referred to, "it is the presence of the peril and not its causes" which justify it, and that it is, therefore, immaterial whether the unseaworthiness of the ship or her negligent navigation contributed directly to the peril or not. Judged by that test it is not disputed that the deviation in the present case was justifiable, and if so, that the contract of affreightment was not void *ab initio*, so that the question for decision resolves itself into this: Is it the presence of the peril and not its cause which determines the character of the deviation, or must the master of every ship be left in this dilemma, that whenever, by his own culpable act, or a breach of contract by his owner, he finds his ship in a perilous position, he must continue on his voyage at all hazards, or only seek safety under the penalty of forfeiting the contract of affreightment? Nothing could, it would appear to me, tend more to increase the dangers to which life and property are exposed at sea than to hold that the law of England obliged the master of a merchant ship to choose between such alternatives.

The Court of Appeal appears to have considered that they found in Lord Watson's judgment in *Strang, Steel, and Co.* v. *Scott and Co.* (*sup.*), a principle which was applicable to the present case. They did not refer to any other authority in support of their decision on this point. With the utmost respect I am quite unable to concur with them. In that case,

through the negligence of the master, the ship was driven ashore and part of her cargo was jettisoned.

The question with which Lord Watson was dealing in the passage cited from his judgment by Fletcher Moulton, L.J., was what he styled the first question raised in the case—namely, "Whether innocent owners of cargo, sacrificed for the common good, are disabled from recovering a general contribution by the circumstance that the necessity for the sacrifice was brought about by the ship-master's fault?" He says: "Each owner of jettisoned cargo becomes a creditor of the ship and cargo saved, and has a direct claim against each of the owners of the ship and cargo for a *pro ratâ* contribution towards his indemnity, which he can enforce by direct action." Further on he says: "The Rhodian law, which in that respect is the law of England, bases the right to contribution, not upon the causes of the danger to the ship and cargo, but upon its actual presence." And before the passage last cited, he says: "The principle upon which contribution becomes due does not appear to differ from that upon which the claim for salvage services are founded. But, in any aspect of it, the rule has its foundation in the plainest equity. In jettison, the rights of those entitled to contribution, and the corresponding obligations of the contributors, have their origin in the fact of a common danger which threatens to destroy the property of them all, and these rights and obligations are mutually perfected, wherever the goods of some of those shippers have been advisedly sacrificed and the property of the others has been thereby preserved. There are, however, two well-established exceptions to the rule of contribution for general average which it is necessary to notice."

He then proceeds to deal with the first exception in the passage cited. Lower down he deals with the second exception, deck cargo; he says: "But the owner of deck goods jettisoned, though not entitled to general contribution, may nevertheless have a good claim against the master and owners who received his goods for carriage upon deck." And after stating that such exceptions as are recognised in *Schloss* v. *Heriot* (*sup.*) are in truth limitations of the rule introduced from equitable considerations in the case of actual wrongdoers, he states the conclusion of the Judicial Committee thus: "The owners of the goods thrown overboard, having been innocent of exposing the *Abington* and her cargo to the sea peril which necessitated jettison, their equitable claim to be indemnified for loss of their goods is just as strong as if the peril had been wholly due to the action of the winds and waves."

To permit a wrongdoer to recover contribution in such a case would indeed be to permit him to take advantage of his own wrong, for his wrongdoing necessitated the sacrifice out of which his claim for contribution would spring. The present case is wholly different. Here the claim of the appellants arose before they were in default at all. It does not spring from their default; it is entirely independent of their default. It springs, on the contrary, from the respondents' fault, and the contract of the respondents provides a specific and particular method, a lien, by which it may be enforced. It is, in truth, the respondents, not the appellants, who seek to take advantage of the appellants' wrong, in order to deprive the appellants of a right which the respondents' wrong gave them. This distinction between the case of *Strang Steel and Co.* v. *Scott and Co.* and the present case is, to my mind, crucial, and prevents the decision in that case from being any help whatever to the proper decision of the present.

On the whole, therefore, I am of opinion that a master, whose ship is, from whatever cause, in a perilous position does right in making such a deviation from his voyage as is necessary to save his ship and the lives of his crew, and that while the right to recover damages for all breaches of contract, and all wrongful acts committed either by himself or by the owners of his ship, is preserved to those who are thereby wronged or injured, the contract of affreightment is not put an end to by such a deviation nor are the rights of the owners under it lost.

Speaking for myself, I may say that I think that it would not be consistent with any principle of justice that these rights should be lost. The fact that by a policy of insurance the insurer merely indemnifies the insured against loss from certain risks, and it is therefore his right not to have these risks increased, differentiates, I think, altogether the case of an insurer from the case of an indorsee of a bill of lading whose goods have been brought safely and undamaged to the port of discharge. The respondents' contention on the second point is to my mind, therefore, as unsustainable as that on the first.

The respondents' contention on their third point amounts, as I understand it, to this. The freight mentioned in the bill of lading is, they say, 26*s.* per load of 50 cubic feet. *Gardner* v. *Trechmann* (*sup.*) decides that where the freight mentioned in the charter-party is more than that mentioned in the bill of lading, the indorsee of the latter, claiming as such, is, in the absence of special agreement to the contrary, only bound to pay the lesser freight. Here there is a special agreement in the last clause of the charter-party, providing that any difference between the two should be settled at the port of lading before the vessel sails. Therefore, as dead freight is still freight it should either not be paid at all, as it is not included in the freight mentioned in the bill of lading, or if payable at all it should under the last clause of the charter-party have been settled and paid at the period of loading before the vessel sailed at all. The answer to this ingenious but very fallacious argument is, that dead freight is not freight at all properly so called, but is in reality damages for breach of contract, for convenience nick-named dead freight, and that neither the last clause in the charter-party nor the case of *Gardner* v. *Trechmann* has any application whatever to it.

On the whole, therefore, I am of opinion that on the three points argued before your Lordships the respondents fail, and that the appeal ought to be allowed with costs, and further that the case should be remitted to the Court of Appeal to deal with the award of damages by Walton, J. against which both parties have appealed.

The Earl of HALSBURY concurred.

Lord MACNAGHTEN.—My Lords: I have had the advantage of reading the judgment of Lord Atkinson and I agree.

The LORD CHANCELLOR (Earl Loreburn).—My Lords: I also agree. I think the best course

would be for the parties to frame an order in accordance with the opinions expressed by Lord Atkinson.

July 26.—The parties submitted to the House the terms of the order.

Judgment appealed from reversed. Case remitted to the Court of Appeal. Respondents to pay to the appellants their costs of this Appeal. Costs in the Court of Appeal to depend on the final issue.

Solicitors for the appellants, *Botterell* and *Roche*.

Solicitors for the respondents, *Trinder* and *Capron*.

Supreme Court of Judicature.

COURT OF APPEAL.

Monday, June 24, 1912.

(Before FLETCHER MOULTON and BUCKLEY, L.JJ.)

THE PACUARE. (*a*)

Collision—Admission of liability subject to a reference — Discovery — Inspection—Order XXXI., r. 18.

A collision occurred between a steamship and a lightship in Liverpool Bay. The owner, master, and crew of the lightship started an action in rem *to recover the damage they had sustained. The owners of the steamship admitted liability subject to a reference. The plaintiffs then delivered particulars of their claim and* inter alia *claimed a sum of* 7047*l. as the value of the lightship. The defendants made an application to the registrar for an order that they were entitled to inspect the plaintiffs' books in order to see upon what basis the plaintiffs arrived at the value set upon their lightship at the time of the collision. The registrar refused to make the order, and on appeal to the judge he confirmed the order of the registrar. The defendants appealed to the Court of Appeal.*

It was admitted that the books would have to be produced at the reference.

Held, reversing the decision of the judge and the registrar, that the defendants were entitled to an order for the inspection of the books before the reference.

DAMAGE ACTION.

Appeal from a decision of Bargrave Deane, J. affirming a decision of the district registrar at Liverpool, who refused to order the plaintiffs to give inspection of certain books which contained statements as to the value and depreciation of their vessel.

On the 22nd Aug. 1911 a collision took place between the lightship *Alarm* and the steamship *Pacuare* in Liverpool Bay.

On the 23rd Aug. the owners of the *Alarm* and her master and crew, suing for their effects, issued a writ *in rem* against the *Pacuare* to recover the damages they had sustained.

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

On the 29th Aug. the owners of the *Pacuare* admitted liability for the collision subject to a reference to the registrar to assess the amount of the damage.

The plaintiffs filed their claim, and among the items included in it was one for 7047*l.*, the value of the *Alarm*.

On the 21st May 1912 the defendants applied to the district registrar for an order that the plaintiffs, the Mersey Dock and Harbour Board, should give the defendants inspection of their books showing the value of the *Alarm* at the time of the collision.

The district registrar refused to make the order.

The defendants appealed to the judge in chambers, who affirmed the order of the district registrar, saying that as the defendants could have the books produced at the reference there was no point in getting inspection before the hearing.

The defendants appealed to the Court of Appeal.

Order XXXI., r. 18 (i.), is as follows:

If the party served with notice under rule 17 omits to give such notice of a time for inspection or objects to give inspection, or offers inspection elsewhere than at the office of his solicitor, the court or judge may, on the application of the party desiring it, make an order for inspection in such place and in such manner as he may think fit: Provided that the order shall not be made when and so far as the court or a judge shall be of opinion that it is not necessary either for disposing fairly of the cause or matter or for saving costs.

Keogh for the appellants, the owners of the *Pacuare*.—The plaintiffs are not claiming the market value of the lightship, for of course there is no market value; they are claiming the value of the vessel to themselves as a lighting authority. The defendants think that if they inspect the plaintiffs' books they will find that the *Alarm* was an obsolete vessel at the time of the accident, and that the value put on her is an extravagant one. The books are certain to show the value to which the plaintiffs had written the vessel down and the rate of depreciation. The learned judge in chambers thought that if those facts were known at the reference it would suffice; the defendants want to know them at once.

H. M. Robertson for the Mersey Dock and Harbour Board, the plaintiffs. — The order appealed from is right, and is consistent with the practice in the Admiralty Court, which is not to produce books until the hearing of the reference. The books will not be of much assistance to the registrar. [FLETCHER MOULTON, L.J.—I am not sure of that, though they may not be binding on him.] He cannot be bound by them, and what evidence of real value is the fact that the Board may have written down the value of the property very considerably. The *Alarm* since she was built in 1885 has been used for many different purposes, and the depreciation allowed is properly different in each case. [FLETCHER MOULTON, L.J.—Then surely the fullest information should be given.] So it will be on the reference, but it cannot help the defendants to have it before then, and no adequate reason has been given for departing from the usual practice in these cases.

FLETCHER MOULTON, L.J.—This is a plain case. The plaintiffs are the owners of the light-

ship *Alarm*, which was run down by the defendant's steamship. The defendants admit liability, and one of the questions on the reference is the value of the lightship. The plaintiffs have got books which contain the whole history of this vessel, its original cost, the work done on it, the depreciation which has been written off, and, in fact, they record all the relevant facts which must ultimately guide the tribunal in deciding on what the value of the lightship is. It is admitted that the books must be produced on the hearing of the reference. Why should they not be produced beforehand, to enable the defendants to be in possession of those facts before the hearing of the reference? I cannot see why they should not. I am not satisfied that any such practice as is alleged to exist does exist or is right and I think it would help to dispose of the case if the books were produced, and the order will be that the books are to be produced forthwith. The appeal will be allowed with costs here and below.

Buckley, L.J.—I agree.

Solicitors for the appellants, *Pritchard* and *Sons*, for *Batesons*, *Warr*, and *Wimshurst*, Liverpool.

April 17, 18, *and May* 18, 1912.

(Before Cozens-Hardy, M.R., Buckley and Kennedy, L.JJ.)

Reliance Marine Insurance Company *v.* Duder. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Marine insurance — Reinsurance — Risk—Intention of assured—Marine Insurance Act 1906 (6 *Edw.* 7, *c.* 41), *s.* 26, *sub-s.* 3.

The plaintiffs issued two policies for the insurance of a vessel for a voyage from "Newcastle, N.S.W., to port or ports, place or places, in any order or rotation, on the West Coast of South America." The vessel was valued in these policies at 12,000*l., and the risk was to continue until thirty days after arrival at final port of discharge or until sailing on next voyage, whichever might first happen. The vessel was also insured by a policy issued by the plaintiffs for a voyage "at and from Valparaiso and (or) port or ports, and (or) place or places, in any order or rotation, on the West Coast of South America" to the United Kingdom, or Continent, or the United States. The vessel was valued in this policy at* 10,000*l., and the risk was to commence from the expiration of the previous policy. The plaintiffs reinsured the vessel with the defendant for a voyage "at and from Valparaiso and (or) port or ports, and (or) place or places, on the West Coast of South America" to the United Kingdom, Continent of Europe, or the United States. The valuation of the vessel was the same as in the two original policies. The plaintiffs gave instructions to their brokers to effect this reinsurance for a voyage "At and from Valparaiso and (or) W. C. S. A. or h/c to U. K. and (or) Cont., or to U. S. A. or h/c . . . (wd. nitrate or h/c). Valuation clause. Hull, &c., vd.* 10,000*l. or v.o.p."*

The vessel was chartered to load a cargo of coal at Newcastle, N.S.W., and under the charterparty the charterers directed her to discharge the cargo at Valparaiso, and bills of lading were accordingly issued making it deliverable at that port. The vessel was then under a second charter party to proceed to Tocopilla to load a nitrate cargo for a European port, and when she reached Valparaiso it was agreed between the owners and charterers under the first charterparty that, instead of delivering the whole of the cargo of coal at Valparaiso, she should proceed with 800 *or* 900 *tons of coal still on board and deliver same to charterers at Tocopilla. By this arrangement it was unnecessary for the captain to take ballast on board for the voyage from Valparaiso to Tocopilla, and on this voyage the vessel stranded and became a total loss. The plaintiffs paid the owners of the ship for a loss under the first two policies, and then brought an action against the defendant on the policy of reinsurance.*

The defendant contended that the plaintiffs did not intend to cover by the reinsurance any risk except the risk under the third policy, and intended to exclude their liability under the two earlier policies.

Held, that this contention failed both upon the facts and the law; that the terms of the written contract being what they were, the evidence as to intention adduced by the defendant was not legally admissible; and held also, Buckley, L.J. (dubitante), *that the defendant was liable as there was no evidence to show that the plaintiffs intended to cover only their risk under the third policy.*

Decision of Bray, J. (12 *Asp. Mar. Law Cas.* 95; 105 *L. T. Rep.* 820) *affirmed, and sect.* 26, *sub-sect.* 3, *of the Marine Insurance Act* 1906 *considered.*

The plaintiffs' claim was to recover, at a trial before Bray, J. sitting without a jury in the Commercial Court, for a loss under a policy of reinsurance upon the vessel *Kynance*.

By their points of claim the plaintiffs pleaded that they caused themselves to be insured by a policy dated the 9th Aug. 1910, which was expressed to be a policy of reinsurance of 500*l.* upon the vessel *Kynance*, valued as in original policy against the risk of total or constructive total loss only, subject to the same terms, clauses, and conditions as the original policy or policies, and to pay as may be paid thereon. The voyage insured was "at and from Valparaiso and (or) any port or ports, place or places, on the West Coast of South America" to the United Kingdom, Continent of Europe, or the United States. They alleged that on the 29th July 1910 the *Kynance*, while on the insured voyage from Valparaiso to Tocopilla, whence she was to sail to the United Kingdom, was totally lost by perils insured against—viz., perils of the sea.

They also alleged that at the time of the loss they were fully interested in the policy of the 9th Aug. 1910 in that they had executed and delivered to the owners of the *Kynance* two policies of insurance on the vessel, dated the 6th and the 11th May 1910 respectively, each for 500*l.* Each of these policies insured the vessel

(*a*) Reported by E. A. Scratchley, Esq., Barrister-at-Law.

from "Newcastle, N.S.W., to port or ports, place or places, in any order or rotation on the West Coast of South America." The vessel was valued at 12,000*l.* and the risk was to continue until thirty days after arrival at final port of discharge or until sailing on next voyage, whichever might first occur.

The defendant by his defence pleaded that the *Kynance* was also insured by the plaintiffs under another policy for 1000*l.*, dated the 4th Aug. 1910, for her homeward voyage, which was described as "at and from Valparaiso and (or) port or ports, and (or) place or places, in any order or rotation on the West Coast of South America" to the United Kingdom, or Continent, or the United States. The vessel was valued at 10,000*l.*, and the risk was to continue until thirty days after arrival, however employed, or until sailing on next voyage, whichever might first occur.

The policy contained the following provision:

In the event of total and (or) constructive total loss of the vessel, underwriters' subscriptions to be limited to 50 per cent. of their lines. Warranted nitrate or held covered at a premium to be arranged.

The policy also contained a proviso:

Risk to commence from expiration of previous policy.

The defendant also alleged that the risk intended to be reinsured by his policy was the risk under the plaintiffs' policy of the 4th Aug. 1910, and he said there had been no loss under that policy, and that the risk never attached, the *Kynance* having been lost before the expiration of the previous policy, and also that there had been a breach of the warranty: "Warranted nitrate."

The plaintiffs had given written instructions to their brokers, dated the 14th July 1910, to effect the reinsurance with the defendant. These instructions were for a reinsurance on a voyage

At and from Valparaiso and (or) W. C. S. A. or h/c to U. K. and (or) Cont. or to U. S. A. or h/c. Leave to call, &c., against the risk of T. and (or) C. T. Loss only (wd. nitrate or h/c). Valuation clause. Hull, &c., vd. £10,000 or v.o.p.

The facts with regard to the voyage were as stated in the report of the *Sailing Ship Kynance Company Limited* v. *Young* (11 Asp. Mar. Law Cas. 596 (1911); 104 L. T. Rep. 397), as follows:

By a charter-party dated the 5th Jan. 1910 the *Kynance* was chartered by Messrs. James and Alexander Brown to load a cargo of coal at Newcastle, N.S.W., and therewith proceed to Valparaiso,

Where . . . having been reported to charterers' agents, she shall receive orders to discharge there or at a safe port not north of Pisagua . . . Freight for the said cargo to be paid at the rate of 17*s.* per ton. . . . Should the vessel be ordered to a direct port of discharge before sailing, 6*d.* per ton reduction in above freight.

By a charter-party dated the 17th March 1910, the *Kynance*, described as "being now at Newcastle, N.S.W., to load for Chili," was chartered to Messrs. Frederick Huth and Co.

The charter-party provided (*inter alia*) that the ship "after delivery of present cargo for owners' benefit at Chili," should "proceed in ballast thence to nitrate loading port and there receive orders from charterers' agents, said orders to be given by charterers' agents at coal discharge port . . . and there load a full and complete cargo of nitrate" for carriage to Europe.

The *Kynance* loaded her cargo of coal at Newcastle, N.S.W., and sailed on the 27th April 1910. Before sailing, the charterers directed that she should discharge her cargo at Valparaiso, and bills of lading were accordingly issued making the cargo deliverable at that port. On the 10th June 1910 she arrived at Valparaiso, and commenced to discharge her cargo. The agents of Messrs. Frederick Huth and Co. then gave orders that she should proceed under the charter of the 17th March 1910 to Tocopilla as the port of loading for her nitrate cargo.

While at Valparaiso an agreement was made between the captain of the *Kynance* and Messrs. J. and A. Brown, the charterers under the charter-party dated the 5th Jan. 1910, that, in lieu of the discharge of the coal cargo being completed at Valparaiso, 800 or 900 tons of the cargo should be carried on by the ship to Tocopilla and discharged there, and that, as the presence of that cargo on the *Kynance* would relieve the captain from the necessity of taking on board ballast at Valparaiso, there should be a reduction of 3*s.* per ton on the charter-party freight of 16*s.* 6*d.* per ton upon the 800 or 900 tons to be delivered at Tocopilla.

Pursuant to this arrangement, freight on the cargo discharged at Valparaiso was paid, leaving freight on the 800 or 900 tons to be paid at Tocopilla upon delivery of the said cargo at that port.

On the 19th July 1910 the *Kynance* sailed from Valparaiso with 800 or 900 tons of coal on board bound for Tocopilla, and on the 29th July 1910 she stranded off Punta Blanca and became a total loss by perils of the sea, the plaintiffs alleging that the 800 or 900 tons of cargo was lost, and, in consequence, the freight upon it.

In an action upon a policy of insurance similar to the policies of the 6th and the 11th May, Scrutton, J. held that the owners of the *Kynance* and the charterers were entitled to vary the mode of performing the charter-party by discharging the coal at two ports of the West Coast of South America instead of at one, and that the policy covered such an adventure, and therefore the owners were entitled to recover under the policy.

It was decided by Bray, J. that the defendant was liable as there was no evidence of an intention on the part of the plaintiffs to cover only their liability under the third policy.

From that decision the defendant now appealed.

Leck replied.

Cur. adv. vult.

May 18.—The following written judgments were delivered :—

KENNEDY, L.J.—The material facts of this case may be shortly stated. They appear more fully in the report in 12 Asp. Mar. Law Cas. 95 (1911) and 105 L. T. Rep. 820.

Before the 9th Aug. 1910 the plaintiffs had executed three policies of marine insurance on the vessel *Kynance*, dated respectively the 6th May, the 11th May, and the 4th Aug. 1910. Of those three policies, the first two for 500*l*. each covered the vessel from Newcastle, N.S.W., to port or ports, place or places, in any order or rotation on the West Coast of South America. The vessel was valued at 12,000*l*., and the risk was to continue until thirty days after arrival at final port of discharge or until sailing on next voyage, whichever might first occur. One of these two policies stated, "cargo to be screened coal or held covered." The third policy, dated the 4th Aug., covered the *Kynance* "at and from Valparaiso and (or) port or ports, and (or) place or places, in any order or rotation on the West Coast of South America to the United Kingdom or Continent or the United States." The vessel was valued at 10,000*l*. This policy also contained two provisions: First, "In the event of total and (or) constructive total loss of the vessel, underwriters' subscriptions to be limited to 50 per cent. of their lines. Warranted nitrate or held covered at a premium to be arranged"; and secondly, "Risk to commence from expiration of previous policy."

The charter-party under which the *Kynance* made her voyage with a coal cargo from Newcastle, N.S.W., to the West Coast provided that she should discharge at Valparaiso, or, if ordered by the charterers' agents, after her arrival there, should discharge at any safe port on the West Coast not north of Pisagua; and in fact, by arrangement made between the charterers and the owners of the *Kynance*, she did not discharge all her coal cargo at Valparaiso, but proceeded with 800 tons on board towards Tocopilla, a West Coast port not north of Pisagua. Between Valparaiso and Tocopilla she was stranded and became a total loss. It was held by Scrutton, J. —as is stated by my brother Bray in the judgment now under appeal—that the present plaintiffs became liable to pay in respect of this loss under the original policies of the 6th and the 11th May. The policy of the 4th Aug. was not available to the owners of the *Kynance*, because, as I have already stated, it was an express condition of that policy that the risk under it should commence only when the previous policies had expired.

The question to be decided in the present action arises in respect of a reinsurance policy which was effected with the defendant, an underwriter of the plaintiffs, on the 9th Aug. 1910, and, therefore, after they had executed all the three policies of the 6th and the 11th May and the 4th Aug., and during the subsistence of those original policies. The plaintiffs sued the defendant in the present action upon this reinsurance policy in order to recoup themselves for the amount of the total loss which they have been held liable to pay and have paid to the owners of the *Kynance* under the original policies of the 6th and the 11th May. The terms of the reinsurance policy are these: It is a policy upon the *Kynance* at and from Valparaiso and (or) any port or ports on the West Coast of South America to any port or ports, place or places, in the United Kingdom and (or) on the continent of Europe between and including Bordeaux and Hamburg or held covered or in the United States of America or held covered as original, &c., &c. "Hull valued as in original policy. Against the risks of total loss and (or) constructive total loss of the vessel only. Valuation clauses as attached. No salvage charges and no sue and labour clause." And in the margin: "Being a reinsurance applying to Reliance Company subject to the same terms, clauses, and conditions as the original policy or policies and to pay as may be paid thereon."

It was not argued at the trial, as Bray, J. states in his judgment, and I did not understand the defendant's counsel to argue before us, that the loss in respect of which the plaintiffs have paid under the policies of the 6th and the 11th May did not fall within the words of the reinsurance policy. And I agree with the learned judge in thinking that they could not successfully have so argued. The language of this reinsurance policy is both sufficient and apt to constitute a contract between the plaintiffs, the Reliance Company, and the defendant, whereunder the plaintiffs, having paid in respect of the total loss of the *Kynance* upon the two original policies of the 6th and the 11th May, became thereupon entitled to be indemnified by the defendant in respect of the said payments. In other words, the policy of reinsurance, according to the natural meaning of its terms, covers the plaintiffs' risk of having to pay for the loss of the *Kynance*, as and when that loss in fact occurred, under any original policy or policies, or, at all events, any original policy or policies existing at the time of the reinsurance (see *Lower Rhine and Wurtemburg Insurance Association* v. *Sedgwick*, *sup.*) under which that risk was insured by the plaintiffs, and each of the policies of the 6th and the 11th May was an original policy.

It is, of course, immaterial in regard to the liability of the defendant as a reinsurer to indemnify the plaintiffs in respect of a loss to which both the original policies of the 6th and 11th May and the reinsurance policy extend that the reinsurance policy would also have protected the original insurer in respect of a loss of the *Kynance* at a further stage, *i.e.*, on the intended homeward voyage, in regard to which the plaintiffs could have been liable to her owners only under the third policy—the policy of

the 4th Aug. The applicability of a reinsurance policy depends upon the period of risk which it covers being coterminous with the risk in the original policy. So far, there is not, I think, any difference between the parties. But the defendant, whilst admitting that the plaintiffs both at the time of the reinsurance and at the time of the loss of the *Kynance* had an insurable interest arising from their liability to the owners of the *Kynance* under the original policies of the 6th and the 11th May, and not disputing that that risk is a risk which apparently comes within the terms of the reinsurance policy, and that the plaintiffs have in fact been held legally liable to pay under those original policies, resists the plaintiffs' claim, because, as he contends, and as he contended before Bray, J., the general words must be limited by the intention of the assured, and he can show that the plaintiffs did not intend to cover by the reinsurance any risk except the risk under the third policy—the policy of the 4th Aug.—and it is not upon that policy, but only upon the two earlier policies of the 6th and 11th May that the plaintiffs have been held liable to pay for the loss of the *Kynance*. He has taken upon himself the burden of proving not merely that the plaintiffs in reinsuring intended to cover their risk on the third policy, but intended to exclude their liability under the two earlier subsisting policies.

I am of opinion that this contention of the defendant fails both upon the facts and in point of law. Such an intention as the defendant imputes to the plaintiffs is, to say the least, improbable. It is difficult to imagine why the plaintiffs, as business men, having risks subsisting under all the three policies of insurance, should, when subsequently taking out through their brokers a policy of reinsurance in terms sufficient and apt to cover their risk on the *Kynance* during her stay on the West Coast under all the three policies as well as during her intended further voyage homeward under the third policy, have intended to limit the protection of reinsurance to the risk under the third policy and to exclude the risks under other two. It is, however, unnecessary to dwell upon this antecedent improbability. The defendant at the trial endeavoured to make out his case by an inference of intention which he invited the learned judge to draw from certain entries in the plaintiff's books, from written communications passing between the plaintiffs and their insurance brokers and between those brokers and their London agents, and also by oral evidence of a sort of constructive notice of the alleged intention given in conversation between those agents and the defendant. The learned judge who had this written and oral evidence before him has held that upon the facts the defendant wholly failed to prove his case.

In the course of a considered judgment, after carefully reviewing the evidence, Bray, J. stated (at p. 97 of 12 Asp. Mar. Law Cas. 95; and at p. 822 of 105 L. T. Rep.) his conclusion in the following terms: "I am unable to find that the intention of the plaintiffs was to cover only their liability under the third policy. It might be true to say that they expected the liability to arise under the third policy, but I find it is not true that their intention was to cover that liability only." As I see no reason for differing from my brother Bray, in regard to this finding, in fact it is not necessary for my judgment on this appeal to consider the law. But as it was much discussed in the course of the argument in this court, I think that I ought shortly to give reasons for my view that the basis of the defendant's contention is unsound and the terms of the written contract between the parties being what they are, that the evidence adduced by the defendant was not legally admissible.

It is, I conceive, a fundamental principle of our law, that, where you have a contract which has a plain natural meaning, and which is not impeached upon the ground of common mistake or upon the ground of fraud or misrepresentation, it is not permissible to alter its effect according to the intention of one of the two contracting parties or to adduce evidence in order to show such an intention. If A. and B. enter into a written contract it is immaterial to consider what either of them intended to effect. The only question is what have they said by their contract. But it is just the opposite of this which the defendant, in resisting the plaintiff's claim, has tried to do. We have here a reinsurance policy covering the insurer's risk under "original policies" ("subject to the same terms, clauses, and conditions as the original policy or policies, and to pay as may be paid thereon") insuring the Kynance at the time and the place of her loss; and the defendant the insurer, has attempted to narrow the natural and *primâ facie* meaning of the contract contained in the reinsurance policy to one out of three of the original policies which existed at the time of the reinsurance, and to each of which the contract of reinsurance is, in regard to the safety of the Kynance when on the West Coast, equally applicable, by proof of an intention on the part of the plaintiffs uncommunicated to the reinsurer to protect themselves only in respect of that single policy.

Such a proceeding appears to me unjustifiable in point of law. Willes, J. in *Denoon* v. *Home and Colonial Assurance Company* (*sup.*), referring to the "intention" of the assured as to insuring the freight and merchandise only, says "which intention, however, not being communicated to the underwriters, could not of itself have altered the construction of the policy, whatever effect it may have had to show a mistake on both sides as to the subject-matter of the valuation, and so to open the policy." When the assured in an original policy or in a reinsurance policy has proved his interest at the time of the loss, the only other questions in the absence of some special provisions in the policy, relevant to the question of the insurer's liability are "Was the subject matter not a subject matter covered by the terms of the contract appearing in the policy? Was the risk occasioning the loss of that subject matter a risk included in the terms of the contract appearing in the policy?

But then, says the defendant "I rely upon sect. 26 (3) of the Marine Insurance Act 1906." That enactment runs thus: "Where the policy designates the subject-matter insured in general terms, it shall be construed to apply to the interest intended by the assured to be covered." I hope that I shall not be judged lacking in due respect either to their Legislature or to the eminent judicial authority whose language—that of Lord Esher (then Mr. Justice Brett) in *Allison* v. *Bristol Marine Insurance Company Limited* (*sup.*) has been in this sub-section imported into the

statute, if I venture to say that I think as I understand Scrutton, J. to think (see *Sailing Ship Kynance Company Limited* v. *Young, sup.*) in agreement with the learned editors of the last edition of Arnold on Marine Insurance (vol. 1, pp. 327, 328) that this sub-section might have been less obscurely worded. Possibly as those learned editors suggest, a question may some day arise under it in regard to opening a valued policy in cases where the designation of the subject-matter in the policy is larger than the insurable interest of the assured, as the valuation was opened by Lord Ellenborough in *Forbes* v. *Aspinall* (13 East. 323) and by Willes, J. in *Denoon* v. *Home and Colonial Assurance Company* (*ubi sup.*). But, be this as it may, I do not think that this subsection can rightly be interpreted to mean that an insurer is thereby entitled to exclude the assured from the receipt of the insurance of any of the risks which are within the terms expressed in the written policy, and which have been presumably considered by the insurer in fixing his premium, by showing that, at the time when the insurance was effected, the assured "intended" in his own mind to cover only some of them. On the contrary, I think that, if this sub section is read as it ought to be in connection with the rest of sect. 26, the purpose of which, as appears by the marginal note, is to deal with "Designation of subject-matter," the principal object of the sub-section is to prevent an assured who at the time of a loss within the policy has only a limited interest in the subject-matter which is designated in the policy in general terms—such, for instance, as "cargo" or "freight"—from being prejudiced by such generality of designation, provided that the designation is not inappropriate, as, for instance, "rice" would be intended to cover an interest in profits which might arise collaterally from a contract relating to the rice: (see per Blackburn, J. in *Anderson* v. *Morice* (3 Asp. Mar. Law Cas. 290; 32 L. T. Rep. 355; L. Rep. 10 C. P. 609, at p. 621) and *Royal Exchange Assurance Company* v. *M'Swiney* (14 Q. B. 634).

Having regard to the words "interest intended by the assured to be covered," I think that those who introduced the sub-section into the Act may also have had in view the one class of case in relation to marine insurance in which the "intention" of one of the two parties to the contract —*i.e.*, the assured, is properly (I say "properly" because it is required by the very terms of the contract) a matter of inquiry in regard to rights under the contract. According to the common form of policy (which appears in the reinsurance policy that we are considering in this case) the insurance is effected by the insurance brokers, "as well in their own names as for and in the name and names of all and every other person or persons to whom the subject-matter of this policy does, may, or shall appertain in part or in all." The persons for whose benefit the policy was intended to enure have therefore to be ascertained. It is expressly provided by sect. 14 of this Act that persons—such, for instance, as mortgagee or consignee, having only themselves a limited interest—may insure for and on behalf of other persons interested as well as for their own benefit, and may recover accordingly upon the policy; although, of course, as laid down by Bowen, L.J. in *Castellain* v. *Preston* (49 L. T. Rep. 29; 11 Q. B. Div. 380, at pp. 388, 399) the plaintiff in such a case can keep for himself only so much of the amount recovered from the insurer as will be due in respect of his own limited interest.

Even in such circumstances the claim to inquire into the intention of those who contract with the underwriters—not appearing in the policy and not communicated to him—has been criticised in a recent insurance case in the House of Lords. In *Boston Fruit Company* v. *British and Foreign Marine Insurance Company* (10 Asp. Mar. Law Cas. 260; 94 L. T. Rep. 806; (1906) A. C. 336, at p. 343) Lord Atkinson made the following remarks: "The underwriter, it would seem, was held to have insured those whom the person who dealt with him intended should be insured, though that intention was never communicated to him. I doubt very much whether that doctrine can long survive the decision of your Lordships' House in *Keighley, Maxsted, and Co.* v. *Durant* (7 Asp. Mar. Law Cas. 418; 84 L. T. Rep. 777; (1901) A. C. 240), or whether the rule of construction thus adopted in the case of marine policies from earlier times is not inconsistent with the root principle which lies at the foundation of the contract—namely, that there must always be the consent *ad idem* of the two contracting minds to make a valid contract." I do not think that sect. 26, sub-sect. 3, assists the defendant in the present case.

The defendant appeared to some extent to seek to support his argument by a reference to the decision of the Court of Appeal in the case of *Lower Rhine and Wurtemburg Insurance Association* v. *Sedgwick* (*ubi sup.*). I do not think that that case has really any bearing upon the question which we have to consider. So far as it goes, it is, when the grounds of the decision of the Court of Appeal are appreciated, rather adverse to the present defendant. The court held, in the words of A. L. Smith, L.J., that "*primâ facie* a person who affects a reinsurance, reinsures the liability he is under at the time when he effects the reinsurance and not a liability he is not then under, and may never thereafter come under;" and that the words after "rubber clause" in that policy of reinsurance "original policy or policies" ought accordingly to be interpreted as referring to the two original policies which were in existence at the time of the reinsurance. The policy to which the defendant in that case was seeking to apply the reinsurance policy, was policy which had been effected upon the expiration of the two original policies which had existed at the time of the reinsurance, and after the reinsurance policy had been effected. The Lord Justice proceeded to point out that he was not deciding that under no circumstances could a policy afterwards effected be covered by a reinsurance policy, but that in face of the fact that there was at the time of the reinsurance two of the original policies to which it did apply and to which *primâ facie* it must be held to apply, the words of the "rubber claim" were not sufficient to embrace a policy effected afterwards, which in material terms differed from the two original policies. The reasoning of Rigby and Collins, L.JJ. was substantially the same as that of A. L. Smith, L.J., which I have cited.

There is, as I have said, nothing in all this which assists the present defendant. The question of "intention" *dehors* the contract itself and existing only in the mind of the person who

effected the reinsurance policy, had not to be, and was not considered at all. The Court of Appeal decided as it did, reversing the judgment which I had given in favour of the defendant, upon the ground (1) that it was the duty of the court, as a matter of construction, to treat the reinsurance policy as *primâ facie* applying, under the phrase "original policies" and the two policies already existent: (2) that in a case at any rate where such original policies existed at the time a subsequent policy in materially different terms ought not to be treated as covered by the reinsurance policy.

COZENS-HARDY, L J. expressed his concurrence in the foregoing judgment.

BUCKLEY, L.J.—I have had the advantage of reading and considering the judgment which Kennedy, L.J. has delivered. I do not differ from it, but I still doubt.

Whether the risk is a risk which comes within the words of the reinsurance policy upon its true construction is, I think, the question to be decided. As matter of construction of the words "original policy or policies" in the reinsurance policy, the question is whether all or some and which of the three insurance policies is described by those words. Looking at the valuation given and the voyage described in the policy of the 4th Aug. as contrasted with those given and described in the policies of May, and looking at the voyage described in the reinsurance policy of the 9th Aug., it is, I think, a question of construction whether the policy of the 4th Aug. to the exclusion of those of May is not that which the reinsurance policy calls the "original policy or policies."

To answer this question of construction no resort need be or ought to be had to intention. The documents alone and a proper regard to the surrounding circumstances are the only materials for the decision. I had elaborated this more fully in the judgment which I had written, but I think it unnecessary to deliver it.

Appeal dismissed.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Tuesday, May 14, 1912.

(Before HAMILTON, J.)

SOCIETA ANONIMA UNGHERESE DI ARMAMENTI MARITTIMO *v.* HAMBURG SOUTH AMERICAN STEAMSHIP COMPANY. (*a*)

Charter-party—Charterer to pay all "dues"—Ship to pay all "port charges"—Custom of port of Santos.

A charter-party contained the following clause: "The charterer paying all dues and duties on the cargo, and the steamer all port charges, pilotages, &c., as customary," and also provided that on arrival at Santos the steamer should discharge on the quay.

At Santos a dock company has authority to enforce a tariff, being entitled (inter alia) *to make a charge "for the use of the quay for loading and discharging goods and any merchandise. . . ."*

The plaintiffs' vessel having been discharged on to the quay, the charterers' agents at the port of Santos charged against the ship in accounts rendered the particular charge for cargo so delivered.

In an action by the shipowners to recover the amount deducted:

Held, following the decision of Walton, J. in Field Line (Cardiff) *v.* San Paulo Gas Company *(unreported, but delivered on the 14th April* 1908), *that the charge was not a "due" on the cargo, but a port charge falling on the steamer.*

COMMERCIAL COURT.

Action tried by Hamilton, J., sitting without a jury.

The plaintiffs' claim was for balance of freight due under a charter-party.

The facts and arguments are sufficiently stated in the judgment.

Bailhache, K.C. and *Roche* appeared for the plaintiffs.

Gregory, K.C. and *Chaytor* for the defendants.

HAMILTON, J.—This is a shipowner's action for balance of freight due under a charter-party dated the 4th Oct. 1910. It is brought against the charterers, but as by the terms of the charter the steamer was to be consigned to the charterers' correspondents in the respective ports, the capacity in which the charterers are defending the action is really that of ship's agents at one of the ports of discharge, who by themselves or their sub-agents have made a disbursement on behalf of the ship which they were compellable to make, and who have sought to reimburse themselves, as *primâ facie* they were entitled to do, by setting it off against the charter-party freight and deducting it. The result is, therefore, that the shipowners, although suing for a balance of a lump sum freight, are in substance engaged in showing that a sum, which their agents paid at a foreign port to discharge a liability which fell in the first instance upon their ship, is one which the defendants have themselves contracted to bear, and are not entitled to set off and deduct in dealing with the freight. The dispute turns upon what occurred in connection with this voyage at the port of Santos, in Brazil. There is there a dock company which is authorised to enforce a tariff of charges, published in Portuguese, of which I have a translation which is substantially accepted. That tariff is divided into four heads: A, B, C, and D. C is a tariff of charges which the dock company makes under contract for non-obligatory services rendered to cargo, and D is a similar tariff for services which are non-obligatory rendered under contract to ships not included in the contracts of the docks company. The remaining two charges appear to be the regular dock company's charges, independent of contracts to render specific services in particular cases. A begins "Quay dues payable by ships and included in their price of affreightment," and is then divided into two heads. B is headed: "Dues for services rendered to goods and paid directly by them," and is divided into two heads, and they are "supervision dues" and "warehousing dues."

(*a*) Reported by LEONARD C. THOMAS, Esq., Barrister-at-Law.

The two heads under A are "landing dues," which vary in amount according as the vessel is a steamer or a sailer, and are calculated by a combination of the linear meter of quay occupied by the steamer and time, and the other is the charge in question, and the translation of the charge in the tariff is this: "For the use of the quay for loading and discharging goods and any merchandise, and for the dredging and clearing away of obstructions from the port per kilogram."

The result, therefore, is that the ship's agents, the charterers' correspondents in the port, charged against the ship in accounts which are rendered in the first instance to the captain this particular charge upon the weight of the cargo which was delivered on to the quay. The charter is expressed in English, although it is in fact made between the Societa Anonima Ungherese di Armamenti Marittimo "Oriente" and Hamburger Sud Amerikanische Dampfschiffahrts Gesellschaft. It comes from Hamburg, and has been adopted by the English firm. It provides that the ship shall load a general cargo at Antwerp and proceed outwards to Rio de Janeiro and Santos, there being no provision as to the quantity of cargo for each port that she is to take, and on the right and true delivery to pay the lump sum freight of 6412*l.*, part prepaid on sailing and part on delivery. At Santos she is to discharge on the quay by the express terms of charter, and then in the printed form, which as far as print goes is applicable to any ports in the world, there is this provision: "The charterer paying all dues and duties on the cargo, and the steamer all port charges, pilotages, &c., as customary."

It is not contended on either side that there is any kind of impost levied at Santos which would not be either dues and duties on the cargo or port charges, pilotages, &c., as customary, and there at least those two classifications are exhausted; but the ship, in order to establish an answer to the charterers' claim to indemnity against disbursements on ship's account, has to establish not merely that those are not port charges, pilotages, &c., as customary, which she has expressly contracted to pay, but also that they are dues and duties on cargo, because those and those alone are what the charterer has expressly contracted to pay. It is proved in the case, by the uncontradicted evidence of Mr. Luigi Nicolich, that there are no such dues as these at Rio de Janeiro, and it is amply proved that such dues as these have been well known and regular dues at Santos for a great many years. Under the terms of the tariff, the ship has to pay the dues in question in the first instance, but that is by no means conclusive, because it only refers to the party from whom the dues are to be collected, without defining in itself whether the dues are dues on the cargo or a port charge as customary. It is plain that the scheme of the tariff is to contrast B, which are dues for services not merely paid for directly by the goods, but rendered to the goods, with A, which are quay dues not only payable by ships, but included in their prices of affreightment. What the concern of the docks company of Santos may be with the ship's freight is not apparent—legally none—but those words can hardly have been used, except with some idea of indicating that those are dues not merely payable by ships, but are in a special degree a burden upon the ships, and therefore can be contrasted with services rendered to goods. In this particular case the ship's contract bound her to discharge on the quay, and she therefore was not merely in the position of calling upon the consignee to receive his goods at the ship's rail in an accustomed place of discharge, but the ship was bound to place the goods on the quay, and the quay is there a contrivance for discharge, and not for custody. Hence, therefore, to this particular obligation of the ship landing dues on to a quay and discharging dues for the use of the quay for discharging are particularly appropriate; and another portion of the words, which describes what this particular charge is for, are still more words indicative of a charge for appliances which enable a ship to perform her contract of carriage. They provide that this charge is not only for the use of the quay in discharging, but for the dredging and clearing away of obstructions from the port. If there had been a separate charge for dredging and clearing away obstructions from the port, I think that "port charge" would have been a very convenient term to apply to it. It is pointed out to me very forcibly upon the charter, first of all, that under this charter it is entirely in the charterer's opinion whether he will send most of his cargo to Santos and a little part to Rio, or *vice versâ*, although at Rio he has to take cargo free from alongside, while at Santos the ship has to place it on the quay. Further, that he has the option of underletting the whole or any part of the steamer, and yet the lump sum freight on the ship is the same, and hence if the ship has to pay any more in the course of the process of discharge at Santos than at Rio, where there are no such charges, the result is to give an option to the charterer, which might be in fact determined by a sub-charterer, and which will within very wide limits affect the freight which the shipowner is to get. It is further pointed out that unless these particular dues at Santos are those from which the shipowner was protecting himself when in this contract he stipulated that the charterer should pay all dues on cargo, there appear to be no dues to which those words would be applicable, and from which he would be protecting himself, and therefore, in order that some effect may be given to the express terms between the parties in this case, that I ought to apply the words "all dues on the cargo" to these dues; otherwise the clause in the charter would be of none effect. The force of that argument is very considerably lessened by the circumstance that the charter is in a printed form equally applicable, as filled up, at the will of the parties, to one port of discharge or to many, to a lump sum freight or to a tonnage freight, and that there would be no difficulty in inserting a clause apportioning the total cargo between the two ports, if any importance is attached to the point. First of all, as a question of construction, I have come to the conclusion that these particular charges are not dues on the cargo. Secondly, I have come to the conclusion that they are port charges, and port charges on the steamer. I do not attach any importance to the mere circumstance that the money is collected from the ship, but I think that circumstance, in conjunction with the rest of the words of the tariff, is of importance as showing that it is part of the paragraph which is not providing for dues on cargo, but which is providing for sums to be paid by the ship in return for the provision

of these appliances and structures, without which she cannot perform her contract. I do not think it is practicable to dissect this particular charge into a part connected with the port, namely, dredging, and a part connected with the cargo, namely, discharging; nor do I think it is practicable to give so much importance to the circumstance that discharge is commonly the joint operation of ship and consignee as to warrant me in saying that this combined charge must be deemed to be a charge in respect of cargo, although half of it is for dredging, and half of the remainder at the least must be for the ship's part of the discharge. The expression used has been that these are dues payable in respect of cargo, but the expression in the charter is dues "on" the cargo, and the mere fact that they are incurred in respect of the cargo partly by reason of the ship discharging her cargo in pursuance of her contract on to the quay, and partly by reason of the measure being the number of kilograms of cargo that get to the quay, is not sufficient, I think, to enable me to say that this is a charge within the words "dues on the cargo" in the charter-party. There was a decision a few years ago of the late Walton, J., in the case of *Field Line (Cardiff) Limited* v. *San Paulo Gas Company*, delivered on the 14th April 1908. I have not the facts or the argument, but I have a shorthand note of the judgment, which I think is quite sufficient for the purpose, and I have had handed to me a copy of the charter. The learned judge there was dealing with this same port, this same charge, this same tariff, and on a charter which, although it differed from the present one, was very similar to it. The words in the charter there were: "The freight is in full of trimming and of all port charges, pilotage, and consulages on the vessel. All wharfage dues on the cargo to be paid by the charterers."

Technically, Walton, J.'s judgment does not bind me here, because I am construing a charter in slightly different language, but at the same time, the reasons that he gives are equally applicable to the present case, and I need hardly say that I should differ from any conclusion of his only if I were satisfied first of all that the authority of his judgment was distinguishable, and, secondly, that the convincing character of his reasoning was inapplicable to the present case by reason of some difference in the language of the charter or in the facts. The facts seem to me to be indistingushable. Now in his judgment he analysed the tariff itself, and he stated that the question he had to decide was whether this—that is, this very charge—was a port charge which was payable by the ship, or whether it was a wharfage charge due on the cargo, in which case it was payable by the cargo. He cites the words of the charter, and he then proceeds to examine the nature of the charge, and expresses the opinion that it is really a charge which is for the provision of quays on which the ship can unload her cargo, and is not intended to be a rate for the use of the quays by the cargo. He says: "I do not think it is a rate, although it may be payable by the ship, imposed really upon the cargo for the use of the quays or wharves, or anything of that kind. I think it is what it says—it is a rate on vessels, or a charge on vessels, in respect of the expense to which the docks company has been put for the utilisation of the quays. I do not think that means merely for the use of the quays; I think it means rather for making the quays useful for the purpose, so that they may be fit for the purpose of loading and unloading, and further in respect of the dredging and clearing of the port from obstruction. That is so that ships may be enabled to get to the quays. That seems to me to be intended by the tariff, and it seems to me in fact to be a rate payable by vessels, imposed on vessels, and in the nature of a port or harbour rate, or port or harbour due. That, I think, practically disposes of the case."

And he thereupon proceeds to say that it is not in the words of the charter-party a wharfage due on the cargo, but is a due payable by the ship. These considerations, which appear to me to be of high authority, lead to the conclusion which I have already indicated on the tariff, that I should treat this particular charge as not being a due on the cargo. It is quite true that in the contract before Walton, J. dues on the cargo were qualified and limited; the words were, "all wharfage dues on the cargo," and it is truly said that there might be here dues on the cargo consisting of this very charge which were not wharfage dues on the cargo because they were not in respect of any wharfage. I am unable to accede to that contention, because, having regard to the fact that the due is the same, and that Walton, J. laid no particular stress on the word "wharfage," and that this clause is framed to cover everything under two mutually exclusive categories—"dues on cargo" and "port charges, pilotages, &c., as customary"—this is so clearly a port charge that I do not think it is practicable to distinguish this case from the case before Walton, J. It was pleaded in this case that there was a custom at the port of Santos by which, independently of the charter-party, this sum was payable by the ship, and not by the charterer. I have heard witnesses of experience and competence, who, of course, have given me their experience, but I think that their evidence does not amount to proof of the custom which was pleaded, nor is it now so relied upon. It is really evidence of very experienced gentlemen as to what they have found in practice is done as between shipowner and charterer. Had there been any dispute here as to what is the customary port charge, their evidence would have been of value on that point also, but there is no dispute that this is a customary charge; in fact, it is an obligatory charge under the tariff, and there is no dispute here as to whether the particular thing is or is not a port charge, except such dispute as turns upon the contention that this is not a port charge because it is a due on cargo; and therefore no evidence to denominate the particular port charges at Santos is here required. I regard the evidence simply as showing that in the course of commerce for a good many years past there has been, I think, an invariable, and certainly a very general, practice, by which this due is paid and is borne by the ship. In every case, or in practically every case, the matter is regulated by the charter. This particular dispute, as I understand it, has not arisen, or I have not heard that it has arisen, since the decision of Walton, J., and the consequence is that in one form of words or another mercantile men are in the habit in voyages to Santos of contracting that this particular due

shall be borne by the ship. A new form of charter is on the point of coming out—whether it will be adopted or not I am sure I do not know—which will reverse the incidence of this charge, and therefore I have no doubt that soon there will be other cases which will have to be decided. But at present that is the firm view taken by gentlemen well conversant with the trade of the effect of the contracts which, in one form of words or another, they have adopted. The judgment in this case is for the defendants.

Solicitor for the plaintiffs, *W. G. Glover*.

Solicitors for the defendants, *Rehder and Higgs*.

Thursday, July 4, 1912.

(Before Hamilton, J.)

Coker *v.* Bolton. (*a*)

Marine insurance—Constructive total loss—Freight policy—Institute time clauses—Construction.

The plaintiffs, the assured, were insured with the defendants under a time policy on freight per the steamship Ivy, *valued at* 950*l.*, *"chartered or unchartered, on board or not on board, and (or) bunker out and freight only home." There were three separate printed sets of clauses attached, the principal one being the "Institute Time Clauses—Freight* 1910,*" of which No.* 5 *was as follows: "In the event of total loss, whether absolute or constructive, of the steamer, the amount underwritten by this policy shall be paid in full, whether the steamer be fully or only partly loaded, or in ballast, chartered or unchartered." During the course of the voyage the vessel became a constructive total loss, but was subsequently towed to a port where she discharged her cargo, and the plaintiff received payment of freight.*

In an action to recover the full amount of the policy:

Held, that the underwriters were entitled to credit for the amount of the freight received by the assured.

Commercial Court.

Action tried by Hamilton, J., sitting without a jury.

The plaintiff claimed on behalf of himself and all other the owners of the steamship *Ivy* for a loss under a policy on the vessel.

An order was made for an early trial of the action without pleadings or discovery on an agreed statement of facts as follows:—

1. The defendants admit that the plaintiffs were at all material times the owners of the steamship *Ivy*, and that they had an insurable interest in the subject-matter of the policy sued upon to the full amount mentioned in such policy.

2. The defendants admit that they underwrote the policy of insurance. . . .

3. During the currency of the policy . . . —namely, on the 2nd Dec.—the steamship *Ivy* stranded in the river Mersey while on a voyage from the Baltic to Manchester with a cargo of grain, and as the result of such stranding became a constructive total loss.

4. At the time of the stranding of the *Ivy* the hull of the steamship was insured for 5150*l.* on a valuation of 9000*l.*, the plaintiffs being uninsured for 3850*l.* . . .

(*a*) Reported by Leonard C. Thomas, Esq., Barrister-at Law.

5. On the 2nd Dec. the Liverpool Salvage Association, on the suggestion of the underwriters of the hull policy . . . and by arrangement with the plaintiffs, but without prejudice—that is, without accepting the abandonment of the *Ivy* of which notice had been given—took charge of the steamship *Ivy* and towed her to Manchester and discharged her cargo there. Subsequently the hull underwriters settled with the plaintiffs on basis of settlement at 6250*l.* with interest at 5 per cent. (on the sums payable) for twelve months, plaintiffs to keep proceeds of sale of wreck.

6. The sum of 630*l.* 12*s.* became payable and was paid for freight on the cargo by the consignees to the plaintiffs.

7. The expenses incurred in taking the said vessel to Manchester after she had been floated were borne by the underwriters on the hull policy. Any question of figures can be adjusted hereafter.

8 On the 8th Dec. 1910 the plaintiffs gave notice of abandonment to the defendants which was not accepted, but the plaintiffs were placed by the defendants in the same position as if writs had been issued.

9. The defendants admit that the sum of 450*l.* 15*s* 6*d.* is due to the plaintiffs under the terms of the policy, being the insured amount, 950*l.*, less nineteen-twenty-fourths of the 630*l.* 12*s.* freight received by the plaintiffs as aforesaid.

The policy in question was dated the 25th Nov. 1910, was valued at 950*l.*, and covered freight on the *Ivy*, "chartered or as if chartered, on board or not on board, and (or) bunker coals out and freight only home."

The following clause was attached to the policy:

In the event of total loss, whether absolute or constructive, of the steamer, the amount underwritten by this policy shall be paid in full, whether the steamer be fully or only partly loaded, or in ballast, chartered or unchartered.

Leslie Scott, K.C. and *J. W. Scott* for the plaintiff.

Baillhache, K.C. and *Leck* for the defendants.

Hamilton, J.—The question which the parties desire to have decided in this action is really a question of the construction of No. 5 "Institute Time Clauses—Freight 1910," applicable to the freight policy to which they are attached.

The plaintiffs, the assured, were insured with the defendants under a time policy on freight by the steamship *Ivy* belonging to them, valued at 950*l.*, "chartered or unchartered, on board or not on board, and (or) bunker coals out and freight only home." There were three separate printed sets of clauses attached, the principal one being the "Institute Time Clauses—Freight 1910." There are thirteen of these. No. 5 is as follows: "In the event of total loss, whether absolute or constructive, of the steamer, the amount underwritten by this policy shall be paid in full, whether the steamer be fully or only partly loaded, or in ballast, chartered or unchartered." The agreed facts conclude that she stranded in the Mersey on a voyage from the Baltic to Manchester with a cargo of grain, that as the result of such stranding she became a constructive total loss, that by arrangement with the plaintiffs, but without prejudice to their rights, the hull underwriters suggested that

the Liverpool Salvage Association should deal with the casualty, that thereupon the vessel was towed by the Salvage Association to Manchester, that she discharged her cargo there, and that 630*l.* 12*s.* became payable and was paid for freight on the said cargo, and it is common ground that that money came to, and has been retained by, the plaintiffs; and the defendants, admitting that the sum of 450*l.* 15*s.* 6*d.* is due to the plaintiffs under the freight policy, say that that is arrived at by deducting from the insured amount the proportion of the freight received by the plaintiffs as aforesaid. The plaintiffs' claim for the whole amount irrespective of any deduction for this freight received amounts to this, that no matter what was paid by the cargo owners on delivery of the cargo, and no matter what was received by the plaintiff in consequence, be it 100 per cent. or less than the amount of the freight insured, they are entitled by virtue of clause 5 in the event which has happened to recover in full upon the freight policy. The effect of that would be to treat it as a separate and independent insurance which gives to the plaintiff, apart from any actual loss of freight, or any actual pecuniary loss at all, the right to receive the same in the event of the total loss of the steamer. I do not understand that it is argued that that could be the effect interest or no interest, though I think that must follow from the argument, because this clause, looked at by itself, contains no reference to interest. It is argued that the true effect of the express words "in full" is the same as though it were "without the benefit of salvage." In fact, it is only one of many attached clauses ancillary, therefore, to the insurance in the body of the policy, and its function is only to elaborate, and it may be extend, the insurance which is subject to the usual insurance law, and expressed in the old Lloyd's form; and it is clearly contrary to the structure of this, and every similar insurance, to treat clause 5 as though it were the expression of an independent insurance altogether. It is clearly to my mind contrary to the intention of the parties, and contrary to anything under the well-known rules of insurance law, to say that this is a wagering policy imported into the transaction as a separate contract by clause 5 of these clauses; and I am satisfied that I ought not to regard it in that light if by any possibility it can be avoided; and if it is to be regarded in that light I am not sure that I have any power in view of the Stamp Act to enforce it.

The argument by which it is supported, if I rightly appreciate it, is very refined, and is drawn from certain well-known rules which have been laid down in regard to the respective rights of hull underwriters and freight underwriters when cargo is delivered and freight is earned, although the carrying ship has become a constructive total loss, and notice of abandonment has been given. In fact, in this case the plaintiffs had a hull insurance, but it was a hull insurance to which there was also attached "Institute Time Clauses —Hull 1910," which provide that "in the event of total or constructive total loss no claim to be made by the underwriters for freight, whether notice of abandonment has been given or not." Had there been no hull insurance at all the position of the plaintiffs would have been that with a crippled ship they would have had the good fortune to earn freight. I do not think it matters, but I am not informed either as to the total amount of the freight that was in process of being earned, or whether it was being earned under bills of lading or under charter-party, or how; but if the plaintiffs had been insured under a Lloyd's policy without the clause that I have read, the result would have been that the vessel having sustained this casualty, and being a constructive total loss, and the plaintiffs having given notice of abandonment, the underwriters would have been entitled to claim as incident to the ship the sum received upon the delivery of the cargo to the cargo owners; and, therefore, it is said that I must regard the event in clause 5 as having happened in the ordinary sense of the term, the vessel being a constructive total loss. I must then remember that under those circumstances by general law this money would belong to the underwriters, and although it might be received by the hand of the shipowner would be received by him in trust for the hull underwriters only. Consequently, it is said that what he receives, not for himself, but only as trustee for third parties, cannot be claimed as salvage by freight underwriters, nor can they claim as against him a benefit which, in fact, he cannot give them, because he has only received the money in trust. Alternatively, as I understand, it is said the true view of the transaction that happened is that the hull underwriters have by the terms of the hull policy released their right to have the benefit of this sum, and are, therefore, I suppose, *cestuis que trust* who have released to the trustee their interest in the subject-matter. If so, that is *res inter alios acta*, the benefit of which the freight underwriters cannot claim; that is a transaction to which they are strangers, not incident to the ownership of the ship. It is also put, if I follow it, thus: that the right to retain the money as between the shipowner and the hull underwriter arises not as part of the contract of affreightment, and the money he has received is not really the fruit of performance of the contract of affreightment, and, consequently, it is not freight which she, the vessel, earned within sect. 63, sub-sect. 2, of the Marine Insurance Act 1906, but is either the proceeds of some bargain which, as a matter of business, it was convenient for the hull underwriters to make with the shipowner, or is remuneration received by the shipowner by way of *quantum meruit* for the service that was rendered by the ship in being the vehicle in which the cargo owner's property was conveyed from some sandbank in the Mersey to Manchester in tow of a tug.

If I fail to represent the argument more accurately, it certainly is not the fault of anyone but myself; but I think the considerations which I have listened to hardly agree with the facts of the case. Sect. 63, sub-sects. 1 and 2, of the Marine Insurance Act 1906, a codifying Act, provide what is to happen where there is a valid abandonment in the one case, or upon the abandonment of a ship in the other. Nothing prevents the parties interested in that abandonment from agreeing between themselves that the statutory rule shall not apply, and the effect of the Institute time clause in the hull policy is to oust that effect, and to agree that no claim is to be made by the underwriters for freight whether notice of abandonment has been given or not. If, therefore, they are to make no claim, they have no right, and they acquire

no right, and need not to release any right, and for this purpose, that is to say, for the purpose of seeing what the truth of the fact is with regard to the shipowner's receipt of this money, one can look at his contract with third parties. The effect of the contract with the hull underwriters is that he never ceded his right to the freight, he never ceded his right to carry on if he could and to claim from the cargo owners, and he succeeded, although with a battered ship, in earning freight, and has had full benefit of it. In the same way it appears to me that there is no new transaction, by way of argument, with strangers, out of which this money arose, but that, in fact, in the words of the Act, it was freight earned by her subsequent to the casualty causing the loss. But by the agreement which he had made the shipowner continued to be entitled to freight so earned by her, and that being so he has earned some of his freight, and the freight underwriters are entitled to claim to that extent; and although there may have been *primâ facie* a total loss of the freight when the ship stranded and became a constructive total loss, there has been salvage, the benefit of which they are entitled to.

The only difficulty I have in the case is the one of bestowing upon clause 5 the construction that the plaintiff contends for. Mr. Leslie Scott said: What effect is given to the words "in full" in this clause, if the meaning of it is that there is no recovery in full, but only a recovery of part, that is to say, a recovery in full less the share of the salvage? I think the meaning of the words "in full" can only be ascertained by continuing the sentence to the end. It is to be paid in full whether the steamer be fully or only partly loaded, or in ballast, that is to say, not yet loaded at all, and whether she be chartered or unchartered. Those circumstances are not to prevent payment in full. If the risk on freight is attached, if the conditions necessary to have freight at risk have arisen, then if that freight, or that chance of earning freight, be lost, it is to be paid for in full, and not to be reduced to any extent by pointing out that the cargo is not still on board, or that all the cargo was engaged but not loaded, or circumstances of that kind; and the other words of the clause, I think, are clearly intended to deal with the rule that has long been felt to be a difficulty with regard to the right to freight earned after a constructive total loss. Even Blackburn, J., in expounding the rule, dwelt rather upon its intrinsic injustice than on its established legality. And underwriters as well as assured have felt that it is, if I may say so, paradoxical, and have repeatedly endeavoured to deal with it. One instance in which it has been endeavoured to be dealt with is the case of *United Kingdom Mutual Steamship Assurance Association Limited* v. *Boulton* (3 Com. Cas. 330), where the rule, also not without some difficulty of construction, was construed by Bigham, J., as he then was, as being intended to secure that where freight was lost to the shipowner at common law not by perils of the sea, but by the operation of the notice of abandonment in transferring to the underwriters of the ship the freight which was eventually earned, the assured should, nevertheless, recover for that as a loss as though it had been lost entirely from perils of the sea. The same is the object here. Whether the language is felicitous or not is immaterial. I think it is quite sufficiently clear for the purpose. "In the event of the total loss, whether absolute or constructive, of the steamer"—that directs attention to the question that had arisen, as to whether the freight is lost or whether some of the freight is earned, and earned for the hull underwriters, though not lost as a loss on the freight policy—"the amount underwritten by this policy shall be paid," that is to say, the underwriters on this policy shall be liable for the freight so lost, and paid in full, whether the cargo be actually fully on board or partly on board.

I think, therefore, that the plaintiff's construction of the clause fails, and his contention in the case fails. I think the clause sufficiently bears out the contention of the defendants, and unless there is some question of figures which still requires to be adjusted, the amount which the defendants admit to be their liability is right.

(Before HAMILTON, J.)

VIRGINIA CAROLINA CHEMICAL COMPANY v. NORFOLK AND NORTH AMERICAN SHIPPING COMPANY. (a)

Bill of lading—Defect in tap—Loss by fire—Unseaworthiness.

A bill of lading provided that the owners of the vessel were not to be liable "for fire on board" or owing to "unseaworthiness of the ship at the commencement of or at any period of the voyage, provided all reasonable means have been taken to provide against such unseaworthiness." The ship took fire in consequence of some oil from a leaky tap coming into contact with a light, the tap being in that condition at the commencement of the voyage.

Held, that as there was no defect existing in the tap which could not be ordinarily remedied in the course of the voyage, the condition of the tap did not in any way constitute initial unseaworthiness.

COMMERCIAL COURT.

Action tried by Hamilton, J. sitting without a jury.

The action was brought in respect of the non-delivery of some 9000 bags of sulphate of ammonia shipped on board the steamship *West Point* from Glasgow to Charleston, and lost owing to the destruction of the vessel by fire while at sea. The action originally came before Bray, J. for decision on certain points of law. The judgment of Bray, J. was affirmed by the Court of Appeal (see 12 Asp. Mar. Law Cas. 82 (1911); 105 L. T. Rep. 810), but on appeal to the House of Lords that tribunal declined to give a decision until there had been findings of fact, and the action was accordingly removed to the King's Bench Division.

The facts and arguments are sufficiently stated in the judgment of Hamilton, J.

Atkin, K.C., *Maurice Hill*, K.C. and *R. A. Wright* for the plaintiffs.

Bailhache, K.C. and *Dawson Miller* for the defendants.

(a) Reported by LEONARD C. THOMAS, Esq., Barrister-at-Law.

HAMILTON, J.—On the 18th Aug. 1910 the *West Point*, the property of the defendants, sailed from Glasgow for Charleston, with a cargo of the plaintiffs' on board. Some time in the morning of the 27th Aug., about 6 30 in the morning, when it was daylight on deck at any rate, if not down in the engine-room, a fire broke out in the engine-room, two persons only being there—the second engineer, Westlake, and Vedoe, the greaser. The fire drove everybody out of the engine-room, and, after raging there for some considerable time, spread to the cargo and the rest of the vessel, with the result that it became necessary to abandon the ship to save the lives of those on board her. They took to the boats, after scuttling the vessel to prevent her from being a danger to navigation, and she went to the bottom.

In this action, which is an action for the loss of the plaintiffs' cargo, the question is first, how this happened; and, secondly, when the cause has been ascertained, whether that amounts to unseaworthiness of the vessel for the carriage of the cargo at the time when she loaded the cargo and sailed from Glasgow; and there is also the question whether, if she was unseaworthy, all reasonable means had been taken to provide against such unseaworthiness. That the cargo was burnt because of the fire in the engine-room is clear; that the fire in the engine-room broke out because a store of paraffin kept in the engine-room escaped so as to come in contact with some naked light and started a conflagration is also clear. All the rest is obscure, and, up to a certain point, rather difficult to settle.

The paraffin was carried in the cavity of the low-pressure column. I am satisfied that that mode of carrying the paraffin was not unreasonable or unsafe in itself, or such as could make the vessel unseaworthy. I am satisfied that the same is true of the presence of the paraffin in the engine-room at all, and this particular part of the engine-room was as well ventilated and as cool as any part. [His Lordship, having considered the evidence, continued:] I have come to the conclusion, therefore, that there was no crack or flaw. [His Lordship having dealt with the cock, continued :] I have come to the conclusion that there is nothing inconsistent with the evidence that I have and can accept, and with the condition of the cock, in the supposition that a sudden and excessive use of force by Westlake, the second engineer, in screwing up the tap might fracture it in the way described, and thus cause the escape of the oil. If that is so, the conclusion to be drawn would be that prior to the sailing of the vessel the tap was in good order, and not open to criticism; and that the accident was caused, and entirely caused, by two acts of negligence on the part of Westlake; one, working in proximity to a possible escape of paraffin with a naked lamp, instead of keeping his daylight job for daylight; and another, nipping up the tap with excessive force, so that he broke what should have been handled more judiciously, and then would not have broken. [His Lordship, having dealt further with the evidence, continued:] An argument was advanced with much skill by Mr. Atkin to the effect that a leakage of the tap, if it was leaking at that joint, though not from any crack and not accompanied by an unprecedented kind of repair to the nipple, was such that the vessel was unseaworthy to go to sea unless it was cured before she sailed. It was not contended, of course, that seaworthiness has to be maintained at the cost of always introducing the latest or the best appliances. It was pointed out that negligence will occur and negligence must be provided for, and that you cannot assume perpetual carefulness in your engine-room, and therefore must have appliances capable of carrying the cargo in safety, even although there be some negligence. I accept that, of course. On the other hand, one must remember that it cannot be expected of a shipowner that he should make his appliances what is called in the United States "fool proof." There must be some limit within which human beings who get wages may be deemed to be capable of doing their duty and willing to do it, and reliance must be placed upon that. Can this defective tap, assuming that there was some little occasional oozing at the joint on the boss, which is all that I think there can have been, and assuming that there may have been an occasional dripping at the bottom of the plug which could have been cured in a moment, be described as constituting a structural defect existing in the vessel at the time of sailing? It appears to me to be impossible. I accept the evidence, of course, that if it had been noticed that there was such a leak, the proper thing would have been to have it attended to at once. The sooner these things are done the better. No leak should be tolerated in any engine room at all; but upon this point I was struck with, and think I ought to accept, the evidence of Mr. Swainston, who is practically experienced as well as experienced as an engineer, who has had experience in the engine-room and in supervising the conduct of engine-rooms, who says to me: "I would, of course, do it at once, and as a superintendent I would order it to be done at once if I saw it; but I should not stop the ship for it, and if I was a second engineer I should, as a matter of course, deal with it without difficulty as soon as she had proceeded." I think that there was no defect existing in the tap at all that could be called more than such a matter as is, and ought to be, ordinarily remedied in the course of the voyage. I think, therefore, that she sailed with a good tap in her, a tap in a reasonable condition, which might be properly left to that which it must receive—the daily attention of the engine-room staff, and a tap which did not in any way constitute initial unseaworthiness. The evidence, as I find it, seems to me not to indicate in any way any fault or privity of the owner.

There only remains one thing to be said. It does not appear to me quite clear what my position and functions are on this occasion. The case has been, by the consent of the parties and with the approval thereto of the House of Lords, remitted to me for trial here out of the usual course. No order was drawn up. The only thing is to ascertain what their Lordships' pleasure really is, and that can be done by the simplest application. If their intention was that the case should be remitted to me for trial, then my judgment is for the defendants with costs. If their intention was that the case should be remitted to me for inquiry and report, then I find the facts, after hearing the evidence, as I have endeavoured to explain them in this judgment.

In neither case is it necessary for me to express any opinion at all upon the questions which, having been pronounced upon by my brother Bray and the Court of Appeal, were taken by way of appeal to the House of Lords, when the step was taken which has resulted in the case being sent down again.

(Before BARGRAVE DEANE, J. and ELDER BRETHREN).

THE TONGARIRO. (a)

Collision — Compulsory pilotage — Exemption — Ships navigating in ballast—Bunkers in excess of immediate requirements—Merchant Shipping Act 1894 (57 & 58 *Vict. c.* 60), *ss.* 581, 583, 745—*Order in Council the* 25*th July* 1861.

A steamship left Newcastle-on-Tyne for London, on a voyage to Port Chalmers, New Zealand, viâ London, with no cargo, but having on board 3040 *tons of coal, of which* 1095 *tons were carried in her bunkers and the rest in No.* 3 *hold and No.* 3 *between deck; she also had on board* 710 *tons of water ballast. The steamship had a water ballast capacity of* 1538 *tons and the water ballast and coal on board was more than was necessary to make the vessel seaworthy. When coming up the Thames in charge of a pilot she ran into and damaged a pier. In an action brought by the pier owners against the shipowners to recover damages for the injury done to the pier, the shipowners pleaded that the steamship was in charge of a compulsory pilot, and that the damage was caused by his negligence. An order was made that the point whether the steamship was under compulsory pilotage should be tried first. On the hearing:*

Held, that the steamship was navigating in ballast from a port or place in the United Kingdom to another port or place in the United Kingdom within the meaning of the Trinity House by-law authorised by the Order in Council of the 25*th July* 1861, *and was therefore exempt from compulsory pilotage.*

DAMAGE ACTION.

Trial of a point of law as to whether a vessel was in ballast within the meaning of the Trinity House by-law confirmed by Order in Council of the 25th July 1861 and so exempt from compulsory pilotage.

The case made by the plaintiffs on the pleadings was that they were the owners and occupiers of a pier and jetty connecting it with the land at Purfleet on the north side of Long Reach of the river Thames which was used for the purposes of loading and discharging petroleum.

At about 12.10 a.m. on the 7th Oct. 1911, the wind being light and variable the tide last of the flood of about one knot and the weather foggy, the defendants' twin screw steamship *Tongariro* of 8073 tons gross register when coming up Long Reach was so negligently and improperly navigated that, although the pier and jetty were duly lighted by two red lights placed vertically at each end of the pier or jetty which were burning brightly, the *Tongariro* ran into the jetty and forced her way through the same and did so much damage that the pier and jetty became wholly useless to the plaintiffs.

The charges made against those on the *Tongariro* were that they did not keep a good look-out, that they did not keep clear of the jetty, that they were proceeding at an excessive speed and that the engines of the *Tongariro* were not eased, stopped, or reversed.

The case made by the defendants was that shortly after midnight on the 7th Oct. 1911 the *Tongariro*, a steel twin screw steamship of 7600 tons gross, and 4917 tons net register, whilst bound from Newcastle to New Zealand *viâ* London, and proceeding up the River Thames in charge of a duly licensed pilot, was enveloped in a sudden very dense bank of fog, and although the engines which previously had been slowed were put full speed astern, and the helm which had been ported for the lights of craft believed to be barges was put hard-a-starboard, the *Tongariro* struck the plaintiff's pier, and that they were not guilty of any negligence.

Alternatively they alleged that if there was any negligence in the navigation of the *Tongariro*, which they denied, it was solely that of the compulsory pilot in charge of the *Tongariro*.

After the close of the pleadings it was agreed that the question as to whether the *Tongariro* was or was not exempt from compulsory pilotage should be decided before the question of negligence was decided.

During the hearing of the point of law, the following sections of the Merchant Shipping Act 1894 were referred to:

Sect. 581. Every pilotage authority may, by by-law made under this part of this Act, exempt the masters of any ships or of any classes of ships from being compelled to employ qualified pilots, and annex any terms and conditions to those exemptions, and revise or extend any such exemptions or any exemptions existing by virtue of any Act of Parliament, law, charter, or usage, upon such terms and conditions and in such manner as may appear desirable to the authority.

Sect. 583 (1) A by-law under this part of this Act shall not take effect until it is submitted to Her Majesty in Council, and confirmed by Order in Council.

(2) Any by-law proposed to be made under this part of this Act shall, before it is submitted for confirmation, be published in such manner as the Board of Trade direct.

Sect. 745 (1). The Acts mentioned in the twenty-second schedule to this Act are hereby repealed to the extent specified in the third column of that schedule. Provided that (*a*) any Order in Council, licence, certificate, by-law, rule, or regulation, made or granted under any enactment hereby repealed shall continue in force as if it had been made or granted under this Act.

The following Orders in Council were also referred to.

Order in Council the 21st Nov. 1855:

Whereas the Trinity House, being a pilotage authority, hath submitted, for the consent of Her Majesty in Council, the following by-law, *videlicet* That all ships which shall arrive from foreign parts at ports or places in the United Kingdom, within

(a) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

the pilotage jurisdiction of the Trinity House, shall when navigating from thence in ballast to a port or place in the United Kingdom, for the purpose of taking on board cargo for delivery at some other port or place in the United Kingdom, be exempt from compulsory pilotage while navigating within the limits of such pilotage jurisdiction, subject, nevertheless, to the terms and conditions following, that is to say, first that the owner or master of the ship claiming exemption from such compulsory pilotage shall provide himself with a certificate of such exemption for the particular voyage therein specified; such certificate to be signed by the secretary or other proper officer of the Trinity House, and to be delivered to the owner or master of such ship, upon his making a declaration, setting forth that the said ship last arrived from foreign ports, and is about to navigate in ballast to some port or place in the United Kingdom, for the purpose of taking on cargo, for delivery at another port or place, also in the United Kingdom, and such ports or places being named in such declaration. And further that the master of such ship shall produce the said certificate, to any duly licensed Trinity House pilot, who shall offer his services to pilot such ship on such voyage; and such master shall on every such occasion, make an entry in the ship's log, of the offer by a Trinity House pilot, of the certificate of exemption having been produced to the said pilot, and of his services having been declined. Second, that in every case in which a certificate of exemption shall have been obtained by misrepresentation, the person on whose application such certificate shall have been granted, shall forfeit double the amount of the pilotage to which the ship so exempted would, but for such certificate, have been liable, to be recovered in like manner as penalties are recoverable under the said Act; and third that in every case in which a ship, for which a certificate of exemption has been granted, shall proceed oversea, either before or after arriving at the port or place specified in such certificate, without navigating with cargo to some other port or place in the United Kingdom, the pilotage to which such ship would have been liable, had a pilot been employed, shall be paid to the pilotage authority or sub-commissioners of the district, and be applied to the purposes of the pilotage fund. Now, therefore Her Majesty . . . is pleased . . . to declare her consent to the same, and the said by-law is hereby approved accordingly.

Order in Council the 25th July 1861:

Whereas the Trinity House at Deptford Strond, being a pilotage authority, have submitted for the consent of Her Majesty in council, the following by-law, viz:—that all ships navigating in ballast from any port or place in the United Kingdom, to any other port or place in the United Kingdom, shall, when not carrying passengers, be exempt from compulsory pilotage within the pilotage jurisdiction of the said Trinity House. Now, therefore, Her Majesty . . . is pleased . . . to declare her consent to the same, and the said by-law is hereby approved accordingly.

Evidence was given and it was proved that the *Tongariro* was registered at Plymouth, and that at the time of the accident she was in fact in charge of a duly-licensed pilot. She had gone to Newcastle-on-Tyne from London in water ballast with 195 tons of coal on board. When she left Newcastle she was bound for Port Chalmers, New Zealand, *viâ* London; she cleared out from Newcastle for London in ballast, paying no cargo dues to the Tyne commissioners. Her crew were engaged on ships' articles which described the voyage as being a coasting one from London to Newcastle and back to London. On her voyage to London she had 3040 tons of coal on board, 1095 tons in her bunkers, and the rest in No. 3 hold and No. 3 between decks, and she also had 710 tons of water ballast. She could carry about 10,000 tons of cargo. The total capacity of her water-ballast tanks was 1538 tons, and she was stable with water-ballast only. The coal was all intended for consumption on the voyage out to New Zealand; she usually bunkered in London, but she bunkered in Newcastle on this occasion to save the cost of the freight on the coal. The coal in London would have cost about six shillings a ton more.

Laing, K.C. and *Dunlop* for the defendants, the owners of the *Tongariro*.—This vessel is not exempt from compulsory pilotage. Pilotage is compulsory in the Thames unless the vessel is an exempt vessel. The only possible way she can be exempt is if she can be brought within the words of the Order in Council of the 25th July 1861, for it is clear she is not within the exemption created by the Order in Council of the 21st Nov. 1855. It is true this steamship was navigating from a port in the United Kingdom to a port in the United Kingdom, and she was not carrying passengers, but she was not in ballast within the meaning of the Order in Council. Those words only cover vessels of light draft earning no freight. Under the Customs Consolidation Act 1876, s. 6, for customs purposes ships are cleared as in ballast if they leave the United Kingdom not having goods on board except stores borne on the victualling bill, but this is no guide. Again, the second schedule of the Merchant Shipping (Mercantile Marine Fund) Act 1898 appears to make the earning of freight the test as to whether or not a vessel is in ballast for the purpose of escaping the payment of light dues, in this case by carrying the coal she in effect earned a freight, for her owners got the coal at a cheaper rate by buying it in Newcastle than they could have done in London; and the vessel ought to be credited with the difference as freight for the carriage of the coal. No vessel can be said to be in ballast when she is loaded to the extent this one was.

Bateson, K.C. and *Roche* for the plaintiffs, the owners of the pier.—This vessel was exempt from compulsory pilotage. It is admitted that she is not within the exemption created by the Order in Council of the 21st Nov. 1855, but she is clearly within that of July 1861. These bunker coals were ballast. Suppose a sailing vessel were to carry more than one suit of sails, is the spare suit cargo, and would she cease to be in ballast and have to take a pilot? The argument for the defendants amounts to this, that if there is a ton more ballast on board than is necessary to make the ship seaworthy, the ship ceases to be in ballast, and the excess ballast is supposed to become cargo. Further, it is arguable that she was a vessel employed in the coasting trade of the United Kingdom, and so within the exemption created by sect. 625 (1) or (3) of the Merchant Shipping Act 1894, for the facts in this case differ from those in *The Winestead* (72 L. T. Rep 91; 7 Asp. Mar. Law Cas. 547; (1895) P. 170) and *The Glanystwyth* (80 L. T. Rep. 204; 8 Asp. Mar. Law Cas. 513; (1899) P. 118).

Laing, K.C. in reply.—This vessel was not in fact engaged in the coasting trade, and so is not within the exemption created by sect. 645 (1) of the Merchant Shipping Act 1894, and the cases cited clearly show that she is not within that created by sect. 645 (3) of the Act.

BARGRAVE DEANE, J.—This is a very short point, but it is an important one. It is whether a steamer, in other respects within the Order in Council of 25th July 1861, can be said to be in ballast when she is carrying more coal than is necessary to take her from one port to the other. That is what it really comes to.

I am of opinion that this vessel was in ballast within the meaning of the Order in Council and of the by-law passed by the Trinity House and recognised by that Order in Council. The by-law is as follows: "That all ships navigating in ballast from any port or place in the United Kingdom to any other port or place in the United Kingdom shall, when not carrying passengers, be exempt from compulsory pilotage within the pilotage jurisdiction of the said Trinity House." First of all, if her two bunkers had been full and her tanks had been full she would have had about 2600 tons on board; she only had 1100 tons in excess of that. She was, as a matter of fact, only down to three-eighths of her dead-weight capacity—3750 as against 10,000. She had nothing on board which was earning freight. She was on a voyage to Port Chalmers *viâ* London, which would require her to be cleared in London, which would again be a protection against any possibility of fraud upon the Government.

The statute itself has no definition of what is "in ballast," and all counsel for the *Tongarir o* have been able to do is to quote to me two statutes upon other subjects in which there are definitions of "in ballast" which are contradictory of each other; and therefore it is clear that "in ballast" must have a different meaning according to the different circumstances to which it is sought to apply it.

Then I come to another point which seems to me conclusive. In what category would you class bunker coals on board a ship? Surely they are stores. If they are stores, then you have got the definite word "stores" in the language of these provisions in the clearance papers. The clearance says this: "That she has not on board, nor will she take on board at this port, any goods, wares, or merchandise whatever, except such stores as are necessary for the use of the said ship during the said voyage"—the said voyage being described as to Port Chalmers. Now, she did not take on board more stores than were necessary for her purpose on that voyage, because we have it in evidence from the gentleman called—Mr. Haycroft—that she would have required more than the 3040 tons on board to take her all the way to Port Chalmers, and that she would have to take on some hundreds of tons of coal at Teneriffe. I am of opinion that these coals taken on board at this time were stores within the meaning of the clearance; that they were not merchandise in the sense that they were earning freight; that they were nothing which would bring this vessel within the provisions of any regulation which would recognise that she was carrying them as cargo.

Vessels are either in ballast or laden, and if you had seen this vessel in the Thames, only down to three-eighths of her loading draught, you would have said at once she was in ballast. That, however, is not conclusive. It is only in point to the extent that she was light. The whole point is that when a vessel has got nothing on board except these matters which are necessary for her purposes as a travelling vessel, can she be said to be otherwise than in ballast?

There is one other matter which I want to mention. A steamer requires coal for her propulsion at present—she may require oil later on—but a sailing vessel requires canvas. Now, if a sailing vessel has two or three duplicate sets of sails beyond any amount of not-made-up canvas on board, is that to be said to be other than stores? They are just as much stores in the one case as in the other, and in my opinion from whatever point of view you look at this case it cannot be said that this steamer was carrying cargo. If she was not carrying cargo she was in ballast. You cannot say a vessel shall only have so much ballast. There is no regulation prescribing, according to tonnage, how much ballast she shall have. She may be ballasted right down, I suppose, if she thinks right. In my opinion in this case the extra coal she was carrying, which was to be used entirely by herself and in her own furnaces, was nothing more or less than ballast, therefore the pilot was not necessary, and the vessel was exempt. There will be judgment for the plaintiffs on this issue, with costs.

Solicitors for the plaintiffs, *Thomas Cooper* and *Co.*

Solicitors for the defendants, *Cattarns* and *Cattarns.*

June 24 *and* 25, 1912.

(Before BARGRAVE DEANE, J. and Elder Brethren).

THE BITINIA. (*a*)

Collision—Vessel aground in Thames at night—Lights — Validity of rule 30 *of the Thames Rules—Collision Regulations, art.* 11.

A vessel upwards of 150*ft. in length aground in the Thames was exhibiting two white lights, one forward and one aft, in order to comply with rule* 30 *of the Thames By-laws for vessels "of* 150*ft. or upwards aground in or near a fairway."*

It was contended in a damage action that she should have exhibited the two white lights and the two red lights prescribed by art. 11 *of the Sea Rules for vessels "aground in or near a fairway," as rule* 30 *of the Thames Rules was ambiguous, and that therefore art.* 11 *of the Sea Rules was the article to be obeyed.*

Held, that there is no ambiguity in rule 30 *of the Thames By-laws so far as concerns "vessels of* 150*ft. or upwards"; that it was a rule duly made by a local authority as contemplated by art.* 30 *of the Sea Rules, and as such was the rule which applied to vessels "*150*ft. in length or upwards aground in or near a fairway" in the Thames.* (*b*)

The Carlotta (8 *Asp. Mar. Law Cas.* 544; (1899) *P.* 223; 80 *L. T. Rep.* 664) *referred to.*

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

(*b*) This decision does not seem to cover the case of a vessel which may be less than 150ft. in length aground in the Thames Query as to the lights such a vessel ought to carry. It may be that provision will be made to cover this point in the revised Thames Rules which it is understood will shortly come into operation.—ED.

DAMAGE ACTION.

The plaintiffs were the owners of the steamship *Otaki*; the defendants and counter-claimants were the owners of the steamship *Bitinia*.

The case made by the plaintiffs was that shortly before 10.35 p.m. on the 11th Nov. 1911 the *Otaki*, a steel, twin-screw steamship of 4611 tons net register was, whilst in the course of a voyage from London to New Zealand, laden with a general cargo, manned by a crew of sixty-six hands, all told, and in charge of a duly licensed Trinity House pilot, lying aground in Sea Reach, River Thames, a little above the Chapman Light. The wind was southerly, a fresh breeze, it was raining heavily, and the tide was low water. The *Otaki* was aground on the north bank of the river, heading about east south-east. The regulation white lights, forward and aft, were duly exhibited and burnt brightly, and a proper watch was being kept.

In these circumstances those on the *Otaki* observed, at a distance of one to two miles, and bearing about ahead, the masthead and green lights of the steamship *Bitinia* coming up river. The *Bitinia* was watched, and as she came nearer was heard to blow a port-helm signal, apparently for some other vessel. When a short distance away from the *Otaki* she appeared to port her helm, and showed her red light and subsequently seemed to starboard her helm. Nothing was or could be done on the *Otaki* to avoid a collision, and the *Bitinia*, coming on at a high rate of speed, with her port anchor and port bow struck the port side of the *Otaki* just before the main rigging, doing heavy damage.

Those on the *Otaki* charged those on the *Bitinia* with not keeping a good look-out, with failing to keep clear of the *Otaki*, and with failing to slacken speed, or stop or reverse in due time or at all.

The case made by the defendants and counter-claimants was that shortly before 10 30 p.m. on the 11th Nov. 1911 the *Bitinia*, a screw steamship of 3125 tons gross and 1968 tons net register, whilst on a voyage from Alexandria to London with general cargo, passengers, and a crew of twenty-six hands all told, was in Sea Reach, River Thames. The weather was thick with rain, and the wind a strong south-easterly breeze, with squalls, and the tide low water slack. The *Bitinia*, in charge of a duly qualified pilot, was proceeding up the river to the northward of mid-channel, making about three knots. The regulation masthead and side lights and a stern light were being duly exhibited, and were burning brightly, and a good look-out was being kept on board of her.

In these circumstances the blur of what afterwards proved to be the two white riding lights of the *Otaki* was seen behind the lights of a steamship a quarter to half a mile distant and about one to one and a half points on the starboard bow. The *Bitinia* sounded one short blast, ported her helm, and after passing the last mentioned steamship portside to portside the helm was ported and hard-a-ported for the *Otaki*, but the *Bitinia* owing to the shoal water fell off against her helm, and although the engines were put full speed astern the *Bitinia* with her port bow struck the *Otaki* a sliding blow on the port side. It was then found that the *Otaki* was aground.

Those on the *Bitinia* charged those on the *Otaki* with not exhibiting the two red lights which betoken a vessel aground in or near a fairway, and with not ringing her bell as required by the Thames rules when a vessel is in the fairway and not under way. They further alleged that if there was any negligence in the navigation of the *Bitinia* it was that of the pilot who was in charge by compulsion of law.

The following collision regulations were referred to:

Art 11 . . . A vessel aground in or near a fairway shall carry the above light or lights (that is a white light or lights depending on whether the vessel is anchor over or under 150ft. long) and the two red lights prescribed by art. 4 (*a*).

Art. 4 (*a*) is as follows:

4 (*a*). A vessel which from any accident is not under command shall carry at the same height as the white light mentioned in art. 2 (*a*) where they can best be seen, and, if a steam vessel, in lieu of that light, two red lights, in a vertical line one over the other, not less than 6ft. apart, and of such a character as to be visible all round the horizon at a distance of at least two miles; and shall by day carry in a vertical line one over the other, not less than 6ft. apart, where they can best be seen, two black balls or shapes each 2ft. in diameter.

The following Thames rules were referred to:

Preliminary.—In obeying and construing the following by-laws relating to lights and signals and steering and sailing due regard shall be had to all dangers of navigation and of collision, and to any special circumstances which may render a departure from them necessary in order to avoid immediate danger. Nothing in the following by-laws shall exonerate any vessel or the owner, master, or crew thereof from the consequences of any neglect to carry lights or signals or to keep a proper look-out, or of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case. The by-laws as to lights shall be complied with in all weathers from sunset to sunrise and during such time no other lights which may be mistaken for the lights prescribed by the by-laws shall be exhibited.

30. With the exceptions hereinafter named a vessel under 150ft. in length when at anchor or moored shall carry forward, where it can best be seen, but at a height not exceeding 20ft. above the hull, a white light (hereinafter called the riding light) in a lamp so constructed as to show a clear, uniform, and unbroken light visible all round the horizon at a distance of at least one mile. A vessel of 150ft. or upwards in length when at anchor shall carry in the forward part of the vessel at a height of not less than 20 and not exceeding 40ft. above the hull, one such light, and at or near the stern of the vessel and at such a height that it shall not be less than 15ft. lower than the forward light, another such light. The exceptions are as follows: (*a*) Where masted vessels are lying in tiers the outermost off shore masted vessels only of each tier shall carry the riding light; (*b*) Lighters lying at the usual barge moorings in the river above Gravesend are not required to exhibit the riding light; (*c*) every steam vessel, sailing vessel, or lighter moored permanently head and stern in the river shall in addition to or in lieu of the riding light exhibit such light or lights as the conservators shall from time to time order or direct. The length of a vessel shall be deemed to be the length appearing in her certificate of registry. A vessel of 150ft. or upwards aground, in or near a fairway shall carry the above light or lights.

38. All steam and sailing vessels when in the fairway of the river and not under way shall at intervals of about one minute ring the bell rapidly for about five seconds.

49. Every steam vessel and steam launch when approaching another vessel so as to involve risk of collision shall slacken her speed and shall stop and reverse if necessary.

Batten, K.C. and *Raeburn* for the plaintiffs.—It is the practice in the Thames to exhibit the two white lights mentioned in rule 30 of the Thames rules in circumstances such as these. The *Otaki* is not within any of the exceptions mentioned in that rule. Even if the lights exhibited were wrong the defendants must show that they were misled by them. The sea rules do not apply in this case:

The Carlotta, 80 L. T. Rep. 664; 8 Asp. Mar. Law Cas. 544 (1899) P. 223.

The real cause of the collision was that the pilot received no assistance from the crew.

Bateson, K.C. and *C. R. Dunlop* for the defendants.—The look-out on the *Bitinia* was at his post and reports were made by him. The collision was not caused by want of look-out. The collision was caused by the pilot porting and going to the north of the small vessel he met, just before he got up to the *Otaki*, and by attempting to go north of the *Otaki*. The *Otaki* should not have exhibited anchor lights for she was not at anchor:

The Thames Preliminary Rule.

When rule 30 says a vessel of 150ft. aground shall carry the above light or lights, it cannot mean that she is to carry anchor lights. There must be some omission in the rule, and it is ambiguous. *The Carlotta* (*ubi sup.*) shows that the Sea Rules apply in the Thames unless there is some local rule which supersedes the sea rule. The local rule here is ambiguous and the *Otaki* should have been exhibiting the two white lights and the two red lights required by art. 11 of the Sea Rules. Rule 30 of the Thames Rules is void for ambiguity.

Batten, K.C. in reply.—There is no ambiguity in rule 30. That rule supersedes art. 11 of the Sea Rules.

BARGRAVE DEANE, J.—This action is brought by the owners of the *Otaki* to recover the amount of the damage sustained by reason of a collision between their vessel and the *Bitinia*, owned by the defendants and counter-claimants. The collision happened about 10.30 p.m. on the 11th Nov. in last year, and it took place about three-quarters of a mile above the Chapman Light, on the north side of the river Thames. The *Otaki*, a big steamer drawing 29ft. of water, found that the tide was too low to let her get safely down over the shoal at the mouth of the river, and so, when she got near the Chapman Light, she turned, and in turning got ashore on the north bank; and there she lay with her head to the southward and eastward. I think that was about 7 30 o'clock. The *Bitinia* was a vessel of some size, over 3000 tons, and she was coming up the river on the north side, in charge of a Trinity House pilot. It appears that he found himself too close to the Chapman Light. He set a course from the Chapman Light of W. by N. which, as I have laid it off, would take him pretty nearly straight to where the bow of the *Otaki* was lying out in the river. As they proceeded on the weather apparently became squally, with a rain storm, and the pilot thought they had better anchor, and the chief officer was sent forward with the boatswain to see that the anchor was clear, ready to let go. Before the chief officer went forward the look-out man reported green and white lights on the starboard bow, and the pilot of the *Bitinia*, who already knew that he was too far to the northward, ported his helm in order to pass that vessel, which was on his starboard bow, showing a green light, port to port, which would take him still more into the northward, away from that centre of the river which was the best place to be in at low water. That was his initial fault. Instead of porting, in my opinion, he ought to have starboarded. But, assuming that he did not starboard, but ported, he knew perfectly well that he was going into the northward. Then he saw, and I am satisfied they were reported, the white lights of the *Otaki*, which was lying on the north side of the river; and he ported still more, with the result that his vessel got on the ground, refused to answer her helm, and ran into the port quarter of the *Otaki*, doing damage. That is the story, and a worse story for a pilot I do not think I have ever heard.

The only question I have to ask myself with regard to the *Bitinia* is, Was the pilot properly supported by the crew? The Elder Brethren and I have discussed with some care the question whether a proper look-out was being kept, and the conclusion I have come to upon the evidence is that a proper look-out was kept on board the *Bitinia*, and that it was solely the fault of the pilot of the *Bitinia* that this collision took place. That, however, does not conclude the case, because counsel for the defendants, on behalf of their clients, have raised another point. They say that the *Otaki* was not properly lighted, and that she did not do what was necessary in the circumstances, she being aground, to give notice to any vessel coming up that she was in that position. In the defence they plead art. 11 of the general Regulations for Preventing Collisions at Sea and also art. 38 of the by-laws of the river Thames These by-laws they say are *ultra vires*. They make use of the Thames by-laws for their own case, but so far as the other side is concerned they say the by-laws are *ultra vires*. Now, what is it that, according to the by-laws, the *Otaki* ought to have done, because for the purpose of to-day I hold that the by-laws are not *ultra vires*, but are binding and have been acted upon for many years? Sect. 191 of the Thames Conservancy Act 1894 provides that: "The Conservators may from time to time make such by-laws as to them seem meet for all or any of the purposes for which by this Act they are authorised to make by-laws, and for all or any of the following purposes—namely," for the regulation, management, and improvement of the Thames and of the navigation thereof, and "for compelling vessels on the Thames to exhibit lights." If that is the case I should say that the by-law is a perfectly good one which regulates the lights which vessels should show at various times and in various circumstances between sunset and sunrise on the river Thames. Accordingly the conservators have made by-laws. If these by-laws are *ultra vires*, some other court must decide that point, as, so far as I am concerned, I am of opinion that they are good by-laws.

The by-law in question is No. 30, which provides for lights to be carried by vessels when

at anchor or moored. It says: "With the exceptions hereinafter named a vessel under 150ft. in length when at anchor or moored shall carry forward . . . a white light (hereinafter called the riding light) . . . A vessel of 150ft. or upwards in length when at anchor"—it does not say when moored—"shall carry in the forward part of the vessel at a height of not less than 20ft. and not exceeding 40ft. above the hull one such light, and at or near the stern of the vessel, and at such a height that it shall be not less than 15ft. lower than the forward light another such light." In other words, a vessel under 150ft. shall carry one light, and a vessel of over 150ft. two lights. Then there follow the exceptions: (*a*) "Where masted vessels are lying in tiers the outermost off-shore masted vessel only of each tier shall carry the riding light." I should say that applies to vessels under 150ft. Then (*b*) "Lighters lying at the usual barge moorings in the river above Gravesend are not required to exhibit the riding light; (*c*) every steam vessel, sailing vessel, or lighter moored permanently head and stern in the river shall, in addition to or in lieu of the riding light exhibit such light or lights as the conservators shall from time to time order or direct." This exception is not a matter of 150ft., above or under. It says: "Every steam vessel," &c. That is an absolutely different class of regulation. It relates to a vessel which is permanently moored in some particular part of the river. She is to carry in addition to or in lieu of the riding light any such light or lights as the conservators may in their discretion order or direct. Up to the present they do not seem to have thought it right to add any other lights, but they do reserve to themselves the right to add to the riding light any such lights as they may think necessary for vessels permanently moored in the river. Then it goes on to this paragraph in the same rule, which is in dispute: "A vessel of 150ft. or upwards aground in or near a fairway shall carry the above light or lights." The difficulty about that is that the rule only mentions vessels of over 150ft. or upwards in respect of which, by the earlier part of the by-law in question, two lights must be carried, and therefore the word "light" is ambiguous, but with regard to a vessel of over 150ft. carrying two lights there is no ambiguity. It seems to me plain that, whether anchored or whether aground, she is to carry those two lights at particular heights above the deck and at particular distances fore and aft, to indicate that she is there, fixed and immovable.

Counsel for the defendants say that, having regard to that particular paragraph, the rule is ambiguous and void for ambiguity; so that it is to be treated as a nullity, and therefore you are entitled to introduce the sea rule, which otherwise would not apply. They say that by the sea rule, which applies where there is no valid local rule, you must carry two red lights, and that as the *Otaki* was carrying two white lights when she was aground she is to blame also. I do not agree with them. The case of the *Carlotta* (*ubi sup.*) has been cited, and in that particular decision, which was not quite like this, because it was broad daylight and there was no question of lights, Gorell Barnes, J. pointed out distinctly that the Regulations for Preventing Collisions at Sea "commence with a preliminary statement that: 'These rules shall be followed by all vessels upon the high seas and in all waters connected therewith, navigable by seagoing vessels.' It is also provided by art. 30 of those Regulations that 'nothing in these rules shall interfere with the operation of a special rule, duly made by local authority, relative to the navigation of any harbour, river, or inland waters.'" If that is the case, that is a precise provision in the sea rules that they shall not apply to the river Thames if there is a rule made by the proper authority exercising jurisdiction over the river Thames, providing for the particular matter in question. In my opinion, as I have said before, art. 30 of the Thames Rules does purport to provide for the case, and that being so, you must not bring in the sea rule, which is a different rule, and would mean this, that a vessel by the Thames rule would require two white lights and by the sea rule would require two white lights and two red lights. That would be a conflict of authority and practice which would cause confusion. In my opinion the contention of counsel for the defendants on the question of the articles and the lights which the *Otaki* should have been carrying cannot prevail. I think the collision was caused solely by the bad navigation of the pilot, who was compulsorily in charge of the *Bitinia*, and both claim and counter-claim will be dismissed, with costs.

Solicitors for the plaintiffs, *Cattarns* and *Cattarns*.

Solicitors for the defendants, *Stokes* and *Stokes*.

July 29 *and* 31, 1912.

(Before BARGRAVE DEANE, J. and Elder Brethren.)

THE ENTERPRISE. (*a*)

Collision — Breach of collision regulation — Presumption of fault—Merchant Shipping Act 1894 (57 *&* 58 *Vict. c.* 60), *s.* 419 (4)—*Collision happening before the passing of the Maritime Conventions Act* 1911 (1 *&* 2 *Geo.* 5, *c.* 57)—*Proceedings taken after the passing of that Act—Application of that Act—Maritime Conventions Act* 1911 (1 *&* 2 *Geo.* 5, *c.* 57), *ss.* 4 (1), 9 (2).

A steamship dredging up the river Ouse was run into by two lighters proceeding up the river in tow of a tug. The collision happened before the passing of the Maritime Conventions Act 1911, *but proceedings were instituted after, by the owners of the steamship against the owners of the tug to recover the damage. The defendants contended that, even if they were to blame, as the steamship had broken art.* 28 *of the collision regulations by failing to sound whistle signals when she ported and went astern she was also to be deemed to be in fault.*

Held, that as sect. 419 (4) *of the Merchant Shipping Act* 1894 *was repealed by sect.* 4 (1) *of the Maritime Conventions Act* 1911 *and as no proceedings had been taken in respect of the collision before the passing of the Maritime Conventions Act* 1911, *sect.* 9 (2) *and* (3) *of that Act applied, and as the breach of the collision regulations did not in fact contribute to the collision, the steamship was not to blame.*

(*a*) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

DAMAGE ACTION.

The plaintiffs were the owners of the steamship *Gripfast*; the defendants were the owners of the steam tug *Enterprise*.

The case made by the plaintiffs was that shortly before 7.35 a.m. on the 23rd Nov. 1911, the *Gripfast*, a screw steamship of 1109 tons gross and 645 tons net register, 225ft. in length, manned by a crew of sixteen hands all told, was, whilst on a voyage from Poole to Goole in ballast, in Goole Reach, river Ouse, in charge of a duly licensed Ouse pilot. The wind was south-easterly, a fresh breeze, the weather was fine and clear, and the tide flood of a force of about two and a half to three knots. The steamship *Brenda* was aground on Goole Ness on the east side of the river, and was athwart the river head to the shore. The *Gripfast*, which had turned round head to tide below the *Brenda*, and had dredged up past her, was about four ships' lengths above the *Brenda*, and was dropping slowly up in about mid channel with her starboard anchor down, with about twelve fathoms of chain paid out. Her regulation lights for a steamship under way were being duly exhibited and were burning brightly, and a good look-out was being kept on board of her.

In these circumstances those on the *Gripfast* saw the steam tug *Enterprise* with four barges in tow in two lines, of which the *Dora* was the leading barge, and the *Speculator*, the second barge on the port hand coming up below the *Brenda* bearing on the port bow of the *Gripfast*, and distant about four or five ships' lengths. The *Enterprise* passed round the stern of the *Brenda*, apparently shaping to pass along the port side of the *Gripfast*. The helm of the *Gripfast* was ported to give her as much room as possible, but the lighters in tow of the *Enterprise*, having apparently got caught in the eddy under the *Brenda's* stern, were observed to sheer, and the *Dora* and afterwards the *Speculator* with their port bows struck the port side of the *Gripfast* about amidships doing her considerable damage, and although the port anchor of the *Gripfast* was let go, she fell against the steamship *Aire* receiving further damage. Just before the collision with the *Dora* the engines of the *Gripfast* were given a touch astern to ease the blow.

Those on the *Gripfast* charged those on the *Enterprise* with not keeping a good look-out, with navigating at an excessive speed, with failing to slacken her speed or stop or reverse, with failing to keep to her starboard side of the channel, with failing to pass the *Gripfast* port to port, and with failing to turn round head on tide.

The case made by the defendants was that shortly after 7.30 a.m. on the 23rd Nov. the *Enterprise*, a steam tug of 70 tons gross register 75ft. in length, manned by a crew of four hands all told, was whilst on a voyage from Hull to York with four laden barges in tow in Goole Reach, river Ouse. The wind was a light air from the north-west, the weather was fine and clear and the tide very strong flood four to five knots in force. The *Enterprise* was on an up-river course making about two knots through the water. It was daylight and a good look-out was being kept on board her.

In these circumstances those on board the *Enterprise* observed the *Gripfast* about three-quarters of a mile away lying to the tide apparently stationary, and at anchor on the port bow and on the west side of the river. No lights were noticed on her, it being daylight. As the *Enterprise* proceeded on with her four laden barges in tow, she gave one short blast to indicate that she was going to pass the *Gripfast* under port helm. No reply was heard. As the *Enterprise* approached the *Gripfast*, the latter was seen to be working her engines astern. A second short blast was blown. No reply was heard. The *Gripfast* apparently increased her speed astern, and instead of remaining fore and aft the river as she could and ought to have done, swung across the river narrowing the passage between the *Brenda* (a vessel ashore on the Goole Ness) and herself. The helm of the *Enterprise* was at once ported and hard-a-ported, but, although she succeeded in clearing the *Gripfast*, first the *Dora*, the leading lighter in her port tier, and then the *Speculator*, which was behind the *Dora*, were carried down on to the *Gripfast* by the tide or by the wash from the propeller of the *Brenda*, which vessel was working her engines astern, the port bows of the barges colliding with the port side of the *Gripfast* about amidships.

Those on the *Enterprise* charged those on the *Gripfast* with not keeping a good look-out, with not keeping her fore and aft of the river and allowing her to impede the traffic, with neglecting to keep to the western side of the river, with improperly going astern, with neglecting to keep clear of the lighters, with neglecting to navigate with care and with failing to signify their course by whistle signal.

The following collision regulations were referred to in the course of the case:

25. In narrow channels every steam vessel shall, when it is safe and practicable, keep to that side of the fairway or mid channel which lies on the starboard side of such vessel.

27. In obeying and construing these rules, due regard shall be had to all dangers of navigation and collision, and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

28. The words "short blast" used in this article shall mean a blast of about one second's duration. When vessels are in sight of one another, a steam vessel under way, in taking any course authorised or required by these rules, shall indicate that course by the following signals on her whistle, or siren—viz.: One short blast to mean, "I am directing my course to starboard." Two short blasts to mean "I am directing my course to port." Three short blasts to mean "My engines are going full speed astern."

29. Nothing in these rules shall exonerate any vessel, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look-out, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

The following Ouse (Lower) Rules 1910 were also referred to:

4. All vessels while navigating or anchored or moored in the river shall observe and obey the regulations for Preventing Collisions at Sea (hereinafter referred to as the "General Regulations"), made in pursuance of and for the time being in force under the Merchant Shipping Act 1894 or any subsisting statutory modification thereof with the exceptions and additions made in the following rules.

9. A vessel when at anchor except when lying alongside any quay, jetty, wharf, or landing place shall, between sunrise and sunset, carry in the forward part of the vessel at a height of not less than twenty and not exceeding forty feet above the hull a black ball not less than fifteen inches in diameter, provided that in the case of a vessel within Article 7 of the General Regulations such black ball may be carried at a height above the gunwale not less than nine feet.

14. When a steam vessel is commencing to turn round or for any other reason is not under command and cannot get out of the way of an approaching vessel she shall signify the same by four short blasts of the steam whistle in rapid succession and it shall thereupon be the duty of the approaching vessel to keep out of the way of the steam vessel so situated. A steam vessel commencing to turn round shall immediately before giving the signal referred to in this rule indicate the direction in which she proposes to turn by sounding the one short blast or two short blast signals prescribed by article 28 of the General Regulations. A vessel not under command shall as speedily as possible get fore and aft the river head to tide and under command. If a sailing vessel or any other craft in tow is situated as above mentioned the said whistle signals shall be made by the tug.

18. No vessel, unless compelled by stress of weather, fog, or other emergency, shall anchor in the fairway of the river in such a position as unnecessarily to obstruct, impede, or interfere with passing vessels. A vessel, which by stress of weather, fog, or other emergency, may be compelled to anchor in any such prohibited position shall, with the least possible delay, remove therefrom.

20. No vessel shall be allowed to drift otherwise than under control, or to drift athwart or abreast.

21. A vessel shall be navigated with care and caution, and at such a speed and in such a manner as not to endanger the lives of, or cause injury to persons, or involve risk of collision by causing a swell, or endanger the safety of other vessels or moorings, or cause damage thereto, or to the river banks. Special care and caution shall be used in navigating such vessel where there is much traffic, and when passing vessels employed in dredging or removing sunken vessels or other obstructions. If the safety of any vessel or moorings is endangered, or damage is caused thereto, or to the river banks by a passing steam vessel the onus shall lie upon the master or owner of such vessel to show that she was navigated with care and caution, and at such a speed and in such a manner as directed by these rules.

The following sections of the Merchant Shipping Act 1894 (57 & 58 Vict. c. 60), and the Maritime Conventions Act 1911 (1 & 2 Geo. 5, c. 57) were referred to.

The Merchant Shipping Act 1894, s. 419 (4):

Where in a case of collision it is proved to the court before whom the case is tried, that any of the collision regulations have been infringed, the ship by which the regulation has been infringed shall be deemed to be in fault, unless it is shown to the satisfaction of the court that the circumstances of the case made departure from the regulations necessary.

The Maritime Conventions Act 1911:

Sect. 4 (1). Sub-sect. (4) of section four hundred and nineteen of the Merchant Shipping Act 1894 (which provides that a ship shall be deemed in fault in case of a collision where any of the collision regulations have been infringed by that ship), is hereby repealed.

Sect. 9 (2). This Act shall not apply in any case in which proceedings have been taken before the passing thereof, and all such cases shall be determined as though this Act had not been passed. (3) The provisions of this Act shall be applied in all cases heard and determined in any court having jurisdiction to deal with the case, and in whatever waters the damage or loss in question was caused, or the salvage services in question were rendered, and sub-section 9 of section 25 of the Supreme Court of Judicature Act 1873 shall cease to have effect.

Laing, K.C. and *R. H. Balloch* for the plaintiffs.—The evidence of the defendants' witnesses ought not to be accepted. It is impossible that this tug-master thought that the *Gripfast* and these other vessels were all at anchor. It is clear that the *Enterprise* is to blame for excessive speed. The *Gripfast* did nothing which contributed to or caused the collision.

Bateson, K.C. and *J. B. Aspinall* for the defendants.—Even if the story told by those on the *Enterprise* is not accepted the *Gripfast* must be held to blame, for she did not sound whistle signals when she ported and went astern. The case has been argued on behalf of the plaintiffs as if the Maritime Conventions Act 1911 applied. The collision in this case happened on the 23rd Nov. 1911, and the Act did not come into force until the 16th Dec. 1911, and therefore if the *Gripfast* broke any of the collision regulations she is deemed to be in fault under sect. 419 (4) of the Merchant Shipping Act 1894 unless the plaintiffs show that the breach of the regulation could not by any possibility have contributed to the collision, and that they have not done.

Laing, K.C. in reply.—The fact that the whistle of the *Gripfast* was not blown had no bearing on the collision. The Maritime Conventions Act 1911 does apply to this case. Sect. 419 (4) of the Merchant Shipping Act 1894 is a direction to the court that when it is proved to the court before whom the case is tried that any of the collision regulations have been infringed the court shall deem that vessel to be in fault, but on the 16th Dec. 1911 sect. 4 (1) of the Maritime Conventions Act 1911 repealed sect. 419 (4) of the Merchant Shipping Act 1894, and the result is that in cases tried after the 16th Dec. 1911 there is no section of the Merchant Shipping Act in existence which says that a vessel is to be deemed to be in fault for a breach of the collision regulations, and the court before whom the case is tried has to consider whether the breach of the regulations in fact caused the collision or contributed to it. Sect. 9 (2) of the Maritime Convention Act 1911 enacts that the Act is not to apply to any case in which proceedings have been taken before the passing of it which shows that it is to apply to any case in which proceedings are taken after the passing of it. The writ in this action was issued on the 24th Jan. 1912, that is the date on which the proceedings were taken, and the Act therefore applies to this case.

BARGRAVE DEANE, J.—This case depends largely on a question of fact, and I believe the evidence of the plaintiffs. I find this is the true state of things.

The *Gripfast* was making for Goole Dock, and when she got to Goole Reach, somewhere opposite the green light which we hear so much of in these cases, it is perfectly manifest that she adopted the ordinary rule of navigation in that part

of the river. She turned under port helm, dropped her anchor, and dredged up with her anchor under her foot, making up to that portion of the river above Goole Dock. In that position there was on her port side as she dredged up the *Brenda*, a vessel which was ashore on the east side pretty well at right angles to the river, with her stern sticking out into the river. The *Gripfast*, dredging up, saw coming up the river on her port bow this tug with four lighters in tow, and it is important to remember it is the fact in this case that the four lighters were two abreast. There was a scope of about 15 fathoms of line out from the stern of the tug to the leading lighters, and of 10 fathoms between the leading lighters and the after lighters. Therefore the total length of the tug and tows was over 380ft. That is important to remember. It is not like the river Thames, where you have short tow ropes. These long tow ropes of course rendered the navigation of the lighters more difficult. It is agreed that they each had a rudder, and I suppose they had rudders of some size, because it is no use having a rudder on lighters of this description unless it is a broad one. This tug, coming up, blew a port-helm signal. It does not appear quite where she blew that signal, and it does not matter much. She blew it to denote that she was porting her helm, which would head her in towards the *Brenda*. Any ordinary man who knew that water or any water with a tideway would know that there must be a set of the tide off the starboard quarter of the *Brenda* as she lay ashore, setting out towards mid-channel. The *Gripfast* continued to dredge up, I find as a fact, until she got four or five lengths up river from the stern of the *Brenda*. I do not believe the story of the tug-master that the collision took place off the *Brenda*—it is in conflict with all the other evidence in this case—but I believe it took place, as I have said, four or five lengths up river—150yds. above the *Brenda*. The *Gripfast* continued to dredge, and the tug, going at full speed past the *Brenda*, felt the set of the tide, but she managed to avoid the effect of the set. She had this motive power of her own, which enabled her to do that, but the two sets of lighters, with the long scope of rope, would feel this set and would be shot across towards the middle of the river. That is what happened. They were shot across towards the *Gripfast*, and the tug, continuing at full speed, would take them still further on and cause the collision just about where the plaintiffs' witnesses say it occurred.

In my opinion the tug-master was in a hurry, and he seemed to think everybody ought to give way to him, and that he would make a push for it. He took the risk. He ought to have known the danger of the risk he was taking. Whether he shut his eyes to it I do not know, but he took the risk, with the result that the accident happened in the way I have described.

I am advised by the Elder Brethren that, although possibly he could not have stopped his engines altogether for any length of time, he might have eased down and kept a slight strain on the tow rope, which would have lost him a minute and a half to two minutes perhaps; and if so he might have succeeded in getting through. The facts are against him. By keeping his engines going full speed ahead he got his vessel into the particular place at the particular time. If he had been a minute later, he would not perhaps have been taking his lighters into collision. It was due entirely to the stubborn determination of the tug-master to try to force his way through a difficult place without taking into account all the dangers, and running the risk which I have mentioned.

The defendants said that the *Gripfast* ought to have given notice that she was going astern, and ought to have given notice that she had ported her helm at a particular time. I do not think that is upheld by the evidence. I think the porting of the helm and the putting of the engines astern were done at the very last moment, when the collision was inevitable, and that there was nothing done on the part of the *Gripfast* which could in fact have caused this collision or contributed to it. I am afraid that under the old state of the law I should have had to say that, as the master of the *Gripfast* ported and reversed without sounding the proper whistle signals, he was to blame for not blowing his whistle; but the Court of Appeal have been, I think, rather too strict in the line which they have taken, and the Legislature seems to have thought they had been too strict. They have taken away that arbitrary rule which has been in existence, and have left the court to follow what I think is the proper rule, and to say, "Did this want of obedience to the regulations in any way contribute to the collision?" In my opinion, and the Elder Brethren so advise me, the porting and reversing could not have contributed to the collision. It was broad daylight, and everything was open to the eyes of the tug-master. He saw and knew exactly what was going on, and he has come here and deliberately told us what was untrue, about the *Gripfast* being right athwart the river and going astern and getting into his way. If his story was true he might be right, but I do not believe it, and I think he and the witness from the quay have deliberately tried to mislead the court. Therefore I am of opinion that the failure of the *Gripfast* to blow "port helm" and "going astern" signals had nothing whatever to do with the collision, which was inevitable from the time the tug-master determined to force his way through between the *Gripfast* and the *Brenda*.

I must say a word about the Maritime Conventions Act. I can only read that Act literally. I do not import words into it, or say that the plain language of the Act means anything other than it says. Sect. 9, sub-sect. 2, is as follows: "This Act shall not apply in any case in which proceedings have been taken before the passing thereof, and all such cases shall be determined as though this Act had not been passed." It is perfectly plain language. It does not say "the Act shall not apply to any case in which the collision occurred before the passing of the Act," but "it shall not apply to any case in which proceedings have been taken." Counsel for the defendants asked me to read it as though it said "in which the collision happened before the passing of the Act." Why the Legislature dealt with it in that way it is not for me to say, but the words are so plain that there cannot be any doubt about it. Sub-sect. 3 says: "The provisions of this Act shall be applied in all cases heard and determined in any court having jurisdiction to deal with the case."

Therefore I am clearly of opinion that the Legislature have clearly said that the application of the Act is determined by the date of the proceedings and not by the actual date of the accident. That being so, I feel perfectly justified in coming to the conclusion I have done, although under the old practice, as laid down by the Court of Appeal, if the whistle was not blown, the Court of Appeal would have held that that was in itself sufficient to make the vessel to blame under sect. 419 of the Merchant Shipping Act. Under the Maritime Conventions Act the court is clearly authorised by sect. 4, sub-sect. 1, to see whether the breach of the regulation did or did not contribute to the collision. It means that the old statutory provision that the mere fact of a breach of the regulations, whether it did or did not in fact contribute to the collision, is not to be sufficient to render a vessel responsible for the collision as one of two wrongdoers is repealed, and the court is left to exercise its own judgment and discretion in the case before it. I am of opinion that the *Gripfast*, in this case, is not in any way to blame for this collision. The whole fault of the collision was due to the tug-master, and the *Enterprise* is alone to blame for the collision.

(Before BARGRAVE DEANE, J.)

THE CALIPH. (a)

Collision—Loss of life—Action in rem *to recover damages for loss of life—Action brought more than twelve months after the death of the deceased —Fatal Accidents Act* 1846 (9. *&* 10 *Vict. c.* 93), *ss.* 1, 3—*Maritime Conventions Act* 1911 (1 *&* 2 *Geo.* 5, *c.* 57), *ss.* 5, 8.

A steam trawler collided with a ketch. The ketch was lost, and in consequence of the collision her crew, one of whom was her owner, were drowned. After the passing of the Maritime Conventions Act 1911, *and more than a year after the collision, the widow of the owner instituted proceedings* in rem *to recover damages for the loss of the ketch, and damages on behalf of herself and her four children under the Fatal Accidents Act for the loss of life of her husband. The defendants admitted liability for the loss of the ketch, but alleged that the action to enforce the right given by the Fatal Accidents Act should have been brought within twelve months after the death of the deceased, and that, as that had not been done, the plaintiff had lost her right to recover anything in respect of the loss of her husband.*

Held, that as sect. 5 *of the Maritime Conventions Act* 1911 *provided that damages for loss of life were included in the damage recoverable in the Admiralty Court and enacted that such damages should be recoverable in an action* in rem, *and that as sect.* 8 *of the Act provided that an action* in rem *might be brought to recover damages for loss of life within two years from the date when the damage, loss, or injury was caused, it extended the time under sect.* 3 *of Lord Campbell's Act from one year to two years, and that the widow was entitled to recover.*

(a) Reported by L. F. C. DARBY, Esq., Barrister-at-Law.

DAMAGE ACTION.

The plaintiff was the widow of Joseph Williams, the owner of the ketch *Glyndwr*; the defendants were the owners of the steam trawler *Caliph*.

The action was brought by the plaintiff as administratrix of the estate of her husband to recover the damage sustained by the loss of the ketch and to recover damages for herself and her four children for the loss of her husband, Joseph Williams, who met his death by drowning as a consequence of the collision.

The case made by the plaintiff was that on the afternoon of the 16th Dec. 1910 the *Glyndwr*, a ketch of 26 tons register, manned by Joseph Williams and another hand, was lying properly and safely at anchor in Dale Roads, Milford Haven. The wind was westerly, blowing very strong; the weather was squally and the tide was flood, and a proper anchor watch was being kept.

In these circumstances the *Glyndwr* was fouled by the *Caliph*, which drifted down upon her and broke her adrift, with the result that she drifted helplessly across the roads and was totally lost on the rocks near the Castle Head, both members of her crew being drowned. After breaking the *Glyndwr* adrift, those on the *Caliph* made no efforts, as they should and could have done, to save either the ketch or the lives of those on board of her, but steamed away without attempting to render assistance.

The plaintiff charged those on the *Caliph* with not keeping a good look-out, with giving the *Glyndwr* a foul berth, with failing to keep clear of her, with being improperly and insecurely moored, and with neglecting to render assistance to the *Glyndwr* or her crew in breach of the duty imposed on them by sect. 422, sub-sect. 1 (*a*), of the Merchant Shipping Act 1894 and sect. 6 (1) of the Maritime Conventions Act 1911.

The defendants admitted liability for the value of the *Glyndwr* and claimed a reference to the registrar and merchants to assess the amount of damages for that, and as to the claim for damages under the Fatal Accidents Act they alleged that by sect. 3 of that Act every action to recover damages for loss of life had to be commenced within twelve calendar months after the death of the deceased person, and that the plaintiff had failed to do that.

The plaintiff relied on the following collision regulation:

> 29. Nothing in these rules shall exonerate any vessel, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look-out, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

The following statutes were cited:—

The Fatal Accidents Act 1846 (9 & 10 Vict. c. 93):

> Sect. 1. Whensoever the death of a person shall be caused by wrongful act, neglect, or default, and the act, neglect, or default is such as would (if death had not

ensued) have entitled the party injured to maintain an action and recover damages in respect thereof, then and in every such case the person who would have been liable if death had not ensued shall be liable to an action for damages, notwithstanding the death of the person injured, and although the death shall have been caused under such circumstances as amount in law to felony.

Sect. 3. Provided always that not more than one action shall lie for and in respect of the same subject-matter of complaint; and that every such action shall be commenced within twelve calendar months after the death of such deceased person.

The Admiralty Court Act 1861 (24 Vict. c. 10)

Sect. 7. The High Court of Admiralty shall have jurisdiction over any claim for damage done by any ship.

The Merchant Shipping Act 1894:

Sect. 422 (1) (*a*). In every case of collision between two vessels it shall be the duty of the master or person in charge of each vessel, if and so far as he can do so without danger to his own vessel, crew, and passengers (if any), (*a*) to render to the other vessel, her master, crew, and passengers (if any) such assistance as may be practicable and may be necessary to save them from any danger caused by the collision, and to stay by the other vessel until he has ascertained that she has no need of further assistance.

The Maritime Conventions Act 1911:

Sect. 5. Any enactment which confers on any court Admiralty jurisdiction in respect of damage shall have effect as though references to such damage included references to damages for loss of life or personal injury, and accordingly proceedings in respect of such damages may be brought *in rem* or *in personam*.

Sect. 6 (1). The master or person in charge of a vessel shall, so far as he can do so without serious danger to his own vessel, her crew, and passengers (if any), render assistance to every person, even if such person be a subject of a foreign State at war with His Majesty, who is found at sea in danger of being lost, and, if he fails to do so, he shall be guilty of a misdemeanour.

Sect. 8. No action shall be maintainable to enforce any claim or lien against a vessel or her owners in respect of any damage or loss to another vessel, her cargo or freight, or any property on board her, or damages for loss of life or personal injuries suffered by any person on board her, caused by the fault of the former vessel, whether such vessel be wholly or partly in fault, or in respect of any salvage services, unless proceedings therein are commenced within two years from the date when the damage or loss or injury was caused or the salvage services were rendered, and an action shall not be maintainable under this Act to enforce any contribution in respect of an overpaid proportion of any damages for loss of life or personal injuries unless proceedings therein are commenced within one year from the date of payment: Provided that any court having jurisdiction to deal with an action to which this section relates may, in accordance with the rules of court, extend any such period to such extent and on such conditions as it thinks fit, and shall, if satisfied that there has not during such period been any reasonable opportunity of arresting the defendant vessel within the jurisdiction of the court, or within the territorial waters of the country to which the plaintiff's ship belongs or in which the plaintiff resides or has his place of business, extend any such period to an extent sufficient to give such reasonable opportunity.

Laing, K.C. and *Raeburn* for the plaintiff.—The collision took place on the 16th Dec. 1910, and the plaintiff's husband was drowned on that day. The writ in this action was issued on the 6th May 1912, and an appearance was entered on the 25th May. The right to damages was given to the widow in 1846 by sect. 1 of the Fatal Accidents Act, and sect. 3 of that Act provided that the action to enforce that right, which was a right against a person, should be commenced within twelve calendar months after the death. In 1861 sect. 7 of the Admiralty Court Act gave the Admiralty Court jurisdiction to try any claim for damage done by any ship, and by sect. 35 that jurisdiction could be exercised *in rem* or *in personam*, but it was decided in *The Vera Cruz* (52 L. T. Rep. 474; 5 Asp. Mar. Law Cas. 386; 10 App. Cas. 59) that there was no right *in rem* for damages recoverable under the Fatal Accidents Act as they were not damages done by a ship. On the 16th Dec. 1911 the Maritime Conventions Act came into force, and sect. 5 of that Act provides that any enactment which confers on any court Admiralty jurisdiction in respect of damage shall have effect as though such damage included damages for loss of life, and that accordingly proceedings may be taken *in rem* or *in personam*. That section clearly sweeps away the decision in *The Vera Cruz* (*ubi sup.*). Sect. 8 of the Maritime Conventions Act provides that no action shall be maintainable in respect of damage or loss to another vessel or in respect of damages for loss of life or personal injuries suffered by any person unless proceedings therein are commenced within two years from the date when the damage or loss or injury was caused. The loss in this case was caused on the 16th Dec. 1910 and proceedings were commenced on the 6th May 1912—that is, well within the two years. The right to recover these damages may be put on two grounds—first, that the time limit in sect. 3 of the Fatal Accidents Act has been enlarged by sect. 8 of the Maritime Conventions Act, just as it was curtailed in certain cases by the Public Authorities Protection Act 1891 (*Markey* v. *Tolworth*, 83 L. T. Rep 28; (1900) 2 Q. B. 454); or, secondly, that the Fatal Accidents Act gave a right which was enforceable for a year against a person and the Maritime Conventions Act 1911 provided that that right may be enforced by a new remedy—namely, an action *in rem*, which is something quite distinct from an action *in personam* (*The Burns*, 96 L. T. Rep. 684; 10 Asp. Mar. Law Cas. 424; (1907) P. 137) and which may be brought within two years of the loss. On either ground the widow has this right *in rem* up to the 16th Dec. 1912.

Bateson, K.C. and *Noad* for the defendants.—The widow can only bring an action under the Fatal Accidents Act within a year of the loss. There is no doubt that sect. 5 of the Maritime Conventions Act 1911 refers to actions under the Fatal Accidents Act, and they may now take the form of an action *in rem*, but sect. 3 of that Act is not repealed, and the action *in rem* must be brought within twelve calendar months of the death. Sect. 8 of the Maritime Conventions Act, which deals with limitations of actions, refers to actions in respect of any damage or loss to another vessel or to actions in respect of damages for loss of life or personal injuries, and says they shall not be maintainable unless proceedings therein are commenced within two years from the date when the damage or loss or injury was caused, but the two years only applies to actions for damage or loss to other ships or to actions for personal injuries,

but no reference is made to actions for damage for loss of life. This is not damage done by a ship within the meaning of sect. 7 of the Admiralty Court Act 1861:

The Rigel, 106 L. T. Rep. 648; (1912) P. 99.

Statutes are to be construed as only applying to cases and facts which come into existence after the statutes are passed unless a retrospective effect is clearly intended:

Maxwell on Statutes, 4th edit., 321.

BARGRAVE DEANE, J.—This is an action in which a vessel at anchor was driven down upon by another which broke her adrift. It was blowing hard at the time, and the vessel drove ashore and both hands on board were drowned.

It is admitted that this accident occurred through the negligence of those on board the *Caliph*. This widow would have had no right of action for the loss of the life of her husband but for Lord Campbell's Act of 1846 (9 & 10 Vict. c. 93). By sect. 3 of that Act she is entitled to bring an action for damages for the loss of the life of her husband, but she must bring it within twelve months after the death of her husband. So the law stood, and, but for the Maritime Conventions Act, so the law would still stand; but sect. 8 of the Maritime Conventions Act, according to the contention of the plaintiff, extended the time to two years.

The section says this: [His Lordship referred to the section, and continued:] Therefore, in respect of the matters mentioned in the earlier part of the section, any action must be commenced within two years. The words are "damage, or loss, or injury." The first is damage or loss to another vessel, the second damages for loss of life or personal injury, and then there comes salvage. Therefore you have got exactly the same language used, except the words "loss of life," which is not mentioned in the later part of the section. But it is part of the very same section, and it says that the action shall not be maintainable unless brought within two years.

The section goes on to say that "an action shall not be maintainable under this Act to enforce any contribution in respect of an overpaid proportion of any damages for loss of life or personal injuries unless proceedings therein are commenced within one year from the date of payment"—which would be a considerable time after the original loss.

As I read this section, it extends the time in which alone an action could be brought by a widow for damages for the loss of the life of her husband from one year to two years. Counsel for the defendants say: "Under Lord Campbell's Act, this man having been drowned on the 16th Dec. 1910, the widow ceased to have any right of action after the 15th Dec. 1911, and the Maritime Conventions Act only receiving the Royal Assent on the 16th Dec. 1911—the next day—she cannot in this way revive an action which is already dead" In the case of *The Enterprise* (*ante*, p. 240) I tried to point out that the Legislature in passing the Maritime Conventions Act was dealing, in regard to the application of the Act, not with the date of the cause of action, but with the date at which proceedings were commenced; and this statute says the action shall be brought within two years from the date of the right of action, whereas Lord Campbell's Act says one year. I have no doubt myself, although it may be badly worded, as, unfortunately, many Acts of Parliament in recent years have been, that what the Legislature meant by this section was that an action for damages for loss of life should not be maintainable unless brought within two years after the date when the damage or loss was caused.

Therefore I am of opinion that, under the Maritime Conventions Act, the time under Lord Campbell's Act limiting the right of action to one year after the date of death is extended to two years. I think that is the short point which I have to decide, and I decide that the plaintiff is entitled to recover under sect. 8 of the Maritime Conventions Act 1911, which extends the time under sect. 3 of Lord Campbell's Act.

Solicitor for the plaintiff, *W. W. Stocken*.

Solicitors for the defendants, *William S. Crump and Son*.

Supreme Court of Judicature.

COURT OF APPEAL.

July 16, 17, 19, 20, *and* 24, 1912.

(Before VAUGHAN WILLIAMS, FLETCHER MOULTON, and BUCKLEY, L.JJ.)

CANTIERE MECCANICO BRINDISINO *v.* JANSON AND OTHERS.

CANTIERE MECCANICO BRINDISINO *v.* CONSTANT. (a)

APPEAL FROM THE KING'S BENCH DIVISION.

Marine insurance—Policy on floating dock—"Seaworthiness admitted"—Concealment—Waiver—Marine Insurance Act 1906 (6 *Edw.* 7, *c.* 41), *ss.* 17, 18, 20.

The plaintiffs effected an insurance on a floating dock, which was to be towed from Avonmouth to Brindisi, against all the usual risks, and the policy contained a clause "seaworthiness admitted."

Although the plaintiffs believed that the dock was fit for the voyage, it was not in fact seaworthy, as it required special strengthening in order to fit it for the voyage. During the voyage the dock sank and was totally lost. In an action on the policies:

Held, that the underwriters, who were aware that the subject-matter of the insurance was a dock and not an ordinary sea-going vessel, were by reason of the admission of seaworthiness put upon inquiry as to the dock's construction, and the plaintiffs were not bound to disclose the want of special strengthening.

Decision of Scrutton, J. (12 *Asp. Mar. Law Cas.* 186; 106 *L. T. Rep.* 678; (1912) 2 *K. B.* 112) *affirmed.*

APPEAL from a decision of Scrutton, J. sitting without a jury in the Commercial Court.

The plaintiffs, who carried on business at Brindisi as shipbuilders and repairers, claimed to

(a) Reported by W. C. SANDFORD, Esq., Barrister-at-Law.

recover under certain policies of insurance against certain underwriters and insurance societies in respect of the loss of a floating dock.

The dock, which was constructed of iron, was built in 1893 for the Bristol Corporation, and was originally stationed inside the old dock at Avonmouth. The dock was 365ft. long, 85ft. wide, and 19ft. deep. It was constructed with six pontoons, the depth of each being 8ft, and the height of the side walls above the pontoons 29ft. The side walls were connected to the pontoons by strong angle irons on both sides.

The dock was purchased in 1910 by Mr. Constant, the defendant in the second action brought by the same plaintiffs for 5000*l.* for the purposes of resale. The pontoons and walls had to be taken apart to enable the structure to be floated out, each wall being floated out on two pontoons. The dock was then examined and re-erected, 20,000 bolts which had been used for connecting the walls of the pontoons having been renewed, and new joining material being fitted to all water-tight joints.

On the 29th Aug. 1911 Mr. Constant sold the dock to the plaintiffs for 19,000*l.*, the price to include cost of towing from Avonmouth to Brindisi, and cost of insurance, fittings, strengthening, and towing gear; 1000*l.* to be paid on the signing of the contract, 15,000*l.* when ready for sea, and the balance was to be placed on deposit and released on the safe arrival of the dock at Brindisi. The vendor agreed to hand over to the buyers, before the voyage commenced, Lloyd's policies of insurance for 16,500*l.*

The plaintiffs said that Mr. Constant employed a firm called Lotinga and Co. to make inquiries as to the cost of insurance for the voyage. Lotinga and Co. employed Tozer and Co., insurance brokers at Lloyd's, to effect the insurance, and Tozer and Co. effected insurances on the dock for 12,000*l.* at 80*s.* per cent., and for 6000*l.* at 100*s.* per cent. For the information of the underwriters, Tozer and Co. made inquiries of Lotinga and Co. as to the dock, and, in particular, if it was new, and, if not, when it was surveyed last. In reply, Lotinga and Co. furnished the following particulars: "Just been newly repaired; pontoons taken abroad and thoroughly repaired and strengthened to make the voyage." This information (the defendans alleged) was passed on in some form or other to the underwriters by Mr. Bullock, of Tozer and Co., and the underwriters initialled the slips on the 23rd and 24th Aug.

The insurance being a matter of some difficulty to arrange, a report was obtained from a Mr. Watkins, a surveyor, who said that he found every part of the dock in good order, and that in his opinion its condition was practically as new. He stated that he had compared the construction and strength of the dock with that of other floating docks which had been towed to various ports, and found this dock as strong and well fitted as any. He also expressed the opinion that the vessel might be safely towed to a Mediteranean port, provided that suitable arrangements for towing were made. This report was shown to several of the underwriters who undertook the risk.

The insurances were effected as upon a floating dock in tow of two tugs from Avonmouth to Brindisi against all the usual risks, the policies also containing a clause: "Seaworthiness admitted."

On the 13th Sept. the dock left Avonmouth in tow of two tugs, and on the 16th Sept., when about 100 miles west of Ushant, the dock sank in two pieces, the walls and pontoons having parted amidships.

The defendants set up the defence that they had been induced to subscribe the policies by reason of the concealment of a material fact—viz., that the dock was being sent on the voyage without the additional strengthening usual and necessary for the dispatch of a dock on an ocean voyage. Also that they had been induced to subscribe the policies by a material misstatement of fact at the time when the slips were initialled by the broker through whom the insurance was effected—viz, that the dock had been nearly rebuilt and thoroughly repaired and strengthened for the voyage. They contended at the trial that the fact that the dock had not been specially strengthened for the voyage ought to have been disclosed (Marine Insurance Act 1906, s. 18), for it was a material circumstance affecting the risk and known to the assured, and one which, if disclosed, would have caused the underwriters to refuse the risk.

After hearing the evidence, Scrutton, J. found the following facts on the question of concealment: (1) That the dock was not at the time of sailing as fit for the voyage as was usual and proper for such an adventure, or as it could have been made by ordinary available means—in other words that it was not seaworthy; (2) that the dock had not been strengthened for the voyage in the sense in which the term would be ordinarily understood; (3) that the fact that the dock had not been strengthened for the voyage was clearly material to the question whether, and at what premium, the underwriters would insure—if they had been told of it they would either have refused the insurance or have made further inquiry as to the construction of the dock; (4) that none of the parties knew or believed that the dock was not seaworthy—they all thought the dock was fit for the voyage. As to the defence of misrepresentation, Scrutton, J. was not satisfied that the alleged misrepresentation had been made. He held that the underwriters were by reason of the admission of seaworthiness put on inquiry as to the construction of the dock, and that the plaintiffs were not bound to disclose the want of special strengthening, and he gave judgment for the plaintiffs.

The defendants appealed.

Atkin, K.C., *Holman Gregory*, K.C., and *R. A. Wright* for the appellants.

Bailhache, K.C. and *F. D. Mackinnon* for the respondents.

The nature of the arguments appears sufficiently from the judgments.

Leslie Scott, K.C. and *Roche* attended the proceedings in the interests of Mr. Constant, the respondent in the second appeal (which was dismissed without any further argument as a necessary consequence of the dismissal of the first appeal).

Cur. adv. vult.

VAUGHAN WILLIAMS, L.J. read the following judgment:—This is an action on a policy of marine insurance upon a floating dock in tow of

two tugs from Avonmouth to Brindisi. Such policy insured the dock against all usual perils. The claim was for total loss. By the policy the seaworthiness of the dock was admitted. The underwriters respectively plead that they are not bound by reason of the concealment of a material fact—namely, that the dock was being sent on the voyage without the additional strengthening usual and necessary for the dispatch of a dock on an ocean voyage; and, further, or in the alternative, they plead that the defendants were severally induced to subscribe the respective policies by a material misstatement of fact made to them orally, at the respective times when, as appears from the slips to which the defendants will refer, they severally initialled such slips, by Samuel Walker Bullock, of Tozer, Hemsley, and Fisher, the broker through whom the insurance was effected—namely, the statement that the dock had been nearly rebuilt and thoroughly repaired and strengthened to make the voyage. In fact the dock had not been nearly rebuilt or thoroughly or at all repaired or strengthened to make the voyage.

The defendants delivered particulars of the additional strengthening rendered necessary by the fact that the stresses to which a floating dock is exposed while being towed on an ocean voyage are different from the stresses involved in the operation of lifting vessels, for which purpose the dock is constructed. Such strengthening is needed to bind together the pontoons of the dock so as to give longitudinal strength to the dock. It is effected, as a general rule, by giving greater strength to the side walls of the dock by adding increased thickness to the plating of the lower deck connecting the side walls, and also to the steel plating of the lower deck connecting the pontoons with plates or angles or otherwise.

Such strengthening in the case of the dock referred to in the points of claim was said to be necessary by reason (1) that the dock was built of iron; (2) it had never been adapted for towage in the open sea; (3) it had been almost completely disused and unattended to since 1908; (4) the plates connecting the pontoons were only seven-sixteenths of an inch thick; (5) the side walls were in no place more than 29ft. high; (6) the side walls were not of uniform height; (7) the diagonalisation in the way of the low portions was not strong enough for the force which would come upon it; (8) the bridges connecting the side walls were weakened by hatchways cut on either side of each of the central towers.

No such strengthening was effected or intended to be effected to the said dock of the kind above set out, nor any strengthening in substitution therefor, but the dock was sent to sea without the same. The defendants would rely on the circumstance that none of the above material facts were disclosed to them at the respective dates which appear on the slips as the dates when the defendants severally initialled the same, such being the non-disclosure or concealment alleged in the said paragraph of the points of defence.

Scrutton, J. deals first with the defence of concealment, or, as I think it is more accurately called, having regard to the duty of the assured, non-disclosure, and leaves misrepresentation till the latter part of his judgment.

I will deal first with misrepresentation. As to misrepresentation, it is not necessary that the misstatement charged should be fraudulent. It is sufficient to justify an avoidance by the insurer of the contract of insurance if during the negotiations for the contract there is an untrue material representation made by the assured or his agent to the insurer. This appears by sect. 20 (1) of the Marine Insurance Act 1906. Clause 2 of the same section provides that: "A representation is material which would influence the judgment of a prudent insurer in fixing the premium, or determining whether he will take the risk." Clause 3 says: "A representation may be either a representation as to a matter of fact, or as to a matter of expectation or belief" Clause 4 says: "A representation as to a matter of fact is true, if it be substantially correct, that is to say, if the difference between what is represented and what is actually correct would not be considered material by a prudent insurer." Clause 5 says: "A representation as to a matter of expectation or belief is true if it be made in good faith." Clause 6 says: "A representation may be withdrawn or corrected before the contract is concluded." Clause 7 says: "Whether a particular representation be material or not is, in each case, a question of fact." Then sect. 21 provides: "A contract of marine insurance is deemed to be concluded when the proposal of the assured is accepted by the insurer, whether the policy be then issued or not, and, for the purpose of showing when the proposal was accepted, reference may be made to the slip or covering note or other customary memorandum of the contract, although it be unstamped."

Scrutton, J. points out, when dealing with this part of the case, that it is sufficient to avoid the contract if the statement was in fact made and it was untrue, and that it is not necessary that the underwriter should have relied on it, and the learned judge in my opinion had present to his mind all the provisions of sect. 20. He comes to the conclusion that the representation, if made, that the dock had been strengthened to make the voyage was untrue—that is, in the sense in which any underwriter would understand it, it was untrue—but comes to the conclusion that the misrepresentation was not in fact made, or, at all events, was not proved to have been made, by the assured or his agent to the underwriters. If this finding stands, the defence of misrepresentation fails. The Court of Appeal may, of course, review the finding. In the case of a finding in fact by a judge sitting without a jury, the Court of Appeal may reverse the finding, although the finding in fact is not perverse, and it is the duty of the court to do so, if satisfied that the finding in fact is wrong; but the Court of Appeal should in my opinion in every case bear in mind that the judge saw and heard the witnesses, and not easily reverse findings in fact by the judge who saw and heard the witnesses. I think this of great importance in the present case in which Scrutton, J. obviously did not believe some of the evidence. I am of opinion that we should not in the present case disturb the findings of the learned judge that the misrepresentations alleged were not proved.

The defence of non-disclosure is not easy to deal with. Scrutton, J. says as to this in his judgment: "I will deal first with the defence of concealment of the material fact that the dock was being sent on a voyage without the necessary extra strengthening for such a voyage," and says:

"As this defence on a policy 'seaworthiness admitted' appears to me to raise somewhat novel questions, I proceed to state fully my findings in fact." I ask that I may have those findings taken as read.

Summarised, these findings are: (1) Dock not seaworthy at commencement of voyage; (2) dock not strengthened for the voyage; (3) this non-strengthening material to question whether and what premium they should insure; (4) neither Mr. Constant (the vendor of the dock to the plaintiffs) nor the plaintiffs nor any agent of theirs, whose duty it was to inform them, knew or believed that the dock was not seaworthy. They all thought she was fit for the voyage, but they knew that the dock had not at this time been specially strengthened for the voyage, but honestly thought it unnecessary. They did not know that she had not when built been strengthened for a sea voyage round to Avonmouth, and had not in fact made such a voyage as a dock.

Having found these facts, Scrutton, J. puts the question to himself: "What is the extent of disclosure necessary by an assured who asks an underwriter to insure 'seaworthiness admitted' a subject-matter such as a river steamer, or floating dock, which can never be seaworthy in the ordinary sense of the term, for it is not intended for sea work, but which can have additional temporary strengthening for a voyage built into it or added to it? There can be no doubt that, if the assured knows of any specific defect such as a leak, or badly corroded plates, he must disclose it in asking for an insurance 'seaworthiness admitted.' So, also, if the assured knows or believes that the dock is not fit to go to sea owing to the absence of some strengthening usually added, or has a report or opinion to that effect, though he thinks it erroneous, he must in my opinion disclose his knowledge or unfavourable report. But suppose none of these facts exist, and the assured and his servants honestly believe the dock is strong enough to go to sea, and tell the underwriter she is a 'floating dock' (in this instance one of some age), must they disclose anything else? If the policy did not admit seaworthiness they need not disclose anything, for the implied warranty excludes the necessity of disclosure of facts which would break it." See the Marine Insurance Act 1906, s. 18 (3), which clause is introduced with the words "In the absence of inquiry, the following circumstances need not be disclosed—namely, (*d*) any circumstance which it is superfluous to disclose by reason of any express or implied warranty." But if the warranty is excluded by the words "seaworthiness admitted," must they give the underwriter, without his asking for it, a full statement of the construction of the structure which they have informed him is a floating dock, or when they tell the underwriter it is a floating dock, and therefore not an ordinary sea-going vessel, and ask him to admit its seaworthiness, do they put him on inquiry as to its construction and the means adopted to send it to sea, with the result that, if he does not ask, he waives information?

Scrutton, J. then quotes the cases of *Carter* v. *Boehm* (3 Burr. 1910) and *Seaton* v. *Burnand* (82 L. T. Rep. 205; (1900) A. C. 135) as instances where the subject-matter of insurance was sufficient to put the underwriter on inquiry and relieve the assured from disclosure till asked. *Carter* v. *Boehm* seems the more appropriate authority, because in that case it was the character of the ship which put the underwriter on inquiry, whereas in *Seaton* v. *Burnand* the subject-matter of the insurance was a loan and surety.

Scrutton, J. proceeds: "The clause 'seaworthiness admitted' is put into these insurances of floating docks and river steamers not ordinarily engaged on sea voyages to avoid the doubtful and difficult inquiry whether sufficient temporary strengthening for an unusual service has been applied to a subject-matter not originally intended for that service; and, in my view, the proposal of such an insurance to an underwriter, while requiring the disclosures I have already suggested, puts him on inquiry as to the actual construction and strengthening, if any, of the subject-matter, if he wants to investigate it."

I think the reasoning of Scrutton, J. substantially sound. He does not exclude all obligation to disclose. He recognises this obligation in the instance he cites in the passage I have quoted. I think that in a case like the present of the insurance of a floating dock not fitted in its original construction to go a voyage on the ocean and insured under a "seaworthiness admitted" policy, the contract between the underwriter and the assured is something of this sort, "We will raise no defence that the 'dock' was not seaworthy, from the very fact that this floating dock of this class of construction could not be expected to be seaworthy in the ordinary sense of the word; but, nevertheless, if this dock has a peculiar defect not usual in docks of this construction which creates an extraordinary risk, this you must disclose, otherwise the policy may be avoided by the underwriter."

The avoidance of the policy in such a case would seem rather to be based on want of good faith in accordance with sect. 17 of the Act of 1906 than on sect. 18, which to a large extent seems excluded by the "seaworthiness admitted" form of policy. The non-disclosure alleged is, in my judgment, non-disclosure of matters as to which the underwriters were put on inquiry by the character of the dock, which was not built for voyages on the sea, and by the invitation given by those who wished to insure the dock to the underwriters to issue a "seaworthiness admitted" policy. I think this appeal must be dismissed.

FLETCHER MOULTON, L.J.—I do not propose to recapitulate the facts of this case, which are to be found very fully and accurately stated in the judgment of the learned judge in the court below and the judgment which we have just heard.

I will come at once to the two points at issue in this case. The first is, that the defendants are entitled to succeed, because there was an actual misrepresentation made to the underwriters by the agent of the plaintiffs who took out the policy, Mr. Bullock. This turns entirely on what has been called the Lotinga slip and the communications by Mr. Bullock to the underwriters whom he induced to insure the risk. Mr. Bullock wrote on the 16th Aug. to Messrs. Lotinga to ask for particulars of the dock which he was about to insure, and he inclosed in his letter, or left with them, a pencil memorandum of the points on which he required information. That pencil memorandum was filled up in ink by Messrs. Lotinga and sent by them, I think, on that day

or the next day to Mr. Bullock. It is common ground that it was filled up most inaccurately. The name of the makers was wrong, the date was wrong, the description of the construction was wrong, and there was a statement with regard to what had been done to the dock which the defendants say was wrong in most material points. Nothing is made of the small things, but that which related to what had been done to the dock reads as follows: "Just been nearly rebuilt; pontoons taken abroad and thoroughly repaired and strengthened to make the voyage," and it is asserted that that was communicated to the underwriters, and that it informed them that the dock had been strengthened for the voyage, whereas no strengthening had been done. It is not seriously contested, I think, that if a representation in that form was made to the underwriters, it would have been a misrepresentation. I say that it is not contested, but speaking for myself, and having looked at the original slip and seen how it is written, I am of opinion that the statement with regard to the strengthening related to the individual pontoons and that the words "just been nearly rebuilt" refer to the whole dock. There is a space then, and a new sentence begins with the words "pontoons taken abroad and thoroughly repaired and strengthened to make the voyage," so that if the information had been given to the underwriters precisely and exactly as it was given in this slip, as, for instance, by showing the slip, I am not certain that it would have been a representation that the dock as a whole had been strengthened. But I think that there was no bad faith at all in saying that the pontoons—that is to say, the individual parts of the dock—had been strengthened because they had been taken apart and something like 20,000 new bolts had been put in the place of those which were there originally and which, of course, had suffered by age. But it is quite clear on the evidence that the slip itself was shown to no one of the underwriters, and the whole question, therefore, is, "Was the information which it gave to Mr. Bullock orally given by him to the underwriters who underwrote the risk?"

We are, of course, entitled to review the decision of a judge of first instance, but I am obliged to say that this part of the judgment of Scrutton, J. seems to me to show not only that he properly weighed the evidence, but also that he was fully aware of what his proper task was, and that he applied himself to it with very great skill and with great impartiality. I have come to the conclusion that the grounds which he gave for thinking that it is not proved that Mr. Bullock gave the information contained in the slip to the underwriters are fully sustained. I agree with him that with regard to all the underwriters from Mr. Poole onwards who saw the report of Mr. Watkins this matter is practically unimportant, because Mr. Watkins' report is so clear that there had been no strengthening done and no strengthening proposed to be done to the dock as a whole that I do not think that any oral information, if it had been given, would have had any effect upon that, and, as I say, I think it would be most improbable that, if he did not show the slip when he had Watkins' report, he would do anything more than read Watkins' report. But with regard to the underwriters who come before Mr. Poole and who had not Watkins' report, I think that his criticism of the evidence is excellent. Really the evidence of the underwriters does not show that they received any information of this kind from Mr. Bullock. It is of the vaguest possible description, and when you look at Mr. Bullock's evidence, although in some respects it is very confident, I think that in truth it is evidence given *arguendo*. He had this slip and therefore he supposed that he communicated the contents to the underwriters. I do not think that he had any memory on the subject, and I think this, coupled with the evidence of the underwriters, makes it so doubtful whether the misrepresentation was in fact made that the learned judge was bound to come to the conclusion that the defendants had not in fact by evidence supported this part of the case.

I turn now to the much more difficult part of the case which depends on concealment. I say that it is difficult, not because I feel any doubt about it, but because it is difficult to lay down the law in general terms with regard to a matter like that which is raised under the head of concealment in this case. To understand it properly, one must consider what the nature of the construction of the dock was. It was a dock which had been used for something like eighteen years at Avonmouth as a dry dock for docking ships of different lengths. It was formed of six floating pontoons joined together by decks so that there was a continuous deck over them all, and upon them on each side was erected a wall, as it has been called. It really was a very big longitudinal girder, some 360ft. long on each side, rising, I think, for a height of something like 29ft. above the deck. To that were bolted these pontoons. The result of that structure would make it a longitudinal girder of great strength. It must be of great strength because, as it was intended to dry dock ships of different lengths, there would be very considerable transverse strain—that is to say, vertical strain—upon each of those girders. The method of docking ships in docks of this kind of course is to float the vessel in, and then pump out the water from the hollow pontoons, and then they float it up, and, if the ship is not the full length of the dock so that its weight is distributed evenly over the pontoons, it is quite clear that there must be a very considerable bending stress vertically on these side walls; that, of course, is resisted by the girder strength. When this dock was bought it had to be taken to pieces in order to get it out of the port where it had been in work—that is to say, the connection of the pontoons with the girders had to be broken. Each pontoon and the girders had to be taken out separately and then rebuilt outside. The man, to whom that task was given, was called, and it is clear from his evidence that the dock was rebuilt outside with all care, and that a very large number—I think something like 20,000—of bolts, which bolted the pontoons to the side girders and connected other parts of the structure, were put in, replacing the old ones, and, as will be seen by the evidence, the dock was in splendid condition. It was proposed to tow it out to the buyers, and that was the risk against which the owners wished Messrs. Lotinga to insure, and very properly Mr. Bullock applied for the insurance "seaworthiness admitted."

In my opinion, that phrase "seaworthiness admitted" signifies this: that no defence is to be

raised by the insurers on the ground that it was not fit to contend against the perils of the sea. It is very difficult indeed to give any definition of "seaworthiness" as applied to a construction like this, which is not properly a vessel at all, although it floats, and, from some points of view, may be regarded as a vessel, and might even be called so in a legal sense; but it is extremely difficult. Nobody supposes that a structure of this length and this nature can sustain perils of the sea which a ship ought to be able to sustain, and I should think that nobody imagines that a dock is ever sent to sea which is safe and seaworthy in the same sense that a tramp ship, or an Atlantic liner, would be, and "seaworthiness admitted" to my mind gives the insurers notice of the peculiarity of the risk when it is a dock, and puts them on examination as to whether with regard to this strange structure which is to be towed over the sea they are willing to take the risk. That it was recognised that it was not seaworthy in the ordinary sense is clear to me from the premium. A premium of about 5*l.* per cent. for a Mediterranean voyage shows quite clearly that both parties realised that the thing was not an ordinary risk. I have no doubt whatever that if you apply for a policy of insurance "seaworthiness admitted," you must measure your duty as a person applying for an insurance by the nature of the policy that you ask, and that, if seaworthiness is admitted, the duties of disclosure cover all those things which in such a policy would affect the premium or the willingness of the underwriters to accept the risk. I take it that sects. 17 and 18 apply to all policies of every kind, whatever risks be excluded. They apply to all policies by reason of the nature of the policy. Whether or not the particular act becomes the duty of the person seeking to insure depends upon the policy that is about to be taken out, and therefore I agree with the argument that if there was anything known to the owners which would tend to affect the premium, or the willingness of the underwriters to take the risk in a policy where seaworthiness was admitted, they were bound to disclose it. Sect. 17 lays it down that the contract is one of the utmost good faith. Sect. 18 says that the assured must disclose to the insurer before the contract is concluded every material circumstance which is known to the assured, and the assured is deemed to know every circumstance which in the ordinary course of business ought to be known to him. Then the second sub-section says that every circumstance is material which would influence the judgment of a prudent insurer in fixing the premium or determining whether he will take the risk. If there be something known to the owner within the meaning of those sections which would affect the willingness to take the risk, or affect the premium, I think that the obligation rested on the owner to disclose it, and that we must measure the extent of that obligation by remembering that the policy was one in which there was to be no defence raised on unseaworthiness.

What does that duty to disclose cover? I have not the slightest doubt, for instance, that if they knew that there had been corrosion in the plates of this dock so that the strength had diminished, if they knew that it was an old dock, they were bound to say so. All those matters they would be clearly under an obligation to disclose, and if they did not disclose them the person taking the risk could avoid the policy. But nothing of the kind is alleged. All that is alleged is that they did not say that the dock had not been strengthened. Now, once more may I say with regard to all those from Poole onwards who saw Mr. Watkins' report this case breaks down on fact? That was clear notice to them, not only that the dock was not strengthened, but that there was no intention to strengthen it, and that the risk was to take that dock, just as it was, out to the buyer.

But, of course, although that decides the case with regard to those underwriters, there were a certain number who did not see Mr. Watkins' report, and I must go into the case with regard to them. The true position with regard to a dock is this: There is no mystery about it; docks are made of various strengths; if a dock is not strong enough, or thought not to be strong enough, if you want it stronger, you strengthen it; if you think that it is strong enough you do not; to talk about there being a universal knowledge that docks have to be strengthened is to go far beyond the evidence. In my opinion, on the evidence, and there was considerable evidence given by Mr. Watkins, Mr. Weir, and Mr. Maclaren, evidence that I have no reason to doubt was given by competent people and honestly given, it is clear that docks may be built so that they are sent as they are on a sea voyage. Even the evidence of the witnesses on the other side admits that some docks may be safely sent to sea. Therefore, to say that if you ask persons to insure a dock, you have impliedly represented that it has been strengthened for sea, in my opinion wholly breaks down. What they were asked to do was to insure a dock, and there was no representation that it was strengthened nor was there any custom generally known to underwriters of strengthening docks before they go to sea anything like so universal or anything like so necessary in all cases as would make the application to insure "a dock" mean a "strengthened dock." What does the evidence of the defendants come to? In my opinion, that which has most impressed Scrutton, J. would have least impressed me. The learned judge is very much impressed by the fact that the people called before him are from the two firms which have probably got special knowledge with regard to docks, and substantially spend their lives in dealing with them. They have elaborated a course of individual treatment of docks—that is to say, of the docks they build—which has secured them in all their voyages across the sea. But the evidence speaks to me most eloquently of its being the private practice of these well-known firms with regard to their own docks, and I cannot find a trace of there being throughout the shipping world any custom of using these particular devices. Supposing that these two men were called and they said: "When we know that a dock is going abroad we always have a strengthening fin down the centre of the pontoons, or something of that kind," could it be said that a policy of insurance of a dock in which no representation whatever had been made, except that it was this particular dock, was void for concealment because the owner, who had never heard of this private practice of these particular firms to strengthen the pontoons by this internal

fin, did not tell the underwriters that there was not a strengthening fin down the centre of the pontoons?

Of course one realises that the duty which is put by the statute on owners is a duty based on good faith, and a duty which cannot be avoided by mere culpable ignorance, but that is the type of it, and I have no hesitation in coming to the conclusion that there was here no representation of anything except that this was a dock in its normal state, that there was no duty on the part of the owner to know of this private practice of these particular firms, and that in not referring to the fact that this private practice had not been carried out he was not failing in any duty whatever which he owed the insurers. In my opinion there is no evidence that the insurers themselves knew anything about this private practice at all. They were put on notice that this was an insecure structure by reason of its being a dock; they were going at a high premium to take the risk of its surviving the perils of the sea, and they were going to bear that risk, and it was for them to make any inquiries as to the condition in which it was going to be sent to sea, and therefore they undertook this risk, and there was no failure of duty on the part of the insured, and therefore this defence fails. I think, therefore, that this appeal should be dismissed with costs.

Buckley, L J. read the following judgment:— This is an action upon a policy of marine insurance of a dry dock "seaworthiness admitted." She was lost at sea. She had not been strengthened for the voyage. The defences are two: First, misrepresentation—namely, that the assured stated that she had been strengthened for the voyage. Secondly, and in the alternative, non-disclosure of a material circumstance—namely, that she had not been strengthened for the voyage. As to the former, the defendants have not proved the misrepresentation which they allege. I agree with all that Scrutton, J. has said as to the evidence on the point. I cannot improve upon it. I will add that in my opinion counsel who was cross-examining Bullock, if he was going to rely upon his answer as evidence of misrepresentation, was bound to obtain an amplification of his general statement by asking him as to details. His general answer is only in substance, "Certainly, as an honest man, I disclosed all the information I possessed." Counsel ought to have asked what disclosure he made; for instance, what he said, whether he said anything, and what, as to strengthening. It may, for instance, well have been that the dock had been strengthened (as she had), not that she had been strengthened for the voyage (as she had not). But upon the evidence it is not, I think, proved that he said anything about strengthening at all.

As to non-disclosure. This defence will succeed if it be shown either (1) that there was fraud (which is not alleged), or (2) that the duty of disclosure which lay upon the assured in inviting a contract in which *uberrima fides* must be shown has not been discharged. The conditions of this contract include "seaworthiness admitted." The result is not the same as if such admission were contained in a pleading. The result is not that seaworthiness can never be in issue. The result may be stated in either one of two ways, either (1) that the shipowner's warranty of seaworthiness is to be taken as fulfilled or (2) that the risk of unseaworthiness is one which the underwriter accepts with the result that if the vessel is lost by unseaworthiness the underwriter is liable: (*Parfitt* v. *Thompson*, 4 L. T. Rep. O. S. 116, 138; 13 M. & W. 392; 14 L. J. 73, Ex.). But in either case it remains that the duty of disclosure (now found by way of codification in the statute) must be discharged. If the shipowner knows any material circumstance within the meaning of the Act of Parliament, he must disclose it in obtaining the assent of the underwriter to the contract, and none the less because it contains as it does the condition "seaworthiness admitted": (*Brownlie* v. *Campbell*, 5 App. Cas. 925, 954).

I will endeavour to state the disclosure which the assured was bound to make, and to see whether he has made it. Before the contract was concluded he owed the duty of disclosing every material circumstance which he knew, and every material circumstance which in the ordinary course of business he ought to have known. This duty extended to every such circumstance as was material, and was not confined to such as he knew or thought to be material. Whatever was the character of the vessel which he desired to insure, he was bound to disclose any specific defect which he knew, or in the ordinary course of business ought to have known. But by material circumstance is, I think, meant a material circumstance of fact to the exclusion of a material circumstance of opinion. Whether the dry dock here tendered for insurance required to be strengthened for the voyage or not was, I think, a question of opinion. The assured honestly believed, and had the authority of Watkins' report for believing, that she did not require to be strengthened for the voyage, but might safely be towed to a Mediterranean port provided that suitable arrangements for towing were made. The assured was bound to disclose that report as soon as he had it. He did so. If he had received any other report, say to a contrary effect, the existence of the opinion which it contained was a matter of fact, and its disclosure was necessary as being a material circumstance. But whether she required to be strengthened for the voyage or not was not a question of fact, but a question of opinion. Further, the assured need not disclose (sect. 18 (3) (*b*), any circumstance known or presumed to be known to the insurer, and the insurer is presumed to know matters which an insurer in the ordinary course of his business, as such, ought to know. The insurer, in my judgment, must be presumed to know that a dry dock is not an ocean-going craft, and, unless she has been built with a view to or has been strengthened for a voyage, is not seaworthy. The effect of the words "seaworthiness admitted" is, I think, for the purposes of sect. 18 (3) (*b*), that the underwriter says: "I know that the subject tendered for insurance is a dry dock; I know that such a craft is not seaworthy unless she has been strengthened. I admit that this craft satisfies such a standard of seaworthiness as is to be reasonably expected in a craft of this kind, and as between you and me I will not raise the question that she is not seaworthy." The underwriter accepts the contract on the footing of that admission, and is bound, unless the assured has withheld some specific defect, or some specific knowledge or report as to some matter

such as I have mentioned. I may express the same thing in other words as follows: A defect known to the insurer need not be disclosed (sect. 18 (3) (*b*); a defect whose existence or non-existence is a matter of opinion need not be disclosed, at any rate to an insurer who admits that for the purposes of the contract the answer may be taken to be a particular answer which the assured believes to be the true answer. Scrutton, J. says: "The clause 'seaworthiness admitted' is put into these insurances of floating docks and river steamers not ordinarily engaged on sea voyages to avoid the doubtful and difficult inquiry whether sufficient temporary strengthening for an unusual service has been applied to a subject-matter not originally intended for that service, and in my view the proposal of such an insurance to an underwriter, while requiring the disclosure I have already suggested, puts him on inquiry as to the actual construction of and strengthening, if any, of the subject-matter, if he wants to investigate it." I entirely agree with the view thus expressed. Further, the insurer need not disclose (sect. 18 (3) (*c*)) any circumstance as to which information is waived by the answer.

The question of fact was not whether the craft ought to have been (which was matter of opinion), but whether she had been (which was matter of fact) strengthened for the voyage, By the words "seaworthiness admitted" the underwriter, in my opinion, waived any information as to what had been done. He was content to take the risk upon the conditions expressed or implied by the words that the subject of insurance was a dry dock, whose seaworthiness for the purpose of the voyage he was to accept without further information. It has been found as a fact: First, that the craft was not seaworthy without strengthening for the voyage; (2) that she had not been strengthened for the voyage; (3) that the fact that she had not been so strengthened was material; and (4) that the assured honestly thought that she was seaworthy without further strengthening. The first question that was material to the underwriter, however, was whether she wanted strengthening. This was a question of opinion, and is not, in my opinion, within the Act. If, and only if, this question was answered in one way, did the fact become material that she had not been strengthened. The fallacy of the appellants' argument seems to me to lie in this, that at every turn they start with the assumption that the craft being a dry dock necessarily required streugthening. In my judgment this is not true. Had she been built for a foreign purchaser she would have been built with sufficient strengthening for a sea voyage. She had not been so built, and did in fact require strengthening, but as matter of opinion the assured honestly thought that she did not. The terms upon which the underwriter accepted the risk, I think, were that upon this question of opinion he was prepared to admit that strengthening was not necessary. Under these circumstances the fact that she had not been strengthened was not a material circumstance. The underwriter cannot say, "I agree that I admitted that this vessel (as you believed) did not require strengthening for the voyage, but nevertheless it was material that she had not been strengthened." I am of opinion that Scrutton, J.'s judgment was right. He rests it upon waiver and upon disclosure which put the underwriter upon inquiry. As to the former, I agree. As to the latter, I prefer to express it as I have done, in the form that a question of opinion is not a material circumstance within the Act, and that there was no material circumstance of fact known, or which ought to have been known, to the assured which he failed to disclose. In my judgment the appeal fails and must be dismissed with costs.

Appeal dismissed.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

April 30 *and May* 1, 1912.

(Before HAMILTON, J.)

SCOTTISH SHIRE LINE LIMITED AND OTHERS *v.* LONDON AND PROVINCIAL MARINE AND GENERAL INSURANCE COMPANY LIMITED. (*a*)

Marine insurance—Policy on freight—Construction—Chartered or as if chartered—Concealment—Marine Insurance Act 1906 (6 *Edw.* 7, c. 41), s. 18.

A policy of insurance taken out by the plaintiffs in respect of the steamship Ayrshire *was expressed to be upon "Freight of frozen meat and (or) apples and (or) other refrigerated produce, and valued at* 15,000*l. chartered or as if chartered. On board or not on board . . . lost or not lost at and from any ports or places in any order or rotation in the United Kingdom to any ports or places in any order or rotation in Australia and (or) Tasmania* via *Durban and (or) any route and wheresoever." Attached to the policy was a clause which contained* (inter alia) *the following stipulations: "Warranted free from any claim consequent on loss of time, whether arising from a peril of the sea or otherwise, but this clause only to apply in cases where the vessel is fulfilling a special charter containing a cancelling date." . . .*

On the construction of the policy:

Held, that the expression "as if chartered" did not extend the freight covered to the anticipation of freight under contracts which at the material time did not exist.

Held, also, that as the plaintiffs concealed from the defendants the fact that by the terms of a certain contract freight was liable to be lost if the steamer did not arrive in Tasmania to load on a certain date, this was a concealment of a material fact, and entitled the defendants to avoid the policy.

COMMERCIAL COURT.

Action tried by Hamilton, J., sitting without a jury.

By their points of claim the plaintiffs alleged that they were interested to the full extent under

(*a*) Reported by LEONARD C. THOMAS, Esq., Barrister-at-La

a policy of marine insurance, dated the 7th Jan. 1910, for 2000*l.* on freight on the steamship *Ayrshire* subscribed by the defendants. The policy was upon freight of frozen meat and (or) apples and (or) other refrigerated produce, valued at 15,000*l.*, at or from any ports or places in any order or rotation in the United Kingdom to any ports or places in any order or rotation in Australia and (or) Tasmania *viâ* Durban or any route; risk to commence at once and continue in its entirety until steamer sailed from loading port on homeward voyage. The perils insured against were of the seas and other usual perils, including all damages and accidents attendant on steam navigation and all risks incidental to steam navigation. They alleged that, while on the voyage insured, on the 2nd Jan. 1910 the *Ayrshire* came into collision with the steamship *Arcadian* and was greatly damaged, and the said insured freight thereby became and was totally lost. They also pleaded that due notice of abandonment was given to the defendants, and alternatively that there was a constructive total loss of the said insured freight.

By their defence the defendants denied that there was any total loss under the policy, as the *Ayrshire*, having been repaired after the collision, loaded a full cargo in Australia and earned freight, and they also denied that there was a constructive total loss of freight as alleged. They pleaded alternatively that if the plaintiffs had any interest under the said policy it was by reason of certain freight contracts having been made by shippers in Australia with a body or partnership called the F. H. S. Lines or the F. H. S. Committee. In the further alternative they said the policy contained the following clause:

Warranted free from any claim consequent on loss of time, whether arising from a peril of the sea or otherwise, but this clause only to apply where the vessel is fulfilling a special charter containing a cancelling date.

They stated that among the contracts made by the F. H. S. Committee was one dated the 14th Oct. 1909 with Messrs. Jones Limited and Messrs. Peacock Limited providing for the shipment of 40,000 cases of apples on the *Ayrshire*, provided she was ready to load on or about the 20th March 1910. The amount was subsequently increased to 70,000 cases, and if and so far as the plaintiffs' claim was for loss on the freight of the apples the defendants were relieved from any liability therefor by reason of the clause.

In the further alternative they said that if the freight under the apple contract was freight insured under the policy sued on, the plaintiffs on effecting the policy concealed from the defendants a material fact, viz., that by the terms of such contract freight was liable to be lost if the steamer did not arrive in Tasmania to load on or about the 20th March 1910, and that the defendants were in consequence entitled to avoid the policy sued on.

They further alleged that it was arranged by the plaintiffs or alternatively by the F. H. S. Lines or F. H. S. Committee that all the cargo engaged for the *Ayrshire* should be loaded and carried by another steamer called the *Somerset* and (or) other steamers, and it was in fact so loaded and carried; and that by reason of the said fact the plaintiffs waived and abandoned the notice of abandonment they had purported to give to the defendants in that they themselves exercised or alternatively assigned to others the right to earn the freight which they had purported to abandon to the defendants.

The facts were as follows:—

A combination or conference consisting of the Scottish Shire Line, the Federal Steam Navigation Company, and Houlder Brothers and Co. Limited ran a line of steamers between the United Kingdom and all Australian ports by various routes. The line worked on a principle of endeavouring to fit into a programme the successive sailings of their respective steamers in such a way as to give each company a specific employment for its vessels. At the beginning of every twelve months the managers of the line arranged a number of programmes of sailings by various routes. The steamship *Ayrshire* was concerned in route No. 1, and the system was so arranged for a round voyage out from this country and back, with dates for leaving Brisbane, Sydney, Melbourne, and Adelaide, these dates being subsequently advertised among the persons whom it concerned. The object was to let the shipping public know the prospective arrangements which the line was making for the supply of tonnage for homeward cargo from the various ports. Evidence was given to the effect that sailing dates could not be guaranteed, and the business was worked as a berth business with running contracts, and no charters made for the ships.

There were certain constant contracts which the line kept on foot, amongst others being one with Messrs. Birt and Co. Limited, to the effect that when the combination took place all refrigerated cargo owned and controlled by Messrs. Birt for shipment to the United Kingdom or other destinations to which the line steamers might sail should, so far as the ships could afford space, be shipped in ships belonging to the line. Messrs. Birt from time to time made arrangements with exporters of frozen meat to freeze meat for such exporters, and in making such arrangements Messrs. Birt stipulated that such exporters for a large proportion of refrigerated and other freights belonging to the exporters at other places than where Messrs. Birt had freezing works should direct freight to the line through the agency of Messrs. Birt at all ports in Australia, and consequently, in the event of any of the line steamers being short of freight, Messrs. Birt had an exceptional call on the frozen meat exports of Australia to fill up the steamers. There were also other contracts on foot. One was with the Apollo Bay Dairy Company Limited, to commence on the 2nd Dec. 1907 and to last till the 31st March 1911. By that contract the shipper agreed to ship by the steamers of the line all butter consigned to the United Kingdom belonging to the shipper, but the shipper had the option of shipping by other steamers running to a regular time-table which did not carry at rates of freight less than the line. There was also a similar contract subsisting in Victoria and with the Berrima District Farm and Dairy Company Limited covering the same period, and a similar contract covering the dates in question with Foley Brothers Limited for Queensland, and a similar one with the Government Produce

Export Department covering the material dates for South Australia.

There was also a contract made with Messrs. H. Jones and Co. Limited and W. H. Peacock and Co. Limited of Hobart, dated the 14th Oct. 1909, which provided (*inter alia*) that

The owners on or about the 20th March next, subject to loss, detention, or injury from *force majeure*, agree to have the steamship *Ayrshire* at Hobart with a reserve space in the insulated holds, ready to start loading 40,000 cases of apples, which the companies agree to supply to the said ship

The *Ayrshire* sailed from Liverpool on the 31st Dec. 1909, but collided in St. George's Channel with the steamship *Arcadian*, sustaining considerable damage, in consequence of which she was under repair until the 17th March 1910. She did not reach Australian waters until three months after she had been expected. The *Ayrshire* was preceded in the programme by the steamship *Somerset*, and at the beginning of 1910 neither vessel was definitely booked to take cargo at particular dates at particular ports to such an extent that there would be any breach of contract in altering the dates, with the exception of the *Ayrshire's* engagement with regard to the Hobart shipment of apples. It was found practicable to alter the *Somerset's* dates, and the order of call at her last ports was so as to enable her to some extent to take the *Ayrshire's* duties and to call at Hobart just about the date at which the *Ayrshire* should have called to take the apple shipment, and she sailed a full ship. Some of the meat cargo which was expected to have gone by the *Ayrshire* was shipped in the steamship *Carpentaria.*

The policy of insurance taken out by the plaintiffs with the defendants was declared to be upon

Freight of frozen meat and (or) apples and (or) other refrigerated produce, and valued at 15,000*l*. chartered or as if chartered. On board or not on board . . lost or not lost at and from any ports or places in any order or rotation in the United Kingdom to any ports or places in any order or rotation in Australia and (or) Tasmania *viâ* Durban and (or) any route and whereseoever.

Attached to the policy was the following "special" T.P. clause:

Warranted free from any claim consequent on loss of time, whether arising from a peril of the sea or otherwise, but this clause only to apply in cases where the vessel is fulfilling a special charter containing a cancelling date. . . . Risk to commence at once and continue in its entirety until steamer sails from final landing port on homeward journey. . . . It is specially agreed that in the event of a total loss being recoverable under this policy underwriters shall be entitled to receive by way of salvage the net amount of meat freight earned and actually payable to owners at the time of the accident.

The plaintiffs did not inform the defendants that under their contract with Messrs. Jones and Peacock of Hobart the *Ayrshire* was to arrive on or about the 20th March.

Bailhache, K.C. and *Leck* for the plaintiffs.—The words "chartered or as if chartered" really contain the whole point at issue in the action. These words have been treated twice as covering all freight contracted for, or as if contracted for, the phrase being a wide one, and intended to cover even all expectations of freight:

Turnbull, Martin, and Co. v. *Hull Underwriters' Association*, 9 Asp. Mar. Law Cas. 93; 82 L. T. Rep. 818; (1900) 2 Q. B. 402.

In the present case the freight expected to be earned by the *Ayrshire* as a programme boat in the ordinary course of events was all that could possibly have been meant to be covered by the policy, for there were no other interests of the assured at risk at the time when the policy was effected. [HAMILTON, J.—Though in fact no binding contracts may have been effected so as to come under the policy, yet there was always the possibility that such were being or were about to be concluded, so that the policy would have to attach to them.] The Marine Insurance Act, s. 26, sub-s. 3, expressly provides that the intention of the assured is to be regarded in any attempt to define the extent of the risk. The section means that where words are on the face of them ambiguous the assured's intention may assist interpretation. In this case the risk covered is doubtful, and the assured's intention may be referred to to explain it. As for the concealment point, the apple contract, to which alone it applied, was not a special contract, and it contained no cancelling date. Cancelling date is a term of art with a strict meaning which cannot be extended.

Leslie Scott, K.C. and *Mackinnon* for the defendants.—The case involves the contention that defendants would become liable to pay some 15,000*l*. on the steamer being delayed for, say, a fortnight by some accident. In the first place, no freight had been lost, because there had been no insurable freight at risk. In the second place, what expectation of freight was at risk had in fact been realised. The assured had, in fact, earned the expected freight, by rearranging their sailings for the purpose, immediately they heard of the collision. Thirdly, there was at best a constructive total loss, and at the very moment when plaintiffs were giving notice of abandonment to the underwriters, they were making arrangements in Australia to carry the same things at the same rates, which arrangements made the notice of abandonment meaningless. If plaintiffs are to be deemed to have a contract because they have a hope or expectation of one, they need not stop there. They might as well not be deemed to have a contract even if the ship is in fact sent to a desert island which produces nothing. The words relied on by the plaintiffs are "chartered or as if chartered," but the parties must be taken to have known what a charter-party is. The words "as if chartered" only cover cases wherein no charter-party is found, but various small parcels of goods, aggregating to a whole cargo, are contracted to be loaded under a separate binding contract in the case of each parcel. They do not affect the fundamental description of the interest insured, which is freight, and not the mere business hope of making money out of a ship. The postponement of the time of earning does not amount to loss: (*Everth* v. *Smith*, 2 M. & S. 278). This principle covers all the sources of freight in the case except the apples. Birts' contract is not on a par with the apple contract. A policy on freight on a particular vessel does not attach until either the goods are on board or a binding contract has been

concluded for the carriage of the goods by that vessel: (*Flint* v. *Flemyng*, 1 B. & Ad. 45). [HAMILTON, J.—That case only shows that a bare expectation is not enough.] As for the Marine Insurance Act, sect. 26, sub-sect. 3, only means that where language is general, evidence of intention is admissible, or that the assured may give evidence to show that the apple contract was the freight insured, not that a general loss was the risk he intended to cover. This is a valued policy. In order to succeed on the valuation, the plaintiffs must show a loss of the whole freight:

> *Denoon* v. *Home and Colonial Assurance*, 1 Asp. Mar. Law Cas. 309; 26 L. T. Rep. 628; L. Rep 7 C. P. 341.

The apple contract was a contract containing in effect a cancelling date, and the warranty in the policy therefore came into operation with respect thereto. The policy is therefore void for non-disclosure. They also referred to

> Marine Insurance Act 1906, s. 18;
> *The Bedouin*, 7 Asp. Mar. Law Cas. 391; 69 L. T. Rep. 782; (1894) P. 1;
> *Jackson* v. *Union Marine Insurance Company*, 2 Asp. Mar. Law Cas. 435; 8 Com. Cas. 61; 9 Com. Cas. 114.

Bailhache, K.C. in reply.—The case comes back to the point as to what is the meaning of the words "chartered or as if chartered." *Everth* v. *Smith* (*sup.*) only shows that where a particular freight is afterwards earned no claim is possible on a policy insuring it. An analogous case would arise where a mortgagor insures freight by a ship which was seized by a mortgagee *en voyage*. The mortgagee would earn the freight, and the mortgagor, though he lost it, would have no claim. But in the present case it was the *Ayrshire's* freight that was insured, and that freight was never earned. The other ships following the *Ayrshire* lifted their own cargoes, not the *Ayrshire's*, and earned their own freight, not hers. If the *Ayrshire* had been only a little late the case would have been different, and no useful argument could be drawn from considering what would then have happened. As for the warranty in the policy, a cancelling clause must be a cancelling clause:

> *Re Jamieson and Newcastle Steamship Freight Assurance, &c., Association*, 7 Asp. Mar. Law Cas. 562, 593; 72 L. T. Rep. 648; (1895) 2 Q. B. 90, per Lord Esher, M.R.

If the loss of freight in fact results not from the delay, but from the exercise by a freightee of an option to cancel, then by the operation of the rule *Causa proxima et non remota spectatur* the assured could not in any case recover:

> *Inman Steamship Insurance Company* v. *Bischoff*, 5 Asp. Mar Law Cas. 6; 47 L. T. Rep. 581; 7 App. Cas 671;
> *Mercantile Steamship Company* v. *Tyser*, 5 Asp. Mar. Law Cas. 6n.; 7 Q. B. Div. 72.

In *Jackson* v. *Union Marine Insurance Company* (*sup.*) there was a long delay, but a short delay is enough where the steamer is on a programme and running to advertised dates. No doubt the underwriters may claim a set-off, but here they have no proof of any such. The *Somerset* and the *Carpentaria* carried some of the *Ayrshire's* cargo, but they had in consequence to shut out cargo of their own and earned nothing. They also referred to

> *Bensaude* v. *Thames and Mersey Marine Insurance Company*, 8 Asp. Mar. Law Cas. 315; 77 L. T. Rep. 282; (1897) A. C. 609;
> *Barber* v. *Fleming*, L. Rep. 5 Q. B. 59;
> *Williams* v. *Canton Insurance Office*, 9 Asp. Mar. Law Cas. 247; 85 L. T. Rep. 317; (1901) A. C. 462;
> *Manchester Liners* v. *British and Foreign Insurance Company*, 9 Asp. Mar. Law Cas. 266; 86 L. T. Rep. 148.

HAMILTON, J.—[His Lordship having reviewed the facts and the evidence, and having referred to the contracts, continued:] I must find as a fact that in all probability if no accident had happened to the *Ayrshire*, she would have sailed with a full cargo at full rates; and that the *Somerset*, undisplaced in that event, would also have sailed with a full cargo at full rates; and that the subsequent steamships to the *Ayrshire* would equally have been able to get all the cargo that they could carry. Therefore, I think that as a fact, upon the working of the whole line for the whole period, it is true to say that the combination has lost that amount of refrigerated cargo freight which could have been earned upon one extra homeward sailing.

The question is now whether, in respect of that loss, they are covered by the policy sued upon. This policy is in a form which has been substantially in use for some twenty years. It was altered to some extent, I know not what, in 1905; but I can derive no useful inference from those facts, because it is also admitted that claims in respect of freight losses on these policies have been very few, and, therefore, there has been no occasion for any dispute between the parties that could throw any light upon what they between themselves conceived to be or agreed to be its real meaning. The first matter to look at is the language in which the subject-matter of the insurance is described. The insurance is declared to be upon "Freight of frozen meat and (or) apples and (or) other refrigerated produce, and valued at 15,000*l.*, chartered or as if chartered. On board or not on board." Then the vessel is "Lost or not lost at and from any ports or places in any order or rotation in the United Kingdom to any ports or places in any order or rotation in Australia and (or) Tasmania *viâ* Durban and (or) any route and wheresoever." Then attached are other clauses, one at least of which was specifically mentioned in the slip as what was known as the "special T.P. clause"—special time penalty clause. That clause is "warranted free from any claim consequent on loss of time, whether arising from a peril of the sea or otherwise, but this clause only to apply in cases where the vessel is fulfilling a special charter containing a cancelling date." The other two parts of the attached clause are: "Risk to commence at once and continue in its entirety until steamer sails from final loading port on homeward journey"; and "It is specially agreed that in the event of a total loss being recoverable under this policy underwriters shall be entitled to receive by way of salvage the net amount of meat freight earned and actually payable to owners at the time of the accident." What is the subject-matter covered? It is freight. It is freight on frozen or refrigerated produce on

board or not on board; words which no doubt are intended to meet difficulties which once arose when cargo alongside for loading, but not brought on board, was lost. It was then said that no right to freight had accrued because no lien upon that cargo for remuneration for its carriage had attached. I think they throw no light upon the present case.

"Chartered or as if chartered" are words which have given rise to considerable discussion. Those words have been in use many years. When they first came into use, or under what circumstances, I have been unable to find out. Words similar were used as long ago as 1869 in *Barber* v. *Fleming* (*sup.*), where the words are "on freight chartered or otherwise." The language of Blackburn, J. in that case is strong, and it is supported by Hannen, J. too, to show that they regarded the "freight chartered or otherwise" to which that policy referred, as freight as to which some binding instrument was in existence; the point being whether the ship had so started on the insured voyage as to commence to earn that freight. He says: "The spirit and reason of the rule are, that the interest commenced, not because the man acted under compulsion of the contract, but because he has acted so far under the contract as to show it is so no longer speculative, but he had actually begun to do something which makes the inchoate interest attach, and makes it a real thing." Hannen, J. says: "The policy may or may not apply to freight which might have been earned on the way from Bombay to Howland's Island. It may or may not apply to freight other than the chartered freight, but this particular freight is specified under the terms of the policy, inasmuch as it is chartered freight from Howland's Island to the United Kingdom." The words to my knowledge have been extremely common for a good many years. The next case which I have been referred to in which such words are discussed is in the case of *Turnbull, Martin, and Co.* v. *Hull Underwriters' Association Limited* (*sup.*). The words there are "upon freight of frozen meat chartered or as if chartered." It was argued by His Honour the late Judge Carver, who certainly would never have advanced an argument which he had not carefully considered and believed to be sound, that "the phrase 'chartered or as if chartered' means 'contracted for or as if contracted for,' the clause being a wide one and intended to cover even an expectation of freight." But it is important to observe that he was referring to a case in which there were contracts or engagements of some binding kind, because Mathew, J., in his judgment on p. 404, says: "The evidence showed that at the time when the vessel sailed no contracts had been secured by the plaintiffs for the shipment of frozen meat from the colonial ports, but such contracts were made and the homeward cargo was booked at Newcastle, Melbourne, and New Zealand ports while the vessel was making her outward voyage." The accident occurred, I think, at Sydney. The result, therefore, was at the time that was material, namely, the date of the accident, there were in existence contracts made, and the homeward cargo booked; and the argument that "chartered or as if chartered" means "contracted for or as if contracted for" referred to a case in which there really were actual contracts at the date which was material. It may well be that the phrase is intended to cover an expectation of freights which is an expectation only at the date of the insurance; but it is another matter altogether to say that it can apply to cover a freight which remains a pure expectation at the time of the loss. I cannot understand how "contracted for or as if contracted for" can mean "contracted for or not contracted for." If it is "as if contracted for," it must in substance be a legal obligation, although it may not be in the form of an ordinary mercantile contract. But "as if contracted for" implies the idea of a contract, and negatives the idea that there is no contract.

The matter then came up in *Williams* v. *Canton Insurance Company* (*sup.*) in the House of Lords. There there was a policy upon freight "chartered or as if chartered"; but the gist of the case was contrast between a lump sum charter freight and a bill of lading freight. In the opinions delivered there are three which deal with the question. The Earl of Halsbury, Lord Chancellor, says: "These words 'or as if chartered' have, to my mind, no meaning where there is, as in this case, a chartered freight, and if they have any meaning at all in other cases, of which I have some doubt, I decline to speculate what their meaning would be in a case different from the present." In the present case, *ut res magis valeat quam pereat*, I have to fit some kind of meaning on to those words. Then in the judgment of Lord Brampton it is said: "I am very much disposed to think that in using in the policy the words 'freight chartered or as if chartered,' it was intended by the framers of and the parties to it that, whatever the facts might be, whether the ship was wholly loaded by the charterers or wholly or partly under bills of lading by other shippers, the whole was to be treated for the purposes of the policy as one entire undivided cargo, loaded by the charterers, to be carried for that one lump freight." Lord Lindley says: "The alternative 'or as if chartered,' applies to freight, or what in business is treated as freight, although not payable by the express terms of any charter-party—*e.g.*, if the shipowner carries other people's goods without a charter-party, or perhaps if he carries his own goods. The phrase 'as if chartered' would also cover freight payable under a charter-party entered into after the date of the policy, if the policy without those words would not extend to such freight."

The one thing that is clear is that no colour is lent by any of those passages to the view that the words "as if chartered" mean "not contracted for" at any place, but evidently and reasonably expected to be earned. As Lord Lindley says, the words cover the case of a charter-party expected at the date of the policy, but only concluded after it. They cover, or may cover, the benefit that the shipowner derives from carrying his own goods, although it has been held that that is covered by the description of freight *simpliciter*, and they cover the case of other people's goods being carried without a charter-party—that is to say, either under a bill of lading, or, if there is no actual bill of lading, under that promise to pay which is implied from the fact that the goods are shipped and carried. But it is necessary to the plaintiffs' case to support the contention that "as if chartered" extends the freight covered to the anticipation of freight under contracts, which at the material time did not exist.

Lastly, it was suggested that a passage in the argument of counsel for the defendants in *Manchester Liners v. The British and Foreign Insurance Company* (7 Com. Cas. at p. 30) might assist. But all that that says is that insurances on expected freight are always effected in one of two ways—by a P.P.I. policy—that is to say, recognising that there is no insurable interest; or by the insertion of such words as "as if chartered" or "freight at risk or not." "Freight at risk or not" appears to me to have much the same effect as P.P.I., and the insertion of the words "as if chartered," at any rate there, is not alleged to be in practice a sufficient equivalent to give a legal right to recover upon a policy which is to be legally enforceable where there is no freight of any kind actually contracted for. The only colour I have been able to find for extending it further than that is in the valuable handbook of Mr. Gow on Marine Insurance, p. 233, where he says the underwriter, under these words, insures a sum on freight whether the vessel is under engagement or not, carrying cargo or not, and whether the cargo has already paid freight or not. But I have no evidence of any usage that attaches that meaning to these words. It seems to me that the first thing to be borne in mind is that, whatever "chartered or as if chartered" may mean, they are words which qualify and describe a noun substantive which is freight. The thing covered is first and foremost freight as known to the law—not all freight, but only freight which can be said to be "chartered or as if chartered." What chartered freight is there is no difficulty in understanding. Its only contrast would be with the bill of lading freight. Chartered freight is remuneration paid to the shipowner by another who hires his ship or part of it, generally with an added contract that the shipowner's captain shall sign bills of lading for the charterer's benefit. On the other hand, bill of lading freight is the shipowner's own contracted remuneration for the carriage of goods in his own ship by his own servants. But no doubt the word "freight" extends much beyond that. It extends to engagements of the one kind or the other which actually are binding engagements, although they do not take the form of either a charter or a bill of lading, such as berth notes. There are numbers of contracts which are illustrated in the reported cases where, when a vessel is loaded on the berth in one form or another, somebody undertakes with the shipowner either to ship cargo or to procure cargo to be shipped, and in those cases the shipowner has the right to say: "I have the right under this contract to receive cargo with which I shall earn freight for its carriage, and as soon as in pursuance of my contract I start the ship out to perform the contracted voyage I have commenced to earn that remuneration"—call it freight or not, call it chartered freight or as if chartered or not. There is no novelty in that idea. But has it ever been extended to the case of a ship going out with the best right to expect that her agents will fill her, but with no actual binding engagement to that effect? I cannot find that that has been so held.

I find numbers of cases and numbers of text-writers by whom it is said that freight involves either a possession of the goods so that you can imply a contract to carry in a certain event, or else a right in the sense of a legal right to have the goods so that you may earn the freight. I do not find any case which says that you can use the word "freight" at all on the mere expectation that you will get cargo and earn freight, and I think the contrary has been decided if one looks at the case of *Flint* v. *Flemyng* (*sup.*). The *Hope* there, while discharging outward cargo at Madras, was lost by perils of the seas. No part of the homeward cargo was then shipped. The captain had purchased at Madras, by order of his owner, 25 tons of redwood, and a firm called Binny and Co. had contracted to ship 122 tons of saltpetre; and Webster, one of the partners in that house, engaged to ship 90 tons of light goods, but as to those goods there was not any contract in writing. There was a policy on freight on the homeward voyage. Had any freight attached? or, to apply the usual test, was there any such right to freight as, but for the intervention of the perils insured against, would have resulted in freight being earned? At the trial before Lord Tenterden, the learned judge told the jury that if the captain had a reasonable assurance that 90 tons of light goods would be shipped, "the assured had a right to recover in respect of them the freight which the vessel would have earned if they had been shipped and she had performed the voyage, though there was not any such contract as could be enforced by action." That seems to me precisely to be the suggestion made in this case. A rule *nisi* was obtained for a new trial on the ground of misdirection upon two points, one of which was that very direction to the jury. The counsel showing cause, who included Campbell, afterwards Chief Justice, and Pollock, afterwards Chief Baron, admitted undoubtedly as to the light goods that there must be a contract, "but here there was evidence of a contract, for Webster engaged to ship light goods." The court, Lord Tenterden himself giving the first judgment, says: "To recover upon a policy of freight, the assured must prove that but for the intervention of some of the perils insured against, some freight would have been earned, either by showing that some goods were put on board, or that there was some contract for doing so. The question was not submitted to the jury, whether there was any contract between Webster (acting on the behalf of Binny and Co.) and the captain for the shipment of the light goods." The defendant therefore was entitled to a new trial, but instead of a new trial it was referred to a barrister to ascertain whether there was a contract to ship light goods.

Then if one looks at the text-writers: Phillips, sects. 328, 329, and 331, distinctly presents the alternative either of goods ready to ship or a contract with another person for freight. Arnould says much the same thing, the material sections, I think, being 266 and 269. Passages are cited from the judgments of Lord Ellenborough and other great authorities which seem amply to bear it out. *Forbes* v. *Aspinall* (13 East, 323) is a case in question. There the expression used is: "Where there was no complete contract by any person to load or pay dead freight but the ship was a mere seeking ship." If I might repeat an expression that I used in the course of the argument, it seems to me here that in fact the *Ayrshire* when she started was a seeking ship, and that on the 1st Jan. she was no more, except as to the apple contract and

possibly the Birt shipments, although at that time there was a strong expectation that when she arrived in the colony she would find a full and complete cargo; but in the ordinary course of business until five or ten days before her actual arrival no engagements, except for the apples, would be definitely made. If that is so, the test which I must apply is, was there, and if so to what extent, freight which was the subject-matter of some legal agreement giving the shipowner the same legal security as if he had a charter to load —I do not mean to say the same legal security in all its incidents, but legal security enforceable as a charter-party would have been. It is conceded that as regards the apple contract there was such a contract existing at the time of the loss. Of course the material moment for this purpose is the time of the accident, and the loss was occasioned by that accident. I think also, although the case is a little difficult, that I ought to hold that the arrangement with Messrs. Birt was of such a character as to constitute a binding contract to get the vessel a cargo so far as her space would enable her to take it; at any rate, so far as Messrs Birt and Co. were able to influence or to control a sufficient quantity. It is true that it does not take the form of a contract to load at all. It is true that the terms of it are not before me, but I think the effect of it is that, by something which was enforceable because it was definite and supported by consideration, Messrs. Birt were bound, had she arrived on the coast, to load at any rate at the ports in question, to do their best to get her a cargo, and as the evidence satisfies me that at the time she was expected on the coast there was a sufficiency of cargo, I think she was in the same position as though that quantity had been contracted for. Hence it seems to me that to the apple contract and to the Birt shipments the term "freight chartered" or "as if chartered" would sufficiently apply; but separate considerations apply to the apple contract.

I will deal with the meat shipments. As to that I think the issue between the parties may be stated in this way. Is this an insurance of the *Ayrshire* freight of the kind in question upon her round voyage, or is it an insurance of her freight of the kind in question upon cargo to be shipped at or about the dates at which it was expected that she would ship a cargo upon a round voyage? If it is the latter, she missed her dates, and missed them to a most material extent. If it is the former she made a round voyage, a round voyage which comes within the description in the policy, and in substance the very round voyage, apart from the sequence of ports and such like, that she was all along intended for. Therefore in the latter case it is suggested that the case comes within the principle of *Everth* v. *Smith* (*sup.*), a decision of Lord Ellenborough not, so far as I know, ever doubted, where, the insurance being simply on freight from Riga and Baltic ports to the United Kingdom, it was held that there was no loss because, although the ship first by embargo and afterwards by the port freezing up, failed to carry the cargo that she expected to carry, when she was able to sail got another cargo and earned freight upon the very voyage homewards named in the policy. There is nothing in the policy itself which makes any express limitation of the voyage to a voyage occurring at the dates or substantially in accordance with the programme contemplated. It is proved to my satisfaction that when the *Ayrshire* reached Australia some three months later she found cargo, she took cargo, she carried it home, and she earned the full freight upon her carrying capacity, though how much it was and what the cargo consisted of I have not heard. Mr. Bailhache contends that policy must be read in a more limited sense, as a policy upon the voyage commencing at the dates and loading at the ports in accordance with the programme substantially. He says the practice was to keep up the sailing dates, hence if the vessel missed her date by an accident she missed her place and missed her cargo, and the insurance therefore is really one conditioned by the sequence of times originally contemplated. I think that very considerable difficulties of a practical kind would arise in connection with such an insurance, although I am far from saying that such an insurance cannot be effected if appropriate language is used, but the said risk on the *Ayrshire* against the risk of such contemplated freight on cargo to be shipped at the dates mentioned in the programme or thereabouts, is a different risk, measurable, I should have thought, by different considerations, from a mere insurance on freight per *Ayrshire* homeward from Australia to the United Kingdom. In this very case a number of legal questions which may or may not be required to be answered are suggested to arise, if that is the real construction. I think there might be some substantial difficulty in deciding how the valuation, the concealment, and the disclosure are to apply if the subject-matter of the insurance is expectation of cargo being forthcoming in the event of the vessel keeping her programme dates, and if the loss is to arise in the event of her missing her programme dates and is to be measured by the expectation of cargo that has either not been forthcoming or has been taken by some other vessel. There can be no insurable interest in a bare expectation. It is difficult to see how one could assess the risk of the vessel missing the date sufficiently to fail to carry the cargo at the expected date, though she carries it at another date. If she carries it at another date, is that the same freight or another freight? If it is another freight, is it salvage to the underwriter? If it is the same freight, has there been any loss? All those questions arise if the policy is construed in this way. First of all, I see no necessity to construe the policy in this way, because of the evidence, which I accept, of the flexibility of the programme itself, and the extent to which in practice the programme is necessarily departed from in the six or eight months or more which elapse between its formulation and its performance. In the next place it seems to me that such an interpretation does violence to the language. It imports into the definition of the risk words which are not there. It is true that it is said both parties knew that they were insuring ships in a line, ships which endeavoured to run to a programme, ships which were governed by a programme. It is true that it is said that for some years past they have been insured in this way, and the question is asked what were they insured for if it was not this risk. I think the answer is that the policy does not fall to the ground because admittedly it would be sufficiently worded to attach to the apple contract,

a very valuable one, and that, beyond that, the notion that the assured may have had in framing his policy cannot be availed of for the purpose of construing it. But I do not see here that the circumstances of the line are such in fact as to make it necessary, and if not necessary it cannot be proper, to construe this as a policy which would limit the freight to freight earned by shipment at or about programme dates. I am therefore of opinion that, although the *Ayrshire* did not earn freight on the cargo that went by the *Somerset*, that cargo never was her definitely contracted cargo, because although Birt and Co. were under contract to get a cargo for her, they never declared any particular shipment, that I know of, for the *Ayrshire*, and it was simply frozen meat at large which might be expected to be available. She therefore did not get meat at the time expected, and in that sense did not get her expected cargo, but she did get a cargo at another time, and carried it on her homeward voyage, and did earn the freight. I therefore think there has not been, as regards the meat cargo, a loss of freight, and I think that the same is true of all the other cargo, with the exception of the apple cargo, because there was no cargo that I know of which was not definitely engaged for her, and for that sailing in the programme, except the Hobart apples.

Now comes the question of the Hobart apples. It is said that those are within the terms of the warranty which I have read—the special T.P. clause. I think that may be shortly disposed of. Whatever the contract of Messrs. Jones may have been, it was not a special charter—it was not even a general charter. It was not a charter at all. It was "as if chartered," which means that, although it was like a charter, it was not a charter. In the next place, it contained no cancelling date. As is said by Lord Esher in *Re Jamaica and Newcastle Steamship Freight Assurance Association* (*sup.*) cancelling is a strictly understood term in shipping business, and the cancellation clause has been known for some twenty years, at least, as a well-known clause. I have no doubt that this clause has direct reference to the well-known cancelling clause which contains a cancelling date. My view is, although it may be a matter of form, or even of pedantry, that, in the Hobart Jones contract, an arrival about the 20th March is a condition precedent to the obligation to load at all; whereas, if there had been a cancelling clause, the obligation to load would have been defeasible in the option of the shipper if the vessel failed to arrive at the specified cancelling date. I do not think, therefore, that clause covers the Hobart contract. Stopping there, the assured would have proved their loss in respect of the apples. They could have proved their insurable interest, and the attaching of it in respect of the Birt meat shipments, but I think they will not have proved the loss there. But for the questions which arise on the remainder of the case some possibly difficult questions would arise, because, in this view, first of all, the valuation of 15,000*l.* would require to be readjusted in the manner that has been indicated in various decided cases; and, secondly, it might be necessary to discuss and decide the question whether the loss of a portion only, be it about 50 per cent., of the refrigerated cargo contemplated could be described as a constructive total loss under the policy, or a partial total loss; and whether, in the event of its being a constructive total loss, it is necessary that there should be a notice of abandonment; and whether the subsequent carrying of the cargo of apples by the *Somerset*, and the earning of the freight on the apples, does not constitute a waiver of notice of abandonment by carrying for the benefit of the shipowner that which by the notice of abandonment he had abandoned, and was bound to leave abandoned to the underwriters.

But I do not think it necessary to discuss or decide these questions. There is a defence connected with the apple shipment, but going to the root of the whole question, and that is the defence of concealment. With regard to that, I want to say at the outset that there has been, and can be, no suggestion whatever in this case of any wilful concealment, or any impropriety whatsoever on the part of the plaintiffs; but, on the contrary, probably no one more genuinely would recognise the entire integrity of the conduct of those concerned than the underwriters, who appreciate the importance in insurance law of the rules as to concealment. By what was, no doubt, sheer inadvertence, because it had not actually occurred to anybody that it could be necessary to make any disclosure upon the subject, and without the very slightest notion of prejudicing the underwriters in any way, those who were concerned with instructing this insurance to be effected did not cause the underwriters taking the risk to be made aware that in the apple contract at Hobart the 20th March or thereabouts was stipulated as the date at which the *Ayrshire* was to arrive and take the cargo. The date to be looked at is the 2nd Dec., because that is the date when the slip was opened and the risk was first taken. It was subsequently closed on the 30th Dec., the day before the vessel sailed. At either date, of course, there was no engagement with regard to freight, except the apple contract, and the vessel was still in safety. There has been a discussion as to how much concealment is a matter of law, and how far it is a matter of fact, but it is well settled now that evidence is admissible on the subject; and unless I can be satisfied, as a matter of law, that the point in question could not be material, it is a matter upon which I must be guided by the evidence as to whether it was material to a reasonable underwriter, with a view either to his taking the risk, or to the premium he would charge for taking it, to be apprised of the fact in connection with this insurance that the Hobart apple contract specified a date about which the vessel had to arrive. The Marine Insurance Act codifies the law on that subject in sect. 18. It seems to me to be quite clear that in law it might be material. I cannot possibly say that it is not material. The risk, if there was no date in this contract, would be that when the vessel arrived at Hobart there might be no apples, in which case she could not earn freight by carrying them, and that she might be prevented from arriving at Hobart, while there were apples to ship, by perils of the sea. Considering that she was about to leave English waters at the end of the year, and considering that the apple season at Hobart appears to extend for about two months, to which, I suppose, must be added a few days—three or four, whichever it may be—during which apples in case may remain awaiting shipment

without deterioration, the underwriter would in that view have a very considerable time range within which the vessel might arrive and save her freight.

I do not say that the risk of her being injured, and so losing that freight, would not be a considerable one, but it would be a risk measured by the extent of the range of time within which she could arrive and save it. If the time was to be about the 20th March, not much before and not much after, it seems to me that the risk is intrinsically altered, and the likelihood of the underwriter being called upon to pay in the event of accident is considerally increased. The evidence called is all one way, and is all called by the defendants. [His Lordship having referred to the evidence continued:] I must come to the conclusion, therefore, that, as I should have expected personally, the circumstance in itself is a circumstance that is material to the risk.

Then the way in which it is answered is that the particular circumstances of the underwriter's knowledge made it unnecessary to disclose this matter to him. Nothing was done by the underwriter, that I have heard of, to waive any information at all. I think, therefore, the matter must turn upon what he knew or must be deemed to have known having regard to his position. There is nothing here to show that he did know, or that he ought to have inferred, or ought as an underwriter to have been aware that in one particular contract there would be a date which had the same business effect as the cancelling date, although it was not the same in legal form.

I think, therefore, the defence arising here of concealment is proved, and I must give my judgment for the defendants.

Solicitors for the plaintiffs, *Lowless* and *Co.*

Solicitors for the defendants, *Waltons* and *Co.*

July 17 *and* 19, 1912.

(Before Pickford, J.)

HARROWING STEAMSHIP COMPANY LIMITED *v.* WILLIAM THOMAS AND SONS. (*a*)

Charter-party — Lump freight — Non-arrival of chartered ship—Delivery of part of cargo—Right of shipowner to freight.

By the terms of a charter-party it was provided that the steamship Ethelwalda *should load a full and complete cargo of pit props at a port in Finland and proceed to Port Talbot, a dock as ordered, and there deliver the cargo on being paid a lump sum of* 1600*l.*

The charter-party contained an exception clause including (inter alia) *perils of the seas. The* Ethelwalda *loaded her cargo and proceeded to Port Talbot, but before she could get into a dock she went ashore and ultimately became a total wreck. Part of the cargo was washed ashore, and a substantial part was collected on behalf of the shipowners and delivered to the consignees.*

Held, that the shipowners were entitled to payment of the lump freight as they had performed their contract save in so far as they had been prevented by an excepted peril.

COMMERCIAL COURT.

Action tried by Pickford, J. sitting without a jury.

(*a*) Reported by Leonard C Thomas, Esq , Barrister-at-Law.

The plaintiffs' claim was for freight payable under a charter-party dated the 1st Sept. 1911 for the carriage of a cargo of pit props per the plaintiffs' steamship *Ethelwalda.*

The charter-party was in the following terms:

It is this day mutually agreed between Messrs. Robert Harrowing and Co., owners of the good steamship called the *Ethelwalda,* of 1535 tons net register or thereabouts, now trading, and Messrs. William Thomas and Sons, of Swansea, charterers, that the said steamship . . . shall . . . sail and proceed to one place, Uleaborg district, as ordered . . . and there load . . . a full and complete cargo consisting of props. The steamer to carry a full and safe deck load, at charterers' risk, not exceeding what she can reasonably stow and carry . . . and being so loaded shall therewith proceed to Port Talbot, a dock as ordered, or so near thereunto as she may safely get, and deliver the same, always afloat, on being paid freight as follows: A lump sum of 1600*l.* (say sixteen hundred pounds) in consideration in full of all port charges and pilotages.

[In the form of charter originally the freight was to be paid per standard with regard to some of the timber, and per fathom with regard to the other, but that was struck out.] There was an exception clause including, among other exceptions, perils of the seas.

The *Ethelwalda* duly loaded her cargo and proceeded to Port Talbot, but on arrival was unable to get into dock, and before she was able to get into a dock, either through breaking her anchor or in consequence of her cable parting, she went ashore on the north side of the breakwater. Her deck cargo was swept off, some of it being stranded on the beach and some lost. The remainder of the cargo was washed out of the ship, and a substantial portion of it was subsequently collected on behalf of the owners by a firm called Jenkins and Co. The dock company took possession of the cargo as it was collected and held it under a lien for their own charges and also under a lien for freight on behalf of the shipowners.

Bailhache, K.C. and *Dunlop* for the plaintiffs.—The shipowners having substantially performed their contract are entitled to lump freight as provided by the charter-party. The owners are entitled to forward the cargo to its destination:

Rankin v. *Potter,* 2 Asp. Mar. Law Cas. 65 (1873); 29 L.T. Rep. 142; 6 H. L. 83.

The contract with Jenkins was a forwarding contract for the purpose of delivery under the charter-party, and not a salvage contract after abandonment of ship and cargo. The only answer to a claim for a lump freight is total failure of consideration. If the cargo is lost by excepted perils and the ship arrives, the lump sum is payable. They referred to

The Norway, 2 Mar. Law Cas. (O.S.) 17, 168, 254 (1864); 12 L. T. Rep. 57; 13 L. T. Rep. 50; 3 Moo. P. C. N. S. 245;
Carver's Carriage by Sea, sects. 547 and 550;
Mitchell v. *Darthez,* 2 Bing. N. C. 555;
Hunter v. *Princep,* 10 East, 378;
Guthrie v. *North China Insurance Company,* 6 Com. Cas. 25; 7 Com. Cas. 130.

Maurice Hill, K.C. and *Leck* for the defendants.—A lump freight is not really freight in the strict sense, but an amount payable for the use and hire of a ship for a voyage:

Robertson v. *Knights,* L. Rep. 8 C. P. 465.

It is an entire sum for an entire service:

Merchant Shipping Company v. *Armitage*, 2 Asp. Mar. Law|Cas. 51, 185; 29 L. T. Rep. 97; L. Rep. 9 Q. B. 99.

It therefore follows that nothing is payable unless the ship performs the voyage in its entirety. In *Mitchell* v. *Darthez* (*sup.*) it was decided that, the vessel having failed to complete the voyage, the lump freight could not be recovered although part of the cargo had been sent on and reached the intended destination.

Bailhache, K.C, in reply. — In *Mitchell* v. *Darthez* (*sup.*) the cargo was forwarded on behalf of the cargo-owners, whereas in the present case it was forwarded on behalf of the shipowners.

Pickford, J.—This case raises what I am told is a new question, certainly is a difficult one, namely, as to whether, under the circumstances of the case, a shipowner who has chartered his ship on what is called a lump-sum charter, namely, a charter in which the remuneration for the services to be performed by the shipowner is one lump sum and not a sum per ton, is entitled to recover his freight. Under the circumstances, being a lump sum, he must be entitled to recover all or none, and that is the situation which creates the difficulty. I do not think I need state the facts of the case at any very great length. [His Lordship stated the facts, and continued:] The question is whether, under those circumstances, the shipowners, who have contracted for payment of a lump sum, are entitled to their freight or not? The charter was in these terms: [His Lordship read the terms, and continued;] In the form of the charter originally the freight was to be paid per standard with regard to some of the timber mentioned there, and with regard to the other per fathom, but all that was struck out, and it reads now "on being paid freight as follows: A lump sum of 1600*l.* (say sixteen hundred pounds) in consideration of which owners place at charterers' disposal the full reach of steamer on and under deck, including spare bunkers, if any." Then there was an exception clause, which included the usual ordinary exceptions, and, amongst others, perils of the sea.

It was argued before me for the defendants that they were entitled to the cargo, as it was their cargo, but they were not liable to pay any freight because in the first instance under a lump-sum charter what is called the lump-sum freight is not freight at all, but is a payment for the use of the ship, and unless the ship arrives, although the whole of the cargo may arrive and may be delivered to the consignees, no freight is payable at all. That was the first proposition, the broad proposition, and if that be correct there could be no payment here, because it was not contended that the ship was an arrived ship. She got off the port, but she certainly had not got to her chartered destination, and it was not contended that she was an arrived ship. Besides that, it was also contended that even assuming that broad proposition not to be upheld, no payment was due in this case for two reasons, as I understand it: First, that only a part of the cargo was delivered, and that unless the whole of the cargo was delivered no payment became due at all, because it was a payment of one sum for one service; and, secondly, it was contended that in the circumstances of this particular case, even assuming that the shipowner might be entitled to perform his contract by transhipping the cargo and sending it, nothing of that kind had been done because the cargo had been washed away and taken out of his possession altogether, and that it was not like a case of transhipment; it was mere salvage. On that last point I should have to determine what was the result and effect of the contract made by the shipowner with Messrs. Jenkins and Co. I think that was a contract made by the shipowner for the purpose of earning his freight. I think that the representatives of each interest were quite willing that the representatives of the other interest should pay for the work being done so long as they retained their rights, and I think it shows that the shipowner at one time was quite willing, in fact rather anxious, that somebody else should pay Messrs. Jenkins so long as he retained his right to freight. But he had contracted with Messrs. Jenkins, and I think, looking at what the master did, and his stipulation that the cargo was to be held under a lien for freight, that that was a contract made by the shipowner for the purpose of earning, if he could, his freight.

With regard to the first point, I cannot think on this charter it is essential, in order that any freight could be earned, that it should be earned by the arrival of the ship which is mentioned in the charter. I do not say that there may not be lump-sum charters in which the amount of freight, as it is called, is payable for the use of the particular ship, and that, unless the particular ship performs the services, payment is not to be made. There may be such charters, but, looking at this charter, I do not think that is the effect of it. It is the ordinary and regular charter for the services of a ship to carry a particular cargo for a particular voyage. If the mode of payment of freight which was in the form of charter-party had been carried out, it is not disputed that the shipowner, if his ship was disabled from performing service by perils of the sea, would be entitled to tranship the cargo in another ship, send it on to its destination, and deliver it and be entitled to his freight. I take first the case where he sent on the whole of the cargo. I cannot see that altering the method of payment from a rate per standard or per fathom to a lump sum deprives the shipowner of perhaps that obligation, but that right, certainly, of performing his contract. I think that if in this case the shipowner having his ship disabled, as I say, from an excepted peril, had transhipped the whole of those pit props into another vessel and delivered them at Port Talbot, as ordered, to the consignees, the consignees could not have refused to pay the freight any more than they could if it had been payable per fathom or per ton, or per anything else you like. It does not seem to me that altering the method of payment alters the primary obligations and privileges and rights of the shipowner and the consignee under the charter, although, no doubt, the fact that there is only one sum payable for one service, or payable in respect of the services in the charter, made a little difference in their rights as to payment.

To deal with the last point before I come to the second one, namely, that the whole of the cargo was not delivered, I cannot see that it makes any difference that the cargo, instead of being taken out of one ship and transhipped into another was,

in fact, swept out of the ship by a peril of the sea and afterwards collected by the shipowner or by persons who contracted with him to do it and delivered to the consignee. He delivers the cargo to the consignee, and the fact, if it be a fact, that it was out of his control for a certain time while it was in the water and washed out of the ship, does not seem to me to matter if he afterwards collects it and delivers it. Therefore I think that, if the whole of the cargo had been collected and delivered, it is exactly as if the whole of the cargo has been transhipped and delivered in another ship.

But the difficult point, and, to my mind, the great difficulty in this case, is to ascertain whether, where only part of the cargo is delivered, the shipowner is entitled to his freight, because he must be entitled to the whole of his freight. There is no way of dividing it per ton delivered or per standard delivered, or anything of that kind; he must be entitled to the whole of his freight or not to any, and he can only be entitled to the whole of his freight if he has performed his contract, and that is the point which seems to me to be the difficult one, and as to which, I confess, I had very great doubts, which are not entirely removed at present. But I think you have to look at the contract as a whole, and by that I mean you have to look at it as a contract which has to be performed subject to certain excepted perils, and that the obligation upon the shipowner is to perform his contract so far as he is not prevented from doing so by perils which are excepted in the exception clause. If he were prevented from doing it altogether, that is to say, if the whole ship and cargo went to the bottom and nothing was ever delivered, there would be a total failure of consideration, and the freight, I take it, would not be payable. But that is not this case. In this case there is—I forget the exact proportion—but it is a very substantial amount of the cargo that was delivered, and which has been received, and everything was collected and delivered that could be. The fact that the whole was not delivered was due to a peril of the sea. Therefore it seems to me, though I express the opinion, I must say, with some doubts, as I think it is a very difficult point, that the shipowner in this case did perform his contract, because his contract was to carry this cargo and deliver it so far as he was not prevented by perils of the sea. He did deliver a substantial amount, and therefore there is not a total failure of consideration. Therefore I think he was entitled to his freight. What might be the result of a case such as is mentioned in *The Norway* (*sup.*), where the whole of the cargo was not delivered by default of the shipowner, is a matter which does not arise here, and I do not think it is necessary to deal with it. It is not this case. This case is a case of a substantial amount being delivered, and the remainder not being delivered by reason of an excepted peril, namely, perils of the seas. Therefore I think that the shipowner did perform his contract in this case, and that he is entitled to his freight.

Marine insurance — Policy — Assignment of — Concealment—Innocent assignee—Marine Insurance Act 1906 (6 *Edw.* 7, *c.* 41), *s.* 50 (2).

An underwriter must have the opportunity of deciding for himself whether the knowledge of a material fact will affect him or not.

A defence of concealment of a material fact in connection with a policy of marine insurance is a good defence even against an innocent assignee of the policy. Such a defence arises "out of the contract" within the meaning of sect. 50 (2) *of the Marine Insurance Act* 1906.

Commercial Court.

Action tried by Hamilton, J. sitting without a jury.

The plaintiffs claimed in respect of a total loss under policies of marine insurance on the steamship *British Standard* which were subscribed by the defendants.
