SUBJECTS OF CASES.

PAGE

ACCIDENT.

Charter-party—Construction—Ship "prevented from working"—Accident putting out of action winches in forepart of ship. (Tynedale Steam Shipping Company Limited v. Anglo-Soviet Shipping Company Limited. Goddard, J.) 558

See *Workmen's Compensation.*

ACTION *IN REM.*

See *Carriage of Goods*, No. 8; *Collision*, No. 17; *Conflict of Law*, Nos. 2, 4; *Freight*, No. 1; *Jurisdiction*, No. 1; *Practice*, No. 9.

ADJUSTERS' CHARGES.

See *Practice*, No. 1.

ADMIRALTY JURISDICTION.

See *Practice*, No. 9.

ADMIRALTY, LIABILITY OF.

See *Collision*, No. 1.

AGENT.

See *Practice*, No. 5.

ALIEN.

See *Jurisdiction*, No. 3.

ANCHOR, VESSEL AT.

See *Collision*, No. 4.

APPRAISEMENT.

See *Salvage*, No. 1.

APPROPRIATION, NOTICE OF.

See *Sale of Goods*, No. 2.

ARBITRATION.

Charter-party—Clause providing that the captain shall prosecute all voyages with the utmost despatch—Exception clause—Construction—Claim for hire—Counter-claim for loss caused by delay in prosecuting a voyage—Arbitration. (Istros (Owners of) v. F. W. Dahlstoem and Co.) Wright, J.) 177

ARREST.

See *Practice*, No. 9.

ASSESSOR.

See *Collision*, No. 15.

ASSIGNMENT.

See *Freight*, Nos. 1, 2, 3; *Marine Insurance*, No. 15.

ARMED GUARDS.

See *Crown Protection*, No. 1.

AWARD.

See *Salvage*, No. 2.

BAIL.

See *Conflict of Laws*, No. 2.

PAGE

BAILMENT.

Steam trawler—Repairs being carried out in public dock—Bailment—Liability of repairer for safety of trawler during repairs—Custom at Grimsby. (Rehearo, The. Langton, J.) 422

BARGE UNATTENDED.

See *Collision*, No. 6.

BELGIAN CODE DE COMMERCE, ART. 91.

See *Conflict of Laws*, No. 1.

BERTH.

See *Carriage of Goods*, No. 25; *Limitation of Liability*, No. 1; *Negligence*, No. 2.

BILL OF LADING.

See *Carriage of Goods*, Nos. 2, 3, 4, 6, 9, 13, 14, 17, 34, 35 36; *Conflict of Laws*, No. 1; *General Average*, No. 7.

BLAME, APPORTIONMENT OF.

See *Carriage of Goods*, No. 1; *Collision*, No. 2; *General Average*, No. 4; *Marine Insurance*, No. 10; *Practice*, No. 8.

BOILERS.

See *Freight*, No. 1.

BUNKERS.

See *General Average*, No. 1.

BUYERS' RIGHT TO REJECT.

See *Sale of Goods*, No. 1.

CANADA.

See *Carriage of Goods*, No. 30; *Collision*, No. 14; *Conflict of Laws*, No. 3; *Constitutional Law.*

CARGO.

See *Carriage of Goods*, Nos. 1, 30, 31, 35; *Conflict of Laws*, No. 1; *General Average*, No. 1; *Negligence*, No. 1.

CARRIAGE OF GOODS.

1. *Charter-party—Discharge of cargo—Docks owned by railway company who act as stevedores—Railway company requested to discharge cargo—Apportionment of cost of discharge—" Work done by the vessel at the port of discharge." (Dampselskab Svendborg v. London Midland and Scottish Railway Company.* App. Ct.) 27

2. *Bills of lading—Discharge into lighters—Lighterage to be at risk of owners of goods—Damage to goods by reason of defective packing of other goods—Whether sea-transit completed—Liability of owners of ship—Carriage of Goods by Sea Act* 1924 *(14 & 15 Geo. 5, c. 22), Sched., Art. IV., 2, (c), (n), (q). (Goodwin, Ferreira, and Co. Limited v. Lamport and Holt Limited.* (Roche, J.) 38

3. *Bill of lading—Cargo of flour—Unseaworthiness—Steamer unfit to carry flour cargo—Implied warranty that steamer fit to carry cargo—Harter Act. (The Erik Boye.* Hill, J.) 66

SUBJECTS OF CASES.

PAGE

4. *Bill of lading—Carriage of goods by sea—Damage during transit and discharging—Acknowledgment by shipowners that goods received in apparent good order and condition—Estoppel—Goods delivered in a damaged condition—Exceptions—Liability of shipowners—Carriage of Goods by Sea Act* 1924 (14 & 15 *Geo.* 5, *c.* 22), *Sched., Art. III., rr.* 3, 4, *Art. IV., r.* 2 (m), (n). (*Silver and another* v. *Ocean Steamship Company Limited.* App. Ct.) .. 74

5. *Charter-party—Dispatch money—Cargo to be taken from alongside "at the average rate of* 125 *tons per working hatch per day"—Marginal clause—Consignees not obliged to take cargo from alongside at a higher rate than* 500 *tons per day—Construction—Chamber of Shipping Welsh Coal Charter* 1896 (*Form A*). (*The Sandgate.* App. Ct.) 83

6. *Bill of lading—Freight payable—Ship or goods lost or not lost—Loss of ship and goods at sea—Goods never delivered—Claim for balance of freight—Warranty of seaworthiness—Exceptions clause in bill of lading—Shipowners not liable.* (*Cosmopolitan Shipping Company* (*Inc.*) v. *Hatton and Cookson Limited* (*Liverpool*). App. Ct.) 130

7. *Deck cargo—Measurement of space occupied—Appropriate method of measuring—Measurement made by another method—Memorandum by Customs officer—Effect—Merchant Shipping Act* 1894 (57 & 58 *Vict. c.* 60), *s.* 77, *sub-ss.* (1), (2), *s.* 85, *sub-ss.* (1), (3). (*Great Western Railway Company* v. *Kassor Steam Navigation Company.* (Div. Ct.) .. 174

8. *Action* in rem*—Claim for freight—Owner of the ship domiciled in England—Judicature* (*Consolidation*) *Act* 1925 (15 & 16 *Geo.* 5, *c.* 49), *s.* 22—*Administration of Justice Act* 1928 (18 & 19 *Geo.* 5, *c.* 26), *s.* 6. (*The Eskbridge.* Lord Merrivale, P.) 207

9. *Charter-party—Bill of lading—Liberty to call at any ports in any order for "bunkering or other purposes"—"Trial trip"—Whether deviation—"Any reasonable deviation"—Rule that deviation excludes right to rely upon exceptions—Whether still exists after Act of* 1924*—Loss of c.i.f. cargo at sea, before property has passed—Measure of damages—Carriage of Goods by Sea Act* 1924 (14 & 15 *Geo.* 5, *c.* 22), *Schedule, Rules Relating to Bills of Lading, Art. IV., rr.* 2 *and* 4. (*Foscolo Mango and another* v. *Stag Line Limited.* App. Ct.) 210

10. *Charter-party—"Scanfin" charter-party—Mode of discharge—Consignee entitled to select any one or more of alternative modes "if customary and available"—Alternative mode selected not available—Delay—Damages.* (*The Varing.* App. Ct.) ... 231

11. *Conflict of laws—Claim for distance freight—Freight engagement notes made in Egypt—Charter of Swedish vessel—English charter-party—English bills of lading—Law of flag—*Lex loci contractus. (*The Adriatic.* Langton, J.) 259

12. *Discharge of grain cargo—Wheat in bags—Bag "starting" to bulk before discharge—Discharge by bucket grain elevator—Rate applicable—Schedule of rates of Stevedores' Association of Bristol, Avonmouth, and Portishead,* 1927. (*The Aldington Court.* Adm. Div. Ct.) 264

13. *Charter-party—Bill of lading—Liberty to call at any ports in any order for "bunkering or other purposes"—"Trial trip"—Whether deviation—"Any reasonable deviation"—Rule that deviation excludes right to rely upon exceptions—Whether still exists, after Act of* 1924*—Loss of c.i.f. cargo at sea, before property has passed—Measure of damages—Carriage of Goods by Sea Act* 1924 (14 & 15 *Geo.* 5, *c.* 22), *Schedule, Rules Relating to Bills of Lading, Art. IV., rr.* 2 *and* 4. (*Foscolo Mango and Co. and another* v. *Stag Line Limited.* (H. of L.) 266

14. *Charter-party—Freight—Shipper's weight in—Bill of lading presented by shipper—Shipper agent of charterer—Bill of lading signed by master on loading as required by charter-party—Understatement of weight of cargo—Indemnity by charterer against consequent loss.* (*Dawson Line Limited* v. *Aktiengesellschaft Adler fur Chemische Industrie of Berlin.* App. Ct.) 273

PAGE

15. *Charter-party—Exception clause including "accident to hull"—Deck-load of timber "at charterer's risk"—Loss of deck cargo while loading—Negligence of master—Seaworthiness—Accident to hull—Whether shipowners protected—Claim for short delivery.* (*C. Wilh. Svenssons Travaruaktiebolag* v. *Cliffe Steamship Company.* Wright, J.) 284

16. *Charter-party—"Weather working day"—Loading prevented by ice—Claim by owners for dead freight.* (*Dampskibsselskabet Botania A/S.* v. *C. P. Bell and Co.* Bateson, J.) 107

17. *Bill of lading issued in Palestine—Bill of lading illegal by law of Palestine—Failure to incorporate the "Hague Rules"—Bill of lading "wherever signed to be construed in accordance with English law"—Whether "Hague Rules" incorporated—Government of Palestine Carriage of Goods by Sea Ordinance No.* 43 *of* 1926. (*The Torni.* App. Ct.) 315

18. *Charter-party—Provision of ice-breakers—Duty of charterers—Ice-breakers provided and subsequently withdrawn—Claim for demurrage—Onus of proof.* (*Owners of Steamship Anastasia* v. *Ugleexport Charkow.* Roche, J.) 360

19. *Charter-party—"Enabling ship to leave port"—Ship detained in ice beyond geographical limits of port—Provision of ice-breakers—Claim by owners for damages for delay and for injury to ship.* (*Dampskibsselskabet Heimdal* v. *Russian Wood Agency Limited.* Roche, J.) 362

20. *Charter-party—Discharge of cargo—Consignees to select method of discharge—Selected method frustrated by strike—Duty to select alternative method—Provision of lighters without crew—Discharge by ship by only available method.* (*Fitzgerald* v. *Owners of Steamship Lona.* Roche, J.) 364

21. *Charter-party—Construction—Expenses of discharging cargo—Carriage of wheat, maize, or rye—Optional cargo—No importation of rye at port of discharge—Expenses exceeding those of discharging heavy grain.* (*Lykiardopulo* v. *Bunge y Born Limited.* Acton, J.) 399

22. *Charter-party—Construction—Provision of ice-breakers—Duty of charterers—Ice-breakers provided and subsequently withdrawn—Claim for demurrage—Onus of proof.* (*Owners of Steamship Anastasia* v. *Ugleexport Charkow. Dampskibsselskabet Heimdal* v. *Russian Wood Agency Limited.* App. Ct.) 404

23. *Charter-party—Construction—"Enabling ship to leave port"—Ship detained in ice beyond geographical limits of port—Provision of ice-breakers—Claim by owners for damages for delay and for injury to ship.* (*Dampskibsselskabet Heimdal* v. *Russian Wood Agency Limited.* App. Ct.) 404

24. *Charter-party—Construction—Ice clause—Duty of ship to notify port of need of ice-breaker assistance—Claim for dead freight—Timber coated with snow and ice—Carrying capacity of ship reduced.* (*Akties. Steam* v. *Arcos Limited.* Branson, J.) .. 409

25. *Charter-party—Berth contract—Construction—Lay days—Demurrage—"Time lost whilst steamer is in loading berth"—"Owing to work being impossible"—"Through rain"—"Amount of actual time so lost"—Work rendered impossible through rain—In fact, no cargo alongside to load—No lost time in loading.* (*Burnett Steamship Company Limited* v. *Joint Danube and Black Sea Shipping Agencies.* App. Ct.) 443

26. *Charter-party—Construction of ice clause—Duty of charterers—Ship travelling in convoy.* (*Andrea Sanguineti fu Davide* v. *Ugleexport, Moscow.* Branson, J.) 470

27. *Charter-party—Construction—Ice-bound ports—Icebreaker assistance—Obligation of charterers—Scope of the obligation.* (*Ugleexport Charkow* v. *Owners of Steamship Anatasia Russian Wood Agency Limited* v. *Dampskibsselskabet Heimdal.* H. of L.) 482

SUBJECTS OF CASES.

PAGE

28. *Charter-party—Construction—Duration of lay days—" Sundays and holidays excepted "—Local law forbidding loading of ships after 1 p.m. on Saturday—Saturday afternoon not a " holiday."* (*Hain Steamship Company Limited* v. *Sociedad Anonima Comercial de Exportacion e Importacion.* Mackinnon, J.) 504

29. *Damage to cargo—Measure of damage—Cargo of wheat—Non-delivery—Breach of contract—Tort—Conversion—No market price—Payment before delivery.* (*The Arpad.* App. Ct.) 510

30. *Canada—Quebec—Ship—Cargo—Loss by stranding—Unseaworthiness of ship—Fault or privity of owners—Canadian Water Carriage of Goods Act,* 1910 (9 & 10 *Edw.* 7, c. 61, *R. S. C.*). (*Paterson Steamships Limited* v. *Canadian Co-operative Wheat Producers Limited.* Priv. Co.) 529

31. *Charter-party—Ice-breaking clause—Charterers to arrange for provision of ice-breaking assistance—Operation of exceptions clause.* (*Danneberg* v. *White Sea Timber Trust Limited.* Branson, J.) .. 538

32. *Charter-party—Ice-breaking clause—Charterers to arrange for provision of ice-breaking assistance—Liability of charterers where assistance intermittent and inadequate—Operation of exceptions clause.* (Danneberg *v.* White Sea Timber Trust Limited. App. Ct.) 542

33. *Charter-party—Carriage of passengers by shipowners—Ship chartered for carriage of grain—Charter not a demise.* (*Société Annonyme Comercial de Exportacion e Importacion (Louis Dreyfus et Cia) Limitada* v. *National Steamship Company Limited.* Branson, J.) 549

34. *Damage to cargo—Charter-party (Chamber of Shipping British North American (Atlantic) Wood Charter-party,* 1914) *prescribing the form of the bills of lading to be signed by master—Bills of lading—" Shipped in good order and condition "—Cargo " to be delivered in like good order and condition "—" Condition " inserted by master before " quality, description, and measurement unknown "—Log entry by master that " cargo was in a very bad state "—Contract—Estoppel—Admissibility of evidence as to contents of contract (c.i.f.) between plaintiffs, consignees (buyers) and shippers (sellers)—Short delivery of part of cargo—Clause in charter-party that " bills of lading shall be conclusive evidence as against the owners as establishing the aggregate number of pieces delivered to the steamer "—Apportionment of costs.* (*Skarp, The.* Langton, J.) 576

35. *Bill of lading—Undertaking to deliver cargo at wharf—Liberty to tranship—Discharge into lighters—Cargo lost through sinking of lighters.* (*Marcelino Gonzalez y Compania* v. *Nourse (James) Limited.* Branson, J.) 590

36. *Bill of lading—Form prescribed by Chamber of Shipping River Plate " Centrocon " Charter-party, 1914—Charter-party made in London—Goods shipped at Argentine ports for delivery at Scandinavian ports—Claim against ship by indorsees of bills of lading for short delivery of cargo—Unseaworthiness—Incorporation in bills of lading of charter-party exceptions clause—Whether law of flag or law governing charter-party applicable to bills of lading—Intention of parties—Business efficacy.* (*Njegos, The.* Sir Boyd Merriman, P.) 609

1. *Requisitioned ship—Charter-party T.99—Collision—Negligence of both ships—War risk—Marine risk—Warlike operation—Liability of Admiralty.* (*Board of Trade* v. *Hain Steamship Company Limited.* H. of L.) 15

2. *Costs—Apportionment of blame in unequal degrees—Appeal—Proportion of blame varied—Apportionment of blame in equal degrees—Costs of appeal—Discretion—R. S. C., Order LXV., r.* 1. (*The Young Sid.* App. Ct.) 22

3. *Dumb hopper—Lighter—Lights—Hopper moored alongside dredger—After moorings cast off—Hopper held by forward moorings and swinging with the tide—Whether under way—Two riding lights being exhibited—Obligation to exhibit navigating lights—Port of London River By-laws,* 1922, *by-laws* 5, 6—*Port of London River By-laws,* 1914-1926, *by-law* 14 (*The Dagmar.* Hill, J.) 41

4. *River Thames—Vessel at anchor—Swinging—Whether turning signal required—Port of London River By-Laws* 1914-1926, *by-laws* 5 *and* 28 (e) (*The Palemberg.* Lord Merrivale, P.) 45

5. *Damages—Detention—Time charter-party—Cesser clause—Payment of hire to cease if time lost owing to collision or damage preventing the steamer from working for more than twelve hours—Loss of time whilst carrying out permanent repairs of damage sustained in collision before the making of the charter-party—Application of cesser clause—Whether hire properly decucted.* (*The Essex Envoy.* Bateson, J.) 54

6. *Negligence—Dumb barge moored alongside steamer during night—Barge unattended—No riding light—Port of London River By-Laws* 1914–1926, *by-law* 14. (*The Princess.* Hill, J.) 56

7. *Lights—" Flare-up "—light—May be shown if necessary to attract attention—Green pyrotechnic light shown—Whether " flare-up " light authorised by regulations—Regulations for Preventing Collisions at Sea* 1910, *art.* 12. (*The Tovarisch.* Hill, J.) [*Reversed.* See *No.* 8] 58

8. *Sailing vessel—Lights—Green pyrotechnic light shown to a steamship—" Flare-up " light—Whether green pyrotechnic light authorised by the regulations—Regulations for preventing Collisions at Sea* 1910, *arts.* 1, 12. (*The Tovarisch.* App. Ct.) (*Affirmed.* See *No.* 11] 87

9. *Vessels on crossing courses—Failure of " give way " ship to take action—Action taken by the " stand on " ship—Starboarding without taking off way—Negligence—Regulations for Preventing Collisions at Sea, Arts.* 18, 21 (*note*). (*The Otranto.* App. Ct.) 99

10. *River Scheldt—Vessels meeting in the vicinity of swinging or turning vessel—Duty of vessel navigating against the tide to stop her way over the ground—Obligation to take off way when vessel is aware of other vessels—Delay in taking off way until turning vessel is reached—Regulations relating to the navigation of the River Scheldt,* 1926, *art.* 40, *r.* 3. (*The Chatwood.* App. Ct.) 165

SUBJECTS OF CASES.

PAGE

11. *Sailing vessel—Lights—Green pyrotechnic light shown to a steamship—"Flare-up" light—Whether green pyrotechnic light authorised by the regulations—Regulations for Preventing Collisions at Sea*, 1910, *arts*. 1, 12. (*The Tovarisch*. H. of L.) 182

12. *Vessels on crossing courses—Failure of "give-way" ship to take action—Action taken by the "stand-on" ship—Starboarding without taking off way—Negligence—Regulations for Preventing Collisions at Sea* 1910, *Arts*. 19, 21 (*note*). (*The Otranto*. H. of L.) 193

13. *Evidence—Photographs taken from passing ship—Calculations made therefrom—Locality of collision*. (*United States Shipping Board* v. *The ship St. Albans*. Priv. Co.) 196

14. *Canada—Railway bridge over navigable channel—Obstruction to navigation—Damage caused to ship—Statutory authority—Interference amounting to public nuisance—Railway Act* (*R. S. Can*., 1927, c. 170), *ss*. 3, 245, 248. (*Steamship Eurana* v. *Burrard Inlet Tunnel and Bridge Co*. Priv. Co.) .. 202

15. *Fog—Whistle of steamship heard a little abaft the beam—Whistle heard again on the same bearing—Failure to stop—Regulations for Preventing Collisions at Sea, art*. 16—*Nautical Assessors—Disqualification of an assessor*. (*The Bremen*. App. Ct.) 252

16. *Damages—Loss of use—Dredger totally lost—Dredger engaged at time of loss in connection with the performance by her owners of contract to execute harbour works—Loss and expense incurred by owners owing to their inability through lack of financial resources to replace dredger—Loss of profits and incidental losses on contract—Natural consequence of collision—Measure of damages*. (*The Edison*. App. Ct.) [*Varied*. *See No*. 20] 276

17. *Barge sunk in dock—Expenses of raising and disposing of the wreck—Action* in rem *by harbour authority—"Damage done by a ship"—Jurisdiction—Judicature (Consolidation) Act* 1925 (15 & 16 *Geo*. 5, *c*. 49, *s*. 22, *sub-s*. (1) (a) (*iv*.). (*The Chr. Knudsen*. Bateson, J.) 347

18. *Detention of warship—Repairs in naval dockyard—Measure of damages*. (*The West Wales*. Bateson, J.) 349

19. *Portland Harbour — Dockyard Regulations — Vessel "about to enter" from seaward one of the channels between the breakwaters—Order in Council as to the Dockyard Port of Portland, Sched. II., reg*. 5 (1931, *No*. 176). (*H.M. Submarine Rainbow*). Langton, J.) 368

20. *Damages—Loss of use—Dredger totally lost—Dredger engaged at time of loss in connection with performance by her owners of contract to execute harbour works—Loss and expense incurred by owners owing to their inability through lack of financial resources to replace dredger—Loss of profits and incidental losses on contract—Natural consequence of collision—Measure of damages*. (*The Edison*. H. of L.) 380

21. *Damages — Interest — Repairs — Interest on estimated sums for repairs not actually carried out and on demurrage—"Slip order"—R.S.C., Order XXVIII., r*. 11. (*The Napier Star*. Langton, J.) 400

22. *Steam vessels approaching at night so as to involve risk of collision—Alterations of heading and to "yawing"—Both side-lights sometimes visible—"End on" Rule—Crossing Rule—Regulations for Preventing Collisions at Sea, arts*. 18, 19, 21. (*The Kaituna*. App. Ct.) 429

23. *"Crossing" rule—Failure of "give-way" vessel to keep out of way—Failure of "stand-on" vessel to take any action—Regulations for Preventing Collisions at Sea, art*. 21, *note*. (*The Lady Belle*. Langton, J.) 451

24. *Thames estuary—Navigation round N.E. Spit Buoy—Practice of pilots—"Narrow Channel" rule—"Crossing" rule—Duty of "stand-on" vessel to act where collision cannot be avoided by action of "give-way" vessel alone—Regulations for Preventing Collisions at Sea, Arts*. 19, 21, *and* 25. (*The Treherbert*. App. Ct.) 460

25. *Fog—Action of vessel hearing another vessel sounding signal of two prolonged blasts—Regulations for Preventing Collisions at Sea*, 1910, *arts*. 15 (*b*), 16. (*The Gastelu*. Bateson, J.) 480

26. *Fog—Fog signal heard forward of beam—Position of other vessel not "ascertained"—Engines not stopped—Regulations for Preventing Collisions at Sea, art*. 16. *By art*. 16 *of the Regulations for Preventing Collisions at Sea*: *"A steam vessel hearing, apparently forward of her beam, the fog signal of a vessel, the position of which is not ascertained, shall, so far as the circumstances of the case admit, stop her engines, and then navigate with caution until danger of collision is over*." (*Nippon Yusen Kaisha* v. *The China Navigation Company Limited*. Priv. Co.) 533

27. *Damages — Vessels damaged whilst laid up — Amount of repair damages agreed—Vessel sold for breaking up—Repairs not carried out—Whether owners entitled to recover agreed amount of repair damages*. (*The London Corporation*. App. Ct.) .. 535

28. *Suez Canal Regulations—Breach—Lights—Test as to whether lights displayed misleading or not—Burden of proof—Costs*. (*The Æneas*. Sir Boyd Merriman, P.) 571

29. *Collision outside entrance to Harwich Harbour—Negligence—One vessel outward bound approaching sharp bend in fairway and navigating against the tide—Other vessel rounding Beach End Buoy to enter harbour—By-law* 8 *of the Harwich Harbour Conservancy Board By-laws* (1929)—*Regulations for Preventing Collisions at Sea* (1910), *art*. 25—*Evidence—Whether pilot's report to Trinity House admissible*. (*The Prinses Juliana*. Bucknill, J.) 614

REPORTS

OF

Cases Argued before and Determined by the Superior Courts

RELATING TO

MARITIME LAW.

House of Lords.

Feb. 19, 21, *and April* 16, 1929.

(Before Lords Hailsham, L.C., Sumner, Buckmaster, Blanesburgh and Warrington.)

Clan Line Steamers Limited v. The Board of Trade. (*a*)

On appeal from the Court of Appeal in England.

Requisitioned ship — Charter-party T.99 — Loss due to warlike operation taken by Government —Marine risks by owners—Collision due to breakdown of steering gear—Not a consequence of warlike operation—Marine risk.

The claimants were the owners of the steamship Clan M., *which, during the war, was requisitioned by the Government under the terms of the charter-party T.99. By the terms of this charter-party the Government was responsible for loss or damage due to a warlike operation, and the owners were responsible for ordinary marine risks. While the vessel was proceeding in a convoy from the United States to France she suddenly left her course owing to a defect in her steering gear, which was never explained, came into collision with the* W. F., *another ship in the convoy, and sank. At the time of the collision the* Clan M. *carried a cargo the greater part (amounting to* 84 *per cent. of the whole cargo) of which consisted of cereals intended for the civil population. A small quantity of the cereals was intended for the troops, and there was also in the cargo a quantity of steel billets intended for the manufacture of shells. The* W. F. *was carrying war supplies, and it was admitted that that ship was engaged in a warlike operation at the time of the accident. The owners claimed compensation on the ground that the loss of the ship was due to a warlike operation. The Crown contended that the loss was not due to a warlike operation but to a marine risk. The arbitrator found that the sinking of the* Clan M. *was proximately caused by the impact of the* W. F. *moving in the course of a warlike operation which she was then carrying out, and that the sheering of the ship to port was not the real or proximate cause of her loss within the meaning of the charter-party. He, therefore, awarded in favour of the claimants.*

Held, that the loss was not a consequence of warlike operations. The collision was due solely to the breakdown of the steering gear of the claimant's vessel. From the moment that that breakdown occurred nothing which could be done by those in charge of either vessel could prevent the collision. That breakdown was the real and proximate cause of the loss.

Decision of the Court of Appeal (17 *Asp. Mar. Law Cas.* 533 ; 140 *L. T. Rep.* 33 ; (1928) 2 *K. B.* 557) *affirmed.*

Appeal from a decision of the Court of Appeal (Scrutton and Lawrence, L.JJ., Greer, L.J. dissenting), reported 17 Asp. Mar. Law Cas. 533 ; 140 L. T. Rep. 33 ; (1928) 2 K. B. 557, on an award stated in the form of a special case.

The question raised by the special case and by the appeal was whether the loss of a requisitioned vessel during the war was the consequence of a warlike operation.

The claimants, the Clan Line Steamers Limited, were the owners of the steamship *Clan Matheson*, which was a cargo vessel, built in 1917. The *Clan Matheson* was requisitioned by the British Government on the 28th Sept. 1917, while the war was still in progress, on the terms of the charter-party known as charter-party T.99, under which the shipowners remained liable for loss by ordinary marine risks, under clause 18 of the charter-party, while the Government, under clause 19, undertook liability for loss from all consequences of hostilities or warlike operations.

Clause 18 provided that " The Admiralty shall not be held liable if the steamer shall be lost, wrecked, driven on shore, injured or rendered incapable of service by or in consequence of dangers of the sea or tempest,

(*a*) Reported by Edward J. M. Chaplin, Esq., Barrister-at-Law.

collision, fire, accident, stress of weather or any other cause arising as a sea risk."

By clause 19 the risks of war which are taken by the Admiralty are those risks which would be excluded from an ordinary English policy of marine insurance by the following, or similar, but not more extensive clause. "Warranted free of capture, seizure or detention and the consequences thereof, or of any attempt thereat, piracy excepted, and also from all consequences of hostilities or warlike operations, whether before or after the declaration of war. Such risks are taken by the Admiralty on the ascertained value of the steamer, if she be totally lost, at the time of such loss."

In May 1918 the *Clan Matheson* sailed in convoy from New York with about forty vessels escorted by cruisers for Europe. The convoy sailed in columns; the *Clan Matheson* was the third ship in the second column from the port hand, and the steamship *Western Front* was in the corresponding position in the port column. The convoy sailed without lights On the night of the 22nd–23rd May, the steering gear of the *Clan Matheson* broke down, and she sheered out of her line across the bows of the *Western Front*, which rammed and sank her. The *Clan Matheson* carried a cargo of which only 16 per cent. was for military purposes, and was bound for Nantes, a war base as well as a commercial port. The *Western Front* was carrying a cargo made up entirely of war supplies for St. Nazaire, a war base. The claimants pleaded that at the time of the collision both vessels were engaged upon and were carrying out a warlike operation within the meaning of clause 19 of the charter-party, and that the loss was a consequence of warlike operations. The respondents admitted that the *Western Front* was engaged upon and carrying out a warlike operation but denied that the *Clan Matheson* was so engaged, or that the loss was in consequence of a warlike operation. The value of the vessel was agreed at the sum of 265,000*l*. Subject to the opinion of the court, the arbitrator held in favour of the claimants upon the ground that there was no negligence on the part of either vessel, and that the loss was a consequence of warlike operations within the meaning of clause 19 of the charter-party T.99. In the Court of Appeal it was held, affirming the decision of Wright, J., by Scrutton, L.J. and Lawrence, L.J., Greer, L.J. dissenting, that the loss was not the consequence of a warlike operation.

The claimants appealed.

W. A. Jowitt, K.C., *G. P. Langton*, K.C., *A. T. James*, K.C., and *J. MacMillan* for the appellants.

Sir *Thomas Inskip*, K.C. (A.-G.), *W. Norman Raeburn*, K.C., and *Russell Davies* for the Crown.

The House took time for consideration.

Lord HAILSHAM, L.C.—This is an appeal from an order of the Court of Appeal affirming the decision of the King's Bench Division upon an award stated in the form of a special case; the question which arises for determination is whether upon the facts as found by the arbitrator the respondents are liable to pay to the appellants a sum of 265,000*l*., representing the value of a steamship known as the *Clan Matheson* at the date of her loss in May 1918. The appellants were at all material dates the owners of the *Clan Matheson*, which was requisitioned by letters dated the 28th Sept. 1917, upon the terms of a charter-party known as "T. 99."

By clause 18 of the charter-party it was provided as follows: "The Admiralty shall not be held liable if the steamer shall be lost, wrecked . . . by, or in consequence of, collision . . . or any other cause arising as a sea risk." Clause 19 of the charter-party provided: "The risks of war which are taken by the Admiralty are those risks which would be excluded from an ordinary insurance policy of marine insurance by the following but not more extensive clause:—'Warranted free of capture, seizure, or detention and the consequences thereof . . . and also from all consequence of hostilities or warlike operations. . . . '"

On the 17th May 1918, whilst the *Clan Matheson* was still under requisition upon the terms of the charter-party she sailed from New York in convoy. She was bound for Nantes and her cargo consisted as to 84 per cent. of stores intended for the civil commissariat and as to 16 per cent. for the military authorities.

The convoy sailed in columns; the *Clan Matheson* was the third ship in the second column from the port hand; the regulation distance between each ship in the same column was 400yds. and the regulation distance between the columns was 800yds.; the corresponding ship in the port column was a vessel called the *Western Front*, which was under charter to the Government of the United States of America and was bound for St. Nazaire with a cargo made up entirely of war supplies for that Government; St. Nazaire was a war base.

On the night of the 22nd-23rd May 1918 the convoy was proceeding at a speed of from nine to nine-and-a-half knots; there was a rough sea; the convoy was sailing without lights, but it was a moonlight night, visibility was good and every vessel in the convoy could easily be seen. About 1 a.m. the second officer of the *Clan Matheson*, who was then on watch, noticed that the ship ahead of him in his column was on his starboard bow. He ordered the quartermaster to port the helm, but found that the ship did not respond. He repeated the order, and then went to the helm and found the wheel hard a-port. He suspected that something in the steering gear had suddenly given way, and he called the captain and the chief engineer. The engines were put astern and attempts were made to adjust the steering gear, but meanwhile the *Clan Matheson* swung right across the bows of the *Western Front*,

which struck her amidships and approximately at right angles. The *Clan Matheson* sank within two hours and became a total loss; the time which elapsed between the moment when the second officer first noticed that the *Clan Matheson* was out of her course and the moment of the collision was estimated by him at from two-and-a-half minutes to four minutes, and this seems on the data given to be an outside estimate. It was admitted on the pleadings that the *Western Front* was engaged upon a warlike operation; it was contended before the arbitrator that the *Clan Matheson* was also engaged upon a warlike operation; the arbitrator negatived this contention, and though the appellants challenged this finding in the court below, at your Lordships' bar it was conceded that the finding was one of fact and that there was material to support it and the contention was abandoned. There was no express finding upon the question whether there was negligence in the navigation of the *Western Front*; but in the courts below counsel for the appellants admitted that negligence on the part of those in charge of the *Western Front* could not be suggested—that is to say, in the language of the learned judge, "The *Western Front* could not avoid striking the *Clan Matheson* as she did when the *Clan Matheson* swung out of her course and across the bows of the *Western Front*." The arbitrator held that there was no negligence on the part of the appellants or in those in charge of the *Clan Matheson*, and he found "that immediately before the collision the steering gear of the *Clan Matheson* broke down and failed to operate, and that by reason thereof the said vessel sheered to port and across the course of the *Western Front*."

So far as appears, there was no suggestion at the time of the accident that the Admiralty was under any liability in respect thereof; but on the 11th Aug. 1926, encouraged apparently by their reading of certain decisions in your Lordships' House, the appellants by their solicitors wrote a letter to the respondents alleging that at the date of the collision the *Clan Matheson* was upon a warlike operation, and that there was therefore a claim upon those bearing the war risk insurance under the charter-party.

The claim was referred to the sole arbitration of Mr. Claughton Scott, from whose award I have extracted the findings of fact to which I have called your Lordships' attention. The learned arbitrator held upon these findings that the loss of the *Clan Matheson* was a consequence of warlike operations within the meaning of clause 19 of the charter-party, and consequently that the respondents were liable; and he stated his award in the form of a special case. The special case was argued before Wright, J., and he reversed the decision of the arbitrator. From that judgment the appellants appealed to the Court of Appeal, and by a majority (Scrutton, L.J. and Lawrence L.J., Greer, L.J. dissenting) that court upheld the decision of the judge and dismissed the appeal; from this decision the present appeal is brought.

In order to decide the question raised in the appeal it is necessary to refer to certain decisions which have already been given in this House upon the construction to be placed upon these two clauses in the charter-party. In the case of *The Petersham; Britain Steamship Company Limited* v. *The King* (15 Asp. Mar. Law Cas. 58; 123 L. T. Rep. 721; (1921) 1 A. C. 99) it was held that sailing without lights is not a warlike operation. In the case of *The Matiana; Green* v. *British India Steam Navigation Company Limited; British India Steam Navigation Company Limited* v. *Liverpool and London War Risks Insurance Association Limited* (15 Asp. Mar. Law Cas. 58; 123 L. T. Rep. 721; (1921) 1 A. C. 99), which was heard and decided at the same time, it was held that sailing under convoy is not a warlike operation. In the cases of *The Ardgantock; Attorney-General* v. *Ard Coasters Limited* (15 Asp. Mar. Law Cas. 353; 125 L. T. Rep. 548; (1921) 2 A. C. 141) and of *The Richard de Larrinaga; Liverpool and London War Risks Insurance Association Limited* v. *Marine Underwriters of Steamship Richard de Larrinaga* (15 Asp. Mar. Law Cas. 353; 125 L. T. Rep. 548 (1921) 2 A. C. 141) it was held that if a warship carrying out her naval duties in time of war comes into collision with a merchant vessel without any negligence on the part of those in charge of either the warship or the merchant vessel, the resultant damage to the merchant vessel is a consequence of warlike operations. In the case of *Commonwealth Shipping Representative* v. *Peninsular and Oriental Branch Service; The Geelong* (16 Asp. Mar. Law Cas. 33; 128 L. T. Rep. 546; (1923) A. C. 191) it was held that a merchant vessel carrying war stores from one war base to another war base for the British Government in time of war was engaged upon a warlike operation and therefore in the same position as a war vessel. In the case of *The Warilda; Adelaide Steamship Company* v. *The King* (16 Asp. Mar. Law Cas. 178; 129 L. T. Rep. 161; (1923) A. C. 292) it was held that where a ship engaged on a warlike operation comes into collision with another vessel, the damage done to the former ship is none the less a consequence of a warlike operation because those in charge of that vessel have been guilty of negligence which brings about the collision. There is in addition a decision of the Court of Appeal in the case of *The Trevanion; Re Hain Steamship Company Limited* (*Owners of the Steamship Trevanion*) *and The Board of Trade* (17 Asp. Mar. Law Cas. 520; 139 L. T. Rep. 566; (1928) 2 K. B. 534), that if a collision occurs between a vessel engaged in a warlike operation and a merchant vessel owing to negligence in the navigation of both vessels the collision is none the less a consequence of warlike operations within clause 19 of the charter-party. Your Lordships were informed that this last decision is under appeal to your Lordships'

House; it is not necessary to express any opinion as to its correctness in order to determine the present case, and I do not propose to discuss it in this judgment.

Counsel for the appellants contended that these authorities established that a collision between a vessel engaged in a warlike operation and a merchant vessel is the consequence of a warlike operation where neither vessel is to blame; that it is none the less a consequence of a warlike operation if those in charge of the warship are to blame; that if the decision in *The Trevanion* be correct it is none the less the consequence of a warlike operation if those in charge of both vessels are to blame; and they asked your Lordships to say that the true principle was that wherever a collision occurred between a vessel engaged upon a warlike operation and another vessel, the damage resulting from that collision was the consequence of a warlike operation within the meaning of clause 19 of the charter-party. On the other hand, the Attorney-General argued that in the cases cited the warship was, as he expressed it, the aggressor; and he contended that in order to determine whether the loss fell within clause 18 or clause 19 of the charter-party, it was necessary to decide whether the collision was due to the action of the war vessel or to some other cause.

It is a well-settled principle of marine insurance law that *causa proxima non remota spectatur;* and it was expressly determined in the well-known case of *Ionides* v. *Universal Marine Insurance Company* (1 Mar. Law Cas. (O.S.) 353; 14 C. B. N. S. 259) that this maxim is applicable in cases in which the question to be decided is whether the loss is due to a marine risk or to a war risk. There is no doubt, therefore, that it must be applied in the present case. But in my opinion its application does not lead to the result for which the appellants contend. By the express terms of clause 18 of the charter-party, the Admiralty is not liable if the steamer be lost in consequence of a collision; while clause 19 excludes from these losses for which the Admiralty is not liable, collisions which are the consequence of warlike operations. This necessarily imposes upon the tribunal the duty of determining in the case of loss by collision whether or not that collision is the consequence of a warlike operation; and I have no doubt that in determining this question the proximate cause of the collision is the one which has to be looked at. But this does not mean that you must exclude from consideration everything which happened before the actual impact took place; the illustrations given by Erle, C.J. in his judgment in *The Ionides* case (*sup.*) are sufficient to establish that proposition. In the present case the facts found by the arbitrator show that the collision was due, and was due solely, to the breakdown of the steering-gear of the *Clan Matheson*. From the moment when that breakdown occurred nothing which could be done by those in charge of either vessel could prevent the collision, and in my opinion in law as well as in ordinary parlance, the collision was the consequence of that breakdown.

The conclusion which I have reached is supported by the high authority of Lord Sumner in *The Warilda* case (*sup.*), to which I have already referred. Lord Sumner says (16 Asp. Mar. Law Cas., at p. 182; 129 L. T. Rep., at p. 165; (1923) A. C., at p. 305): "When damage is done by two ships coming into collision, one being engaged in a warlike operation, and the other on an ordinary commercial voyage, the collision is a risk falling on the marine policy, unless it is taken out of it by being proved to be caused by warlike operations, and this proof fails, when it is shown to be caused by the action of the officer in charge of the commercial operation, all the more so if his action is negligent and blameworthy; but I think the result would be the same, if his action was only an error of judgment or wrong but excusable in what is called the agony of the moment, so long as it is his action that causes the collision effectively and proximately, for the ship engaged in the warlike operation may play a minor part, since it takes two to make a collision." It was contended that this passage was only an *obiter dictum* and that it should be overruled; but in my opinion it is an essential part of the reasoning upon which the judgment proceeds, and in any event I regard it as a correct statement of the law. I agree with the view taken by Wright, J. in his admirable judgment, and it follows that I am unable to accept the reasoning of Greer, L.J. in the Court of Appeal. It seems to me that the learned Lord Justice fails to give sufficient weight to the fact that from the moment when the steering-gear broke down the collision was inevitable, in view of the situation in which the *Clan Matheson* then found herself in relation to the *Western Front.*

In my opinion the order appealed from is correct, and I move your Lordships accordingly.

Lord Blanesburgh asks me to say that he concurs in this judgment.

Lord Sumner.—In a claim for indemnity made in the shipowner's name on charter-party T.99, the claimants must show that the loss was one (*a*) excluded from an ordinary marine risks policy by the specified F.C.S. clause, and (*b*) caused in the insurance sense of that term by a peril, which in this case is some warlike operation. The *Clan Matheson* foundered after being in collision with the *Western Front.* Foundering and collision are perils insured against under an ordinary marine policy. Before the collision the *Western Front* and the *Clan Matheson* were sailing together in convoy at night, the *Western Front* admittedly being, by reason of her cargo and her employment, herself engaged in the warlike operation of proceeding with munitions of war for the Government of the United States to a war base

in France, while, on the other hand, the *Clan Matheson* in herself admittedly was not so engaged, though it was argued, somewhat faintly, that she became so when she sailed in convoy. Your Lordships have already decided the contrary of this last contention, and any discussion of it is merely academic and in legal proceedings irrelevant. The appellants' case, therefore, is that the *Clan Matheson* was lost because the *Western Front*, in the course of her warlike operation, cut her down amidships in collision. On this it is necessary to examine the facts set out and the conclusions arrived at in the award, which is stated in the form of a special case for the opinion of the court.

Both these vessels were large. The *Clan Matheson's* length was 405ft. and that of the *Western Front* must have been considerable also. In the prescribed order of the convoy the *Western Front* was on the *Clan Matheson's* port hand and was in line with her distant 800yds., while in each case the distance from the ships ahead and astern was 400yds. The speed of the convoy generally was 9 to 9½ knots. The *Clan Matheson's* steering gear fortuitously went wrong and she took and kept a fixed sheer to port. By estimate two-and-a-half to four minutes passed from the time when this sheer was first noticed to the actual collision. As the *Clan Matheson* got across the *Western Front's* bows and the angle of impact was about a right angle, either the *Western Front* was abaft or the *Clan Matheson* was ahead of her due station, or both, at the commencement of and during the sheer, but its duration can only be estimated generally, for the exact positions of the ships are not known. The award finds that, when the breakdown of the *Clan Matheson's* steering gear had been discovered, her engines were put astern and the appropriate signals were made. It does not find whether the *Western Front* used, or could have used, either her engines or her helm to arrest or modify the consequences of the *Clan Matheson's* sheer, but the appellants' counsel disclaimed any charge of negligence in the *Western Front's* navigation, just as the award itself exonerated those in charge of the *Clan Matheson*. There was a moon and the sea was rough with considerable swell, but all the same visibility is said to have been good. In these circumstances it is not to be expected that the change of the *Clan Matheson's* course would be apparent to those on the *Western Front* till after, and probably substantially after, the moment at which it was visible to her own officers, and, in view of the shortness of the time between the change of course and the collision and the difficulties in the way of any manœuvring of the *Western Front* owing to the proximity of other vessels, I think that the effect of these facts and of the absence of any charge of negligent navigation is logically that in the circumstances nothing could have been done to avert the collision.

The award concludes that the proximate cause of the foundering of the *Clan Matheson* was the impact of the *Western Front* and not her own sheer, but this conclusion the arbitrator submits to the court. It appears to me that on the facts found the collision had become inevitable for a material, if not a measurable, time before the impact occurred, and, if so, the character of the other vessel, as well as the direction of her course and of the blow, fail to become material. The *Clan Matheson* had become irretrievably a loss by a marine peril before the collision happened, and the character of the object with which she collided was a pure incident. If it had not been the *Western Front* it would have been some other ship.

There are many cases in the books in which a ship or cargo, though still physically untouched, is held to have been so affected by a peril as to be lost by it, though disappearance or dissolution only come at a substantial interval afterwards. This peril, having "begun to operate," and there being no escape, is held then to be the proximate cause. Such is Erle, C.J.'s illustration in *Ionides* v. *Universal Marine Insurance Company* (*sup.*, at p. 286) of a ship which gets embayed on a lee shore while flying from captors and so is wrecked, the loss here being by capture or a similar consequence of hostilities. Probably this is the best illustration to be found, but reference may also be made to *Bondrett* v. *Hentigg* (Holt's Nisi Prius 149) and *Hahn* v. *Corbett* (2 Bing. 205).

At first sight there may seem to be something paradoxical in saying that a ship is lost when she is still afloat and, apart from the jamming of the steering gear, is still uninjured, but it is not illogical. In the great majority of cases the question may be of no moment, since the ordinary policy covers so many perils, but whenever it is necessary to consider whether a limited insurance applies or not, for example a time policy or a policy against the risks excluded by the F.C. & S. clause, it becomes necessary also to inquire in what exactly the loss consists and when it happens, and in such cases it cannot be predicated of the subject-matter insured that no loss has happened to it, when it has been so affected by perils insured against that nothing can save it from ultimate destruction. The element of uncertainty as to the effect of subsequent events may go to the measure of the loss or to the necessity of giving notice of abandonment, but it cannot prevent an operative peril, which has already taken charge of the ship, from being its cause of loss when its complete operation cannot be arrested.

The appellants' argument took up the incidents of this casualty in the reverse order. They found a sinking of the *Clan Matheson* in consequence of a collision, in which, having fallen athwart the course of the *Western Front*, she was cut into by that vessel's bows, as she proceeded on her course pursuing the warlike operation in which she was engaged. "Here," said they, "is the cause of the loss, and the rule of proximate cause forbids any anterior research for a remoter cause or condition." The validity of this argument depends entirely on

its being established that the impact of the *Western Front* was the proximate cause of the loss, that the collision which thus took place would have been excluded from an ordinary marine policy by the perils specified in clause 19, and that the advance of the *Western Front* through the water was, in the circumstances, in itself a warlike operation. For this purpose the facts must be looked at. When an assured is covered equally by two policies he may be entitled to recover against whichever policy he chooses to rely on, but if he is covered in one event only by one and by another only in another event he has not a free choice to elect what peril he will declare to win on but must be governed by the facts of the casualty. If the true view of the facts is that the *Clan Matheson* was already a lost ship before the impact occurred, the subsequent events only determine the mode and measure of a loss, already caused *aliunde*. On the facts, Wright, J. and, as I read their judgment, the majority of the Court of Appeal, considered that this was so, and I agree with them. If so, the above argument fails *in limine*, and the *Western Front* was not the cause of this loss. I forbear to criticise the other elements involved in that argument. Hostilities only terminated a little over ten years ago, nor were warlike operations necessarily brought to an end even by the Armistice, and in the deliberate gestation of Government law. suits we do not know what further appeals may yet await decision or what arguments founded on the "warlike operations" cases and *Reischer* v. *Borwick* (7 Asp. Mar. Law Cas. 493; 71 L. T. Rep. 238; (1894) 2 Q. B. 548) may need consideration in the course of them. Accordingly, I will only venture to add this. In arguing questions of proximate cause in marine insurance, the temptation is always strong to resort to a minute analysis of the circumstances of a casualty, in order to place the cause as proximately to the conclusion of them as possible. It is a natural way, in which to apply the rule as it is laid down in the books. I think, however, that Lord Bacon's warning against inquiry into the causes of causes applies equally forcibly to a microscopic analysis of the incidents of a casualty as a means of discovering the proximate cause. His phrase appears to me to apply equally to an infinitely intensive analysis as to an infinite historical retrospect.

I think that the appeal fails.

Lord Warrington.—On the night of the 22nd–23rd May 1918, in mid-Atlantic, the *Clan Matheson*, a ship belonging to the appellants, was sunk as the result of a collision with a ship called the *Western Front*, in charter to the American Government, manned by naval ratings and carrying war stores to Nantes, the American base in France.

The *Clan Matheson* was in charter to the British Government under the well-known *pro forma* charter T.99, under which the Government take the risks of war, including particularly all consequences of hostilities or warlike operations.

The appellants contend that the sinking of the *Clan Matheson* was a consequence of warlike operations, and that accordingly the Government, now represented by the respondents, the Board of Trade, is liable for her loss. The respondents, on the other hand, insist that the sinking was an ordinary peril of the seas for which they are not liable.

The question was referred to the late Mr. Claughton Scott as sole arbitrator, and on the 28th March 1928 he made his award in the form of a special case. He found as facts and held in so far as they were questions of law:

(1) That the *Clan Matheson* was not at any material time engaged upon or carrying out a warlike operation.

(2) That there was no negligence on the part of the appellants or any of those in charge of the *Clan Matheson*.

(3) That immediately before the collision the steering gear of the *Clan Matheson* broke down and failed to operate and that by reason thereof the said vessel sheered to port and across the course of the Western Front.

(4) That the sinking of the *Clan Matheson* was proximately caused by the impact of the Western Front moving in the course of a warlike operation which she was then carrying out.

(5) That the sheering of the *Clan Matheson* to port was not the real or proximate cause of her loss within the meaning of the charter-party.

(6) That the sinking of the *Clan Matheson* was a consequence of warlike operations within the meaning of the charter-party, and he accordingly held, subject to the opinion of the court upon the question of law submitted by him, that the sinking of the *Clan Matheson* was a consequence of warlike operations within the meaning of the charter-party, and that the respondents were liable to pay to the appellants the value of the ship at the time of the accident, viz., 265,000*l*.

The special case was heard by Wright, J. on the 9th and 14th May 1928, who, in a very careful and elaborate judgment, held that the loss of the *Clan Matheson* was not a consequence of warlike operations, and that accordingly the respondents were not liable.

On appeal to the Court of Appeal that court, on the 19th July 1928, by a majority (Scrutton and Lawrence, L.JJ.; Greer, L.J. dissenting), affirmed the judgment of Wright, J. and dismissed the appeal. Hence the present appeal.

It is unnecessary to state the facts in detail. It is enough to say that the ships were sailing in convoy under escort of ships of war and without lights, but it is not contended, and in fact could not on the authorities be successfully contended that that in itself was a warlike operation: (*Britain Steamship Company Limited* v. *The King* (*sup.*), and *Green* v. *British India Steam Navigation Company Limited, British India Steam Navigation Company Limited* v. *Liverpool and London War Risks Insurance Association Limited* (*sup.*).

It is admitted on both sides that the *Western Front* was and the *Clan Matheson* was not engaged in a warlike operation.

It is also in my opinion clear that from the moment the breakdown of the steering gear occurred—a matter of from two-and-a-half to four minutes—before the collision, the collision was inevitable.

The question then is: What was the real or proximate cause of the loss? Was it the impact of the *Western Front* against the side of the *Clan Matheson*, and that alone, or was it the breakdown of the steering gear of the *Clan Matheson* rendering the collision inevitable?

In *Ionides* v. *Universal Marine Insurance Company* (*sup.*) the main question was whether the hostile act of the confederate authorities during the civil war in America in extinguishing a light on Cape Hatteras was the proximate cause of the stranding of a ship or whether the fact that the master was out of his reckoning was such proximate cause, and it was held that the latter was the proximate cause, although, if the light had not been extinguished, the stranding would probably not have happened. In giving judgment, Erle, C.J. gives some illustrations on p. 286 which are of value in the present case. A ship driven by an attempt at capture into an inhospitable bay and there driven ashore by the wind and lost. The attempt at capture would be the real and proximate cause, though the loss would not have happened but for the violence of the wind. In the converse case the ship succeeds in getting out of the bay, but encounters a gale which she would not have encountered but for the delay and is lost. Here the proximate cause is the gale, though but for the attempt at capture it might not have been encountered.

So here the collision in a sense occurred, inasmuch as it became then inevitable, as soon as the steering gear of the *Clan Matheson* broke down, and I think this misfortune should be regarded as the real and proximate cause of the loss, though the loss would not have occurred had not the *Western Front* been in the position in which she in fact was. I desire to express agreement with and to adopt the remarks of Lord Sumner in *Adelaide Steamship Company* v. *The King* (16 Asp. Mar. Law Cas. 178; 129 L. T. Rep. 161, at p. 165; (1923) A. C. 292, at p. 305), the case of *The Warilda*: "When damage is done by two ships coming into collision, one being engaged in a warlike operation, and the other on an ordinary commercial voyage, the collision is a risk falling on the marine policy, unless it is taken out of it by being proved to be caused by warlike operations, and this proof fails, when it is shown to be caused by the action of the officer in charge of the commercial operation." In my opinion these remarks apply equally where it is proved, as I think it is in this case, that the collision was caused by the failure of the ship to obey the will of the officer. For these reasons I think that I am justified in coming to the conclusion that the judgments of Wright, J. and Scrutton and Lawrence, L.JJ. are correct, and that this appeal fails and ought to be dismissed, with costs.

Lord BUCKMASTER concurred.

Appeal dismissed.

Solicitors for the appellants, *Ince, Colt, Ince, and Roscoe*.

Solicitor for the respondents: *Solicitor to the Board of Trade.*

April 16, 18, *and June* 14, 1929.

(Before Lords HAILSHAM, DUNEDIN, SUMNER, BUCKMASTER, and ATKIN.)

PHŒNIX INSURANCE COMPANY OF HARTFORD AND ANOTHER v. DE MONCHY AND OTHERS. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Insurance — Shipment of turpentine — Loss caused by leakage — American certificate of insurance—Limitation of time for recovery of claim—Meaning of leakage.

The plaintiffs were interested in a certificate of insurance which was issued under two policies of marine insurance subscribed by the defendants in respect of 100 *barrels of pure gum turpentine shipped from Florida to Rotterdam. The policies provided for payment for " leakages from any cause in excess of* 1 *per cent. on each invoice." It was the practice of the trade, at the port of shipment, to gauge the barrels of turpentine and to express the result in gallons, and at the port of discharge to weigh it and to express the result in kilograms with an allowance for reduction on account of the varying temperature conditions of* 3.25 *kilograms to the gallon. The policies also contained a stipulation providing that no suit or action for the recovery of any claim should be maintainable in any court unless such suit or action be commenced within one year from the happening of the loss out of which the claim arose, but that limitation clause did not occur in the certificate. When the vessel was discharged a shortage in respect of the gallons of turpentine shipped was ascertained to have taken place. The defendants having refused to pay upon the ground that there was no sufficient evidence of the loss and that the claim was not instituted within the year, the present claim was brought by the plaintiffs on the certificate.*

Held, (1) *that the limitation clause was not one which bound the certificate holder. The rights of the original policy holder, which were conveyed to the certificate holder, comprised the rights given by the policy qualified by all the conditions and warranties which affected the nature and extent of the insurance granted,*

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law

but did not impose an obligation affecting only a limitation of time within which the rights so given were to be enforced; (2) that an actual physical loss had been proved based upon the calculations, and there was no ground for imputing that loss to any cause other than leakages.

Decision of the Court of Appeal affirmed.

APPEAL from an order of the Court of Appeal (Scrutton, Sankey and Russell, L.JJ.) dated the 5th March 1928, affirming a judgment of MacKinnon, J. By a contract note dated the 27th July 1923 the respondents, who had for many years been established in Rotterdam as dealers in turpentine and other products, bought from the Columbia Naval Stores Company of Savannah 100 barrels of pure gum turpentine for shipment from Jacksonville, Florida, to Rotterdam. They had insured the turpentine with the appellants, two insurance companies, for the voyage. By the certificate of insurance dated the 27th Aug. 1923, which was issued under the two marine insurance policies, the respondents were insured by each of the appellants respectively for 50 per cent. of 14,925 florins against the ordinary marine perils and against leakage by the following clause: "To pay leakage from any cause in excess of 1 per cent. on each invoice, conversion of kilograms into the American gallon shall be made on the basis of 3.25 kilograms to the gallon." After receiving the turpentine on board the *Cape Town Maru* left Jacksonville on the 25th Aug. 1923. Heavy weather was experienced on the voyage, and when the vessel was discharged at Rotterdam a loss within the terms of the leakage clause was ascertained of 206.75 kilograms out of a total of 16,597.75 kilograms, to recover which the present action had been brought. The appellants contended that the loss, if any, was due to the inherent vice of the barrels of turpentine in that the same, being a volatile oil, volatilised or alternatively contracted without any injury to the barrels, and that "leakage" within the meaning of the clause meant a physical loss in transit by an escape of the liquid. They further contended that the policies of insurance, which formed part of the contract sued on, contained a clause that the appellants were not to be liable unless the action was brought within one year from the happening of the alleged loss, and the action was not so brought. The certificate contained no reference to the limitation clause. Mackinnon, J. held that the respondents were entitled to recover on the grounds (1) that leakage in the certificate meant any loss of weight or bulk during the course of the voyage, whichever measure be taken; (2) that the loss was proved by credible evidence of the kind contemplated by the certificate; and (3) that the appellants had failed to make out that the certificate incorporated the limitation clause from the policy. The Court of Appeal affirmed the learned judge's judgment. The defendants appealed.

W. A. Jowitt, K.C. and *Van den Berg* for the appellants.

S. L. Porter, K.C. and *W. Lennox McNair* for the respondents.

The House took time for consideration.

Lord BUCKMASTER.—I have had the opportunity of reading the judgment of my noble friend Lord Dunedin which he has committed to writing and with it I agree.

Lord DUNEDIN.—On the 27th July 1923, the agents in Rotterdam for an American company, the Columbia Naval Stores Company, sold by cable authority to Messrs. De Monchy, the respondents in this appeal, 100 barrels of spirits of turpentine at a certain price. The contract was a c.i.f. contract; it need not be quoted in full. It contained (*inter alia*) the following clauses: under the heading "Reduction of freight" it provided for the rate of exchange between pounds sterling, dollars, gilders, and reichsmarks, and then follows "Reduction of weight," American net weight to be reduced by 1 gallon = 3.25 kilos. It also contained the following clause:—"Insurance documents to include risk of leakage in excess of 1 per cent. upon the basis of the above reduction of weight."

The turpentine was shipped on the 25th Aug. 1923, at Jacksonville, Florida, on board the *Cape Town Maru*. The ship remained on the Florida coast till the 19th Sept. It then left for London, encountering some heavy weather on the passage. It left London on the 9th Oct. and went to Rotterdam, where it discharged the turpentine on the 22nd and 23rd Oct. An invoice and bill of lading were sent to the respondents in ordinary form. There was also sent to them a document entitled certificate of insurance. Cases were cited by learned counsel which show that it has been more than once decided in the courts of this country that such a certificate of insurance is not a good tender of an insurance policy under a c.i.f. contract. No question, however, as to that was raised by the respondents. They were content to hold that the document as it stands was a good fulfilment of the insurance part of their c.i.f. contract. I shall shortly revert to the document, on the construction of which the present case depends, but in the meantime I continue the narrative of facts.

The barrels of turpentine on being discharged had their contents weighed, in the ordinary manner in which such weighing is conducted, at Rotterdam by a sworn weigher. He found the weight of the turpentine to be 16,225 kilos. Now the intake quantity had been gauged at Jacksonville as 5,107 gallons. Converting this at the conversion figure of 1 gallon = 3.25 kilos, we get 16,597.75 kilos. Comparing this with the output quantity there is a deficiency in the output of 372.75 kilos. Deducting 1 per cent. on the total which equals 166, this leaves a deficiency of 206.75 kilos, and the value of that is the claim made in this action. It only amounts to 17*l.* in money,

but we are told that this is a test case, and that large sums of money are really dependent on its decision. The case was brought against the two insurance companies who issued the certificate and depended before MacKinnon, J., who decided in favour of the plaintiffs. On appeal the appeal was dismissed by a unanimous judgment of Scrutton, Sankey and Russell, L.JJ. Appeal is now taken to your Lordships.

I now revert to the certificate of insurance on which the case depends. It is, from the point of view of the practice in this country, a peculiar document. I cannot do better than quote what Scrutton, L.J. says about it : "This document must be seen to be believed. There is, apparently, a blank form of certificate of insurance which the companies issue to persons who have a contract of insurance with them somewhat similar to an open cover. Someone has filled in a blank certificate with the subject matter of the insurance, '100 barrels pure gum turpentine,' the voyage 'per steamer, *Cape Town Maru*, from Jacksonville to Rotterdam,' and the value insured '14,925 florins,' and then someone has stamped on the front of the document a clause which is almost completely illegible, and which is stamped over what can be discovered from other sources to have been originally a warehouse to warehouse clause. Someone has stamped on the back two or three clauses which are again on the original almost completely illegible and which also obliterate the names of the agents to whom claims should be made."

Read by the light of a legible copy of another certificate it is possible to consider its terms. It need not be quoted in full, but the material parts are as follows. First comes the opening :—

William H. McGee & Co., General Agents Marine Department, 15, William Street, New York.
Fl. 14925.00
This is to Certify, that on the Twenty seventh day of August 1923, there was insured under Policies 924 of the Phoenix Insurance Co. of Hartford (50% interest) No. 387 of the Great American Insurance Co. of New York (50% interest) in the name of the Columbia Naval Stores Co. of Delaware the sum of fourteen thousand nine hundred, twenty five and 00/100 Florine on 100 bbls, pure gum turpentine.
Valued at sum insured.
Per Steamer *Cape Town Maru* at and from Jacksonville, Florida, to Rotterdam, Holland.
loss, if any, payable to the order of the Assured Indorsed hereon upon surrender of this Certificate. This Certificate represents and takes the place of the Policy, and conveys all the rights of the Original Policy Holder (for the purpose of collecting any loss or claims) as fully as if the property was covered by a Special Policy, direct to the Holder of this Certificate, and free from any liability for unpaid premiums.

Then follow the signatures of the two companies, and then, "The clauses stamped or written on back hereof are made a part of the certificate." Then comes a set of held covered clauses and clauses dealing with breakage, etc. Then under the heading of conditions :—

It is agreed that this insurance covers also the risk of capture, seizure, destruction, or damage by men of war, by letters of mart, by takings at sea, arrest, restraints, detainments, and acts of kings, princes, and people, authorised by and in prosecution of hostilities between belligerent nations, but excluding claims for delay, deterioration, etc.

Then there is stamped on back "Provisions as to notice of claims," and there are more clauses as to "War risks," and then at last there is the clause on which the first point of this case turns.

"To pay leakage from any cause, in excess of one per cent. (1 per cent.) on each invoice, or whole leakage without deduction if vessel or craft be stranded, sunk, burnt, on fire, or in collision, or there be any forced discharge of cargo at a port of distress.

"Where barrels with contents are weighed at a port of shipment and destination, loss, if any, due to leakage shall be ascertained by a comparison of the gross shipped and gross landed weights. Where barrels with contents are weighed at port of shipment and contents of barrels only weighed at destination, loss, if any due to leakage, shall be ascertained by a comparison of the gross shipped weight, after deducting 80lb. tare for each barrel, and the net landed weight.

"Conversion of pounds or kilograms into the American gallon shall be made on the basis of :
3.25 kilograms to the gallon.
7.2lb. to the gallon."

Now under the claim made up as above mentioned as first put forward the answer of the underwriters was simple. They said that no leakage could be held as proved which did not leave signs of it on the cask. That at once raises the question "What is the meaning of leakage ?" Leakage I take to mean any stealthy escape either through a small hole which might be discernible or through the pores of the material of which the cask is composed. Turpentine has a very great power of penetration. It even penetrates through metal containers, but it evaporates rapidly, and having penetrated it leaves no sign or external mark. It is clear, therefore, that if the underwriters' view were right, there would be no leakage except when an actual hole was shown in the cask. The provision as to an average leakage and the elaborate provision as to comparing the contents of the cask on arrival with what they had been at starting, all point clearly to the inadmissibility of such a construction. It is not, therefore, surprising that when the case came into court little or nothing was heard of this defence. Another line of defence, however, was formulated, and it was as follows. Turpentine is a liquid which under varying conditions of temperature expands or contracts in bulk to a very marked degree. Now the temperature at Jacksonville in August is pretty certain to be higher than the temperature at Rotterdam in October. Therefore, argue the appellants, the shrinkage that was found in Rotterdam as compared with Jacksonville is only due to atmospheric conditions and you have not proved any loss or leakage.

This argument is ingenious and lost nothing in its treatment by learned counsel, but in my view it is straight in the teeth of the conditions of the contract. After all, the problem is simply this. Was all the stuff which was put into the cask at Jacksonville turned out of the cask at Rotterdam, or had some of it escaped *quocunque modo* during the voyage? Now that, if there was found to be less, it must be held to be leakage in terms of the bargain, is perfectly clear. In an expansive liquid you cannot compare gallons, but you can compare weight with weight, for weight is not affected by atmospheric conditions, and that the deficiency in weight was treated as leakage is abundantly plain. Two cases are specifically dealt with in the clauses quoted above: (1) when barrels and contents are weighed together at both ends; (2) when barrels with contents are weighed at port of shipment, but contents only at port of discharge. It suffices to repeat the terms of the first clause where barrels with contents are weighed at a port of shipment and discharge, "Loss, if any, due to leakage shall be ascertained by a comparison of the gross shipping and gross landing weights," and the same is said in the second case, the only difference being an allowance for the tare of the barrel. So far then as weight at each end is concerned the comparison is perfect, but there was one other case to be dealt with, namely, where there was measurement of volume at one end and measurement of weight at the other. These had to be correlated, and that is done by the conversion clause, "Conversion of pounds or kilograms into the American gallon shall be made on the basis of 7.2 pounds to the gallon, 3.25 kilograms to the gallon." Now this is exactly what has been done. The number of gallons taken in at Jacksonville has been converted according to the correct formula into kilograms, and that number of kilograms has been compared with the kilograms found by actual weighing at Rotterdam, the deficiency being leakage. That leakage was expected is perfectly clear from the provision that leakage to the extent of 1 per cent. is not to be paid for, and it is not unworthy of notice that for a lower premium no leakage is paid for unless above 4 per cent., but for the higher premium here paid leakage above 1 per cent. has to be paid for. Now, of course, the absolute accuracy of the conversion figure depends on the temperature. As it happens we have it proved by Dr. Goldsmith that at a temperature of 80 deg. Fahrenheit the correct figure of correlation is 3.25 kilograms to one gallon, and 80 deg. Fahrenheit has all along been said to have been the temperature at Jacksonville, so that in the circumstances of the present case it is obvious that no injustice has been done to the appellants. But this is a test case, and in other cases the turpentine may not have come from Jacksonville in August. We are here dealing with a commercial matter. It would be a practical impossibility to find correctly the temperature at the moment when each parcel had to be shipped and then calculate the proper conversion figure. Therefore the parties to avoid a practically impossible inquiry agreed on a conventional figure, and by that figure they must be bound. No doubt 3.25 was fixed on because it represented the proper figure for a very likely temperature at the places from which turpentine is shipped, and as shown here it is exact. But the appellants lose their case, not because, as it happens, the figure is an exact one, but because the figure of conversion as taken is the conventional figure agreed on between them, and in any such case they will be bound by the conventional figure, no matter whether the actual temperature would make that figure favourable or unfavourable to them. This concludes the first point.

The appellants have raised another and a very formidable point. It will have been noticed in the summary I gave of this certificate that it is deficient in many particulars as a contract of marine insurance. In particular it does not mention the ordinary perils of the sea. Therefore, although in the opening words of the certificate, after mentioning the policy, a copy of which was not sent along with the certificate, it says that it is to represent and go in place of the policy, yet unless the policy be looked at the contract would not be a true contract of marine insurance at all. It would be an insurance against leakage, but not against the ordinary perils of the sea. The policy, when looked at, is, according to experience of such instruments, almost as extraordinary a document as the certificate. It is blank as regards the particular thing assured, blank as to premium, and blank as to duration. It begins with the ordinary sea perils clause and then goes on with pages of various clauses, war risk clauses, addenda, and superaddenda. Then comes a clause in these terms: "A supply of blank certificates will be furnished to the assured to be used only for shipments under this policy and only in accordance with the terms thereof." Among the manifold clauses of the policy is one in these terms: "It is agreed that no suit or action for the recovery of any claim arising under this policy shall be maintainable in any court unless such suit or action shall have been commenced within one year from the date of the happening of the loss out of which the said claim arose." Therefore, say the appellants, you must after all look at the policy, and, if you do, you will find this clause which provides that no suit or action for the recovery of any claim arising under this policy shall be maintained in any court unless such suit or action shall have been commenced within one year from the date of the happening of the loss out of which the said claim arises.

This suit was admittedly not brought till after the expiry of a year from the loss. I think that to a certain extent the appellants are right; it is necessary to look at both the policy and the certificate. You cannot get the full terms of a contract of marine insurance without looking at both, but when you do

look at the policy you find a host of straggling clauses, many of them contradictory, and you also find in the policy a great lacuna, as no premium is mentioned and no particular "risk" is mentioned. Now the certificate is what I may call the determinative of the two instruments. It is the certificate that clinches the bargain as to a particular shipment and gives a premium. That is shown clearly enough by its own terms and by the clause that it represents and takes the place of the policy. It follows, I think, that all clauses of the policy which are essential to the contract of marine insurance must be read into the certificate, but beyond that there is no necessity to go. The condition in question is a collateral stipulation imposing a condition precedent. It has nothing to do with insurance particularly, but might be applied to any contract. Common sense and fairness revolt against the idea of this being enforced against the holder or indorsee of the certificate. Neither the holder, as here, nor a possible indorsee could ever have seen the policy. There is not even expressed in the certificate a right to ask for exhibition of the policy. Against them it may be fair to assume ordinary insurance clauses, but not to assume a collateral agreement of this sort. I therefore think that on this point also learned judges below were right. I move that the appeal be dismissed with costs.

Lord Hailsham desires me to state that he concurs in this judgment.

Lord Sumner.—The respondents in my opinion duly proved their loss, to the amount claimed, under the words "to pay leakage from any cause in excess of 1 per cent. on each invoice," which admittedly formed part of a contract of insurance subsisting between themselves and the appellants. Unless the appellants can establish their affirmative defence that the action was out of time this appeal must fail.

In common speech there is leakage from a barrel if it lets its contents escape, and there was evidence that some of the contents of these barrels did escape. True the word is "leakage" not "wastage" or "shortage," and we are told that turpentine has such a propensity to vaporise and its vapour is so insidious and so penetrating that under favourable circumstances it will even disappear through the material of sound and tight receptacles, and this may not so obviously be a "leakage." Still it would be affectation if I were to profess to know nothing about barrels, and I think that the judgment at the trial may be well supported on the ground that the missing turpentine simply escaped through the ordinary joints between the staves of the barrels, since the contrary is not proved and in a sound wooden barrel that is the readiest way of escape. For this at any rate "leakage" is a perfectly appropriate word. It is not really to the point to say that a sound barrel, as good as they make them, cannot be a leaky barrel; for the word here is "leakage," without imputation upon the barrels. The appellants again argued that they were only liable, when barrels showed signs of transit damage or where stains or other marks proved that turpentine had passed that way. As a defence on the contract this failed, for there are no contractual words to make it a condition of liability for leakage that such signs should be visible, and as mere evidence that the turpentine had not escaped at all the absence of such signs was one for the trial judge, who was justified by the affirmative evidence in holding the contrary.

I think the evidence of gauging at Jacksonville, Florida, and of weighing at Rotterdam was admissible and sufficient. (1) That the mode of gauging was inexact and inconclusive is not a valid criticism. It was the usual mode in the turpentine shipment business, to which this insurance was directed, and was not shown to result in substantial errors. (2) The weighing at Rotterdam was indeed proved by affidavit of information and belief, but it does not appear that the appellants sought to exercise their right to cross-examine or required any formal order for the admission of the affidavit, or appealed against such order, if any was made. There was jurisdiction to admit and act on such evidence and it is too late now to object to it. (3) The conversion of kilograms into American gallons is decided by a formula prescribed by the contract itself, and, as this formula is applicable in its terms not only to turpentine but to other fluids, there can be no doubt that it is adopted because in business exact conversion would be troublesome and expensive and, in spite of some known inaccuracy, this rough and ready conversion is agreed to be good enough for practical purposes. (4) It is said, and no doubt truly, that with turpentine shipped and discharged at different temperatures and atmospheric pressures and at substantial intervals of time, some loss is inevitable, and the insurance is against casualties that may happen, not against loss that must happen. This is all very well, but again the words "in excess of 1 per cent." are clearly used in order to discriminate by rule of thumb between these two kinds of loss, and, rough as it is, when a percentage of normal waste is agreed to, it binds. These words, coupled with the words "from any cause" appear to me to have been carefully and judiciously selected to protect the goods owner from this very kind of loss, arising in such a voyage as this and measured by the processes which are normally adopted at the two ports. The loss insured and proved I take to be an actual escape of turpentine, not a mere change in bulk owing to reduction of temperature.

The affirmative defence that the action was out of time (as it was in fact, if the clause relied on applies) is more difficult. It is hardly necessary to consider whether the certificate could be treated as a policy against leakage by itself. The plaintiffs claimed and recovered judgment for some small percentage additions,

which the certificate itself does not provide for, and this judgment has never been varied or abandoned. It is reasonably certain that the insurance, which was included in the c.i.f. price, was not confined to leakage, and when the plaintiffs accepted this certificate as one of the documents to be tendered, no doubt they took it to be a cover in accordance with their contract. No question as to the certificate being a valid tender arises.

The respondents' substantial case was that although some other parts of the policy were sufficiently incorporated with the certificate by reference, the clause of limitations was not. On the other hand I understood the appellants to contend that the certificate was only a certificate, and was not a contract to be sued on at all, or alternatively that, if it was a contract of insurance, it incorporated the whole of the policy, which was to be read as one with it, or, in the further alternative, that it sufficiently incorporated the clause in question, which was general and explicit in its terms and gave a reasonable time within which to sue for the loss.

The first contention clearly will not do. The certificate is not a certificate in the sense of a document stating that certain facts exist and verifying them but not saying any more. In that case its operation would be by estoppel against any denial of those facts. The certificate is clearly contractual. It is brought into existence in order that "the holders of certificates of insurance issued hereunder" may receive payment of losses, though they are not parties directly liable to pay premiums on the original "policy." Instead of leaving c.i.f. buyers from the original policy-holders to aver interest in themselves and to sue on the original policy, which of course they do not see, the certificate, after naming the policies by serial number, the cargo covered, the carrying ship, and the sum insured, says: "This certificate represents and takes the place of the policy and conveys all the rights of the original policy-holder (for the purpose of collecting any loss or claims) as fully as if the property was covered by a special policy direct to the holder of this certificate and free from any liability as to premiums," and later on it speaks of "claims under this certificate" and of "loss under this certificate" and it concludes with this "Notice.—To conform with the revenue laws of Great Britain, in order to collect the claims under this certificate it must be stamped within ten days after its receipt in the United Kingdom." Now our laws require that such an action should be launched upon a stamped policy and the object of stamping the certificate is to make it such a policy.

To contend that the certificate is not any part of the bargain, which has arisen between the appellants and the respondents, is untenable and it really amounts to saying that, when a claim comes to be collected, whatever the certificate may have been used for previously, the policy represents and takes the place of the certificate. Nor is it true that the whole of the policy is incorporated in the certificate or that both instruments in their entirety are to be read together. The language of the certificate is against this. Though it "conveys all the rights" of the original policy-holder, it expressly states that his liability as to premiums is not transferred, and there are two passages which expressly specify conditions of the policy that are incorporated and so by implication negative the incorporation at any rate of all others, if not of any others, viz., claims are "to be adjusted according to the usuage of Lloyds, but subject to the conditions of the policy and contract of insurance" and "this certificate is subject to the full terms of the policy in respect of being warranted free of capture, seizure and detention. . . ." On the other hand there is much in the policy, with its addenda, that is clearly personal to the original policy-holder, such as the agreement and payment of premiums, the option to have leakage covered on either of two alternative sets of terms, the option to have war risks included in the cover, and the warranty, in that event, to place with the appellant companies the corresponding marine insurance as well, the right to report other risks to the insurers with a view to their inclusion in the insurance, the right to give notice cancelling the policy, the right to issue certificates of insurance and the warranties as to the expression and limitation of their terms, and the limitation upon the total amount to be accepted under the policy at any one time. It is worth remark that, while the original assured warrant that they will not issue certificates which "vary from" the conditions of the policy, they are not called on to warrant that the certificates issued shall incorporate all or any of these conditions. These citations, which may not be exhaustive, show that any tacit incorporation into the certificate of terms contained in the policy is a selective incorporation only. The question then arises: what is the test of the selective process, bearing in mind that it is the appellants who frame and put forward these documents, and the respondents who, as a matter of business, must accept them blindly or refuse to accept them at all? One test would be to say, affirmatively, that only so much is incorporated as is necessary to give business efficacy to the transaction, for which purpose this clause of limitations is certainly not necessary. Another is to say, negatively, that the incorporation only extends to such clauses as a reasonable c.i.f. buyer would assent to as part of the terms of his purchase. If such a buyer were told, when the document was tendered to him, that notwithstanding prolongation of voyage or delay in examining and establishing the condition of cargo beyond his control, notwithstanding the necessity for taking advice as to Unites States law and procuring documents for that purpose from distant parts of the world, notwithstanding his own ill-health or disablement, he must issue his process in some tribunal, to whose jurisdiction these companies are amenable, within twelve months of the loss, or drop his undefended claim, I am sure that he would have none

of it, and under these circumstances I think the courts below rightly refused to countenance for the assured's sole benefit an incorporation so ambiguous and so one-sided.

When the documents, the aggregate of which forms the policy, come to be examined in the facsimile which has been supplied to your Lordships, it will be seen that they begin with a regular form of policy, which is supplemented by separate memoranda of various additional sets of terms, one to give an option to cover war risks from which the policy form is warranted free; another to cover turpentine and some other merchandise against leakage, which the form of policy did not cover; a third, which for the first time introduces and makes special provision for certificates of insurance to be issued by the original assured; and a fourth, called an "addendum," which provides for the terms as to leakage and conversion of volume into weight which are actually embodied in the certificate in question. This is the order in which these documents are printed in the record, but they are pinned together in a different order in the facsimile of the whole fasciculus, which is annexed to it. The original policy is dated the 21st Sept. 1921, but there is nothing to show how long ago the form was first adopted. The first addition as to war risks is not dated, nor is the second which relates to the issue of certificates, though this is followed by an "addendum," ancillary to and possibly part of it, which is dated the 10th Oct. 1921. The last document, also called an "addendum," is dated the 15th June 1923. It is, at any rate, clear that the first document —the parent policy—is the oldest and the others have come into existence to enlarge or supplement it, but while the limitation of time clause occurs in the parent policy and nowhere else, either by repetition or by reference, the document which introduces the certificate system into this insurance is a separate one, which contains a full code for that system, and the parent policy contains no reference to it. This document, however, does not enumerate the usual perils insured against or mention any sue and labour clause, but no doubt an insurance under the terms and liberties which the third document gives would be subject to perils insured against and to suing and labouring, as set out in the original policy. I infer from this structure that the limitation clause, which is a liability upon, not a right of, the original assured, was no part of the certificate scheme, which is directed to transferring rights *in globo*, but imposes liabilities only when they are mentioned.

The language of this clause bears out this view. It begins thus: "It is agreed that no suit or action for the recovery of any claim arising under this policy . . ." Now the claim here is one for leakage, from which this "policy," in the sense in which it is used in the clause, was free. It was a claim arising only under what I have called the second and fourth documents. Further, the great majority of the provisions of these documents do not use the expression "it is agreed," and in those few which do use it, all, unless I have overlooked something, are provisions where the parties agreeing are the insurance companies and the original assured only. It appears to me that, in the absence of any language calculated to do so expressly, this personal agreement, to which the plaintiffs were not parties, and which, even between the original parties, is so incomplete that it may be doubtful if an action could be brought on it, is not introduced into the document on which their rights arise by any recognisable mode of reference, and I am of opinion that the decision of the Court of Appeal was right and that it should be affirmed.

Both the trial judge and the Lords Justices refer in their judgments to the difficulties produced by the unsystematic accumulation of clauses and provisions in these numerous instruments, and to the difficulty of deciphering the clauses, caused by the mode of printing and also of superimposing extra clauses upon the print. Perhaps I may be permitted to add, lest a use should hereafter be made of their Lordships' words which they of course did not intend, that the questions here are only—what is the contract and what does it mean? Microscopic type and blurred imprints, like crabbed handwriting, present evidentiary difficulties in establishing the text of a contract, but they do not prejudice its construction. Similarly emphasis was laid on the fact that the plaintiffs, traders in Holland, had no access to the original policy, which remained in the United States, and no notice of the limitation clause in question. Notice, however, of the contents of a contract is not necessary, when the contract is proved, apart from fraud and mistake or things of that kind. If a party has contracted, he is bound, whether or not he has read or understood his contract or has pursued any references to their ultimate hiding place. If the respondents had had notice that, in issuing the certificate, their vendors had exceeded the authority given them by their policy and had broken its warranties, they would have been affected and restrained by such notice, but if they take a contract, whose terms they do not or cannot make out, they must abide by them as truly construed by a court.

Lord ATKIN.—It is a popular belief, especially prevalent amongst lawyers, that the efficient business man requires that obligations incurred in business should be expressed in writing in simple, intelligible and unambiguous language. It is a belief encouraged by the sayings of business men themselves. But in practice nothing appears to be further from the truth. Business men habitually adventure large sums of money on contracts which, for the purpose of defining legal obligations, are a mere jumble of words. They trust to luck or the good faith of the opposite party, with the comfortable assurance that any adverse result of litigation may be attributed to the hairsplitting of lawyers

and the uncertainty of the law. Some day the ideal business man will appear, on whose advent the legal advisers of many contracting parties, including in particular shipowners and underwriters, will get busy. I do not make any further reflection on the documents in this case, except to say that they offer an excellent illustration of the proposition advanced above. To ascertain the legal effect of them is difficult, but in the result I think that the contract of insurance to which the assignee becomes a party is expressed in the certificate of insurance, which becomes in his hands a policy. But the terms of the contract so expressed are to be ascertained partly from the certificate and partly from the original policy, some of whose terms are incorporated by reference in the certificate. The so-called policy is in fact misnamed. It does not insure anything, it neither defines the subject-matter insured, except that it is to be merchandise, principally rosin turpentines and other naval stores, nor the voyage insured, nor the sum insured. It is a promise during a certain time to issue policies to the named assured against named risks, but the completed policies expressed in the certificates are to be capable of varying the conditions of the policy in accordance with written instructions given from time to time by the insurers. One of the questions in the case is whether the holder of the certificate is bound by a clause in the policy which begins: "It is agreed that no suit or action for the recovery of any claims arising under this policy shall be maintained" except within one year from the happening of the loss." I myself have considerable doubt whether any claim could arise under the policy, and in any case whether a claim made under the certificate is a claim made under the policy. The parties are different and the insurance terms are varied. But without deciding the case on this ground I am of opinion that the clause is not one which binds the certificate holder. In my opinion "the rights of the original policy holder," which are conveyed to the certificate holder, comprise the rights given by the policy, *i.e.*, the rights to the promised indemnity, qualified by all the conditions and warranties which affect the nature and extent of the insurance granted. The words are not apt to impose upon the certificate holder, not a right, but an obligation affecting only a limitation of time within which the rights so given are to be enforced. A useful analogy is found in the decisions dealing with claims on bills of lading purporting to incorporate all the conditions of the charter-party as the result of which it is clear that an arbitration clause in the charter is not incorporated: (*Thomas and Co.* v. *Portsea Steamship Company*, 12 Asp. Mar. Law Cas. 23; 105 L. T. Rep. 257; (1912) A. C. 1). It deserves attention that the certificate expressly repeats with variations the clauses in the policy dealing with notices of claims, and this in itself leads me to suppose that the insurers intended that the certificate contained the full provisions of the contract as to requirements when once a loss had been incurred. Certainly I think a certificate holder would reasonably so suppose. For these reasons, therefore, I think that the defendants cannot avail themselves of this defence.

The main point on the case is whether the plaintiffs proved a loss under the certificate. They have under the claim "to pay leakage from any cause in excess of 1 per cent. on each invoice, or whole leakage without deduction" if vessel stranded, &c. The clause proceeds, "where barrels with contents are weighed at a port of shipment and destination, loss, if any, due to leakage, shall be ascertained by a comparison of the gross shipped and gross landed weights."

The defendants' contention originally was that they were not liable to pay unless the cask or other receptacle in which the turpentine insured was carried showed signs of leakage having taken place. This seems to me quite untenable. Turpentine is very volatile, and substantial leakage may take place without any external sign. I think, upon the true construction of the clause, the parties intended that if there were any gradual escape of the turpentine from the receptacle from any other cause than wilful damage the insurers were to pay. This seems to me to be the meaning of the words in this clause, which appear to lay down that if there is an actual weighing at port of shipment and at port of discharge, the difference in weight, *i.e.*, the actual physical loss, should determine the amount of leakage. Loss "if any" due to leakage meets the possible case of loss by pilfering or other wilful damage. In this case, however, the turpentine was not weighed at the port of shipment. The express words of the clause, therefore, do not apply. There is a table of conversion of weight into gallons which is necessary if only for the purpose of valuing the loss in weight where there has been a weighing on shipment and discharge. I do not think that the effect of the table is to make a gauging of the contents at the port of shipment equivalent upon the application of the reduction table to a weighing at port of shipment. The reason for the distinction is obvious. Volume varies with the temperature, and a difference of 20 degrees in the temperature will make a difference in bulk of about 1 per cent. It was suggested by the assured that the 1 per cent. deduction was intended to provide for this contingency. I cannot accept this. Leakage in excess of 1 per cent. means in excess of 1 per cent. leakage; and loss which is merely notional, arising from a conventional table of reduction, cannot in my opinion be described as leakage. Nor do I believe that the American insurers ever intended in this 1 per cent. deduction to include anything which was not physically lost at all. They were insuring against casualties, but not of arithmetic. This seems borne out by the clause, for even where there has been an actual weighing at both ends and an

ascertained physical loss, yet it is only the physical loss over 1 per cent. which is covered.

I think, therefore, that it is open to the insurers to meet a claim for loss based upon a calculation founded on the reduction table to point out the difference in volume caused by temperature, and to require this element to be taken into account by the assured before they can be said to prove their loss. If, however, the effect of temperature or volume is duly taken into account, and there still appears to be a physical loss upon comparison of weights now accurately adjusted, it appears to me that such physical loss is, on a proper construction of the policy, to be taken to be the result of leakage, and for any amount over 1 per cent. the assured will recover. In the present case it appears from the evidence that the scale adopted of 3.25 kilograms to the gallon was the appropriate scale for turpentine at the temperature at the port of shipment, and did give the actual weight of shipment comparable with the actual weight of discharge. There was, therefore, proved an actual physical loss, and the plaintiffs in the action have recovered the excess over 1 per cent. of that actual physical loss. There is no ground for imputing that loss to any cause other than leakage, and I think, therefore, that the judgment in favour of the plaintiffs is correct, and that this appeal should be dismissed with costs.

Appeal dismissed.

Board of Trade v. Hain Steamship Company Limited. (a)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Requisitioned ship — Charter-party T.99 — Collision—Negligence of both ships—War risk —Marine risk—Warlike operation—Liability of Admiralty.

In 1917 the steamship T., *belonging to the claimants, was requisitioned by the Shipping Controller, under charter-party T.99, which provided that the Crown would undertake to indemnify the owners in respect of all consequences of warlike operations while the owners would continue to bear the marine risks. In Dec. 1918, after the Armistice had been signed, the* T. *was on a voyage from the United States with a cargo of oats, and a steamer, the* R., *which had been requisitioned by the United States Government, was on a voyage from England to the United States with a cargo of mines which, as the Armistice had been signed, were no longer required for carrying on hostilities in European waters. On the night of Christmas Day, the steamers came into collision in mid-Atlantic, and the* T. *was so much damaged that she was off hire for ninety-nine days. The collision was due to the fact that both steamers were being negligently navigated at the time.*

The arbitrator considered himself bound by the decisions in the Commonwealth Shipping Representative v. Peninsular and Oriental Branch Service; The Geelong (128 *L. T. Rep.* 546; (1923) *A. C.* 191) *and* Attorney-General v. Adelaide Steamship Company Limited; The Warilda (129 *L. T. Rep.* 161; (1923) *A. C.* 292), *and held that the collision was a consequence of warlike operations, and therefore that the Crown was liable under the war-risks clause in the charter-party to indemnify the owners of the* T.

Held, (1) *that the arbitrator was entitled to find that the collision was a consequence of warlike operations, even although it happened after the declaration of the Armistice; and* (2) *that the claim made against the* R. *which, if it stood alone, would have been covered by the policy, was not the less covered because the* T. *also contributed to the accident.*

Decision of the Court of Appeal (17 *Asp. Mar. Law Cas.* 520; 139 *L. T. Rep.* 566; (1928) 2 *K. B.* 534) *affirmed.*

Appeal from the decision of the Court of Appeal, reported *sub. nom. Re Hain Steamship Company (owners of steamship* Trevanion) *and the Board of Trade* (17 Asp. Mar. Law Cas. 520; 139 L. T. Rep. 566; (1928) 2 K. B. 534) on a special case stated by an arbitrator.

In 1917 the steamship *Trevanion*, of which the claimants were the owners, was requisitioned by the British Admiralty under the terms of charter-party T.99. By clause 18 of that charter-party, "The Admiralty shall not be held liable if the steamer shall be lost, wrecked, driven on shore, injured, or rendered incapable of service by or in consequence of dangers of the sea or tempest, collision, fire, accident, stress of weather, or any other cause arising as a sea risk," and by clause 19: "The risks of war which are taken by the Admiralty are those risks which would be excluded from an ordinary English policy of marine insurance by the following, or similar, but not more extensive clause: Warranted free of capture, seizure, and detention and the consequences thereof, and also from all consequences of hostilities or warlike operations, whether before or after declaration of war."

On the afternoon of Christmas Day 1918, about six weeks after the Armistice was signed by Germany and the Allies in the Great War, the *Trevanion*, which was then carrying a cargo of oats, the property of the British War Department, from the United States of America,

(a) Reported by Edward J. M. Chaplin, Esq., Barrister-at-Law.

to Portland, for orders, collided in mid-Atlantic with the steamship *Roanoke*, which was then in the possession and under the control of the United States Government, employed by that Government solely for naval purposes as a regularly commissioned mine planter of the United States Navy, operated by the Navy Department, officered by commissioned officers of the United States Navy and manned by a United States naval crew.

The arbitrator found that, at the time of the collision, the *Roanoke* was proceeding "under her aforesaid public employment" from Portland, England, to Hampton Roads, Virginia, having 720 mines on board, but no other cargo and no passengers, and that there was no evidence with regard to the circumstances under or the purposes for which the mines were being carried. He found that both vessels were negligent and both were equally to blame.

The collision occurred on the 25th Dec. 1918, some six weeks after the Armistice. The duration of the Armistice was originally fixed at thirty-six days, but was subsequently extended from time to time. During the Armistice the blockade conditions set up by the Allied and Associated Powers remained unchanged, and German merchant ships at sea and vessels carrying contraband goods remained liable to capture; but the other hostilities had ceased. Up to the time of the Armistice, the *Roanoke* had been employed as a warship engaged in operations of war, and the question was whether she was performing a warlike operation when proceeding, under orders, from England to America during the temporary and qualified suspension of hostilities at sea brought about by the Armistice.

The owners of the *Trevanion* contended that the Armistice did not change the character of the *Roanoke's* employment, and that, as the war had not terminated, the case was simply one of a warship in the employ of one of the belligerent Powers carrying munitions of war from one place to another during a state of war, and consequently that the *Roanoke* was engaged in a warlike operation at the time of the collision.

The Board of Trade, on the other hand, contended that in order to render an operation "warlike" within the meaning of clause 19, it must be one which is performed in furtherance of hostilities, or for combatant purposes, and that an American warship proceeding to America after the cessation of hostilities, with munitions of war which were no longer required, was not engaged in a warlike operation.

The arbitrator, in deciding in favour of the owners of the *Trevanion*, had found as a fact and held as a question of law that the *Roanoke*, at the time of collision, was performing a warlike operation; and he held, further, following the decisions in *Commonwealth Shipping Representative* v. *Peninsular and Oriental Branch Service; The Geelong* (128 L. T. Rep. 546; (1923) A. C. 191); and *Attorney-General* v. *Adelaide Steamship Company; The Warilda* (129 L. T. Rep. 161; (1923) A. C. 292), that the collision was a consequence of warlike operations, and that, therefore, the Crown was liable to indemnify the owners of the steamship *Trevanion* under the war risks clause of the charter-party T. 99.

The Court of Appeal (Scrutton, Lawrence, and Greer, L.JJ.) held, reversing the decision of Rowlatt, J., (1) that at the time of the collision the steamship *Roanoke*, which was carrying the mines, was engaged in a warlike operation, and (2) that as the *Roanoke* was engaged on a warlike operation, though conducted negligently, the Crown was not excused from liability under its war-risks clause, because the loss was equally caused by the negligence of another ship. The Crown was, therefore, liable, and the award of the arbitrator in favour of the shipowners must be restored.

The Board of Trade appealed.

Sir *Thomas Inskip*, K.C., Sir *Boyd Merriman*, K.C. and *Russell Davies* for the appellants.

C. R. Dunlop, K.C. and *R. H. Balloch* for the respondents.

The House took time for consideration.

Lord Buckmaster.—At about 8.20 p.m. on the 25th Dec. 1918, the steamship *Trevanion* collided in the North Atlantic with the steamship *Roanoke*, and suffered damage by which she was disabled for ninety-nine days. The *Trevanion* was at the date of the collision under requisition to His Majesty's Government upon the terms of the charter-party which, under the reference of T.99, has become familiar to the courts. The *Roanoke* was in the possession and control of the United States of America, and was employed by the United States Navy as a mine-planter, officered by officers of the United States Navy, and manned by a United States Navy crew. At the time of the collision the *Trevanion* was on a voyage from New York to Portland laden with a cargo of oats, and the *Roanoke* was proceeding from Portland to Hampton Roads, Virginia, with 720 mines on board belonging to the Navy Department of the United States of America, and she was carrying no other cargo and no passengers. The collision was due to the joint negligence of both vessels and both were equally to blame.

The consequent dispute as to liability was referred to arbitration and the arbitrator found that the steamship *Roanoke* was at the time in question performing a warlike operation and that the collision was a consequence of hostilities or warlike operations. Rowlatt, J., on appeal, disagreed with this view, but his judgment was reversed by the Court of Appeal.

The terms of the charter-party, the rights under which are in issue, need only a brief reference. Clause 18 exempts the Admiralty from liability if the ship be lost, among other things, "by collision . . . or by any other cause arising as a sea risk," but by clause 19 the Admiralty themselves undertake the risks excluded from an ordinary insurance

policy of marine insurance under the following clause :—" Warranted . . . free from all consequences of hostilities or warlike operations whether before or after declaration of war." Upon those clauses it is only necessary to make this comment: that, in my opinion, taken together, they provide a complete insurance against all loss arising as a sea risk, all that is excepted from the general clause being undertaken by the Admiralty. If, therefore, the Admiralty had been the marine insurer the result would have been that the ship would have had the benefit of a complete marine insurance policy without any of the exclusions referred to in clause 19.

The first question that arises, therefore, is whether the collision was a consequence of hostilities or warlike operations; and the second, if this be so, is whether the fact of the negligence of the *Trevanion* prevents her owners from being entitled to recover. The first point appears to me to be one upon which it is possible that different views might reasonably be held. In Dec. 1918 the Armistice had been declared and had been existing for some six weeks, and it provided by art. 20 that there should be an immediate cessation of hostilities at sea, so that loss as a consequence of hostilities, meaning as I think it does, existing hostilities, is negatived. The war, however, had not ended, and however improbable it may have been, it was quite possible that it could at any moment have been revived, and it is certain that the position must be regarded in the light of that possibility. The *Roanoke* was sailing into peaceful waters with a cargo of mines, for what purpose is not stated, and these considerations point, to my mind, to the conclusion that she was not engaged in a warlike operation; but it is clear that there were other matters upon which the learned arbitrator might take the opposite view. It is essentially a question of fact, and I am not prepared to disturb his finding.

The remaining question can be shortly dealt with. This House has decided that if a vessel is engaged on warlike operations and by its negligence collides with another vessel, the negligence does not prevent the collision from being the result of warlike operations (see *Attorney-General* v. *Adelaide Steamship Company Limited; The Warilda* (16 Asp. Mar. Law Cas. 579; 129 L. T. Rep. 161; (1923) A. C. 292). It is neither necessary nor fitting to discuss or examine the grounds of that judgment, for the law upon this point is authoritative and clear. It follows, therefore, that the negligence of the *Roanoke* does not prevent this collision from being the result of warlike operations. Does, then, the negligence of the *Trevanion* produce that result? In my opinion it does not. I think the case of *Reischer* v. *Borwick* (7 Asp. Mar. Law Cas. 493; 71 L. T. Rep. 238; (1894) 2 Q. B. 548), approved by this House in *Leyland Shipping Company Limited* v. *Norwich Union Fire Insurance Society Limited* (13 Asp. Mar. Law Cas. 426; 118 L. T. Rep. 120; (1918) A. C. 350), shows that it is no answer to a claim under a policy which covers one cause of a loss that the loss was also due to another cause that was not so covered. It follows from this that the claim made against the *Roanoke*, which, if it stood alone, would have been covered by the policy, is not the less covered because the *Trevanion* also contributed to the accident.

For these reasons I think the appeal should be dismissed.

Lord Dunedin.—I concur.

Lord Sumner.—In par. 9 of his award the learned arbitrator says: "If and in so far as it is a question of fact, I find, and if and in so far as it is a question of law, I hold (subject to the opinion of the court) that the *Roanoke*, at the time in question, was performing a warlike operation and that the collision was a consequence of hostilities or warlike operations" and your Lordships have to decide in this appeal whether he was right. I think he was.

Though the Armistice had been signed and, having been renewed, was still current, war was not over nor was the renewal of war by any means out of the question. Except in so far as her destination may make the difference, the *Roanoke* was apparently doing what would have been one of her ordinary duties *flagrante bello*, and, if she had been proceeding to her station off the coast of Germany, I do not think it could have been argued, in view of the authorities, that her voyage so made was not a warlike operation. The temporary cessation of hostilities, which is all that an armistice in itself involves, could not deprive the operation of that character.

The appellants' proposition was that it is not enough to prove what the *Roanoke* was, unless it is also shown what she was doing. I recognise the high importance of considering the ship's errand and the purpose of her voyage, but I should have thought that, having proved an animal at large to be a lion, it was not further indispensable to prove that he was not at the moment merely performing as a lamb, unless, of course, some circumstances of ovine behaviour happened to be apparent. In truth the contention that the operation was not warlike, in other words, that under the circumstances, whatever it was like, it was in truth peaceful, is founded mainly on the *Roanoke's* destination, and partly, I think, on what is now knowledge but then was only hope, that hostilities were actually over. Your Lordships were not much troubled with the question whether this matter was one of fact or of law; the point really urged was that there is no presumption here one way or the other as to the purpose of this voyage; that its character depends on its purpose; and that for the purpose nothing short of affirmative proof will do. Had the vessel not been a regularly commissioned ship of war of the United States Navy this might well be so, but

that is what she was in fact, namely, a "mine-planter," with 720 mines on board, ready and, for all we know, waiting, to be "planted." We have no right, in law or in fact, to assume without evidence that such a ship is not engaged on the duty for the service of which she forms part of the Navy to which she belongs, and the mere fact that we do not know why she was sailing away from the ordinary area of hostilities for purposes unknown does not establish such a conclusion, however ample the scope for speculation may be. It is not for us to presume to know all the purposes of the naval authorities of the United States at that time. In the absence of knowledge I think that the arbitrator committed no error of law in presuming that the purpose of her voyage was such as to consist with her general warlike character, and in the like absence I think it would be useless for me to estimate the chance of her mission being of one kind rather than of another. This is a stronger case than that of a man-of-war, returning to her home port still equipped with her permanent armament. Live mines, I hope one may be justified in saying, are not generally supposed to be things either required in time of peace or convenient for storage at home against the next war, nor do they constitute so safe a cargo as to tempt any prudent authority to keep them on hand if they are no longer wanted and, in so far as this was a question of fact, I think that the learned arbitrator was entitled, if he was so minded, to say so.

It was argued, though I do not think that this question was submitted by the special case, that the collision here was not a risk taken by the Admiralty under charter form T. 99, because clause 18 excepts "collision." I think this reasoning is fallacious. Each ship ran into the other and, as the award finds, the collision "was caused by the negligent navigation of both vessels" and "both were equally to blame." For the purposes of an insurer's liability this means that the loss—whichever ship is regarded as the sufferer—was the result of two causes, jointly and simultaneously in operation—for the *Roanoke* ran into the *Trevanion* and the *Trevanion* ran into the *Roanoke*. If the respondents had claimed indemnity for this from Lloyd's underwriters the answer would have been "this loss, which is a collision loss, is one loss, the product of two causes, joint and simultaneous, namely the eccentric courses steered by the two vessels. The whole voyage of the *Roanoke*, and therefore this part of it, was a warlike operation, and from losses so caused this policy is warranted free. Neither in law nor in fact is this collision and its resulting damage apportionable—hence no part of it can fall on this policy." This defence would have succeeded and, under clause 19 of charter-party T. 99, this, coupled with proof that the *Roanoke's* voyage truly was a warlike operation, would have brought the case within the cover given by the Admiralty. Clause 18 must not be read so as to eviscerate clause 19; both stand together. I think clause 18 only excludes such collisions as do not otherwise come under clause 19 as being both excluded by the ordinary f.c. and s. clause and also caused by a warlike operation. Accordingly, I think that the appeal fails.

Lord Warrington.—On the 25th Dec. 1918, the respondents' steamship *Trevanion* came into collision in the North Atlantic with the steamship *Roanoke* and suffered considerable damage.

The *Trevanion* was at the time of the collision under requisition to H.M. Government upon the terms of the *pro forma* charter-party known as T.99.

The question in this appeal is whether the damage sustained by the *Trevanion* was a consequence of warlike operations within the meaning of clause 19 of the charter-party.

The question was in the first instance referred to Mr. Raeburn, K.C., who stated his award in the form of a special case.

He held that on the facts found or admitted the collision was a consequence of warlike operations. This decision was reversed by Rowlatt, J., whose judgment was in turn reversed by the Court of Appeal (Scrutton, Lawrence and Greer, L.JJ.). Hence this appeal.

At the date of the collision the Armistice, concluded on the 11th Nov. 1918, was in force. Under its terms hostilities at sea were suspended, but the existing blockade conditions were to remain unchanged.

It is common ground that the *Trevanion* was not engaged in a warlike operation. She was on a voyage from New York to Portland. At the time of the collision she was exhibiting the regulation lights, but not the optional masthead light.

The following are the findings of the arbitrator on which the question turns:

"5. The steamship *Roanoke* at the time in question was in the possession and control of the United States of America under a bare boat charter. During the period from the 25th June 1918 to the 25th Jan. 1919, she was employed by the United States of America solely for naval purposes as a regularly commissioned mine-planter of the United States Navy, operated by the Naval Department, officered by commissioned officers of the United States Navy, and manned by a United States Navy crew.

"At the time of the collision with the *Trevanion* the *Roanoke*, under her aforesaid public employment, and officered and manned as above stated, was proceeding from Portland, England, to Hampton Roads, Va., with 720 mines on board belonging to the Navy Department of the United States of America and was carrying no other cargo and no passengers. She was exhibiting the regulation lights. There was no evidence before me as to the circumstances under, or the purposes for, which the mines in question were being carried.

"6. Having carefully considered the evidence as to the said collision, I find that it was caused by the negligent navigation of both vessels, and that both were equally to blame. The said negligence consisted in a bad look-out on both, insufficient porting by the *Trevanion*, and failure to keep her course on the part of the *Roanoke*."

The appellants contended: (1) That the fact of the collision occurring during suspension of hostilities of itself prevented it from being caused by a warlike operation; (2) that even if this fact was insufficient, the absence of any evidence as to the circumstances under and the purposes for which the mines were being carried rendered it impossible properly to find that the *Roanoke* was engaged on a warlike operation; (3) that the negligence of those on the *Trevanion* prevented the collision from being a consequence of warlike operations.

As to the first of these contentions, I agree with the arbitrator and the Court of Appeal. Hostilities were suspended but the war was not at an end, and in my opinion it was open to the arbitrator to hold that, notwithstanding the suspension of hostilities, the voyage of the *Roanoke* under the circumstances found by him was a warlike operation.

As to the second, the arbitrator has found that during the period including the day of the collision the *Roanoke* was employed solely for naval purposes as a regularly commissioned mine-planter carrying a large cargo of mines. In a state of war that fact is in my opinion enough to constitute her voyage a warlike operation. It could not be denied that on the voyage out she was engaged in such an operation and, in the absence of evidence to the contrary, the same quality must, in my opinion, attach to the remainder of her voyage. Supposing the impact of the collision had exploded the mines or some of them causing further damage, it would have surely been impossible to contend that this was not a consequence of a warlike operation, yet the mere accident of the explosion would not alter the nature of the voyage.

As to the third contention, I think the point is concluded by the decision of this House in *Attorney-General* v. *Adelaide Steamship Company Limited; The Warilda* (*sup.*). It was there held that the negligence of the warship did not prevent the collision from being a consequence of warlike operations. If this is so, how can the negligence of the other ship contributing, but only contributing, to the collision, have that effect? On the finding of the arbitrator it is impossible to say that the negligence of either ship by itself was the proximate cause of the collision.

This case is clearly distinguishable from that of the *Clan Mathieson* (*Clan Line Steamers Limited* v. *Board of Trade* (45 Times L. Rep. 408) recently decided in your Lordships' House, in which it was held that the proximate cause of the collision was the breaking down of the steering gear of the merchant vessel, rendering the collision inevitable from the moment when it occurred.

I agree that the appeal fails and must be dismissed.

Lord ATKIN.—I agree with the judgment which has been delivered by my noble and learned friend, Lord Sumner, and have nothing to add.

Appeal dismissed.

Solicitor for the appellants, *The Solicitor to the Board of Trade.*

Solicitors for the respondents, *Thomas Cooper and Co.*

Supreme Court of Judicature.

COURT OF APPEAL.

Wednesday, Dec. 19, 1928.

(Before SCRUTTON, GREER, and SANKEY, L.JJ.)

SYMINGTON AND CO. *v.* UNION INSURANCE SOCIETY OF CANTON LIMITED (NO. 2). (*a*)

Insurance (Marine)—Policy—Slip—Goods insured from warehouse to warehouse—Warranted free from restraint—Free from particular average—Fire at port of shipment—Goods destroyed by order of port authorities—Marginal note in policy that goods not covered if otherwise insured against fire—Condition not in slip.

The claimants were cork growers and had a factory and warehouse some miles inland near Algeciras. There was no warehouse at Algeciras, and the cork was accumulated on the jetty at that place. The claimants insured a quantity of cork from a port or place between Bordeaux and Nice to the United Kingdom with the defendants. A fire broke out near the jetty, and the claimants' cork was seriously damaged by the action taken by the port authorities to prevent the fire spreading. The policy had not been issued, but the cork was covered by slips and cover notes. When issued the policy contained a marginal clause that the policy was not to enure to the benefit of any fire insurance company. Loss reasonably attributable to fire was, however, covered by clause 9, and there was also a warehouse-to-warehouse clause. The marginal clause was not included or stipulated for in the slip, and the arbitrator excluded it from the policy for that reason. He also held that the loss was one reasonably attributable to fire while the goods were in the ordinary course of transit. He made an award in favour of the claimants. The Court of Appeal held, on a case stated, varying the order of Roche, J. (1) *that at the time of the loss the goods were in the ordinary course of transit and were covered by the warehouse-to-warehouse clause;* (2) *that the goods while on*

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law

the quay at Algeciras were lost by perils insured against ; (3) *that the action of the port authorities was not a matter which was contemplated by the warranty against restraint of princes ; and* (4) *that the question whether the policy issued so far as it contained a fire clause was or was not contrary to the usual form of marine insurance on goods, must be referred back to the arbitrator. In his supplemental award the arbitrator found and awarded* (a) *that the policy issued so far as it contained the fire clause was a not unusual form of marine policy on goods ;* (b) *that it was not the usual form of marine policy on goods ; and* (c) *that it was the usual form of marine policy on goods issued by the appellants.*

Held. that the effect of the marginal clause was partially to limit or contradict clause 9 of the policy. If the underwriters wished to limit that clause and to exclude their liability for loss by fire they must do so by express terms on the slip, and not leave it to be implied that the usual form of policy of the company is to be issued. The defence of the underwriters therefore failed.

Further hearing of this appeal on the question which had been referred back to the arbitrator. The previous hearing is reported 139 L. T. Rep. 386.

The respondents, who were cork growers, had a factory and warehouse at San Roque, in Spain, a few miles inland from Algeciras and connected by railway with that port. There was a jetty at Algeciras but no warehouse, and the respondents were accustomed to send their cork daily in small quantities down to the jetty, where it accumulated until there was a sufficient quantity to be shipped to the United Kingdom.

On the 25th Nov. 1919 the respondents insured their cork with the appellants at and from any port or ports, place or places, between Bordeaux and Nice, to the United Kingdom and until delivered at destinations inland. The policy contained the following clauses :

(1) Warranted free of capture, seizure, arrest, restraint or detainment.

(6) The insured goods are covered subject to the terms of this policy from the time of leaving the shipper's or manufacturer's warehouse during the ordinary course of transit until on board the vessel . . . and from the vessel whilst on quays, wharves, or in sheds during the ordinary course of transit until safely deposited in consignee's or other warehouse at destination named in policy.

(9) Warranted free from particular average. . . . but notwithstanding this warranty the assurers are to pay the insured value of any package or packages which may be totally lost in loading, transhipment, or discharge, also for any loss which may reasonably be attributed to fire.

In the margin of the policy the following clause, which did not appear in the slip, was inserted :

"This policy not to enure to the benefit of any fire insurance company. It is warranted and agreed by the assured that any shore risk against fire granted herein shall not cover when the assured or any carrier or bailee has fire insurance which would attach if this policy had not been issued."

On the 9th Feb. 1920 the respondents had on the jetty awaiting shipment a large quantity of cork, some of which had been lying there since Aug. 1919, and the remainder of which had been sent down from the respondents' warehouse at San Roque in Nov. and Dec. 1919, and Jan. 1920. The respondents expected to ship this cork by a steamer which was expected to sail about the 20th Feb. 1920. On the 9th Feb. 1920 a fire broke out on the jetty at some distance from the respondents' cork, and the port authorities, in order to prevent the fire from spreading, jettisoned some of the cork and threw sea water on the remainder. At the time of the fire occurring no declaration had been made under the insurance ; no policy had been issued. The respondents claimed in arbitration against the appellants in respect of the goods so destroyed and damaged. The appellants contended that at the time of the fire the risk had not attached, as the goods were covered only from a place on the coastline, and the reference to warehouse meant from a warehouse at the port of loading ; that the proximate cause of the loss was not the fire but the action of the authorities, and was excepted by the warranty free from restraint ; and that the marginal note prevented the respondents from recovering as they had insured the goods against fire with other insurers.

The Court of Appeal held, on a case stated, (1) that at the time of the loss the goods were in the ordinary course of transit and were covered by the warehouse-to-warehouse clause ; (2) that the goods while on the quay at Algeciras were lost by perils insured against ; (3) that the action of the port authorities was not a matter which was contemplated by the warranty against restraint of prices ; and (4) that the question whether the policy issued, so far as it contained a fire clause, was or was not contrary to the usual form of marine insurance on goods must be referred back to the arbitrator.

The matter having been referred back to the arbitrator, the latter made a supplemental award in which he found (1) that the policy issued, so far as it contained the fire clause, was a not unusual form of marine policy on goods ; (2) that it was not the usual form of marine policy on goods ; and (3) that it was the usual form of marine policy on goods issued by the appellants.

Le Quesne, K.C. and *Simey* for the appellants.

Porter, K.C. and *Somervell* for the respondents were not called upon.

Scrutton, L.J.—We sent this case on one point back to the arbitrator who had stated the case for some further information because we thought that one aspect of the case might raise matters upon which additional information

was desirable, and we now have to determine the point which we left undetermined when this case came before us.

The dispute was as to some cork which was lying on the pier at Algeciras, between the warehouse and its ultimate destination in England, and which, a fire having broken out on the pier, was, as to part of it, thrown into the water to save it from being burned and to prevent the fire from spreading, and, as to another part of it, had water played on it for the same purpose. A series of points were then raised, three of which were dealt with.

It was said in the first place that the risk did not attach at the time of the loss, which turned upon the position of the goods on the pier awaiting shipment. We decided that the risk did attach. Then it was said that the loss was not due to the peril insured against, and certain considerations were put forward in argument as to whether this was a fire having regard to the fact that the goods were damaged by water and further as to whether the goods were jettisoned or lost by a peril *ejusdem generis*. We decided that the loss was due to a peril insured against. Then it was argued that inasmuch as the captain of the local port and fire brigade had thrown the cargo of cork into the water, the doctrine of restraint of princes applied and we declined to hold that the action of the fire brigade amounted to restraint of princes. There then remained a fourth point, which was this. The slip under which the policy was in the ordinary course of business to be issued and which was signed by the appellant company, insured cargo to be declared on various terms which included the Institute Cargo Clauses (F.P.A.), clause 9 of which runs as follows: "Warranted free from particular average unless the vessel or craft be stranded, sunk, or burnt, but notwithstanding this warranty the assurers are to pay the insured value of any package or packages which may be totally lost in loading, transhipment or discharge, also for any loss . . . which may reasonably be attributed to fire." It is said on behalf of the assured that the claim concerns loss of or damage to the goods assured which is reasonably attributed to fire, to which, the other answers having failed, the company replied: "No. In our ordinary policy, there is also this clause printed in the margin, 'This policy is not to enure to the benefit of any fire insurance company. It is warranted and agreed by the assured that any shore risk against fire granted herein shall not cover where the assured or any carrier or other bailee has fire insurance which would attach if this policy had not been issued.'" It is said: "True, it may be that there was loss or damage to the cargo insured which may reasonably be attributed to fire but you are insured under another fire policy: consequently, we are not liable to pay anything for that damage." The question then arose as to whether there was, and if so, what sort of, an implied term in the slip as to the form of policy to be issued and the suggestion was made that it must involve the usual form of policy of a particular company. On the other hand it was said that it must be only the usual form of insurance on goods without reference to any particular company. We sent the matter back to the arbitrator in order that he might decide whether there was a usual form or not of insurance on goods, and whether it contained the particular clause upon which the company relied in this case. The arbitrator, as one would expect, has carried out his duty with great detail and has furnished a schedule of about 50 insurance companies with particulars as to whether they have or have not this clause or some clause like it. It appears to me that the question may be tested, as I thought and noted at the time, without going into this matter. A contract of insurance originates with the slip, and the obligation in honour though not in law of the company is to reproduce that slip in the policy, and it appears to me that if the company desire to alter the terms on the slip by terms in their usual form of policy they must say so on the slip and not leave it to be implied. One may put it in this way. I put certain supposititious cases to Mr. Le Quésne. I put the case of a slip insuring against mortality in the case of cattle on a voyage, and the policy saying "not liable for mortality in any instance"—a very usual form of policy—and I understood Mr. Le Quesne to agree that in a case like that the slip would prevail and you could not issue a policy saying "not liable for mortality," if you had issued a slip purporting to insure cattle on a voyage against mortality. That was a case in which he said, there was total contradiction between slip and policy. Now one may put a case of partial contradiction which seems to me to arise upon this very form of policy and slip. Clause 9 of the Institute Cargo Clauses commences with these words: "Warranted free from particular average unless the vessel or craft be stranded." The result of which, if it stands, is that if you have a stranding, the underwriter is liable for particular average. But when you look at this company's form you find in a marginal clause that it is agreed that a stranding within the limits of the Suez Canal and other canals shall not be deemed a stranding. So there you have a case where the slip says that clauses are to be included which, if there is a stranding anywhere, including the canals mentioned, make the underwriters liable for particular average, and you have a clause in the policy which says that they will not be liable for particular average if the stranding is in one of the named canals. There again there seems to me to be a partial contradiction or limitation or alteration of the Institute Cargo Clauses and it appears to me in that case that if the underwriter wants to alter the Institute Cargo Clauses which he says on his slip are to be incorporated, he must expressly say so on the slip and not leave it to be implied by some implied term that the ordinary form of policy is to be issued. The question, therefore, is, what is the position in this case? Here clause 9, which begins with the words: "Warranted free from particular average unless

the vessel or craft be stranded, sunk or burnt" which would, in the case of fire, only make the underwriter liable for particular average if the ship were burnt, proceeds thus: "but notwithstanding this warranty the assurers are to pay for any loss of or damage to the interests insured which may reasonably be attributed to fire." That means "We will be liable for any loss or damage which may reasonably be attributed to fire, but only if you are not already insured against fire." That seems to me to be a partial contradiction or limitation of clause 9, which the slip says is to be incorporated in the policy, and it appears to me also, as in the two previous cases, that if the underwriter wishes to limit the Institute Cargo Clause which he agrees on the slip shall be included in the policy he issues he should do so by express terms on the slip. That view of the case renders it unnecessary to decide what I personally consider is rather a difficult question, and that is as to the effect of various companies appearing on the same slip. The question would never have arisen with Lloyd's underwriters, who would all be on the same policy in the same form, and no question of difference would arise between their respective names on slips because of their forms of policy, but I can quite see that a difficult question may arise when a number of companies appear on a slip.

For the reasons I have given it appears to me that the defence raised by the underwriters fails on this point also, and the result is that we affirm the arbitrator's award and the appeal will be dismissed with costs.

GREER, L.J.—I desire to add one or two words. I will assume that Mr. Le Quesne's argument is right. If we have to look at the form of policy which is to be issued in accordance with this slip we must first of all look to the slip so far as it is express, and so far as it does not contain an express term I am willing to accept that we must then look at the ordinary policy issued by this company and that we are not concerned, on the facts as found by the arbitrator, with any form of policy which is usual in the marine insurance market. It is not necessary to decide that, but I have a fairly confident opinion that Mr. Le Quesne's argument on that head is right. But taking it in that way it appears to me quite clear that if you have express clauses inserted in the slip as to what the company's liability is to be, you cannot by means of an implied term that the usual policy of that company is to be issued cut down the express terms which are contained in the slip. The contract is made by the slip, and if there are express terms in the slip as to what the liability is to be, I do not think it is right that those terms should be cut down by an implication that the usual form of policy of the company is to be issued. The express terms in the slip include the Institute Cargo Clauses, which are well-known printed clauses, which any one desiring to insure can obtain and read and one of them (No. 9) is this: "Warranted free from particular average unless the vessel or craft be stranded, sunk, or burnt, but notwithstanding this warranty the assurers are to pay the insured value of any package or packages which may be totally lost in loading transhipment or discharge, also for any loss . . . which may reasonably be attributed to fire." We have been told that the loss in this case was loss reasonably attributed to fire, that there is in this clause contained an express promise that that loss shall be payable by the insurance company. I agree with my Lord that if an insurance company, or a member of Lloyd's, or anyone entering into a contract of insurance with a term that the Institute Cargo Clauses are to apply, wishes to cut them down and limit his insurance in such a was as it is sought to be limited by the fire clause in the margin of this policy, he must say so in express terms. For these reasons, I am of opinion that the appeal should be dismissed with costs.

SANKEY, L.J.—I entirely agree. I do not think that the express terms, the Institute Cargo Clauses, which are made part of the contract by the slip can be cut down in this case by any implied term that the usual form of the company's policy shall form part of the contract. With regard to the second point, I feel very much pressed by the difficulty where you have companies instead of individual names on the slips, but I prefer to say nothing about that, and to reserve my opinion. I agree that the appeal should be dismissed.

Appeal dismissed.

Solicitors for respondents, *Parker*, *Garrett*, and *Co.*

Friday, March 22, 1929.

(Before SCRUTTON, GREER, and SANKEY, L.JJ.)

THE YOUNG SID. (*a*)

ON APPEAL FROM THE ADMIRALTY DIVISION.

Costs — Collision — Apportionment of blame in unequal degrees—Appeal—Proportion of blame varied—Apportionment of blame in equal degrees—Costs of appeal—Discretion—R. S. C., Order LXV., r. 1.

The costs of any proceedings without a jury in the Supreme Court are in the sole discretion of the court or judge. The discretion of the court or judge in the matter of costs, if exercised judicially, is not in any way restricted or fettered by rules of practice or decisions in previous cases. Thus, there is no rule in the Admiralty Court that where both parties are held to blame in equal degrees, either in a court of first instance or in an appellate tribunal, each party shall pay his own costs.

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

In an Admiralty collision action in a County Court, two vessels were held to blame in the proportion of one-third and two-thirds. On appeal the Divisional Court held both vessels to blame in equal degrees.

Held, that the costs were in the sole discretion of the Divisional Court, and that the court was not bound to award the appellants their costs or to order that there should be no costs on either side.

The Canton (166 *L. T. Jour.* 88 ; (1928) *W. N.* 214) *considered.*

Donald Campbell and Co. Limited *v.* Pollak (137 *L. T. Rep.* 656 ; (1927) *A. C.* 732) *followed.*

APPEAL by leave from a decision of an Admiralty Divisional Court (Lord Merrivale, P. and Hill, J., assisted by Elder Brethren) (reported 17 Asp. Mar. Law Cas. 548 ; 140 L. T. Rep. 200 ; (1929) P. 109).

The appellants (respondents in the Divisional Court) were the owners of the steam drifter *Young Sid.* In an action in the Lowestoft County Court in which the respondents, owners of the drifter *Ocean Swell,* who were appellants in the Divisional Court, claimed damages sustained in a collision between the *Young Sid* and the *Ocean Swell,* the County Court judge held both vessels to blame in the proportion of two-thirds to the *Ocean Swell* and one-third to the *Young Sid.* On appeal, the Divisional Court varied the proportions of blame, holding the vessels to blame in equal degrees. The Divisional Court held that the appellants in the Divisional Court were entitled to the costs of the appeal. The respondents in the Divisional Court (present appellants) obtained leave to appeal.

Dunlop, K.C. and *Holman* for the appellants. —This court is required to decide whether in the circumstances of this case there should be an order that the appellants should have the costs of the appeal, or whether there should be no order as to costs. It is contended that there is a well-established rule in the Admiralty Court that, where both vessels are held to blame in equal degrees, there should be no costs on either side. The existence of such a rule is recognised in the decision of Lord Phillimore in *The Canton* (166 L. T. Jour. 88 ; (1928) W. N. 214), and extends to a case where two vessels have been held to blame in equal degrees in the court of first instance, and the proportion of blame is subsequently varied by the appellate tribunal so that each vessel is held to blame in equal degrees. In such a case the appellant, not having admitted any liability, and to that extent having failed, is not entitled to any costs.

Langton, K.C. and *Naisby,* for the respondents argued that the question of costs was in the unfettered discretion of the court or judge, and that the court, having exercised its discretion, its decision could not be challenged upon the ground that the court were bound to award costs in accordance with any alleged rule or practice.

Dunlop, K.C. replied.

SCRUTTON, L.J.—I hope that the judgment which we are about to give will not disappoint the crowds of Admiralty practitioners who have been represented to us as waiting for guidance.

The point arises in this way. There was a collision, I think in Lowestoft Harbour, between two small steam drifters, the *Young Sid,* represented by Mr. Dunlop, and the *Ocean Swell,* appropriately represented by Mr. George Langton. The learned County Court judge, sitting with assessors, found that both vessels were to blame, the *Ocean Swell* in the proportion of two-thirds and the *Young Sid* in the proportion of one-third. The owners of the *Ocean Swell* appealed against the County Cour judge's order ; and they asked that the court should determine that the *Young Sid* was alone to blame for the collision. They failed in that appeal, but they succeeded in getting the proportion in which the two drifters were in fault altered from two-thirds and one-third to equal damages, that is to say, both equally to blame.

The question of costs then arose. Apparently the question was raised by those representing the *Young Sid,* that there was a rule of practice binding upon the judge of the Admiralty Court by which once the vessels were found both to blame neither got any costs. The President adjourned the matter for the consideration of the court. He gave judgment after considering the matter, citing a passage of Lord Phillimore's judgment in *The Canton* (166 L. T. Jour. 88 ; (1928) W. N. 214), where both vessels were held to blame, stating that the ancient rule of the court was that where both vessels were held to blame each party should bear his own costs in the court of first instance, and concluding : " I would recommend your Lordships not to interfere with this settled rule of practice, and to hold that there should be no costs either in the Admiralty Division or in the Court of Appeal ; and I think that this should also be the rule in your Lordships' house when the appellant seeks for a total reversal and the result in your Lordships' opinion is that both vessels are to blame." The President seems to have taken the view that the " settled rule of practice " as stated by Lord Phillimore did not agree with " the practice generally followed in this Division," which is the language he uses, and that in his view " the practice generally followed in this Division " was that where the party appealing had succeeded on the appeal, the costs should follow the event of the appeal and that the successful appellant, although successful in part, should have the costs of appeal ; and he mentions a case (*The Ceto* (6 Asp. Mar. Law Cas. 479 ; 62 L. T. Rep. 1 ; 14 App. Cas. 670)) in the House of Lords which fitted in, in his view, with the practice as he understood it, and an earlier case, *The Tyenoord* (Swa. 374). The Divisional Court proposed, therefore, to

give the appellants their costs of the appeal. The exact language is: "That being the case, although it is true, as Mr. Holman pointed out here, that only a small amount was involved, the appellants proved to be right in substance upon their appeal—they had substantial grounds of appeal and they succeeded—it seems to me that so far as the appeal is concerned the appellants ought to have their costs of the appeal."

The representatives of the *Young Sid* thereupon applied for leave to appeal and Mr. Holman, appearing for them, stated: "My point will be that costs in a case of this sort are a matter of principle, and that the principle has been laid down in *The Canton* (*sup.*), and that it is not now open to this court to exercise a discretion on a question of costs in an appeal where a judgment has been varied so that both vessels are held equally to blame. My point will be that in such a case as *The Canton* (*sup.*) the court always lays it down that there shall be no costs." On hearing that this question or principle was supposed to be involved, leave to appeal was given in these terms: "Leave to appeal from the order of the 22nd Nov. 1928, whereby the defendants were condemned in the costs of the appeal herein, but ordered that such appeal be limited to a matter of principle and not of discretion."

Now, in my view, the idea that any court under the Judicature Act is limited by rules in the matter of costs is erroneous. There are rules which have the force of a statute, rules under the Judicature Act, of which Order LXV., r. 1 is as follows: "The costs of and incident to all proceedings in the Supreme Court . . . shall be in the discretion of the court or judge"; and the suggestion that because in previous cases of a particular character the court has exercised its discretion in one and the same way, therefore a later judge, having the same set of facts before him, must exercise his discretion in the same way, appears to me to be quite erroneous. There is no doubt that up till about the year 1927, the courts below the House of Lords were laying down certain rules by which the judge in his discretion should be guided. For instance, a marked case of that will be found in the judgment in *Ritter* v. *Godfrey* (122 L. T. Rep. 396; (1920) 2 K.B. 47), where all the members of the Court of Appeal, particularly Lord Atkin, attempted to codify the matters which would influence a judge in refusing a successful plaintiff his costs; and very elaborate judgments were given by the Court of Appeal in that particular case formulating the sort of rules by which a judge should be guided. But in a case decided by the House of Lords in the year 1927, the case of *Donald Campbell and Co. Limited* v. *Pollak* (137 L. T. Rep. 656; (1927) A. C. 732), the House of Lords pointed out in most emphatic terms that there was a statute which gave the judge trying the case discretion as to what he should do with the costs, and that in those circumstances if he exercised his discretion—unless he dealt with absolutely immaterial matters such as the state of politics, or the weather, or the colour of the plaintiff's hair—his judgment as to costs was unappealable; and that he was not to be fettered by any previous rules of practice or course of practice of other judges sitting in the same tribunal. The House of Lords said that *Ritter* v. *Godfrey* (*sup.*) was wrong and that the Court of Appeal had no business to lay down rules or to formulate rules for the guidance of the judge as to whether or not a successful plaintiff should have his costs; and in the particular case they set aside the judgment of the Court of Appeal, which had altered the decision of Branson, J. as to costs in the case, in which the Court of Appeal thought he had considered matters which he ought not to have considered, namely, matters which he knew because he had tried another case relating to the same parties. The House of Lords said that that was wrong; that there was no appeal from the discretion of the judge who tried the case as to costs, provided that he did not deal with matters which had absolutely no connection whatever with the case.

Now in that general statement of the House of Lords, they seem to me only to be repeating what had been said with regard to the alleged rule of the Court of Admiralty by the Court of Appeal in *The Friedeberg* (5 Asp. Mar. Law Cas. 426; 1885, 52 L. T. Rep. 837; 10 Prob. Div.). Mr. Dunlop says with some contempt that that is an old case; but it was a case which was decided at a very relevant time, shortly after the Judicature Act came into operation, as to the effect of the statutory provision of the Judicature Act. At that time apparently, the impression of Admiralty practitioners was that there was a settled rule of practice that when a reference took place in the Admiralty Court, if the registrar struck off one-fourth each party paid his own costs; if he struck off more than one-third the claimant paid the other party's costs, and that that was the settled rule of practice in the Admiralty Court. Coming before the Court of Appeal to ascertain whether that rule of practice could stand, Lord Esher said this: "The Court of Admiralty always had a discretion in regard to costs; even if it had not, it would have been given by the Judicature Acts; but, in fact, Order LXV., r. 1, has affirmed the already existing discretion. When a court has such a discretion it is intended that it should exercise it in each individual case. The moment, therefore, that a hard-and-fast rule is laid down as to costs, the judge's discretion is fettered. With all deference to that eminent judge, Dr. Lushington, the moment he laid down as a general rule that if, on a reference, the plaintiff did not obtain a certain proportion of his claim, he was to be deprived of, or to pay, costs, he did what was wrong. For he tried to fetter his own discretion and that of his successors, which he had no legal power to do. As to the rule, if it could be made, I doubt if it would be a good rule, and in many cases it must work injustice. But since the judge of the Admiralty Court must exercise his discretion in every case, it is wrong

to say that there is any rule by which he can be bound." Now, as to the supposed rule laid down by Lord Phillimore in *The Canton* (*sup.*), I desire to say, first of all, that I do not think he was laying down more than a suggestion which would be considered by any subsequent court which had a similar set of facts before it. Secondly, if he was intending to lay down such a rule, he was going contrary to the decision in the House of Lords in *Campbell* v. *Pollak* (*sup.*), and I notice that although he sat on the appeal as to the merits in *Campbell* v. *Pollak* (*sup.*) he was not one of the seven law lords who sat to consider the preliminary question of jurisdiction and the question of appeal. It may be, therefore, that he had not in his mind so clearly as he would otherwise have had what the House of Lords in fact decided in the case of *Campbell* v. *Pollak* (*sup.*) as to the unfettered discretion of the judge of first instance.

If, as Mr. Holman said, this case is intended to decide whether there is a rule binding the discretion of the judge that where both vessels are held equally to blame there shall be no costs whatever success the appellant has on the appeal, such a contention is, in my view, erroneous. Similarly, with great respect to the President, if I thought he was saying: "There is a settled rule of this court which we are bound to act upon in the Divisional Court," I think equally he is wrong. But as I read the president's judgment, I think he is not doing more than saying there is not a settled rule, because if Lord Phillimore said so in that case, I refer to another decision (*The Cito* (*sup.*), in the House of Lords, which said the opposite, and I refer to the decision (*The Tyenoord* (*sup.*) in Swabey's Reports, which said the opposite; and we frequently rule in the opposite direction in this court.

In my view, what the President has done, particularly having regard to the last sentence of his judgment, is this. He has said: "In our discretion we think that this is a case in which the appellant, who has partly succeeded in his appeal, should have the costs of that partial success, because he had to come here to get it."

Speaking of my own experience in this court in common law cases (and, I am sorry to say, I have had thirteen years' experience here), the question is constantly arising. An appellant brings a very wide-sweeping appeal, and succeeds in part. It is said on the one side: "See how much the appellant has failed in." It is said on the other side: "Ah, but he succeeded in this and he had to come here to get it"; and the court acts on no settled rule of practice, but considers the circumstances of each case and considers whether the appropriate order would be, in view of the fact that the appellant has failed in a large part of the appeal, to make a special order as to costs, or whether he has succeeded in a sufficiently substantial amount to justify giving him the costs of appeal.

I should like to say, as has been pointed out to me by my brother Sankey—as no doubt he will himself point out—that circumstances have very much altered since the Maritime Conventions Act enabled you to depart from the old rustic rule of equal blame and to give proportions of two-thirds and one-third, one-quarter and three-quarters—I do not know how far at present in the matter of proportions the Admiralty Court has gone. The power of varying proportions obviously raises such a lot of different circumstances that an unfettered discretion is a thing which should be left to the judge of the Admiralty Court, and which, in my view, is left to him by Order LXV., r. 1, which has the force of a statute.

The result is that we decide that the question of the previous practices of the court are immaterial. If in this case the President had purported to say, "I use no discretion and act on the previous practice of the court," we should have sent it back to him in order that he might use his unfettered discretion. But as, in my view, the Divisional Court have used their discretion, it follows that there is no ground for suggesting that they are bound by a previous rule of practice to decide otherwise; and the appeal, therefore, must be dismissed with costs.

GREER, L.J.—I agree. The present respondent, who was appellant in the court below, was complaining of the finding of the learned County Court judge that put upon him two-thirds of the damages caused by a collision. He asked the Court of Appeal to say that he was not responsible for any of the damage, and said he ought to have had judgment with costs. He also asked the court, and it was open to the court, to say that the proportion of the damages put upon him was not the right proportion, and that it ought to be something less. The Divisional Court held that it ought to be something less, and that it ought to be half-and-half. It follows from that that the appeal from the County Court was partially successful and a remedy was obtained by the appellant that he could not have got without bringing the matter before the Divisional Court. For myself, I should have thought, although there is no rule binding the discretion of the court, that that was *primâ facie* a reason why the present respondent, the appellant below, should have the general costs of the appeal. However, it was argued by those who appear for the present appellant that there was a practice of the court that in those circumstances there should be no costs on either side, and that the practice of the court was so strong as to amount to a rule of law that in those circumstances the court must order each party to bear his own costs.

Leave to appeal was asked for by Mr. Holman in these terms: "I do not wish to appeal as to the exercise of discretion, but my point will be that costs in a case of this sort are a matter of principle, and that the principle has been laid down in *The Canton* (*sup.*), and that it is not now open to this court to exercise a discretion on the question of costs in an appeal where a

judgment has been varied so that both vessels are held equally to blame." He was there asking liberty to raise a point of law—the question as to whether there was any discretion still left open to the court, and it is only upon the point of law that he obtained leave to appeal; and that is the only question of law with which we have to deal. The rule dealing with the costs in all proceedings in the Supreme Court, which includes proceedings by way of appeal to the Probate Court, as well as any other proceedings in the Supreme Court, including, of course, proceedings before the Court of Appeal, is Order LXV., r. 1. That rule says this: "Subject to the provisions of the Acts and these rules the costs of and incident to all proceedings in the Supreme Court, including the administration of estates and trusts, shall be in the discretion of the court or judge; provided that nothing herein contained shall deprive an executor, administrator, trustee or mortgagee who has not unreasonably instituted or carried on or resisted any proceedings, of any right to costs out of a particular estate or fund"—and then it goes on to deal with what is to happen when there is a trial by jury—"provided also that, where any action, cause, matter or issue is tried with a jury, the costs shall follow the event, unless the judge by whom such action, cause, matter, or issue is tried, or the court, shall, for good cause, otherwise order." There is a clear distinction drawn between the discretion which is allowed to a judge who tries a case without a jury, and what his powers are when the case is tried with a jury. When the case is tried with a jury the costs follow the event, unless the learned judge can find good cause for otherwise ordering: and the question as to what is a good cause is quite clearly a matter of law, and there have been a number of decisions on the question as to what is or is not good cause. But no such question can arise where the case is tried without a jury. There you have only to look to the first part of the rule to see what the law is upon the subject; and the law is that the judge is to exercise his discretion.

Now, naturally, but perhaps unfortunately, there grew up the habit of judges who were trying cases alone of stating, when they were dealing with costs, what were the reasons that influenced their judgment in giving the costs to the plaintiff or the defendant, as the case might be; and gradually those decisions appear to have become considered to be decisions on questions of law, whereas they were not decisions on questions of law at all. It came to be almost the fact that there were as many decisions limiting the discretion of the judge in a case which was tried by a judge alone as there were in a case which was tried by a jury where good cause had to be made out. The position so remained until the decision in the House of Lords in *Donald Campbell and Co. Limited* v. *Pollak* (*sup.*), where attention was redirected by the House of Lords to the words of the rule, and it was held that neither the judges of first instance nor the Court of Appeal could lay down limits as to what discretion could, or could not, be exercised by a judge trying a case without a jury, except to the extent to which my Lord has referred where totally irrelevant considerations had admittedly influenced the judge in giving his decision.

The question arises now as to whether or not the judge did exercise his discretion. The practice before the decision was given in this case in the Admiralty Court as to how the discretion should be exercised was apparently not uniform; and the judges below in the Admiralty Court thought apparently that the practice was in favour of the view which they took, namely, that the appellant having succeeded in part should have his costs. But I cannot read the judgment as meaning that they were laying that down as a matter of law. They were entitled to take into consideration the recent practice as they knew it to be, and I read the last paragraph of their judgment as meaning that, taking that into account, and taking everything else into account in the case, there were substantial grounds of appeal, and the appellants succeeded in the appeal on those substantial grounds, and that, therefore, they ought to have their costs of the appeal.

For those reasons I think that this appeal should be dismissed with costs.

SANKEY, L.J.—I agree. As I am not familiar with the Admiralty practice, I have ventured to send for and to look at a well-known treatise on the practice in the English Courts of Admiralty, the third edition of Williams and Bruce on Admiralty Practice, which was edited by the late Mr. Justice Bruce and published in 1902; and I think there must have been some sort of—I will not say rule, because I want to use the vaguest sort of word, but some sort of understanding such as is contended for by Mr. Dunlop. It is stated on p. 97: "Where both ships are to blame, it is the general rule that each party should be left to pay his own costs. . . . The same rule as to costs applies in the Court of Appeal, and in order to enforce care at sea the Court of Appeal will not, when both ships have been to blame, allow, unless in some exceptional case, either ship to gain anything by the litigation. Thus where one of two ships has been held alone to blame in the court below, and her owners have appealed, and in the Court of Appeal both ships have been held to blame, the successful appellant will as a general rule not obtain his costs of the appeal." A great many authorities are cited for that proposition, and on p. 459 there is a long criticism upon the decision in *The Friedeberg* (*sup.*), and it says: "The attention of the Court of Appeal does not appear from the report of the case of *The Friedeberg* (*sup.*) in the Law Reports, to have been called to the numerous cases in the Court of Admiralty and Admiralty Division subsequent to the case of *The Empress Eugenie* Lush. 138), in which the notion that any hard-and-fast rules existed as to the incidence of

costs in the Admiralty Registry was expressly repudiated."

If those are correct statements as to the practice in the Admiralty Court, they do not convey to my mind that there is a hard-and-fast rule upon the subject which can be translated as if there is a rule of practice. If there were I think it would be wrong. Personally, I rather think it is a list of instances in which the court has or has not given costs in the particular case, which may serve as a guide to a court trying subsequent cases, but which is not binding upon such a court. To begin with, if there were such a hard-and-fast rule, I think it would contravene Order LXV., r. 1, as to costs, which has statutory authority, and which expressly provides that the costs shall be in the discretion of the court or judge.

Now it may have been in the old days of Admiralty, where you simply had the issue, both to blame or one only to blame, that the rule was workable. I am not at all sure how far it is workable having regard to the passing of the Maritime Conventions Act 1911, in which rules were established, again statutory rules, as to the apportioning of blame. Therefore, I think that the fact that that Act was passed does, to some extent. throw some doubt upon the earlier decisions being of a binding character and making a hard-and-fast rule, as is contended.

Further, I think that since the decision in *Donald Campbell and Co.* v. *Pollak* (*sup.*) Mr. Dunlop cannot take up the attitude which he would desire to take up. What the Lord Chancellor said in that case was this: "A successful defendant in a non-jury case has no doubt in the absence of special circumstances, a reasonable expectation of obtaining an order for the payment of his costs by the plaintiff; but he has no right to costs unless and until the court awards them to him, and the court has an absolute discretion to award or not to award them. This discretion. like any other discretion, must of course be exercised judicially and the judge ought not to exercise it against the successful party except for some reason connected with the case. Thus if—to put a hypothesis which in our courts would never in fact be realised—a judge were to refuse to give a party his costs on the ground of some misconduct wholly unconnected with the cause of action or of some prejudice due to his race or religion or (to quote a familiar illustration) to the colour of his hair, then a Court of Appeal might well feel itself compelled to intervene. But when a judge, deliberately intending to exercise his discretionary powers, has acted on facts connected with or leading up to the litigation which have been proved before him or which he has himself observed during the progress of the case (and these are strong words), then it seems to me that a Court of Appeal, although it may deem his reasons insufficient and may disagree with his conclusion, is prohibited by the statute from entertaining an appeal from it." The history of that case is well known. For some years previously there had been a tendency in this court to interfere with the discretion of the learned judges of first instance, and an attempt was made by Atkin, L.J. (as he then was) in *Ritter* v. *Godfrey* (*sup.*) to codify the cases as to costs. The effect of that codification was to take away a discretion which the statute had given to judges of first instance, and which by the decision of *Donald Campbell and Co.* v. *Pollak* (*sup.*) was restored to them by the House of Lords.

Therefore, for those reasons the words of the order itself, such considerations as may be derived from remembering the recent passing of the Maritime Conventions Act and the decision in *Donald Campbell and Co.* v. *Pollak* (*sup.*), I have come to the conclusion that the position contended for by the appellant in this case cannot be maintained. In other words, what it was sought to do was this. It was sought by an alleged practice of the Court of Admiralty to fetter the discretion of the judge sitting in Admiralty. As I have said, I have very great doubts whether the rule existed in the sense that Mr. Dunlop would have us think it existed. All I think that took place was this, that a very large number of cases were reported upon costs which no doubt are extremely useful as a guide for future judges as to how to exercise their discretion in particular cases. But I doubt if those cases ever formulated a hard-and-fast rule. If they did formulate a hard-and-fast rule, in my opinion that rule cannot now be maintained.

For those reasons I am of opinion that the court below was correct in its determination, and that the appeal should be dismissed.

(Before Scrutton, Greer, and Russell, L.JJ.)

Dampselskab Svendborg v. London, Midland, and Scottish Railway Company. (*a*)

ON APPEAL FROM THE KING'S BENCH DIVISION.

Charter party — Discharge of cargo — Docks owned by railway company who act as stevedores—Railway company requested to discharge cargo—Apportionment of cost of discharge—"Work done by the vessel at the port of discharge."

By a charter-party for the carriage of a cargo of timber from the Baltic to Garston it was provided, inter alia, *as follows: Clause* 15 *: "For any work done by the vessel at the port of discharge beyond delivering cargo at the*

(*a*) Reported by Edward J. M. Chaplin, Esq., Barrister-at-Law.

ship's rail if delivered by hand, or within reach of the ship's tackle or of the shore crane tackle if thereby discharged, the consignees shall pay to the shipowner the cost thereof plus 15 per cent."

Held, by Scrutton and Russell, L.JJ. (Greer, L.J. dissenting), that upon the true construction of clause 15 of the charter-party the vessel had not delivered the cargo until it had lowered it into wagons and released the attachment to the crane which lowered it.

Decision of Branson, J. affirmed.

Appeal from a decision of Branson, J.

The plaintiffs, who were a foreign company, were owners of the steamship *Laura Maersk*, which by a charter-party dated the 17th Jan. 1928, was chartered to carry timber from Windau in the Baltic, to Ellesmere Port and Garston. The first-named defendants were the owners of the docks at Garston, at which 180 standards of deals, battens, and boards were discharged from the *Laura Maersk* between the 2nd and 4th Feb. The second defendants were the indorsees of three bills of lading for seventy standards of batten ends. Besides owning the docks, the first defendants had for many years acted as stevedores and master porters at Garston Docks in connection with the discharge of cargoes, and it was their custom to discharge a ship by means of shore cranes, the timber being lifted thereby out of the ships and deposited direct into wagons after the slings had been loosed. Upon the arrival of the *Laura Maersk* at Garston the plaintiffs requested the first defendants to undertake the work of placing the cargo so that delivery of it could be taken by the consignees within reach of the shore crane. In addition, the railway company charged the plaintiffs with the expenses of receiving the timber from within reach of shore crane tackle, unslinging and stowing in wagons.

Accordingly, the plaintiffs claimed against the first defendants the return of 31*l.* 8*s.* 9*d.* as being money wrongly demanded from the plaintiffs and paid under protest in relation to the unloading and delivery of the cargo of timber ex the steamship *Laura Maersk*. In the alternative, they claimed against the second defendants 12*l.* 1*s.* 7*d.* as money paid by the plaintiffs for and on behalf of the second defendants and in relation to services which were performed or which by the charter-party ought to have been performed by and for the second defendants.

The first defendants pleaded that their rates and charges were reasonable, and that they had charged and been paid by the plaintiffs in accordance with the same. The second defendants said that they had paid for all work of delivering the cargo beyond reach of shore crane tackle.

The charter-party, which incorporated the terms of the Baltic Wood Charter 1926 ("Baltwood"), provided by clause 15 as follows: "The shipowner's liability shall cease at the port of discharge when the cargo is discharged at the ship's rail if discharged by hand, or within reach of ship's tackle or shore crane tackle if thereby discharged. . . . For any work done by the vessel at the port of discharge beyond delivering cargo at the ship's rail if discharged by hand, or within reach of the ship's tackle or of the shore crane tackle if thereby discharged, the consignees shall pay to the shipowner the cost thereof plus 15 per cent."

Branson, J. held (1) that the plaintiffs knowing the terms and conditions of discharge, and having requested the railway company to undertake the work of discharging the cargo, became liable to pay to the railway company the sums which they had in fact paid; and (2) that the rates and charges for discharging the cargo were not excessive or unreasonable. As to the second defendants, Branson, J. held, that there was nothing the plaintiffs could claim against them under the charter-party. The plaintiffs appealed against the second defendants, the appeal against the first defendants having been withdrawn.

Le Quesne, K.C. and *R. K. Chappell*, K.C. for the appellants.

Dunlop, K.C. and *Harold Stranger* for the respondents.

Cur. adv. vult.

Scrutton, L.J.—This appeal is another chapter in the prolonged struggle between the Timber Trade Federation and the Chamber of Shipping of the United Kingdom as to the incidence of the expense of discharging timber at the various ports of the United Kingdom. The two contending parties had originally arranged the Scanfin Charter of 1899 in which the relevant clause ran "Cargo to be brought to and taken from alongside the steamer at charterers' risk and expense as customary." Under this clause work was being done under customary arrangements at a number of British ports. These arrangements were upset by the decision of the House of Lords in *The Turid* (127 L. T. Rep. 42; (1922) 1 A. C. 397, 15 Asp. Mar. Law Cas. 538), a case relating to the peculiar circumstances of the port of Yarmouth, that no place could be "alongside" by custom which was not "alongside" in the ordinary sense of the word. In 1924, the contending parties arranged a new version of the Scanfin Charter 1924, which left out the debatable word "alongside" in relation to discharging, and inserted a new clause 13. "The cargo shall be discharged by the vessel in the customary manner as fast as the vessel can deliver, during the ordinary working hours of the port, on to the quay and (or) into lighters and (or) craft and (or) wagons and (or) on to bogies and thereon stowed and (or) stacked as customary at the port of discharge, the consignees having the right to select any one or more of these alternatives if customary and available at the time of discharge. But any work done by the vessel at the port of discharge beyond delivering the cargo within reach of the ship's tackle or of the shore crane tackle (the shipowner having

the option of using the ship's tackle or shore crane where permissible by local regulations) shall be at consignees' risk and expense. The cost of such additional work shall be determined in accordance with a schedule of apportionment to be agreed from time to time between the Chamber of Shipping of the United Kingdom and the Timber Trade Federation of the United Kingdom at ports where the schedule applies." At this stage it was apparently contemplated that the federation and the chamber would be able to agree for each port the amount to be paid by the consignees for work done by the ship after delivery as defined in the clause when the ship was working "in the customary manner."

As appears from the agreed schedule of apportionment the two bodies, the chamber and the federation, were able to agree for a large number of ports, the amount of the consignees' payment. But for some reason not stated to us it was again thought necessary to alter the form of charter, and a new arranged form, the one in question in the present case, known as the Baltwood Charter 1926, was produced. The port of discharge in the present case was the well-known Garston Dock, near Liverpool, owned by the London, Midland, and Scottish Railway. The chamber and the federation had not been able to, or at any rate had not, agreed an apportionment of the charges at this port.

At Garston the only possible method of discharge is by short cranes worked by the railway company on to wagons within reach of the shore cranes. Where there are several consignees the cargo is sorted by the railway company for delivery to them by marks and numbers at a yard to which the wagons are moved and delivery orders are issued to the consignees after this sorting. Clause 15 of the Baltwood Charter makes certain additions to clause 13 of the Scanfin charter 1924. First it adds two sentences about shipowners' liability, (a) the first sentence as to liability for the work up to delivery or discharge provides that the liability is to cease when the cargo is discharged within reach of the shore crane tackle, (b) the last sentence as to liability for the work done by the ship for which the consignee is to pay, namely, work done after discharging within reach of the shore crane tackle provides that the shipowner is to have the liability of a stevedore, subject to a special provision as before. Secondly, as the chamber and the federation have now agreed an apportionment in many ports, it adds a sentence that the cost shall be apportioned under that apportionment which it contemplates shall be filled into the schedule in clause 18. Clause 16 contains a note in small print: "If the port of discharge is not included in the schedule of apportionment, the charges, if any, under clause 15 shall be paid in addition to the freight above mentioned," providing what is to happen if the schedule of apportionment does not contain the port of discharge in the charter, which is the present case, and says the consignee is to pay the charges, if any, under clause 15, that is, the cost of any work done by the vessel beyond delivering cargo within reach of the shore crane tackle. Clause 16 at the beginning speaks of the apportionment of charges under clause 1; the last sentence of clause 1 reads that any additional expense of the mode of delivery selected by the consignee over the cost of delivery on to the quay shall be paid by the consignee. This hardly seems to be the same as the provisions of clause 15 that the consignee is to pay the cost of work done by the ship after delivery within reach of the shore cranes. But neither side before us attempted any explanation of the meaning of clause 1 on this point, or based any argument on it, and I deal with the matter in the words of the footnote to clause 16, as to be determined by the words of clause 15.

The dispute between the two parties was this: counsel for the ship said, I have delivered, and my liability ceases when the timber swung on the shore cranes is within reach of the consignee in the wagon, though it is still in the air and tied up in the sling. The consignee must pay the cost of manœuvring it into and on to the floor of the wagon and, counsel added under pressure, the cost of releasing the sling. Pressed as to the cost of the craneman who lowered the sling from "within reach" to the floor of the wagon, I think counsel admitted that this was ship's work in delivering and that the consignee could not be called upon to pay for it. Counsel for the consignee said that he was entitled to have the timber discharged into wagons, and that this work was not done till the timber was in the wagon, not merely hanging near it, and the timber was released from the sling which tied the pieces together and attached them to the crane. I mention, to show that I have not overlooked it, that it is not ordinarily good delivery to tender goods of two consignees claiming different marks mixed up together and to leave the consignees to sort them, but the consignees seem to have acquiesced, as they do in London, in the form of delivery.

In my view, the fallacy of the argument for the ship lies in this: that it turns the phrase "delivery within reach of shore crane tackle" into "delivery within reach of consignees," and argues that though the ship is bound to deliver into wagons, it does so if it brings the sling of timber hanging on a crane within reach of the consignee standing in a wagon, and leaves the consignee to "manœuvre" the timber into the wagon and release it from the sling. These latter operations are, in my opinion, part of the work of delivery or discharge into wagons which the ship has undertaken to do, and the words "within reach of shore crane tackle" are inserted to limit the area within which the ship can be required to deliver into wagons. There is not a case of delivery at ship's rail where the consignee takes from the rail the cargo which the ship brings to the rail, both parties possibly having hold of the package at the same time. The ship has undertaken to deliver beyond the ship's rail,

that is into wagons, provided the wagons are within the reach of the shore crane tackle. Stowage or stacking in the wagons or on the quay where customarily done by the ship is for expense of the consignee. I cannot think the ship has delivered the cargo into wagons when it is still in the air, or has made delivery of goods which are still fastened or tied to the tackle of the crane the ship is using.

I have come to this conclusion on the wording of the charter, but it is confirmed by the apportionment which the chamber and the federation have agreed to at ports where discharging into wagons by crane is customary. For instance, at the Ship Canal port of Manchester, discharge into wagons by crane, whether ship's or shore, is customary, and it is agreed that the ship pays " for discharge direct from ship to wagon alongside and releasing from ship's tackle or shore crane." At the Hartlepools the customary method is discharge into wagons, the ship pays for discharge into wagons by shore crane and releasing slings only ; any work done beyond release of sling payable by consignees. At a number of ports where delivery by shore crane into wagons is customary the ship pays the expense of delivery and the consignee nothing. Examples of such ports are Cardiff, Glasgow, Swansea, Milford Haven, and Irvine. The Belfast apportionment for ship's tackle mentioned that the ship must release the sling.

The judge below expressed his view as to the point where delivery or discharge, which I think mean the same thing, terminated in the following words : " I think it plain that the discharge or delivery within reach of shore crane intended by this clause is a delivery or discharge overside on to the quay or into craft or wagons as the custom of the port demands, the words 'within reach of shore crane' limiting the distance from the ship's side beyond which the shipowner need not, in his capacity of shipowner, transport the goods and within which he is called upon to deposit them." I agree with this view, and I think it is fatal to the claim of the ship against the consignee under the charter.

There appears to be nothing in the authorities to negative this construction of the charter. Reliance was placed upon *Petersen v. Freebody* (8 Asp. Mar. Law Cas. 55; 73 L. T. Rep. 163; (1895) 2 Q. B. 294). This decision related to a cargo of spars and poles in the Surrey Commercial Docks under a charter which provided that cargo was to be taken from alongside the ship at merchant's risk and expense. The discharge of the poles was into lighters alongside through the ship's bow ports under a clause entitling the consignee to " discharge over side into lighters or otherwise." The custom of the Port of London as to discharge into lighters, which was afterwards proved in *Glasgow Navigation Company Limited v. Howard Brothers and Co.* (11 Asp. M. C. 376; 102 L. T. Rep. 172), was not proved in *Petersen v. Freebody* (*sup.*). The claim was for demurrage occasioned by the consignees having insufficient men in the lighters. The express provision was that the ship was to deliver overside into lighters and no crane was used, a ship's man on a stage hanging outside the ship took hold of the end of the pole as it came out of the bow port, and pulled it till the men in the lighter got hold of it and completed the operation. The court treated the matter as analogous to delivery at the ship's rail, the ship placing the pole where the consignee could reach it, and the consignee then assisting in handling it. There was no question of the poles being in a sling which had to be released, or being lowered by ship's tackle into the lighters. In my opinion the judgment of the court on these special facts has no bearing on the different facts and language of the present charter. Here the ship agrees to deliver into wagons, and does so by lowering the timber attached by rope to a crane. In my view the ship has not delivered till it has lowered it into wagons and released the attachment to the crane. Till this is done the timber is not in the wagon and is still attached to the shipowner's tackle.

In my view Branson, J. came to a correct conclusion, and the appeal must be dismissed with costs.

Greer, L.J.—This is an appeal against the judgment of Branson, J., dismissing a claim made by the appellants against the receivers of a portion of the cargo of the steamship *Laura Maersk* at the port of Garston, for a portion of the expenses incurred in connection with the discharge of the cargo which the shipowner paid, and which he says, under the terms of the bill of lading which incorporated the terms of the Baltic Wood Charter 1926 he was entitled to recover from the defendants.

The cargo shipped under the charter-party was described as deals, and (or) battens, and (or) boards, and (or) scantlings. The bills of lading related to a quantity of batten ends, but this fact is not material to anything we have to consider in this appeal.

The usual practice for the port of Garston is for the work of discharge and receipt of the cargo to be done by the servants of the London Midland and Scottish Railway Company, who are the dock authority. It is a convenient practice which enables the whole of the work to be done continuously by one body of men, and the charges afterwards allocated to the ship and to the receiver of the cargo. The railway company have their own schedule as to the charges which they make against and collect from the ship, and the charges which they make against and collect from the receivers, but, of course, their allocation cannot determine the rights of the parties *inter se*. These fall to be determined by the bill of lading agreement to which the receiver becomes a party by taking an assignment of the bill of lading.

The material provisions of the charter-party are contained in clauses 1 and 15. Clause 1 is as follows : " If the consignees select one of the alternatives mentioned in clause 15, other than discharge on to the quay (which includes

rough stacking thereon if and where customary and not usually done by the consignees), any additional expense (plus 15 per cent. thereon and in addition the charge for workmen's compensation insurance) of such delivery beyond the expense of delivery on to the quay, as aforesaid, shall be paid by the consignees to the shipowner, in addition to the amount(s) above mentioned. If the port of discharge is included in the schedule of apportionment last agreed between the Chamber of Shipping of the United Kingdom and the Timber Trade Federation of the United Kingdom, such additional expense shall be ascertained in accordance there with." The apportionment as to Garston had not been agreed. Clause 15 is as follows: "The shipowner's liability shall cease at the port of discharge when the cargo is discharged at the ship's rail if discharged by hand or within reach of the ship's tackle or shore crane tackle if thereby discharged (the shipowner having the option of using ship's tackle or shore crane where permissible by local regulations). The cargo shall, however, be discharged by the vessel in the customary manner as fast as the vessel can deliver during the ordinary working hours of the port, on to the quay and (or) into lighters and (or) craft and (or) rafts and (or) wagons and (or) on to bogies and thereon stowed and (or) stacked as customary at the port of discharge, the consignees having the right to select any one or more of these alternatives if customary and available at the time of discharge. For any work done by the vessel at the port of discharge beyond delivering cargo at the ship's rail if discharged by hand, or within reach of the ship's tackle or of the shore crane tackle if thereby discharged, the consignees shall pay to the shipowner the cost thereof plus 15 per cent. on the amount thereof and in addition the charge for workmen's compensation insurance. If the port of discharge is included in the schedule of apportionment last agreed between the Chamber of Shipping of the United Kingdom and the Timber Trade Federation of the United Kingdom the charge for such work shall be as settled by the said schedule of apportionment plus 15 per cent. on the amount of such charges, and in addition the charges for workmen's compensation insurance, all of which are agreed at the amount stated in clause 16 hereof. In the execution of any work done beyond discharging cargo at the ship's rail or within reach of the ship's tackle or shore crane tackle, as the case may be, the shipowner shall act as a stevedore with the liabilities only of such and not further or otherwise, but the shipowner shall not be liable for damage by fire, even though caused by the act or neglect of the shipowner or his servants or of any person for whom he is responsible." The railway company collected from the ship 11*s.* per standard for deals and battens and 11*s.* 10*d.* per standard for boards. It was proved, and found by the judge, that this charge included a proportion, which he found to be three-eighths of the remuneration paid to the men who stood in the trucks to receive the timber in the slings, for the work of manœuvring the timber into such a position as would enable them to place it conveniently in the truck or wagon concerned. The plaintiffs say that this proportion of the charge which they had to pay is in respect of work which was done on behalf of the receiver, and work for which they are entitled to be repaid under clause 15 of the charter-party. In order to correctly interpret clause 15 of the charter-party, it seems to me necessary to consider, in the absence of express agreement, what part of the work of discharge and receipt of the cargo is the obligation of the ship, and what part is the obligation of the receiver. In my judgment, it has been accepted for many years that the law on this subject is accurately stated in the judgment of Lord Esher, M.R., in *Petersen* v. *Freebody* (8 Asp. Mar. Law Cas., at p. 56; 73 L. T. Rep. at p. 164); (1895) 2 Q. B. 294, at p. 297).

It is true that that was a claim for demurrage, but the court had to consider who was responsible for the delay to the ship, and for that purpose to decide when the obligation of the ship to deliver had been complied with, and when the obligation of the bill of lading holder to receive the cargo had commenced. In giving judgment Lord Esher used these words: "The operation, therefore, which is to take eight days, is an operation to be performed as between the shipowner and the consignees. Whichever word be used, whether it be called a 'discharging' or a 'delivery,' and whatever be the circumstances of the delivery, one party is to give, and the other is to take, delivery at one and the same time, and by one and the same operation. It follows that both must be present to take their parts in that operation. Those parts are, the ship has to deliver and the consignee to take delivery—where? Each has to act within his own department. The shipowner acts from the deck or some part of his own ship, but always on board his ship. The consignee's place is alongside the ship where the thing is to be delivered to him. If the delivery is to be on to another ship, he must be on that ship; if into barge or lighter, on that barge or lighter; if on to the quay, on the quay. Wherever the delivery is to be, the shipowner, on the one hand, must give delivery. If he merely puts the goods on the rail of his ship, he does not give delivery; that is not enough. If, on the other hand, the consignee merely stands on the other ship, or on the barge or lighter, or on the quay, and does nothing, he does not take delivery. The shipowner has performed the principal part of his obligation when he put the goods over the rail of his ship, but I think he must do something more—he must put the goods in such a position that the consignee can take delivery of them. He must put them so far over the side as that the consignee can begin to act upon them, but the moment the goods are put within reach of the consignee he must take his part in the operation. At one moment of time the shipowner and the consignee are both acting—the

one in giving and the other in taking delivery; at another moment the joint act is finished. Where goods are slung, and lowered gradually over the side of the ship into a lighter, they cannot all be deposited on the same spot in the same lighter. It is obvious, therefore, that those on board must help in the operation of taking delivery by guiding the thing as it is coming down into the lighter. In the present case the delivery was of spars, but it was still a joint operation in which each party had to take his part. The shipowner had to get the spars in such a position as that they could be taken out of the ship. He had not completed his part of the operation by merely getting the spar on to the stage, but, when one end of the spar was tipped over the side of the stage so as to come within the reach of the men in the lighter, they had to take their part in the ordinary operation in the ordinary way; they had to assist in getting the spars into the lighter." There is nothing in the other judgments which show any disagreement with the view expressed by Lord Esher in the words I have quoted. That this has been generally accepted as defining the respective duties of the ship and the receiver of the cargo appears from the judgment of Lord Birkenhead, L.C., in the case of *The Turid* (15 Asp. Mar. Law Cas., at p. 540; 127 L. T. Rep. at p. 45; (1922) 1 A. C., 397, at p. 404), where he says: "The words of the charter-party in this case are: 'Taken from alongside the steamer at charterers' risk and expense.' I am myself of opinion that the word 'alongside,' if it does not suggest actual contact, does at all events suggest close contiguity, and not the less so because the ordinary obligation of the shipowner is admittedly only to deliver to the consignee the cargo his ship carries at ship's rail. A contract which requires delivery elsewhere extends this legal obligation." In *Smith, Hogg and Co. Limited* v. *Louis Bamberger and Son* (17 Asp. M. L. C., at p. 459; 138 L. T. Rep. 615, at p. 618; (1929) 1 K. B. 150, at p. 163), Wright, J. says, after referring to a number of authorities: "I deduce from these authorities the conclusion that the cargo is 'alongside' when it is available for release or is released from the ship's slings if discharged by the ship's tackle, and if discharged, as was the first portion of the deck cargo in this case, by being handed from the vessel, when it is laid with one end on the quay and the other resting against the ship. "I think the learned judge is there accepting the law as laid down in *Petersen* v. *Freebody* (*sup.*). I give the same effect to the words he uses (138 L. T. Rep. at p. 618; (1929) 1 K. B. p. 165: "Apart from custom, the placing into lighters would be a joint operation, requiring the receivers to have their men in the lighter to take the goods as soon as they are within their reach; see the cases of *Petersen* v. *Freebody* (*sup.*), and *Brenda Steamship Company Limited* v. *Green* (9 Asp. M. L. C. 55; 82 L. T. Rep. 66; (1900) 1 Q. B., 518). In *Rederi Aktiebolaget Aeolus* v. *W. N. Hillas and Co. Limited* (30 Com. Cas., 271), which was tried before me and went to the House of Lords, I used these words, at p. 278: "To put the goods over the rail is thus the *primâ facie* limit of the obligation of the ship to discharge and deliver the cargo. If there be nothing in the charter-party about the consignee taking from alongside, it may well be that a custom such as is alleged in this case might impose the further duty of delivery into bogies 18½ft. from the ship's side. It has been decided that the ship's obligations, even where there is an alongside clause, may be extended and the receiver's duties diminished by an established custom of the port so long as the added duties of the ship are being performed while the goods are still alongside. But if the added duties of the ship imposed by the custom extend to taking goods beyond a place that can properly be described as alongside, the custom is inconsistent with the contract made by the express words of the charter-party, and is not binding on the parties to the contract." I see no reason to alter the view as to the law applicable to cases like the present. When the goods in the sling are within the reach of the receiver's men they must begin to act and do what is necessary to guide the goods into position on the quay or in the lighter, though, of course, the ship's men must lower the parcel with the ship's derrick or the shore crane. This, I take it, is the limit of the ship's duty in discharging cargo subject to any extension that may be made by express contract or by custom.

There had been many cases in which the question of the meaning of "alongside" had to be considered for the purpose of determining that local customs were consistent with the provision that the cargo owner should take the goods from alongside, or that the cargo should be taken from alongside at his cost and expense, and it was in this state of the law that the Baltic Wood Charter 1926 was settled as the form of charter to be adopted by steamship owners and shippers of wood goods from the Baltic. In my judgment the effect of clause 15 is as follows: It starts in the first line from what I conceive to have been the accepted rule of law as stated by Lord Esher, M.R. in *Petersen* v. *Freebody* (*sup.*), that the shipowner's liability in relation to the discharge or delivery of the cargo if delivered by hand terminates at the ship's rail, and if delivered by ship's tackle or by the shore crane terminates when the goods in the tackle are within the reach of the receiver's men in the lighter or on the quay subject to the ship doing the necessary lowering of the parcel. This does not, I think, mean as soon as the receiver's men can touch the goods, but as soon as they reach a position in which the receiver's men can effectively deal with them for the purposes of accepting delivery and putting them either on the quay, in a lighter or in a wagon. It is an express provision that at that point the ship's obligations with reference to discharge or delivery are to cease, except as aforesaid, but the clause goes on to provide in the second

sentence that for the convenient discharge of the cargo the ship is to do something which is in addition to that which they do under their liability. I read the second sentence as meaning, "notwithstanding what is hereinbefore provided with regard to the extent of the ship's liability, the ship must continue operations until the goods are on to the quay or into the lighters, or craft, or rafts, or wagons, or bogies, and thereon stowed or stacked, as customary at the port of discharge, the consignees having the right to select any one or more of these alternatives if customary and available at the time of discharge." Then I read the next sentence as meaning that inasmuch as the ship is thereby exceeding that which is their liability as defined in the first sentence, the consignees are to pay to the shipowner the cost of that which is done in excess of such liability and 15 per cent. in addition, and I do not think the obligations put upon the consignee by clause 15 can be deemed to be limited because a less onerous obligation is put upon him by clause 1.

In my opinion the decisive question in this case is what is the correct interpretation of the first sentence in clause 15. The words used are intended to define the extent of the ship's liability in the operation of discharging the cargo. It is clear that the first limb of the sentence provides that where the discharge is by hand, the liability of the ship ceases when the cargo is put on the ship's rail within reach of the consignee's men. So far the clause adopts the ordinary obligation of the ship as laid down in *Petersen* v. *Freebody* (*sup.*); it then goes on to provide that where the discharge is by the ship's tackle the ship's liability shall cease when the cargo is discharged within reach of the ship's tackle. I cannot think that this means that as soon as the cargo is within reach of the ship's tackle the ship's liability ceases. This would mean that it ceased as soon as the cargo was within reach of the ship's tackle in the hold. I think the clause is contemplating a discharge by ship's tackle to a receiver on the quay, or in the lighter, and that it means that the ship's liability shall cease when the cargo is by the tackle placed within the reach of the receiver's men in the lighter or on the quay: and that a similar effect must be given to the words relating to discharge by the shore crane. I think the clause was intended to give effect by express agreement to the obligation of the ship as laid down in *Petersen* v. *Freebody* (*sup.*), and does not have the effect of extending the ship's obligations beyond the point to which they extend in the absence of the clause. The object of clause 15 was, in my judgment, to provide for the doing by one set of hands the work of the ship and the receiver, and to provide that when the ship did what was beyond their common law liability, the work, though done by the ship, should be paid for by the receiver.

For these reasons I think this appeal should be allowed, but as my brethren think differently, the appeal will be dismissed.

Russell, L.J.—The determination of this appeal depends upon what is the true meaning of the third sentence in clause 15 of the Baltwood charter-party, which provides for the payment by the consignees to the shipowner of the cost (plus 15 per cent. on the amount thereof) of certain work done by the vessel at the port of discharge.

In the present case the defendants, Denny, Mott, and Dickson Limited (whom I will refer to as the defendants), were the indorsees of bills of lading for batten ends which were discharged into railway wagons by means of shore cranes at the port of Garston.

Under the charter-party the whole process of discharge down to and including stowing and stacking is to be conducted by the ship. Clause 15 is the clause which relates to discharging. It consists of five sentences. The first sentence provides for the cesser of the ship's liability when the cargo is discharged, and in so doing it refers to the three means of discharging cargo which the charter-party contemplates—namely, by hand, by ship's tackle, and by shore crane tackle. The second sentence places on the ship the obligation to discharge and to stow or stack: it also enumerates various places and apparatus on or into which the cargo shall be discharged, including the quay, lighters, and wagons. The third sentence runs thus: "For any work done by the vessel at the port of discharge beyond delivering cargo at the ship's rail if discharged by hand, or within reach of the ship's tackle or of the shore crane tackle if thereby discharged, the consignees shall pay to the shipowner the cost thereof plus 15 per cent. on the amount thereof and in addition the charge for workmen's compensation insurance." The fourth sentence has no application to the present case, and neither it nor the fifth sentence appears to me to afford assistance on the point of construction.

The ship claims that once the shore crane has swung a load of timber in slings from the ship to a point in mid-air within reach of the hands of the men in a railway wagon, so that they can manœuvre the load into a position suitable for lowering into the wagon, that load is cargo delivered within reach of the shore crane tackle, and that the expense of any work done from that moment by the vessel in discharging is (with the percentage) payable by the defendants.

The defendants concede that they are liable to pay in respect of all work done by the ship after the load has been discharged into the wagon, that is, after the sling has been released. It is in respect of the work done in between these two points of time that the dispute arises.

As a result of close discussion, the point resolved itself into this: do the words in the third sentence "within reach of the ship's tackle" operate to describe a particular kind of delivery to the consignee, from and after the occurrence of which all expenses (plus a percentage) are to fall on the consignees, or do they merely describe the area within which the ship has to fulfil her obligation to discharge

the cargo? In other words, does the third sentence mean that all work done by the ship in discharging her obligations under the second sentence, beyond putting the cargo within the consignee's reach by means of the shore crane tackle, must be paid for by the consignee; or does it only mean that all such work beyond delivering into wagons within the area of the shore crane's reach must be paid for by the consignee?

In my opinion the latter is the true meaning and the natural meaning of the words used. The ship's argument gives an artificial meaning to the language of the third sentence. The "reach" referred to is not the reach of any individual, but is the sweep of the crane. It would involve redrafting the sentence to read it as though it referred to the cargo being brought by the shore crane to a point within reach of somebody for the purpose of handling.

The more natural reading of the third sentence is that the delivery of the cargo there referred to is the same delivery which is referred to in the second sentence as "discharge into wagons," and that the words "within reach of the shore crane tackle" refer to the area within which delivery is to take place, and do not operate to describe and create some form of constructive delivery which falls short of the delivery contracted to be given by the second sentence.

Numerous authorities were cited in the course of the argument, but I confess that I failed to appreciate the relevance of them to the point of construction which we have to decide. They dealt with the meaning and effect of words imposing obligations to take cargo "from alongside," and the effect thereon of port customs.

The only one on which it occurs to me to offer any remarks is *Petersen* v. *Freebody* (*sup.*)

In that case the ship sued the consignees for demurrage. The charter-party provided that the cargo (spars and poles) was to be taken from alongside the ship at the merchant's expense. It also contained a provision, "The ship to discharge overside in the river or dock into lighters or otherwise if required by consignees." That provision, it was held, imposed no obligation on the ship to complete the whole operation of getting the spars out of the ship and putting them into lighters; it only gave the consignees an option to take delivery by lighters or in some other way. Accordingly delivery under that charter-party was to be a delivery in the ordinary way by a joint operation in which the ship and the consignees were to take their respective parts. The consignees were held liable for demurrage because the delay in the unloading had been caused owing to the insufficient number of men provided by the consignees to discharge their part of the joint operation, namely, taking delivery by guiding the spars, as they were coming down, into the lighter.

The case was relied upon as showing that in the present case there was delivery by the ship at the point of time when men in the wagons were able to guide the sling loads, as they were coming down, into the wagons. The following passages in the judgments were cited in support of this view. Lord Esher, M.R. (8 Asp. Mar. Law Cas., at p. 56; 73 L. T. Rep. at p. 164; (1895) 2 Q. B. at p. 297) says: "Wherever the delivery is to be, the shipowner on the one hand, must give delivery. If he merely puts the goods on the rail of his ship, he does not give delivery; that is not enough. If, on the other hand, the consignee merely stands on the other ship, or on the barge or lighter, or on the quay, and does nothing, he does not take delivery. The shipowner has performed the principal part of his obligation when he has put the goods over the rail of his ship, but I think he must do something more—he must put the goods in such a position that the consignee can take delivery of them. He must put them so far over the side as that the consignee can begin to act upon them, but the moment the goods are put within the reach of the consignee he must take his part in the operation." Kay, L.J. (8 Asp. Mar. Law Cas., at p. 57; 73 L. T. Rep. at p. 165; (1895) 2 Q. B. at p. 299) says: "I think that his (the shipowner's) duty is completed when he has discharged over side and put the spar under the dominion and control of the men in the lighter." Smith, L.J. (8 Asp. Mar. Law Cas., at p. 57; 73 L. T. Rep. at p. 165; (1895) 2 Q. B. at p. 300) says: "As has been pointed out by the Master of the Rolls, the giving and taking delivery is a joint operation. It is contended here that because the cargo was a cargo of spars the consignees had not to receive the spars until the ship's crew had put them into the bottom of the lighter. If that be so, the case forms an exception to the general rule. But what is there to show that there is any duty on the shipowner to do that which he is not bound to do with respect to any other cargo, namely, to put his crew off the ship and on to the lighter?"

The language used by the learned judges, while most appropriate to the facts of that case, appears to me quite inapplicable to the present charter-party, by which in express terms the obligation is put upon the ship to carry out and complete the whole operation of getting the cargo out of the ship, delivering it into wagons, and stowing it there. *Petersen* v. *Freebody* (*sup.*) does not, in my opinion, assist to the conclusion that the word "delivering" in the third sentence of clause 15 of the Baltwood charter-party connotes any delivery earlier in point of time than that which is stipulated for by the second sentence, namely, discharge into the wagons.

I find myself in agreement with the judgment below and with the views of Scrutton, L.J. and would dismiss the appeal.

Appeal dismissed.

Solicitors: for the appellants, *Gregory Rowcliffe* and *Co.*, agents for *Hill, Dickinson*, and *Co.*, Liverpool; for the respondents, *Trinder, Kekewich*, and *Co.*

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Tuesday, April 9, 1929.

(Before Lord HEWART, C.J., AVORY and SWIFT, JJ.)

PATTERSON v. ROBINSON AND OTHERS. (*a*)

Seamen — Complaint — " Combine together to neglect duty "—No entry of alleged offence in official log-book—Whether condition precedent to hearing—Discretion of justices—Merchant Shipping Act 1894 (57 *&* 58 *Vict. c.* 60), *ss.* 225, 228, 239, *and* 240.

On a complaint against seamen for an offence against discipline under sect. 225 (1) (e) *of the Merchant Shipping Act* 1894, *for that they on board a British ship then on the High Seas and then being duly engaged to serve on board such vessel, unlawfully did combine together to neglect duty, it is not a condition precedent to the hearing of the complaint, that an entry shall have been made in the official log-book of the vessel in respect of the offence. The justices in such a case have jurisdiction to hear the case; but in the exercise of their discretion, they may refuse to do so.*

CASE stated by justices for the county borough of South Shields. George Edward Patterson preferred a complaint against Joseph Robinson, Patrick Skilling, Walter Cowan, James Curran, and Thomas Bailey, the respondents, for " that they between the 5th July 1928 and the 13th Sept. 1928 on board the British ship *Gretavale* then on the High Seas and then being duly engaged to serve on board such vessel, unlawfully did combine together to neglect duty contrary to sect. 225 (*e*) of the Merchant Shipping Act 1894. The justices on the 9th Oct. 1928 without hearing evidence dismissed the complaint on a preliminary objection on a point of law raised by the respondents, but consented to state and sign the following case.

In opening the facts of the complaint counsel for the appellant—the master—stated that the offence complained of consisted of a continuous combination on the part of the respondents—certain firemen—to neglect duty in that from the 5th July to the 12th Sept. 1928 the respondents as firemen on board the steamship *Gretavale*, on a voyage from Colombo to the United Kingdom, acting in concert, refused and neglected to do a fair and reasonable amount of work during their on-duty periods with the object of compelling the appellant to pay them overtime wages for doing work during their off-duty periods, but that the appellants in view of the long period over which this course of conduct continued had not made any entry in the official log-book of the vessel in respect thereof.

Before any evidence was called on behalf of the appellant an objection was taken by the solicitor acting for and on behalf of the respondents that the entry of the alleged offence was required to be made by the appellant in the official log-book of the said vessel by virtue of the provisions of sect. 239 of the Merchant Shipping Act 1894, which provides :

(1) An official log shall be kept in every ship (except ships employed exclusively in trading between ports on the coasts of Scotland) in the appropriate form for that ship approved by the Board of Trade. . . . (4) An entry required by this Act in an official log-book shall be made as soon as possible after the occurrence to which it relates, and if not made on the same day as that occurrence, shall be made and dated so as to show the date of the occurrence and of the entry respecting it; and if made in respect of an occurrence happening before the arrival of the ship at her final port of discharge, shall not be made more than twenty-four hours after that arrival.

And by sect. 240 of the said Act, which provides :

The master of a ship for which an official log is required, shall enter or cause to be entered in the official log-book the following matters (that is to say). . . . (2) Every offence committed by a member of his crew for which it is intended to prosecute, or to enforce a forfeiture, or to exact a fine, together with such statement concerning the copy or reading over of that entry, and concerning the reply (if any) made to the charge, as is by this Act required.

And by sect. 228 of the said Act, which states :

If any offence, within the meaning of this Act, of desertion or absence without leave or against discipline is committed, or if any act of misconduct is committed for which the offender's agreement imposes a fine and it is intended to enforce the fine, (*a*) an entry of the offence or act shall be made in the official log-book, and signed by the master and also by the mate or one of the crew; and (*b*) the offender, if still in the ship shall before the next subsequent arrival of the ship at any port, or if she is at the time in port before her departure therefrom, either be furnished with a copy of the entry or have the same read over distinctly and audibly to him, and may thereupon make such reply thereto as he thinks fit; and (*c*) a statement of a copy of the entry having been so furnished, or of the entry having been so read over, and, in either case, the reply (if any) made by the offender shall likewise be entered and signed in manner aforesaid and (*d*) in any subsequent legal proceeding the entries by this section required shall, if practicable, be produced or proved, and in default of that production or proof the court hearing the case may, in their discretion, refuse to receive evidence of the offence or act of misconduct.

It was contended on behalf of the appellant :

(*a*) That the entry of the offence in the official log-book of the vessel was not, as contended by the respondents, a condition precedent to proceedings against the respondents under sect. 225 (*e*) of the Merchant Shipping Act 1894.

(*b*) That, even in cases where there is no entry in the official log-book at all, the court hearing the case has, by virtue of sect. 228 of the Merchant Shipping Act 1894, a discretion to receive evidence of the alleged offence; or alternatively,

(*a*) Reported by C. G. MORAN, Esq., Barrister-at-Law.

(c) That, as the nature of the alleged offence consisted of a course of conduct extending over a period of more than two months, which amounted to a continuing combination to neglect duty and did not consist of isolated occurrences on particular days, it was not practicable to enter the alleged offence in the official log-book of the vessel, or to prove or produce any entry relating thereto, and accordingly the court had by virtue of sect. 228 a discretion to receive evidence of the alleged offence.

It was contended on behalf of the respondents:

That as the entry of the alleged offence in the official log-book of the vessel had not been made as required by sects. 228, 239, and 240 of the Merchant Shipping Act 1894, and as this was a condition precedent to any proceedings against the respondents for the alleged offence, the court had no jurisdiction to hear the complaint, and that the complaint should be dismissed.

The justices being of opinion that the contention of the respondents was a good objection, and that they had no jurisdiction to hear the complaint, dismissed the complaint. The question for the High Court was whether on the above-mentioned statement of facts the justices came to a correct determination in point of law.

The Merchant Shipping Act 1894 provides:

Sect. 225: (1) If a seaman lawfully engaged or an apprentice to the sea service commits any of the following offences in this Act referred to as offences against discipline, he shall be liable to be punished summarily as follows (that is to say): . . . (e) If he combines with any of the crew to disobey lawful commands or to neglect duty, or to impede the navigation of the ship or the progress of the voyage, he shall be liable to imprisonment for a period not exceeding twelve weeks:

W. L. McNair for the appellant.—The entry in the official log-book of the offence is not a condition precedent to the hearing by the justices of a complaint for one of the offences against discipline. By sect. 228 (*d*) of the Act, the entry required by the section shall, if practicable, be produced or proved and in default of that production or proof the court hearing the case may, in their discretion, refuse to receive evidence of the offence. They are not bound to refuse to receive such evidence. The point taken in the court below was that this paragraph of sect. 228 had no application to a case where there was no entry in the log-book at all, but only to a case where the production of the entry actually made was not practicable, owing to the ship having left the port or for some other reason. My submission is to the contrary: the offence charged here consisted of a course of conduct alleged to have extended over a period of more than two months and it was not practicable to enter the alleged offence in the log-book or to prove or produce the entry. I submit that where in such a case no entry has been made in the official log-book, it is not practicable to prove or produce the entry. [Lord HEWART, C.J.—Sect. 228 makes the entry obligatory and then provides that in any subsequent legal proceedings the entry shall, if practicable, be produced. Does that not refer to the case where an entry has actually been made? By sect. 241, a fine is imposed for failure to make an entry.] [AVORY, J.—Take the case of a mutiny where the officers are put out of action and unable to make any entry. In that case would an entry in the official log-book be a condition precedent to jurisdiction? One of the offences in sect. 225 is assaulting the master or mate. I am inclined to think that the provision in sect. 228 (*d*) means that in the absence of the best evidence that of the entry in the log-book, made at the time, the court need not proceed to hear the matter.] [SWIFT, J.: The provision requiring entry of the offence may be of value to the person charged. He is to be furnished with a copy of the entry or to have the same read over to him distinctly and audibly. He may then make a reply and that also is to be entered.] I submit that here it was not practicable to prove an entry. Consequently the justices need not have heard the complaint, but they were wrong in holding that they had no jurisdiction to hear it. [Lord HEWART, C.J.: It is thirty-five years since this legislation was passed. Has it ever been argued before that the entry in the log is a condition precedent to this jurisdiction?] I know of no recorded case on the subject. [He was stopped.]

The respondents did not appear and were not represented.

Lord HEWART, C.J.—This is a case stated by justices for the borough of South Shields. A complaint was preferred by the present appellant under the Merchant Shipping Act 1894, against the respondents "for that they the respondents" between certain dates "being duly engaged to serve on board such vessel," a British ship named the *Gretavale*, "unlawfully did combine together to neglect duty contrary to sect. 225 (*e*)" of the Statute. When the case came on the point was taken by the solicitor to the respondents that a condition precedent was not fulfilled, namely, that no entry of the alleged offence had been made in the official log-book of the vessel. The making of such entry, it was said, was a condition precedent to any proceedings against the respondents for the alleged offence. It was argued, accordingly, that the court had no jurisdiction to hear the complaint, and that the complaint should be dismissed. That objection having been taken, the justices considered the matter, and came to the conclusion that the objection was good, and that they had no jurisdiction to hear the complaint. The question raised by this case for us is whether in so holding the justices came to a correct decision in point of law.

Now undoubtedly the provisions in this statute for the making of entries in the official log, and in particular entries as to the commission of offences, are provisions not merely in the interests of shipowners or the employers, but also in the interests of the accused person,

and I should be very sorry to give any decision which might diminish, however slightly, the protection which a statute had given to a person accused of committing an offence. But when one looks at these provisions as a whole, in my opinion it is not correct to say that the production of the entry in the log is a condition precedent. By sect. 225 it is provided: "If a seaman lawfully engaged or an apprentice to the sea service" commits any of a series of offences referred to in the Act as offences against discipline, he shall be liable to be punished summarily. One of those offences is the offence which it was proposed to deal with in this case "if he combines with any of the crew to disobey lawful commands, or to neglect duty, or to impede the navigation of the ship or the progress of the voyage." Then by sect. 228 it is provided: "If any offence, within the meaning of this Act, of desertion or absence without leave or against discipline is committed or if any act of misconduct is committed for which the offender's agreement imposes a fine and it is intended to enforce the fine," then "an entry of the offence" not "may be made," but "shall be made in the official log-book and signed by the master and also the mate or one of the crew; and (*b*) the offender, if still in the ship, shall before the next subsequent arrival of the ship at any port, or if she is at the time in port before her departure therefrom, either be furnished with a copy of the entry or have the same read over distinctly and audibly to him, and may thereupon make such reply thereto as he thinks fit"; and (*c*) "a statement or a copy of the entry having been so furnished, or of the entry having been so read over, and, in either case, the reply (if any) made by the offender, shall likewise be entered and signed in manner aforesaid." Sect. 239 contains a series of stringent provisions as to the keeping of an official log. The section is as strict as it could be. Sub-sect. (4), for example, provides as follows: "An entry required by this Act in an official log-book shall be made as soon as possible after the occurrence to which it relates, and if not made on the same day as that occurrence shall be made and dated so as to show the date of the occurrence and of the entry respecting it; and if made in respect of an occurrence happening before the arrival of the ship at her final port of discharge shall not be made more than twenty-four hours after that arrival." It is not necessary to cite further passages to show the importance which the Act attaches to the making of entries in the official log. But the question whether where an offence is sought to be proved the production of that log is a condition precedent is another question. By sect. 241 it is provided: "If an official log-book is not kept in the manner required by this Act or if an entry directed by this Act to be made therein is not made at the time and in the manner directed by this Act, the master shall for each offence be liable to the specific fine in this Act mentioned." But so far as evidence is concerned, the statute provides, as it has to provide, in sect. 239 (6), that "every entry made in an official log-book in manner provided by this Act shall be admissible in evidence."

Then one comes to par. (*d*), in sect. 228: "In any subsequent legal proceeding the entries by this section required shall, if practicable, be produced or proved, and in default of that production or proof the court hearing the case may, in their discretion, refuse to receive evidence of the offence or act of misconduct." I am bound to say that for a time it did not appear to me that those words were apt words to cover a case where *ex hypothesi* no entry had been made. There seems to be something slightly humorous in saying, for example, that it is not practicable to produce or to prove the entry in the log when in truth and in fact the log contains no entry. But I have come to the conclusion that these words are sufficiently wide to cover the case where it is not practicable to produce or to prove the entry for the reason that it was never made at all, and I am helped in coming to that conclusion by the form of this part of the enactment.

That which the justices are by these words empowered to do is not to receive evidence which otherwise they might have received. They are empowered to refuse to receive evidence. What does that mean? Does it not mean this, that apart from this statutory power to refuse to receive such evidence, they were expected to receive and would naturally receive it; in other words, while the Act goes out of its way, so to say, to make an entry in the official log-book admissible in evidence, it does not make it the only evidence, and it expressly provides that where that evidence, the best evidence, perhaps, is not capable of being produced, the justices if they think fit, may refuse to receive any other evidence. That form and that scheme seem to me to be inconsistent with the proposition that the production of the entry in the log-book, or the making of the entry in the log-book, which is a different thing, is a condition precedent. In my opinion, the proper conclusion for these justices in these circumstances was not to say "we cannot hear other evidence in this case," but they might well in the exercise of their discretion have said "we will not hear other evidence in this case," and that course is still open to them.

Avory, J.—I agree that the justices were wrong in this case in holding that they had no jurisdiction to hear the complaint. The real question in the case is whether an entry of the alleged offence in the official log-book was a condition precedent to any proceedings being taken against the respondents in this case for the alleged offence. In my view, it would require much plainer words to take away from a court, otherwise having jurisdiction over an offence, the jurisdiction to deal with a particular offence because no entry had been made in the log-book. In my view, sect. 228, par. (*d*), means that in the absence of what the

legislature may have conceived to be the best evidence of the alleged offence, the magistrates might, in their discretion, refuse to hear other evidence than that which is ordinarily to be found in the log-book. If this were not so, if this were not the true view, it would, in my opinion, lead to the absurd result which I suggested during the argument, that if a seaman or a number of seamen assaulted the master and the other officers and rendered them incapable of making an entry in the log-book, they would thereby save themselves from ever being proceeded against or punished for the offence: in other words, it would be a premium on their assaulting him so grievously as to make it impossible for him to make an entry in the log-book himself. I cannot believe that that was ever intended by this provision in the Act, but I think that the only intention was that the entry in the log-book should, whenever practicable, be receivable as the best evidence, and that in the absence of it, the magistrates in their discretion may proceed to hear any other evidence that is available. Therefore I agree that the case should be remitted to the justices with that opinion of this court.

Swift, J.—I agree.

Solicitors for the appellant, *Botterell* and *Roche*, for *Botterell*, *Roche*, and *Temperley*, Newcastle.

June 6 *and* 7, 1929.

(Before Roche, J.)

Goodwin Ferreira and Co. Limited *v.* Lamport and Holt Limited (*a*)

Bills of lading — Discharge into lighters — Lighterage to be at risk of owners of goods—Damage to goods by reason of defective packing of other goods—Whether sea-transit completed —Liability of owners of ship — Carriage of goods by Sea Act 1924 (14 *&* 15 *Geo.* 5, *c.* 22), *Sched., Art. IV.*, 2, (c), (n), (q).

Certain cotton goods were carried from Liverpool to Bahia, where they were discharged into a lighter. Certain other iron goods, packed in a wooden case, were being lowered into the same lighter when the case broke and the iron goods fell out into the lighter and holed it. Sea-water entered and damaged the cotton goods. Under the contract of carriage lighterage was to be at the risk of the owners and the provisions of the Carriage of Goods by Sea Act 1924, *were also incorporated. The owners of the cotton goods claimed damages from the owners of the ship.*

Held, that if the sea transit had ended when the goods were placed in the lighter the defendants were protected by the terms of the bill of lading. The sea-transit, however, had not ended: the discharge into the lighter was part of the operation of discharge from the ship and was not complete as long as there were other goods to be discharged into the lighter.

Held, also, that the exception relating to loss due to insufficiency of packing in Art. IV. 2 (n), *was wide enough to cover the case of the packing of other goods though primarily it would apply to the goods themselves that were lost or damaged.*

Held, further, that on the evidence the defendants had shown no negligence on the part of themselves or their servants and were therefore exempt from liability under Art. IV., 2 (q).

In Jan. 1926 the plaintiffs sent twenty-two bales of white cotton yarn from Liverpool to Bahia in the defendants' steamship *Biela*. Discharge at Bahia was into lighters, and under the contract in the bill of lading lighterage was to be at the risk of the owners of the goods. By the contract, also, the provisions of the Carriage of Goods by Sea Act 1924 were incorporated, and where these were at variance with any terms in the bill of lading the former were to prevail. At Bahia the plaintiffs' goods were deposited safely into a lighter, and a case containing heavy iron pipes was raised from the hold by ship's tackle to be put into the same lighter. While being lowered the bottom of the case broke, and the pipes fell out into the lighter and holed it. Sea water entered, and damaged the plaintiffs' goods. The plaintiffs brought the present action claiming 880*l.* odd as damages for alleged breach of contract in the carriage of goods by sea.

For the defendants it was argued that as soon as the plaintiffs' goods had been placed in the lighter, the sea transit had come to an end, and that they were then protected by the terms of the bill of lading under which lighterage was at the risk of the owners of the goods. For the plaintiffs it was contended that the defendants had acknowledged the receipt of the goods in good order and condition and were bound to deliver in the like good order and condition. The defendants could not rely on the exception under Art. IV., 2 (*n*), relating to insufficiency of packing: they could only rely on exception (*q*) of Art IV., 2, and had to show that there had been no negligence on the part of themselves or their servants. The defendants had not discharged this onus.

Miller, K.C. and *Atkins* for the plaintiffs.

Le Quesne, K.C. and *W. Lennox McNair* for the defendants.

Roche, J.—This action is brought by shippers and receivers of certain cargo against the owners of the ship upon which that cargo was laden upon a voyage in the year 1926 from Liverpool to Bahia in the Republic of Brazil. I shall speak of the plaintiffs as cargo owners and the defendants as shipowners. No point is taken in the case by the shipowners, the defendants, as to which of the plaintiffs, the shippers or receivers, has the proper title to recover, if anybody is entitled to recover in the action. The cargo in question consisted of

(*a*) Reported by R. A. Yule, Esq., Barrister-at-Law.

a large parcel of white cotton yarn. It was shipped on board the defendants' steamship *Biela* in the year and on the voyage which I have already mentioned. The action arises because when the cargo, the parcel of yarn, got to Bahia and had been put into a lighter in which it was to be conveyed from the ship's side to the Customs House on the wharf, certain machinery, which also formed part of the cargo of the *Biela*, and which, like the cotton yarn, was destined for Bahia, when being put into the lighter, which also contained the yarn, came out of its case, dropped into the bottom of the lighter, made a hole in it, let in sea water, and damaged the cotton yarn to the extent of some 80 per cent. of its sound value. There is no dispute that if the plaintiffs are entitled to succeed they are entitled to substantially the sum claimed in this action. The real question is whether they are entitled to succeed at all. The matter must be determined in accordance with the terms of the bill of lading under which the goods were carried, which, of necessity, incorporates and makes applicable that which is made applicable to the carriage of the goods by the Act of Parliament itself—the provisions of the Carriage of Goods by Sea Act 1924.

The first point in logical order, though I do not know that it is the point which is most highly esteemed by the plaintiffs, is this: It is said that the goods never ought, under the contract contained in the bill of lading, to have been put into the lighter, and that, accordingly, it was really a case of deviation or departure from the terms of the contract and the defendants were not protected by the terms in the contract, and, accordingly, are liable as carriers of the goods in the lighter for the damages they sustained. That depends upon clause 9 of the bill of lading and upon the facts of the case. The body of the bill of lading having provided that the goods were to be delivered at the port of Bahia, or as near thereto as the ship could safely get, clause 9 provided: "The goods to be discharged from the ship as soon as she is ready to unload at the wharf, or into hulk, lazaretto, or hired lighters if necessary, and be lightered by the master or agent at ship's expense, in the case of Bahia in accordance with the custom of the port . . . but at the risk of the owners of the goods in every case."

It is said by the plaintiffs that it was not necessary to put these goods into a lighter, that there were wharves to which the ship could have got having regard to her draught, which was some 20ft., the wharves providing 24ft. of water. It is, therefore, said that the lightering was unauthorised by the contract, and the consequences follow which I have indicated. The first observation is there is evidence that no berth was available; they were occupied. But I do not rely upon that or decide the case on that, although I think it would be a sufficient fact upon which to decide it. The evidence is that these large steamers of the defendant shipowners do not proceed to these wharves. Their usual discharging place and method is that which was followed in this case. The body of the bill of lading would authorise discharge at Bahia in any usual manner and at any usual place providing it was the usual discharging place in the port, as I find this place was. Clause 9, in providing for discharge into lighters, if necessary, did not in my judgment provide merely as an indispensable condition that it should be physically impossible to discharge otherwise than by lighters. It provided that if it were necessary, which in my judgment meant in the ordinary business sense necessary, that that method of discharge should be followed, and that certain provisions should be made with regard to the lighterage at the ship's expense and ship's risk. Now I cannot doubt that if the business is done always in this way by these steamers of the defendants, and that course of business is acquiesced in, as it seems to be (there is no evidence of any objection or anything of that sort), by all the consignees of the goods on the defendants' steamers, that there is the business necessity which is requisite under the clause in question. For that reason I hold that that point on which the plaintiffs seek to build their case fails.

I can conveniently, I think, at this stage deal with what I may call a parallel contention raised on behalf of the defendants regarding the lighterage, because that contention also goes to the root of the action if it is well founded. The contention of the defendants with regard to the lighterage is this, that lighterage was not merely permissible and proper, but that when the goods in question—the yarn—was put into the lighter, the sea transit was over and the whole transit was over which was made the subject of the Carriage of Goods by Sea Act 1924, and that, therefore, the defendants were not bound at that stage by the provisions of that Act, and that with regard to the risks of perils of the sea, even if there was a negligence of their servants, those were all provided for at that stage, and in respect of that stage, by the provisions of the bill of lading itself unaffected by and not rendered more onerous by the provisions of the Carriage of Goods by Sea Act 1924. I think it would follow, if the contention were well founded, that the Act did not apply, that the exceptions of the bill of lading itself would be sufficient to protect the defendants upon any view of the facts of this case. But in my judgment the contention itself is erroneous. The discharge of these goods was part of the operations which are covered and affected by the Carriage of Goods by Sea Act 1924. In my judgment the discharge of these goods was not finished when they were put into a lighter when other goods were being discharged into the same lighter to make up the lighter load which was to start for the shore. When it is contemplated that these goods are to form the lighter load with other goods, the discharge of the goods themselves within the meaning of the Act of Parliament is, in my judgment, going on so long as other goods are being raised into the

lighter and stowed into the lighter alongside or on top of them. For that reason I put out of sight and dismiss that contention, although it is open to the defendants to rely upon it if this judgment, which for other reasons will be in their favour, is impeached before any other court.

Having dealt with those contentions, I now pass to the questions of fact as to how the accident happened. The real dispute between the parties has been and is this. The plaintiffs say, by certain affidavits of lightermen, that the accident happened because the case which contained the machinery was bumped into the bottom of the lighter and that the end of the case which contained the machinery was broken and that when the case was lighted up again to make more orderly stowage, it was found that the bottom of the case was smashed, and then the machinery, which consisted of columns of pillars, fell out into the lighter. The evidence is very indecisive, and I think variable from time to time, when it appears in different forms, letters, and so forth, whether the holing of the lighter is supposed to have been done when the case was bumped or dropped into the barge in the first instance, or when the columns forming the contents fell out of the case. But I dismiss, and do not believe, that case for various reasons which I need not further define. It is eminently improbable; it was put forward very late; and I definitely prefer and accept the version of the defendants, which was set out in correspondence and various documents at the time, which is this: That when the case was in the air the bottom fell out of it and so did the columns, and the columns so falling out holed the lighter and caused the accident. That is the basis of fact upon which I proceed to determine this case. The argument upon that state of facts may be put as follows. It is said by Mr. Le Quesne, for the defendants, that the letting in of the water by the holing, caused by the fall of the machinery, brought into operation the perils of the sea, namely, the ingress of water, and there is considerable authority for saying such an incident or damage is a peril of the sea; and he continues that on the basis of the principle stated in Mr. Carver's work, sect. 78, for which the authority is *The Glendarroch* (70 L. T. Rep. 344; (1894) P. 226), which is there cited, the onus of proving negligence in those circumstances is upon the person who seeks to avoid the operation of the exception of perils of the sea, that is to say, in this case the onus is on the plaintiff. He says that the position is unaffected by the existence and operation of the Carriage of Goods by Sea Act 1924. It is unnecessary for me to decide whether that contention is well founded or not. In my judgment I am going to proceed on the basis that the onus in this matter is upon Mr. Le Quesne, and that he has discharged it. I am not deciding whether that is so, but I am going to proceed on that basis, and for this reason, that I do know, or think I know, what brought into operation the perils of the sea, namely, the fall of the machinery, and I do know, or think I know, and am going to find I know, why the machinery fell. Therefore, I have to deal with causes more material, more really the causes of the accident and the damage than the entrance of the sea water. I think that those causes are causes which are specifically dealt with by Art. IV., 2, of the Carriage of Goods by Sea Act 1924. I incline to the view that with regard to those causes and their operation and effect, the Act of Parliament has put the onus upon the person who asserts them, the shipowner, and, accordingly, I am going to deal with this case on the basis that the onus is there and has been discharged. In Art. III. one finds in sub-art. 2 the following: "Subject to the provisions of Art. IV., the carrier shall properly and carefully . . . care for and discharge the goods carried." I read the words material to the present case. When one looks at Art. IV., which contains the obligations to which Art. III. is subject, one reads the following in sub-art. 2: "Neither the carrier nor the ship shall be responsible for the loss or damage resulting from . . . (*c*) perils, dangers, and accident of the sea"—that is one matter—"(*n*) insufficiency of packing . . . (*q*) any other cause arising without the actual fault or privity of the carrier or"—which is now said to mean "and"—"without the fault or neglect of the agents or servants of the carrier, but the burden of proof shall be on the person claiming the benefit of this exception to show that neither the actual fault or privity of the carrier nor the fault or neglect of the agents or servants of the carrier contributed to the loss or damage." The contention of Mr. Miller for the plaintiffs was that he called a gentleman from the engineers who had packed or superintended the packing of this case of machinery, and that I ought to find that the packing was good when it left the works of the engineers, and that, even if I thought that the bottom fell out, the defendants had not proved that it did not fall out because they bumped the case either at the time when the accident happened or that they had not damaged it at some previous stage in the transit and the handling of the case. What I find about the case itself is this. I was satisfied that the engineers are very competent people and had a very competent gentleman superintending the packing, and that the case, a model of which has been made and shown to me, is a common form of package used by these engineers to hold these columns, which are part of sugar-pressing machinery which they are making very commonly, shipping very commonly, and send invariably, as I gather, in this kind of case, which is like a large coffin or sarcophagus of a rectangular shape.

On the evidence I am quite satisfied that this case had, and must have had, initial defects. No knocking about, I think, would have accounted for what happened. I am satisfied that the case was received in the apparent good order and condition which the bill of lading says it was. I am satisfied, since no

one said anything or suggested anything to the contrary, that when the case left the hold it was in similar apparent good order and condition, and that what was wrong with it was not that some positive injury had been done to it which would never have been visible, but that it was not properly nailed up or fastened at the beginning. There was an odd circumstance, and that was the specimen case submitted to me, it appeared, had no nails at all at one part of the lower end of the bottom which was the vulnerable part in the accident of 1926. If the same nailing had been used on that side of the bottom, where there would have been six nails there were none. Had there been a similar absence of nails in the case in question I think very likely the columns, which are heavy things of 25cwt., would have dropped out when they were slung over the barge with the weight of the columns upon this bottom part of the case. At all events, I am satisfied that it was initial want of fastening or securing of the case which was the cause of the trouble and not injury done during the voyage. Of course, if part of the battens which surround the bottom had been knocked off that would have been visible. Knocking about would not have knocked out these long French nails which are used for fastening. For those reasons I am satisfied that insufficiency of securing the bottom of the case was the cause of the trouble, due to the escape of the columns contained in the case, which escaped through the bottom. That being so, the question is, has the defendant brought himself within (*n*) or (*q*) of Art. IV., 2, of the Act of 1924? It is said and argued by Mr. Miller that, as regards (*n*), insufficiency of packing has reference to the packing of the particular goods in respect of which or to which loss or damage arises. I have no doubt that (*n*) is intended chiefly and mainly to apply to such a case, but I am not satisfied and I do not decide that insufficiency of packing of another parcel which is to be shipped with the damaged cargo cannot be prayed in aid or used under (*n*). I decided two days ago a case where the packing of other articles in the same ownership as the damaged articles was dealt with and held to be a protection under (*n*) of that article, and I am not prepared to hold, and I do not hold without further considering the matter, that if the packing which was insufficient was the packing of some article which was not the property of the person complaining in the action, that (*n*) of the article could not be invoked or used in aid. But I do not decide it on that point for this reason, that clearly on the view I have expressed of the facts, the accident happened through another cause which arose without the actual fault or privity of the carriers or without fault or neglect of the agents or servants of the carriers, and I have held that there was nothing in the appearance of this case which ought to have roused or did rouse the suspicions of either the carrier or any of his agents or servants, and that the defendants, the shipowners, have discharged the onus of satisfying me that there was no negligence or fault of the shipowners or their agents or servants. I think that covers all the matters in the case. If there are other contentions which have been raised by either party in support of their view, I have no doubt there is a sufficient note or record of those of them I have not mentioned in my judgment, and those points and contentions will be open to them in order to attack or defend this judgment if the matter goes elsewhere.

I give judgment for the defendants with the costs of the action.

Judgment for the defendants.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Feb. 21 *and* 22, 1929.

(Before HILL, J. and Elder Brethren.)

THE DAGMAR. (*a*)

Collision — Dumb hopper — Lighter — Lights— Hopper moored alongside dredger—After moorings cast off—Hopper held by forward moorings and swinging with the tide—Whether under way—Two riding lights being exhibited —Obligation to exhibit navigating lights—Port of London River By-laws 1922, *by-laws* 5, 6— *Port of London River By-laws* 1914-1926, *by-law* 14.

A dumb hopper made fast by forward moorings to a moored vessel, and swinging with the tide is herself a moored vessel, and not a vessel under way within the Port of London River By-laws.

The M., *a dumb hopper loaded with spoil, had been moored alongside a dredger in Blackwall Reach, River Thames. Her after moorings were cast off, and she commenced to swing with the tide, being still made fast forward by her forward moorings. She was exhibiting one white riding light forward and one white riding light aft. In these circumstances the* D., *a steamship bound up-river, came into collision with the* M.

Held, (*i*) *that the* M. *was not a vessel under way:* (*ii*) *that in any case the* M. *was probably a "lighter" within the meaning of the Port of London River By-laws* 1914-26, *and was not required to carry side lights when under way, and no lights were laid down by the by-laws for her to carry;* (*iii*) *that the* M., *being*

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

moored to the dredger which was moored to buoys, was herself moored and bound to exhibit two white riding lights in accordance with by-law 14; (iv) that the D. was alone to blame for the collision.

DAMAGE ACTION.

The plaintiffs claimed damages for injuries sustained by their dumb hopper *Medlock* in a collision with the defendants' steamship *Dagmar*, which took place in Blackwall Reach, River Thames, on the 15th Oct. 1928.

The Medlock, a dumb hopper 180ft. in length, had been lying moored fore and aft alongside the dredger *No. 7*, heading up-river. She was loaded with spoil and was about to be towed out to sea by the tug *Mark Lane*. Her after moorings were accordingly cast off, and she commenced to swing with the tide on to a down-river heading. When the *Medlock* was about half athwart the *Dagmar* came into collision with her. At the time of the collision the *Medlock* was exhibiting a white riding light forward and a stern light.

The Port of London River By-laws 1914-26 provide as follows:

14. . . . A vessel of one hundred and fifty feet or upwards in length when at anchor or moored shall, by night, exhibit in the forward part of the vessel at a height of not less than twenty and not exceeding fifty feet above the hull one such light, and at or near the stern of the vessel and at such a height that it shall be not less than fifteen feet lower than the forward light, another such light.

The Port of London River By-laws 1922 provide:

5. A sailing vessel under way and any vessel not under steam being towed shall exhibit the same lights as are prescribed by By-Law 7 of the Port of London River By-Laws 1914 for a steam vessel under way with the exception of the bright white lights mentioned therein which they shall never exhibit. This by-law shall not apply to: (*a*) a lighter . . .

[By-law 7 of the Port of London River By-laws 1914 now by-law 7 of the Port of London River By-laws 1914–1926, provides (*inter alia*) that a steam vessel under way shall exhibit one or two white masthead lights and green and red side lights.]

6. A lighter and any other vessel specified in sub-clause (*a*) or by-law 5 (of 1922) when under way and not in tow shall by night have a white light in a lantern of a pattern approved by the Port Authority always ready and the person in charge thereof shall exhibit the same on the approach of any vessel. . . .

Langton, K.C. and *Willmer* for the plaintiffs. The *Medlock* was moored, being properly made fast aft to a vessel which was herself moored. *The Medlock* was, therefore, obliged to show two white riding lights in accordance with by-law 14. These lights she was showing. *The Dagmar* was solely to blame.

Digby, K.C. and *Hayward.*—*The Medlock* was not at anchor, but was in fact under way. *The Esk; The Gitana* (3 Mar. Law Cas. (O. S.) 242; 1869, 20 L. T. Rep. 587; L. Rep. 2, A. & E. 350). She ought, therefore, to have been exhibiting side lights in accordance with the by-laws for a vessel under way. Her failure to exhibit proper lights was misleading for *The Dagmar*, and was a cause of the collision: (see *The Devonian*, 9 Asp. Mar. Law Cas. 179; 84 L. T. Rep. 675; (1901) P. 221).

Langton, K.C., replied.

HILL, J.—In this case the *Medlock*, a dumb hopper, 180ft. long, 36½ft. beam, laden with mud, was lying alongside the dredger *No. 7*, 240ft. long, in Blackwall Reach on the night of the 15th Oct. 1928. They were both heading up-stream. The loading of the *Medlock* was completed and she was preparing to proceed to sea. The intention was that she should be towed to sea by the tug *Mark Lane*, as she had no means of propulsion of her own. The tug was waiting to take her in tow. The dredger was in about mid-channel at a point marked on the plan. The *Medlock* was on the starboard side of the dredger, and the tug was waiting on Harrison's Wharf until the *Medlock* had swung head to tide.

The *Medlock* was in the course of swinging, having cast off her stern ropes, and had swung about half way athwart the channel when the steamship *Dagmar* was seen coming up river. The *Medlock* continued her swing and the *Dagmar* came into collision with her when she was heading about athwart, and it is agreed on both sides that it was about a right angle blow.

The *Dagmar*, a steamship of 2471 tons gross and 290ft. long, was on her way up from Gravesend to Hay's Wharf. The dredger was exhibiting her riding lights and also the triangle of lights belonging to a dredger and also her working lights. The barge had a sufficient stern light and she said also, which is a matter in dispute, that she had a forward white light. If it was there it was of such a character as to be a proper riding light, and it was in relation to the after light at a proper height. She said she had it exhibited and defendants say that there was no forward light. If they were both exhibited and burning they were proper lights and properly placed.

Now, the plaintiffs' case is that before casting off aft, those in charge of the hopper made sure that nothing was coming up the reach. They waited for a short time before casting off for a tug that was passing, and when it had passed and there was nothing in sight they cast off. The hopper was already far swung when the *Dagmar* was seen coming up, showing her masthead and red lights about abreast of the Blackwall entrance to West India Dock; and their case is that the *Dagmar* came on opening her green light as well as the red as if trying to squeeze through between the dredger and the *Medlock*, and that the forward rope attached to the *Medlock* was let go and that the dredger herself hove on her chains to try to pull herself clear, but

that nothing else could have been done and that the collision followed. Shortly before the collision three blasts were sounded from the *Dagmar*.

Now, except as to the lights exhibited by the *Medlock* this story and the *Dagmar's* story are in substantial agreement. The *Dagmar's* story is that she was coming up at a speed of about seven knots under a steady, easy helm. After nearly completing the Blackwall bend she saw, about half a mile distant, the lights of the dredger. Recognising that they were the lights of a dredger, they kept their speed with an easy starboard helm, and at about a quarter of a mile after this they saw a single white light on their port bow, which they say was the aft light of the *Medlock*. It was taken for the stern light of a vessel proceeding up river. The speed of the *Dagmar* was maintained until at about a length from the dredger they became aware that the light which they had observed was on the aft end of a vessel the loom of which they saw forward. They went full speed astern but could not avoid the collision.

The master of the defendants' vessel spoke of a starboarding after the white light was seen, and at a preliminary inquiry it was stated that just before the collision the helm was put hard-a-port. It does not very much matter. The speed of the *Dagmar*, as they all say, was seven knots. It is almost impossible to test that in any satisfactory manner. It is quite impossible to reconcile the speeds as the engineer's various orders were recorded in the scrap log and as given in the evidence of the master and pilot. It is quite impossible to reconcile those speeds with the time it is said the *Dagmar* took to travel from Gravesend to the point of the collision. You cannot do it; and the result is that you cannot draw any definite conclusion as to the speed that the *Dagmar* was travelling when she came in sight of the dredger.

But take it as they said, half speed, and I will assume that she was half speed and no more, that would mean that she entered the reach at a speed over the ground of something like eight and a half to nine knots, for the tide was one and a half to two knots. If she continued at that speed until a very short time before the collision, which must be measured almost by seconds, it follows that she cannot have reduced her speed from seven knots to anything like one or two knots, and that she must have had very considerable way on her.

The position then is this, that the *Medlock* is swung across the river still fast forward to the dredger, and at the time of the collision has got athwart the river. The *Dagmar* is coming up at a speed of seven knots, which in relation to any fixed object is a rate of eight and a half to nine knots. Now, what are the obligations in that position?

First of all, the most important matter of controversy is as to whether the *Medlock* was showing two riding lights or only one. The pilot of the *Dagmar* admitted that if she was showing two lights he ought to have seen them. I think that there may have been some difficulty at first at any rate in separating the forward riding light from the many lights on the dredger, and that may account for some of the people on the *Dagmar* not being able to distinguish the two lights. If they were there they must have distinguished the two lights. If they were there they must have distinguished them if they were really attending before they came into contact, and I have to determine where the truth is in this matter.

Taking the evidence and having seen the witnesses from the *Medlock* with the master of the dredger and the master of the *Mark Lane*, I am unable to say that it is not true that the *Medlock* had a forward riding light. It is highly unlikely that people like this, doing this work every day—and they seem to be very responsible kind of people—should have neglected to have the two riding lights exhibited. It is quite clear that they were under a duty when moored to a dredger to have riding lights forward and aft, and I find as a fact that they had them, and that they were burning.

Then the next question that arises is whether those were the proper lights for the *Medlock* to be exhibiting, and in my view they were. It has been argued that the *Medlock* was at the time a vessel under way. I do not think there is any authority which would lead me to the conclusion that a vessel which is still fast by a rope forward to a dredger and controlled by that rope is to be regarded as a vessel under way within the rules. But if I were to consider that this vessel was under way, I should find it quite impossible to say that she ought to have had her side lights exhibited.

The rules to which I have been referred are the Thames Rules of 1922. Rule 5 deals with side lights and stern lights, that is to say, the same lights as prescribed for a steam vessel under way. With the exception of the bright white lights, that rule applies to a sailing vessel under way and to any vessel not under steam being towed. Now this was neither "a sailing vessel under way" nor a "vessel not under steam being towed." There is an exception to the rule which deals with lighters, dredgers, and other vessels which may include the *Medlock*. I think the word "lighter" may include her, but the rule only applies to these vessels when they are being towed. Rule 5 seems to have no application to the *Medlock*, but rule 6 of 1922 applies to lighters "and every other vessel specified in sub-clause (a) of by-law 5 (of 1922) when under way and not in tow." Now, a lighter is defined in the definition clause as "any dumb barge or other like craft for carrying goods . . ."; and the only reason why it could be said that the phrase about lighters does not include this hopper barge is that it might be said that it is not a craft for carrying goods. But I should accept the word "goods" in its widest possible sense, as including spoil from dredging. If it

is not a lighter then there is no provision for it, and it must be governed by some such general rule as that. No vessel at all which is moving in the river must be without any light, and it is certainly a vessel within the definition clause.

What I have said, therefore, so far comes to this. Firstly, I do not think this vessel was under way. Secondly, if she was under way I can find no rule which requires her to carry side lights. I find at most a rule which required her to have a white light in a lantern. I cannot carry that further. She certainly had a white light in a lantern, which was fixed aft.

My own idea is that she is governed by a rule. She was moored, and by-law 14 (Port of London River By-laws 1914-26), I think, provides for the light she is to carry. It is in two parts. It deals, first, with a vessel under 150ft. in length, with a special proviso as to lighters. That, I conclude, means lighters less than 150ft. in length. The second part deals with vessels over 150ft. in length. The circumstances in which a vessel must be to make rule 14 apply are that she must be at anchor or moored. In the case of a U-boat, *The Deutschland* (1920, 3 Le. L. L. Rep. 96), I dealt with a matter similar to this, and expressed an inclination of opinion which would lead me to say that the *Medlock*, being moored to a dredger which was at anchor was herself at anchor. But I passed by that troublesome point on the previous occasion, and I can pass it by now, because I am clearly of opinion that the dredger being there at anchor or fixed to a buoy, and the *Medlock* being attached to her by a rope controlling the *Medlock's* movements, the *Medlock* was moored. That being so, I think she comes within the obligation to exhibit two riding lights to comply with the second part of rule 14, and, further, she did not come within any of the exceptions which are dealt with in the provisions in the rule. In my view she was carrying the right lights.

In order that I may not be discourteous to Mr. Digby's excellent argument, I shall add that, in my view, she was none the less moored because she had cast off part of her moorings. Her aft moorings were gone. Her forward moorings still remained, and in my view she was none the less moored, because in consequence of loosening some of her moorings the tide had begun to operate on her. A vessel at anchor is none the less at anchor because she is swinging, and a vessel moored to anything is none the less moored because she is swinging.

It is obvious that if a vessel which is moored or at anchor, instead of remaining head to the tide or straight with the tide, so acts that she begins to swing with the tide, though she continues to be moored, she comes under quite a fresh duty. It is a duty which applies to any ordinary ship at anchor swinging to her anchor. She cannot treat herself as if she was remaining rigid. A moored vessel, as soon as she begins to swing, comes under a duty of special care to vessels navigating the river up and down. and the question here I have to consider, as far as the *Medlock* is concerned, is whether she neglected any duty which she owed to vessels navigating the river. I think it may well be—the Elder Brethren think it may well be—that it would be wiser if long vessels like this, instead of swinging without any assistance, were to make fast to a tug first and get the tug to help them. It is said to be more troublesome; perhaps it may be, I do not know; but there would certainly be more control, and I understand that some instruction since this occurrence has been given to that effect.

But to say it would be wiser in the light of experience to employ a tug on these occasions is a very different thing from saying it is negligent not to employ a tug. The evidence is that it is quite a common thing for hoppers waiting on these dredgers to swing in this way—in fact the evidence is that it is always done in this way. With the hopper heading downstream there is some evidence that a tug makes fast on the starboard side, but if the hopper is heading up stream and has to make a complete turn down stream it has been the practice to cast off the aft moorings and let the tide carry the hopper round. There is no rule of law which forbids a vessel to swing in a navigable river, and the Elder Brethren are unable to advise me of any provision that such a craft as this should not do so. The utmost they can say is that in the light of experience it would be better if it were not done in future; but I am quite unable to say that it was negligent on the part of the *Medlock* to swing in the way they did, provided they took proper precautions to see they had time in which to do it. It was clearly their duty in my view to see that nothing was coming up which they were likely to interfere with. I accept their evidence that before they cast off they looked out and nothing was in sight. Having regard to the speed at which the *Dagmar* was coming up, I think it highly probable, in the almost certain conditions, that the *Dagmar* could not have been in sight, and, that being so, those in charge of the hopper, in my view, were entitled to assume: "Now is the time when we can swing in safety. We shall get round before anybody will come up who will be affected by our swinging, and we will do it." In my view, that is all they did.

Therefore, I am quite unable to say that there was anything which they did which was negligent. They had not any power to make whistle or sound signal, and they had exhibited what in my view were the proper and prescribed lights. As to the suggestion of side lights, I can imagine nothing more dangerous or more likely to produce confusion than that a hopper swinging in this way, still fast to a vessel alongside, should be showing a navigation light to a ship approaching—nothing more misleading could be imagined. I am

unable to find the *Medlock* has been guilty of negligence.

As to the *Dagmar*, to my mind the matter is quite clear. The pilot knew that the dredger was there. It was a matter of public notice by the Port of London Authority, and as soon as he came within range of it he saw it. The working lights were all exhibited and burning. He saw them, and he ought to have known that, not certainly but very likely, the dredger might have a hopper alongside. He said that he did not hear the buckets working to show that she was dredging at the moment, but it must have been in his knowledge that a hopper might be alongside: and the Thames Rule 19 (*b*) required him to keep well clear of the dredger, and sect. 278 of the Port of London (Consolidation) Act 1920, to which special attention had been drawn in the notice about dredging, required that special care and caution should be used by vessels in passing vessels employed in dredging.

The pilot chose to enter the reach at a speed of at least seven knots, and to continue that speed although he saw the dredger there. In my view he made no adequate attempt to keep well clear of the dredger. He says he was going to pass at 100ft. and he somehow got within 20ft. of the dredger. Something no doubt must be allowed for the effect of the tide, but whether he was passing the dredger at a safe distance or not, he was, at any rate, as the Elder Brethren advise me and as I certainly think, approaching the dredger and passing rather near, at any rate on the starboard side of the dredger, at a very excessive speed. He never saw, nor did anyone on board the *Dagmar* see, the *Medlock's* forward light, or if anyone saw it nobody paid any attention to it, the look-out not even reporting that light. Perhaps, as I say, they did not see the forward light because they saw so many. The pilot says that it was not there and that he would have seen it if it had been there. I find that it was there.

The result of all this is that the pilot, who did not reduce his speed when he first saw the dredger so as to pass her with care and caution, continued his speed until he was so close that nothing could be done by him to avoid a collision. Therefore, in my opinion, the *Dagmar* is alone to blame.

(Before Lord MERRIVALE, P., and Elder Brethren.)

THE PALEMBANG. (*a*)

Collision—River Thames—Vessel at anchor—Swinging—Whether turning signal required—Port of London River By-Laws 1914–1926, *by-laws* 5 *and* 28 (e).

By the Port of London River By-Laws 1914–1926, *by-law* 5, "*the expression 'under way' when used in relation to a vessel means when she is not at anchor, or moored, or made fast to the shore, or aground, and includes a vessel dropping up or down the river with her anchor on the ground.*"

In order to come to anchor, the plaintiffs' vessel, which was bound up river on the flood tide, sounded the turning signal required by the Port of London River By-Laws, by-law 28 (e) *and commenced to swing under helm and engine action. When she had swung about two to three points the anchor was let go with about thirty fathoms, the navigating lights were extinguished, and riding lights exhibited. The plaintiffs' vessel continued to swing, but in the course of swinging her engines were worked ahead for about a minute in order to avoid another vessel.*

Held, that the plaintiffs' vessel was at anchor, and not under way, and was not therefore required to sound the turning signal prescribed by by-law 28 (e).

The Esk (3 *Mar. Law Cas.* (*O. S.*) 242; 20 *L. T. Rep.* 587; *L. Rep.* 2 *A. & E.* 350) *followed.*

DAMAGE ACTION.

The plaintiffs, owners of the steamship *Pakeha*, claimed damages from the defendants, owners of the steamship *Palembang* in respect of damage sustained by the *Pakeha* in a collision which took place in Sea Reach, River Thames. The weather at the time of the collision was foggy. The *Pakeha*, bound up-river on the flood tide, in order to come to anchor on account of the fog, sounded the signal prescribed by the Port of London River By-Laws, by-law 28 (*e*), for a vessel turning in the river with her head to port, namely, four short blasts followed by two short blasts, and began to swing under hard-a-starboard helm and reversed engines. Having swung about two to three points, the pilot of the *Pakeha* ordered the anchor to be let go, with about thirty fathoms, and when it was reported that the anchor was holding, he ordered the navigating lights to be switched off and riding lights to be switched on. No further signal was sounded by the *Pakeha*, save that the bell was rung for fog in accordance with the regulations. Whilst swinging the engines of the *Pakeha* were worked for a short time ahead in order to avoid a collision with a steamer at anchor. When the *Pakeha* had

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

swung nearly head to tide she was run into by the defendants' steamship *Palembang*.

Langton, K.C. and *Alfred Bucknill* for the plaintiffs.—The *Pakeha* was at anchor and was not under way: (*The Esk*, 3 Mar. Law Cas. (O. S.) 242; 20 L. T. Rep. 587; L. Rep. 2 A. & E. 350); *The Romance*, 9 Asp. Mar. Law Cas. 149; 83 L. T. Rep. 488; (1901) P. 17; *The Dagmar*, 141 L. T. Rep. 271).

Stephens, K.C. and *Carpmael* for the defendants.—The *Pakeha* was "under way" within the meaning of the by-laws, and she ought, therefore, to have sounded the turning signal prescribed by by-law 28 (*e*). Reliance was placed upon *The Wega* (7 Asp. Mar. Law Cas. 597; 72 L. T. Rep. 332; (1895) P. 156) and *The Nador* (11 Asp. Mar. Law Cas. 283; 100 L. T. Rep. 1007; (1909) P. 300).

Bucknill replied.

Cur. adv. vult.

May 15, 1929.—Lord MERRIVALE, P.—The collision in question took place on the 26th May 1928 at a few minutes before three in the morning in dense fog in Sea Reach of the Thames at a point about twelve cables above the Chapman Light. The plaintiffs' vessel, the *Pakeha*, a steel twin screw steamship of 7889 tons gross register, 477ft. long, with quadruple reciprocating engines of 850 horse power, and manned by a crew of eighty-three hands, had come to an anchor in the fog in course of her voyage with general cargo from Wellington, New Zealand, to London. The defendants' steamship, the *Palembang*, a vessel of Dutch register of 7051 tons gross, 445ft. long, with triple expansion engines of 500 horse power nominal, came into Sea Reach in course of her voyage, part laden, from Dunkirk to London. Each vessel had an experienced Thames pilot on the bridge at all material times, and both were adequately manned and equipped.

One broad allegation on the part of the *Pakeha* was that in steaming to the point in question on her course, and in coming to a down-river heading, she had been involved in dense fog for more than a quarter of an hour before the collision. On the other hand, the defendants alleged that at the time when they had been proceeding up river with bare steerage way, but not prevented from safe navigation, they found the *Palembang* "suddenly involved in a dense bank of fog," just before the collision. Each vessel blamed the other in respect of action taken on board when both were in the fog. They were agreed, however, that a serious casualty took place presently after the vessels respectively became aware of their mutual proximity, the stem of the *Pakeha* and the starboard bow of the *Palembang* coming into collision with heavy resultant damage to the *Palembang* and some damage to the *Pakeha*.

The plaintiffs' main case was that the *Pakeha*, being at anchor, was run into by the *Palembang*, negligently brought into and navigated in fog at excessive speed. The plaintiffs also alleged improper starboarding of the *Palembang* to cross ahead of the *Pakeha*, and that when the *Palembang* was close to the *Pakeha* she dropped her starboard anchor, bringing her head to port so that the *Palembang* fouled the anchor chain of the *Pakeha* and broke her adrift.

The defendants, while traversing the *Pakeha's* allegation as to the navigation of the *Palembang*, denied that the *Pakeha* was at anchor, and further said that if at anchor she was not showing two riding lights, having none aft. They contended also that during the fifteen minutes before the collision, the *Pakeha* had been a vessel under way about to turn or in course of turning round, bound by by-law 28 (*e*) of the by-laws 1914-26 to sound four blasts and two at intervals of not more than two minutes, and that she had failed to comply with the by-law. Beyond this it was complained that when the vessels were in imminent danger of collision the *Pakeha* had not taken action to get out of the way by slacking her cable and using her engines to go astern. It was said indeed that, on the contrary, she had come ahead towards the *Palembang* and so into collision with her.

The defendant's charge that the *Pakeha* did not display two anchor lights I may deal with at once, by saying that I find both the lights to have been duly lit and to have been burning at all material times.

The main controversy on the facts was that raised by the defendants' allegation that their vessel in course of her voyage up river in Sea Reach was enveloped suddenly by the dense bank of fog in which the collision occurred. Asserting this to be so, Mr. Stephens submitted that those on board the *Palembang* had no warning of the state of things into which the vessel was proceeding, that they navigated their ship with due care when they found themselves in difficulties as to visibility, and that, therefore, they could not be found guilty of negligence so as to give the plaintiffs cause for action for damage due to the collision.

The case was said to be on all fours with that of *The Nador* (11 Asp. Mar. Law Cas. 283; 10 L. T. Rep. 1007; (1909) P. 300) where —to cite from the judgment—"that no sort of warning that the *Nador* was approaching a fog of the density which in fact appears to have been the case." Those in charge "entered the fog suddenly and when they realised that the only thing to be done was to bring the ship to an anchor . . . took the proper steps to do so." Some discussion arose at the hearing here upon the fact that the defendants in the case of the *Nador* formulated in their defence a plea of inevitable accident. This, however, is a matter of form only. The defendants there as here brought before the court the facts on which they relied to show that in navigating in a fog, and coming into collision, they were not guilty of negligence. Negligence, or its absence, is the matter material for determination. The facts of the case as to fog are, therefore, of vital importance.

There is cogent evidence on the part of the plaintiffs that for, at any rate, half an hour before the collision there was from just above the Chapman Light to the place of the collision intermittent fog which made it imprudent to advance up river at any substantial speed. Two vessels, the *Woodcote* and the *Bazalgette*, were brought to anchor because of fog a quarter of a mile down river from the place of collision, a good part of three quarters of an hour before the *Pakeha* let go her anchor.

Each of those was from that time sounding her bell for fog, and both the *Pakeha* and the *Palembang* steamed past them. "Sometimes," said the master of the *Woodcote*, "you could see ships, sometimes you couldn't." Up river of the *Woodcote* and the *Bazalgette* were numerous other vessels sounding during this period in like manner. The defendants' pilot said there were no less than 35 ships so sounding in the upper part of the reach during the night. Most, if not all, of those vessels had come to anchor before either the *Pakeha* or the *Palembang* passed up. On the other hand, the *Pakeha* went ahead with precautions till about half-past two, and with her engines at dead slow from 2.33 until 2.45, although fog signals, including bells, had been heard higher in the reach. The steam tug *Betty* passed the Chapman at nearly the same time as the *Pakeha* and anchored a quarter of a mile or more below her, and the *Betty's* master says that half a minute before the *Palembang* passed the *Betty* the weather was more clear down river, and that there then came on a sudden bank of fog. A good deal of other evidence incidentally supports the view that the density of the fog was intermittent. It would be quite incorrect though to say that it was a sudden fog in which the *Palembang* found herself enveloped. The real question is whether with fog signals of vessels at anchor in fog ahead, haze deepening and fog present in dense banks from time to time lower down, the *Palembang* ought to have proceeded as she did. The ships' bells which were being sounded could be heard, the Elder Brethren inform me, at three-quarters of a mile distance. Several bells were being sounded well below the place of collision.

Those in charge of the *Palembang* did not bring her to anchor when the peril ahead was manifest, but kept her under way at substantial speed. During the ten minutes next before the collision she covered one mile two cables, a speed representing 5.2 miles through the water on a flood tide of about two knots. She was, during this period navigated at such speed that she could not avoid other vessels at the distance at which they could be seen. In these respects the *Palembang* must be held to blame.

The main controversy with regard to the *Pakeha* depends upon whether she ought under the Port of London by-law 28 (*e*) to have been sounding a turning signal of four short blasts and two at intervals of not less than five minutes during some ten or twelve minutes before the collision, whether she did so sound, and if she did not whether her failure in this regard contributed to the collision.

By-law 28 (*e*), so far as is material, and relevant, says that "a steam vessel under way about to turn and whilst turning round shall sound at intervals of not more than two minutes four short blasts in rapid succession followed if turning with her head to . . . port by two short blasts."

By-law 5 provides definitions of the language used in the by-laws generally. It directs, *inter alia*, that "In these by-laws . . . unless there be something in the subject or context repugnant to such construction . . . the expression 'under way' when used in relation to a vessel means when she is not at anchor or moored or made fast to the shore or aground and includes a vessel dropping up or down the river with her anchor on the ground." On behalf of the defendants it was argued that the *Pakeha* ought to be held to have been "under way" and "not at anchor," within the meaning of the by-laws.

On this part of the case several authorities were cited, and, in particular, *The Esk* (3 Mar. Law Cas. (O. S.) 242; 20 L. T. Rep. 587; L. Rep. 2 A. & E. 350), *The Wega* (7 Asp. Mar. Law Cas. 597; 72 L. T. Rep. 332; (1895) P. 156), and *The Romance* (9 Asp. Mar. Law Cas. 149; 83 L. T. Rep. 488; (1901) P. 17). The decisions in these cases do not deal with the constructions of the language used in the present by-laws. All three, however, show what is a vessel at anchor, in the general acceptance of that term among seamen.

In *The Esk* (*sup.*) Sir Robert Phillimore had to determine whether, under the Admiralty Regulations 1858, the schooner *Esk*, which had been at anchor between the Sunk and the Gunfleet Sands was still at anchor when the brig *Gitana* was about to pass her at night in hazy weather. Her white light, as a vessel at anchor, had been seen from the *Gitana* at a quarter of a mile off, and was still in view at the time of collision. The master of the *Esk* had before the *Gitana* sighted her called up all hands to get up anchor, and they had heaved in chain to the extent of about two-thirds of the length let go with the anchor. There was conflicting evidence, for the *Gitana*, it was said that the *Esk* was in motion and forging ahead, and had moved a ship's length after she came in view of the *Gitana*; for the *Esk*, that the anchor was on the ground and holding at the time of the collision, and that the collision caused her to drive and the anchor to come home. The learned judge found that the *Esk* was not in fact holden by her anchor. "The true criterion," he said as to the application of the regulation, "that is, as to the display of navigation lights, must be whether the vessel be actually holden by and under the control of her anchor or not. The moment she ceases to be so, she is in the category of a vessel 'under way,' and must carry the appointed coloured lights." *The Wega* (*sup.*), a case tried before Gainsford Bruce, J., in 1895, involved consideration of the Thames By-Laws

then in force. Under those by-laws : " Where a steam vessel is turning or for any reason is not under command and cannot get out of the way of an approaching vessel," she is required to signify the same by four or more blasts of the steam whistle in rapid succession.

Under art. 7 white lights fore and aft are prescribed for a " vessel . . . lying in the river at her own anchor or at mooring buoys, where she will swing." The steamship *Galatea* came to anchor in Barking Reach in dense fog, took in her side lights, and put up a riding light, and sounded three short blasts, but did not sound the signals required by art. 18. On the part of an approaching ship, the steamship *Wega*, which came into collision with the *Galatea*, it was alleged that the red side light remained exposed for two or three minutes after she had brought to anchor, and, further, that she failed to sound whistle signals so that the *Wega* was misled into supposing her to be an on-coming ship, collided with her as she swung athwart the tide. Regarding side lights, the learned judge found her in fault as alleged, and said : " The side lights ought to have been taken in instantly she was held by her anchor." Sir Robert Phillimore's statement in *The Esk* (*sup.*) that the true criterion of a vessel being at anchor is " whether the vessel is actually holden and under the control of her anchor or not," was considered and adopted by Lord Gorell—then Gorell Barnes, J.—in 1901 in the case of *The Romance* (*sup.*)

Before me counsel for the defendants relied also on the judgment of Gainsford Bruce, J. in the case of *The Wega*, for a passage relating to whistle signals in which the learned judge held that the *Galatea* ought under the by-laws then in force, to have sounded after she had let go her anchor.

As to the *Galatea's* failure in respect of sound signals, the learned judge said, " I think that a vessel throwing herself athwart the river and stopping her way to come to anchor is ' not under command ' within the meaning of the rule, and that it was incumbent upon the *Galatea* to have sounded four or more blasts in rapid succession . . . and I cannot doubt . . . that if the *Galatea* had sounded four short blasts or more so long as the danger lasted that a warning would have been given which probably would have enabled the *Wega* to avoid the collision. It is contended that as the *Galatea* was at anchor before the collision the circumstances which made it incumbent upon her to sound the danger signal had passed. But the danger cannot be said to have passed until the *Galatea* had swung to her anchor . . . so long as she was swinging across the tide, so long, as it seems to me, did the danger occasioned by her turning continue." To apply this decisive passage last quoted to the controversy in the present case would be to assume the obligation of the *Pakeha* in this case to have been governed by a regulation laying down that until a vessel held by her anchor has swung to her anchor so as (if tide is running) to ride with her head to the tide she will sound the signal of four and one or four and two short blasts directed by by-law 28 (*e*). It will be necessary to consider whether by-law 28 (*e*) has this effect.

So far as the judgment in *The Wega* (*sup.*) deals with the obligations in 1895 of vessels which in course of being anchored became out of command I may deal very concisely with the case made against the *Pakeha*. Art. 27 of the by-laws in force in 1895 imposed on all vessels " turning round or for any reason not under command not able to get out of the way of an approaching vessel," a duty in common to sound certain signals. By-law 28 (*e*) now in force deals distributively with a vessel " under way about to turn and whilst turning round," and a vessel " under way not under command or which is unable to manœuvre as required by these by-laws." The learned judge found that in *The Wega*, the *Galatea*, though " at anchor " was " not under command." I was not invited in the present case to find that the *Pakeha* was not under command, nor, indeed, to hold that she made any default under by-law 28 (*f*), and on the advice given me by the Elder Brethren I have no doubt that, at all material times, the *Pakeha* was under command, and able to manœuvre so far as a vessel may do which is held by her anchor.

To return to by-law 28 (*e*), what is to be determined firstly is whether the *Pakeha*, when she was about to turn, and whilst turning round, and not " at anchor," omitted to sound signals obligatory upon her under by-law 28 (*e*) ? It is further to be determined whether, if the *Pakeha* had so sounded, the *Palembang*, warned by such signals, would certainly or in reasonable probability have avoided collision.

The material period of time is that from 2.45 to 2.55. At 2.45 the pilot of the *Pakeha*, having proceeded with his engines stopped for some minutes, ordered the ship's helm hard-a-starboard. He then put the engines full speed astern, and when the vessel had swung two or three points he ordered the anchor to be let go, and presently directed that the navigation lights should be switched off and the anchor lights switched on and the ship's bell rung, which was done. At the time it was done the anchor was on the ground. Thirty fathoms of chain was paid out, the anchor held, and was reported to be holding. The riding lights were switched on at about the time the anchor held. Immediately before putting the helm hard-a-starboard the *Pakeha* sounded the turning signal of four short blasts and two. I do not find that she sounded it subsequently. The anchor was reported to be holding within two minutes, and my impression, from the pilot's evidence, is that he did not consider it incumbent on him, under the regulations, to sound any more turning signals. He took the view, as I think, that from the time the vessel was held by her anchor, his proper course was to be showing anchor lights

instead of navigation lights, and instead of blowing long blasts for fog to sound the ship's bell.

When the *Pakeha* was swinging toward a direct down-river heading—head to tide—engine action half ahead, and ahead for a minute-and-a-half, was taken to avoid a small vessel on her starboard quarter, and the vessel being cleared the engines were stopped, put full astern for about a minute, and again stopped. They remained stopped until—the *Pakeha*, having by this time a heading of about east-south-east, one point southward of a direct down-river course—the masthead lights of the *Palembang* were made out above the bank of fog, the *Palembang* approaching the *Pakeha* fine on her port bow, her masthead lights opening as though she were under a starboard helm.

During several minutes—probably seven or eight—before the *Pakeha's* swing at her anchor was interrupted by her engine action last mentioned, and during a minute after that interruption had passed, no turning signals such as are prescribed in by-law 28 (*e*) were being sounded by the *Pakeha*. Was she required by the by-law to give them? Was she, that is to say, a vessel under way and turning, and not at anchor?

If I am to apply the criterion Sir Robert Phillimore supplied in his judgment in the *Esk* (*sup.*), I must, on my view of the evidence here, find that the *Pakeha* was actually holden by and under the control of her anchor during all the time in question. That was her position according to the meaning which long ago was judicially set upon the words I have to apply. To see whether this meaning is applicable to the words "at anchor" under by-law 28 (*e*), I examine the particular by-law with the associated regulations of the by-laws generally for any other instances there may be of the use of the same words, in order to ascertain whether there is ground for saying that in the by-laws 1914-26 the term "at anchor" has a meaning other than its common meaning. By-law 14, which specified the lights to be shown by vessels "at anchor," and by-law 15, dealing with vessels "at anchor" below Bow Creek, appear to me certainly not to suggest any other than this common meaning. Moreover, under by-law 82 a breach of any regulation is an offence summarily punishable. I am not aware of any ground on which a by-law so enforceable can be construed less strictly in a damage case than it would be if some breach were the subject of proceedings to enforce a penalty.

On the whole I find myself bound to hold that within the meaning of the definition in by-law 5 the *Pakeha* was at anchor at the time in question and accordingly was not under by-law 28 (*e*) required during this time to be sounding a turning signal.

I may add that as a matter of navigation—apart from the by-laws—I am advised that from the time the *Pakeha's* anchor held and her cable was taut, she could not be said to have been under way, though different considerations would arise if, from any cause, she steamed up to her anchor so that the cable ceased to hold her head. This I am satisfied the *Pakeha* did not do. The Elder Brethren inform me further that in the case of a vessel which has let go her anchor and is held by it, and thereafter is using her engines to assist her in getting the heading at which she is to lie, it has not, in recent years, been a common practice in the navigation of the Thames to sound a turning signal during such movement, provided the anchor holds and the cable is taut.

I proceed to deal with the claim on the part of the *Palembang* that if warned by sound signals from the *Pakeha* under by-law 28 (*e*) she would have avoided collision. I attended carefully to the evidence of her pilot and have since discussed with the Elder Brethren the action and relative situation of the two vessels. The pilot certainly did not appear to me, so far as his personal view was concerned, to attribute the collision to any failure of the *Pakeha* to blow a turning signal. He, personally, did not regard the absence of such a signal as a default on the part of the *Pakeha*, though he adopted the view that if he had heard four blasts and two just before he entered the fog he would have "turned his ship round." I was satisfied such a signal would not have conveyed to him that a vessel held by her anchor was coming to a direct down-river heading in the fog, or anything more than that a vessel under way and not at anchor was turning higher in the river above the bank of fog. I believe also that if such a signal had been blown up-river of him, five, three, or two minutes before the collision he would not have done other than he, in effect, did. He expected to get safely through notwithstanding all the fog signals ahead. "If I had turned and lost the tide," he said, "I should have been much to blame."

I may add that on the question of the materiality of the signal of four blasts and two under the circumstances, the Elder Brethren have called my attention to the relative headings of the two ships at the time in question, to the mode in which during the time the *Pakeha* pivoted on a point very slowly abaft of her stem, to the effect that with knowledge of the position of the *Pakeha* those in charge of the *Palembang* expected to pass her, heading down river as she then was, by means of starboard helm action and to the fact that the *Palembang's* collision was not collision with the side of a vessel turning but with a vessel heading in nearly an opposite direction to herself. I do not enlarge on these matters because those I have already dealt with seem to me to dispose of the particular questions I have under consideration.

Complaint was made on the defendant's behalf that when the *Palembang* was seen to be approaching and crossing the bow of the *Pakeha*, the *Pakeha* did not put out cable to her anchor and go astern. This I have discussed with the Elder Brethren and I find that in the *Pakeha's* position the doing of the things

suggested if it were effective would have enveloped her in new risks, but that it probably could have been effectively done in the time available after risk of collision arose.

There was a further allegation that the *Pakeha* came head into collision. I am satisfied she did not.

A contributory cause of the collision was, the Elder Brethren consider, the letting go of the starboard anchor of the *Palembang*, by reason of some misunderstanding on the part of her chief officer immediately before the collision. Her engine action at that time also taken independently of her pilot, if it did not contribute to the casualty did not avoid or diminish it. Each action showed that the *Palembang* was not, at the material time, under the steady control which would no doubt have been found on her bridge under ordinary circumstances.

The result of the various considerations on which I have dwelt is, that I find the *Palembang* solely to blame.

Solicitors: Messrs. *Ince*, *Colt*, *Ince*, and *Roscoe* for the plaintiffs; Messrs. *Waltons* and *Co.* for the defendants.

(Before BATESON, J.)

THE HAYLE. (*a*)

Damage at berth — Liability of owners of berth — Harbour-master acting as ship's agent — Notice limiting liability of the owners of the berth for damage—Knowledge of the harbour-master that the berth was unsafe—Whether knowledge of the owners.

The plaintiffs claimed damages from the defendants for injury to their steamship H. *caused by the* H. *lying aground in the defendants' berth. Before the* H. *was consigned to the berth the plaintiffs received an assurance from the harbour-master that the berth was safe for vessels to lie aground. The harbour-master subsequently acted as agent for the plaintiffs. The court found that the berth was in fact unsafe. The defendants relied upon the knowledge of the harbour-master that the berth was unsafe, which knowledge they contended must be imputed to the plaintiffs by reason of the harbour-master having acted as the plaintiffs' agent. They further alleged that the harbour-master ought to have known of the unsafe nature of the berth, and ought to have drawn the attention of the plaintiffs to the fact in his capacity as their agent. They further relied upon the terms of a printed notice that they did not warrant or guarantee the berths safe, and were not in any event liable for damage contracted at them. There was no evidence that the terms of the notice were known to the plaintiffs, although they were known to the harbour-master.*

Held, that even if the harbour-master had known that the berths were unsafe there was no obligation upon him to communicate such knowledge to the plaintiffs, since such knowledge would have been acquired in his character as harbour-master, and it would have been against the interest of the harbour-master himself to communicate it; that the printed notice did not form part of the contract, the harbour-master not having been appointed agent until after the contract was made; and that the plaintiffs were entitled to succeed.

ACTION for damage sustained by steamship lying in a defective berth.

The plaintiffs claimed damages for injuries sustained by their steamship *Hayle* whilst lying aground in a berth at the wharf at Fremington, near Barnstaple, belonging to the defendants, the Southern Railway Company.

Before arranging to send the *Hayle* to Fremington the plaintiffs addressed an enquiry to Mr. Thatcher, the defendants' harbour-master, and also station-master at Fremington, requesting him to inform them whether the berth was safe for steamers to lie aground. In reply Mr. Thatcher informed the plaintiffs that the berths were perfectly safe for steamers to lie aground, and he also informed them that he himself acted as agent for nearly all boats coming to Fremington, and that he was station-master as well as harbour-master and could attend to all requirements.

Subsequently the *Hayle* arrived at Fremington to discharge a cargo of coal, and the harbour-master acted as ship's agent, paying the pilot and engaging labourers, and making advances to the master of the *Hayle*, for which services he was paid 1*l*. 1*s*. by the plaintiffs.

The *Hayle* sustained certain damage in the berth which Bateson, J., assisted by Elder Brethren, held to have been caused by the defective state of the berth. The defendants then relied upon the knowledge of the harbour-master that the berth was defective, which knowledge they contended he should have communicated to the plaintiffs. They further relied upon a notice, the terms of which were known to the harbour-master, to the effect that the company did not represent, warrant, or guarantee that the berth was safe, and that vessels brought alongside were at the sole risk of their owners, and that the company would not in any event be liable for damage.

Bateson, J. adjourned these questions for further consideration.

Dunlop, K.C. and *Alfred Bucknill* for the plaintiffs.

Schiller, K.C., *Digby*, K.C. and *Dumas* for the defendants.

Fuller v. *Benett* (1843, 2 Hare. 394) and *Rolland* v. *Hart* (1871, 25 L. T. Rep. 191; L. Rep. 6 Ch. 678) were referred to in the course of the argument.

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

BATESON, J.—There remain the questions which I reserved for argument as to whether the defendants can escape liability on the ground that the plaintiffs knew of the dangerous condition of the berth or knew of the terms of a notice by the defendants exempting them from liability. I think the defendants fail on these points also.

It is not contended that the plaintiffs had knowledge otherwise than by the employment as ship's agent of the defendants' harbour-master who knew, or ought to have known, both the danger and the terms. The harbour-master was not employed as a general agent by the plaintiffs, but only for a very limited purpose, namely, to report the ship at the custom house, pay the pilot, and provide the master with money to pay the labourers. I think the harbour-master collected the labour—or more probably the labour collected itself—on the wharf, and the harbour-master sent the labourers down to the ship to get the job. The account for his services is made up of some small sums for telegrams, payment of the pilot, and the money advanced to the master to pay for the labour, together with one guinea for his agency services.

Mr. Schiller put his argument in a very short form. He says that the harbour-master knew, and was, in fact, the agent of the ship ; and that the knowledge of the agent of the ship must be imputed to the plaintiffs as principals. He put it that the harbour-master ought to have known—even if he did not know—the actual condition of affairs and also the terms of the card, which is called a " notice," to the master, owner, and persons in charge of vessels. Mr. Schiller argued that it did not matter whether the case was founded in tort or contract—the same principle must apply. He was rather inclined to think it was contract. He said that the contract was only made when the ship came alongside and not before. The object of that argument, no doubt, was to get rid of certain letters which had been written before the vessel came to the wharf ; and he contended that the knowledge which the harbour-master had was to be imputed to the plaintiffs. He referred me to *Indermaur* v. *Dames* (1867, 6 L. T. Rep. 293 ; L. Rep. 2, C. P. 311, 313), and in particular to the following passage from the judgment of Kelly, C.B., quoting from the judgment of Willes, J. in the court below : " We consider it settled law that he " (a visitor unacquainted with the danger he is likely to incur), " using reasonable care on his part for his own safety, is entitled to expect that the occupier shall on his part use reasonable care to prevent damage from unusual danger which he knows or ought to know ; and that, when there is evidence of neglect, the question whether such reasonable care has been taken by notice, lighting, guarding or otherwise, and whether there was such contributory negligence in the sufferer, must be determined by a jury as a matter of fact." Mr. Schiller also referred to *Re Fenwick ; Stobart, and Co. Limited* (*Deep Sea Fishery Company's* claim) (86 L. T. Rep. 193 ; (1902) 1 Ch. 507, 511), also a case of a secretary acting in a dual capacity, where it was held by Buckley, J. that the secretary's knowledge, as regards the affairs of one company, did not affect with notice the other company of which he was also secretary. The particular passage relied on was : " What the court has to see is whether the information he gets, as secretary of the one company, comes to him under such circumstances as that it is his duty to communicate it to the other company. Suppose, for instance, as secretary of the first company he learns something which it would be a breach of his duty to that company to communicate to the other company. I should say certainly that it is not notice to the other company." It depends on the circumstances of the case what the position really is. Mr. Schiller also cited *Forbes, Abbott, and Lennard Limited* v. *Great Western Railway Company* (17 Asp. Mar. Law Cas. 347 ; 138 L. T. Rep. 286) with reference to the terms of the notice to show that the terms of this notice were wide enough to protect the company in every possible event.

Mr. Dunlop's case was that the harbour-master did not in fact know ; he said in terms, in his evidence, that the berth was safe ; therefore he did not know that the berth was unsafe, and facts which he ought to have known, but did not know, did not affect the plaintiffs. His principals—if they were principals to this extent—would not be affected with matters which he ought to know but which he, in fact, did not know, and (as far as the berth's unsafety was concerned) as the harbour-master did not know it was unsafe the plaintiffs certainly would not be affected with any knowledge of the unsafety of the berth. He also says that the harbour-master did not really know the contents of the notice, and that there was no evidence that he had ever read it. I do not think, in fact, there was any evidence that he had ever read it. My own view is that if he had ever read it he had forgotten all about it until the accident happened, and then, when the accident did happen, he handed to the master a card with the terms on it. Mr. Dunlop also said that there were two factors which are always necessarily present before knowledge of an agent can be considered to be knowledge of a principal, and he referred me to Bowstead's Law of Agency, 7th edit., pp. 366–7 : " Knowledge acquired by an agent otherwise than in the course of his employment on the principal's behalf, or of any fact or circumstance which is not material to the business in respect of which he is employed, is not imputed to the principal."

Applying those principles to the present case I think it may be said that the harbour-master was not the agent of the plaintiffs to know these matters. I doubt myself whether the harbour-master really had any business to know what the precise condition of this berth was. The engineering department of the railway company were responsible for seeing that the berth was safe. The harbour-master had general supervision of the wharf and did apparently report

whether the time had arrived or was about to arrive when some cleaning of the berth should be done, but as to his knowledge of the condition of the berth or its fitness to receive a ship at different times, I doubt very much whether he was the person who was in a position to know what the condition of things was. But, however that may be, I am quite satisfied that his employment by the plaintiffs was merely for the purposes of reporting the ship and providing funds for the labour—as I have already indicated—and that he was not an agent to know these matters that are relied on in this case.

Further than that the harbour-master was very much interested in getting the ship to come to this particular berth, and it was certainly not to his interest to prevent her coming. In that connection Mr. Dunlop referred me to a passage in *Re David Payne and Co. Limited* (91 L. T. Rep. 777 ; (1904) 2 Ch. 608). Buckley, J. (as he then was) said this : " I understand the law to be this : that if a communication be made to an agent which it would be his duty to hand on to his principals, who in this case, of course, were the board of which Kolckmann was but one member, and if the agent has an interest which would lead him not to disclose to his principals the information which he has thus obtained, and in point of fact he does not communicate it, you are not to impute to his principals knowledge by reason of the fact that their agent knew something which it was not his interest to disclose, and which he did not disclose."

Lastly, Mr. Dunlop referred to *Nelson Line* v. *James Nelson and Sons Limited* (10 Asp. Mar. Law Cas. 581 ; 97 L. T. Rep. 812 ; (1908) A. C. 16) with regard to the terms of the notice, and with regard to the notice itself, even assuming that it could be held that the plaintiffs had notice of the terms. Mr. Dunlop pointed out that before the ship ever went to this berth the plaintiffs had written to the harbour-master to inquire whether the berths at the wharf were always safe for steamers to lie aground, and had received from him a letter stating that the berths were " perfectly safe for steamers to lie aground." Those letters were written, I think, before any contract was made for the ship to take the cargo to the wharf, in order that the plaintiffs might decide whether they should enter into the contract or not, and that letter of the harbour-master no doubt was part of the inducement which led the plaintiffs to make their contract with the railway company to send the ship there. In my view those letters are part of the bargain between the railway company and the plaintiffs for taking the ship to this wharf. There is, therefore, a notice in writing to the plaintiffs by letter, which says that the berths are perfectly safe for steamers to lie aground, and a printed notice which conveyed words to the very opposite effect. In that connection Mr. Dunlop in *Nelson Line* v. *James Nelson and Co. Limited* (*sup.*) cited this passage from Lord Loreburn's speech : " If I were obliged to affix a definite meaning to the disputed language, I should prefer the plaintiffs' construction. But in truth I think the clause, taken as a whole, so ill thought out and expressed that it is not possible to feel sure what the parties intended to stipulate. The law imposes on shipowners a duty to provide a seaworthy ship and to use reasonable care."

This, of course, was a damage to cargo case, but it seems to me that the words there are equally applicable to a case where there is a duty on the defendants to take reasonable care. They may contract themselves out of that duty, but unless they prove such a contract the duty remains. Such a contract is not proved by producing language which may mean that, or may mean something different. As Lord Macnaghten said in *Elderslie Shipping Company* v. *Borthwick* (10 Asp. Mar. Law Cas. 24 ; 92 L. T. Rep. 274 ; (1905) A. C. 93) : " An ambiguous document is no protection." I was also referred in this connection to the Scottish case of the *Aktieselskabet Dampskibet Forto* v. *The Orkney Harbour Commissioners* (1915, S. C. 743, 755). Lord Salvesen, in that case, dealing with the notice of the harbour commissioners to masters of vessels and others making use of the moorings laid down by the commissioners, says : " Even if the notice applied, I doubt whether it would relieve the defenders as in a question with the owner of a ship who was not familiar with its terms, even although the local pilot whom he employed was in knowledge of it. To have this effect in law it would require to be pleaded as a condition of the invitation which the harbour authorities impliedly issue to all vessels having occasion to use the harbour ; and such a condition could not be imported in the case of a person who was not made aware of it. The pilot was not the servant of the shipowner in the sense of making his knowledge on such a subject the shipowner's knowledge. He was a mere agent for the limited purpose of navigating the entrance to the harbour. The conclusive answer, however, seems to me to be (as indeed the history of the notice shows) that it applies only to buoys and moorings which vessels make use of by attaching themselves to them." There he deals not only with the notice, but with the other point of a person being an agent for a limited purpose.

I think this notice was no part of the contract as between the plaintiffs and the defendants, and that the defendants fail on this point also.

I therefore give judgment now for the plaintiffs, subject to a reference.

Solicitors for the plaintiffs, *Thomas Cooper and Co.*, for *Hill*, *Dickinson*, and *Co.*, Liverpool.

Solicitors for the defendants, *Godfrey Warr Clarkson*, and *Co.*

Monday, June 10, 1929.

(Before HILL, J.)

THE NORMANSTAR. (*a*)

Practice — Taxation of costs — Limitation of liability—Reference—Average statement and adjusters' evidence used at reference as evidence of the claim of each cargo owner—Whether adjuster's charges recoverable on taxation.

The plaintiffs obtained a decree limiting their liability for a collision in which the defendants' vessel was sunk. There were a large number of cargo claims. An average statement was prepared by a firm of average adjusters, and at the reference the solicitors for the cargo owners by agreement tendered the average statement as evidence of the claims of the various cargo owners, and the average adjusters appeared and gave such explanations as were necessary of their statement. On taxation the registrar allowed the defendants 1000*l. for the average adjusters' fees. The plaintiffs objected to such allowance on the ground that the defendants' solicitors were not entitled to pay others to carry out work which ought properly to have been performed by themselves, and upon the further ground that the same average adjusters had been engaged to prepare the defendants' claim against their underwriters.*

Held, that the item was properly allowed on taxation.

SUMMONS to review taxation adjourned into court.

The plaintiffs obtained a decree limiting their liability in respect of a collision in the River Plate between their steamship *Normanstar* and the defendants' steamship *Kuneric*, for which the *Normanstar* was held alone to blame. There were a large number of cargo claims. At the reference the solicitors acting for the cargo claimants tendered by agreement, in lieu of affidavits and vouchers, an average statement prepared by a firm of average adjusters, who also attended the reference and gave any necessary explanations.

On taxation the assistant registrar allowed the defendants 1000*l.* for the average adjusters' fees and 157*l.* 10*s.* for the defendants' solicitors for instructions for brief. The plaintiffs objected to the sum allowed for the average adjusters' fee.

Noad for the plaintiffs.

Alfred Bucknill for the defendants.

June 10.—HILL, J. This was an objection on taxation following a report on a reference by the plaintiffs in a limitation action following a report and reference. The plaintiffs in the limitation action were defendants in the damage action and have been found alone to blame, and therefore had to pay the damages suffered by the other steamship and her cargo. They objected to an allowance by the registrar of a fee paid to well-known average adjusters for preparing particulars. Where there is a decree of limitation of liability, the party obtaining the decree and liable for the damages limited by the decree has in general to pay the costs of the reference—at least, these costs include the costs of the several joint creditors proving the amount of the damages suffered by them. That is obviously just. It would be strange if the wrongdoer could say to the injured parties, "Here is the lump sum for which I am liable to you in the lump; now find out at your own expense how much of it each is entitled to."

Each claimant on the reference must prove the amount of his loss. Where there are several cargo claims and also a ship's claim, it is very often found convenient to prove the claims by affidavit, as the rules permit. Frequently, where the claims have been put into the hands of an adjuster, and he has investigated them, it may be agreed that the results as set out in his adjustment are accepted without incurring the expense of filing affidavits with the relevant vouchers.

When that practice is followed it relieves the claimants' solicitors from personally preparing the affidavits and vouchers, and getting them sworn, and it presents the evidence to the registrar in a very convenient form. In general, where there are a large number of items to be proved it is, I am satisfied, a course which involves less expense than the preparation and swearing of a number of affidavits. In the present case there were many items of damage to be considered. The ship was sunk and salved; the cargo was in part lost, in part salved and re-conditioned; there were salvage and other expenses to be ascertained and distributed among the several claimants before the amount of damage suffered by each could be proved, and the loss of each several claimant had to be proved. The solicitors for the cargo claimants, instead of doing all this work themselves, employed, as I think very wisely, a well-known firm of salvage adjusters to ascertain the facts and set them out in a statement. A similar statement was prepared by the adjusters dealing with the charges and expenses incurred by the ship. A statement was prepared dealing separately—and no doubt incorporated in the first statement I have referred to—with the proceeds of unidentified salvage cargo, and their appropriation of the several parcels belonging to the different claimants, and there was also a separate statement of the general suing and labour expenses and charges. All those were by agreement treated as the evidence in the reference in lieu of affidavits and vouchers. The adjuster attended the reference to give explanations. The registrar, on the basis of the statement, arrived at the figures in the report. The ship's loss worked out at 26,453*l.* and the cargo loss at 328,134*l.* Then came the question of costs. The solicitors' costs for instructions for brief had been carried in at the very moderate figure of 157*l.* 10*s.*—properly so, for they had

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

employed the adjusters to prepare the particulars. On that head 126*l.* was allowed. Had they done all the work no one can doubt that a very much larger sum would have been claimed and allowed for instructions for brief. The adjusters' fee was originally put in as 1575*l.*, but that was amended to 1312*l.* 10*s.*, and the registrar allowed 1000*l.*

In principle I can see no possible objection to such an allowance. The adjusters have done for the claimants work which the claimants' solicitors would otherwise have had to do, and the result has been that the facts and figures set out in the adjustment have been accepted in evidence. Had that course not been followed the claims could only have been proved by bringing a large number of witnesses from the River Plate, or by a great number of affidavits, mostly sworn in the River Plate, with the appropriate vouchers annexed, supplemented by evidence, which might have been very lengthy, as to the appropriation of the salvage and other charges to the respective items of ship and each parcel of cargo. It is not for me to question the quantum allowed. But I have little doubt that the cost of so preparing the brief and proving the claims would have very largely exceeded the aggregate of the 1126*l.* allowed by the registrar.

The appellants seem to think it is relevant that the claimants may have employed the same adjusters to prepare their claim against the underwriters. I cannot see the relevance. It is true that an adjustment as against underwriters must first of all claim the amount of the respective losses. So far it proceeds in the same way. Then the adjusters have to ascertain the respective insurances and underwriters, and have to distribute the losses according to the amounts insured among the underwriters, and so ascertain what each underwriter has to pay and to whom he has to pay it. This second half of an adjustment against underwriters is irrelevant to any inquiry against the wrongdoer. But this second half is not included in the adjusters' fees charged in this case. I might add that it is a fallacy to suppose that for other purposes the adjusters are employed by the underwriters. It is obvious, therefore, that I must dismiss the appeal with costs.

Solicitors, *Wm. A. Crump* and *Son*; *Ince, Colt, Ince*, and *Roscoe*.

Tuesday, June 11, 1929.

(Before BATESON, J.)

THE ESSEX ENVOY. (a)

Collision—Damages—Detention—Time charter-party — Cesser clause — Payment of hire to cease if time lost owing to collision or damage preventing the steamer from working for more than twelve hours—Loss of time whilst carrying out permanent repairs of damage sustained in collision before the making of the charter-party—Application of cesser clause—Whether hire properly deducted.

A time charter-party contained the following cesser clause:

"In the event of loss of time from deficiency of men or stores, breakdown of machinery (whether partial or otherwise), collision, stranding, fire in ship and (or) cargo, damage or interference by authorities preventing the working of the vessel for more than twelve running hours, the payment of hire shall cease until she be again in an efficient state to resume her service at the place where the accident occurred. . . ."

After the steamer came on hire she went into dry dock for four days to repair damage which she had sustained in collision before coming on hire. The owners allowed the charterers four days' hire, and claimed to recover the amount so allowed from the defendants in the collision action.

Held, that the above cesser clause applied to damage arising before as well as after the making of the charter-party; that the charterers were entitled to deduct four days' hire; and that the owners were entitled to recover the amount so deducted from the defendants as damages for loss of use of their steamer.

MOTION in objection to registrar's report.

The plaintiffs, the Hall Line Limited, claimed damages from the defendants, owners of the steamship *Essex Envoy*, in respect of damage sustained by the plaintiff's steamship *City of Lyons* in a collision which took place at Port Said on the 11th Dec. 1926. The defendants admitted liability for the collision. After the collision temporary repairs were carried out, and the vessel eventually proceeded to the United States. On the 21st March 1927 the *City of Lyons*, being then at Philadelphia, was chartered by the plaintiffs to the Ellerman Bucknall Steamship Company Limited upon a time charter-party by the terms of which it was provided as follows:

1. The said owners agree to let and the said charterers agree to hire the said steamship for the term of about six months from the day she is placed at the disposal of the charterers at Philadelphia in such dock, wharf or place as customary, and as charterers may direct, she being then ready with clear, clean holds to receive cargo; and being tight, staunch, strong and in every way fitted for the service. . . .

2. The steamer is expected ready about the 26th March 1927.

11. In the event of loss of time from deficiency of men or stores, breakdown of machinery (whether partial or otherwise), collision, stranding, fire in ship and (or) cargo, damage or interference by authorities preventing the working of the vessel for more than twelve running hours, the payment of hire shall cease until she be again in an efficient state to resume her service at the place where the accident occurred. . . ."

On the 25th March the *City of Lyons* was put at the disposal of the charterers at Philadelphia; on the 27th March she went into

(a) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

dry dock for permanent repairs, which it was agreed lasted four days. This period of time was deducted by the charterers from the hire payable under the charter-party, and the plaintiffs claimed to recover the amount so deducted by way of damages from the defendants. At the reference the registrar allowed the amount claimed. The defendants moved to vary his report by omitting the sum claimed in respect of the four days in question.

B. B. Stenham for the motion.—The cesser clause has no application to damage arising before the vessel came on hire. It is impossible to give effect to the clause unless the accident occurred during the course of the service, since the service is to be resumed at the place where the accident occurred. The parties in the present case do not desire the resumption of service at Port Said, where the accident occurred. No other place being specified, the clause upon a proper construction cannot apply to an accident which took place before the steamer was chartered. [Other reasons, not material to this report, were also advanced by counsel.]

Brightman.—The charterers were clearly entitled to make a deduction of four days' hire. The cesser clause cannot be construed so as to impose upon them an obligation to pay for time during which they did not enjoy the use of the steamer. Such a construction would be manifestly unjust.

B. B. Stenham replied.

BATESON, J.—In my view this appeal fails. In consequence of a collision between the *City of Lyons* and the *Essex Envoy* which occurred at Port Said on the 11th Dec. 1926 the *City of Lyons* was so injured that she had to be put into dry dock and repaired. The repairs necessarily occupied four days, and in my view the owners of the *City of Lyons* lost the use of their vessel for four days. The measure of damage for the loss of the use of the vessel for four days is no doubt the amount of hire which the owners could have got for their ship. In fact, they had a charter-party at the time for their ship, and the charterers have not paid for the hire for the four days while the vessel was under repair. That affects only the measure of damage, because if the vessel had been repaired before the charter-party was entered into, the owners would have had to delay chartering her for four days, and would have lost the hire for those four days, on which they could have obtained hire for their ship. It is said that because of the terms of the charter-party and because of what happened the owners could have recovered hire for the use of their ship during the four days when the owners took her out of the power of the charterers to use her and dry-docked her while they did the repairs. I do not think that argument, ingeniously put forward as it was by Mr. Stenham, ought to prevail. The vessel after the accident was allowed a voyage (by the surveyor's certificate in Port Said) to Calcutta and back to the United Kingdom for repairs. She, in fact, went to Calcutta, but did not come to the United Kingdom. She went to Philadelphia, via New York, to discharge her cargo. She was surveyed in New York on the 16th March 1927, and on the 21st March the charter-party in question, which was a six months' charter, was entered into by Ellerman and Bucknall Steamship Company Limited, of London, and the Hall Line Limited, of Liverpool, who were the managing owners of the *City of Lyons*, which I understand belongs to the Ellerman Line. Messrs. Hall, the Ellerman Line, and Ellerman and Bucknall, are no doubt closely associated, but all different entities. The charter-party was signed on the 21st March. The vessel arrived at Philadelphia on the 24th March. She finished her discharge and was handed over to the charterers on the 25th March. She loaded two tons at Philadelphia. She left Philadelphia on the 26th March, arriving at New York on the 27th March; she was there examined by surveyors after she had got alongside, was dry-docked on the 30th, came out of dry dock on the 3rd April, and started loading on the 9th April. The master, I think it is, said: "We were ready for loading and had it not been for this damage probably we should have commenced." There was a telegram from a Mr. Niven who, I am told, is the surveyor in New York, to the Hall Line, the agents in Liverpool, quoting the offers for repairs and stating that the vessel was not required for loading until the 4th April. So that there was the evidence of the master that he probably would have loaded and the evidence of this surveyor who said that she was not required for loading.

The registrar's finding, as I understand it, with regard to this matter is that the vessel was prevented from working for more than twelve hours, and that the damage prevented the use of the vessel for more than twelve hours, so I suppose that he accepted the master's evidence that the vessel would have loaded but for the fact that she was being repaired in dry dock.

It seems to me that the charterer was prevented from using and lost the use of this vessel (owing to her being repaired for damage in dry dock) for four days after she had come under the charter-party. The charter-party, which is a charter-party for a vessel from the day she is placed at the disposal of the charterer "staunch, tight, fitted for service, and to be so maintained." That is clause 1. Clause 4 says: "The charterer shall pay for the use and hire at the rate of [so much] per calendar month, commencing when she is placed at the charterer's disposal." Then comes the clause which is really the clause upon which the whole argument before me, and, as I understand it, the whole argument before the registrar was based. Clause 11: "In the event of loss of time from damage preventing the working of the vessel for more than twelve running hours the payment of the hire shall cease until she

shall again be in an efficient state to resume her service at the place where the accident occurred." I have read the material words of the clause; I have not read the whole of it.

Mr. Stenham for the motion in objection takes three points. He says the cesser of hire only applies to an accident after the vessel comes on hire. With regard to that, I think the words are wide enough to cover a case of this kind, because in this case there was damage which prevented the working of the vessel for more than twelve running hours. The vessel could not be loaded or used by the charterer when she was in dry dock, and that is what she was wanted for. Therefore, there was a loss of time to the charterers, and under those circumstances the payment of hire is to cease. Taking the words in their ordinary and natural meaning, there was a loss of time from damage preventing the working for more than twelve hours. He says that it must be damage that occurs after the vessel comes on hire. The clause does not say so, and one can well imagine many cases where damage which has occurred before the vessel comes on hire may not be discovered, or may not be repaired until after the vessel comes on hire, and if so, the parties, by the terms of the clause, seem to me to have provided for such a matter. As a matter of business, I should think this happens quite constantly, and the words are simple enough to cover such a case, and I do not see any reason why I should confine it to damage subsequently received. Then his second point was that in this case there was no loss of time, and his point upon that was—as I understand it—that, inasmuch as there was a telegram saying that the vessel was not wanted for loading until a particular date, there was no loss of time. I think if the words had been "loss of use" there might have been a good deal more to be said for Mr. Stenham's argument, but I myself cannot see how, if the ship is being dry-docked and the charterer has not the benefit of the time when she is being dry-docked, he has not lost time under the charter-party. He has lost four days to which he had a right, and that is a loss of time. His last point was that there was not prevention of the working of the ship. It seems to me that if you put a ship into dry dock to repair a rent in her, as I am told there was in this case, which had been boxed in with cement temporarily, the vessel could not be used for the ordinary purposes of a charterer, namely, to control, work, load and send her across the sea. Therefore, she was prevented from working and the damage did prevent the working of the vessel. Taking the view that I do, this clause seems to me to be applicable to the present case. There has been a loss of use of this ship suffered by the owner of the ship involving a loss of money measured by the amount which the charterer did not pay.

It is quite true that these companies are all closely inter-related, and the accounts are made up by one clerk in one of the companies who may very likely act in a similar capacity for the other companies, for all I know, but it seems to me that it was a proper debit note that was sent in for the hire which allowed the deduction of the amount claimed. I cannot imagine any shipowner who had taken the ship out of the hands of his charterer for four days while he repaired her properly sending in any account other than that which was sent in in this case. He could not charge for her when his ship had really not been at the disposal of the charterer. At any rate, that is what has been done in this case, and I think it is right. If he had sent in such a claim, I think the charterer would have been quite justified in claiming those four days back under this clause and under the facts of this case. What use the charterer was going to make of the ship after he has hired her is no concern of the *tort feasor* in this case, and if it were, the fact that he was not going to use her would not avail the defendants as an answer to the claim in this case. Loss of time I have already pointed out is not the same as loss of use.

For these reasons I reject this motion with costs.

Motion dismissed with costs.
Report of Registrar confirmed.

Solicitors: *Thomas Cooper* and *Co.*, for the motion; *Gregory, Rowcliffe*, and *Co.*, agents *Hill, Dickinson*, and *Co.*, Liverpool, contra.

June 25, 26, *and July* 23, 1929.

(Before HILL, J. and Elder Brethren.)

THE PRINCESS. (*a*)

Collision — Negligence — Dumb barge moored alongside steamer during night — Barge unattended — No riding light — Port of London River By-Laws 1914–1926, *by-law* 14.

The defendants' dumb barge was sunk in a collision at night whilst moored fore and aft alongside the plaintiffs' steamship S. *The* S. *was lying moored at a tier in the River Thames. The tier was not a usual barge mooring. No riding light was exhibited by the barge, and she was left unattended during the night. Subsequently the* S. *settled down upon her, and sustained damage.*

Held, that there was no negligence in leaving the barge unattended.

By the Port of London River By-Laws 1914–26, *by-law* 14, *it is provided that a vessel under* 150*ft. in length when at anchor or moored shall, by night, exhibit forward where it can best be seen, but at a height not less than* 10*ft. and not exceeding* 20*ft. above the hull, a white light (hereinafter called the riding light) in a lantern so constructed as to show a clear, uniform, and unbroken light visible all round the horizon at a distance of at least one mile. . . . . Provided that* (a) *where masted vessels*

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

are lying made fast to the moorings in the tiers, only the outermost off-shore of such vessels in each tier shall be required to exhibit the riding light. . . . (c) Lighters lying at the usual barge moorings in the river above Gravesend, and lighters lying made fast at wharves, piers or jetties, or alongside vessels thereat, shall not be required to exhibit the riding light.

Held, that the defendants' dumb barge was a vessel which was required to exhibit a riding light.

DAMAGE ACTION.

The plaintiffs, owners of the steamship *Stork*, claimed damages from the defendants, owners of the dumb barge *Princess*, for damages sustained by the *Stork* in settling down upon the *Princess* when the latter was sunk alongside the *Stork*.

On the morning of the 22nd Oct. 1926 the *Stork* was lying moored at Mill Stairs Tier, River Thames, heading down river. On the previous day the *Stork* had been discharging cargo into the defendants' dumb barge *Princess*, and during the night the *Princess* had been left moored fore and aft alongside the *Stork*. The *Princess*, which was partly laden, had been left unattended during the night. No riding light was exhibited on the *Princess* during the night, but an anchor light was exhibited on the *Stork*.

During the night a collision took place between the *Princess* and some unknown vessel, in consequence of which the *Princess* sank. As the tide fell the *Stork* settled down upon the *Princess* and sustained damage.

The Port of London River By-Laws 1924–26 provide as follows:

14. A vessel under one hundred and fifty feet in length when at anchor or moored shall, by night, exhibit forward where it can best be seen but at a height not less than ten feet and not exceeding twenty feet above the hull a white light (hereinafter called the riding light) in a lantern so constructed as to show a clear, uniform and unbroken light visible all round the horizon at a distance of at least one mile. . . . Provided that: (*a*) where masted vessels are lying made fast at the moorings in the tiers, only the outermost off shore of such vessels in each tier shall be required to exhibit the riding light . . . (*c*) Lighters lying at the usual barge moorings in the river above Gravesend, and lighters lying made fast at wharves, piers or jetties or alongside vessels thereat, shall not be required to exhibit the riding light . . .

Dunlop, K.C. and *O. L. Bateson* for the plaintiffs.—The onus is upon the defendants to satisfy the court that the *Princess* sank without negligence on their part: (*The Merchant Prince*, 7 Asp. Mar. Law. Cas. 208; 67 L. T. Rep. 251; (1892) P. 179). The *Princess* ought not to have been left unattended: (*The St. Aubin*, 10 Asp. Mar. Law Cas. 298; 95 L. T. Rep. 586; (1907) P. 60). A riding light ought also to have been exhibited on the *Princess* in accordance with by-law 14 of the Port of London River By-laws 1914–26. Mill Stairs Tier is not a usual barge mooring.

Batten, K.C. and *Dumas* for the defendants.—There was no negligence in leaving the *Princess* unattended. As to the alleged failure to show a riding light, no riding light was required under proviso (*a*) and (*c*) of by-law 14.

Cur. adv. vult.

July 23, 1929.—HILL, J.: This case involves a claim for damages for negligence by the owners of the steamship *Stork* against the owners of the dumb barge *Princess*. The *Stork* was a vessel of 2029 tons gross and 270ft. long. She was lying moored at Mill Stairs Tier, in the River Thames, heading down river, part laden.

The *Princess* was a steel dumb barge of 130 tons carrying capacity, 74ft. long, and on the day preceding the damage to the *Stork* she was lying alongside the *Stork*, on the *Stork's* starboard side, heading up river; that is to say, the *Princess's* starboard side was alongside the *Stork's* starboard side. The *Princess* was attached to the *Stork* by ropes fore and aft and breast ropes. The *Princess* had come there on the afternoon of the 21st Oct. 1926, and had received part of a cargo of asphalt from the *Stork*. At five o'clock in the afternoon she had about 40 tons in her in the after part. Work for the night then ceased and the lightermen left the *Princess* there. During the night she carried no light and she had no one on board. High tide was at 2.17 a.m. on the following morning. Some time during the night the *Princess* sank, and as the tide fell the *Stork* rested upon her, and both vessels received damage. The plaintiffs sue the owners of the *Princess* for the damage.

Now a barge ought not to sink and get into such a position that a steamer alongside of her sits on her. That she got into such a position is, I think, *primâ facie* evidence of negligence. The *Stork* had no steam and could not remove herself in time, even although those on board had known that the *Princess* had sunk in dangerous proximity to the *Stork*. *Primâ facie*, therefore, there is evidence that the damage to the *Stork* was due to negligence for which the defendants were responsible. That has shifted the burden on to the defendants.

The defendants contend that this sinking was without negligence on their part. As they were bound to do, they set out to prove what was the cause of the sinking. Unless they did that they could not say that there was no negligence on their part. I find that the incursion of water was due primarily to damage to the *Princess*, as described in the survey reports. The damage to the *Princess* was on the port side 2ft. forward of the cabin bulkhead. What was the cause of this damage? I am advised, and I entirely agree, that it must have been sustained when the *Princess* was afloat, and by some other vessel striking the *Princess*. No one, except the man who did the mischief, knows what vessel struck the *Princess*—and possibly he does not know. But it is, as I find, certain that some vessel did strike the

Princess. I accept the evidence that up to 5 p.m. the damage did not exist. Another barge in the barge tier near by was broken adrift during that night. The watchman of the *Stork* did see a tug and tow which passed, forcing her way through craft in that neighbourhood, and it may be that the craft was driven against the *Princess*. At any rate, some vessel during that night was carelessly handled in the neighbourhood, and the result was that something came into collision with the *Princess* and did her damage. The result of the damage to the *Princess* was that she made water and sank.

I, therefore, find that the incursion of water which caused the *Princess* to sink was by reason of collision with some unknown vessel or craft. That, however, does not completely discharge the onus which rests upon the defendants. They must further show that the collision and the sinking were without negligence of their part. The plaintiffs say that the defendants fail to do that for two reasons: (1) that the barge ought to have had a man in charge; (2) the barge ought to have been exhibiting a light. If either of these propositions is sound, then it is clear that the defendants cannot show that the sinking was without negligence on their part. If a man had been on board he might have given warning to prevent the collision; or he might shortly after the collision have discovered the leak caused by it and obtained assistance in order to remove the barge to a position where she would have sunk clear of the *Stork*. The damage was such that it must have taken a considerable time for sufficient water to enter and sink the barge. If the barge had been exhibiting a light the collision might never have happened.

I am not able to find that it was negligence to leave the barge unattended. Whether, in river or in dock, a barge ought to be attended depends in each case on the particular locality and time and the other circumstances of the particular case. The *Princess* was fast fore and aft alongside the *Stork* in the tier. She was on the side of the steamer remote from the main traffic of the river. There might be some traffic on the south side between the barge tiers and the steamer, or in or out of St. Saviour's dock. But St. Saviour's dock is only a small inlet, and the traffic was not likely to be considerable; nor was there any reason to expect that such traffic as there was would not keep clear of the steamers at the tier and craft moored alongside them. I have asked the Elder Brethren for their view. They are of opinion that it was not improper to leave the barge unattended. I am of the same opinion.

But that still leaves the question of the light, and that depends on the Port of London By-Laws, No. 14. The first part of by-law 14 provides as follows: "A vessel under one hundred and fifty feet in length when at anchor or moored, shall, by night, exhibit forward where it can best be seen but at a height not less than ten feet and not exceeding twenty feet above the hull a white light (hereinafter called the riding light) in a lantern so constructed as to show a clear, uniform and unbroken light visible all round the horizon at a distance of at least one mile. Provided that in the case of a lighter the riding light may be placed on the highest available part thereof." That applies to the *Princess*. She was a vessel; she was moored; she was moored fore and aft to the *Stork*, which was herself moored fore and aft. So far, therefore, the rule would impose upon the *Princess* the obligation to exhibit a riding light. But there are certain provisos to the by-law. Proviso (*a*) is as follows: "Where masted vessels are lying made fast at the moorings in tiers, only the outermost off shore of such vessels in each tier shall be required to exhibit the riding light." The *Princess* was not a masted vessel. Then proviso (*c*) reads as follows: "Lighters riding at the usual barge moorings in the river above Gravesend, and lighters lying made fast at wharves, piers or jetties or alongside vessels thereat, shall not be required to exhibit the riding light." The *Princess* was not lying at any usual barge mooring nor was she made fast to a wharf, pier or jetty, nor was she alongside a vessel at a wharf, pier or jetty. There is, therefore, nothing to take the *Princess* out of the obligation imposed upon her by the rule, to exhibit a riding light on her highest available part. She had no light. Disobedience to the rule is negligence.

The defendants cannot prove that the absence of a light was not a cause of the collision. They fail to discharge the onus which is upon them, and therefore there must be judgment for the plaintiffs.

THE TOVARISCH. (*a*)

Collision—Lights—"Flare-up" light—May be shown if necessary to attract attention—Green pyrotechnic light shown—Whether "flare-up" light authorised by regulations—Regulations for Preventing Collisions at Sea 1910, *art.* 12.

Art. 12 *of the Regulations for Preventing Collisions at Sea* 1910 *authorises the use by any vessel of a "flare-up" light, if necessary to attract attention, in addition to the lights which she is by the regulations required to carry.*

Held, that art. 12 *does not authorise the use of a green or red pyrotechnic light, and that a "flare-up" light means an ordinary flame, and not a specially coloured flame.*

Quære, *whether it is permissible to use a "blue" pyrotechnic light, which burns with a more*

(*a*) Reported by GEOFFREY HUTCHINSON Esq., Barrister-at-Law.

penetrating light, nearer a pure white than the yellow of an ordinary flame.

DAMAGE ACTION.

The plaintiffs, owners of the Italian steamship *Alcantara*, claimed damages from the defendants, owners of the Russian four-masted barque *Tovarisch*, in respect of a collision between the *Alcantara* and the *Tovarisch*, which took place in the English Channel. In consequence of the collision the *Alcantara* sank with all hands, with the exception of a single survivor.

The facts and arguments of counsel fully appear from the judgment of Hill, J.

Langton, K.C., *Digby*, K.C., and *Cyril Miller* for the plaintiffs.

Dunlop, K.C., *Stranger*, and *Krougliakoff* for the defendants.

Cur. adv. vult.

July 25, 1929.—HILL, J.—The vessels involved in this collision were the Italian steamship *Alcantara* and the Russian sailing ship *Tovarisch*. The collision happened on the 24th Feb. 1928. The *Alcantara* was a single screw steamship of 1682 tons gross, 289ft. long, she was laden with mineral ore, and manned by a crew of twenty-three hands all told. Her lights were electric. The *Tovarisch* was a four-masted barque of 2472 tons gross, 284ft. long, she was heavily ballasted, drawing 17ft. 2in. forward and 18ft. aft. She was employed as a training ship for the Russian Mercantile Marine. Her crew was ninety-five hands all told, including about sixty cadets. Her lights were oil. The *Alcantara* was bound up Channel for Calais. The *Tovarisch* was bound down Channel, after passing the South Foreland and Dover. The collision was in the neighbourhood of Dungeness, the defendants say about S.S.W. of Dungeness, and about three to four miles distant. The ships were in collision, the bowsprit and stem of the *Tovarisch* with the port side of the *Alcantara*. The *Alcantara* sank within a few minutes and all on board her were lost except one man who, at the moment of the collision, was in the engine room and who came on deck, and, as the *Alcantara* sank under the bows of the *Tovarisch*, caught hold of a chain attached to the bowsprit and ten minutes later was hauled on board the *Tovarisch*. It may be that nothing that could be done would have saved any others. But it is much to be regretted that the *Tovarisch* did not immediately bring herself to as she could easily have done without risk to herself. She threw out lifebuoys, and prepared to lower boats port and starboard, but by continuing on her course she was already past the place of collision.

The master and the third officer say that they did not know that the *Alcantara* had sunk. But the look-out knew it ; he had seen her go down. It is strange that the master should have made no inquiry as to the ship with which he had collided. The fact that the plaintiffs are without any evidence except that of the one survivor, who was in the engine-room at the moment of collision, and had last been on deck some twenty minutes before, makes the case one of difficulty for the plaintiffs, and also for the defendants, and still more for the judge. The plaintiffs called this witness and put in the log of the *Tovarisch*, and put in certain answers to interrogatories. That was the plaintiffs' evidence as to the facts of the collision. The plaintiffs also called two surveyors. The defendants were able to call such evidence from the *Tovarisch* as they thought fit. They called the third officer, who was in charge of the watch, the master, who had been on deck when Dungeness was passed, and who came on deck very shortly before the collision, an A.B., a cadet who was at the wheel, and a cadet who was on the look-out. These were the defendants' witnesses as to the facts of the collision. Two other men from the ship were called on the question of the efficiency of the *Tovarisch's* green light, as well as a Board of Trade inspector, and also a surveyor as to angle and speed. My task was not lightened by the fact that the bulk of the evidence of the defendants was given in Russian, and that there were evidently differences in interpretation. I would suggest that where witnesses are going to give their evidence in a foreign language through an interpreter it would be very desirable that two interpreters should be employed so that they might work in relays. To try to interpret evidence for four or five hours a day must be very trying work, and I would suggest that interpreters should be treated as shorthand writers are, by being permitted to work in relays.

The place of collision may, I think, be accepted. Being on S. 60° W. the *Tovarisch* had had Dungeness abeam about twenty-eight minutes before the collision.

The time : The defendants fix it at about 8.10 p.m., the plaintiffs at about 7.52 p.m. The precise agreement of the time is not important. It was shortly before the change of watch on the *Alcantra*, and shortly after the change of watch on the *Tovarisch*.

Weather : The plaintiffs plead hazy with fair visibility, the defendants hazy. Pavon (the survivor from the *Alcantara*) says he was on deck about twenty minutes before the collision and it was then fine. He could see the moon (which must have been fairly low in the west) but not the coast. The *Tovarisch's* log at 8 p.m. records "On horizon haze." The weather records of Dungeness Lighthouse and Varne Lightship (put in by the plaintiffs) record fog and the sounding of their fog horns. This may denote a greater or less degree of fog. The defendants' preliminary act says the *Alcantara's* lights were seen at about one mile. The look-out judged the distance at which he saw the masthead light as about three-quarters of a mile. Assuming the lights were seen as soon as they could be seen, and assuming the speeds were about equal, and about six-and-a-half knots, the third officer's estimates of time between sighting and collision

which work out at two-and-a-half to three minutes, would give a visibility of about two-thirds of a mile. I take it that the visibility was two-thirds of a mile. I take it that the visibility of the *Alcantara's* lights was somewhere between two-thirds of a mile and one mile. It may be that the electric lights of the *Alcantara* were visible at a greater distance than the oil lights of the *Tovarisch*.

Wind: It is agreed that it was a moderate breeze from about East. The master of the *Tovarisch* said East to E. by S. Dungeness at 6 p.m. and 9 p.m. records E.N.E., the Varne at the same hours East. The *Tovarisch's* log records E. by N. It was said that the *Tovarisch* had the wind on the port quarter, with yards braced accordingly and had the sails full.

Speeds: The evidence of Pavon is that the speed of the *Alcantara* was about six-and-a-half knots. He said that the telegraph was at full speed, but two hours before he had had orders to reduce the revolutions and had reduced them from seventy-eight to sixty-eight. At seventy-eight the speed was eight knots, and at sixty-eight it would be something under seven knots. The *Tovarisch* had all square sail except royals, on three masts (which he calls fore, main, and second main masts), had nothing on the fourth or jigger mast, and had three head sails, outer jib, jib and fore staysail. The plaintiffs say she was making about six-and-a-half knots, and the *Tovarisch* log so records, and that may be accepted. The surveyors agree that there was not much difference between the speeds of the two vessels at the moment of collision.

Courses: The course of the *Tovarisch* was S. 60° W. That is the defendants' evidence and the record of the *Tovarisch's* log. The *Alcantara's* course cannot be precisely fixed. But it may, I think, be taken that it was something between N. 76° E. and N. 82° E. The answers put in by the plaintiffs establish that the lights first seen by the third officer of the *Tovarisch* were masthead, red and green, one-and-a-half to two points on the starboard bow. As the heading of the *Tovarisch* was at that time S. 60° W.. it follows that the heading of the *Alcantara* at that moment was not less than 76°, and not more than 82° east of north. It is, of course, possible that the *Alcantara* had seen the *Tovarisch* and had already ported before she was seen by the third officer of the *Tovarisch*. But that is not the defendants' case, nor, I think, the plaintiffs' case. The *Alcantara* was bound for Calais and very probably had set a course from the *Royal Sovereign* to the Varne to pass the Varne on her port hand. From the defendants' place of collision to the Varne is N. 76° E. The *Alcantara* would be on a course a little east of that. I take the *Alcantara's* course as about N. 78° E. to N. 80° E.

Lights: An attack is made by the plaintiffs upon the *Tovarisch's* green light. The plaintiffs' surveyors say that when they examined it, Mr. Kinley, on the 27th Feb. 1928, and the 1st March 1928, and Mr. Camps on the 1st March 1928, the cog of the spindle did not properly work upon the wick, with the result that the wick might slip down. They had no doubt that the burner in the lamp produced in court was not the burner they examined. It is unfortunate that the defendants' attention was not at once called to the burner. That was not the fault of the plaintiffs' surveyors; the defendants' agents had an opportunity of sending a surveyor with Mr. Kinley, but di not avail themselves of it. A Board of Trade surveyor inspected the *Tovarisch's* lights, probably on, and certainly not later than the 1st March 1928; whether before or after Mr. Kinley's second inspection does not appear; he found nothing wrong with the working of the wick. The defendants' evidence is that the side lights were burning brightly. The log so records. It would be very unlikely that in so frequented a part of the Channel the *Tovarisch* should be sailing without lights. On the evidence as a whole I find that the green light was burning. The lamp is a good type of lamp. I am unable to find that the green light was not, in fact, being exhibited according to the rules. As I have said, in the weather which prevailed, it is possible that the sidelights of the *Alcantara* were visible to the *Tovarisch* at a greater distance than that at which the light of the *Tovarisch* was visible to the *Alcantara*.

Part of the *Alcantara* first in collision: The defendants' evidence was that the *Alcantara* was struck in the way of the foremast, and that she sank by the head. Pavon's evidence was that when he reached the deck from the engine room, and he would come abaft the bridge, the bowsprit of the *Tovarisch* was over the *Alcantara* between holds three and four. At that time the bowsprit must have been over the after part of the *Alcantara*, for it was to it that Pavon clung. I think Pavon must be right about this. It is not of great importance but I find that the *Alcantara* was struck abaft the engine room.

Angle of the blow: The defendants' evidence is about four points. The defendants' surveyor thinks the angle was about 45°. The plaintiffs' surveyor thinks 63°. I am not able to decide definitely. It was not less than 45° and not more than 63°.

Before I deal with the manœuvres of the vessels I will get rid of the question of speed. I am advised that in the weather which prevailed neither ship can be found guilty of proceeding at excessive speed. I agree. Nor on the evidence am I able to find that the collision was due to bad look-out on either vessel. It is the plaintiffs' case that the *Tovarisch* saw the *Alcantara* and acted wrongly. It is the defendants' case that the *Alcantara* saw the *Tovarisch* and acted wrongly. The case has to be decided on other grounds than look-out. At the same time I am advised that the navigating officer of the *Tovarisch* was not in anything like so good a position as he would have been had he been, as is usual in sailing ships, on the poop. He was not in a position to keep an

effective look-out, or have a clear view along the side of the ship. Moreover, he was in a very bad position for giving helm orders, and seeing that they were understood and carried out. The owners of the *Tovarisch* have placed a bridge athwart ships a little abaft of the second mainmast and abreast of its rigging, just forward of the forward boat davit and the after pair of davits shown on the photograph. The wheel is in the usual position, on the poop aft; it is about 72ft. abaft the bridge. The navigating officer keeps his watch on the bridge, he shouts his helm orders to the men at the wheel, to give orders he must turn round towards them, and for the moment cease to look out himself and have his back to the look-out stationed on the forecastle head; at night, at any rate, he cannot see him, and, if they make a mistake, he cannot instantly be aware of it and correct it. I am advised that with those arrangements the ship was not under proper control.

Before I deal with the manœuvres, it will be well to consider a question of law. The third officer of the *Tovarisch* burned a green pyrotechnic light, holding it out from the starboard side of the bridge. It is spoken of in the pleadings as a green flare. Specimens were produced in court—ordinary green and red pyrotechnic lights. The *Tovarisch* carried a supply of such lights—kept on the bridge—from time to time they were used; the third officer had some in his pockets, and, as I have said, lit one. The defendants say this was a light authorised by the regulations. If authorised it must be by art. 12: "Every vessel may, if necessary, in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light, or use any detonating signal that cannot be mistaken for a distress signal." Art. 31 included among distress signals "flares on the vessel (as from a burning tar barrel, oil barrel, &c.)." I am not, for the moment, concerned with the condition "if necessary in order to attract attention." I am concerned with the meaning of "a flare-up light." The defendants say it may be of any colour, shown from any part of the ship. I cannot agree. In my opinion, in the language of the sea it means a light, which is not in a lamp, and is produced by setting fire to something which burns with an ordinary flame and does not include specially coloured flames. So also the Elder Brethren understand by a "flare-up light" an ordinary flame. So far as the regulations are concerned the phrase "flare-up" or "flare-up light" is, I believe, found for the first time in the regulations of 1863. In 1863 I doubt if pyrotechnic coloured lights were known, I mean of the kind you now hold in your hand. I daresay coloured powders, which were ignited to produce a coloured light, were known, but I very much doubt whether the pyrotechnic light which you grasp with your hand was known as long ago as 1863. The powders which were contained in a little box I can remember as a little boy letting off on Guy Fawkes Day, but they were not the sort of things which I could hold up in my hand. I have traced the history of "flare-up" or "flare-up light" in the regulations. In 1910 the phrase occurs in art. 8 (pilot vessels); art. 9 (*d*) and (*f*) (fishing vessels); art. 10 (overtaken vessel); and art. 12. Art. 12 first appeared in the regulations of 1896 (where also it was art. 12). Art. 10 first appeared in the regulations of 1880 (as art. 11), and was repeated in the regulations of 1884 and the regulations of 1926. There was no corresponding article in the regulations of 1863. The second paragraph was added first in the regulations of 1896; it is stated in Mr. Marsden's 5th edit. (1904), that it was added because doubts had been expressed as to the legality of carrying a fixed stern light: (see *The Imbro* (6 Asp. Mar. Law Cas. 276; 1889, 60 L. T. Rep. 936; 14 Prob. Div. 73)). Art. 9 relates to the lights of fishing vessels and fishing boats. It is a tedious task to trace the history of this regulation. The rules as to fishing vessels have been altered so often and. when issued, suspended, that I will not even attempt to do it. Art. 8 relates to pilot vessels, and corresponds with art. 8 of 1896 and of art. 9 of 1884 and art. 9 of 1880 and art. 8 of 1863. In art. 12 the phrase has always been "show a flare-up light . . . that cannot be mistaken for a distress signal." In art. 10 the phrase has always been "a white light or a flare-up light." The power to carry the white light fixed and screened has existed since 1896. As to art. 9 the phrase a "flare-up" first occurs (as far as I can find out) in the regulations of 1863, art. 9, which relates to open fishing boats and other open boats. It provides that if they do not carry side lights they shall carry a lantern with green and red slides and exhibit it in sufficient time to prevent collision so that the green light is not seen on the port side nor the red light on the starboard side. It then provides for a bright white light, when the vessel is at anchor or attached to her nets, and stationary. And adds "fishing vessels and open boats shall, however, not be prevented from using a flare-up, in addition, if considered expedient."

For this was substituted art. 10 of 1880 which added to the regulations of 1863, by making special provisions as to trawlers and vessels engaged in drift net fishing, repeating in nearly the same words the permission as to flares. "Fishing vessels and open boats shall not be prevented from using a flare-up in addition if they desire to do so." Art. 10 of the regulations of 1884 (Sept. 1884) repeated with modifications art. 10 of 1880 and retained the provisions as to "flare-ups" on the following words: "Fishing vessels and open boats may at any time use a flare-up in addition to the lights which they are by this article required to carry and show. All "flare-up" lights exhibited by a vessel when trawling, dredging, or fishing, with any kind of drag net shall be shown at the after part of the vessel except that, if the vessel is hanging by the stern to her trawl, dredge, or drag net, they shall be

exhibited from the bow." A regulation of 1884 added special provisions as to steam trawlers and sailing trawlers prescribing the lights to be carried by them. A further Order in Council of the 24th June 1885, altered the regulations of Dec. 1884, so far as related to sailing vessels engaged in trawling, and gave them an option of carrying a white light visible all round the horizon and also " a sufficient supply of red pyrotechnic lights which shall each burn for at least thirty seconds " and directed that " one of the pyrotechnic lights shall be shown on approaching, or on being approached by another ship or vessel, in sufficient time to prevent collision."

This I believe to be the only reference to pyrotechnic lights in the regulations. They were used under that regulation, and an instance of their being used may be found in the case of *The Orion* (7 Asp. Mar. Law Cas. 88; 65 L. T. Rep. 500; (1891) P. 307). Then came the regulations of 1896 generally, and they postponed the question of fishing vessels' lights to a subsequent Order in Council: (see Marsden, 5th edit., p. 506). I gave the reference to Marsden for the 1880 regulations. That will be found in the second edition of Marsden, and the 1884 regulations will be found in the third edition of Marsden.

I have not found out when the new fishing vessels' lights order was made which was incorporated in 1896, but there was an order on the 23rd Oct. 1905 which I have not seen, and it may be that that was it. Finally the whole set of regulations as to fishing vessels was recast by an Order in Council of the 4th April 1906, art. 9 of which is set out in Marsden, 6th edit., p. 353. Pyrotechnic red lights have disappeared. The provision as to sailing vessels engaged in trawling is now art. 9 (*d*) (2): " Shall carry a white light in a lantern . . . visible all round the horizon and shall also, on the approach of or to the other vessel, show where it can best be seen a white flare-up light or torch in sufficient time to prevent collision." Art. 9 of 1910 repeats art. 9 of 1906. The provision as to sailing trawlers is art. 9 (*d*) (2). Art. 9 (*f*) repeats in slightly different terms the permission which existed since 1863 to use a flare-up light. The words are: " (*f*) Fishing vessels and fishing boats may at any time use the flare-up light in addition to the lights which they are by this article required to carry and show." Now, looking at the regulations considered as a whole, from one end to the other of them, there is, in my view, nothing to justify the display of a red or green pyrotechnic light on a sailing boat. Red pyrotechnic lights are only once mentioned and then are taken out of the regulations flare " white," and that is in a rule relating to sailing trawlers which substituted a " flare-up " light for a red pyrotechnic light. The phrase a " flare-up " or " flare-up light " has appeared in the rules since 1863. Since 1863 it has been used in the regulations relating to " fishing vessels or open boats," and in the regulations relating to pilot vessels. Since 1880 it has been used in the regulations relating to an overtaking vessel.

Since 1896 it has appeared in art. 12, which authorises its use " if necessary in order to attract attention."

Mr. Marsden in the fifth edition (1904) in regard to art. 12, says at p. 364: " The ' flare-up ' light intended by the article, presumably, is that in common use; and care must be taken that, if any of the modern pyrotechnic lights are used, they are such as cannot be mistaken for other lights prescribed by the regulations." This passage has been repeated by later editors.

Test the matter by art. 10. If the defendants' contention is right the overtaken vessel may show a red or a green light from her stern. It is absurd to suppose that the regulations have that effect. Test it again by art. 9 (*f*); the result is nearly as absurd. A fishing vessel which is bound to carry the white lights prescribed, or, if a steam trawler, a screened tricolour lantern, may also burn a coloured light visible all round the horizon from any part of the vessel. I hold that the " flare-up " light means an ordinary flame, and not a specially coloured flame. My only doubt is whether what is called a blue pyrotechnic light is permissible—it burns with the effect of a more penetrating light, which is nearer a pure white than the yellow of an ordinary flame. I do not decide that. But of this I am satisfied, that the words " flare-up light " include neither a green flame nor a red flame. To hold otherwise would be to invite confusion and disaster. Flare-up lights are not screened, and show all round the horizon. If the defendants' contention were right, a green pyrotechnic light, or a red, might be burned on either side of the ship, or at the stern, or in the bows, from whatever direction the other ship was approaching, and whether she was meeting, crossing, or overtaking.

The lights prescribed by the regulations for the *Tovarisch* were the red and green side lights, *i.e.*, lights in lanterns properly screened. If it was necessary in order to attract attention, she was entitled to show something which burned with an ordinary flame. It was a breach of the regulations to exhibit a green pyrotechnic light.

I now return to the defendants' narrative, and, *inter alia*, have to consider whether that breach caused or contributed to the collision.

The story of the third officer and the answers which the plaintiffs put in is this: The *Tovarisch* saw both side lights of the *Alcantara* one and a half to two points on the starboard bow at an estimated distance of about a mile and, about a minute later, at an estimated distance of half to three-quarters of a mile, lost the red and had only the green light about two points on the starboard bow. Upon this the helm was ordered hard-a-starboard and the third officer took from his pocket a green pyrotechnic light and lit it and held it out from the starboard wing of the bridge. About half a minute later the red light of *Alcantara*

reopened and a short blast was heard. Upon this the order "hard-a-port" was given. Two turns of the wheel had been carried out under the order hard-a-starboard, and under the order hard-a-port the wheel was put right over before the collision. According to the answer put in the green pyrotechnic light was burned right up to the collision, but, according to the evidence of the third officer, it was dropped when the order hard-a-port was given. The third officer said there was a misunderstanding in the answer. After the red light of the *Alcantara* opened, her green light was shut and a second faint short blast heard. According to the evidence the order "hard-a-port" was given one minute or a little more before the collision. We thus have the green light of the *Tovarisch* right ahead of the *Alcantara;* the *Tovarisch* passes on to the starboard bow of the *Alcantara* and the vessels are green to green; the *Tovarisch* begins to alter to port, and burns the green light. The *Alcantara* ports or hard-a-ports with a short blast and opens the red light; the *Tovarisch* hard-a-ports, the *Alcantara's* green light is shut in. The collision follows in a minute or rather more. I accept Pavon's evidence that he had shut off steam and stopped the engines before the collision; his estimate of time was one minute. He had heard a blast of his own whistle before that; he did not know what it was; his estimate of time was four minutes before the collision. After his experiences, too much reliance cannot be placed on his recollections of intervals of time, but he heard the blast before he received the order to stop.

From these facts I conclude the following: (1) The *Alcantara* when first seen had the *Tovarisch* right ahead and then had the *Tovarisch* showing a green light on the *Alcantara's* starboard bow, and the *Alcantara* was in a position to pass the *Tovarisch* green light to green light. There was no absolute need for the *Alcantara* to alter her course. On the courses if neither altered they would have passed with one to two cables between them.

(2) From the position of green to green the *Alcantara* did port or hard-a-port and later alter her course to starboard. She must have altered to starboard to produce the angle of collision even if it be only 45°.

(3) Before the collision the *Alcantara* did stop her engines, but she never reversed and she maintained her speed of six and a half or even seven knots until the last minute or so.

(4) The *Alcantara* did not port or hard-a-port until after the *Tovarisch* had begun to show the green pyrotechnic light. According to the third officer's estimate of times the light had been burning half a minute before the *Alcantara's* red light reopened.

(5) The *Tovarisch* immediately the red light of the *Alcantara* was lost began to starboard and at the same time lit the green pyrotechnic light.

(6) The *Tovarisch* immediately the red light of the *Alcantara* reopened hard-a-ported and kept hard-a-port helm up to the collision.

It is clear from what I have said that the *Alcantara* attempted to cross what was in fact the heading of the *Tovarisch.* And if she knew that she had a ship showing a green light on her starboard bow she was clearly to blame; she was guilty of a most foolish action. But she had had exhibited to her a brilliant pyrotechnic light. If she had already seen the green light of the *Tovarisch* the pyrotechnic light would probably have obliterated the feebler flame of the lantern. How the pyrotechnic light would show upon the sails is a matter of conjecture. What was the *Alcantara* to think of it? I have asked the Elder Brethren. They say they would have regarded it as an imperative demand to take action—a warning to the *Alcantara* that she was doing something dangerous, and an urgent call to her to do something different. In these circumstances they are of opinion that the *Alcantara* could not be blamed for porting or hard-a-porting; so also with regard to the engines, they think the *Alcantara* cannot be blamed for stopping instead of reversing. The master of the *Alcantara* would be right if he thought "I may be wrong if I keep ahead, I may be wrong if I go astern, I will stop and see." What the *Alcantara* did in fact contributed to the collision, but it was not the fault of the *Alcantara* that she did it. The burning of the green light was the cause, and was negligent, and the *Tovarisch* is to blame.

I should add that it would be difficult for the *Tovarisch* to justify the burning even of a flare of the ordinary kind. In the circumstances if the vessels were green to green, it would be misleading and, if they were green to green it was unnecessary to attract attention, and the condition of art. 12 did not exist. In one set of circumstances a flare might have been justified, namely, if the *Alcantara* having originally had both her side lights open to the *Tovarisch* had continued to keep them open, *i.e.*, had continued to approach with risk of collision. But that is not the defendants' case. If it had been the star-boarding of the *Tovarisch* must have been wrong beyond all doubt.

What I have already said is enough to show that the plaintiffs have proved the *Tovarisch* to blame, and the defendants have not proved the *Alcantara* to blame. But in case I am wrong about the green pyrotechnic light, it is well that I should deal with the other charges made by the plaintiffs against the *Tovarisch.* They are two. It is said the *Tovarisch* was wrong (1) to starboard and (2) to hard-a-port. In the first instance, when the *Tovarisch* saw the red and green of the *Alcantara* on the starboard bow the vessels were approaching so as to involve at that moment risk of collision. It was the duty of the *Tovarisch* at that moment to keep her course and speed. Whether the *Tovarisch* was justified in starboarding immediately depends on whether the risk was finally at an end. The position was similar to that of steamships of crossing courses where the duty of the stand-on ship to keep course and speed continued until the ships have definitely

passed out of the phase of crossing ships. See *The Orduna* (14 Asp. Mar. Law Cas. 574; 122 L. T. Rep. 510; (1919) P. 381). The Elder Brethren are of opinion that it was not right for the *Tovarisch* to starboard as soon as she did.

It is a difficult question and I need not decide it. But this, at any rate seems clear. If the position of the ships was such that it was necessary to call attention it can only be because the ships are in such a position that there was still risk of collision. And either the *Tovarisch* ought to have kept her course or she ought not to have burned any sort of flare.

As to the hard-a-porting of the *Tovarisch,* the Elder Brethren advise me, and I entirely agree, that it was the worst thing the *Tovarisch* could have done. She was called upon to act by the porting of the *Alcantara.* The men at the wheel were already putting the wheel to starboard and the *Tovarisch* had begun to swing. How much she had swung I am unable to say. I am unable to place too much reliance on the men at the wheel, each of whom says he was doing the steering. But it was a substantial matter. With the wind on her port quarter she could alter her heading more rapidly to port than to starboard. The third officer said that by hard-a-starboarding the helm he could get the sails shaking in one and a half minutes. In fact, though the helm was already partly over to starboard there was time to get right over to port before the collision. The head sheets could have been let go and that would have assisted the starboard helm. If the men were at stations—Mr. Dunlop said there was no evidence that they were not—the yards could have been braced and the ship kept under control. But as there was a smooth sea and a moderate wind there was no danger in throwing the *Tovarisch* flat aback. I am advised that if the hard-a-starboard helm had been continued, the *Tovarisch* would very probably have brought herself parallel with the *Alcantara* and avoided the collision altogether. Sailing as she was, the *Tovarisch* had almost as much power of stopping her way by throwing herself up into the wind as a steamer would have had by reversing her engines. The *Tovarisch* was to blame for hard-a-porting and for failure to continue hard-a-starboarding. The result is that I find the *Tovarisch* alone to blame.

Anybody who is interested in finding out what lights sailing ships had to show before the Regulations prescribed them will find an interesting book by Dr. Pratt, of Doctors' Commons, which deals with the law on that subject before 1863.

Solicitors: for the plaintiffs, *Richards* and *Butler;* for the defendants, *Middleton, Lewis,* and *Clarke.*

July 24 and 25, 1929.

(Before HILL, J.)

THE RUAPEHU (No. 2). (*a*)

Limitation of liability — Dock-owner — Damage to vessel in docks at Blackwall—Dock-owner also in control of docks at Falmouth—Whether limitation calculated upon tonnage of largest vessel within the dock at Blackwall or dock at Falmouth—" Within the area over which such dock . . . authority performs any duty or exercises any power "—Merchant Shipping (Liability of Shipowners and others) Act 1900 (63 *&* 64 *Vict. c.* 32).

By the Merchant Shipping (Liability of Shipowners and others) Act 1900, *s.* 2 (1) " *the owners of any dock shall not, where without their actual fault or privity any loss or damage is caused to any vessel . . . be liable beyond an aggregate amount not exceeding* 8*l. for each ton of the tonnage of the largest registered British ship which at the time of such loss or damage occurring, is, or within the period of five years previous thereto has been, within the area over which such dock or canal owner . . . . performs any duty or exercises any control.*"

Held, that, where a dock-owner exercised control over docks at Falmouth and docks at Blackwall, the docks at Falmouth were not within the area at Blackwall within which the dock-owners exercised control; and therefore that where loss or damage was caused to a vessel in the docks at Blackwall the dock-owners were not entitled to limit liability upon the tonnage of the largest vessel which had within the specified period been within the docks at Falmouth.

LIMITATION ACTION.

The plaintiffs, R. and H. Green and Silley Weir Limited, obtained a decree limiting their liability for loss or damage caused to the defendants' steamship *Ruapehu* whilst undergoing repairs in the plaintiffs' dry dock at Blackwall in May 1923 (reported 17 Asp. Mar. Law Cas. 270; 137 L. T. Rep. 353; (1927) A. C. 523) Messrs. R. and H. Green and Silley Weir Limited claimed to limit their liability to the sum of 8*l.* per ton on the tonnage of the *Ruapehu*, she being the largest vessel which had been in their dry dock at Blackwall within the stipulated period of five years.

The Merchant Shipping (Liability of Shipowners and others) Act 1900 (63 & 64 Vict. c. 32), s. 2 (1) provides as follows:

The owners of any dock . . . shall not, where without their actual fault or privity any loss or damage is caused to any vessel or vessels, or to any goods, merchandise or other things whatsoever on board any vessel or vessels, be liable to damages beyond an aggregate amount not exceeding 8*l.* for each ton of the tonnage of the largest registered British ship which at the time

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

of such loss or damage occurring, is, or within the period of five years previous thereto has been, within the area over which such dock or canal owner, harbour authority, or conservancy authority, performs any duty or exercises any power. . . .

Langton, K.C. and *Carpmael* for the plaintiffs.

Le Quesne, K.C. and *Pilcher* for the defendants. —The plaintiffs are not entitled to limit their liability upon the tonnage of the largest vessel which has been within the docks at Blackwall, because they in fact exercise control over docks at Falmouth, owned by the Falmouth Dock and Engineering Company Limited, and a vessel of greater tonnage has within the stipulated period been within the docks at Falmouth.

Langton, K.C. replied.—It is not admitted that the plaintiffs exercised any power or control over the docks at Falmouth. Assuming that they do so, the limit of liability is still the tonnage of the largest vessel which has been in the docks at Blackwall, because Falmouth is not in fact within the area of Blackwall, but is in another totally different area.

HILL, J.—Under sect. 2 of the Merchant Shipping (Liability of Shipowners and Others) Act 1900 the question as to the amount of the limit of liability is dealt with, and the plaintiffs' right to limit under that section is in their capacity as dock owners. It has been held that they are within the terms of the section as the owners of a dock. The *Ruapehu* was damaged by fire in the larger of the plaintiffs' two dry docks at Blackwall. The *Ruapehu* herself was the largest registered British ship which had been in either of those dry docks during the five years ending on the 14th May 1923, the date of the fire, and upon the tonnage basis of the *Ruapehu* the limit would be 69,067*l.* 7*s.* 2*d.* The question is whether you have to look outside those two dry docks which are within the plaintiffs' ship repairing yards, and the defendants say you have. Some question arose yesterday as to whether you can have regard to the dry dock of the Thames Ironworks Company at Canning Town, of which, at the material time, the plaintiffs were the lessees, but that point has become only of academic interest, because it has been ascertained that no ship as big as the *Ruapehu* can have been in that dry dock, because it is incapable of containing any ship as large as the *Ruapehu*. That leaves the main question that is raised on the pleadings, and that is this: it is said that in ascertaining their limit of liability you must look not only at the largest ship which was within the dry dock in which the collision happened, but to some other dry dock, and to some other ship—you must look at docks in this case at Falmouth, because it is said that there are docks at Falmouth in the nominal ownership of the Falmouth Docks and Engineering Company, but over which the plaintiffs exercise power. It is said, therefore, regard must be had to those dry docks, and to the largest British ship which has been in those dry docks within five years before the fire. It is admitted that there was a ship —the *Shropshire*—larger than the *Ruapehu*, which was within those dry docks within the period in question. Now ought I to pay any attention at all to docks at Falmouth? Assume that it can be made out that the plaintiffs performed duties or exercised powers over such docks, the words of the section are "Within the area over which such dock, canal, or harbour authority performs any duty or exercises any power." You have got to find out what was the largest British ship within the five years within an area, and that area has to be the area over which the dock company performs a duty or exercises a power. The words are "the area," not "the areas." An area I take to be a plane surface the boundaries of which are defined. In the Oxford Dictionary the definition is "the plane surface contained within given limits," and I think there was a quotation from Webster's Dictionary "a plane surface within bounds." The context in which the phrase "area" is used might show that a different meaning was to be attached to it, but here the context shows that the primary meaning is to be given to the words "the area over which such dock or canal owner performs any duty or exercises any power." You have to find out an area, and that has to be an area over which the dock-owner is exercising any power. Now here the two dry docks are within one area—the ship repairing yard—and over the whole of that area the plaintiffs exercised power. The docks at Falmouth were not within the one area of the docks at Blackwall. There were many hundreds or thousands of intervening areas between Blackwall and Falmouth over which the plaintiffs performed no duty and exercised no power at all. If the defendants' contention were right, I can see no reason at all for limiting the inquiry to other docks in the United Kingdom. I see no reason, if they were right, and if a dock in the Thames and a dock at Falmouth are to be considered as within the same area, why a dock on the Thames and a dock at Singapore should not equally be considered as within the same area.

But even if there is some reason why you should limit your consideration to the United Kingdom, it still remains to my mind clear that a dock at Falmouth and a dock at Blackwall must be, so far as the dock-owner is concerned, within different areas.

Then it remains to consider what is the area that you have to have regard to. It is in my view that area over which the limiting dock-owner performs a duty or exercises a power, which area contains within it the particular dock in which damage has occurred. In this view I think I am very much strengthened by what was said by Lord Atkinson, in 1927, A. C. at p. 341 (17 Asp. Mar. Law Cas. at p. 277; 137 L. T. Rep. at p. 360), because I think he treats that which I am now deciding as being a matter so obvious that it must be taken as granted.

That being so I do not feel disposed, myself—I am quite clear about this—to go clearly into the question whether it is established that the plaintiffs did exercise power over the area of the Falmouth docks. There is a very close association between the two companies, and, indeed, the plaintiffs may be regarded as the dominating influence, or controlling influence, but it still remains that the Falmouth docks were owned by the Falmouth Docks and Engineering Company and not by the plaintiffs.

However, while I am not at all inclined to assent to the proposition that the plaintiffs did exercise power within the meaning of this section in the Falmouth docks, I do not think it is necessary to consider it, because what I have already said about the meaning of the word " area " determines the fact.

(Before HILL, J.)

THE ERIK BOYE. (*a*)

Bill of lading—Cargo of flour—Unseaworthiness—Steamer unfit to carry flour cargo—Implied warranty that steamer fit to carry cargo—Harter Act.

Where a cargo of flour, shipped under bills of lading which incorporated the United States Harter Act, was damaged owing to insufficient ventilation and failure to draw off hot air from the holds, such failure being due to the character and construction of the ship,

Held, that the damage to the flour was caused by breach of the implied warranty of seaworthiness for the cargo in question ; and that the United States Harter Act did not exclude the implied warranty of seaworthiness for cargo, or cut down such implied warranty to an undertaking on the part of the shipowner to use due diligence to make the ship seaworthy.

THE plaintiffs were indorsees to whom the property passed by indorsement of bills of lading of a cargo of flour in bags, shipped on board the defendants' steamship *Erik Boye*, a tramp steamer of about 3400 tons dead weight. The flour was shipped for carriage from Portland, Maine, to Danzig. The terms of the bills of lading incorporated the United States Harter Act, by sect. 3 of which it is provided as follows :

Sect. 3 : That if the owner of any vessel transporting merchandise or property to or from any port in the United States of America shall exercise due diligence to make the said vessel in all respects seaworthy and properly manned, equipped, and supplied, neither the vessel, her owner, or owners, agent or charterers, shall become or be held responsible for damage or loss resulting from faults or errors in navigation or in management of the said vessel ; nor shall the vessel, her owner or owners, charterers, agent, or master, be held liable for losses arising from dangers of the sea or other navigable waters, acts of God, or public enemies, or the inherent defect, quality, or vice of the thing carried, or from insufficiency of package or seizure under legal process or from loss resulting from any act or omission of the shipper or owner of the goods, his agent or representative, or from saving or attempting to save life or property at sea, or from any deviation in rendering such service.

Upon discharge of the cargo it was found that a quantity of the bags had been damaged by " sweat." The cause of the " sweat " was insufficient ventilation, causing evaporation in the holds, due to failure to remove the hatch coverings from time to time during the voyage, and to closing the ventilators at night.

Raeburn, K.C. and *G. St. C. Pilcher* for the plaintiffs.

Dunlop, K.C. and *Balloch*, for the defendants, argued that in a vessel of the type of the *Erik Boye* the hatch covers could not be removed at sea with safety, nor could the ventilators be safely left open at night even during fine weather. In these circumstances it was argued that by incorporation of the Harter Act, there was no implied warranty that the *Erik Boye* was seaworthy for the plaintiffs' cargo, but merely a warranty that the plaintiffs had used reasonable diligence to make the *Erik Boye* seaworthy. The real cause of the damage was the " inherent defect " in the plaintiffs' cargo, which gave rise to accumulation of moisture in the holds.

HILL, J.—The plaintiffs are indorsees of bills of lading of flour in bags shipped on board the defendants' steamship *Erik Boye* for carriage from Portland, Maine, to Danzig. The property passed to the plaintiffs by indorsement.

The bills of lading represent all the cargo on board the *Erik Boye.* She shipped a whole cargo of flour in bags. The goods were acknowledged by the bills of lading to be received in apparent good order and condition. A few bags were not delivered. A considerable quantity, some thousands of bags, were delivered damaged. It is common ground that the damage was by sweat, that is the condensation of vapour in the holds.

The *Erik Boye* was a new ship. She was of about 3,400 tons deadweight—a ship therefore of no great size. She had two holds with four hatches. The engine room and boiler room are amidships. Above the main deck amidships is a long bridge deck. In the 'tween decks, except for a space amidships, cargo is carried. The flour on this voyage was stowed in the holds and also in the 'tween decks. The hatches have deep coamings rising 3ft. 1in. above deck and carried 1ft. below deck. These hatches are in the main deck at No. 1 and No. 4, and in the bridge deck in No. 2 and No. 3. Under No. 2 and No. 3 are hatches

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

in the main deck, but they were not covered. The damage was confined to the after end of the fore hold, and the fore end of the after hold. It was worst in the square of the hatch coamings, and extended down, spreading out. There was no damage in the way of No. 1 and No. 4 hatch. In the master's letter of the 20th Nov. it is stated that when the hatches were opened, "No. 1 and No. 4 were in superb condition, quite dry and free from sweat. No. 3 was very bad, and No. 2 in a horrible condition." The shipping agents on the 22nd Nov. wrote, "After opening the hatches a large number of bags were discovered to be wet and mouldy. . . . There are still wet bags to be discharged out of the holds." That is also the plaintiffs' case. There was a dispute of fact as to how much of the 'tween deck aft of No. 2 hatch, and forward of No. 3 hatch, was occupied by cargo, and as to whether the square of the hatches was filled right up with cargo or an empty space left. As to the 'tween deck the point is unimportant, the damage was in and near the hatches. As to the space in the square of the hatch coamings I have the evidence of Mr. Wein that it was full, and the master's letter, which says: "The ship is full . . . also in 'tween decks there is perhaps place for about fifty sacks altogether in No. 1 and No. 2 hatch coamings." This point also is not of much importance; the square of the coamings formed a space into which hot air would rise, and in which there was nothing to cause any circulation of air; and whether the bags of flour were close up to the bridge deck, or a little below, drippings of condensed moisture from the underside of the bridge deck equally fell upon them.

The neighbourhood of No. 2 and No. 3 hatches was naturally the hottest part of the ship—being immediately forward and aft of the engine and boiler space. No. 2 was naturally the hotter of the two being next to the boiler space.

It is clear that the damage was caused by the evaporation in the holds and 'tween decks, and the rising of the hot humid air to the under surface of the bridge deck, and especially to the hatch coverings in No. 2 and No. 3 hatches, and subsequent condensation.

The voyage was an ordinary North Atlantic voyage for the time of the year; for the most part in very good weather, but with some days of very bad weather.

The flour was sound ordinary flour. It was shipped during what the master described as an Indian summer. That it was well cared for before shipment appears from the master's letter: "On the whole they are very particular about the cargo which arrived here in closed railway wagons which are covered everywhere inside with thick paper to protect the sacks." The flour stowed at the after and fore ends of the ship arrived, as the master said in his letter, "in superb condition." In the way of No. 2 and No. 3 hatches there was no damage except from the drippings of condensed vapour. Flour contains some moisture, but the plaintiffs' evidence is that when properly stowed and carried it travels with a very slight percentage of damage. There was no evidence to contradict this. It needs an adequate ventilation. The plaintiffs attack the means of ventilation and the failure to use the means. They say the ventilators were not sufficient in number and were wrongly placed. They say it was negligent to close them at night in fine weather. They say that a hatch covering should have been removed from time to time to permit the escape of hot air from the enclosed square of the hatch coamings. The defendants' reply that the means of ventilation were fully up to and, indeed, in excess of the standard of ventilation of a ship of the type of the *Erik Boye*. They say that for a ship like the *Erik Boye* it would have been imprudent to leave the ventilators unclosed at night even in fine weather for fear of a change of weather and flying spray. They say that for the safety of the ship it would have been dangerous not to keep the hatches covered, battened down and secured throughout the voyage. In other words, they say that there was nothing they could do to prevent condensation from a sound cargo of flour from causing damage.

I do not think it useful to decide as to the details of the means of ventilation or the use of them. For it seems to me to be clear that either on the one hand the means were deficient or not properly used, or on the other, that a ship of the size and construction of the *Erik Boye* is not able to carry safely a whole cargo of flour. I will assume that it was necessary to keep the ventilators closed at night because they were not lifted high enough above the water level, and that it was necessary to have irremovable hatch coverings because of the damage of seas in heavy weather. It naturally followed that in the hotter part of the holds there would be a rise in the temperature sufficient to cause evaporation, and that the hot air would rise and reach the enclosed squares of the hatch coamings, within which, it is agreed, there was very little circulation of air and from which the hot air had no means of escape, and was bound to condense when the deck above was cooled by water or by air. That means that the *Erik Boye* was not fit to carry a whole cargo of ordinary sound flour in the ordinary conditions of the bill of lading voyage.

I can see no answer to the plaintiffs' claim.

The Harter Act does not relieve the shipowner of the implied warranty that the ship was reasonably fit to carry the plaintiffs' flour: (See Carver's Carriage by Sea, par. 19A and *Stanton* v. *Richardson*, 1 Asp. Mar. Law Cas. 449; 1874, 33 L. T. Rep. 193; L. Rep. 7 C. P. 435). As pointed out by Channel, J. in *McFadden* v. *The Blue Star Line* (10 Asp. Mar. Law Cas. 55; 93 L. T. Rep. 52; (1905) 1 K. B. 697), the implied warranty is absolute and is not cut down by the Act to an undertaking to exercise due diligence to make the ship fit. He further

adds " the incorporation of sect. 3 does nothing more than give immunity respecting loss from specified causes provided the shipowner has exercised due diligence to make the ship seaworthy." The specified cause relied on by the defendants in the present case is : " inherent quality " of the flour. It was not any " inherent quality " of the flour that caused the damage. It was the accumulation of hot air not drawn off. The more the defendants prove that it was impossible, by use of the appliances they had, to prevent the rise of hot humid air into the square of the hatch coamings, and its retention there until condensation followed, the more the defendants prove that the *Erik Boye* was a vessel not reasonably fit to carry the plaintiffs' flour.

Therefore there will be judgment for the plaintiffs.

Supreme Court of Judicature.

COURT OF APPEAL.

July 19, 22 *and* 23, 1929.

(Before SCRUTTON, GREER and RUSSELL, L.JJ.)

NEW LIVERPOOL EASTHAM FERRY AND HOTEL COMPANY LIMITED *v.* OCEAN ACCIDENT AND GUARANTEE CORPORATION LIMITED. (*a*)

ON APPEAL FROM THE KING'S BENCH DIVISION

Insurance (Marine)—Insurance of barge—Barge lying moored—" Body tackle, apparel, ordnance . . . . boat and other furniture "—Moored barge or coal hulk—Damage to moorings—Claim under policy—Whether moorings covered by policy—Marine Insurance Act 1906 (6 *Edw.* 7, *c.* 41), *Sched. I., r.* 15.

The plaintiff's barge, Black Diamond, was insured by the defendants by a policy dated the 27th April 1926, *for* 400*l. part of* 800*l. The insurance was expressed to be on the " body, tackle, apparel, ordnance, munition, artillery, boat and other furniture " of the vessel, " while lying moored at Eastham Ferry stage or elsewhere, with liberty to be towed to any dock or place not beyond the Rock Light to load coal, for repairs and (or) overhaul, while there and until back again at her moorings or held covered ; with liberty to moor in the Manchester Ship Canal while the operations for deepening the Eastham Canal are in progress. For and during the space of twelve calendar months commencing at noon on the 27th day of April* 1926, *and ending at noon on the 27th day of April* 1927," *and was against the usual perils. During the currency of the policy the moorings to which the insured barge was attached were damaged and the plaintiffs claimed under the policy. On the defendants refusing to pay, the plaintiffs brought an action in the Liverpool County Court. The County Court judge found that the moorings were " tackle and furniture of the barge " and were therefore covered by the insurance.*

The underwriters appealed to the Divisional Court. But the Divisional Court differed in opinion—Wright, J. holding that the underwriters were liable and Talbot, J. holding to the contrary. The appeal was accordingly dismissed. The underwriters thereupon appealed to the Court of Appeal and that court, by a majority (Russell, L.J. dissenting) upheld the judgment of the County Court judge, holding that the underwriters were liable.

APPEAL by the underwriters from the decision of the Divisional Court (Wright J. and Talbot, J.) dismissing an appeal from the Divisional Court.

The following statement of the facts is taken from the judgment of Wright, J. in the Divisional Court.

The underwriters are in this case appealing against the judgment of the County Court judge holding them liable for certain expenses incurred in respect of the moorings of the steel barge, *Black Diamond*, due to a casualty in July, 1926. The underwriters assert that the moorings constitute no part of the subject matter insured. The County Court judge has found the contrary.

The *Black Diamond* was insured under a time policy for one year, dated the 27th April 1926. The insurance was for 400*l.* part of 800*l.* and was on the " body, tackle, apparel, ordnance munition, artillery, boat and other furniture," of the vessel, and was expressed to be on that subject-matter " while lying moored at Eastham Ferry Stage or elsewhere, with liberty to be towed to any dock or place not beyond the Rock Light to load coal, for repairs and (or) overhaul, while there and until back again at her moorings or held covered ; with liberty to moor in the Manchester Ship Canal while the operations for deepening the Eastham Canal are in progress. For and during the space of twelve calendar months commencing at noon on the 27th day of April 1926, and ending at noon on the 27th day of April 1927 " and was against the usual perils.

The policy contained a warranty that she was seaworthy and otherwise fit and equipped for the purpose and use intended, subject, however, to the Institute Time Clauses attached. It is clear from the policy that the purpose and use intended was of a special character—that is, the barge was to serve as a moored barge or coal hulk in the place specified, subject to the liberties expressed.

The assured owned a number of steam ferries, and the barge was used for the purpose of coaling them. She was to be moored to the Eastham Ferry Stage, that is in the Mersey close to the entrance to the Manchester Ship Canal, where she has lain so moored since 1913, with perhaps

(*a*) Reported by T. W. MORGAN, Esq., Barrister-at-Law.

occasions when she was shifted. The policy gave certain limited liberties to move, as set out, but such liberties were merely ancillary to the main adventure. The Eastham Canal, or Cut, is tidal, and the barge was obviously subject not merely to the tides, which ran strong there, but also to the wash of big steamers which passed to and from the canal, and it is also obvious that it was essential for such intended purpose and use that the barge should be strongly moored at each end, so that she could not swing in the tideway. In fact she was moored at her stern to the stage by an 8in. manilla and a 3in. wire rope attached to bollards on the stage, and at the bow she was provided with three bollards to which were attached three chain cables leading to three anchors; one cable was 85 fathoms and the anchor was 20cwt.; another was 60 fathoms and its anchor was 12cwt.; the third cable was 60 fathoms and its anchor was 20cwt. These or similar moorings had been used since 1913. It was not suggested that they were too big for the purpose, though they were far in excess of what would have been required for a barge used for navigation in the ordinary way. The underwriters' surveyor, who was employed by them to survey after the casualty, when the moorings dragged and had to be picked up and relaid, reported that the moorings which have been adequate for years past are now insufficient for their purpose. The moorings are heavy enough, but the south and south-east anchors are on a rock bed and therefore have not much holding power. The south-west anchor was placed in a hole on the west bank, but on each occasion was dragged out. The surveyor added: "I understand steps are now being taken to prevent the possibility of a similar accident occurring again."

In the action the defendants, as a first plea, and as an alternative to their plea that the moorings were not insured, alleged as follows: "The losses in respect of which the plaintiffs' claim arises are attributable to the inadequate moorings of the *Black Diamond* in breach of the implied terms of the said policy that she should be seaworthy and (or) reasonably fit to encounter the ordinary perils of the seas while lying moored at Eastham Ferry Stage, and the plaintiffs are accordingly not entitled to recover therefor"; and they gave the following particulars: "The moorings of the *Black Diamond* were inadequate in that they were of insufficient length and (or) strength and improperly secured to the ground and (or) anchored in or on unsuitable ground with no or no sufficient holding."

Wright, J., in the course of his judgment in the Divisional Court, said: In my judgment the underwriters cannot successfully contend that the moorings in question were not part of the barge and her necessary equipment for the insured adventure and the use and purpose intended, within the policy description of the barge, her body, tackle and furniture. I think so much follows from the words of the policy, the description of the adventure, and the conditions of the place where the barge was moored. So much must be presumed to have been within the knowledge of the underwriters as matters which in the ordinary course of their business underwriters, as such, ought to know (Marine Insurance Act 1906, s. 18 (3) (*b*)). These moorings, furthermore, in my judgment, are within the words of rule 15 of the rules for the construction of the policy embodied in the Marine Insurance Act 1906. "The term 'ship,'" says rule 15, "includes the hull, materials and outfit, stores and provisions for the officers and crew, and, in the case of vessels engaged in a special trade, the ordinary fittings requisite for the trade."

The moorings are, in my judgment, ordinary fittings requisite for the special trade of a moored coal hulk such as the *Black Diamond* in the place where she was moored. As Lord Mansfield said in *Pelly* v. *Royal Exchange Assurance* (1757, 1 Burr. 341, at p. 348): "The insurer, in estimating the price at which he is willing to indemnify the trader against all risques, must have under his consideration the nature of the voyage to be performed, and the usual course and manner of doing it. Everything done in the usual course must have been foreseen and in contemplation, at the time he engaged. He took the risque upon a supposition that what was usual, or necessary, would be done."

The underwriters have contended that as anchors and cables would not be taken on board the barge, but would be left behind if under any of the limited liberties specified in the policy the barge was temporarily removed from her place, they could not be deemed to be part of the ship; but the case just cited shows that a temporary separation during an adventure does not remove what is part of a ship or its furniture from the insurance, if such removal is justified by custom: and the same must apply to obvious necessity, as, for instance, here, if the barge acted on any of the liberties to move, it is obvious that she would leave the anchors behind. An anchor is part of the ship's furniture: (see *Margetts* v. *Ocean Accident and Guarantee Corporation Limited*, 9 Asp. Mar. Law Cas. 217; 85 L. T. Rep. 94; (1901) 2 K. B. 792) even when lying at the scope of the cable; indeed, the term "furniture" includes whatever is necessary for the proper fulfilment of the insured adventure, the absence of which would render the vessel unseaworthy: (*Hogarth* v. *Walker*, 9 Asp. Mar. Law Cas. 84; 82 L. T. Rep. 744; (1899) 1 Q. B. 401; (1900) 2 Q. B. 283).

For these reasons I am of opinion that the actual anchors and cables in this case were part of the subject-matter insured. I cannot see any force, in such a case as this, in the underwriter's contention that the anchors and chains are not insured because they were larger than would have been carried by an ordinary navigating barge, since what was insured was not an ordinary navigating barge; indeed, the underwriters' case seemed to be that the anchors and chains were not large enough.

Nor is the issue affected because the moorings were what were called permanent or ground moorings; they were the property of the assured, and were appurtenant to the barge (there was no evidence that they were used for other vessels), and, indeed, were necessary for her. No doubt the barge might have been moored to buoys which belonged to the harbour authority, or to someone other than the assured, and which would not have been covered; but in fact she was not so moored, and the underwriters had no right to assume that this was so; nor is there evidence that they did so assume. On the contrary, the County Court judge has found as a fact, not only that the moorings were necessary for the insured purpose, but also that the underwriters knew or could have known the method in which she was moored; and he bases that finding in part on a casualty in the previous year, in which the moorings had been fouled by a vessel, and the papers had come before these underwriters on the previous year's policy. A similar finding would also flow as an inference from the policy and the surrounding circumstances.

I think the County Court judge was right, and that the appeal should be dismissed.

I ought to add three things: (1) the allegations of unseaworthiness were abandoned at the trial; (2) apparently on the underwriters' recommendation the anchors were, after the casualty in question, buried or cemented to make them more efficient to hold the barge; and (3) the three underwriters who took the balance of 400*l.* not taken by the defendant underwriters paid, as the County Court judge states. I only mention this last circumstance to add that it does not affect my judgment.

Talbot, J., who differed from Wright, J., in the course of his judgment said: The question at issue lies in a very small compass, and depends on very simple considerations. There is no doubt that the barge, *Black Diamond*, is normally moored at the Eastham Ferry Stage, near the entrance to the Manchester Ship Canal in the Mersey, and that she is chiefly if not wholly used for coaling ferry boats which ply from there to Liverpool. It is also clear that in order that she may be safely and properly moored, it is necessary that she be moored at both ends, and that her bow moorings should be something of the kind which is in fact provided for by her owners. The whole question is whether these moorings, consisting of three heavy anchors and the chains attached, come within the words of the policy: "The body, tackle, apparel, ordnance, munition, artillery, boat, and other furniture of and in the good ship or vessel called the steel barge *Black Diamond*." The burden is on the plaintiffs to prove that they do.

I agree with the contentions of the appellants that these words naturally mean things which are normally on the ship and accompany her on such voyages as she makes, and no case has been produced in which they have been applied to anything else. There is no reason to think, certainly no evidence, that these anchors and chains have ever been on board the barge at all, nor does there seem to be any reason why they should be. This being so, the appellants contend that they are not tackle, apparel, or furniture of the barge at all, but are simply appliances provided at the mooring place for her use, which would be equally available for any other barge which might be substituted for her, or which might be brought to the place by those who own the moorings or by anyone to whom they might be willing to allow the use of these moorings. In my view this is a reasonable view of them, and I do not see that the bow moorings which remain in the river, whether this or any other barge is there or not, are essentially different from the stage to which the stern of the barge is moored.

Test it in this way: If the Mersey Docks and Harbour Board decided to provide a proper mooring place for such barges or hulks as the *Black Diamond* at this place, they must provide some such appliances as those under discussion, and might provide appliances identical with them. Such appliances would be part of the necessary equipment of the mooring place. How do they become anything else because the happen to be provided by the owners of the barge which uses the mooring place? No doubt they are necessary for the safe and proper discharge by the barge of her special functions, but they are so necessary as being an essential part of the mooring place at which she lies, and not as part of herself, her tackle, furniture, or fittings. Again, if the owners had two barges which used these moorings in turn, counsel for the respondents admitted that he would find it difficult to contend that the moorings were tackle or furniture of both or either.

I do not see how it can affect the true description of the moorings that in fact they are used by one barge only.

These are the short reasons which lead me to the conclusion that the appeal should be allowed, but, as Wright, J. agrees with the learned judge of the County Court, it will be dismissed with costs.

The underwriters appealed.

Clement Davies, K.C., *Wilfrid Lewis*, and *J. G. Trapnell* for the appellants.—The question arises in this case whether, on the construction of a policy of marine insurance, permanent moorings are insured by a policy covering "ship, hull, furniture, tackle, &c., of and thereon." It is submitted that they are not. It is to be observed that the ship was insured while she was being moved away from her moorings. By rule 15 of Sched. I. to the Marine Insurance Act 1906 (6 Edw. 7, c. 41), "The term 'ship' includes the hull, materials, and outfit, stores and provisions for the officers and crew, and, in the case of vessels engaged in a special trade, the ordinary fittings requisite for the trade, and also, in the case of a steamship, the machinery, boilers, and coals and

engine stores, if owned by the assured." [SCRUTTON, L.J.—Is the question here one of fact or of law?] A question of law is involved in this appeal. Wright, J. relied on sect. 18 (3) (*b*) of the Marine Insurance Act 1906, which provided that "In the absence of inquiry the following circumstances need not be disclosed, namely: (*b*) any circumstance which is known or presumed to be known to the insurer. The insurer is presumed to know matters of common notoriety or knowledge and matters which an insurer in the ordinary course of his business, as such, ought to know."

It is not enough to show that the insurer knew of the existence of the permanent ground moorings, if the insurer is to be saddled with the risk, they must be clearly designated in the policy. In this case the moorings, it is submitted, are not covered by the policy. There is no evidence that the moorings in question are the ordinary fittings of a special trade. The burden of proof is on the insured to show that the moorings in question are covered by the policy and they have not discharged the onus. This barge can be taken away for repairs and not return for months, and during her absence some other barge can take her place. The moorings are quite independent of any barge in particular.

R. E. Gething for the respondents.—The County Court judge was right in holding that the underwriters are liable on the policy of marine insurance in this case. The subject-matter of the insurance is a moored barge. The permanent moorings in question are ordinary fittings which are requisite for the trade in which the barge was engaged. The word "furniture" in a marine insurance policy has a wide meaning and covers any necessary part of the outfit: (see *Brough* v. *Whitmore*, 1791, 4 Term Rep. 206). The question is one of fact, and there is evidence to support the judgment of the County Court judge.

SCRUTTON, L.J.—In this case an action was brought in the Liverpool County Court by the New Liverpool Eastham Ferry and Hotel Company Limited, who own a block of mixed properties in the neighbourhood of Eastham Lock, including ferry boats, ferry pier, and a coal hulk. In the action the plaintiffs claimed under a policy of insurance on the coal barge, *Black Diamond*, for damage to certain permanent moorings of the barge. The County Court judge held that the plaintiffs succeeded.

On appeal the Divisional Court differed in opinion, Wright, J., taking the view that the County Court judge was right and Talbot, J. taking the view that he was wrong. The judgment of the County Court judge therefore stood, and the insurance company now appeals to this court.

I am bound to say, as appears from the difference of opinion in the Divisional Court, that the matter is one of considerable difficulty, and my mind has fluctuated considerably in the course of the case and is not at the present moment in a condition of very stable equilibrium. The matter is made a little artificial by two circumstances: first, that so far as the question is one of fact there is no appeal from the County Court, and if there is any evidence on which the County Court judge could come to the conclusion to which he did come, that conclusion binds us, although I might have reached a different conclusion on the facts myself. And secondly, for some reason which I do not understand, the parties in the court below agreed that if these moorings came within the policy a certain sum was recoverable as damages, although without that agreement, I should have thought that it was clear that some of the items claimed did not come within the policy. Consequently, I am in the unfortunate position of having to give a judgment which I probably should not give if I was hearing this case as a judge in the Commercial Court.

The matter arises in this way: the *Black Diamond* spends her life in the summer in coaling the ferry steamers which bring pleasure seekers to the stage belonging to the plaintiffs. She lies loaded with coal and moored at one end to the stage and at the other end to the bank. Her moorings to the stage are of the ordinary barge character, and when she goes, as she occasionally does, to obtain more coal, she pulls her stage moorings on board and proceeds with them. The moorings at her other end are of a very different character. They are three heavy anchors and chains, and when she goes to fill up with coal or to be repaired she leaves those moorings behind her. The ends of the chains are tied to the stage and there she leaves them. Apparently, when she was bought many years ago, she was bought with two anchors and 100 fathoms of chain. She now has at that end of her moorings three anchors and 200 fathoms of chain, and the exact nature of her moorings is rather obscure. I do not know whether the question has arisen in the Mersey, but in the Thames there has been a question with regard to the legal character of these permanent or ground moorings. When there are substantial moorings of a coal hulk, which the hulk would never take on board as a ship takes an ordinary anchor on board, but which she, when moved, would leave behind her as permanent moorings in the river, the question has arisen whether the moorings constitute an occupation of land in the river bed, so as to lead them to be rated. Of course, that is not the question in this case, but the authorities show that the character of a particular mooring turns on the particular facts.

In *Cory* v. *Greenwich Churchwardens* (1872, 27 L. T. Rep. 150; L. Rep. 7 C. P. 499), moorings were held not rateable. Some of the moorings were stones with ropes tied to them, and it was found as a fact that they could be hauled on board by the derrick's own machinery if she was moved, and Wills, J. held that there was not enough occupation of the river bed to make the owners of the derrick liable to be rated. Another case—*Cory* v. *Bristow* (1877, 36 L. T.

Rep. 594; 2 App. Cas. 262)—decided shortly afterwards, had a different result. It was found that the moorings were as firm as it was possible to place them in the bed of the river and each derrick was attached to these moorings. The derricks could not weigh the moorings as ships weigh anchors, but could only move from them by casting off the cables and leaving the anchors and stones behind; and it was held that there was rateable occupation. Obviously, therefore, the question of the nature of these permanent or ground moorings is a question of degree.

When there is a finding which is a question of degree, is it a finding of fact or a finding of law. The language to be construed in this policy is: "Whilst lying moored at Eastham Ferry Stage or elsewhere, with liberty to be towed to any dock or place to load coal upon the ship or vessel the steel barge *Black Diamond*," and the insurance is on "the body tackle apparel ordnance munition artillery boat and other furniture" of the *Black Diamond*. So the question is whether these three heavy anchors and chains which are used to moor the *Black Diamond* in a particular place, and which she leaves behind her when she goes to take in more coal, are the "tackle apparel and furniture" of the *Black Diamond*. It may also be a question whether these moorings are "materials or outfit" of the *Black Diamond*, or ordinary fittings requisite for the trade of a coal hulk, within the meaning of rule 15 for the construction of a policy contained in the Marine Insurance Act 1906, which says that the term "ship" includes the hull, materials, and outfit, and, in the case of vessels engaged in a special trade, the ordinary fittings requisite for the trade.

There is some vagueness about the position of these anchors, and so far as I understand the evidence the first appears, and the other two do not appear, to have been buried in the soil. The County Court judge has found that these anchors and chains are part of the outfit and tackle of the barge and are part of her ordinary fittings in her trade as a hulk. Is that a finding of fact or of law? It seems to me that the answer to that question is a question of degree. At a certain point an anchor and chain are obviously part of the tackle of a ship. At another point the anchor and chain, like a bollard on a quay, become a fixed and permanent thing, to which the ship moors herself but which is no more part of the ship than the bollard and quay are part of the ship, or the stage to which the *Black Diamond* is moored is part of the ship. Then between those two points there may be a very difficult set of intermediate facts, and different minds may draw different conclusions with regard to whether an anchor and chain are part of the tackle or are a permanent mooring place not part of a ship. I have several times expressed my own opinion that a question of degree of that sort is a question of fact. I expressly said so in *Ducker* v. *Rees Roturbo Development Syndicate* (138 L. T. Rep. 598; (1928) A. C. 132), and the House of Lords adopted the same view.

That case was concerned with a finding of Commissioners of Income Tax, and from them there is no appeal on questions of fact just as there is no appeal on fact from the County Court judge. A man selling one picture is not carrying on a trade, but a man selling 100 pictures a year is probably carrying on a trade as a picture dealer. A man who lends money once a year is not a moneylender, but if he lends money to 100 people in the year he is probably a moneylender. At some point it becomes a question whether the man is or is not a picture dealer or a moneylender; it is a question of degree, and, in my opinion, a question of fact.

Now whether these anchors and chains did or did not pass from being fittings of the ship to being permanent moorings which are not part of the ship is a question of degree and, in my view, a question of fact. The County Court judge had therefore, the right to decide it, as there was some evidence on which he could come to his conclusion, and though I am not sure that I would have come to the same conclusion myself, we are bound by his finding.

The parties have agreed that, if the plaintiff can recover, the amount of the damages is 87*l.* odd. That sum appears to me to include some matters that could not possibly be recovered under the policy. I cannot conceive that if a ship drags her anchor you can recover under a policy of marine insurance on the ship the cost of bringing her back to the place from which she dragged or the cost of taking up the anchor and examining it. I only mention this because I do not wish this decision to be taken as a decision of the Court of Appeal that under a policy like this matters such as the parties here have agreed upon can be recovered.

For these reasons, the question of fact and the agreement with regard to the damages, I feel that my judgment is a very artificial one and is not one which I should probably have delivered if sitting as a judge in the Commercial Court. But as I am sitting here to decide an appeal from a County Court judge, who is supreme on fact if there is any evidence on which he can come to a conclusion of fact, and the parties have agreed the amount of the damages, I have come to the conclusion that the appeal must be dismissed.

Greer, L.J.—I agree that the appeal fails, and I think I go a little further than Scrutton, L.J. in the view that I take of the judgments of the County Court judge and of Wright, J., for I think that those judgments, on the facts as I understand them, were right whether they were conclusions of fact or conclusions of law. I treat it as agreed between the parties that if any sum is due under the policy, the proper amount to be paid is 87*l.* 18*s.* 10*d.*, and I therefore confine myself to considering whether the damage was or was not covered by the policy.

The policy is on a moored barge, and one has to consider the history of the barge; what it was and what it was obtained for; what was its outfit and what the purpose for which as the insurance company knew, it was intended to be used. It was bought from Messrs. Grayson by the respondents for 800*l.*, and the contract specifically provided that "mooring and towing bollards are to be supplied and fitted and mooring gear in the shape of two suitable anchors and about 100 fathoms of cable." Then, after referring to wood fenders with half-round facing irons, the contract says: "No other outfit or equipment to be placed on board by the sellers."

It does not, of course, conclude the matter, but it is not without significance that two of these anchors and part of the cable which was ultimately used were bought as part of the outfit or equipment of this barge which was to be sued as a moored barge. When the accident which led to this action happened the barge was moored to the stage at her stern and was moored at her bow to cables and three anchors, one of 20 cwt. on each side and one of 12 cwt. between them. The cables and anchors at the bow were moored to the three bollards referred to in the contract, and I cannot help thinking that from the start it was intended that there should be three anchors as part of the outfit or equipment of this moored barge, and that while the two larger ones were purchased from Messrs. Graysons with the barge the other either belonged to the respondents at the time or was acquired by them afterwards to complete what I may call the mooring outfit of the barge.

Before referring to the policy I may refer to the evidence, which shows that the barge was purchased on the 14th March 1913, and says that the moorings supplied were used from that time under similar conditions. I suppose that means that the conditions were the same throughout, that there were these three moorings at the bow, and that the moorings, the chains and anchors which formed part of the outfit of the vessel, were used from the start for mooring her. Then one finds in the correspondence letters written before the date of the policy which seem to me important.

After referring to the correspondence, his Lordship continued: I think we are entitled to take into consideration these facts which were known to both parties, when we are deciding whether these anchors and chains were part of the outfit, tackle, or furniture of this moored barge within the meaning of the policy, and we must remember that the word "outfit" is included in the word "ship" by rule 15 of the rules for interpretation in the schedule to the Marine Insurance Act 1906. We are entitled to take those facts into consideration when interpreting words which apply to a vessel of this sort which, while moored, was doing her work as a vessel.

Then with regard to the policy. The subject-matter of the insurance is described as "the body, tackle, apparel, ordnance munition, artillery, boat, and other furniture of and in the good ship or vessel called the steel barge *Black Diamond* while lying moored at Eastham Ferry Stage or elsewhere, with liberty to be towed to any dock or place not beyond the Rock Light to load coal, for repairs, and for overhaul, while there and until back again at her moorings, with liberty to moor in the Manchester Ship Canal while the operations for deepening the Eastham Canal are in progress. For and during the space of twelve calendar months commencing at noon on the 27th April 1926, and ending at noon on the 27th April 1927."

I read that as meaning that the subject-matter of the insurance is a barge whose main occupation during the period of the insurance is to lie moored at Eastham Ferry Stage. She has liberty to depart on certain occasions from those moorings and to moor elsewhere, but to the knowledge of insurers and insured she will as a general rule be moored at the Eastham stage. She is insured as a moored vessel, with, possibly, occasional trips away.

Most vessels do not lie at anchor for very long. They have anchors which are suited for the mooring which they require. This vessel has to be moored for a long period; she has to stand considerable strains on her moorings, and it is important for her work as a coaling barge that she should be steady at her moorings. Accordingly, she must have anchors of greater holding power than she would have required if she had been a barge sailing about the Mersey with loads of various kinds; and I think that the policy should be interpreted, as Wright, J. interpreted it, as covering that which is the furniture of a moored barge, that which is, in the words of the schedule, part of the outfit of a moored barge, the barge being moored in a way, and for a purpose, which was known to both parties.

If the anchor had not been purchased in connection with the vessel, if it had been supplied in the river by some person other than the owner of the barge, it would clearly not have been part of the furniture, fittings or outfit of the vessel; and if it had been purchased by the respondents, or used by them, independently of this barge, and this barge had found it there when it went to the moorings, it would not have been part of the furniture fittings or outfit of this barge.

I agree with Wright, J., and with the County Court judge, that the moorings were part of the furniture, tackle or outfit of the barge within the meaning of the policy, and I think, therefore, that as there was a difference of opinion in the Divisional Court, the judgment of the County Court judge must stand.

RUSSELL, L.J.—This case certainly presents considerable difficulty, but the view which I have formed coincides with that of Talbot, J. Although the craft with which we are concerned here is a coal barge moored in the Mersey, the matter is a seafaring matter, and

in such a matter I need hardly say that I differ from Scrutton, L.J. and Greer, L.J. and Wright, J. with great diffidence; but since I have formed a view, I think that I ought to state it.

I wish to make two preliminary observations. First, I can find no facts found by the County Court judge which would warrant us in attributing to the words of the policy any other than their natural meaning. And, second, the fact that the respondents, when they purchased this barge sixteen years ago purchased with it certain mooring gear is an irrelevant and improper matter to take into consideration in construing the policy.

With those two observations I turn to the question which arises for decision. The barge is moored in this way: at the bow she is moored by three cables, each attached to an anchor, two of the anchors weighing a ton and the middle one weighing 12cwt. At the stern she is moored by two cables attaching her to bollards on Eastham Ferry Stage, and if and when she leaves her moorings for any purpose and goes away she does not take with her the anchors or any part of the cables, but the bow anchors and cables are left in the river and the stern cables are hauled up on to the stage and are left there. The barge never takes this mooring gear on board at all. When she comes back she picks it up again and re-moors in the same spot, and the question is whether those cables and anchors are part of the subject-matter insured by the policy.

I think it is purely a matter of construction. The County Court judge has, as I read his judgment, decided the case on the construction of the words of the policy and nothing else; he has not found any facts that were in dispute.

In the Divisional Court, Wright, J. decided in favour of the respondents on two grounds; he held that, on the construction of the policy itself, the cables and anchors were part of the subject-matter of the insurance; and he held that even if they were not within the words of the policy, *per se*, they were brought within the policy by reason of rule 15 in the First Schedule to the Marine Insurance Act 1906. Talbot, J. took the contrary view.

That being so, I turn to the policy. The only words which would cover this are " tackle, apparel and other furniture of and in the good ship or vessel called the steel barge *Black Diamond*." I am quite unable to hold, in view of the facts of the case as we know them, that these cables and anchors are tackle, apparel and furniture of and in the barge; nor is the matter improved in any way in my opinion by reference to rule 15. That rule provides that the word " ship " in a policy shall include the whole materials and outfit, stores and provisions for the officers and crew, and in the case of vessels engaged in a special trade, the ordinary fittings requisite for that trade. The latter words are relied on, but in my opinion the rule does not apply here. The only evidence of a special trade is that this barge carried on the trade of coaling, and I think it is impossible to say that these cables and anchors were fittings requisite for the coaling trade; they were, in my opinion, no such thing.

I think, therefore, that the appeal should succeed.

Appeal dismissed.

(Before SCRUTTON, L.J., GREER, L.J., and SLESSER, L.J.)

SILVER AND ANOTHER *v.* OCEAN STEAMSHIP COMPANY LIMITED. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Bill of lading — Carriage of goods by sea — Damage during transit and discharging — Acknowledgment by shipowners that goods received in apparent good order and condition —Estoppel—Goods delivered in a damaged condition—Exceptions—Liability of shipowners —Carriage of Goods by Sea Act 1924 (14 & 15 *Geo.* 5, *c.* 22), *Sched., Art.* III., *rr.* 3, 4, *Art. IV., r.* 2 (*m*), (*n*).

The plaintiffs were the indorsees of bills of lading in respect of parcels of cans of frozen eggs which had been delivered to the defendants for carriage from Shanghai to London. A large number of parcels were in a damaged condition when delivered. A certain amount of the damage was caused before the goods were loaded on the defendants' ship, and some of the damage was caused during the voyage from Shanghai to London; also during and after discharging the goods in London. The defendants had issued bills of lading stating that a number of cases were shipped " in apparent good order and condition," for delivery subject to conditions thereinafter mentioned. The first condition mentioned in each bill of lading was " this bill of lading is subject to the rules contained in the Schedule to the Statute of the United Kingdom of Great Britain and Northern Ireland, entitled the Carriage of Goods by Sea Act."

Rule 3 *of Art.* III. *of the Schedule to the Carriage of Goods by Sea Act* 1924, *provided that the carrier should on demand of the shipper issue to the shipper a bill of lading showing* " (inter alia) . . . (c) *the apparent order and condition of the goods,*" *and by rule* 4 " *such a bill of lading shall be* prima facie *evidence of the receipt by the carrier of the goods as therein described . . .*"

By Art. IV., r. 2, " *Neither the carrier nor the ship shall be responsible for loss or damage due, arising or resulting from . . .* (m)

(*a*) Reported by T. W. MORGAN, Esq., Barrister-at-Law.

wastage in bulk or weight or any other loss or damage arising from inherent defect, quality or vice of the goods. (n) *Insufficiency of packing.*"

In answer to the plaintiffs' claim the defendants pleaded that the goods were damaged before shipment and also that they were insufficiently packed, and they relied on the exceptions in the Schedule to the Carriage of Goods by Sea Act 1924 *as excepting them from liability.*

Held, that the defendants having issued bills of lading acknowledging the receipt of the goods in apparent good order and condition could not afterwards prove that the goods were damaged before shipment if such damage would have been apparent on reasonable inspection, nor could they rely on the exception of insufficiency of packing in Art. IV., r. 2 (*n*) *of the Schedule to the Carriage of Goods by Sea Act* 1924, *if such insufficiency of packing would have been apparent on reasonable inspection.*

Appeal from a decision of Roche, J.

The plaintiffs, who were the indorsees of bills of lading in respect of two parcels of cans of frozen eggs—one parcel consisting of 16,000 cans and the other of 5334 cans— which had been delivered to the defendants in May 1927, for carriage from Shanghai to London, claimed damages from the defendants for alleged breach of the contract of carriage evidenced by the bills of lading. The plaintiffs alleged that the goods were in a damaged condition when delivered in London, and that the defendants were liable. Alternatively, they alleged that the damage was caused by the defendants' alleged negligence.

The defendants pleaded that the damage was due to the inherent defects or quality or vice of the goods, or was due to insufficiency of packing, and while denying liability they brought into court the sum of 350*l.*

The plaintiffs, in reply, said that the defendants, by their bills of lading, having acknowledged the receipt of the goods in apparent good order and condition, and having accepted the goods without protest and with full knowledge of their packing, and having given clean bills of lading in respect of such goods, were not entitled to rely on any inherent defect, quality, or vice of the goods, nor on the exception of insufficiency of packing within the meaning of Art. IV., r. 2 (*n*), of the Schedule to the Carriage of Goods by Sea Act 1924.

Roche, J., came to the conclusion that the bulk of the damage was done before loading, or, if after loading, was due to the cans being of a shape calculated to cause the damage, but that some damage was done by the defendants in the course of discharging the cargo by nets, and he decided that the amount—350*l.*—which the defendants had paid into court was sufficient to cover the damage caused by the method of discharging by nets, which he thought was negligence on the part of the defendants, and he gave judgment for the defendants on the plea of payment into court.

The plaintiffs appealed.

Clement Davies, K.C., and *G. St. C. Pilcher*, for the appellants.

S. Lowry Porter, K.C., and *James Dickinson*, for the respondents.

Cur. adv. vult.

Nov. 11, 1929.—The following judgments were read :

Scrutton, L.J.—This appeal relates to damage done to a large shipment of Chinese eggs while in course of transit from China to London. The transit was from shipper's warehouse in Shanghai to cold stores in London, the defendants' ship being only responsible from delivery on board in Shanghai to delivery overside in London. The liquid content of the eggs was contained in metal cases, holding 42lb. each, cases of a rectangular shape, and, therefore, with twelve right-angled edges. The cases were not covered with any cloth, fibre or cardboard covering. The contents were frozen and the cases were carried in refrigerated holds. The more usual method of conveyance was either in rectangular cases covered with some kind of covering, or in circular drums which are sometimes uncovered. In this case the rectangular cases of the size in fact used were used at the request of London purchasers for reasons connected with their own business. They were probably uncovered for cheapness. With regard to shape, rectangular cases were obviously better for the ship's stowage, as cylindrical cases wasted room in stowage. But the right-angled edges were probably more likely to damage other goods even in careful stowage and handling ; and were certainly more likely to do so if there was negligent handling. There was in the whole transit from shipper's warehouse to store very considerable damage to the cases. None of it was due to failure of refrigeration. But out of 21,334 cases shipped, 10,982 cases were damaged in their metal coverings, so that London purchasers rejected them. The damage varied in degree, but when experienced checkers at the stores tallied them in at Nelson's Wharf, 1,038 were damaged out of 5,334 ; at Bermondsey Cold Store, out of 16,000 cases 1732 were recorded as specially damaged. When the goods were more carefully examined and the two parcels taken together out of 21,334 cases, 2499 were classed as heavy and exceptional damage, on which 1337*l.* 5*s.* 3*d.* was claimed, and 8433 were classed as slight damage ; in all nearly 11,000 cases were damaged out of 21,334.

These figures are nearly accurate, but owing to some small parcels being dealt with in various ways, are only to be taken as approximate. They show heavy and unusual damage, and the question is where was it caused, and is the ship responsible to any and what extent for it. The cases go through a number of stages between shipper's warehouse and London stores, and one difficulty is that witnesses at each stage deny that any damage was caused at their particular stage. Yet at the end of the

transit there was this very large damage. The judge below has not accepted the evidence of any of the witnesses who say that there was no damage at their particular stage, and finds, as I understand him, that there was damage at every stage. though not necessarily damage for which the ship was responsible. The cases are surveyed by Lloyd's surveyor in shipper's store and are then taken down to the ship's side by insulated van and lighter. This is stage one. Stage two : The cases are hoisted on trays over ship's rail and placed on ship's deck, from whence, after casual examination, they are lowered into ship's hold and stowed one by one in tiers. Stage three is the transit from loading to commencement of discharge—the voyage. There is no suggestion of any specially bad weather on the voyage, and I do not think either side suggests any special damage in this stage. Stage four is discharge from the ship's hold to the consignee's insulated barges. Stage five is carriage by the insulated barges to the wharf and discharge there. Stage six is carriage by insulated vans to the cold store. I understand the learned judge to find that 50 per cent. of damage was caused before discharging commenced, described in the evidence as "old damage," and that none of it was caused by negligence of the ship's men in loading. This must apparently mean that in the judge's view this 50 per cent. was made up of damage before loading, for which the ship is not responsible, and damage in loading resulting from insufficiency of packing, for which again the ship is not responsible. The judge finds damage in discharging, for which the ship is responsible, in that the ship's people negligently discharged the cases in nets, during which process the cases were unnecessarily flung about. He assesses this damage as not exceeding 10 per cent. of the total damage assessed in money. This leaves 40 per cent. of the damage to be accounted for, in his view, to either after discharge from the ship or in discharge due to the nature of the packages, without negligence on the part of the ship. There is very specific evidence about the negligence in discharging in nets and the damage thereby caused; there is not much evidence with regard to the amount of damage at any stage—except that with regard to ultimate total damage both in number of cases and in money loss, which damage has to be accounted for somehow—to enable the damage to be divided between the various persons who may be liable for it. I think any conclusions with regard to the amount of damage at any stage must be in the nature of a jury estimate, made on very slight materials, and I should be very slow to interfere with the estimate of the judge below, unless I thought the estimate was very substantially wrong, or was vitiated by erroneous views on legal considerations. The plaintiffs, appellants, submit that they have been awarded far too little in getting only 10 per cent. of the actual damage sustained.

It is necessary, therefore, to go in detail into the various stages with the legal considerations affecting them. The transit begins with a survey of the cases by Lloyds' surveyor at the shipper's refrigerating store on the 23rd May and the 24th May. The survey describes the cases as "strong rectangular tins—no fibre or other cover." Tins—one hundred and fifty in number—were weighed; others taken at random, sounded, and found solid frozen. The cargo is certified as "fit for transportation." It cannot be said that there is any individual examination of the cases for perforations or punctures. The cases then go down in insulated vans to be loaded into insulated barges and taken alongside the ship. All refrigerated cargo at that time of year is loaded at night, but the ship has clusters of electric lights on deck and in the insulated hold. Alongside the ship the cases are stowed on a tray with some side protection—eighty-four tins in each lift—in a block seven cases long and three cases wide and four cases high. It is obvious that in the block of eighty-four tins, having 504 sides, only eighty-one sides in the block are externally visible. When the tray is landed on the ship's deck a ship's officer taps the external tins to see if they are frozen, and if he sees any damage to the tins, he rejects the damaged tins. The tray is then lowered into the hold and each tin is individually handled by the stowing gang, and if any damage is seen in that process the tin is rejected. In fact, a small number of the original 21,334 tins were rejected at this stage, the shippers say fifty, the ship sixty. It is not clear whether they were replaced by sound tins, but 21,334 cases seem to be the total shipment.

Then comes the stage which raises the first question of law. On the 25th May a bill of lading is signed stating that a number of tins are shipped "in apparent good order and condition." After issuing such a bill, can the ship prove that at the time (1) the tins were perforated or punctured, or (2) that they were insufficiently packed, or must it be taken that on shipment the tins, so far as reasonable inspection would discover, were not perforated or punctured and were by all reasonable inspection sufficiently packed? The Carriage of Goods by Sea Act 1924, only directly applies to carriage of goods from Great Britain abroad, not from abroad—for example, China to Great Britain. But the bills of lading by which the shipowner acknowledges the receipt of goods, are for 16,000 and 5,334 cases respectively in apparent good order and condition "for delivery subject to conditions and exceptions hereinafter mentioned" and the first condition mentioned in each bill of lading was "this bill of lading is subject to the rules contained in the Schedule to the Statute of the United Kingdom of Great Britain and Northern Ireland, entitled the Carriage of Goods by Sea Act, hereinafter referred to as 'The Rules.'" Though the Act does not apply to this bill of lading, the parties have apparently by agreement made the rules in the Schedule to the Act conventional terms of the bill of lading. Rule 3 of Art. III. of the Schedule requires the

carrier to issue a bill of lading showing the apparent order and condition of the goods, which by rule 4 is to be *primâ facie* evidence of the receipt of goods as described.

Two questions seem to arise at this stage. First, under the law prior to the Carriage of Goods by Sea Act 1924 a shipowner who received goods which he signed for "in apparent good order and condition" to be delivered in the like good order and condition, and who delivered them not in apparent good order and condition, had the burden of proving exceptions which protected him for the damage found. The present bill of lading runs "shipped in apparent good order and condition for delivery, subject to conditions," etc. Has any difference been made in the old law by this wording? In my opinion no difference has been made. I agree with the view expressed by Wright, J. in *Gosse Millard Limited* v. *Canadian Government Merchant Marine* (17 Asp. Mar. Law Cas. 385; 138 L. T. Rep. 421; (1928) 1 K. B. 717) in similar words, that there is still an obligation to deliver in the like apparent good order and condition unless the shipowner proves facts bringing him within an exception covering him. Lord Sumner, in *Bradley and Sons* v. *Federated Steam Navigation Company Limited* (17 Asp. Mar. Law Cas. 265; 1927, 137 L. T. Rep. 266) appears to express the same view.

The second point of law is this. It has been decided in *Compania Naviera Vasconzada* v. *Churchill and Sim* (10 Asp. Mar. Law Cas. 177; 94 L. T. Rep. 59; (1906) 1 K. B. 237), and affirmed in the Court of Appeal in *Brandt and another* v. *Liverpool, Brazil and River Plate Steam Navigation Company Limited* (16 Asp. Mar. Law Cas. 262; 130 L. T. Rep. 392; (1924) 1 K. B. 575), that the statement with regard to "apparent good order and condition" estops—as against the person taking the bill of lading for value or presenting it to get delivery of the goods—the shipowner from proving that the goods were not in apparent good order and condition when shipped and, therefore, from alleging that there were, at shipment external defects in them which were apparent to reasonable inspection. Art. III., r. 4, which says that the bill shall be *primâ facie* evidence—not *primâ facie* evidence only, liable to be contradicted—can hardly have been meant to render the above decisions inapplicable. For the information relates to the shipowner's knowledge; he is to say what is "apparent," that is, visible by reasonable inspection to himself and his servants, and on the faith of that statement, other people are to act, and if it is wrong, act to their prejudice. I am of opinion that rule 4 of Art. III. has not the effect of allowing the shipowner to prove that goods which he has stated to be in apparent good order and condition on shipment, were not really in apparent good order and condition, as against people who accepted the bill of lading on the faith of the statement contained in it. Apparent good order and condition was defined by Sir R. Phillimore in *The Peter der Grosse* (3 Asp. Mar. Law Cas. 195; 34 L. T. Rep. 749; 1 Prob. Div. at p. 420) as meaning that "apparently, and so far as met the eye, and externally, they were placed in good order on board the ship." If so, on the decision in *Compania Naviera Vasconzada* v. *Churchill and Sim* (*sup.*), the shipowner is not allowed to reduce his liability, by proving, or suggesting, contrary to his statement in the bill of lading, that the goods in respect of matters externally reasonably visible, were not in good condition when shipped. Now, what was reasonably apparent to the shipowner's servants loading at Shanghai at night, but under clusters of electric light? The ultimate damage was classed by the surveyors as (1) serious damage where the tins were gashed or punctured, damage easily discernible in handling each tin; (2) minor damage, pinhole perforations, which on tins covered with rims were not easily discernible, but which were found when the tins were closely examined. I have considered the evidence and I find that the first class of damage was apparent to reasonable examination; the second, having regard to business conditions, was not apparent. The result of this is that the shipowner is estopped against certain persons from proving or suggesting that there was gash or serious damage when the goods were shipped. He may raise the question whether there was not minor or pinprick damage at that time, but having regard to the small quantity of goods rejected for visible damage, I should not estimate the amount of such minor damage at shipment as very high. The question as to whether the shipowner is prevented by the statement with regard to "apparent good order and condition" from relying on the allegation or exception of "insufficiency of packing"—one of the exceptions under the rules in the schedule to the Act—is more difficult. The shipowner's contention is that there was insufficiency of packing, because (*a*) the eggs were packed in uncovered tins, and, therefore, were difficult to handle when frozen and had less protection than if the tins were covered; (*b*) the tins had sharp edges and corners and were, therefore, dangerous to each other; and (*c*) that the tins were of too thin plating to stand the wear and tear of contact with other tins.

The facts that the tins were (1) uncovered, and (2) with rectangular edges, were obvious on shipment. If this was insufficient packing the insufficient packing was obvious. I cannot think that a shipowner who receives, say, a wooden case broken open at one corner or side can describe it as "in apparent good order and condition," and afterwards prove the opposite. And if the insufficiency of the packing is obvious, again I think it cannot be described as in apparent good order and condition. In truth, the rectangular uncovered packages are not "insufficiently packed," but may be dangerous to other cases and are difficult to handle, each matter being obvious to external inspection. Some suggestion is made that the metal containers were too thin, and they were obviously too thin to resist the treatment which

they received. But it appears from the letter of the 26th Aug. 1927 that the metal was of the same thickness as the Union Cold Storage Company's usual tins. I do not see why rectangular tins, carefully stowed, should damage each other, and they are obviously better for the ship in stowage, in that they waste less space than round tins, while their lack of covering is apparent.

I am, therefore, of opinion, that, against the proper person, the shipowner is estopped by his statement that the cans were shipped in apparent good order and condition from proving that they were insufficiently packed, or in fact seriously gashed, but that he may prove or suggest pinholes on shipment as not being reasonably apparent. The old damage, that is, damage done before discharge, found on discharge, was variously estimated at 10 per cent. and 40 per cent., and "considerable." The judge finds 50 per cent. On the view which I take above, this must be reduced by eliminating (1) any heavy damage done before shipment; (2) any damage done before discharge due to insufficient packing. If so, and considering the nature of the ultimate damage, I think, if the old damage is reduced to 25 per cent., covering pinprick damage before shipment, and damage due to the ordinary wear and tear on a voyage of parcels properly packed, the shipowner has a larger allowance than he is entitled to. Whether the consignee is entitled to rely on the statement with regard to apparent good order depends on whether he relied on the statement without knowledge of its untruth to his prejudice. It was argued that as he ordered square tins and uncovered tins, he must have known that they were insufficiently packed. He certainly ordered square tins, but he had certainly no knowledge of the make of the edges, which were said to be unusually sharp. The statement that he ordered uncovered tins is based on his telegram of the 18th May ordering "plain" tins. But this, I think, clearly relates only to absence of mark, as the letter of the 21st June, contrasting "plain tins" with tins branded "Superegg," shows. In my view, the consignee in London had no knowledge of any facts that showed that the tins shipped were not in apparent good order and condition. The last objection was that the witness did not say that he relied on the bill of lading being a clean bill of lading by reason of the statement with regard to good order and condition. The mercantile importance of clean bills of lading is so obvious and considerable that I think the fact that he took the bill of lading, which is in fact clean, without objection, is quite sufficient evidence that he relied on it.

One comes next to the evidence with regard to the discharge, in which the judge has found ship's negligence. While the evidence with regard to the exact amount is not as satisfactory as it might be, this is due to the ship's officers' or agents' quite improper refusal to sign lightermen's receipts stating the amount of damage, or to keep any tallies themselves. They knew that the method of discharge was being objected to and that damage was being done and they refused to sign lightermen's receipts. They cannot complain if the estimate of damage is inaccurate or taken only at the wharf.

The facts with regard to the discharge are these. The uncovered frozen tins were slippery to handle or pile. They were discharged by piecework, the men having an obvious motive to do the work quickly. This, so far as it saves the ship demurrage, is to the advantage of the ship, but may lead to the cargo being handled too hastily. It is for this reason that, according to the evidence, the cold stores pay their men by time and not by piecework, finding that they get more careful, though slower, handling. These tins were at first stacked on a wooden tray, with very slight sides. It was found that some tins slid off or fell unpleasantly near the heads of people working below. They not unnaturally protested, and the ship adopted a system of discharging in nets. When the tins were first placed in the net the bottom tier showed flat. But as soon as the net was hoisted the flat tier disappeared and the tins were pressed together. The chief officer of the ship admitted that there was a chance of damage at that stage. But when the net was lowered into the lighters and set down the chance of damage became almost a certainty. The chief officer describes what happens as follows: Question 241: "(Q.) And is it this danger of knocking against the sides that makes you say the trays are better than the nets? (A.) It is to prevent them slipping out. They are slippery, and when they let go the side of the net the whole block of tins collapses. When they land the net in the lighter the whole block of tins collapses. The top tier would slip 2ft. or 3ft." Mr. Silver, who saw the discharge in nets, protested at once; he "saw the tins all jumbled up in the nets."

I have considered the evidence and come to the same conclusion as the judge below that there was a negligent method of discharge, for damage done by which the ship is liable. I am satisfied that a very considerable part of the actual damage was caused by this negligence. I do not understand how he can have arrived at so small a figure as 10 per cent. of the actual damage being attributable to actual discharge. If, as he finds, 50 per cent. of the actual damage was caused before discharge, and 10 per cent. by negligence in discharge, this leaves 40 per cent. to be caused after discharge. While there is some slight evidence of rough handling at the wharf, on the other hand, this work was done by men on time work, with no inducement to hurry, with special wooden trays with high sides. I am quite unable to discover the evidence that would justify the judge in the division of this damage into 10 per cent. ship and 40 per cent. after ship.

Endeavouring to assess the damage on the figures which I have gone carefully into,

somewhat as a jury would, I am of opinion that if 25 per cent. of the actual damage is assigned to the period before discharge, 50 per cent. to discharge, and 25 per cent. after discharge, the ship is being treated very generously. It may be that the learned judge below has arrived at his figure of 10 per cent. by deducting from the actual damage some percentage as due to insufficient packing. In my view, he is not entitled to do this; first, because of the estoppel, and, secondly, because in my view a man who discharges cargo negligently is not entitled to say: "If I had discharged the cargo properly there would have been some damage, which I can deduct from the damage caused by my negligence." Further, in my view of the estoppel, the ship cannot claim that some tins were delivered to it gashed and some damaged by insufficient packing.

I assess these two classes of damage before discharge at 10 per cent. as compared to 15 per cent. due to non-apparent pin-prick damage before discharge and ordinary wear and tear on voyage. I have stated these figures in order that if any part of my assessment should be dissented from my resultant total may be modified. The percentages which I have given are of the total money values. I am conscious that they are rough-and-ready estimates; but I think that if they were arrived at by a jury they could not be upset. As I have said, I think that they err on the side of generosity to the shipowner, and I am influenced to some extent by the improper refusal of the shipowner's servants to take or agree tallies of actual damage on discharge protecting them by a reference to "old damage."

In my view, therefore, the damage for which the shipowners are liable should be roughly assessed at 60 per cent. of the actual damage, and judgment for 2100*l.* with costs should be entered for the plaintiffs, the judgment of the learned judge with regard to amount and costs being set aside.

GREER, L.J.—The appellants, plaintiffs in an action against the respondents, bring this appeal against the judgment of Roche, J., whereby it was decided that a sum of 350*l.* paid into court by the defendants was sufficient to satisfy their claim for breach of contract of the carriage of two parcels of cans of frozen eggs from Shanghai to London.

By their statement of claim the plaintiffs claimed to be the owners of a parcel of 16,000 cans and a parcel of 5,344 cans of frozen eggs delivered to the defendants' steamship *Aeneas* by the Henningsen Produce Company for carriage from Shanghai to London and delivery to shippers' orders or assigns. They made their claim as owners of the said goods and indorsees of the bills of lading to whom the property in the said goods passed by reason of the indorsement of the said bills of lading. They alleged that the goods were delivered in a damaged condition in London, and that the defendants were liable for breach of the contract of carriage which was evidenced by the two bills of lading. Alternatively, they alleged that the damage was caused by the negligence of the defendants.

By their defence, after the formal denials of the plaintiffs' allegations, the defendants pleaded that the damage was due to the inherent defects or quality or vice of the said goods, or was due to the insufficiency of packing thereof, and that by the terms of the bills of lading they were exempted from liability, and while denying liability they brought into court the sum of 350*l.*

The plaintiffs, by their reply, pleaded that the defendants by the bills of lading having acknowledged the receipt of the said goods in apparent good order and condition on board the Steamship *Aeneas*, were estopped from denying that the goods were shipped in apparent good order and condition, and by par. 3 of the reply they alleged that the tins containing the frozen eggs were square and had sharp corners, and that they were not covered with fibre and (or) hessian cloth and (or) cardboard, and therefore that the defendants, having accepted the said goods without protest and with full knowledge of the matters aforesaid and having given clean bills of lading in respect of such goods were not entitled to contend that the said matters or any of them constituted acts or omissions of the shipper and (or) inherent defect, quality, or vice of the said goods and (or) insufficiency of packing thereof within the meaning of the exceptions in art. IV., r. 2, of the Schedule to the Carriage of Goods by Sea Act 1924.

When the goods were delivered to the ship at Shanghai, it was, of course, apparent to those in charge of the receipt of the goods that the eggs were packed in square tins which necessarily had sharp corners, and that they were uncovered. It was also ascertained that some of them had been damaged before delivery to the ship, and fifty cases were refused on this ground. The goods were carried to London, discharged on to the quay, received by the plaintiffs and put into store, and when finally examined it was found that 2625 tins were badly gashed, and in respect of these tins the plaintiffs suffered loss to the amount of 1377*l.* 1*s.* 6*d.*, that 8357 tins had small dents and holes in respect of which 1044*l.* 12*s.* 6*d.* was the loss sustained, and there were certain charges incurred for labour, surveyors' fees, and agency, which the plaintiffs also claimed. The learned judge came to the conclusion that some damage was done by the defendants in the course of discharging the cargo by nets, but he did not find any damage occasioned by any act of the defendants at any other time, and he further decided that the amount paid into court was sufficient to cover the damage occasioned by the method of discharge by nets, which he thought was negligence on the part of the defendants' servants, and he gave the usual judgment in favour of the defendants on the plea of payment into court.

The bill of lading incorporated the rules contained in the Carriage of Goods by Sea Act

1924, and the defendants relied on the exception of insufficiency of packing contained in Art. IV., r. 2, of the schedule of the said Act. The bill of lading contained the words "shipped in apparent good order and condition," and the first question to be determined is whether the defendants are estopped by these words from alleging that the goods were either in a damaged condition when shipped, or that they were insufficiently packed by reason of the fact that the tins were square and unprotected. It was decided in *Compania Naviera Vasconzada* v. *Churchill and Sim* (10 Asp. Mar. Law Cas. 177; 94 L. T. Rep. 59; (1906) 1 K. B. 237), that those words in a bill of lading are not contractual, but that they contain a representation of fact which may create an estoppel in favour of a purchaser relying on the words in the bill of lading and acting on them to his detriment. The case was decided in 1906, and I think we ought to accept as good law the proposition that the words are not words of contract but only representations which may give rise to an estoppel. I observe also that the decision in *Compania Naviera Vasconzada* v. *Churchill and Sim* (*sup.*) was referred to with approval by Scrutton, L.J., in *Brandt* v. *Liverpool, Brazil and River Plate Steam Navigation Company Limited* (16 Asp. Mar. Law Cas. 262; 130 L. T. Rep. 392; (1924) 1 K. B. 575).

The elements necessary to create an estoppel are three. There must be (1) a statement of fact, (2) relied on by the person alleging estoppel, and (3) he must have acted on the representations to his detriment. So far as the alleged estoppel is concerned with the shape of the tins and the absence of cover, I am of opinion that the plea of estoppel was not established. I doubt very much whether the statement "shipped in apparent good order and condition" has any reference to original defects of quality or type. The words seem to me to refer rather to acquired damage or defect in the goods rather than to original defects of quality or type. I doubt whether a square tin can be said to be not in good order and condition because it is square and has always been so, or because it is uncovered and has always been so uncovered. I am inclined to think that the words are confined to deterioration or damage which has occurred to the goods of the quality and type delivered. A distinction is drawn by Channell, J., in *Compania Naviera Vasconzada* v. *Churchill and Sim* (*sup.*) between quality and condition, and I observe that in the definition section of the Sale of Goods Act 1893 it was considered necessary to specially provide that the word "quality" in the Act should include "condition." It appears to me that when the goods were received for shipment, the shipper and the shipowner were considering that there might be a claim for damage caused during the carriage by sea. In these circumstances the shipowner is willing to say to the shipper, "I admit that up to the present the goods have not been damaged so far as can be discovered by such examination as can reasonably be expected. He does not seem to me to be admitting anything as to the fitness of the goods of the kind presented for carriage at sea, but only as to their undamaged condition.

It is, however, unnecessary to decide this point, as there are other sufficient reasons for holding that no estoppel was proved so far as the shape of the tins and the absence of covering are concerned. From Mr. Silver's evidence it is clear that he had ordered square tins and knew that he was going to have square tins shipped to him. I think it is also extremely probable from the letters which he wrote that he knew that the tins would come uncovered, but, in any case, he gave no evidence that he relied on the bill of lading as a statement that the tins were other than square, or that they were covered, and it is remarkable that after he received the bill of lading he never suggested in the letters and telegrams which he wrote that he had been led by the bill of lading to believe that he would get tins other than those which in fact came forward, that is to say, uncovered square tins.

As regards the question whether the defendants are estopped from denying that the tins accepted by them on the bills of lading were free from gashes and pin-holes, I think there would be such an estoppel as regards gashes and pin-holes which could have been ascertained by such reasonable examination as can be expected when goods of this kind are delivered for shipment under the conditions necessarily prevailing, that is to say, delivery by night. The plaintiff, Mr. Silver, in his evidence did not say that he relied on the statement that the goods were received free from apparent external damage, and in the absence of any statement that he did rely on the bills of lading, it is contended that the court is unable to find his plea of estoppel proved as regards this damage. I think, however, though with some doubt, that the court would be entitled to conclude on the grounds of high probability that he was influenced by the statement that the goods were shipped in apparent good order and condition, and that he must have believed that they were free from reasonably discoverable damage when shipped, and that in accepting the bills of lading and taking delivery he acted to his detriment, but I am not satisfied that all such damage would be apparent on any reasonable examination. On the other hand, I am satisfied that if there was any considerable damage when the goods were shipped, in excess of the fifty cases that were rejected, a substantial part of such damage would have been discovered on a reasonable examination.

I agree with the learned judge's finding that by reason of their shape combined with the thinness and weakness of the metal, which latter defect was not apparent, the goods were insufficiently packed, and that the insufficiency of packing was one of the causes of the damage complained of. But the exception of insufficient packing which was incorporated in the bill of lading by reference to the rules contained in

the Carriage of Goods by Sea Act 1924 will not protect the defendants if negligence be proved. Even if the liability of the shipowner be that of a common carrier, and it is proved that the damage is within the exception in the contract of carriage, the owner of the goods can still recover notwithstanding the exceptions if he shows that the damage was caused by the negligence of those for whom the shipowner is responsible. The plaintiffs failed to prove any negligence in loading or in the carriage to London, but they did prove negligence in the discharge. The plaintiffs had to prove not merely negligence; they had to prove the amount of damage which they suffered due to that negligence. It was satisfactorily proved by the plaintiffs that the loss which they suffered by reason of the damage finally ascertained as existing at the time when the cans were taken into store in London slightly exceeded the amount claimed, which was 3544*l*. There was evidence that a considerable portion of this damage was old damage, and one of the plaintiffs' witnesses admitted that the old damage was as much as 40 per cent. For the reasons which I have given it seems to me impossible to hold the defendants liable for any of the old damage, except such of it as may be affected by the limited estoppel which I have found as stated in the earlier part of my judgment.

The damage for which I hold that the plaintiffs are entitled to be compensated is comprised under two heads: (1) Damage which in fact occurred before the goods were received for shipment under the bills of lading and was of such a character as to be apparent on a reasonable examination. The defendants are precluded by the estoppel from alleging that this damage was not caused while the goods were in their custody. They cannot rely on the exception of insufficiency of packing as the cause of damage, because the exception only applies to damage arising during the carriage of the goods. (2) Damage occasioned by negligence in the discharge of the cans.

I cannot think that Roche, J. was right in his finding that the 350*l*. paid into court is sufficient to satisfy the damages for which the defendants are liable. I think on the contrary that a very considerable part of the damage ultimately found was due to causes for which the defendants are responsible. The goods were discharged by casual labour paid by the piece. I think it very improbable that any large amount of damage was done after the goods were discharged from the ship, but no doubt some of the ultimate damage ought to be attributed to this stage in the journey from Shanghai to the London stores.

This appeal, like all appeals from judgments given on a trial before a judge alone, is a re-hearing. The judge's findings do not depend on the relative value which he attached to the oral evidence of witnesses at the trial. He had to make an estimate based on the general facts of the case and on probability. In my judgment a fair estimate of the damage for which the defendants are liable is 50 per cent. of the total damages, and if the result of this appeal depended on my judgment, the appeal would be allowed and judgment entered for the plaintiffs for half their claim, that is to say, for 1772*l*., and with costs here and below.

Slesser, L.J.—This is an appeal from a judgment of Roche, J, whereby he assessed damages against the defendants for 350*l*. in an action for breach of contract resulting in damage to cargo. The plaintiffs in the action were the holders of two bills of lading which together covered the goods in question. The defendants are the shipowners. It is not disputed that this cargo arrived at the cold storage depot in a very considerably damaged condition; the damage consisted in gashes, perforations and dents in the tins in which the frozen egg product was contained. The damage was apparently caused by one or more tins coming in contact with their neighbours; nor is there any real dispute that it was the pointed corners of such tins which gashed, pierced or dented the other tins which suffered damage.

The evidence in the case largely resolved itself into inquiries at what stage or stages of the journey this damage occurred, and, for this purpose, the journey may conveniently be divided into five periods; the first being the period when the goods were on their way from the cold store in Shanghai to the ship, the second the loading into the ship, the third the voyage, the fourth the discharging from the ship into lighters, and the fifth the conveyance by the lighters to the wharf and thence to the storage depot in London. It is only for the purpose of loading, carrying and discharging, the second, third and fourth periods that the shipowners, on any view, can be made responsible. In substance, the learned judge has come to the conclusion that the damage began during the first period, when the tins were on their way from the cold storage at Shanghai to the ship and continued while they were being loaded on board the ship in Shanghai and that some damage was done during the discharge from the ship into lighters and some when the goods were being dealt with by the lightermen and vanmen at the later stages of the progress. In effect, the only period which he excludes from possibility of damage is the voyage itself, and, as there is no evidence that during the voyage any damage was done, I also exclude that part of the journey from my consideration.

The 350*l*. which the learned judge has awarded to the plaintiffs is arrived at in this way; on arrival in London after an abortive effort to land the tins on trays or boards, the shipowners resolved to use nets; and the evidence is very considerable that, while the tins were in these nets, the tins were "all jumbled up," to use the words of one witness; that they "shot out all over the place when the net opened," in the words of another; and, in the language of a third, "when the net opened

the tins spilt all over the show." The learned judge has come to the conclusion that the nets were unsuitable and that they did aggravate the damage, but he has refrained from giving what he believed to be the full damage caused by the nets, because he says that he thinks that some part of the damage due to the nets could not properly be complained of because some of it was inevitable in any event. In the result, he thinks that 10 per cent. is a fair estimate of the amount of damage due to the nets—the whole of the claim amounting to 3,544*l.* odd, of which sum he awarded the plaintiffs 350*l.*, the amount paid into court by the defendants. It is not at all easy to estimate with any exactitude the degree of damage produced at each stage of the journey; but certain principles may, I think, be applied which have brought me to a conclusion, on amount, different from that of the learned judge.

In the first place the bills of lading contained the usual provision that the goods are shipped in apparent good order and condition. It is provided by clause 1 of each bill of lading that the bill is to be subject to the rules contained in the Schedules to the Carriage of Goods by Sea Act 1924, and it is pleaded by way of reply in this case, in par. 2, that the defendants, having acknowledged the receipt of the said goods in apparent good order and condition on board the *Aeneas*, are now estopped from denying as against the plaintiffs that the said goods, when shipped, were in apparent good order and condition. The effect of these words has been discussed in several cases; but it is sufficient to refer to the judgment of Channell, J. in the case of *Compania Naviera Vasconzada* v. *Churchill and Sim* (10 Asp. Mar. Law Cas. 177; 94 L. T. Rep. 59; (1906) 1 K. B. 237), in which case the American Harter Act was incorporated in the bill of lading. That case was approved in *Brandt and another* v. *Liverpool, Brazil, and River Plate Steam Navigation Company Limited* (16 Asp. Mar. Law Cas. 262; 130 L. T. Rep. 392; (1924) 1 K. B. 575). See also *Martineaus, Limited* v. *The Royal Mail Steam Packet Company Limited* (1912, 12 Asp. Mar. Law Cas. 190; 106 L. T. Rep. 638). Here the rules in the Schedule to the Carriage of Goods by Sea Act 1924 are incorporated, the wording of which statute does not affect the old principle (per Lord Sumner in *Bradley and Sons* v. *Federal Steam Navigation Company Limited* (1927, 17 Asp. Mar. Law Cas. 265; 137 L. T. Rep. 266), and it was held that by the words "shipped in good order and condition," the shipowners were bound by the representation of the Master, not as words of contract but by the way of estoppel. In this case, however, a complication has arisen by reason of the fact that whereas the gashes may reasonably be said to be apparent, the perforations were not so apparent. Channell, J. in the case above cited —*Compania Naviera Vasconzada* v, *Churchill and Sim*, says (10 Asp. Mar. Law Cas. 177; 94 L. T. Rep. 59; (1906) 1 K. B. at p. 244): "In my opinion not only was there damage in fact, but it was damage of such a character that it must have been apparent to anyone."

In my judgment the estoppel in this case goes no further than what was apparent to anyone, which, I think, includes the gashed tins, but reasonably excludes the less apparent perforations and punctures. It then remains to inquire how much of this damage was sustained after the discharge when the tins passed out of the control and responsibility of the shipowners. There is evidence of Mr. Towers that at Nelson's Wharf, where the 5,000 tins were sent, the tins were pitched into trays and were handled too quickly, and at the National Wharf there was also throwing of tins which must have caused damage; and Mr. Bettly also says that he saw some damage done at National Wharf, and Mr. Holmes says that at Nelson's Wharf the tins were not properly handled. Holding as I do that the shipowners are estopped from suggesting that any of the gashed tins were injured at the time they were shipped in apparent good condition, I am prepared to accept the amount of liability on this head as computed by Scrutton, L.J.

There remains for consideration the position of the tins which were not apparently damaged by gashes with regard to which the shipowners may properly say that the bill of lading does not estop them. Approaching this as a question of fact without any estoppel, I think that two periods, namely, the loading and the voyage, may be excluded from consideration as there is no evidence which satisfies me that during either of those periods any injury was sustained. This leaves, however, three periods, the periods before loading, discharge and after discharge, for which the shipowners are only responsible for one, namely, the period of discharge, and again, as I agree with the principles of assessment laid down by my Lord, I adopt his estimate of the shipowners' liability.

The liability of the shipowners is further disputed on a ground with which I have yet to deal. The bills of lading, as I have said, incorporate the rules in the Schedule to the Carriage of Goods by Sea Act 1924, and the defendants rely upon Art. IV. thereof, which provides, so far as is here material, that "neither the carrier nor the ship shall be responsible for loss or damage arising or resulting from: (*n*) insufficiency of packing," and it is said here that there was, in fact, insufficiency of packing, for two reasons, namely, first, that the corners of the tins being square and pointed were dangerous unless they had been protected by some covering; and, secondly, that the tin itself was too thin to resist the contact of the points of the other tins. The learned judge has found that the packing was insufficient on the ground that the tins had eight points of excessive and unusual sharpness, such as has never been known or seen in the trade before. He does not appear to have accepted the view that they were too thin as had been contended. Dealing with the question of the pointed tins, I think that such insufficiency of packing must

have been apparent to the shipowners. In *Barbour* v. *South Eastern Railway Company* (1876, 34 L. T. Rep. 67), in which it was held that the plaintiff, sending furniture by train, had a duty to pack the furniture, the defendants, the railway company, declined the packing, and, as a result, the goods were conveyed unprotected as the packing of the consignor was insufficient. Cleasby, B. in that case said (34 L. T. Rep., at p. 68) :" The goods were delivered in a manifestly unsafe condition."

Now, I think there may well be cases where the insufficiency of the packing is not apparent ; but in this case, where the insufficiency, if any, was obvious, the shipowners were nevertheless prepared to take the goods without complaint and give a clean bill that the goods were shipped in good order and condition. I think that the capacity of the goods safely to travel was part of their order and condition ; and so, being apparent on the face of it, I cannot see how the shipowners can now say that the goods were insufficiently packed. In *Gould* v. *South Eastern and Chatham Railway Company* (123 L. T. Rep. 256 ; (1920) 2 K. B. 186), it is true that it was held that where goods were insufficiently packed, the carrier's knowledge of their condition at the time of their receipt would not necessarily preclude him from setting up as a defence that the damage was due to the insufficient packing. In Story on Bailments the rule with regard to the obligation of a common carrier, at par. 492 (*a*) (9th edit., p. 463), is stated not to cover, among other things, the goods " not being properly put up and packed by the owner or shipper " ; and Atkin, L.J., in *Gould's Case* (123 L. T. Rep. 256 ; (1920) 2 K. B., at p. 193), says that " the defendants' knowledge of the improper packing . . . did not make them responsible." Younger, L.J. concurred ; but a distinction must be drawn, in my judgment, between a mere knowledge of improper packing and a written statement, on which a consignee might reasonably be expected to act, that they are in fact in a proper order and condition, such as was given in the present case. In the present case, the defendants accept the goods, not only with a knowledge of their condition, but with a statement that that condition is proper.

In my judgment, the clean bill of lading, once the alleged defect in packing is apparent, takes the case out of the ambit of *Gould's* case (*sup.*) and other authorities to the like effect. The appellant took the bill and may be assumed to have relied upon it to his detriment, in the absence of any evidence to the contrary, and although Mr. Silver may have known that square tins were being shipped to him he was entitled to assume that the shipowners did not regard such square uncovered tins as dangerous in that they had said that the goods were shipped in apparent good order. In *The Tromp* (15 Asp. Mar. Law Cas. 338 ; 125 L. T. Rep. 637 ; (1921) P. 337) it was held that where potatoes were shipped in wet bags described as shipped in apparent good order and condition, the shipowners were estopped from saying that the external condition of the bags was bad. The bill of lading so endorsed affords evidence that externally and so far as meets the eye the goods are shipped in good order and condition : *The Peter der Grosse* (3 Asp. Mar. Law Cas. 195 ; 34 L. T. Rep. 749 ; 1 Prob. Div. 414).

With regard to the allegation that the tins were too thin, the evidence is not sufficient to justify the court in coming to the conclusion that the tins were insufficiently packed. Indeed, there is some evidence that other consignments had been made with tin of precisely the same thickness ; nor does the learned judge appear to rely upon this alleged defect.

In the result, I have come to the conclusion that the defence of insufficient packing is not made out, and, therefore, the defendants are responsible for the damage to the tins to the extent and to the amount mentioned by Scrutton, L.J.

Appeal allowed.

(Before SCRUTTON, LAWRENCE, and GREER, L.JJ.)

THE SANDGATE. (*a*)

ON APPEAL FROM THE ADMIRALTY DIVISION.

Charter - party — Dispatch money — Cargo to be taken from alongside " at the average rate of 125 tons per working hatch per day " — Marginal clause — Consignees not obliged to take cargo from alongside at a higher rate than 500 tons per day—Construction—Chamber of Shipping Welsh Coal Charter 1896 (*Form A*).

A charter-party provided that a cargo of coal should be discharged " at the average rate of 125 tons per working hatch per day," and by a marginal clause it was further provided that the consignees should not be obliged to take cargo from alongside at a higher rate than 500 tons per day. The vessel had four cargo hatches, and other non-cargo hatches, such as poop and bridge hatches.

Held, that the expression " working hatch " did not mean cargo hatches, as distinguished from non-cargo hatches, but referred to cargo hatches from which cargo was capable of being worked, as distinguished from cargo hatches from which cargo was incapable of being worked, e.g., by reason of the fact that there was no cargo in

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

the holds to which such cargo hatches gave access. The obligation of the consignees to take cargo was, therefore, not fixed at 500 tons per day, but depended upon the number of cargo hatches from which cargo could be discharged. From those cargo hatches from which cargo was capable of being discharged, the consignees were obliged to take at the rate of 125 tons per day.

Appeal from a decision of an Admiralty Divisional Court (Lord Merrivale, P., and Hill, J. (reported 168 L. T. Jour. 399), dismissing an appeal from a decision of the judge of the Mayor's and City of London Court.

The appellants (plaintiffs), owners of the steamship *Sandgate*, claimed from the respondents (defendants), who had acted as brokers for the charterers of the *Sandgate*, the sum of 55*l.* 18*s.* 9*d.*, which the respondents claimed to be entitled to retain as dispatch money due under the terms of a charter-party under which the *Sandgate* had been chartered to carry a cargo of coal. The charter-party provided that dispatch money should be payable at the rate of 15*l.* for a running day or *pro rata* in respect of time saved at the port of discharge. It was further provided that the cargo should be taken from alongside by the consignees at the average rate of 125 tons "per working hatch per day"; and by a marginal clause it was also provided that the consignees should not be obliged to take cargo from alongside at a higher rate than 500 tons per day. The *Sandgate* had four hatches which were used as cargo hatches and certain hatches, such as the bridge hatch and poop hatch, which were not used for the discharge of cargo. The shipowners claimed that the meaning of the charter-party was that the consignees were obliged to discharge at the rate of 125 tons per day from each hatch other than hatches which were not cargo hatches (such as the bridge or poop hatch), whether discharge was in fact capable of proceeding from such cargo hatches or not; on this basis only five-and-a-half hours had been saved by the charterers. The respondents contended that the expression "per working hatch per day" meant per cargo hatch capable of being worked in the circumstances, and excluded cargo hatches which were incapable of being worked, as, for example, where the cargo in the hold had already been completely discharged. On this construction of the clause the charterers had saved three days and twenty-three hours, and were entitled to retain dispatch money amounting to the above sum. The judge of the Mayor's and City of London Court gave judgment in favour of the defendants.

The plaintiffs appealed.

Clement Davies, K.C. and *W. R. Howard* for the appellants.

Raeburn, K.C. and *G. St. C. Pilcher* for the respondents.

Oct. 17, 1929.—Lord Merrivale, P.—I confess I have found this a very interesting little controversy between the parties. I was impressed yesterday by Mr. Clement Davies' argument, who, as was to be expected, presented a captivating view of the facts from the point of view of his clients, the shipowners. It was necessary, however, to hear the other side and to consider the arguments of both sides in relation not only to the documentary matter here, but to the subject-matter, and to remember that this is a business transaction—a business transaction of the discharge of a cargo of coal carried from South Wales to Rosario. The bulk of the cargo was estimated at about 4600 tons. The vessel was a vessel which had numerous holds; apparently she was alternatively used for grain cargoes and for other cargoes—she had numerous holds and numerous hatches—and the charterers for coal, dealing with the vessel about which there does not appear to be particular knowledge except what can be got from a plan, chartering for coal to be discharged in a port as to which it is presumed they had knowledge in respect to its facilities, and so forth, have modified a common form of charter-party to deal with the particular case, and what is being done here is to see what it is really the parties have agreed as to lay days, and consequently as to these two matters which depend upon the lay days, demurrage in the one event and dispatch money in the other possibility. That is done to see what the parties have agreed, having regard to the subject-matter, the position of each of them, the terms of the common form contract, and the special provisions which the charterers introduced for their advantage.

What you find is that the common form charter-party provided for a rate of freight payment at the option of the consignees of the cargo either at the actual delivery or bill of lading quantity minus 2 per cent.; it provided for that and dealt with the bulk of the cargo. Then came the question with regard to discharge. The charter-party provides that the consignees are to discharge. They are to discharge over the side at the ship's expense and they are to receive the cargo and remove it as one of the terms of their primary obligations. As the common form charter-party is framed, it provides for a standard rate of discharge irrespective of the number of holds and governed by the number of available days, so many tons a day—cargo which is roughly 4600 tons, so many tons a day. The appellants here, the shipowners, say that the contract means 4600 tons, or as the case may be, to be discharged at the rate of 500 tons per available day.

When you come to reflect about that you wonder why, if they meant that, they did not say so—why they deviated into these various specific matters, with that simple proposition of 500 tons per available day. But they did not. You have to look at what they actually did, what they consented to, in order to see what they conceded to the charterers and consignees. The charterers knew less about the ship than the shipowners; but here was a ship

with a good many hatches and more than four holds; it appears by the bill of lading, and what is admitted to be one of the contents of the bill of lading, that what was in question here for the carriage of coal was four holds, and that there were to be working hatches of four holds—it would be four working hatches when there was work to be done—and in that state of the matter the consignees required this, that the average rate at which they were to discharge was 125 tons per working hatch on the available days; and they added a memorandum that they were not to be obliged to take the cargo away at a higher rate than 500 tons a day. That was a provision for their protection, not something which they had undertaken as governing the standard rate of discharge. What they undertook as governing the standard rate of discharge was discharge at the rate of 125 tons per working hatch, and that being so, it has been quite rightly recognised both at the hearing below and in the arguments here that what you have in truth to determine here, is, what is meant, upon the fair view of the facts and documents, by that term "per working hatch."

As I say, I was much impressed by the mode in which Mr. Clement Davies presented this, and I could see what a simple and in some respects advantageous contract it would be if you worked it out so that there was a governing figure. That is only a general observation. What does "125 tons per working hatch per available day" mean? When you come to look at the facts of this case, "working hatch" does not mean a hatch capable of being used for the discharge of the hold, as I think. That has so wide a meaning that it would be impossible to apply it as between business people, and I do not think it means a hatch in which there had been coal, a hatch which had been used for the discharge of coal. I think it is a business provision that so long as the consignees are proceeding in a businesslike way with the discharge of the ship, not playing tricks with it, such as were suggested, they are fulfilling their obligation if they discharge 125 tons from each hatch at which coal can at that time be discharged. That is what I think is their obligation. That view is helped by the later words in the second line of clause 7 in the charter-party, to which my brother called attention, "provided the vessel can deliver it at this rate." If there is coal in the hatch and in the course of work regularly done it can be delivered, there is a working hatch, and you are to go on working, applying your standard at per hatch and not for the bulk of the cargo at per day until you have found out that the consignees have fulfilled their obligations.

As I have said, I was very much struck with the simple proposition which was put by the appellants, but I have come to the conclusion very definitely that it is wrong and that the learned judge was right in holding that these consignees having completed the discharge at a better rate than 125 tons per working hatch—interpreting "working hatch" in the sense as I understand it—were entitled to say to the shipowners: "Now you must pay dispatch money for the working time we have saved by discharging at a greater rate than that at which we were bound to discharge." It is a simple proposition when one has all the materials for working it out.

The conclusion at which I arrive is that the learned judge was right in his decision.

HILL, J.—I agree. The right of the charterers depends upon the correct ascertainment of the lay days under the charter. The form of charter used is one of the Chamber of Shipping documentary forms, and provides for the ascertainment of lay days by putting upon the charterer the obligation to take delivery at an average rate of so many tons per day, Sundays and holidays excepted, provided the ship can deliver at that rate—125 tons per working hatch per day—with a proviso that the charterers shall not be bound to take more than 500 tons. The shipowner contends that as soon as the number of hatches is ascertained the quantity is fixed; two hatches, 250 tons; three hatches, 375 tons; four hatches, 500 tons; and, but for the proviso, with five hatches, 625 tons. If that contention is right the obligation is the same throughout the discharge of the whole cargo, whether a smaller hold has already been emptied or not. They say that the word "working" is only used to denote cargo hatches as distinguished from other hatches, such as bunker hatches. If so, one does not know why they did not say "cargo hatch," which would have been a simple expression to have used, but if the effect is as contended by the shipowner it is not easy to see why the shipowner, who knew his own ship and knew that he had four cargo hatches, did not say 500 tons a day in accordance with the printed form. He did not. The agreement with the charterers has the words "working hatch," which is not a very common form of expression.

The charterers contend that "working hatch" means something more than cargo hatch and has reference to the actual working of the ship; that it denotes a hatch which can be worked because there is cargo underneath it waiting to be discharged. The charterers recognise an obligation to take delivery at 500 tons while all four holds can discharge, but if when working at the rate of 125 tons per hatch per day one hold is emptied, and the hatch can no longer be worked, then the charterers contend that the obligation to take by the other hatches is not increased but remains at the same rate: 125 tons per hatch.

I think that is a sound contention. Test it in this way. Suppose the discharge began at the beginning of the lay days at all four hatches and continued at 125 tons per hatch per day, then in this particular case before the sixth day was out No. 1 hatch would be emptied and before the seventh day was out No. 4 hatch would be emptied, and from that time forward the ship cannot deliver at the rate of 125 tons,

or, at any rate by hatches No. 1 and No. 4, because they have no cargo under these hatches which they can get out. The ship in such case seems to have become, and in fact is, incapable of giving delivery by those hatches. Those hatches have ceased to be working hatches, but the obligation to take delivery still remains an obligation to take delivery at the rate of 125 tons per working hatch. The fact that two of the hatches No. 2 and No. 3, can still work while No. 1 and No. 4 cannot work does not seem to me to convert the obligation from an obligation to take 125 tons per hatch into an obligation to take 250 tons per hatch. In the same way, on the eleventh day, I think it is, or the beginning of the twelfth day in this case, working at 125 tons per day from the beginning of the lay days, No. 3 was emptied, the shipowner could not deliver any more coal by No. 3, but there was still some coal left in No. 2. It does not seem to me that that fact converted the obligation to take 125 tons per No. 2 working hatch into an obligation to take either 250 or 375. The obligation continued to take 125 until it was emptied, and then the lay days expired. That seems to me to be the business of this thing, and the only way to give any force to the use of the word "working" before "hatch."

It is said that the proviso limiting the obligation of the charterer to take a maximum of 500 tons a day was somehow inconsistent with that. I cannot see it in the least. The shipowner knows how many hatches he has got; it may be that the charterer does not know how many hatches; and he says: "You say you want four hatches; at any rate "I must not be called upon to take more than 500 tons a day." Nor do the words in the dispatch clause about "lay days in this connection to be calculated on bill of lading quantity without deductions" really affect this question. It seems pretty clear what the object of that is. "Freight payable by bill of lading per quantity delivered or at charterer's option on bill of lading quantity less 2 per cent." This only applies if instead of ascertaining your lay days either upon quantity delivered or upon bill of lading quantity less 2 per cent., you are to take the actual bill of lading quantity. As to the suggested difficulty of the shipowner in knowing what the lay days are going to be, there is nothing in it at all, because it appears from the charter-party that a bill of lading was to be issued and presumably was issued specifying the quantity of tons in each of the respective holds. I suppose worked out most accurately you would take these several quantities and start with 500 and go on reducing to 375, reducing to 250 and finally to 125; but you get exactly the same result, and the shipowner would have no difficulty in doing the arithmetic; if he took the quantity in the hold which contains the largest quantity and divided that by 125, then that would give you the period in which the discharge had to be carried out, and you would then take into account Sundays and holidays.

I think the learned judge was right.

The appellants appealed.

Clement Davies, K.C. and *W. R. Howard*, for the appellants.

Raeburn, K.C. and *G. St. C. Pilcher* for the respondents.

SCRUTTON, L.J.—We need not trouble you, Mr. Raeburn. The appellants have to satisfy us that the court below are wrong in their opinion of an ambiguous and mysterious clause. It may be that that puts a considerable burden on the appellants when it is difficult to say what the clause means, but I think I have come to a conclusion as to what the clause means. Whether the parties meant it, I do not know, but they have used certain words.

From the freight due by them the charterers have deducted a certain sum for dispatch money, nearly four days. The shipowner says they were not entitled to deduct so much for dispatch money—they were only entitled to deduct, I think, five-and-a-half hours. To find out what dispatch money is due you must find out what time was allowed for discharging the ship, because dispatch money is generally due because the ship is discharged sooner than the time allowed for under the provisions of the charter. The clause as to the time for discharging is this: "The cargo to be taken from alongside by consignees at port of discharge, free of expense and risk to the vessel, and at the average rate of 125 tons per working hatch per day weather permitting," with a marginal clause: "Consignees shall not be obliged to take cargo from alongside as per clause 7 at a higher rate than 500 tons per day." Mr. Clement Davies, in addressing his captivating argument to us, said that means that the ship is to be dispatched at the rate of 500 tons a day. If it is so it is a great pity that the parties did not use that very simple and well-known clause. What they do say is this: "Shall not be obliged to take cargo from alongside . . . at a higher rate than 500 tons per day," which is not the same as saying that they must take cargo from alongside at the rate of 500 tons a day. Instead of putting it in the very simple way that Mr. Clement Davies suggests that they should have put it, they do this: First of all they do not say it is to be done in so many days—apparently that will not suit them, though that would be a simple way of doing it—but they do not say that the cargo is to be taken out in so many days. They do not say that the cargo is to be discharged at a certain rate per day—that apparently does not suit them. They do not want to say so much each day is to be discharged, and so they put in the word "average," by which more may be discharged one day and less another day, so long as you get an average rate. Then, apparently, that still will not do. They do not want to say at an average rate of so much per day. They do say "at the average rate of 125 tons per working hatch per day," and Mr. Clement Davies says to us there

are always the same number of working hatches whether there is coal in them or not. But if so there was no need to put in this roundabout phrase of "per working hatch per day," because the hatches being the same every day you could, by putting in a rate per day, have calculated on the same number of hatches every day. They put in something different to that. They say "at the average rate of 125 tons per working hatch per day." That appears to me to assume that there may be a different number of working hatches on one day than what there is on another. If one considers why there may be a different number of working hatches on one day as compared with another, the answer may be that the hatch is not a working hatch if there is no coal in it to work, but the hatch may be a working hatch if there is coal in it and you do not work it. In the original form in which it came into charter-parties, the definition of a working day was a day on which ships in the port ordinarily worked, although a particular ship did not work on that day. A working hatch in the same way, it seems to me, is a hatch with coal in it on that day, and the fact that you do not happen to work it on that day does not prevent it being a working hatch which you ought to have worked, and which must be taken into account on the average.

I come to the conclusion, therefore, that you cannot read this roundabout form as a roundabout way of saying what might have been said quite simply: "I will discharge 500 tons per day out of four cargo hatches, 125 tons for each hatch." What it does mean is to assume that the amount may vary per day, according as there is a working hatch—a hatch which you can work because there is coal in it. Whether it was a reasonable agreement to make or not, it is not for me to say. The parties have made it in that form and not in the simple form in which they would have made it if Mr. Clement Davies' construction had been right.

For these reasons I think that the two courts below came to the correct view of what this phrase means. If shipowners do not like it the obvious course for them is not to go on putting into the form of charter the additional words "working hatch," but to leave the charter as it was originally—so many tons per day, weather permitting. The appeal must be dismissed with costs.

LAWRENCE, L.J.—I agree. Mr. Clement Davies has not satisfied me that the decision of the learned judge in the Mayor's and City of London Court, or the decisions of the learned judges in the Divisional Court were wrong, and, in these circumstances, I think that the appeal fails and should be dismissed.

GREER, L.J.—I agree with the decision of the learned judge in the Mayor's and City of London Court; I agree with the two judgments that have been delivered in the court below, and with the two judgments that have been delivered in this court, and as the sixth judge who has to exercise what he pleases to call his mind on this subject, I do not think it necessary to add anything to what the other five judges have said.

Solicitors for the appellants, *Botterell* and *Roche*.

Solicitors for the respondents, *Ballantyne, Clifford*, and *Co.*

Dec. 4, 5, *and* 6, 1929.

(Before SCRUTTON, LAWRENCE and GREER, L.JJ., assisted by Nautical Assessors).

THE TOVARISCH. (*a*)

Sailing vessel — Lights — Green pyrotechnic light shown to a steamship — "Flare-up" light—Whether green pyrotechnic light authorised by the regulations—Regulations for preventing Collisions at Sea 1910, *arts.* 1, 12.

Article 1 *of the Regulations for Preventing Collisions at Sea*, 1910, *provides that no lights which may be mistaken for the prescribed lights shall be exhibited. Art.* 12 *provides that a vessel may if necessary in order to attract attention, in addition to the lights which she is by the rules required to carry, show a flare-up light.*

Held, that a green pyrotechnic light, of the type which is held in the hand of the person exhibiting it, displayed upon the starboard side of a sailing vessel, is not a light which can be mistaken for a prescribed light; that the flare-up lights, the use of which is authorised by art. 12, *are not limited to white lights, but may include a green light; and that there had been no breach of the regulations.*

APPEAL from a judgment of Hill, J. assisted by Elder Brethren (*ante*, p. 58; 141 L. T. Rep. 611; (1929) P. 293), holding the appellants, owners of the Russian sailing vessel *Tovarisch*, who were defendants in the court below, to blame for a collision between the *Tovarisch* and the respondents' steamship *Alcantara*, which took place in the English Channel on the night of the 24th Feb. 1928.

The collision took place in the following circumstances: When first sighted both side lights of the *Alcantara* were seen by those on board the *Tovarisch*, but subsequently the red light of the *Alcantara* closed, and although the vessels were then in a position to pass each other all clear starboard to starboard, those on board the *Tovarisch* exhibited on the starboard side of the bridge a green pyrotechnic flare-up light. The light was not exhibited in a lantern or screened but was of the type which is held in the hand of the person exhibiting it, and shows an "all-round" light. The *Tovarisch* at the same time that the flare was exhibited,

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

commenced to starboard. Upon seeing the green "flare-up" light, the *Alcantara* apparently ported or hard-a-ported, bringing the two vessels into collision.

The Regulations for Preventing Collisions at Sea 1910, provide as follows:

Rules Concerning Lights.—Art. 1. These rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other lights which may be mistaken for the prescribed lights shall be exhibited. . . .

Art. 12. Every vessel may, if necessary in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light. . . .

Hill, J. held that Art. 12 did not authorise the use of a green or red pyrotechnic light, and that a "flare-up" light meant an ordinary light, and not a specially coloured flame. He held further, upon the answers of the Elder Brethren, that those on board the *Alcantara* must have been deceived by the flare-up light exhibited by the *Tovarisch*, and that the *Tovarisch* was alone to blame for the collision.

The owners of the *Tovarisch* appealed.

Dunlop, K.C., *Stranger* and *Krougliakoff* for the appellants.—The learned judge was wrong in holding that the *Alcantara* was deceived by the light exhibited by the *Tovarisch*. The light was not forbidden by the Regulations. There is nothing to restrict the use of "flare-up" lights to white lights. A coloured flare-up light may be used, provided that it cannot be mistaken for any of the prescribed lights. The light used by the *Tovarisch* could not have been mistaken for anything but a prescribed light. The collision was solely caused by the action taken by the *Alcantara*.

Langton, K.C., *Digby*, K.C., and *Cyril Miller*.—The regulations only permit the use of a flare-up light when "necessary to attract attention." The vessels in the present case were green to green, and there was therefore no necessity for the *Tovarisch* to attract the attention of the *Alcantara*. The *Tovarisch* was rightly held alone to blame.

Dunlop, K.C. replied.

SCRUTTON, L.J.—This case is one of some difficulty owing to two rather unusual features. In the first place, unfortunately, the whole of the people—or almost the whole of the people—who could give evidence as to the proceedings on one of the ships, as being on board that ship, are drowned. Consequently, with the exception of one man from the engine room who ran up on deck and caught the bowsprit of the other ship as it stuck over his deck, everyone else on board the Italian steamer went to the bottom and was drowned, and the court has to make up its mind as to what happened with only the evidence of one side. To one side that may be some advantage, inasmuch as it is the unfortunate position in the Admiralty Court that you do not always get the whole truth from every witness, but, on the other hand, undoubtedly the steamer that is lost is at a disadvantage in not having anybody to contradict the story told by the witnesses on the other side, who, unfortunately, can feel that they have a free hand. The other somewhat unusual feature is this, that very great importance is attached in the judgment below, both by the judge and the assessors, to the somewhat unusual incident, in my experience, of a green flare being burnt in the course of the proceedings on the ship that survived, and the questions as to the right to burn a green flare, and the effect which ought to be produced on anybody seeing a green flare, are undoubtedly somewhat novel in the practice of the Admiralty Court.

The learned judge, as I read his judgment, has not said that he accepts the whole story of the surviving ship. He has said what the story of the surviving ship was, and he has drawn certain inferences from it, but he has not, as I follow his judgment, said expressly or explicitly, "I accept all the story of the surviving ship."

The collision takes place on a hazy, dark night in the English Channel, off Dungeness, between a four-masted sailing ship which is being used as a training ship for cadets by the merchant marine of the Soviet Government and an Italian steamer, the *Alcantara*. The *Tovarisch*, a four-masted sailing ship, nearly 300ft. long, on the night in question, not carrying any sails on her aft mast, is coming down Channel on a course of S. 60° W. The *Alcantara*, bound up Channel to Calais, and very likely having made a course to pass south of the Varne light, is coming on a course of N. 80° E., and, I think, the learned judge accepts the view that the *Alcantara* is seen, when she is seen by those on the *Tovarisch*, about three-quarters of a mile distant—but of course the distances must be always a matter of guess work—showing her masthead light and her two side lights to the *Tovarisch*. Shortly afterwards she shuts in her red. That may be due either to her changing her course by starboarding, or it may be due to the *Tovarisch* proceeding on her course, and working ahead on the line of course of the *Alcantara*, or it may be due to both. But I think the learned judge has accepted that that is what happened. Having shut in her red, the two boats become green to green, and at that stage the *Tovarisch* does what the learned judge, I think, regards as the vital point in the case, the *Tovarisch's* green screened light being comparatively near her bows, the officer on deck of the *Tovarisch*—who was on a bridge which had been erected somewhere near her third mast (what he calls the second main mast)—burns, on her starboard side, a green flare, so that if the *Tovarisch's* green forward light was showing there are two green lights burning on her starboard side (the lamp and the green flare), and there is, undoubtedly, a question as to exactly how the green flare would show on the sails of her main mast and second main mast—her second and third masts. The learned judge has

obviously been very interested in the appearance and disappearance of various flares from the regulations, and he has devoted some two or three pages of his judgment to a very careful and industrious—and I have no doubt accurate —history of the appearance and disappearance of various flares and various colours, from the regulations. I am more concerned with the position of the regulations as they stood at the time the *Tovarisch* did exhibit her green flare. One of the most relevant regulations appears to me to be the first, which is the first rule of the group relating to lights. "Rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other light which may be mistaken for the prescribed lights shall be exhibited." In my view that is only a prohibition of lights which may be mistaken for the prescribed lights. When one comes to think of it it must be so. Look at a liner coming down the channel, how many hundred lights does she exhibit? A light in every port hole, lights from every deck cabin, all sorts of lights besides the prescribed lights, and she is not breaking any regulation, because they cannot be mistaken for the prescribed lights—the green and red side lights and the one or two masthead lights, according to her length—and I am unable to read art. 1 as being a rule prohibiting all lights other than the prescribed lights—it does not say so.

It does prohibit all other lights which may be mistaken for the prescribed lights, and I asked myself this—for what prescribed light is a green flare, exhibited on the starboard side, likely to be mistaken? After listening to the various ingenious speculations that counsel, from their knowledge of the matter, have provided, my answer is none—I do not see any—any prescribed lights for which a green flare aft on the starboard side can be mistaken. I am told to look on further, and to look at reg. 12: "Every vessel may, if necessary, in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light or use any detonating signal that cannot be mistaken for a distress signal." The article, therefore, contemplates that if it is necessary to attract attention a flare-up light may be used—which must be read with art. 1, which prescribes that you must not use a flare-up light which may be mistaken for one of the prescribed lights. The learned judge asked the Trinity Masters to advise him: "What was the *Alcantara*—the Italian steamer that is—to think of it?" I have asked the Elder Brethren. They say they would have regarded it as an imperative demand to take action—a warning to the *Alcantara* that she was doing something dangerous, and "an urgent call to her to do something different." We are not treating this case as an appeal from assessors to assessors. Our superior authority—the House of Lords—has told us we must not do so. We are endeavouring to follow the instructions of the House of Lords in *The Australia* (17 Asp. Mar. Law Cas. 86; 135 L. T. Rep. 576; (1927) A. C. 145) and the group of cases in the same volume; that we are the judges, and we are to regard the gentlemen who assist us—and the gentlemen who assisted the judge below—as witnesses, and we are to form our opinion, as judges, on the combined evidence of the four witnesses, and not take the view that because the two witnesses whom we see in the flesh contradict the two witnesses whom we have not seen in the flesh, that, therefore, we should follow the witnesses whom we see rather than the witnesses whom we do not see. Of course, it is necessary to point out—and indeed it is obvious—that the four assessors are a very funny sort of witnesses. The judge in the Admiralty Court talks to them, and gets information from them. The parties do not know what the witnesses are saying; they do not know what they are telling the judge; they have no opportunity of cross-examining the so-called witnesses. Indeed, in the Admiralty Court, the practice is not followed which we—in obedience to the direction of the House of Lords—follow, the practice of asking questions in writing, and obtaining answers in writing, and sending them up to the superior court. We do not know the terms of the question except from what the learned judge says in his judgment. So that we start with two witnesses whose evidence the parties do not hear, and whom the parties have no opportunity of cross-examining, and then come to this court, and we have to decide the case with two witnesses whom the judge below did not hear.

We do in this court—since the House of Lords has requested us to do so, put a question in writing and obtain an answer in writing—which is available for the parties and for the House of Lords, but, again, the parties have no opportunity of cross-examining these so-called witnesses, and it appears to me to be very odd that we are dependent on the evidence of witnesses whose evidence is not given to the parties, and whom the parties have no opportunity of cross-examining. However, we endeavour to follow the instructions of the House of Lords, and treat them as witnesses, and form our judgment on the evidence they give between them.

As to showing the green flare we have asked our particular witnesses, whom we have the opportunity of asking, "what information, if any, would a reasonably skilful seaman obtain from the *Tovarisch* burning a green flare aft to a steamer then green to green." And the gentlemen who assist us answer "He"—that is the reasonably skilful seaman—"ought to grasp that here was a ship that wished to direct special attention to herself, and was using the best available method of showing her character." We read that answer as meaning that she is showing her character by showing that she is a long sailing ship possibly by being lit aft, directing more light on the sails than the green forward-side light would do. I cannot see in that—in view of art. 12—any breach of any regulation, and I, therefore, start with a green light—green flare—

shown to call attention, in the best available way to the character of the *Tovarisch*, which character, as I say, I take to be that of a long sailing ship. Then comes the next, and to my view, the cardinal statement in the case, that when the green flare was burnt the *Alcantara* ported, hard-a-ported, and did not, at that time, take any action with her engines. She stopped later, she never reversed. Now the learned judge in his judgment, having uttered the passage that I have read, says "in these circumstances the Elder Brethren would have regarded the green flare as 'an urgent call to her to do something different,'" from what she was doing, and what she was doing at that time was passing green to green. "In these circumstances they are of opinion that the *Alcantara* could not be blamed for porting or hard-a-porting; so also with regard to the engines, they think the *Alcantara* cannot be blamed for stopping instead of reversing. The master of the *Alcantara* would be right if he thought 'I may be wrong if I keep ahead; I may be wrong if I go astern; I will stop and see.' What the *Alcantara* did in fact contributed to the collision, but it was not the fault of the *Alcantara* that she did it. The burning of the green light was the cause and was negligent and the *Tovarisch* is to blame." That I understand to be the statement of the learned judge, having heard the witnesses who sat beside him, showing a green flare tells you to do something that you are not doing at present, and it is because of your porting, and crossing the bows of the sailing ship, which you are forbidden by the regulations to do, and, therefore, you, the *Tovarisch*, are to blame. Without any more witnesses I am quite unable to understand that. I cannot understand, having listened, with all the intelligence I can, to the illuminating addresses of counsel, I cannot understand why burning a green flare, tells you to break a regulation by coming ahead of a sailing ship. I can understand the suggesting that burning a green flare may tell you not to go astern of the green light, you see too close, because I am a long sailing ship. I can understand that, but I cannot understand—I have been quite unable to understand—how burning a green flare tells you to cross the bows of an approaching sailing ship. However, I have to attend to the witnesses rather than use my own nautical skill, and we, accordingly, asked the gentlemen who advise us: "Was the *Alcantara* guilty of any, and what, breach of reasonably skilful seamanship when, green to green, she saw the green flare, and (1) ported," and they answer "yes"; "(2) did not reverse at all or stop engines till just before the collision," and they answer again "yes." Considering the four witnesses, and the view of the judge below, I come to the conclusion—which I had already come to before my witnesses answered that question—that the *Alcantara*, in porting, was guilty—as indeed, the judge says—of something that was the cause of the collision, and had no excuse, as a matter of seamanship, for porting in front of the advancing sailing ship. Then there remains the question, the *Alcantara*, being thus to blame, what about the *Tovarisch*? The *Tovarisch* at the time she lighted the green flare hard-a-starboarded. That is to say she did not keep her course, and when the red opened again on the *Alcantara*, and the one blast was blown, showing that the *Alcantara* was crossing the bows, she, instead of continuing her hard-a-starboard movement, put her helm hard-a-port. It is suggested, and it may be so, that she altered about half a point under her hard-a-starboard helm, and about a point back under her hard-a-port helm, and the collision which actually happened was at an angle of 45 degrees pointing aft. So that if her hard-a-port helm had worked a little longer possibly she might have escaped the collision. On the other hand, it is suggested that if, instead of hard-a-porting, she had kept on with her hard-a-starboard helm she might have got through just parallel with the boat that was crossing her bows. It does not seem to me—and I am advised—that the hard-a-starboarding had anything to do with the collision. I have had doubts, left to myself, whether the hard-a-porting was right, or whether its absence would have avoided the collision, but again, we have asked the witnesses whom we have here this question: "Was the *Tovarisch* guilty of any breach of reasonably skilful seamanship (1) in not keeping her course, but putting the helm hard-a-starboard and showing a green flare, when the vessels were green to green?" and they answer, "No." "(2) When she saw the *Alcantara* porting, and her red light opening again a minute before the collision, or a little more, in hard-a-porting, and not continuing her hard-a-starboarding?" Again they answer "No." The witnesses below had answered the question in this way: "Whether the *Tovarisch* was justified in starboarding immediately she lost the red light depends on whether the risk was finally at an end." The position was similar to that of steamships on crossing courses where the duty of the stand-on ship to keep course and speed continues until the ships have definitely passed out of the phase of crossing ships: (See *The Orduna*, 14 Asp. Mar. Law Cas. 574; 122 L. T. Rep. 510; (1919) P. 381). The Elder Brethren are of opinion that it was not right for the *Tovarisch* to starboard as soon as she did. It is a difficult question, and I need not decide it. So that the two witnesses below were giving one opinion, and the two witnesses above giving another opinion. The judge himself did not decide the question at all. What he would have done if he had heard the two witnesses above I do not know, but he did not decide the question. I, having heard the four witnesses, on a matter on which I should hardly feel myself competent to form a very decided opinion, adopt the view of the two witnesses who are here advising us. Then the judgment goes on: "As to the hard-a-porting of the *Tovarisch* the Elder Brethren advise me, and I entirely agree, that it was the worst thing the *Tovarisch* could have done." The

learned judge accepts their view. If by hard-a-starboarding the *Tovarisch* would have got parallel with the *Alcantara*—if that were the fact—then, of course, it seems to me that hard-a-porting was the wrong thing to do, but, considering in the best way I can, the contradictory opinions I have received I am not satisfied that the hard-a-starboarding by itself would have avoided the collision. I think it is much more likely that it would have produced either a right-angle blow or a blow leading aft at very nearly a right-angle, and, if so, the collision would have been just as bad as it was, in the result that happened, namely, the vessel would have gone to the bottom in the same way.

Having given the best consideration I can to the evidence of the cloud of witnesses with which I am encompassed, I come to the conclusion that the *Tovarisch* is not to blame, and the *Alcantara* is to blame. The result, therefore, is that the claim fails, the counterclaim succeeds, and there must be judgment for the *Tovarisch* on the claim and the counterclaim.

I only want to say one thing more. Mr. Dunlop, for the *Tovarisch*, began his address to us by an appeal, or suggestion, that his clients had been unjustly condemned for not taking sufficient action after the collision to save the lives of the people who were lost on board the *Alcantara*, and he was proceeding to investigate, with great care—his usual care—what had happened after the collision, when we stopped him, and we said—as I say now—that we are not going to express any opinion on the conduct of the *Tovarisch* after the collision for the reason that it is irrelevant to the issues we have to decide. Before the Maritime Conventions Act 1911, it would have been relevant, because then failure to take steps to save lives by helping the other ship after a collision was *primâ facie* proof of a breach of the regulations. That was abolished by the Maritime Conventions Act 1911, and since then, in my view, what the ship that has sunk the other does after the collision in the way of saving life, or does not do after the collision in the way of saving life, is quite irrelevant to any question which the court has to decide, and, therefore, I do not express any opinion—we do not express any opinion—on the conduct of the *Tovarisch* after the collision. I only say this, that if the *Tovarisch* should be unfortunate enough to have another collision, no doubt what has happened in this case would lead her master, and those in charge of her, to be particularly careful that they did nothing which might lead to unpleasant remarks being made about them in the way they have been made in this case. As I say, we express no opinion as to the justice or injustice of any such remarks that have been made.

LAWRENCE, L.J.—I agree, and but for the fact that we are differing from the decision of the learned judge in the court below I should have contented myself with simply expressing my concurrence with the judgment of my Lord. Out of respect, however, for the learned judge I will add a few words of my own.

The first question which calls for determination is whether the regulations prohibit the showing of a green flare-up light. The answer to this question depends upon the true meaning of arts. 1 and 12. Art. 1 provides that the rules concerning lights shall be complied with in all weathers from sunset to sunrise and during such time no other lights, which may be mistaken for the prescribed lights, shall be exhibited. I read that, not as a prohibition against showing any lights other than the prescribed lights but only as a prohibition against the exhibition of such other lights as might be mistaken for the prescribed lights, thus impliedly authorising the exhibition of any lights which might not be so mistaken. Art. 12 expressly authorises the showing of a flare-up light or the use of any detonating signal that cannot be mistaken for a distress signal, if necessary, in order to attract attention and in addition to the lights which, by the rules, are required to be carried. Hill, J. has held that the only flare-up light authorised by this article is a white (or possibly a blue) flare-up light, and consequently that the *Tovarisch* committed a breach of the regulations by showing a green flare-up light. In arriving at this conclusion the learned judge has founded himself upon a review of the relevant earlier regulations from the year 1863 down to the present time.

In my judgment that course, however interesting from the student's point of view, is not the proper way of construing the Regulations of 1910 which, it must be borne in mind, were the only regulations governing at the time, and have to be observed not only by British but also by foreign seamen. I think it is too much to expect from either a British or foreign seaman that he should have all the earlier regulations in mind. His only duty is to study and observe the present regulations, and to act according to the directions which on their true construction are thereby given. It is to be observed that art. 12 imposes no condition as to the colour of the flare-up light which may be used. Whenever a light of a particular colour is required to be shown, the regulations indicate that colour. For instance, in art. 2 the colours of the side lights, and the colour of the masthead light are definitely prescribed. The learned judge held that with regard to flare-up lights there was no necessity to prescribe the colour because such lights must necessarily be of a white (or blue) colour. That view is in my opinion mistaken, and moreover is negatived by the provision in art. 9 (*d*), par. 2, that, in certain events, a sailing vessel is to show a white flare-up light or torch, thus indicating that the regulations contemplate that there may be flare-up lights of other colours than white.

The conclusion I have come to is that, on the true construction of the regulations there is no prohibition against showing a flare-up light of any colour always bearing in mind that under reg. 1 every light shown must be of such a character as not to be mistaken for one of the prescribed lights. In the present case there is no evidence, or even suggestion, that the green

flare displayed by the *Tovarisch* was, or could be, mistaken for one of the prescribed lights, and I have, therefore, come to the conclusion that the *Tovarisch* did not commit a breach of the regulations in so far as the colour of the flare-up light is concerned.

The other questions in this case are questions which relate to the conduct of the respective officers in charge of the two ships, and to the navigation of those ships, and I confess to having felt considerable hesitation in differing, on matters of that kind, from the judgment of the experienced judge in the court below, arrived at with the assistance of the Elder Brethren. But having had the assistance of counsel and assessors, I am encouraged to express my own views especially as the judgment which has just been delivered by my Lord agrees entirely with the opinion which I formed during the progress of the case in this court.

In the first place, dealing with the flare-up light exhibited by the *Tovarisch*, Mr. Langton has argued that the *Tovarisch* ought not to have exhibited any flare-up light at all as, at the time when it was exhibited, there was no necessity to call attention of the *Alcantara* to the *Tovarisch*. The officer in charge of the *Tovarisch* who showed the flare justified his action on the ground that as the *Alcantara* was approaching somewhat close to the *Tovarisch* he desired to call attention to the length and character of his ship in case the *Alcantara* might attempt to pass too close under her stern. We have had advice on that matter, and it seems to me that it cannot properly be said that in the circumstances the showing of a flare was an unreasonable act on the part of the officer in charge of the *Tovarisch*. It may not have been absolutely necessary at the time, because the vessels were green to green, but the action was one which in my opinion an officer, in charge of such a vessel, might reasonably have taken. That being so, I have come to the conclusion that the action of the officer in charge of the *Tovarisch* in showing a green flare-up light at the time when he did was justified.

As to the action taken by the *Alcantara*, she immediately on seeing the green flare-up light on the *Tovarisch*, hard-a-ported, keeping her speed. I confess that I have throughout been, and still am, totally at a loss to understand how such action could be justified. She was green to green with a sailing ship close on her starboard bow. That sailing ship showed a green flare. Assuming that the flare puzzled her, or was treated as a demand to take some immediate action, I cannot think that it justified her in steering straight into, or right across the bows of, the sailing ship. At most it could only properly be taken as a demand on her to stop or reverse, or possibly to sheer off by starboarding. It is suggested by Mr. Langton that the flare-up light might have indicated to the *Alcantara* that there were nets ahead which she ought to avoid. That suggestion seems to me far-fetched, and somewhat fantastical. In the result I am of opinion that the *Alcantara* was to blame for the action she took on seeing the flare.

As to the *Tovarisch*, simultaneously with showing the green flare-up light she hard-a-starboarded. At that time, as I have stated before, the vessels were green to green, and I think there is a good deal in Mr. Dunlop's contention that the vessels never were crossing vessels within the definition of the rule, and that if they had at any time been crossing vessels, that phase had passed when the *Tovarisch* hard-a-starboarded. Be that as it may, however, we have been advised, and it seems to me common sense, that the *Tovarisch* in hard-a-starboarding, was not in any way endangering her own safety, or the safety of the vessel on her starboard bow. By starboarding she was sheering away from that vessel, and even if they were crossing vessels and the crossing phase were not quite over, her helm action would in no way embarrass the approaching ship; on the contrary, it would give her more room than she had before. In my opinion, therefore, no blame attaches to the *Tovarisch* for her helm action at that stage, nor can that helm action be made use of, as Mr. Langton sought to do, for his contention that it subsequently prevented the *Tovarisch* from coming over to starboard on the port helm as quickly as she would otherwise have been able to do.

The learned judge has held the *Tovarisch* to blame for not continuing on her hard-a-starboard course when the *Alcantara* hard-a-ported and was coming into her or across her bows. Mr. Langton has frankly stated that that was not a point which he made at the trial, and that his contentions throughout were, first, that the *Tovarisch* ought not to have hard-a-starboarded in the first instance; and, secondly, that when the collision was imminent she ported too soon. In other words, his point was that she ought to have kept her course in the first instance and not hard-a-starboarded, and, secondly, that she ought to have kept her course when the critical moment came, and not then hard-a-ported.

On the advice that we have received it seems to me that whatever action the *Tovarisch* might have taken or omitted to take, after the *Alcantara* hard-a-ported would not have avoided the collision. No doubt if the *Tovarisch* had taken one or other of the courses suggested by counsel for the respondents or by the learned judge the collision would have been different in character as she would either have been run into by the *Alcantara* or would have struck the *Alcantara* at a different angle and in a different place, but it is quite plain to my mind on the evidence that a collision was inevitable after the helm action taken by the *Alcantara*.

Personally I am not sufficiently versed in these matters to say what was the best action that the *Tovarisch* could have taken, when the red light of the *Alcantara* opened up, and she heard the blast which signalled to her that that vessel was hard-a-porting, but we have been

advised (and I think rightly) that the *Tovarisch*, in the circumstances, was not to blame for hard-a-porting instead of keeping her course or continuing her hard-a-starboarding.

In the result for the reasons stated, I agree with the judgment of my Lord that the *Alcantara* was alone to blame and that this appeal ought to be allowed.

Greer, L.J.—I also have come to the conclusion that this appeal ought to be allowed and a declaration made, with its usual consequences, that the *Alcantara* was solely to blame for the collision between her and the *Tovarisch*. The allegations against the conduct of the *Tovarisch* seem to me to have been four. First of all, it is said she showed a green flare-up light when, if she ought to have shown a light at all it ought to have been a white flare-up light; secondly, it is said that, whether green or white, she ought not to have shown a flare at all; thirdly, it is said that she was guilty of bad seamanship in starboarding when she did; and lastly, she was guilty of bad seamanship in porting when she did.

I have come to a conclusion unfavourable to these contentions independently of the answers given to the questions which have been put in writing to our assessors, if those answers confirm the view that I had taken upon the evidence and the arguments presented to this court.

First of all, with regard to the colour of the flare, I cannot help thinking that the learned judge was somewhat misled by his investigations into the history of the regulations so far as they were concerned with flares, and did not, therefore, give adequate attention to the wording of the regulations themselves. The regulations material to this question are regs. No. 1, No. 9, and No. 12. No. 1 provides that no lights shall be shown which are capable of being mistaken for the prescribed lights. No. 9 provides what the lights are to be for fishing vessels and, in sub-sect. 2 of art. 9, we find these words, "Sailing vessels"—that is to say, fishing vessels if they are sailing vessels—"shall carry a white light in a lantern, so constructed as to show a clear, uniform, and unbroken light all round the horizon, and shall also, on the approach of or to other vessels, show where it can best be seen a white flare-up light or torch in sufficient time to prevent collision." Art. 12 provides that "Every vessel may, if necessary in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light, or use any detonating signal that cannot be mistaken for a distress signal." Now I can conceive that if this vessel, the *Tovarisch*, had burnt a white flare it would have been at once alleged "you have broken reg. No. 1 because you have led those on the look-out for you to think that you are a fishing vessel and are showing a flare under the provisions of art. 9." So much for the colour of the light. I cannot help thinking that only where the articles provide what the colour of the light is to be, is there any prescribed colour. There is no prescribed colour in art. 12 unless, by reason of the other two articles, you read art. 12 as prescribing that, at any rate, it must not be a white light because, otherwise, it might be mistaken for the flare of a fishing vessel. Then it is said that they should not have shown a flare of any sort. I read art. 12 as meaning this—not that they are only to show such a light if a collision is inevitable in the absence of their showing such a light, but only if, to those on board it appears—quite rightly appears—reasonably necessary to call attention to their presence, or to their character. It cannot be that the master of a vessel is to be under an obligation to act, and to act only where it is absolutely necessary, to avoid collision, that he should so act. The words must be read as meaning "every vessel may, if reasonably necessary, in order to attract attention." In taking that view, one must not forget of course, that the whole object of these regulations is by their title, the prevention of collisions at sea, and a vessel must not, where there is no risk whatever of collision, take it that it is necessary for it to exhibit a flare light. But if there is a possibility that its position and character may not be understood, then, it seems to me, it may be deemed reasonably necessary to show the flare provided for by art. 12, and I agree with the view expressed by our assessors that, in this case, it was necessary in order to indicate, to the approaching steamer, that the vessel was not one of the short sailing vessels—short in length—that it may well have been from the mere observation of the green light, but that it was a long vessel, which had, in addition to the part of her which was forward of the green light, a very large part of her behind the green light which it was as desirable to protect from collision as that which was forward of the position of the green light.

The next matter to consider is the starboarding. I agree with the argument presented by Mr. Dunlop that, at the time of the starboarding, there was nothing wrong with the starboarding. If both vessels kept their course there was, at that time, no risk of collision whatever, and the sailing vessel was entitled to starboard there just as she was—if she had been half a mile away—entitled to starboard for any purposes she considered desirable in her own interests. It may have made a collision with the other vessel less likely, but it was not an improper manœuvre. With regard to the porting, I am considerably influenced by the course which this trial took. I look at the statement of claim on behalf of the *Alcantara* and there I find what is complained of is this: "Having starboarded, improperly failed and neglected to port their helm in due time or at all." I understand that as covering two allegations. (1) That she did not port at all, and, secondly, that she did not port soon enough, in due time. I do not understand it as containing any allegation that she ought not to have ported at all; the complaint that she did not port cannot be a complaint that she

ought not to have ported at all. It is a complaint that she neglected to port at all, or if she did port she did not do it soon enough, and I gather that no question in the course of the hearing was put to the master to indicate to him that he was charged with improper conduct in not holding on to his starboard helm. But be that as it may, I am satisfied by the way in which this case has been presented to us, and the evidence that has been given, and the opinions which we have received from the assessors, that failing to port and keeping on the starboard helm, would not have prevented this collision. It would have happened, perhaps, in a different way, and, possibly, with different results as to the damages, but it would have happened. I am also satisfied that the porting of the *Tovarisch* when it took place, was a reasonable step to prevent the collision being as damaging to the *Tovarisch* as it might have been if the vessel had not ported at all.

For these reasons I think the appeal should be allowed.

SCRUTTON, L.J.—The judgments of my brothers have recalled to my mind that I did not say what I had meant to say when I started my judgment on the question of porting. In my view, porting was not alleged as a breach originally. It is clear that no amendment was ever made to formally include such a breach. It is also clear to me, having looked at the notes, that Mr. Langton having opened the case for the *Alcantara* never alleged it as a breach. It is also clear to me that it was never put to the master in such a way as to get his defence on the point. Under these circumstances, I do not think the judge ought to have dealt with it. I do not think the judge ought to find a vessel in fault for a matter which was never alleged by the parties alleging fault, unless the pleading has been amended, and a clear opportunity has been given to those affected of dealing with the charge.

Solicitors, *Richards*, *Butler*, *Stokes* and *Woodham Smith*; Messrs. *Middleton*, *Lewis*, and *Clarke*.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Tuesday, Dec. 3, 1929.

(Before ROCHE, J.)

GULF AND SOUTHERN STEAMSHIP COMPANY (INCORPORATED) v. BRITISH TRADERS INSURANCE COMPANY LIMITED. (a)

Insurance (marine)—Insurance by shipowners on cargo and "upon any charges of assured upon said cargo"—Total loss of vessel and cargo—Claim by shipowners against underwriters for loss of freight—Whether "freight" included in term "charges upon cargo."

The plaintiffs were shipowners. The defendants issued a policy of insurance in respect of one of the plaintiffs' steamships "on cargo as per form attached." In the form attached the term cargo was defined as including (inter alia) *"charges of said assured upon said cargo or any portion thereof." During the currency of the policy the plaintiffs' steamship became a total loss with all her cargo, and the plaintiffs lost their right to recover freight which was in process of being earned at the time of the loss. They claimed to recover the lost freight from the defendant company under the terms of the policy.*

Held, that the words "any charges of said assured upon said cargo" included and were intended to cover the freight that was in process of being earned by the ship, and the plaintiffs were entitled to recover.

ACTION tried before Roche, J. in the Commercial List.

By order pleadings were dispensed with and the action proceeded to trial on an agreed statement of facts, which was as follows:

1. The plaintiffs, the Gulf and Southern Steamship Company (Incorporated) were a subsidiary company of the Eastern Steamship Lines (Incorporated). They were at all material times the owners of the steamship *Louisiana*, and ran that steamer and other steamers for the purposes of lines maintained by them between (*inter alia*) New Orleans and Key West and Miami. They were entitled to sue on the policy hereinafter mentioned.

2. By a policy of insurance dated the 2nd Nov. 1926, a copy of which was attached to the statement of facts, and which was admitted to be valid, the defendants, the British Traders Insurance Company Limited, insured the plaintiffs in respect of (*inter alia*) the said steamer as therein mentioned. The policy was described as an insurance for $7965, part of a total similar insurance of $150,000 from noon on the 15th Aug. 1926 to noon on the 1st July 1927, "on cargo (first interest) as per form attached including and subject to the clauses and conditions of the form attached." The form attached provided that the insurance was:

On cargo of any kind owned by the assured, and on the assured's liability to others in respect to cargo of any kind, covering same from time said assured becomes responsible therefor, and until its responsibility ceases, wheresoever the same may be, including risks while on docks, in and (or) on cars on docks, piers, wharves, lighters, and (or) craft, transfers, and all land conveyances, and also to cover upon any advances made by and payment of back charges made by or due from said assured, and upon any charges of said assured upon said cargo or any portion thereof, including risk of transhipment. It is agreed that the term "cargo" as used in this policy includes goods, wares, merchandise . . . and where used in this form it includes also all advances made by and payment of back charges made by or due from said assured and (or) charges of said assured upon said cargo or any portion thereof.

(a) Reported by R. A. YULE, Esq., Barrister-at-Law.

It is agreed between the parties hereto that said steamers are to be employed in carrying cargo, or cargo and passengers, in and on said steamers as aforesaid, the assured taking upon themselves as to said cargo, or parts thereof, all the risks, perils, and liabilities which by law a common carrier by land or water assumes, and also the insurance on such cargo as may be carried under "insured" rates of freight against perils of the seas and fire, jettisons, barratry, and all other acts, perils, or misfortunes that have or shall come to the hurt, detriment, damage to or loss of the said cargo or any part thereof; and the said assurers agree and undertake to indemnify and hold harmless the said assured against hurt, detriment, damage to or loss of such cargo from any and all such risks, perils, acts or misfortunes, to the extent which the assured may be held by the owners thereof under any liability the assured shall have assumed as common carriers, insurers, or otherwise, and for any and all claims which said cargo may be called upon to contribute in general average, and (or) for salvage, landing, warehousing and (or) special charges, and to cover in like manner any cargo owned by the assured, and also all advances made by and payment of back charges made by or due from said assured and (or) charges of said assured upon said cargo or any portion thereof.

3. The following facts as to the plaintiffs' course of business were at all material times well known to the defendants :

(i) Goods carried by the plaintiffs were frequently carried with all charges "collect," *i.e.*, payable by the consignees at their ultimate destination. In such cases, in the event of loss, no charges were payable by the consignee.

(ii) The plaintiffs might either carry the goods over the whole of their transit, or they might be one of a succession of carriers, the first of whom issued a through bill of lading to the consignor covering the whole of the transit. In such cases the freight or other charges of each carrier of goods being carried with charges "collect" were considered as earned on the safe termination of such portion of the whole transit as that carrier might be responsible for, and were paid by the carrier next in the series, who added them to his own charges and collected them from the next carrier or the consignee as the case might be. Such charges so paid to previous carriers were known and referred to in the policy as "back charges." They were at the risk of any carrier who had paid them in so far as if the goods were lost while in the charge of such carrier, he could not recover them from the previous carriers or from the carrier who would have taken on the goods from him or from the consignor or consignee.

(iii) The plaintiff on being paid at an appropriate rate frequently took upon themselves in respect of goods carried by them the full liability of a common carrier and (or) of an insurer against divers maritime perils (*inter alia*) perils of the sea. Goods carried on the terms that the plaintiffs should thus take upon themselves the insurance of the goods were said to be carried under "insured" rates of freight.

4. On the 27th Oct. 1926, the steamship *Louisiana* left New Orleans for Miami and Key West with a general cargo. On the next day she was sunk in a collision and became a total loss with all her cargo. It was admitted that the loss gave rise to claim on the policy, the question for the court being what classes of loss were covered by the policy.

5. The loss of the said steamer and her cargo produced (*inter alia*) the following classes of loss to the plaintiffs :

(i) They became liable to pay to the owners of goods accepted at "insured" rates of freight on board the steamer divers sums.

(ii) They lost their right to recover from the consignees of certain of the goods certain "back charges" paid by them amounting to $2974.22.

(iii) They also lost their right to recover from the different consignees the freight which was in process of being earned by them at the time of the particular casualty, and which only became payable, together with the said back charges, on right and true delivery by the plaintiffs of the goods in question at their destination. The freight so lost amounted to $7366.33.

6. No question arose in respect of the classes (i) and (ii) mentioned in the preceding paragraph, the defendants having admitted liability in respect thereof.

The question for the opinion of the court was whether the loss mentioned under (iii) of the said paragraph was covered by the policy or not. If the court should be of opinion that they were so covered, the defendants' proportion amounted to 113*l.* 4*s.* 7*d.*

J. Dickinson for the plaintiffs.

David Davies for the defendants.

ROCHE, J.—This case raises a short, neat, and interesting point on the construction of a policy of marine insurance.

The parties have very wisely agreed to try it upon an agreed statement of facts, which is clear and to the point, and leaves the matter, having explained the terms which are used in the insurance documents, as one of construction, but the explanations contained in the statement of facts were necessary having regard to the nature of the trade in which the assured were engaged.

The matter may be summarised in the following way. The plaintiffs were shipowners engaged in one part of a venture which is often conducted by through bills of lading, and the policy which was effected may be stated to be one which was intended to cover the goods which they were carrying in the part of the transit with which they were concerned. They might be concerned in the whole of the transit, or only with part of a larger transit. The policy is described as an insurance for "7965 dollars part of 150,000 dollars" on "cargo (first interest) as per form attached including and subject to the clauses and conditions of the form attached." Therefore one is referred to the attached form to see what it was that was covered.

The real question in this case is whether, when one has read that form, the court is satisfied that the assured's freight, which was or might be at risk, was covered. The most material words in the form are as follows : " On cargo of any kind owned by the assured " that is the first point ; and it is to be noticed that primarily the assured are not cargo owners, but if they do own cargo on board the ship then that is covered. But there are other classes which are covered, and no one of those classes consists of the actual ownership of cargo. In respect of the other matters mentioned in the other parts of this clause the assured are not cargo owners. The next thing is : " On the assured's liability to others in respect to cargo of any kind, covering same from time said assured becomes responsible therefor, and until its responsibility ceases, wheresoever the same may be, including the risks while on docks, in and (or) on cars on docks, piers, wharves, lighters and (or) craft, transfers, and all land conveyances." The next thing, therefore, is liability. Then the third thing is : " also to cover upon any advances made and payment of back charges, made by or due from the said assured." What that means is explained in the statement of facts ; it is to cover anything which the assured may have paid other parties concerned in this transit when they took over the goods, but which they could only recover upon completion of the voyage by delivery of the goods. That is the third thing, what they have paid other people, but which they have paid at their own risk because it could only be earned by them on completion of the voyage. The clause which gives rise to the controversy in this case is : " And upon any charges of said assured upon said cargo or any portion thereof including risk of transhipment." Now the next paragraph contains very much the same provisions as to certain matters which I have already dealt with. Then there is a further clause to the effect that the term " cargo " in this form includes all advances made by and payment of back charges made by or due from the assured and (or) charges of said assured upon said cargo or any portion thereof.

I read that stipulation as meaning this, whereas the policy is described as one on cargo, yet it is agreed that it is something much more. The question is : Does that something more include freight ? In my opinion it does. It is true that Arnould on Marine Insurance says at par. 233 of the 11th edit. that freight must be insured *eo nomine* in the policy. Mr. David Davies quite wisely has not contended that that means that you can never insure freight unless you use the word " freight." Any apt wording indicating that freight is the thing covered or one of the things covered is sufficient to give the protection of the policy to freight.

Therefore, the question is, is the term " charges " or any " charges " used in this document sufficient to cover and include freight ? In my opinion it is. Lord Esher, M.R., in the course of his judgment in *The Bedouin* (7 Asp. Mar. Law Cas. 391, at p. 394 ; 69 L. T. Rep. 282, at p. 785 ; (1894) P. 1, at p. 12), says this : " Freight is the charge made by the shipowner for the carriage of goods on board his ship." The parties in these proceedings have in stating the facts used words—though they do not apply to freight itself—in much the same sense as they were used by Lord Esher. They say this : " Goods carried by the plaintiffs are frequently carried with all charges ' collect,' *i.e.*, payable by the consignee at their ultimate destination." I take that to mean that the word " collect " is used as meaning collectable or that all charges are to be collected and payable at their ultimate destination. There can be no doubt, I think, that in that connection and association the word " charges " must be intended to include freight. It is said that to make this plain, so as to support the plaintiffs' contention the words should have been " freight or other charges," phraseology which, no doubt, is often employed in documents relating to ships, but the very wording of that phrase, " freight or other charges," means and imports that freight is a charge. It is a charge, and, in my judgment, it falls within the sweeping and comprehensive phraseology of " any charges " employed in this form which I am considering.

It is not a matter which admits of any detailed argument or any very extensive judgment, but I may, perhaps, usefully refer to the next paragraph in the form which mentions a number of things which are covered by the policy. One of them is : " also the insurance on such cargo as may be carried under ' insured ' rates of freight." What " insured rates of freight " are is also explained by the statement of facts ; they are rates of freight which include both insurance and carriage. I do not gather, and it is not stated, that there is any apportionment between what is charged for insurance and what is charged for carriage, and I read that stipulation to mean that insured rates of freight are covered notwithstanding that part of the rates of freight is really charged for as a premium of insurance. I think the only reason why the freight is specifically provided for is because that is the first and most natural thing which the parties would think of as being a charge upon or in respect of the cargo.

Mr. David Davies makes the point that the phrase is not " charges in respect of the cargo." but " charges upon the cargo." I think myself that distinction is too fine and is an unreal one in a consideration of this document, but even if the word " upon " is to be pressed I think it would not be correct to say that freight is not a charge upon the cargo because the freight itself is not earned at the time of the loss. The truth is that the back charges also are only earned or recoverable when the voyage is accomplished, but the insurance is one directed to reimburse the assured against the contingency of the voyage not being accomplished. I think in using the words " charges upon the cargo " the parties have, for the reasons I have

already assigned, made it sufficiently plain that they intended to cover that which is the principal charge upon or in respect of the cargo, namely, the freight that is in process of being earned by the ship.

For these reasons I give judgment for the plaintiffs for the sum claimed, namely, 113*l.* 4*s.* 7*d.*, with the costs of the action.

Friday, Feb. 7, 1930.

(Before SCRUTTON and SLESSER, L.JJ., sitting as Additional Judges of the King's Bench Division).

STURLEY AND OTHERS *v.* POWELL. (*a*)

Fisherman — Agreement for share of profits of voyage — Extra payments by owners — Wages or money lent—Dispute between owners and fisherman—Jurisdiction of County Court to try action—Merchant Shipping Act 1894 (57 & 58 *Vict. c.* 60), *s.* 387.

By the Merchant Shipping Act 1894, *s.* 387 : "*A superintendent shall inquire into, hear, and determine any dispute, either between the owner of a fishing boat and the skipper or a seaman of the boat, or between the skipper of a fishing boat and any seamen of the boat concerning* (1) *the skipper's or seaman's wages or his share in the profits of the voyage or trip or a fishing catch, or any deduction therefrom . . . If any party to the dispute calls on him to decide it, and his decision thereon shall be final and binding on all persons. . . .*"

The plaintiffs, who were the owners of a fishing vessel, claimed 100*l. from the defendant, who had been a member of the crew and chief engineer. Half-yearly running agreements providing for the distribution of the net profits of the sale of the fish caught on each voyage were signed by the skipper and each member of the crew. A practice had, however, arisen by which, in cases when voyages resulted in a loss or only in a very small profit, the owners paid each member of the crew a sum sufficient to bring his share of the remuneration up to* 3*l. per week. The defendant had during his period of employment drawn certain sums from the plaintiffs' agents, and the plaintiffs contended (and the County Court judge found) that the excess of those amounts over the amount due to the defendant as his share of profits had been advanced by way of loans. The defendant contended that there had been an agreement that he should be paid a minimum wage of* 3*l. per week, but the County Court judge rejected this contention. He further contended that the County Court judge had no jurisdiction to hear the dispute, by reason of the provisions of the above section.*

Held, the action being in reality one for money lent, which the County Court had always had jurisdiction to try, very clear words of exclusion would be required to deprive the County court judge of jurisdiction, and these were not to be found in the above section. The judge had, therefore, jurisdiction to hear and determine the action.

APPEAL from Haverfordwest County Court.

The plaintiffs, Sturley and others, were the owners of a steam fishing boat constructed as a drifter and used for the purpose of fishing by line. The defendant, Powell, was a member of the crew and chief engineer of the vessel from May 1924 to Nov. 1927. Half-yearly running agreements were signed by the skipper and each member of the crew. These provided, *inter alia*, that the net profits of the sale of the fish caught on each voyage should be divided, after deduction of expenses, into twelve and a half shares. Five of these shares were to be the owners', and seven and a half the crew's ; the crew's shares were to be divided in certain proportions, the defendant's proportion of the whole being one-and-one-eighth shares. A practice had arisen in cases, where voyages resulted in a loss or only in a very small profit, by which the owners paid each member of the crew a sum sufficient to bring his share of the remuneration up to 3*l.* per week. The defendant contended, on this point, that the agreement was that he should have 3*l.* per week as a minimum wage, plus a share of the profits, if these were sufficiently large. The plaintiffs, on the other hand, contended—and the judge accepted their contention at the trial—that the agreement was that the defendant's wages were to be his share of the profits only, but that in an unsuccessful trip they would help him by paying him 3*l.* per week, on the understanding that that sum, in so far as it exceeded the defendant's share of profits, was to be merely a loan, to be repaid to the plaintiffs out of the profits of a successful trip.

In Feb. 1929 the plaintiffs brought this action against the defendant alleging that the defendant during his period of employment had from time to time drawn certain sums from the plaintiffs through their agents on account of his share of the net profits of sale of the catches of fish, which sums on a settlement of accounts between the parties exceeded by 106*l.* 10*s.* 4*d.* the amount to which the defendant was entitled in respect of that share. They claimed from the defendant 100*l.* part of that sum, the excess of which they abandoned. The defendant in his defence said that he was not indebted to the plaintiffs in the sum claimed or at all ; that the agreement between the parties was that at the end of each voyage the accounts in respect of it should be settled ; that they had been settled

(*a*) Reported by T. R. F. BUTLER, Esq., Barrister-at-Law.

accordingly, and that all moneys due to the defendant, and no more, had been paid to him by the plaintiffs in complete discharge and satisfaction of his share of profits or wages for each voyage; and that by virtue of the Merchant Shipping Act 1894, s. 387, the court had no jurisdiction to hear the dispute.

The plaintiffs gave evidence at the trial in support of their contentions to the effect that the sums advanced in so far as they exceeded the defendant's share of profits were merely loans, and the County Court judge accepted this evidence. There remained for him to consider the question of his jurisdiction under sect. 387 of the Merchant Shipping Act 1894. He held that there was here no dispute within the provisions of the section for a superintendent to enquire into; that no party to any such dispute had called upon the superintendent to decide it; that the jurisdiction of the superintendent was not exclusive of that of the County Court, and that therefore the County Court had jurisdiction to hear and determine the action. He gave judgment for the plaintiffs for 100*l.* The defendant appealed on the ground that the County Court judge was wrong in holding that he had jurisdiction to try the action.

E. A. Digby, K.C. and *T. Jenkin Jones* for the appellant.

T. J. O'Connor, K.C. and *G. W. Williams* for the respondents.

Scrutton, L.J.—This case raises a question of some importance to fishermen who are remunerated by a share in the catch of fish. The agreement between the parties provided that the defendant was to have one-and-one-eighth share of the net profits of each catch. Now it is obvious that fishermen cannot rely on the amount of the catch as being in any degree constant, as they may return from a trip with a very poor catch, and, accordingly, a practice seems to have arisen by which the catches were averaged by the fisherman receiving 3*l.* a week. On this point there was a substantial dispute between the parties. The defendant said that the agreement was that the fisherman was to have 3*l.* a week as a minimum wage, plus a share of the catch, if the profits were sufficiently great. The plaintiffs said that the agreement was that the fisherman's wages should be his share of the catch only, but that they promised to help him in a poor trip by paying him 3*l.* a week, but part of that 3*l.* was to be merely a loan to be repaid out of the profits of a successful trip. The defendant was in a difficulty in regard to his contention that 3*l.* a week was to be a minimum wage, because he was trying to set up a claim to wages that is not to be found in the articles of agreement. The County Court judge found that the arrangement was as the plaintiffs stated it to be.

Before he entered on a discussion of the facts to enable him to arrive at that finding, a point in regard to his jurisdiction was taken. It was said on behalf of the defendant that sect. 387 of the Merchant Shipping Act 1894, which provides that a superintendent shall inquire into any dispute between the owner of a fishing boat and a seaman concerning the seaman's wages or share of profits of a trip or catch, excluded the jurisdiction of the County Court. As is said in Maxwell on the Interpretation of Statutes, 7th edit., c. 5, which was referred to by Slesser, L.J. during the argument, there is a presumption that the jurisdiction of the court is not excluded by a statute, if the court had jurisdiction before the statue which contains the provision relied upon as excluding jurisdiction, unless there are clear words of exclusion in the statute.

The County Court judge has taken the view that this is really a claim for money lent on trips where there was a poor catch, and that the plaintiffs lent the defendant money on the terms that it should be repaid out of the catches of profitable trips, when the defendant's share of profits amounted to more than 3*l.* per week. The County Court has always had jurisdiction to deal with actions for money lent. To exclude its jurisdiction, where money was lent in connection with a fishing trip, plain words of exclusion would be needed, and no such words are to be found in sect. 387 of the Merchant Shipping Act, though plain words of exclusion do occur in certain other Acts, as, for example, the Friendly Societies Acts. The County Court judge took the view that there are no words in sect. 387 excluding the jurisdiction of the County Court and I am of opinion that he was right in that view and that, therefore, the County Court had jurisdiction. It is not for us to decide whether he was right or wrong in the conclusion of fact to which he came, though, as I have pointed out, the fisherman was in a difficulty in regard to establishing his view of the facts, because he was asking for wages not provided for in the articles of agreement.

I do not decide, and do not intend to decide, what may happen in a case where a superintendent does inquire into a dispute and at the same time there is an action proceeding in the County Court. Very possibly, the reasons which induce the High Court to restrain or not to restrain arbitration proceedings, or to restrain or not to restrain High Court proceedings when there is an arbitration, might be applicable to such a case. That question does not arise here, as there has been no call on the superintendent to inquire into the dispute. I decide this case on the ground that there are no words in sect. 387 of the Merchant Shipping Act 1894, excluding the jurisdiction of the County Court in matters in which it previously had jurisdiction.

Slesser, L.J.—I agree. The sole question argued before us has been whether the County Court had or had not jurisdiction to entertain this claim by reason of sect. 387 of the Merchant

Shipping Act 1894. The County Court judge has found that the money sued for was a loan. He said: "The said advances were loans," and, in my judgment, on that view of the case, the matter does not in any event fall within the language of the section, which does not apply to an action for money lent. That is the first ground on which I think the objection in regard to jurisdiction ill-founded.

Secondly, the superintendent is required to hear and determine a dispute only when a party to the dispute calls upon him to decide it, and it is not suggested here that either party has so called upon him. If he had proceeded to hear and determine this case, he would have done so without authority under the statute, because his authority arises only when a party to a dispute calls upon him.

Thirdly, even had he been called upon to decide the dispute and had the subject-matter of it been one which fell within the section, I can find nothing in the section to prevent a proceeding started in the County Court in respect of the dispute being a valid proceeding, and the judgment given as a result of that proceeding being a valid judgment. The jurisdiction of the County Court to hear and determine a dispute in an action for money lent does not arise out of the Merchant Shipping Act, and therefore it is not necessary to have recourse to sect. 387 to give the County Court jurisdiction.

We have, therefore, a case where there is ordinary jurisdiction in the court altogether apart from sect. 387, and where there are no words in the section which preclude the County Court from exercising the jurisdiction of which it was otherwise possessed. For the reasons which my Lord has stated, and on the principles laid down in Maxwell's Interpretation of Statutes, I am of opinion that in this case there is no reason to suppose that the Legislature intended the County Court judge's jurisdiction to be excluded. The objection to jurisdiction therefore fails and the appeal must be dismissed.

Appeal dismissed.

Supreme Court of Judicature.

COURT OF APPEAL.

Dec. 3, 4, 1929, *and Jan.* 27, 1930.

(Before SCRUTTON, LAWRENCE and GREER, L.JJ., assisted by Nautical Assessors.)

THE OTRANTO. (a)

ON APPEAL FROM THE ADMIRALTY DIVISION.

Collision—Vessels on crossing courses—Failure of "give way" ship to take action — Action taken by the "stand on" ship—Starboarding without taking off way—Negligence—Regulations for Preventing Collisions at Sea, Arts. 18, 21 (*note*).

The appellant's steamship O. *sighted the respondents' steamship* K. M. *at a distance of about seven miles on her port bow. The* O. *accordingly kept her course and speed until about three minutes before the collision, when, the* K. M. *having taken no action to avoid her, the master of the* O. *determined that the* K. M. *could not avoid the* O. *by her own action alone, and he accordingly starboarded, and then hard-a-starboarded, and sounded two short blasts. The* K. M. *was then seen to be porting, and the* O. *thereupon went full speed astern on both engines. About a moment later the vessels came into collision.*

Hill, J. found both vessels to blame, holding that, although the O. *was not wrong in taking action to avoid the collision at the time when she did, she ought then to have taken off her way and not starboarded.*

Held (Scrutton, L.J. dissenting upon the ground that the O. *was to blame for not keeping her course), that the* O. *ought not to be held to blame for failing to take off her way. The relevant authorities establish no general rule that a vessel in taking action justified by the note to art.* 21 *must first take off her way. The* O. *was therefore bound to take such action as in the circumstances might appear best calculated to avoid the collision, and the master of the* O. *was not negligent in taking the action which he took, notwithstanding that if the* O. *had taken off her way the collision might in the circumstances have been avoided.*

APPEAL from judgment of Hill, J. in a damage action.

The plaintiffs, owners of the Japanese steamship *Kitano Maru* claimed damages from the defendants, owners of the steamship *Otranto* in respect of a collision between the *Kitano Maru* and the *Otranto* which took place at about 8.48 p.m., shortly after sunset, on the 11th Aug. 1928, in the North Sea, some miles from the mouth of the River Humber. The weather at the time was fine and clear. The *Kitano Maru*, a vessel of 7952 tons gross,

(a) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

474ft. long, was in the course of a voyage from Middlesbrough to Antwerp with about 2000 tons of cargo. The *Otranto*, a vessel of 20,032 tons gross, 12,021 tons net, 658ft. in length, was on a voyage from Immingham to Copenhagen and other northern capitals with a large number of passengers.

The facts as found by Hill, J. were that the *Otranto* was travelling at about 16 knots and saw about seven miles distant the *Kitano Maru* on a bearing which was accurately taken by the officer on watch; that the bearing continued the same for about ten minutes; and that the officer then sent a message to the master who came on the bridge, and took charge from the second officer. Eight minutes before the collision the *Kitano Maru* was judged to be 2 or 2½ miles away, and about 3½ points on the port bow. The bearing continued almost the same, varying only by one degree. Three or four minutes before the collision, when the distance, as the master judged, was a quarter to half a mile, and was judged by the second officer to be hardly three-quarters of a mile, the *Kitano Maru* had not altered her course or her speed or given any signal. The master of the *Otranto* therefore recognised that the position was very dangerous, and he decided to take action, and approximately about three minutes before the collision he gave an order, "starboard," and immediately "hard-a-starboard." That order was carried out, and he gave two short blasts. He brought the *Kitano Maru* a little on the port bow and then the *Kitano Maru* began to turn to starboard, and gave a short blast. Immediately upon that he gave an order hard-a-port, but before it could be carried out he countermanded it, and repeated "hard-a-starboard," and followed that by full astern on both engines about a minute before the collision. The learned judge rejected the evidence from the *Kitano Maru*, and accepted the evidence from the *Otranto*.

Upon these facts Hill, J. found both vessels equally to blame, holding that the *Otranto*, although not wrong in taking action to avoid the *Kitano Maru* when she did, ought to have followed what the learned judge described as the "golden rule" in such circumstances, namely, to take off way, and not to take starboard helm action.

The owners of the *Otranto* appealed.

The Regulations for Preventing Collisions at Sea 1910, so far as material, are as follows:

"Art. 18: Where two steam vessels are crossing so as to involve risk of collision, the vessel which has the other on her own starboard side shall keep out of the way of the other.

"Art. 21: Where by any of these rules one of two vessels is to keep out of the way, the other shall keep her course and speed.

"*Note.*—When in consequence of thick weather or other causes, such vessel finds herself so close that collision cannot be avoided by the action of the giving way vessel alone, she shall also take such action as shall best aid to avert collision (see arts. 27, 29)."

A. T. Miller, K.C. and *Dumas* for the appellants.

Dunlop, K.C. and *Hayward* for the respondents.

The arguments of counsel and authorities cited fully appear from the judgments.

Cur. adv. vult.

Scrutton, L.J.—This appeal raises again the perplexing problem of the give-way ship which seems likely not to give way, but in fact does give way, and the stand-on ship in consequence does not stand-on, with the resultant collision.

The *Otranto*, a large Orient liner, 658ft. long, was starting from the Humber on a pleasure cruise to Norway, and was a little before 8.45 p.m. on the 11th Aug., proceeding at 16 knots on a course N.59.E. true. The *Kitano Maru*, a large Japanese steamer, 474ft. long, was proceeding from Middlesbrough to Antwerp, partly laden, on a course S.40.E. true. The courses were crossing courses at nearly a right angle; the Japanese boat was the give-way ship, and the Orient liner the stand-on ship.

The two ships came into collision, the *Otranto* striking the port bow of the Japanese boat a right angled blow. The judge finds that each boat had altered about eight points from her course, the *Otranto* having starboarded, the *Kitano Maru* having ported.

The Japanese boat came into court with an impossible story of porting when three miles off and after an interval hard-a-porting. It became clear that if this story were true, the two boats would never have got near each other, and the judge rejects it as a concocted invented story. He accepts the story of those on board the *Otranto*, which is that the *Kitano Maru*, seen seven miles off, was carefully watched, her bearing never altering, three-and-a-half points on the *Otranto's* port bow, till she was under three-quarters of a mile distant, the point of intersection of these courses being about half-a-mile from the *Kitano Maru*, and a little more from the *Otranto*, and as the *Kitano Maru* showed no sign of giving way that the captain of the *Otranto* then decided that he must act, at a time about three minutes before the actual collision, and that he then hard-a-starboarded and blew two blasts. Very shortly afterwards, within twenty or thirty seconds, that is to say, two-and-a-half minutes before the collision, he saw the Japanese boat porting and heard her blow one blast. The *Otranto* gave the order hard-a-port, but altered it almost directly before the helm had got amidships to hard-a-starboard, and the two boats came into collision at right angles, the *Otranto's* stem striking the port bow of the *Kitano Maru*, each of the headings having altered about eight points on a right angle. Each boat went astern shortly before the collision.

The trial judge, with the concurrence of the Trinity Masters, has condemned the *Kitano Maru* for giving way too late, for hard-a-porting, and not going astern when the *Otranto* blew her whistle. As to the *Otranto* he has found, again with the concurrence of the Trinity Masters, that, not mathematically, as a matter of practical seamanship, a distinction I will refer to later, the time had come when the *Otranto* was entitled to act, but that she took wrong action in starboarding, as he and the higher courts had frequently decided; she should have followed the golden rule, to take off her way and keep her course. He therefore found the *Otranto* to blame, and, being unable to distinguish the blame, found each ship equally to blame.

The *Otranto* appeals, contending (1) That she was not to blame at all; (2) that if to blame, the greater proportion of blame was on the *Kitano Maru.* The latter boat originally appealed but abandoned her appeal, which was hopeless. She was obviously keeping a bad look-out, and only awoke to danger when the *Otranto* blew her two blasts.

The rules which apply, which seamen navigating ships have by statute to obey unless they can find sufficient excuse, are Rules 19, 21, and 22. I summarised them in the case of *The Orduna* (14 Asp. Mar. Law Cas. 574; 122 L. T. Rep. 510; (1919) P. 381); thus, at 14 Asp. Mar. Law Cas. 574; 122 L. T. Rep., pp. 514, 515; (1919) P. 329: "There are three rules concerned when two steam vessels are crossing so as to involve the risk of collision; the vessel which has the other on her starboard side should keep out of the way; where one of two vessels is to keep out of the way, the other should keep her course and speed; and every vessel which is directed by the rules to keep out of the way of another vessel should, if the circumstances admit, avoid crossing ahead of the other. I entirely agree and wish to emphasise, if it were necessary, the importance of these rules being strictly observed. The position of ships crossing with a risk of collision is a difficult one. It has been thought right to tell one of the ships to keep her course and speed and the other ship to keep out of the way. The give-way ship can act with much greater certainty if she knows that the stand-on ship is going to do exactly what she is doing when seen. If the stand-on ship acts too soon she may easily put the give-way ship in a great difficulty; and, hard as it is, she ought to keep her course and speed until the last possible moment." I add to that summary the note to rule 21: "When in consequence of thick weather or other cause such vessel finds herself so close that collision cannot be avoided by the action of the give-way vessel alone, she"—that is the stand-on ship—"also shall take such action as will best aid to avert collision." Those rules are to be applied strictly.

Lord Atkin, in *The Ulrikka* (13 Ll. L. Rep. 368), says: "I desire to say, as has already been said over and over again here and in the Admiralty Court, that it is of extreme importance strictly to maintain the enforcement of arts. 19 and 21. These two rules are a bright light to navigators, and I suppose day by day and hour by hour they operate to prevent collisions at sea. It appears to me of the highest importance to enforce them and enforce them strictly. In doing that, one does not differ from the views expressed that in the stress of collision there is a margin which may be allowed to navigators. But that margin is a very narrow one." The excuse for the stand-on ship's not keeping its course does not begin to operate till the give-way ship cannot avoid a collision by any action of its own if the stand-on ship keeps its course and speed. Now, in the present case when the stand-on ship acted otherwise than by keeping its course and speed, the give-way ship was still three-and-a-half points on the port bow of the stand-on ship; the intersecting courses were such that the give-way ship was over half a mile, say 2600ft., from the point of intersection if the stand-on ship kept its course and speed and nearly three-quarters of a mile from the stand-on ship; the turning circle of the give-way ship hard-a-porting even without any assistance from reversing its starboard engine was such that in 900ft. radius it would have completed a quadrant of its circle, that is to say, she would have only got 900ft. nearer the stand-on ship's course, originally 2600ft. distant from its starting point; and that in the three minutes which elapsed between the stand-on ship's taking action and the collision, the two ships had altered their heading eight points each and collided with a right-angled blow. The stand-on ship hard-a-starboarded three minutes before the collision, blowing the appropriate blast, and twenty to thirty seconds later the give-way ship hard-a-ported, blowing the appropriate blasts. Under those circumstances it occurred to me, before we consulted the assessors, that both when the stand-on ship acted and when the give-way ship acted, collision could in fact have been averted by the action of the give-way ship alone. We asked our assessors two questions. Question 1 is: "Assuming the *Otranto* had not altered her course and speed, would the action of the *Kitano Maru*, taken two-and-a-half minutes before the collision, have avoided collision?" They answered to that, "Yes." Then we also asked question 2: "Assuming the *Otranto* had altered speed but not course, would the action of the *Kitano Maru*, taken two-and-a-half minutes before the collision, have avoided collision?" They answered: "Yes, assuming the *Otranto* to be on the original track."

Counsel for the stand-on ship, after consultation, also agreed that, as a matter of fact, not of judgment at the time, they could not dispute this. We have, then, that the *Otranto* acted at a time when collision could have been avoided by the action of the give-way ship alone, because she erroneously thought that the give-way ship could not then avoid the collision by her own action, when in fact the give-way ship could then avoid the collision by her own

action, and did take action which would have avoided the collision if the stand-on ship had kept her course and speed.

A difficult question then arises on which there have been different opinions since and perhaps before. Lord Esher, in *The Vorwaerts* and *The Khedive* (see 43 L. T. Rep. 610; 5 App. Cas., at p. 877), asked the assessors: "If this order which he gave was not absolutely right under the circumstances, was it such an order as a captain of ordinary care, skill, and nerve might be fairly, as a seaman, excused for giving under the circumstances in which the captain was placed," and the assessors having answered in the affirmative, freed the *Khedive* from blame, only to be reversed by the House of Lords. Lord Blackburn gave an account of the statutory legislation up to that time at pp. 892–894 of his judgment.

The Court of Appeal had then to consider the subject again in *The Benares* (5 Asp. Mar. Law Cas. 171; 9 Prob. Div. 16; 49 L. T. Rep. 702), where Bowen, L.J. said: "As to the law, *The Khedive* (*sup.*) decided that it was no answer when the rules had been infringed to say that a master had acted from the best of motives, and according to the best of his ideas, for the law says, not that the master is to do what he believes to be best, but that the regulations are to be obeyed." The court then held that the joint effect of all the regulations had not been disobeyed. In *The Memnon* (6 Asp. Mar. Law Cas. 488; 1889, 62 L. T. Rep. 84), where the stand-on vessel did not stop and reverse, there being risk of collision, the House of Lords, while commenting unfavourably on the language of the Court of Appeal, held the master to blame for not stopping and reversing. The effect of this was that in 1897 by a change in the regulation, the stand-on vessel was required to keep her speed as well as her course till the moment when collision could not be avoided by the action of the give-way ship alone; that is to say, the obligation of the stand-on ship was made stricter. She was not to alter her speed merely because there was risk of collision with the give-way ship. In 1894 the statutory obligation to obey the regulations was repeated (see Merchant Shipping Act 1894), as was the presumption of fault if the regulations were broken. In 1911, by the Maritime Convention Act, the latter presumption was repeated, the statutory obligation remaining, but the owner was only liable if the fault of his servants, *e.g.*, the breach of regulations, caused the collision. The question what happened if the master in fact broke the regulations but reasonably thought he was taking the seamanlike course in so doing, still remained.

In 1913, in *The Olympic and H.M.S. Hawke* (12 Asp. Mar. Law Cas. 580; 112 L. T. Rep. 49; (1913) P. 214; (1915) A. C. 385), which, if the rules applied, was the case of a crossing stand-on ship, where the give-way ship was proceeding in the same direction, it having been argued that the stand-on ship should have altered her course because there was risk of the give-way ship not doing so, Vaughan Williams, L.J. said, at p. 245 of (1913) P.: "It seems uncertain on the cases whether the exception to the rule only arises when a collision is inevitable unless averted by the ship which has to keep her course and speed, or whether the exception applies when the collision is so probable that good seamanship, if there were no rule, would justify action by the ship, bound to keep her course, to avert collision." And Lord Parker, on p. 279, said: "A vessel which under the crossing rule has to keep out of the way of another vessel must act before there be actual danger. If she allows the time for acting to go by, she may lead the other vessel to suppose that she cannot or does not intend to act. In such a case the latter vessel may be relieved from the reciprocal obligation of maintaining her own course and speed. I accept Captain Blunt's evidence that he ported as soon as the Old Castle buoy was clear, because he felt uncomfortable at the close proximity of the *Olympic*, and I think under the circumstances he was justified in so doing, though the cases are not quite consistent on the point. At any rate, it is, I think, quite impossible to suggest that the *Hawke's* action in porting was, apart from the rules, in any way a breach of good seamanship or in any way contributed to the causes of the collision. The *Hawke*, being a King's ship, cannot, therefore, be held liable for porting her helm when she did." The *Hawke*, being a King's ship, was "apart from the rules."

In 1919, in *The Orduna* (*sup.*), the facts of which I refer to later, Bankes, L.J. commented on the language of Lord Parker in *The Olympic and H.M.S. Hawke* (*sup.*), and said it might have to be reconsidered; that there might be cases where the stand-on ship might act when she was misled by the other ship, but that it was important that the rules should be strictly observed, and that any such excuse must be scrutinised with the very greatest care. Lord Phillimore in *The Karamea* (15 Asp. Mar. Law Cas. 430; 126 L. T. Rep. 417; (1922) 1 A. C. 68), declined to express an opinion. He said at p. 79: "It might be thought as a matter of law that all that the ship which has to get out of the way has to do is to take just sufficiently effective steps in just sufficient time, and it might be thought that she so doing ought not to be found to blame, even if the insufficiency and delay of the proper manœuvre has puzzled the other ship and led her to do something which she should not. I pronounce no opinion." Hill, J. in the present case took the view apparently taken by the two judges in *The Olympic and H.M.S. Hawke* (*sup.*). He said: "Mr. Dunlop argued that he acted before he was called upon to act at all under the rule. I do not think so. I have asked the Elder Brethren about that as a matter of seamanship, having regard to the terms of the rule, and they agree with me that the time had come when he was called upon to do something. The rule must be interpreted, not mathematically but reasonably, with

regard to the position as it presented itself to the commander of the *Otranto*. It may be, now we have worked out everything—the turning circles, the precise distances, the precise courses, and all the rest of it—it may be that it can be shown that starboarding about three minutes before the collision was starboarding at a time when, mathematically, it was possible for the *Kitano Maru* by her own unaided action to avoid the collision. It may be so, and in that sense the time had not arrived which entitled the master of the *Otranto* to act. But that is not the way we must look at it. Looking at it all round, was the man, as a seaman, entitled to say to himself, as a reasonable prudent man, 'has the time come when I cannot avoid acting?' I think that time had come, and that he was entitled to act. I cannot, therefore, say that he acted too soon." The Trinity Masters agreed with him, and our assessors take the same view. We asked them: "Given the pleaded courses and speeds and the vessels approaching on bearings which do not change and assuming that the *Kitano Maru*, the give-way ship, did not act until after the *Otranto*, at a time of about three minutes before the collision and a distance of under three-quarters of a mile, had hard-a-starboarded and blown two blasts, (1) Had the time come when as a matter of good seamanship the *Otranto* might reasonably believe that collision could not be averted by the action of the *Kitano Maru* alone?" and they answer: "Submitted—assuming the question refers to the moment before *Kitano Maru* had altered course or sounded any helm signal and the *Otranto* had sounded two blasts, we think that (1) the master was justified in taking action to avoid risk of collision." I confess I have the gravest doubt about the correctness of this view.

"I take Mr. Justice Hills's distinction between "mathematically" and "reasonably" to mean that though in fact it is seen afterwards that the "give-way" ship could and would by its own action have avoided the collision if the stand-on ship had kept its course, yet if the stand-on ship might reasonably think that the "give-way" ship was not going to act, the "stand-on" ship might alter its course or speed. This is I think contrary to Dr. Lushington's view as expressed in *The Test* (1847, 5 Not. of Cas., 276), where he says (at p. 278) "I cannot conceive that anything would be more likely to lead to mischievous consequences, than to suppose that a vessel, whose duty it is to keep her course, should anticipate that another vessel will not give way, and so give way herself. The consequence would be, that there would be no certainty; whereas, the doctrine I have upheld, supported by the nautical assessors' authority, is that, in cases of this description, you ought always to follow the general rule. The certainty which results from an adherence to general rules is, in my opinion, absolutely essential to the safety of navigation." And it appears to me to alter the language of the rule from "shall act when collision cannot be avoided by the action of the give-way ship alone," to "when the captain thinks reasonably but wrongly that it cannot be avoided by the action of the give-way ship alone."

Further, I think, such a view of the facts in the present case is inconsistent with the view taken by the House of Lords in the cases where the give-way ship held on till she was ahead of the stand-on ship, and would, if she continued her course, pass clear to port, but then ported. One of such cases is *The Norman Monarch* (*The Times* Dec. 10, 1918). Another and a very striking case is *The Orduna* (*sup.*). In that case the give-way ship, the *Konakry*, on a course of 17 degrees different from that of the stand-on ship the *Orduna*, kept on her course till she was ahead of the latter and a quarter of a mile off. The *Orduna* thinking that the *Konakry* was going to cross ahead, starboarded to give her room, but at the same time the *Konakry* ported and would have gone clear astern of the *Orduna* but for the *Orduna's* starboarding. The *Orduna* was held to blame by all six assessors and by the Court of Appeal and the House of Lords. It is said that was because the *Orduna* said it was clear that there was no risk of collision because the *Konakry* was going to pass ahead. But it is startling that where a give-way ship has got so far in her crossing course that she is ahead of the stand-on ship, and the latter thinks the give-way ship is certain to go clear, the stand-on ship should be condemned for starboarding; but that when the give-way ship is three-and-a-half points on the port bow and half a mile from the intersecting lines of the original courses and the stand-on ship is merely doubtful what the give-way ship is going to do, it should be excused. Similarly in *The Athena* and *The War Bahadur* (14 Ll. L. Rep. 516) where the give-way ship got right ahead of the stand-on ship and then ported and continued to port though the stand-on ship blew a starboard helm whistle the stand-on ship was held to blame as having acted too early, and Lord Sumner explained that there was nothing new in the judgments in the House of Lords in *The Orduna*, but merely the old and correct interpretation of the crossing rule. A similar view was taken by this court in *The Ulrikka* (*sup.*) when the stand-on ship acted when the give-way ship was one and a half to two points on the port bow of the stand-on ship and showing no signs of giving way, and the stand-on ship was held to blame for starboarding. Decisions of the House of Lords on fact are not strictly binding on this court, but when the House of Lords has three times held that a particular set of facts, the give-way ship practically ahead and showing no signs of giving way, does not justify the stand-on ship in altering course, I think it would not be becoming in the Court of Appeal to hold that a set of facts much less favourable to the stand-on ship, that is the give-way ship well on the port bow and at such a distance that she can in fact

avoid the collision by passing astern of the stand-on ship, excuses the stand-on ship for altering course.

My judgment in *The Orduna* (*sup.*) I hope shows that I appreciate the difficulties of the stand-on ship, but in view of the authorities, and treating the assessors as witnesses, as I am told to do in *The Australia* (17 Asp. Mar. Law Cas. 86; 135 L. T. Rep. 576; (1927) A. C. 145), and paying due respect to the experience of Hill, J., I should have great difficulty in accepting his conclusion that the stand-on ship was justified in not keeping her course and speed. But I have no difficulty in accepting his conclusion, with the concurrence of his assessors, that the stand-on ship was not justified in starboarding. Our assessors took an opposite view to the judge, and the assessors below on this point. We asked them, question B, reciting the previous facts I have already read, "If so, was hard-a-starboarding, without reversing engines, good seamanship under the circumstances?" and they replied "that hard-a-starboarding, without decreasing speed was good seamanship." We are, therefore, in the position discussed in *The Australia* (*sup.*), and have to form our own opinion on the conflicting evidence. I agree with the view taken by Hill, J., and the Trinity Masters. The give-way ship, if it obeys the rule, is to port and pass under the stern of the stand-on ship. In the present case, it acted in time to do this, and would have avoided the collision by its own action alone, if the stand-on ship had kept its course and speed. For the stand-on ship to starboard is to go into the water which the give-way ship will be traversing, if it obeys the rule. This seems to me, as it did to Hill, J., the worst thing the stand-on ship can do, and I agree with him the action the stand-on ship should take generally is to slacken speed, giving more time to the give-way ship to take action to obey the rule. Starboarding to a ship ahead was condemned in the three House of Lords decisions I have mentioned. It was condemned by this court in *The Ulrikka* (*sup.*), where the give-way ship was one-and-a-half to two points on the port bow, showing a green light, the courses about 30 degrees apart and the ships 600yds. apart. It has been repeatedly condemned by the judge below, (see *The Clyne Rock*, 17 Ll. L. Rep. 311, and *The Landport*, 25 Ll. L. Rep. 16), in which latter case, Hill, J. said: "It is the plaintiffs' case which I accept that the *Mathilda* ported very late, but it is plaintiffs' pleaded case that when the *Landport* hard-a-starboarded the *Mathilda's* bow was still on the *Landport's* port bow. I have not to consider whether starboarding would have been justified if the *Landport* had starboarded after the *Mathilda* had crossed to starboard of the *Landport*. The master of the *Landport* was put in a position of great difficulty by the *Mathilda's* failure to give way and open her red. But so is every stand-on ship when the give-way ship is apparently taking no action; and in such cases, when ships are on crossing courses, if the time for action by the stand-on ship has come, the action called for is to take off way. To take helm action at the same time may or may not be justified, according to the circumstances of the case. In my own view, it is in general not justified in a crossing course, but to take helm without engine action is certainly wrong. If the give-way ship does act, though too late, then the stand-on ship by starboarding defeats that action. If the give-way ship persists in crossing ahead, the stand-on ship by reversing gives the give-way ship more time to get across. One always sympathises with the man in charge of a stand-on ship, who is bound to keep his course and speed up to a point, and must then act so as best to avoid a collision; but starboarding without reversing is to take the worst possible action." I entirely agree with this. In my view, to hold that a stand-on ship may starboard, when she does not know what a give-way ship on her port bow is going to do, and when the distances are such that the give-way ship, by her own action, can in fact, by porting, avoid the collision, though the stand-on ship, by error of judgment, thinks she cannot, will create hopeless confusion at sea.

I do not think the case is made any better by the stand-on ship's signalling "I am going to break the rule by starboarding." The only case I have found in which starboarding by the stand-on ship has been excused, is *The Rayford* (10 Ll. L. Rep. 743), in which the Court of Appeal took the view that the starboarding was so slight it did not affect the collision. My judgment in that case shows, I hope, that I appreciate the difficulties of the stand-on ship and am desirous of helping her, if I can. But I think the remedy is altering the rule by legislation, not whittling it away by judicial decision. I, therefore, agree with the learned judge below that the *Otranto* was to blame for not keeping her course.

It was, however, argued that we should vary the apportionment by the judge below, who had found equal proportions of blame. I think the effect of the decisions in *The Peter Benoit* (13 Asp. Mar Law Cas. 203; 114 L. T. Rep. 147), and *The Karamoa* (*sup.*) is that the superior courts will not alter the apportionment of the trial judge, unless they disagree with him on a question of fact or law substantially affecting the result. In the present case, the only difference I have with the learned judge is that I doubt his view that the *Otranto*, though mistaken mathematically in thinking that the collision could not be avoided by the give-way ship alone, was justified as a matter of seamanship in not keeping course and speed. This difference is against the *Otranto* rather than in her favour. I am unable, therefore, to alter the apportionment.

I shall be delighted if this case gives an opportunity to the House of Lords to give clearer guidance to the crossing ships as to their respective duties. But in this case, on the view I take, the appeal must be dismissed. As, however, my brothers do not take this

view, judgment must be entered as proposed by them.

LAWRENCE, L.J.—Hill, J. has held "both to blame" for the collision which took place between the *Otranto* and the *Kitano Maru* in the North Sea off the mouth of the Humber on the evening of the 11th Aug. 1928, resulting in damage to both vessels.

The *Otranto* has appealed on the ground that the learned judge was wrong in attributing any, or in the alternative as much as one half, of the blame to her.

The *Kitano Maru* served a notice of cross appeal, but this was subsequently withdrawn and the findings of fact in the court below as to the negligent manner in which that vessel was navigated were not challenged in this court.

It is common ground that the two vessels concerned were crossing vessels involving the risk of collision and that arts. 19, 21, 22, 23, and 27 of the regulations of 1910 contain the material directions which had to be observed by them respectively. The *Kitano Maru* was the give-way ship. She was very badly navigated and committed breaches of arts. 19 and 23 by not keeping out of the way of the *Otranto* and by not slackening her speed or stopping or reversing on approaching the *Otranto*.

The learned judge has acquitted the *Otranto* of any breach of the duty imposed on her by art. 21, as the stand-on ship, to keep her course and speed, but has held that in the position in which she found herself hard-a-starboarding was an act of negligence. The first question which it is material to consider is whether the learned judge was right in holding that the time had come when the *Otranto* was called upon to depart from her *primâ facie* duty of keeping her course and speed and to take action in order to avoid collision. The answer to this question depends partly upon the construction of art. 21 and partly upon the particular facts of this case. The learned judge has held that on the true construction of art. 21 the master of the stand-on vessel is allowed some latitude in determining when the time has arrived to take action under the note. In my judgment this conclusion is right and in accordance with the authorities. It is clear, however, that the allowable margin is very narrow and that the onus of proving that action is taken within that margin rests heavily on the stand-on ship. Atkin, L.J. (as he then was) in *The Ulrikka* (13 Ll. L. Rep. at p. 368) says with great force that arts. 19 and 21 are a bright light to navigators; that he supposes day by day and hour by hour they operate to prevent collisions at sea, and that it appears to him of the highest importance to enforce them strictly.

Cases such as *The Orduna* (*sup.*), *The Norman Monarch* (*sup.*), and *The Athena* (14 Ll. L. Rep. 516), to which I shall have occasion to refer again later, are striking examples of the strictness with which art. 21 has been enforced by the court. This article, when read in its proper setting, is plainly directed to the avoidance of the risk of collision as well as to the prevention of collision. The first and main direction is that the stand-on ship shall keep her course and speed and the second direction, which, although only contained in the note, is framed in equally imperative language, is that the stand-on ship shall take such action as will best aid to avert collision when she finds herself so close that collision cannot be avoided by the action of the giving-way vessel alone. The joint effect of these two directions is that the first duty of the stand-on ship is to keep her course and speed up to the point when the give-way ship is no longer able to keep out of the way; when that point is reached her second duty is to take such action as will best aid to avert collision (see *The Ranza* 79 L. J. 21 (*n*)). These directions are addressed to practical seamen and they must be construed so that they may reasonably be acted upon. The nature of the event upon the happening of which the stand-on ship is to take action shows that the rule cannot reasonably be construed as referring to the precise moment of time when on a mathematical calculation the give-way ship could in fact no longer avoid collision, which in most cases would depend in some measure upon factors then unknown to the navigator of the stand-on ship, such as, for instance, the turning circle of the give-way ship. Unless some latitude be allowed to the stand-on ship her navigator would be placed in the unreasonable position of committing a breach of one or other of the duties imposed upon him by this article unless he should happen by some lucky accident to hit off the exact mathematical moment of time when the give-way ship in fact first became unable to avoid collision—a matter which could not be ascertained until after the collision and after the relevant circumstances had been investigated. The following authorities, in my opinion, support the learned judge's construction. In *The Ranza* (*sup.*), where it was contended that the stand-on ship had kept her course and speed too long, Gorell Barnes, J. says at p. 22: "What is the duty of a vessel in the position of the *Gloamin*"—the stand-on ship—"with regard to a vessel in the position of the *Ranza*"—the give-way ship. "The *Ranza* had to keep out of the way and the *Gloamin* had to keep her course and speed obviously up to a certain point. It is quite impossible to be absolutely certain where that point is, mathematically speaking, but these rules"—namely, arts. 21 and 27—"have to be construed so that men may act reasonably upon them." The learned judge in that case, no doubt, had his mind directed to the margin of time which should be allowed to the stand-on ship after the moment had arrived when that ship found herself so close that collision could not be avoided by the action of the give-way ship alone, but the same reasoning applies to the margin of time which should be allowed to the stand-on ship before that point has been reached.

In *The Albano* (10 Asp. Mar. Law Cas. 365; 96 L. T. Rep. 335; (1907) A. C. 193) the Privy Council had to consider the Canadian regulations which so far as material are identical with the regulations of 1910 and in the judgment of the board (delivered by Sir Gorell Barnes) after a reference to the difficulty in which the master of a stand-on ship is placed in determining when the time has arrived for him to take action there is the following passage: "Therefore he must keep his course and speed up to some point, and then act, but the precise point must necessarily be difficult to determine, and some little latitude has to be allowed to the master in determining this." In *The Olympic and H.M.S. Hawke* (*sup.*), Vaughan Williams, L.J. says (1913, P. at p. 245): "I am inclined to think that in a case where good seamanship would assume that collision cannot be avoided by the action of the giving-away vessel alone, the case falls within the exception," namely, the exception to the rule to keep course and speed, "even though in fact the giving-way vessel could by her own action have averted collision," and in the same case Lord Parker at p. 279 says: "A vessel which under the crossing rule has to keep out of the way of another vessel must act before there be actual danger. If she allows the time for acting to go by she may lead the other vessel to suppose that she cannot or does not intend to act. In such a case the latter vessel may be relieved from the reciprocal obligation of maintaining her own course and speed." Bankes, L.J., in *The Orduna* comments (1919) P. at p. 390) on this latter statement and observes that such a case ought to be scrutinised with the greatest care and that a person must make it abundantly plain that he was justified in taking up the exceptional position to which Lord Parker refers, but adds that it is largely a question of seamanship. I agree with the view so expressed by Bankes, L.J.

In *The Huntsman* (1911) 104 L. T. Rep. 466: 11 Asp. Mar. Law Cas. 606) Bargrave Deane, J., after referring to the difficult position in which the navigator of the stand-on ship is placed under art. 21 and stating that if the officer is carefully watching the give-way ship and endeavouring to do his best to judge when he ought to act, it ought not to be made a complaint against him that he waited too long or acted too soon, proceeds as follows: "It is difficult to determine the critical moment, and some latitude must be allowed to the officer of a stand-on ship who is clearly doing his utmost in a position of difficulty caused by bad navigation by those in charge of a giving-way ship."

In *The Gulf of Suez* (15 Asp. Mar. Law Cas. 328; 125 L. T. Rep. 653; (1921) P. 331), the Master of the Rolls, Lord Sterndale, approves of the passages which I have cited from *The Ranza* (*sup.*) and *The Huntsman* (*sup.*). Although the cases which I have mentioned relate mainly to the duty imposed by the note to art. 21 on the stand-on ship to take action, I am of opinion that the same principle applies to any action taken by the stand-on ship in order to avoid immediate danger under art. 27. The necessity referred to in that article must, I think, be judged by good seamanship and not by a subsequent mathematical ascertainment of the exact moment of time when in fact the necessity first arose.

The next matter to be considered on this branch of the case is whether the *Otranto* has discharged the onus of proving that when she starboarded the time had arrived for her to take action either under the note to art. 21 in order to aid to avert collision or under art. 27 in order to avoid immediate danger. On the assumption that the master is allowed some latitude under art. 21 this question resolves itself into whether the master of the *Otranto* when he took action was justified as a matter of good seamanship in concluding that the *Kitano Maru* was so close as no longer to be able to avoid collision by her own action alone and consequently that it had become his duty to take action. The learned judge, with the advice of the Elder Brethren, found as a fact that when the *Otranto* starboarded the time had come for her to take action. This finding was arrived at notwithstanding that it was demonstrated at the trial that, as a mathematical proposition, the *Kitano Maru* could have passed under the stern of the *Otranto* if she had ported when the *Otranto* starboarded, and that she could have done so whether the *Otranto* had kept her course and speed or had merely taken off her way. As to this the learned judge remarked in the course of the trial: "That is quite obvious as a mathematical proposition, but as a practical rule of navigation it is not obvious at all," an observation with which I agree. The advice given to us by our assessors on this point agrees with the advice given by the Elder Brethren in the court below. To the best of my judgment, after having carefully considered the evidence and the arguments of counsel, the view taken by the learned judge and by all four assessors was right. The *Otranto* had been carefully watching the *Kitano Maru* ever since she was first sighted some seven miles away and had taken frequent bearings. She did not act until three minutes before the collision at a time when the vessels were under three-quarters of a mile apart and about half a mile from the point of intersection of their courses. Up to that time the *Kitano Maru* had not shown any signs of altering either her course or her speed—she was making slightly over 13 knots and the *Otranto* slightly over 16 knots. The courses were nearly at right angles. It was admitted by Mr. Harry Gray, who was called by the respondents, that a minute later there would have been a position of extreme danger if both vessels had kept their respective courses and speeds. This admission was based on the mathematical calculations which had been made since the collision. Accepting this opinion as correct and looking at the position from the point of view of a practical navigator, this margin does not in the circumstances seem to me to be too wide, especially considering that,

owing to the time of day, the light was deceptive for judging distances with great accuracy. Having regard to all the circumstances and to the advice given by all four assessors I agree with the learned judge's finding that the time had come when as a matter of good seamanship the master of the *Otranto* was justified in assuming that collision could not be averted by the action of the *Kitana Maru* alone, and consequently that he was not only entitled but was bound to take action and to exercise his best judgment to avoid the threatened collision.

There remains the question whether the learned judge was right in condemning the *Otranto*, not for infringing any express direction contained in the regulations, but because in his opinion, when the time for action had arrived, her master exhibited a want of reasonable care and skill. The onus of proving that the action then taken by the *Otranto* was negligent rests on the *Kitano Maru*. It was the latter's negligence which had placed the master of the *Otranto* in the difficult position of having to judge not only when to take action but also what that action should be. Lord Morris, in *The Tasmania* (6 Asp. Mar. Law Cas, at p. 521 ; 63 L. T. Rep., at p. 5 ; 15 App. Cas., at p. 238), points out that when a collision is caused by the misconduct of the party complaining there should be very clear proof of contributory negligence.

Now what are the facts here ? The master of the *Otranto* was a competent and experienced navigator. For twenty years before the collision he had been in the service of the appellants as master and for two years he had been commander of the *Otranto*. His skill, care and nerve as a navigator, apart from the particular action taken in this case, were not called in question. He was summoned on to the bridge and took personal charge of the navigation of the *Otranto* at 8.39, being nine minutes before the collision. From that time forward he carefully watched the *Kitano Maru*. At 8.45 he came to the conclusion that the moment had arrived when it was his duty to take action and he then gave the order "starboard fifteen" followed immediately by the order "hard-a-starboard," making one continuous movement of helm action. At the same time he gave an order for two short blasts on the whistle. Up to the time of giving these orders the *Kitano Maru* was keeping her course and speed and had shown no signs of keeping out of the way. He thought that she was trying to cross his bows and came to the conclusion that the best action he could take to aid in averting collision was to hard-a-starboard with the object of passing under her stern. In his evidence he explained that he did not port because that would have opened up the whole of his port side and that he did not slacken speed or stop or reverse because he could not say how long it would have taken him to take the way off his ship at the speed she was then making ; moreover he thought that if he had taken off way he would have lost more than half of his manœuvring power and that, if the *Kitano Maru* had held on, she might have struck the *Otranto* amidships.

The learned judge in giving judgment said : "To starboard in such a position cannot be right. I have said so in many cases and what is more important, I think the Court of Appeal and the House of Lords have said the same. I agree that every case has to be decided on its own facts, but I can see nothing to distinguish this case from other cases in which I have decided that for the stand-on ship to starboard in such a position cannot be right. It can only assist to avoid the collision if the give-way ship continues to keep her course and speed. If though too late the give-way ship ports then the starboarding of the stand-on ship makes collision almost inevitable. And the stand-on ship has no right to assume that the give-way ship will not port.

The golden rule in such cases is to take off your way. If you take off your way you are very unlikely to make a collision. You are giving more time for the give-way ship if she persists in her wrong-doing to cross ahead of you, or if she repents too late or acts too late—well, you give her more time to act and it may avoid collision altogether, and it is almost certain to reduce the damage." . . . "I am advised—and I quite agree—that hard-a-starboarding was wrong."

Later on in his judgment the learned judge states that he is not going to say that anybody ought in the circumstances to hard-a-port, therefore the question is reduced to whether the *Otranto* was negligent in hard-a-starboarding, instead of taking off her way and keeping her course. Our assessors have advised us that in the circumstances hard-a-starboarding without decreasing speed was good seamanship. Thus we are faced with opposite opinions expressed by the two sets of assessors, who, presumably, are equally competent to advise on such a technical question. The duty of the court in such circumstances is pointed out in clear and unmistakable terms by Lord Sumner in *The Australia* (17 Asp. Mar. Law Cas., at p. 88 ; 135 L. T. Rep., at p. 579 ; (1927) A. C., at p. 151 and 153) as follows : "The court must exercise its function of deciding and find consolation in a consciousness at any rate of blank impartiality. . . . The technical advice given in the court below is advice available for the consideration of the appellate tribunal, as well as that given by its own assessors. The latter are not substituted for those previously consulted ; they are additional to them, and if one adviser or two advisers are to be preferred, it is because in the judgment of the court the advice given is such as in itself is the more acceptable. . . . If, as may happen, a judge cannot decide in his own mind whether or not the advice he receives is sound, his position is simply that the point is not proven and the loss falls on the party who bears the burden of proof on that issue." My duty, therefore, is to exercise my own judgment, paying due regard to the advice given by the Elder Brethren in

the court below as well as to that given to us by our assessors.

The learned judge seems to me to have founded his judgment to a great extent upon a rule which he calls "the golden rule to take off way." With the utmost respect for the opinion of the very experienced judge, I cannot think it right for the court to lay down a rule prescribing the particular action to be taken by the stand-on ship when she finds herself in the predicament indicated in the note to art. 21. Under the regulations the action, which it then becomes her duty to take, is left to the judgment of her navigator, as such action must necessarily depend upon and vary with the circumstances. To take any action before the critical moment has arrived is, of course, entirely wrong, and to starboard in that case is the worst possible action that could be taken because it means entering the water which should be left free to enable the give-way ship to pass under the stern of the stand-on ship is she is so minded. But the position is different when the give-way ship has let the time go by and she is so close that she cannot any longer safely take any port helm action in order to keep out of the way. In such circumstances the master of the stand-on ship must be free to exercise his best judgment as to the appropriate action to be taken and the only requirement is that the action should be such as might reasonably be taken by a competent navigator. To hold that any action other than taking off way is *primâ facie* an act of negligence would in many cases operate to relieve the give-way ship which had caused the difficulty from the burden of proving contributory negligence, and cast the burden of proving that the action taken by the stand-on ship was not negligent on that ship, which in my opinion would be contrary to what was said by the House of Lords in *The Tasmania* (*sup.*). With regard to the statement made by the learned judge that the *Otranto* had no right to assume that the *Kitano Maru*, although too late, would not port, this is contrary to the opinion expressed by Bowen, L.J. in *The Memnon* (6 Asp. Mar. Law Cas., at p. 320; 1888, 59 L. T. Rep., at p. 291). In that case the stand-on ship was held to blame for not having taken off her way soon enough in breach of art. 18 of the Regulations of 1884, and the Lord Justice says: "It seems to me contrary to common sense to maintain that when you are watching a person who is doing something wrong and unreasonable you have a right to assume that at some given moment he will cease that course of conduct and adopt another."

The same reason which led the master of the *Otranto* to conclude that the time for taking action had arrived, namely, his assumption (which has been held to have been justified) that the *Kitano Maru* was trying to cross his bows and would, therefore, keep her course and speed, led him to hard-a-starboard in order to pass under her stern, which to the best of his judgment was the safest course to adopt in the circumstances. He did not lose his nerve, nor was he acting in the agony of collision without any time for reflection. He states in his evidence that he considered the various courses open to him and gave his reasons for starboarding. At the trial he adhered to his opinion that this action was in the circumstances the best he could have taken to avoid collision without unduly endangering his ship and the lives he had on board, an opinion which was emphatically endorsed by our assessors. He cannot, I think, reasonably be held to be negligent for not anticipating that, after the *Otranto* had given the proper signal indicating that she was directing her course to port, the *Kitano Maru* would take port-helm action, with the inevitable result that she would bring herself across the *Otranto's* bows. The obvious inference to be drawn from the action taken by the *Kitano Maru* is that at the critical time she was not keeping a proper look-out and was being navigated by an incompetent person, who only woke up to the fact that the *Otranto* was in close proximity when he heard her signal, and then, either through ignorance or loss of nerve, took the wrong action—an action which could not and in this court was not attempted to be justified. If on hearing the *Otranto's* signal the *Kitano Maru* had acted in a reasonable manner, and either had gone full speed astern, or had starboarded, it is plain that, with the aid of the *Otranto's* action, the threatened collision would have been averted. Even if she had then kept her course and speed it now turns out as a mathematical proposition that the *Otranto's* action would have avoided a collision and the latter would have passed safely under her stern.

Taking all the circumstances into consideration and exercising my judgment on such a technical question to the best of my ability, I prefer the opinion of our assessors to that of the assessors in the court below. The question, however, is not whether the *Otranto* has proved that she acted rightly in starboarding, but whether the *Kitano Maru* has proved that the action taken by the *Otranto* was wrong in the circumstances. The *Kitano Maru* came into court with a concocted story; she has therefore only herself to blame that the court is unable to say what action she would have taken, or what would have happened if the *Otranto* had taken off way instead of starboarding. The learned judge, as I understand his judgment, has condemned the *Otranto* not because he had arrived at the conclusion that if she had taken off way the collision would have been avoided, or the damage reduced, but because by starboarding she broke the golden rule he refers to. If I am right that there is no such rule, it follows that the *Kitano Maru* has not discharged the onus which, according to the decision of the House of Lords in *The Tasmania* (*sup.*), rests on her. Even if, however, in the opinion of the court, it would have been wiser to have taken off way instead of hard-a-starboarding, I think that the master, who acted according to the best of his judgment in the difficult position in which he found himself

was at most guilty of an error of judgment, and that his action cannot justly be held to have been negligent. The observations made by the President (Sir John Bigham) in *The Tryst* (11 Asp. Mar. Law Cas. 33; 101 L. T. Rep. 716; (1909) P. 333) are in my opinion much to the point on this question. There the *Ortona* was the stand-on ship, and when she found herself so close to the give-way ship that action by the latter alone could not avoid a collision, she hard-a-ported, keeping her speed. The give-way ship was held to blame for the collision which ensued, but it was contended by her that the *Ortona* was also to blame as she ought not to have ported at all, and in any event she ought to have taken off her way. The *President* (11 Asp. Mar. Law Cas., at p. 335; 101 L. T. Rep., at p. 718; (1909) P., at pp. 336, 337) said: "Then it is said that the *Ortona* should be held partly to blame because she might and ought to have reduced her speed, and it is pointed out that according to the engineer's evidence an interval of three minutes elapsed between the order from the bridge to stand by and the collision; but, in my opinion, those in charge of the *Ortona* acted all through for the best. There may have been some error of judgment—something might have been done which would seem wiser when considered after the event—but there was in my opinion nothing which could be described as negligence of those in charge of the *Ortona*.

Further, if contrary to my opinion, the *Otranto* was negligent in starboarding, I am of opinion that the port-helm action taken by the *Kitano Maru*, after the *Otranto* had given the prescribed signal indicating that she was starboarding, was a subsequent and separate act of negligence on her part, and that it was this act which was the proximate cause of the collision. If that be so, then the *Otranto* is entitled to recover in full: (see *The Volute*, 15 Asp. Mar. Law Cas., at pp. 534, 535; 126 L. T. Rep., at pp. 429, 430; (1922) A. C., at p. 136).

Lastly, if there be any real doubt whether the action taken by the *Otranto* was negligent or not the finding of this court ought to be that the *Kitano Maru* has not discharged the onus of proof which rests on her, and that therefore the whole loss falls on her.

Before parting with the case, however, I desire to say a few words about the authorities relied upon by the respondents' counsel. The learned judge did not state which of the cases he had in mind when he said that he thought the Court of Appeal and House of Lords had said that starboarding in circumstances similar to those prevailing in the present case could not be right. Counsel have, however, referred us to several cases decided in these courts, all of which are, in my opinion, distinguishable from the present case on the ground that it was held in each that the stand-on ship was to blame because she had disregarded some express direction contained in the regulations.

In *The Khedive* (*sup.*) the House of Lords decided that the stand-on ship by starboarding had disregarded the express direction contained in art. 16 of the Regulations of 1863 requiring her to stop and reverse her engines, and that, as no discretion had been left to her by that article, she was to blame, although her master possibly rightly thought that his helm action would prevent or greatly mitigate the collision. This case shows clearly that, where the regulations have been broken, the question of the expediency of the action taken is irrelevant, and the fact that the master honestly thought that in the circumstances it would be better seamanship to take action, instead of adhering to the Regulations, affords no excuse.

In *The Memnon* (*sup.*), pp. 317 and 488, the Court of Appeal and the House of Lords held that the stand-on ship, in keeping her speed, had broken art. 18 of Regulations of 1884, which required her (as well as the give-way ship) when approaching another ship so as to involve risk of collision, to slacken her speed, or stop and reverse, if necessary, and that, therefore, she was partly to blame for the collision.

In *The Orduna* (*sup.*) the Court of Appeal and the House of Lords held that, although the give-way ship had not ported in time, yet the stand-on ship by starboarding had disregarded her duty under art. 21 to keep her course and speed. Lord Sumner puts the case in a nutshell, as follows: "The evidence of the officer of the watch that, at the moment when he took helm action he judged the position to be a safe one, leaves him without excuse."

The Norman Monarch (*sup.*) is a very similar case to that of *The Orduna*. It was there held by the Court of Appeal and the House of Lords that the stand-on ship by starboarding had broken the rule which required her to keep her course and speed, and was, therefore, to blame, although the give-way ship was also to blame for having acted too late.

Again, in *The Athena* (*sup.*), the Court of Appeal and the House of Lords held that the stand-on ship had not succeeded in discharging the onus which lay upon her of justifying her departure from her duty to keep her course and speed. These three last-mentioned cases are authorities for the proposition (which I understood the appellants not to dispute) that the duty imposed on the stand-on ship, under the note to art. 21, to take action does not arise merely because the give-way ship does not take action to keep out of the way soon enough. They are most material on the question when and in what circumstances it becomes the duty of the stand-on ship to take action, but they do not support the proposition that when that time has arrived starboarding is necessarily or even *primâ facie* an act of negligence. All the authorities to which our attention has been called show that if the stand-on ship departs from the rule to keep her course and speed before the crucial moment has arrived when it becomes her duty to take action, she will be held to blame because she committed a breach of the regulations unless she can clearly show that the action so taken did not cause or contribute to the collision, and such a breach will

not be excused because the master considered it good seamanship under the circumstances to depart from the regulations. But where, as here, the regulations have not been broken, the question whether a ship has been navigated negligently or not must be determined on ordinary principles apart from the regulations. The party alleging negligence must prove that the navigator exhibited a want of reasonable care and skill. In such a case the competency of the navigator, his reasons for taking the particular action complained of, and the expediency of taking such action, are most relevant.

In view of my opinion that the appellants are right on the main question it becomes unnecessary for me to deal with the subsidiary question as to whether the learned judge was right in apportioning the blame equally between the two vessels and I prefer not to express any opinion on that point. In the result for the reasons stated, I am of opinion that this appeal succeeds and that the judgment pronounced in the court below should be varied by pronouncing that the collision was solely caused by the fault of the owners, master and crew of the *Kitano Maru* or some or one of them and by condemning the respondents in the whole of the appellants' counterclaim and by condemning the respondents in the appellants' costs of the claim and counter claim in the court below and in the costs of this appeal.

GREER, L.J.—If it had not been that I am differing from the judgment of Hill, J. and the judgment of Scrutton, L.J., I probably would have contented myself by saying that I agree with the judgment that has just been delivered by Lawrence, L.J. for the reasons stated by him, but having regard to the difference of judicial opinion, I regret to say that I deem it necessary to inflict another somewhat long judgment upon the court and upon the patience of the law reporters.

At or about 8.48 p.m. on the 11th Aug. 1928, a collision took place between the defendants' steamer, the *Otranto* and the plaintiffs' steamer, the *Kitano Maru*. The owners of the *Kitano Maru* brought this action in the Admiralty Court, alleging that the *Otranto* was alone to blame for the collision. The owners of the *Otranto* put in a defence and counterclaim alleging that the *Kitano Maru* was alone to blame for the collision. Hill, J., who tried this action with Trinity Masters, has decided that both were to blame and has apportioned the damage equally. Originally, both parties appealed, but the plaintiffs have withdrawn their appeal, and the only matters for this court to consider are those which are involved in the defendants' appeal.

The defendants, by their counsel, contend that the learned judge was wrong in deciding that the *Otranto* was to blame at all, and secondly, that even if she be held to blame, a larger portion of the blame should be attached to the plaintiffs' vessel than to the defendants', and the judgment of the learned judge, so far as it deals with the apportionment, should be varied by attributing a larger portion of the damages to the plaintiffs. Hill, J. disbelieved the evidence given by the plaintiffs' witnesses, but came to the conclusion that, notwithstanding this false evidence, the *Otranto* was equally to blame with the *Kitano Maru* for the damage occasioned by the collision.

The *Kitano Maru* is a twin screw steamship of 7,952 tons gross and 474ft. long. At the time of the collision, she was laden with about 2,000 tons of cargo, with a draught of 19ft. 11in. forward and 22ft. aft. The *Otranto* is a twin screw turbine steamship of 20,032 tons gross, and 658ft. long. She was in ballast, with a large number of passengers and numerous crew, and her draught was 24ft. forward and 26ft. 10in. aft. The *Kitano Maru* was bound south from Middlesbrough to Antwerp, and the *Otranto* was bound east from the Humber for a Norwegian cruise. They came into collision, the port bow of the *Kitano Maru* and the stem of the *Otranto*, at nearly a right angle. They had originally been on crossing courses nearly at right angles, the *Kitano Maru* heading a course S.E. by S. ¾ S. magnetic, and the *Otranto* a course N.E. by E. ¼ E. magnetic. As they were approaching each other the *Kitano Maru* had the *Otranto* on her starboard side. She was, therefore, the give-way ship under art. 19, and as soon as they became near enough to be described as crossing vessels, it was her duty to keep out of the way of the *Otranto*, and under art. 21 it was the corresponding duty of the *Otranto* to keep her course and speed, unless the facts were such as to bring the case within the note appended to that article, which is as follows: 'When, in consequence of thick weather or other causes, such vessel finds herself so close that collision cannot be avoided by the action of the giving-way vessel alone, she also shall take such action as will best aid to avert collision": (See arts. 27 and 29). It is to be observed that the words are not "is so close that collision cannot be avoided," or "becomes so close" or "gets so close," "that collision cannot be avoided," but the words are "finds herself so close that collision cannot be avoided," words which, in my view, leave room for the exercise of a reasonable finding or judgment by the navigator of the stand-on ship. The learned judge states his findings on the evidence as follows: "I accept the evidence from the *Otranto* that the *Kitano Maru* made no alteration till she was at the very outside three-quarters of a mile away, and probably less. I do not believe the *Kitano Maru* hard-a-ported more than once or gave a short blast more than once. The fact that the action taken was hard-a-port, and not port, confirms the conclusion that it was taken at very close quarters. If taken earlier a slight porting would have been sufficient. The fact that the starboard engines were reversed before the port engine also points to the engines being used to assist rapid action of the helm. On the other hand, the defendants' case I accept.

It tells very much against themselves as well as against the plaintiffs. I accept it as an honest case. I believe the evidence of the defendants' witnesses. Their case is that the *Otranto* was travelling at about sixteen knots and saw at about seven miles distance the *Kitano Maru* on a bearing which was accurately taken by the second officer; that the bearing continued the same for about ten minutes; that the second officer then sent a message to the master, who came to the bridge. Then the master takes up the story (confirmed by the second officer). Eight minutes before the collision the *Kitano Maru* was judged to be two to two-and-a-half miles away, and about three-and-a-half points on the port bow. The bearing continued almost the same, varying only by one degree. Three or four minutes before the collision, when the distance, as the master judged, was a quarter to half-a-mile, and was judged by the second officer to be hardly three-quarters of a mile—up to that time the *Kitano Maru* had not altered her course or her speed or given any signal. Upon that the commander recognised that the position was very dangerous, and decided to take action, and about three minutes before the collision he gave an order "Starboard 15," and immediately "Hard-a-starboard." That order was carried out and he gave two short blasts. He brought the *Kitano Maru* a little on the port bow, and then—and not until then—the *Kitano Maru* began to turn to starboard and gave a short blast. Immediately upon that he gave an order hard-a-port, and before it could be carried out he countermanded it, and repeated hard-a-starboard, and followed that by full astern on both engines about a minute before the collision. At the collision the *Kitano Maru* was swinging to starboard, and the *Otranto* to port. I accept this evidence. I find in fact that the two blasts of the *Otranto* preceded the one blast of the *Kitano Maru*. But, accepting it, I cannot do otherwise than find that the *Otranto* hard-a-starboarded, and did not take engine action and reverse until a very short time before the collision." Lower down the learned judge finds that, at the time that the *Otranto* starboarded, the time had come when the *Otranto* was entitled to act in accordance with the directions contained in the note to art. 21. He held that some latitude must be allowed to the master of the stand-on vessel in making his decision as to whether a collision can or cannot be avoided by the action of the give-way vessel alone, and that, in the case under consideration, the time had come when the *Otranto* was entitled to act, and that it could not be said that her master acted too soon. The *Otranto* was, therefore, not in the wrong in failing to keep her course and speed. If the time had arrived for her to act under the note, I will assume for the time being that this finding of Hill, J. in this respect was correct, reserving the point for consideration after dealing with the case on this assumption. Hill, J. decided that, though the time had come for her to take such action as the best aid to avert collision, she had taken the wrong action and, by doing so, she was negligent or blameworthy. The first question to be determined is, whether the learned judge was right in this view.

A great many authorities have been cited to us upon this question, but, after all, the question in every case is a question of fact to be determined on the proved facts of each case, and is not a question of law to be determined on authority. Assuming that the learned judge was right in coming to the conclusion that when the *Otranto* starboarded the time had come for her to take some action, which in the judgment of a careful and skilful navigator was likely to best avert collision, I am of opinion that the master of the *Otranto* did not act negligently or in any way inconsistent with skilful seamanship. Judged by what in fact happened, her master took the wrong course and one which, having regard to the subsequent navigation of the *Kitano Maru* resulted in the collision, but the reasonableness or skilfulness of the course adopted by the master of the *Otranto* is not to be determined by the event, but by the facts that were present to his mind at the time that he exercised his judgment. It was plain to him, from the bearings that had been carefully taken from time to time, that the *Kitano Maru* was not in fact taking any proper steps to keep out of his way. It was reasonable for him to conclude that she was not keeping a proper look-out and that she was not going to take any steps in sufficient time to avoid colliding with him if he did nothing. If he was right in his judgment as to what the *Kitano Maru* was likely to do, it followed that he would be right in his conclusion that a collision would be avoided if he hard-a-starboarded. If he hard-a-starboarded he, therefore, enabled the *Kitano Maru*, by continuing her course, to keep out of his way. After giving the order hard-a-starboard, the appropriate signal was given to the *Kitano Maru* that the *Otranto* was directing her course to port, whereupon the master of the *Kitano Maru* gave an order which, under the circumstances, was, in my judgment, bound to lead to a collision. Instead of keeping out of the way of the *Otranto* by continuing straight on, so that the vessels would pass starboard to starboard, he ported, thereby, in my judgment, making it inevitable that the two vessels would come into collision. The master of the *Otranto*, when he saw what the other vessel was doing, gave a momentary order to port, which he immediately rescinded before it had had time to check the direction of his vessel to port. At that time I do not think he could have saved the situation by porting, though possibly the collision would have happened in a way different from the way in which it did happen.

The learned judge, however, held, following his own decisions in many cases where the facts were similar though not identical, that to starboard in such a position could not be right, and that the golden rule to be observed was that she should take off her way. In my

judgment, though the rule may be a golden one, it is not an absolute one and it is not a rule of law. As it happened, in the present case, if the master had adopted engine action and reversed his engines, it is probable, but by no means certain, that a collision would not have taken place at all, but in any case he had to act without any knowledge as to when, if at all, the master of the *Kitano Maru* was likely to give an order hard-a-port. I think he was entitled to assume that if he starboarded and gave notice to the *Kitano Maru* that he was doing so, the *Kitano Maru* would then see that the only reasonable course for him to take would be for him to keep out of the way of the *Otranto* in which he was. I cannot think that it was negligent or blameworthy on the part of the master of the *Otranto* to assume that the master of the *Kitano Maru* would, after noticing that the *Otranto* was directing his course to port, take the course which was obviously the most dangerous and which would not keep the *Kitano Maru* out of the way of the *Otranto*, but would put her into the way of the *Otranto* and make a collision certain. Under these circumstances, without the assistance of the assessors, I should have come to the conclusion that the learned judge was wrong in holding the *Otranto* partly to blame for the collision, but my judgment in this case is confirmed by the judgment of the very experienced assessors who assisted us in this court.

In this case questions have been put to our assessors, and their answers seem to me to show that they agree with the view that I have expressed, but great reliance was placed by Mr. Dunlop, for the respondents, on a number of cases which he cited, especially on *The Orduna* (*sup.*). In that case the *Orduna* and the *Konakry* were crossing vessels at a very obtuse angle, there being only a difference of 17 degrees from opposite courses. It is obvious, under these circumstances, that it might be quite safe for the give-way vessel to postpone porting until she was very close to the other vessel, as a very slight porting would have kept her out of the way of the *Orduna*, and the *Orduna* was held to blame because she starboarded, according to her own evidence, at a time when those on board the *Orduna* thought that the vessels would pass safely on the course on which they were, but that it was desirable to give a wider course to the *Konakry* and they starboarded for that purpose. It was there held that the note to art. 21 had no application to the case, as the action of the *Orduna* in starboarding was not required to avoid collision, and, therefore, it was not justified by the note: (See the speech of Lord Finlay at (1921) A. C., at pp. 255, 256, and the short judgment of Lord Sumner at (1921) A. C. 260). That case has no similarity, in my judgment, to the present case where the vessels were approaching on almost perpendicular courses.

A number of other cases were cited by Mr. Dunlop in which it was decided that starboarding was a wrong manœuvre. The decision in each case must depend on the special facts proved in each case, and in my judgment there is no rule of law or good sense to the effect that it is never right for a stand-on vessel to starboard or that it is always negligent navigation for him to do so. Art. 21 puts a severe burden upon him, but it does not prevent him from saying that "under the circumstances as I saw them at the moment I was called upon to act it appeared reasonably safe for me to take the action that I did, and, *therefore*, I was not negligent." Though this is not a case of action taken by a master who lost his head in the agony of collision, the circumstances which called for action on his part were not dissimilar to those which call for action in the agony of collision. He was put into a position of difficulty by the initial fault of the *Kitano Maru*, and he had to do that which appeared to be reasonably safe at the time he acted. The action that he took would have been reasonably safe if, after notice, the *Kitano Maru* had done what she ought to have done, and for my part I cannot hold the *Otranto* to blame for what happened, because her master acted upon the assumption that when the master of the *Kitano Maru* knew that he was starboarding he would have made a correspondingly safe move by starboarding himself, or, would have continued on his course. I cannot help thinking that the learned judge allowed himself to be too much under the influence of his decisions in other cases, and has stated as an absolute rule of navigation a rule which, though usually right, still admits of exceptions.

For these reasons, on the assumption above made, I think that the *Kitano Maru* should have been held solely to blame for the collision on the ground that there was no negligent navigation on the part of the *Otranto*; and, secondly, on the ground that even assuming the *Otranto* to have been negligent in starboarding, still the real cause of the collision was the subsequent negligence of the *Kitano Maru* in porting when, if she had acted with reasonable care, she would either have starboarded, or kept straight on.

I have hitherto assumed that the learned judge was right in his view that the time had arrived when the master of the *Otranto* was entitled to act by altering his course or speed, but it was contended before us that inasmuch as at the time he did alter his course, and if the other vessel immediately ported, a collision would have been avoided, the *Otranto* should be held to blame because she committed a breach of art. 21. We have been advised, and I think rightly advised, that if the *Otranto* had kept her course and speed and the *Kitano Maru* had ported at the time she did the vessels would have passed clear of one another and there would have been no collision. It was argued that upon these facts the first part of art. 21 was still in operation and that the circumstances which under the note to that article made it the duty

of the *Otranto* to take such action as would best aid to avert collision had not happened. Art. 21 and the note thereto must be read along with art. 27 which says: "In obeying and construing these rules, due regard shall be had to all dangers of navigation and collision and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger." I think the true principle upon which these two rules are to be applied to the facts of any particular case is that which was stated by Lord Herschell in *The Tasmania* (6 Asp. Mar. Law Cas. at p. 518; 63 L. T. Rep. at p. 2; 15 App. Cas. at p. 226), where he says: "As soon then as it was, or ought to a master of reasonable skill and prudence to have been, obvious that to keep his course would involve immediate danger, it was no longer the duty of the master of the *Tasmania* to adhere to the 22nd rule"—the 22nd rule at the time of this decision was the rule under which the stand-on ship had to keep her course—"He was not only justified in departing from it, but bound to do so, and to exercise his best judgment to avoid the danger which threatened."

In *The Albano* (10 Asp. Mar. Law Cas. 370; 96 L. T. Rep. at p. 339; (1907) App. Cas. at p. 207), Sir Gorell Barnes, in giving the judgment of the Privy Council, says this: "It must always be a matter of some difficulty for the master of a vessel which has to keep her course and speed with regard to another vessel which has to keep out of her way, to determine when the time has arrived for him to take action for if he act too soon he may disconcert any action which the other vessel may be about to avoid his vessel, and might be blamed for so doing, and yet the time may come at which he must take action. Therefore he must keep his course and speed up to some point, but the precise point must necessarily be difficult to determine, and some little latitude has to be allowed to the master in determining this." In that case the suggestion against the master was that he had acted too late, but I do not see why the same latitude should not be allowed to him when the question is whether he acted too soon. Indeed it seems to me more important to see that the regulations should not be so interrupted as to render it next to impossible for the stand-on ship to act in time than that he should be allowed a little latitude in acting too late because acting in time may save the collision, but acting too late can never save a collision. If he is obliged to wait until the last moment, when it in fact becomes impossible for the give-way ship to avoid a collision by her act alone, in ninety-nine cases out of a hundred that moment will be allowed to pass, and a collision will often become inevitable. The possible consequences of such an interpretation of the rules seem to me quite appalling in a case like the present, where the master of the *Otranto* was faced with the reasonable probability of a disaster to both ships, involving the loss of many valuable lives, if he did nothing, and, on the other hand, a high probability that if he starboarded and gave the appropriate signal the officer in charge of the other ship would do what a careful and observant officer would do; that is to say turn away from him, and not into him. Unless I am forced by the regulations, or the decisions of this court, or the House of Lords, to hold that the *Otranto* broke the regulations, and was, therefore, partly to blame, I am not inclined so to hold.

In the case of *The Olympic and H.M.S. Hawke*, Lord Parker uses these words (1913) P. at p. 217): "A vessel which under the crossing rule has to keep out of the way of another vessel must act before there be actual danger. If she allows the time for acting to go by, she may lead the other vessel to suppose that she cannot, or does not intend to act. In such a case the latter vessel may be relieved from the reciprocal obligation of maintaining her own course and speed." In the same case (1913) P. at p. 245), Vaughan Williams, L.J. cites a statement with regard to the rules in Marsden on Collisions, as follows: "The rule requiring a ship to keep her course and speed must be observed strictly. So long as there is a possibility of the other ship clearing her, she must stand on. Thus Sir James Hannen refused to find a sailing ship to blame for taking no step, until the last moment, to avoid collision with a steamer which she saw was taking no measures to keep out of the way. The guide of the steamer's action is the presumption that the sailing vessel will keep her course. With reference to the same rule under a previous Act, Dr. Lushington said: 'I wholly deny that danger would be averted, or that infinitely greater danger would not occur, if a vessel close-hauled on the larboard tack, on descrying a steamer, were to take upon herself to deviate from her course for the purpose of getting out of the way; because I am of opinion that by so doing it would lead to the chance of infinitely more collisions than at the present.'" The Lord Justice then went on to say: "It seems uncertain on the cases whether the exception to the rule only arises when a collision is inevitable unless averted by the ship which has to keep her course and speed, or whether the exception applies when the collision is so probable that good seamanship, if there were no rule, would justify action by the ship, bound to keep her course, to avert collision."

I prefer to follow the latter alternative suggested by the Lord Justice's comment to the statement in Marsden, or the expression of Dr. Lushington's views on rules which were differently framed from those at present in operation, and I prefer to follow the opinions of Lord Herschell in *The Tasmania* (*sup.*), of Sir Gorell Barnes in *The Albano* (*sup.*), and of Lord Justice Vaughan Williams and Lord Parker in *The Olympic and H.M.S. Hawke* (*sup.*) rather than what I conceive to be the too

rigid statements of the effect of the regulations in Marsden and by Dr. Lushington in the older cases.

At first sight the decision of *The Khedive* (*sup.*) seems to be contrary to the view I am expressing, but that was a decision under art. 16 of the Regulations of 1863, which says that every steamship when approaching another ship so as to involve risk of collision shall slacken speed, or, if necessary, stop and reverse. It was there held that this applied to the stand-on ship, and was an express order to slacken her speed, and she could not escape responsibility of a breach of the rules by saying that she starboarded in a manner that was not negligent under the circumstances. That rule has been altered, the present rule being: "Every steam vessel which is directed by these rules to keep out of the way of another vessel shall, on approaching her, if necessary, slacken her speed, or stop or reverse." This applies to the give-way ship, and not expressly to the stand-on ship. The note to art. 21 was not added until 1897, and, therefore, was not in operation at the time of the decision in *The Khedive* (*sup.*). I think the note justifies reference to art. 27 as bearing on the interpretation of the note.

Some useful observations on this subject are to be found in the judgment of Bargrave Deane, J. in *The Huntsman* (11 Asp. Mar. Law Cas. at p. 608; 104 L. T. Rep. at p. 466) where he says this: "Upon this question as to altering her speed by a vessel whose duty it is to keep it under art. 21, it is almost impossible to lay down any fixed rule. Good seamanship requires that in any case a time may come when the course or speed or both of a stand-on ship may and ought to be altered. The difficulty in such a case is to decide at what exact time such alteration not only may be but ought to be made. It is impossible, mathematically speaking, to fix that time—various ingredients come into the matter—the light or clearness of the atmosphere by which a fair judgment of distances may be formed—the speed and course of the other vessel from which an accurate estimate may be formed of the point where the two intersecting courses will meet if both vessels continue their course and speed—and the further almost insuperable difficulty of detecting, as in this case, at one o'clock in the morning, the precise moment when the giving-way vessel may be altering her course and the precise moment when if she does not alter her course a prudent officer in charge of the stand-on vessel feels it to be his duty to do something, and if something what that something is to be. The burden of taking action and departing from the rule is cast upon that officer, who has to determine when that point of departure occurs. It must not be pressed too severely in any case. If the officer is carefully watching the movements of the other vessel and endeavouring to do his best to judge when the time shall arrive for him to act, it ought not to be made a complaint against him that he waited too long or he acted too soon. If he acts too soon he may disconcert any action which the other vessel may be about to take to avoid his vessel. It is difficult to determine the critical moment, and some latitude must be allowed to the officer of a stand-on ship who is clearly doing his utmost in a position of difficulty caused by bad navigation by those in charge of a giving-way ship." I agree with all those observations. Similar considerations influenced Bigham, J. in *The Tryst* (*sup.*). I agree with the opinions expressed by Bargrave Deane, J. which I have read. In my view, it is not the law that, if the stand-on ship is proved to have altered her course or speed, before the last moment at which it is possible for the give-way ship by her own action alone to avoid collision, the stand-on ship must be held to blame. Some reasonable margin of time must be allowed to the stand-on ship both before and after the last possible moment. I also think that in this case Hill, J., advised by the Trinity Masters, with whose opinion our assessors agreed, was right in holding that the *Otranto* did not act outside that margin of time. I do not feel compelled to give the rules a construction which would involve an obligation on the master of the stand-on ship to do that which no human being could possibly be expected to do. The last moment at which the give-way ship can, by its own act, avoid a collision is a point of time infinitesimal in extent. It passes almost at the moment when it arrives. I cannot think that the rules mean that the stand-on ship must stand-on and fail to take measures to avoid an impending danger until the exact mathematical point of time has arrived when the give-way ship cannot, by anything she does, avoid a collision. I think the note to art. 21, with its reference to art. 27, enables us to give a wider construction to art. 21, and allow some latitude to the stand-on ship to act before the exact mathematical point of time, to which I have referred, has arrived.

The learned judge in this case, his two assessors and our assessors, have come to the conclusion that when the *Otranto* starboarded, it was sufficiently near the time at which it was necessary to do something to avoid the risk of a collision that the *Otranto* must be held not to have acted too soon.

It is said to be impossible to take this view, having regard to the decisions of the House of Lords in *The Orduna* (*sup.*), *The Athena* (*sup.*), and *The Norman Monarch* (*sup.*). In my judgment, there is nothing in any of these decisions to prevent the court from holding that, in the present case, the *Otranto* did not act too soon. In *The Norman Monarch* (*sup.*), it does not appear to have been contended that, on the evidence accepted by the court, the *Thrigia* did not act too soon. She appears to have starboarded twice, once, under the impression that the *Norman Monarch* was a sailing vessel. I think the case was decided on

questions of fact, and I can extract no rule of law from it. The same is true of the *Athena*. It is to be observed that, both in the *Norman Monarch* and in the *Athena*, as in the *Orduna*, the vessels were approaching at a fine angle, and, therefore, a very little porting at a late moment by the give-way vessels would have been sufficient to prevent a collision. The main contention in the *Athena* was the same as in the *Orduna*, " that at the time when the stand-on ship starboarded, the vessels were no longer crossing vessels, and the risk of collision had ceased." On the facts, Hill, J. found against this contention. It appears from the report in the Court of Appeal (10 Ll. L. Rep. 729), in the judgment of Bankes, L.J., at p. 731, that the point that was argued in the present case was also argued in *The Athena*. What Bankes, L.J. says about it is this : " Now the other point is this : Mr. Bateson seeks to bring his case within the reasoning which underlay the decisions in the cases of *The Albano* (*sup.*), *The Huntsman* (*sup.*), and *The Ranza* (*sup.*). Those were all cases where a man, though not acting, perhaps, in the agony of collision, acted under the fear of collision in the sense of something having to be done immediately because of the fear of collision ; but it seems to me quite impossible to bring this case within that class of authority because the case of *The War Bahadur* is this : That when I took the action I did take by starboarding the helm, I was under no fear of collision at all ; I thought that all danger of collision had passed, I acted as I did because the vessels had ceased to be crossing vessels, and I merely did it as a matter of precaution in order that I might not cause inconvenience by the two vessels passing too close to each other." I understand these observations of the Lord Justice as leaving open the question whether the navigator of a stand-on ship can be excused if he ceases to keep his course and speed at a time when it would seem reasonable to a skilful navigator that it was necessary for him to act in order to avoid immediate danger, though that time may be before the exact moment when the give-way ship could not, by her own act, avoid a collision. The judgments of Hill, J. and the Court of Appeal in *The Athena* (*sup.*) were affirmed in the House of Lords, as I read the report, on the ground that the House of Lords were not prepared to interfere with the findings of fact of the trial judge and of the Court of Appeal.

I have already dealt with the decision in *The Orduna* (*sup.*), which appears to me to be almost exactly similar to that in *The Athena* (*sup.*). In my judgment, there is no rule of law established by these cases which prevents this court from accepting the finding of Hill, J., who saw and heard the witnesses, that the time had come when it was reasonably necessary for the master of the *Otranto* to act in order to avoid immediate danger. Some margin of time must be allowed to the stand-on ship before and after the last moment has arrived. It has still to be considered in every case whether the stand-on ship has acted within that margin. I am not myself disposed to place great reliance on estimates of time and position made by observers on a rapidly moving vessel, or on calculations based on mathematical estimates of the course of a vessel, determined by its theoretical turning circle. I think more weight should be attached to the judgment of an experienced and trustworthy navigator, whose evidence the judge who saw and heard him accepts. I think Hill, J., the Trinity Masters, and our two assessors, were right in the view they have taken that the time had come for the master of the *Otranto* to make some alteration in his course or speed to avoid immediate danger, and that, in starboarding, he took action that was not either negligent or unseamanlike.

In my judgment, this appeal ought to be allowed on two grounds : (1) that the *Otranto* was not, to any extent, to blame for the collision ; (2) that in any event, the proximate, effective, substantial or real cause (whichever be the right word) was the negligence of the *Kitano Maru* in porting after the *Otranto* had signalled saying that she, the *Otranto*, was starboarding. I agree that the order of this court should be as stated in Lawrence's, L.J. judgment.

Solicitors : for the appellants, Messrs. *Parker, Garrett*, and *Co.*; for the respondents, Messrs. *Walton* and *Co.*

Friday, Jan. 31, 1930.

(Before SCRUTTON, SLESSER, and ROMER, L.JJ.)

DIXON v. STEAMSHIP AYRESOME (Owners). (*a*)

APPEAL UNDER THE WORKMEN'S COMPENSATION ACT.

Workmen's compensation — Accident — Arising out of and in the course of the employment—Workman employed on a ship as coal trimmer—Leaving the ship in the wrong way—Not outside employment—Workmen's Compensation Act 1925 (15 *&* 16 *Geo.* 5, *c.* 84), *s.* 1.

The dependant, Dixon, an infant, appealed from an award of the County Court judge, who held that an accident did not arise within the scope of the employment where the deceased workman, Chambers, a coal trimmer employed on the respondents' ship, was killed on leaving the ship in the following circumstances : The respondents' ship, going to load coal, was lying alongside a wharf ; the ship was 2ft. from the wharf. The bulwark was about the level of a handrail on the side of the wharf, each being about 3ft. 6in. high and there was about 2ft. between them. The foreman of the trimmers and a trimmer, whom he described as employed under him, went down to the ship to place the chute in position, so that the coal could be shot into the hold. They got on board, the

(*a*) Reported by T. W. MORGAN, Esq., Barrister-at-Law.

foreman by stooping under the handrail and then just jumping or stepping on to the edge of the bulwark, and there was no evidence whether the dead man got over the handrail or under the handrail when he went over the bulwark. They arranged the chute in about ten minutes and then, as there was nothing to trim until some coal had been shot into the hold, they both left the ship. The foreman on that occasion stepped on to the bulwark, and then on on to the top of the rail, and then hopped down on to the staith. The deceased man followed, and when he got his weight on the handrail he slipped and fell on his right side. The evidence was not clear whether the dead man slipped in his jump on the bulwark and then slipped again as he got on to the handrail, whether he made an ineffective jump because he slipped on the bulwark and consequently did not land square on the handrail, or whether he got a firm jump from the bulwark and slipped when he touched the handrail. In any event the result was that he was killed. The bulwark was the ship's bulwark. The handrail was on the quay and the quay did not belong to the ship. If the deceased had landed on the handrail and then fell, it was a question whether the accident happened on the ship's premises at all, and if he was not on the ship's premises when the accident happened, it was a question whether the employment had ceased. The County Court judge did not, however, deal with that point in his award, but he said that the question in dispute in this case was whether the action of the deceased in leaving the vessel as he did was an act done in the course of the employment. The witness had said definitely that it was not the right way of leaving the ship ; a ladder or gangway was provided whereby men could leave the ship. The County Court judge made an award in favour of the employers.

Held, that there was no evidence on which the County Court judge could have come to the conclusion that getting off the ship by stepping from the bulwark to the quay or to the handrail was so far removed from anything contemplated by either party that it would not be held to be within the employment at all ; nor had the workman, when he slipped and fell and was killed, left the ship's premises so as to bring him outside the employment of the ship when the accident happened. Therefore the accident in this case happened within the scope of the workman's employment and the award of the County Court judge in favour of the employers must be set aside.

APPEAL from an award of the judge of the North Shields County Court, sitting as an arbitrator under the Workmen's Compensation Acts.

The appellant, Frances Dixon, claimed as next friend of James Dixon, an infant, aged eleven years, of Perry Main, North Shields, the sum of 100*l.* 16*s.* compensation in respect of the death by accident arising out of and in the course of his employment, of one James Chambers. The infant, James Dixon, was an illegitimate son of the deceased workman, Chambers.

The respondents denied liability on the grounds that the infant was not a dependant of the deceased workman, and that the workman's death was not caused by accident arising out of and in the course of the employment.

His Honour Judge Sir Francis Greenwell held that the accident to Chambers did not arise out of and in the course of his employment.

The facts relating to the accident were as follows :

On the 25th June 1929, the respondents' steamship *Ayresome* was lying alongside a wharf at Northumberland Dock, ready to load coal. The ship was 2ft. from the wharf, the bulwark of the ship being level with the handrail on the side of the wharf, and each being 3ft. 6in. high. The deceased workman, James Chambers, was a coal trimmer employed on that ship. In coming off the ship on that day, Chambers stepped off the bulwark of the ship on to the handrail on the side of the quay, slipped and fell. He suffered injuries from which he died on the 5th July 1929.

Robert Reay, under whom Chambers worked, said that he and Chambers were leaving the ship, he himself stepped on to the bulwark, then on to the top of the handrail, and then hopped down to the staith. He looked back and saw Chambers hanging on the handrail. It looked as if he had slipped when getting on to the handrail. He did not notice any other means of getting off the ship, but he afterwards saw an 18ft. ladder. It was across the two-foot space between the bulwark and the handrail. In cross-examination he admitted that stepping across the handrail was not the right way to leave the ship. Another witness, Samuel Miller, a fitter, said that he saw Reay and Chambers leaving the ship, and that when Chambers got his weight on to the handrail, he slipped and fell on his right side.

The County Court judge said that the question was whether the action of the deceased, in leaving the ship as he did, was an act done in the course of the employment. The witness Reay said definitely that it was not the right way of leaving, and also that, though he did not know it at the time, a way by means of a ladder bridging the space between the vessel and the staith was provided. In those circumstances, it appeared to the County Court judge to be clear on the cases cited that the accident by which the deceased lost his life did not happen in the course of his employment, and he therefore made his award for the respondents.

The dependant appealed on the grounds that the accident to the workman arose out of and in the course of his employment, and that there was no evidence on which the County Court judge could find that the accident did not happen in the course of the employment ; that he misdirected himself by considering that because the workman left the ship in a

way that was not the right way, he necessarily went outside the scope of his employment; that the evidence showed that in leaving a ship on which he was engaged the workman was killed in doing an act for the purposes of his employers' trade or business, and there was no evidence of any prohibition against his leaving the ship in the way he did; that there was no evidence on which the County Court judge could find that the workman knew that the way he left the ship was not the right way; and that the workman's act in so leaving the ship was no more than a deviation from the prescribed method of leaving the ship: that the judge failed to direct himself with regard to the distinction between acts different in kind from those which the workman was employed to do and acts which merely amounted to misconduct in performing work which the workman was employed to do; that as the workman was killed while doing an act for the purposes of and in connection with his employers' trade or business while he was about his employment, and at the time when and at the place where he was carrying out his employment, and as such an act was not and was not alleged to be an "added peril," it did not disentitle the dependant to compensation in respect of the workman's death.

William Shakespeare and *J. Charlesworth* for the appellant, the dependant.—There was no evidence to justify the decision of the County Court judge that the fatal accident to James Chambers did not arise out of and in the course of his employment. The judge thought that if a workman did not act in the right way, that prevented the accident from arising out of and in the course of the employment. The question is whether the judge misdirected himself. On the evidence the deceased workman was doing what he was employed to do, but not in the right way, and according to the authorities, that does not take the accident outside the scope of the employment.

The following authorities were referred to: *Davidson (Charles R.) and Co.* v. *M'Robb or Officer* (118 L. T. Rep. 451; (1918) A. C. 304), *Gallant* v. *steamship Gabir (Owners of)* (12 Asp. Mar. Law Cas. 284; 108 L. T. Rep. 50), *Guest* v. *Gaston and Co.* (135 L. T. Rep. 400; (1927) 1 K. B. 1), *Howells* v. *Great Western Railway* (132 L. T. Rep. 544), *Kearon* v. *Kearon* (1911, 45 Ir. L. T. 96; 4 B. W. C. C. 435), *Keyser* v. *Burdrick and Co.* (1910, 4 B. W. C. C. 87), *Lashbrook* v. *The Times Shipping Company* (16 Asp. Mar. Law Cas. 209; 1923, 129 L. T. Rep. 403), *Morrison* v. *steamship Aboukir (Owners of)* (1928, W. C. & Ins. Rep. 293; 21 B. W. C. C. 163), *Stewart (John) and Son Limited* v. *Longhurst* (116 L. T. Rep. 763; (1917) A. C. 249).

W. H. Duckworth and *P. J. Sykes* for the respondents, the employers.—The question was one for the County Court judge. At the time of the accident the deceased workman had ceased to be in the employ of the respondents. His employment ceased when he left the ship, and the respondents were not liable: (see *Cook* v. *Steamship Montreal (Owners)* (1913, 108 L. T. Rep. 164; 6 B. W. C. C. 220).

Scrutton, L.J.—This is a point of some considerable difficulty, partly owing to the course which was taken at the trial and owing, to some extent, to an agreement which has been made between the parties. A ship going to load coal was lying alongside a wharf; the ship was 2ft. from the wharf. The bulwark, I gather, was about the level of a handrail on the side of the wharf, each being about 3ft. 6in. high, and there was about 2ft. between them. The foreman of the trimmers and a trimmer whom he describes as employed under him, went down to the ship to place the chute in position, so that the coal could be shot into the hold. They got on board, the foreman by stooping under the handrail and then just jumping or stepping on to the edge of the bulwark, and it is not stated whether Chambers, the dead man, got over the handrail or under the handrail when he went over the bulwark. They arranged the chute in about ten minutes, and then, as there was nothing to trim until some coal had been shot into the hold, they both left the ship, the foreman on that occasion stepped on to the bulwark and then on to the top of the rail, and then, as he describes it, hopped down on to the staith.

The evidence about Chambers is this: The man who saw him says: "I saw Reay leave the ship as he has stated, Chambers followed; when he got his weight on the handrail he slipped and fell on his right side." Reay himself says: "I looked back and saw Chambers hanging on the handrail; it looked as if he had slipped coming on the handrail." It is not, of course, clear from that—it is left in complete doubt—whether the dead man, Chambers, slipped in his jump on the bulwark and then slipped again as he got on to the handrail, whether he made an ineffective jump because he slipped on the bulwark, and, consequently, did not land square on the handrail, or whether he got a firm jump from the bulwark and slipped when he touched the handrail. However, unfortunately, the result of the slip was that he was killed.

When one reads the evidence of the foreman it will be seen that he said: "I am employed by the Hartley Main Colliery Company, and Chambers was employed under me as a trimmer." One expects to find that the defendants are the Hartley Main Colliery Company, but the defendants are not the Hartley Main Colliery Company; the defendants are the owners of the ship, and it appears that the union who deals with these trimmers, and the shipping federation who deal with the ship have a sort of agreement that a trimmer shall be treated as being in the employ of the ship, so that the owners of the ship are put as the defendants. That may raise a question—a very troublesome one in some cases—because

trimmers very often work two or three ships at a time, going from one to the other. In whose employ is the trimmer when he is going from ship A to ship B on the wharf? That is one of those interesting questions that the people who made this agreement never thought about, and which will be fought out, I suppose, some day.

But the fact of the possibility of such an agreement at once may raise this question. The ship is the ship, and its bulwark is the ship's bulwark. The handrail is on the quay, and the quay does not belong to the ship. If a man has landed on the handrail and then falls, is he on the ship's premises at all, and, if he is not on the ship's premises, has his employment ceased? Counsel who were present at the trial both told us that that point was raised in argument. One said that, although it was raised, it was not pressed very forcibly, and the learned County Court judge takes no notice of it, and does not refer to it at all in his award, and nobody asked him to refer to it when it was found that his judgment was blank on the subject, although, as counsel for the respondents says: "Why should I ask him to deal with it when I had got a decision in my favour on the other point? If I had asked him to deal with it I might have got a decision against me on that point, which would not have helped me at all." The learned judge not dealing with that point at all—I will say what I have to say about it in a moment—does deal with this other point. His award, which I understand expresses the judgment which he gave at the time, says: "The question in dispute in this case was whether the action of the deceased in leaving the vessel as he did was an act done in the course of his employment. The witness Reay says definitely it was not the right way of leaving," and he also adds a point about the ladder, with which I will deal in a moment.

There has been a series of cases in which judges have endeavoured to lay down with more or less success the distinction which exists. Without adding a further version I had better repeat the language which I used myself, and repeated afterwards, first of all in the case of *Wardle* v. *Enthoven and Sons* (116 L. T. Rep. 103), and then in the case of *Guest* v. *Gaston and Co.* (135 L. T. Rep. 400; (1927) 1 K. B. 1). In the case of *Wardle* v. *Enthoven and Sons* I said this (116 L. T. Rep. 103; (1917) W. C. & Ins. Rep., at p. 22): "If a man is doing the work he was employed to do, but doing it negligently, and meets with an accident, it is not therefore necessarily outside his employment; the accident may still arise out of his employment. A very good illustration of that is the case of *Blair and Co. Limited* v. *Chilton* (113 L. T. Rep. 514; (1915) 8 B. W. C. C. 324), where a man was employed to work a machine standing; and he worked it sitting down, and because of his working it sitting, which was a negligent way of doing it, an accident happened. There it was held that the accident arose out of his employment. You may have cases, on the other hand, where a man is doing something different from what he is employed to do, which has been expressed in various ways, such as being outside the sphere of his employment, outside the scope of his employment, or in another territory to that in which he was employed to work; then the accident does not arise out of his employment. But there is the more difficult class of case in which the man is doing what he was employed to do, but is doing it in such an extraordinary and unusual way that the courts find that the accident does not arise out of his employment, because he was not employed to do the work in the peculiar way in which he was doing it. An illustration of that is the case of *Russell* v. *A. G. Murray Limited* (1915, W. C. & Ins. Rep. 532; 5 B. W. C. C. 81), where a workman was employed to attend to belting, and had the duty of replacing the belting if it slipped off the shafting. In the room in which he worked there were ladders which he could use to get to the belting; but he chose not to get a ladder, but to climb on to a sloping window-ledge in order from that sloping window-ledge to put on the belting, and he fell and sustained injuries, from which he died. The court held, in that case, that the risk he was undertaking arose from such an unusual way of performing the work that the accident did not arise out of his employment, because the way in which he did what he was employed to do was not within the scope of the work that he was employed to do. That principle or statement is also expressed by Pickford, L.J., in the case of *Pepper* v. *Sayer* (1914, W. C. & Ins. Rep., at p. 427): 'It is possible to imagine cases in which the workman has acted in such an unreasonable way that, even though he were doing something within his employment, the manner of doing it would be so far removed from anything contemplated by either party that it would not be held to be within the employment at all.'"

That statement I referred to and repeated in the case of *Guest* v. *Gaston and Co.* (*sup.*), and it has been repeated with approval in a number of other cases by other judges. So that the question which the learned County Court judge had here, assuming he had those cases in his mind, was: There being a ladder by which the man could get off the ship—every ship is bound to have something of that sort by which a man can get off it—either a ladder or a gangway or planks—was the getting on and off the ship by way of stepping from the quay to the top of the bulwark and from there to the top of the handrail, in the language of Pickford, L.J. (1914, W. C. & Ins. Rep., at p. 427): "so far removed from anything contemplated by either party that it would not be held to be within the employment at all"?

If there was evidence on which the learned County Court judge could find either way, that would be a matter for him, and we could not interfere. If he had not considered that distinction at all we might, as in the case of the

man getting on to the moving tram, send the case back to him to consider. The question is whether there was any evidence upon which, in the language of Pickford, L.J., he could have come to the conclusion that getting off the ship, which was a thing which the man had to do under his employment—he had to get on to the ship and get off it when he had done his work—by stepping from the bulwark to the quay or to the handrail was " so far removed from anything contemplated by either party that it would not be held to be within the employment at all."

Whether I am right or wrong in doing it, I am afraid I am deciding this case from what I know about docks, and I cannot think there is any evidence which justifies anybody in saying that to get off a ship by stepping from the bulwark to the quay when there is two feet between the two is so far removed from anything contemplated by either party that it is not within the scope of the employment. It is done, I should think, dozens of times a day in every dock on every ship. It is a risky way of doing it as appears from this case, but with great respect to those who thought a sloping ladder was a safe way of getting off the ship, so is coming down a sloping ladder an unsafe way of doing it, so far as my experience goes.

I come, therefore to the conclusion on that point that the decision of the learned County Court judge should be set aside, on the ground that there was no evidence on which he could arrive at that view.

There only remains the question which I personally think is an important and difficult one, namely, as to whether the point when the workman slipped on the handrail he had left the employers' premises, so that he was then no longer in the employ of the ship, should be submitted to the learned County Court judge. I have come to the conclusion, but with some doubt, that it should not be. In the first place, I think the course taken at the trial is not such as to distinctly raise it. It seems that there is no trace of it in the learned judge's judgment, and he was not asked to decide it when it was found that he was not in fact deciding it. Further, it appears to me that the facts are much too nebulous to raise, really, a specific case of the man being off the ship when the accident happened. The slip which brought him down may have begun on the bulwark, in which case he would have been on the employers' premises, and if the slip occurs in the course of one step—when one foot is on the ship and one on the shore—I think it is extremely difficult to say that the man ought to be deprived of his rights because, in the course of that one step, at one end of which he is on the ship and the other on the shore, an accident happened. I do not wish this case to be taken as a decision that an accident happening off the employers' premises is necessarily to be imputed to the employers. There are many cases in which getting off the employers' premises the employers' risk has ceased. I decide this case on the peculiar facts of this case, and the course taken at the trial.

For these reasons I think that the learned County Court judge's decision must be set aside. Is the amount of compensation agreed ?

Shakespeare.—No, my Lord. The matter will have to go back to the learned County Court judge to fix the compensation. It is a case of an infant.

Scrutton, L.J.—Very well. The case must be remitted to the learned County Court judge to decide the amount of compensation due to the infant.

Slesser, L.J.—I agree that this appeal must be allowed, for the reason that, in my judgment. there is no evidence on which the learned County Court judge could come to the conclusion that the accident by which the deceased lost his life did not happen in the course of his employment. The test which has been mentioned by my Lord, and which I also apply, which is mentioned in many cases, in various phrases, beginning with *Barnes* v. *Nunnery Colliery Company* (105 L. T. Rep. 961 ; (1912) A. C. 44), *Plumb* v. *Cobden Flour Mills Company* (109 L. T. Rep. 759 ; (1914) A. C. 62), and particularly in *Pepper* v. *Sayer* (7 B. W. C. C. 616), is : " Has the workman acted in such an unreasonable way that even though he was doing something within his employment, the manner of doing it would be so far removed from anything contemplated by either party that it would not be held to be within the employment at all ? "

That test has been applied to one or two cases, at any rate, which raise questions not unlike those in the present case. It has, for example, been held that where a proper gangway was provided, and a seaman chose to jump from the quay to the ship instead of using the proper gangway and fell into the water, the accident could not be said to arise out of the employment. That is the case of *Martin* v. *Fullerton and Co.* (1908, S. C. 1030). In that case there was evidence that there was a proper gangway provided. Had there been any evidence here of an authorised way of leaving the ship, and had the learned County Court judge based his finding on any such evidence, I do not think that it could have been disturbed ; but the evidence indicates to me that there was no authorised way which can properly be found on the evidence for leaving the ship at all. It is not suggested that the method of jumping was specifically authorised, and the only other method of leaving the ship which is suggested was by means of a long eighteen-foot ladder. Mr. Reay, who, it is true, was not employed by the ship even notionally for the purposes of this case, as apparently was the appellant here, but who was the foreman, said that Chambers, the deceased, was employed under him as a trimmer, and he also said that he afterwards saw a long

eighteen-foot ladder. That was his evidence, and it appears from that that certainly he, Mr. Reay, did not know of any ladder which could be used as an authorised means of leaving the ship. Of course, that is no evidence whatever that the deceased knew of any such authorised way. It is said against that, that in cross-examination, Mr. Reay said that stepping across the rail is not the right way, but that leaves the matter still in complete doubt as to whether any other method had been authorised for leaving the ship. But it does not follow because stepping across the rail is not the right way that using the ladder would have been the right way, or would not have been the right way.

Therefore, the case seems to me to be distinguishable from *Martin* v. *Fullerton and Co.* (*sup.*), which applied the doctrine of *Pepper* v. *Sayer* (*sup.*), *Plumb* v. *Cobden Flour Mills Company* (*sup.*), *Barnes* v. *Nunnery Colliery Company* (*sup.*), and the decision in *Kearon* v. *Kearon* (45 Ir. L. T. 96), where it was held that if there is no gangway, and no other means of access but to jump from the quay, the accident may arise out of the employment; and in *Keyser* v. *Burdick and Co.* (4 B. W. C. C. 87) it was similarly decided that if the only means of getting on shore is to slide down a rope, that is not such an unreasonable use as to bring the act of the workman outside the sphere of the employment.

In my judgment, differing, unfortunately, from my Lord in knowing nothing about docks, I think there is no evidence in this case that any authorised way was provided for leaving this ship. All we know is, that this man followed the example of the foreman in leaving this ship by jumping from the ship to the quay. In those circumstances, it appears to me, once it is conceded that it is necessary for the man, by the nature of his business, to leave the ship, there being no authorised way, there is no evidence that this was an unreasonable way of leaving the ship, and that would conclude the matter on the authorities, that this was a mere method which may or may not be a very ideal method, but is a method within the sphere of his employment, and he has not suffered or done anything which would produce any added peril to his employment not contemplated reasonably by both parties.

There remains only the further question whether anything can be said here with regard to the fact that it may be that the accident occurred outside the premises of the employers. I say "may be" because, on the evidence, it is extremely doubtful whether the actual accident was the slip or the grasping of the handrail, or whether the slip occurred on the premises, or whether it occurred on the handrail; the whole matter is left in some obscurity on that point. Although it has been said, and very frankly admitted by counsel for the appellant, that the matter was mentioned, I do not think any real contention was laid before the learned County Court judge on this issue. The evidence is not directed to the question of exactly where the accident took place, which would have been an essential point if this point was to be raised—as to whether it was or was not upon the employers' premises. The cases which were cited by counsel for the respondents have no reference to this particular issue, and counsel for the respondents called no evidence which might have been material on this point, and, finally, the award of the learned County Court judge obviously does not proceed on any question as to whether the accident happened or did not happen on the employers' premises. In those circumstances, I think it would be wrong to send this case back upon this point, because I do not think the point was really raised in such a manner as to call for the determination of it in the court below. I therefore prefer to say nothing about that point, and I base my view that the appeal should be allowed entirely on the fact that there is no evidence upon which the learned County Court judge could properly find that the accident by which the deceased lost his life did not happen in the course of his employment. Once it is conceded, and conceded as it must be, that it was part of the employment to go on to the ship and to leave it, it follows that the accident did happen in the course of the employment, and that the learned County Court judge came to a wrong conclusion, and, therefore, the appeal should be allowed.

Romer, L.J.—There are two questions which were really raised on this appeal. The first one is whether, assuming that the accident here occurred while the workman was getting over the rail on the quay, it occurred in the course of his employment. The other question is whether, assuming that question to be answered in the affirmative, the workman's manner of leaving the ship was of such a nature as to take him outside the scope of his employment. For the purposes of answering the first question I am entitled to assume that the method by which he left the ship was either the only one available to him or was, at any rate, one of the methods that was authorised. It has been held over and over again that a man's employment does not cease the moment he ceases to work; his employment generally lasts until he has left his employers' premises. If, therefore, in the present case, and on the assumption that I have made, the accident happened by the workman slipping as he took off from the ship in making this flying leap, it could not, I suppose, be doubted that the accident happened in the course of his employment. Does it make any difference that the accident occurred as he landed on the quay after the flying leap? In my opinion it does not.

Speaking for myself, I should have thought that the employment lasted until the workman had safely arrived on neutral territory, the neutral territory in this case being the surface

of the quay. I think that that conclusion is warranted by at least two authorities decided in this court. One of them is the case of *Webber* v. *Wansborough Paper Company* (111 L. T. Rep. 658; (1915) A. C. 51). That was a case of a seaman employed on a vessel, who left the ship for home at the end of his work, crossing to the quay by a plank to an iron ladder permanently fixed against the side of the quay. The ladder fixed against the side of the quay was not the property of the employer at all; it was the property of the owner of the quay. The workman using this means of obtaining access from the ship to the quay slipped while ascending the ladder, and it was held nevertheless that the accident arose in the course of his employment. He had not safely arrived on the neutral territory. The other case is the case of *Barbeary* v. *Chugg* (112 L. T. Rep. 797; 8 B. W. C. C. 37; 31 Times L. R. 153). That was the case of a man acting as a pilot, who had been piloting a ketch, and after doing his work, which consisted of piloting the ketch, he wished to get back to land, and so he took a flying leap from the ketch into a small dinghy that was being towed behind the ketch. The dinghy was his own property. The accident was described by the Master of the Rolls, Lord Cozens-Hardy, in this way. He said: " He jumped and alighted not in the best or most suitable position, but in the front of the boat, the result being that the boat went under water and became so nearly full that he was up to the thighs in water." Now he was using the only means of access open to him to the neutral territory which was the land, and the fact that the accident happened not indeed on the ketch, which was the property of the employer, but on the boat, which was the property of the employee, was not said to be a reason for holding that the accident occurred otherwise than in the course of his employment.

For these reasons, it appears to me, even on the assumption I have made, namely, that the accident did occur not while he was taking off on the ship, but as and when he landed on the quay and was trying to get over the rail, that the accident occurred in the course of his employment.

Upon the other point, as to whether, having regard to the manner in which he left the ship, he was acting outside the scope of his employment, I do not wish to add anything to what has fallen from the other members of the court, and I agree with the order that has been suggested.

Appeal allowed.

Friday, May 2, 1930.

(Before SCRUTTON, GREER, and SLESSER, L.JJ.)

THE CROXTETH HALL; THE CELTIC. (*a*)

ON APPEAL FROM ADMIRALTY DIVISION.

Seamen's wages—Wreck—Right to receive wages during period of two months from the date of the wreck if unemployed—Voyage terminating within the period of two months—Payment of wages whilst unemployed during period subsequent to date when voyage was due to end—Merchant Shipping (International Labour Conventions) Act 1925 (15 & 16 *Geo.* 5, *c.* 42).

By the Merchant Shipping (International Labour Conventions) Act 1925, *s.* 1 (1), *it is provided that " where by reason of the wreck or loss of a ship on which a seaman is employed his service terminates before the date contemplated in the agreement, he shall, notwithstanding, be entitled in respect of each day on which he is in fact unemployed during a period of two months from the date of the termination of the service, to receive wages at the rate to which he was entitled at that date "; and by sub-sect.* (2) *it is further provided that " a seaman shall not be entitled to receive wages under this section if the owner shows that the unemployment was not due to the wreck or loss of the ship and shall not be entitled to receive wages under this section in respect of any day if the owner shows that the seaman was able to obtain suitable employment on that day."*

Held (Slesser, L. J. dissenting) that a seaman is entitled to wages for a period of two months from the date when his services terminate by reason of the wreck, notwithstanding that the voyage to which his agreement relates would have come to an end but for the wreck, within the period of two months.

APPEAL from judgments of Lord Merrivale, P., in two wages actions, referred to the Probate, Divorce and Admiralty Division by the stipendiary magistrate at Liverpool, and heard together.

The plaintiff in the first action (*Murray* v. *Ellerman Lines Limited; The Croxteth Hall*), signed articles as an able-bodied seaman and quartermaster on board the defendants' steamship *Croxteth Hall* for a voyage not exceeding two years' duration from the 29th Oct. 1928, terminating at such port in the United Kingdom or continent of Europe within home trade limits as might be required by the master. The *Croxteth Hall* was wrecked near Flushing on the 28th Feb. 1929, and the plaintiff was returned to Liverpool on the 4th March 1929 at the defendants' expense, and paid his wages up to the 4th March 1929. Had the *Croxteth Hall* not been wrecked, she would have completed the voyage in respect of which the plaintiff had engaged at Middlesbrough on the 11th March 1929. The plaintiff was unemployed for a period of two months from the 28th Feb. 1929. He claimed wages at the rate

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

provided for by the articles and subsistence allowance at the rate of 4*s.* per day.

In the second action (*Comerford* v. *White Star Line of Royal and United States Mail Steamers, Ocean Steam Navigation Company Limited; The Celtic*), the plaintiff was an able-bodied seaman on board the defendants' steamship *Celtic.* The voyage described in the articles under which the plaintiff served was from Liverpool to New York *via* Queenstown, Boston, and (or) if required to any ports within the North and South Atlantic Oceans trading, as may be required until the ship returns to a final port of discharge in the United Kingdom. On the 10th Dec. 1928, the *Celtic* was wrecked near Queenstown whilst homeward bound for Liverpool, which would have been her final port. Had the *Celtic* not been wrecked she would have reached Liverpool on the 11th Dec. 1928. The plaintiff, with the other members of the crew, was brought to Liverpool by the owners on the 13th Dec. 1928, and was paid his wages under the articles up to and including the 11th Dec. From the 11th Dec. the plaintiff, who was one of the regular crew of the *Celtic*, was unemployed. The plaintiff claimed wages for a period of two months from the 11th Dec. and subsistence allowance at the rate of 4*s.* per day.

The Merchant Shipping (International Conventions) Act 1925 (15 & 16 Geo. 5, c. 542), provides as follows:

Sect. 1. (1) Where by reason of the wreck or loss of a ship on which a seaman is employed his service terminates before the date contemplated in the agreement, he shall, notwithstanding anything in section one hundred and fifty-eight of the Merchant Shipping Act 1894, but subject to the provisions of this section, be entitled, in respect of each day on which he is in fact unemployed during a period of two months from the date of the termination of the service, to receive wages at the rate to which he was entitled at that date. (2) A seaman shall not be entitled to receive wages under this section if the owner shows that the unemployment was not due to the wreck or loss of the ship and shall not be entitled to receive wages under this section in respect of any day if the owner shows that the seaman was able to obtain suitable employment on that day. (3) In this section the expression "seaman" includes every person employed or engaged in any capacity on board any ship, but in the case of a ship which is a fishing boat, does not include any person who is entitled to be remunerated only by a share in the profits or the gross earnings of the working of the boat.

Langton, K.C. and *G. J. Lynskey* for the plaintiff, Murray.

Fraser Harrison for the plaintiff Comerford.

Dunlop, K.C. and *Cyril Miller* for the defendants.

Langton, K.C. replied. *Cur. adv. vult.*

Dec. 4, 1929.—Lord MERRIVALE, P., delivered the following considered judgment:

John Murray, who is the claimant in these proceedings, was shipped as an able seaman and quartermaster on the steamship *Croxteth Hall* for what is described in the articles as "a voyage of not exceeding two years duration to any ports within the limits of 75° N. and 60° S. latitude commencing at Manchester, proceeding thence to Persian Gulf and (or) any other ports within the above limits, trading in any rotation and to end at such port in the United Kingdom or continent of Europe within home trade limits as may be required by the master." The date of commencement of the voyage was the 29th Oct. 1928. It was in progress homeward when the *Croxteth Hall* was wrecked on the coast of Holland on the 28th Feb. 1929. With other members of the crew Murray was brought back at the owners' expense to Liverpool by the 4th March and paid off, wages being paid up to and including the 6th March.

Had the *Croxteth Hall* proceeded on her voyage without mishap she would have gone on to Middlesbrough, where she was due to arrive not later than the 11th March. There the voyage would have ended and subject to any new agreement or agreements, Murray and the other members of the crew would have been discharged from further service under the articles in question.

Murray's home address as shown by the articles was Rock Ferry. On being paid off he proceeded to Rock Ferry and was living there during several ensuing months, out of work and seeking in Liverpool and Birkenhead a like berth to that he had had on board the *Croxteth Hall.* He did not at that time secure employment.

On the 19th March the local secretary of the Transport and General Workers Union, of which Murray was a member, addressed to the defendants' manager an enquiry as to their readiness to indemnify him for loss of employment by reason of the wreck, indicating a probable claim under the Merchant Shipping (International Labour Conventions) Act 1925. This enquiry elicited a letter from the defendants' solicitors, in its material terms as follows:

We are instructed that your three members were paid off at Liverpool up to and including 4th ultimo. We are further instructed that in any event the services of your members would have terminated at Middlesbrough before 12th ultimo. In these circumstances it would appear to us that any unemployment of your members after 12th ultimo was not due to the wreck or loss of the ship, and the case falls within sub-sect. (2) of sect. 1 of the Merchant Shipping (International Labour Conventions) Act 1925. Our clients are therefore prepared to pay your members wages for the period 5th March to the 12th March inclusive, and we shall be glad to hear from you whether our clients are to send the amount in question to you or to your members direct. In the latter event you will no doubt furnish us with their addresses.

Reference was made in the solicitors' letter to a form of statutory release signed by the plaintiff when he was paid off on the 4th March. This, however, does not need to be set out. At the trial it was not relied upon.

Other correspondence ensued, and in May the plaintiffs' solicitors took proceedings before the stipendiary magistrate at Liverpool, claiming under the Act of 1925 two months' wages at the rate fixed by the articles, and subsistence money for the same period at 4*s.* a day. Murray's was not the only claim before the learned magistrate. As has appeared already members of the crew of the *Croxteth Hall* were members of the same union and were claimants. Concurrently with these claims, there had arisen claims of a very large body of seamen, members of the crew of the White Star Company's steamship *Celtic* wrecked near Queenstown in December 1928, of whom Joseph Comerford was one.

Murray's case, and Comerford's case, which must be specifically dealt with later, were brought to a hearing before the learned stipendiary magistrate. In both cases evidence was taken and arguments made, and both were eventually referred by the learned magistrate to this Division.

On the plaintiff Murray's part—by the pleadings which were delivered, and in the arguments advanced by his counsel—the main contention is that his service having terminated before the date contemplated in his agreement, his right to wages at the contract rate for each day on which he was unemployed, during two months from the termination of the service, is an absolute right by virtue of sect. 1 (1) of the statute, subject only to be displaced or reduced as to any day in respect of which under sub-sect. (2) the owners might show that he was on that day able to obtain suitable employment. A further contention is raised, to the effect that but for the loss of the *Croxteth Hall* Murray would have continued in the employment of the defendants for at least two months after March 4th, and indeed in all probability for a period not yet terminated, at wages of £9 10s. a month with keep when on board or subsistence allowance of 4*s.* a day during times when he should be "working by" the ship between voyages. Plaintiff was allowed to give some evidence *de bene esse* as to the footing on which he had been during some years a usual member of the ship's company of the *Croxteth Hall*, and in proof of an invitation to "stand by" the ship while in port at Middlesbrough given to him by the chief officer while they were homeward bound.

As to the main question the defendants assert that any unemployment of the plaintiff after the 10th March was not due to the loss of the ship. "On the 10th March," they say, "the *Croxteth Hall* would have arrived at Middlesbrough, and on that date the voyage in respect of which the agreement was made would have ended and the crew, including the plaintiff, would have been discharged." Alternatively, they contend that any claim under the Act of 1925 is by the Act limited to indemnity against unemployment resulting from the loss of the ship, and consequently could not exceed the amount of the wages the plaintiff might have earned in the period expiring with the date on which—the ship being safe—he would have been paid off. The defendants, I may mention now, produced a good deal of evidence as to vacancies for employment in steamers of like character to the *Croxteth Hall* at Liverpool and Birkenhead during the two months after the 4th March, and they claim to have shown that Murray had abundant opportunities of employment and could have secured it, at any rate for part of the time in question. As to this matter, however, I find against them. They did not satisfy me there were any days within the two months on which Murray was able to obtain suitable employment.

As to the plaintiff's subsidiary grounds of claim, defendants resist *in limine* the consideration of any claim arising outside the ship's articles, either from the course of dealing of the defendants with the plaintiff or upon any proposal made or expectation held out to him during the voyage in question.

These subsidiary claims can be concisely disposed of. As to employment other than that provided for by the articles, which Murray would probably have had if the *Croxteth Hall* had not been lost, the articles constitute the agreement with which the statute deals in sect. 1 (1) (2); the service terminated by the wreck was his service under the articles; and although the words "unemployment indemnity" occur in the title, preamble, and First Schedule of the Act, its operative effect is not by means of these words extended beyond the terms of the express provisions in sect. 1: The claim for subsistence allowance in addition to wages, on the ground that the seaman's remuneration under the articles included his "keep," was not seriously pressed, and, in my opinion, could not be sustained. The language of the section excludes the claim. The crew are to serve on board, and in consideration of their service, as the articles state, "the master . . . agrees to pay to the . . . crew as wages the sums against their names respectively expressed and to supply them with provisions according to the scale." "Wages" at the rate to which the seaman was entitled under the articles is what the section, within restricted limits, entitles him to receive during a possible two months of unavoidable unemployment.

As to the main controversy Mr. Dunlop argued for the defendants that what the statute gives the seaman is indemnity against unavoidable unemployment between the actual termination of the service and the date on which the service would have expired had there been no wreck. That contention he supported by reference to the terms of the title, preamble, and First Schedule of the statute, and, in particular, the use of the word "indemnity," in the view that a claim for indemnity could only take effect for the period provided for in the contract. The true meaning of the section, it was said, would be apparent if there were read into it after the word "unemployed" these words "before the date contemplated in the

agreement," so that the operative words would run thus: "he shall . . . be entitled in respect of each day during which he is in fact unemployed before the date contemplated in the agreement, during a period of two months from the date of the termination of the service to receive wages."

On grounds of construction, as well as on broader grounds which have regard to the scope and apparent intent of the statute, it seems to me impossible to construe the section as is proposed on behalf of the defendants. The words suggested by way of "elucidation" would, if inserted, transform the effect of the enactment. The plaintiff, being a man who was in fact unemployed during a period of two months from the date of the "termination of the service"—by reason of wreck or loss of the ship—instead of being entitled *primâ facie* to receive wages in case of unemployment during a period of two months from the date of the loss, would be given a *primâ facie* claim to wages for six days.

The broader considerations I have mentioned seem to me also to preclude the suggested limitation. In the present case the loss of the *Croxteth Hall* occurred when she was homeward bound and near the end of her voyage, so that there is reason for the observation that under the terms of the articles the seaman was at the time of the wreck within six or seven days of possible unemployment. But the statute deals by one process of relief with all the infinitely various cases in which a seaman's service may be prematurely terminated by loss of a ship. Given, side by side with this case, a case of some ship outward bound under articles signed for a long voyage, lost at a point so distant that return of the crew to the home port would occupy a period of weeks, reasons at once appear why a standard measure of possible relief based on some period other than that of the unemployment actually suffered under the articles may have been determined upon by the authors of the statute. "Indemnity" the section does not give either in the broad sense which some of the plaintiff's claims would require, or in the restricted sense which the defendants' construction would give. It gives not "indemnity" but a conditional safeguard. It enables the seaman to claim compensation for loss of wages if he is out of work through shipwreck, but it limits the maximum amount of the possible claim to a period of two months, and it cancels the claim for any part of the two months as to which it is shown that he could have had employment if he would, and was voluntarily unemployed.

The plaintiff's service was, before the date contemplated by his agreement, terminated by reason of the wreck of the *Croxteth Hall* on the 28th Feb. He was unemployed for two months and upwards from that date, and the unemployment was due to the wreck or loss of the ship. He was not able at any time in the two months to obtain suitable employment. Subject to deduction of wages already paid in respect of any of the days subsequent to the wreck he is entitled to recover wages for the two months of his unemployment.

THE CELTIC.

The steamship *Celtic* was on the 10th Dec. 1928 wrecked and lost on the Irish coast near Queenstown in course of a voyage described in the articles under which her crew served as "from Liverpool to New York via Queenstown, Boston, and (or) if required to any ports within the North and South Atlantic Oceans trading as may be required until the ship returns to "a final port of discharge in the United Kingdom." The vessel was homeward bound at the time of being lost, making for Liverpool, which would have been her "final port of discharge" under the articles. But for the wreck Comerford's services under the articles would have terminated on the 11th Dec., and he would have been paid off with wages up to and including that date. The crew were brought by tender from the wreck to Liverpool, and on the 13th Dec. Comerford was paid off. The wages paid him were wages up to and including the 11th Dec. He, together with some of his fellow seamen, received the wages so paid under protest, making this memorandum: "We each claim compensation under sect. 1 of the Merchant Shipping (International Labour Conventions) Act 1925."

Comerford had been for some years one of the usual crew of the *Celtic* in her successive voyages to and from the United States in the capacity of a refrigerating greaser and seaman, and if the vessel had not been lost would no doubt have continued to sign articles for further like voyages in the same capacity. His rate of pay was 10 guineas per month, and in case of his "working in articles by his vessel in port" without food and lodging found by the ship, he would have been entitled to a money allowance of 4*s*. a day in lieu thereof.

Claims on Comerford's behalf were put forward by his union on the ground that by reason of the wreck or loss of the *Celtic* his service was terminated before the date contemplated in the articles, and that he was as and from such termination of service unemployed during a period of two months, and, further, or alternatively on the ground that but for the wreck or loss he would have remained employed on the *Celtic* after her return from the voyage in question. He claims also in addition to two months' wages, subsistence money for two months at 4*s*. a day.

For reasons such as I have explained in *Murray's* case against the *Croxteth Hall* I hold that the statute in question does not give the plaintiff a right to indemnity or damages in respect of disappointed expectations of service other than the actual service provided for in the articles under which he was serving at the loss of the *Celtic*, and that any right he has under the statute for unemployment by reason of the wreck is a right to wages only, and cannot be made to include subsistence money.

The defendants adduced evidence to show that employment was available to Comerford on board various ships which signed on crews between the date of the wreck and the date three months later when he was next employed. As to this matter, however, I do not find the defendants to have established that on any day or days within two months of the wreck Comerford was able to obtain suitable employment.

The main questions in this case, as in *Murray's* case, are whether Comerford's service was by the wreck or loss of the *Celtic* terminated before the date contemplated in his agreement, and whether he was unemployed during two months from the termination of his service. Upon like grounds to these which I have stated in the case of the *Croxteth Hall*, both these questions must be answered in the affirmative. The fact that, with the *Celtic* safe in port in Liverpool, Comerford's service under his articles would apparently have terminated on the 11th Dec., the next day after the loss of the vessel, does not, in my judgment, deprive him of the benefit conferred by sect. 1 of the Act of 1925, and his claim must be allowed for two months from the actual termination of his service by the loss of the ship on the 10th Dec., less one day's wages already paid.

The defendants appealed.

Dunlop, K.C., and *A. J. Hodgson*, for the appellants.

Langton, K.C., and *Lynskey*, K.C., for the respondent Murray.

Fraser Harrison for the respondent Comerford.

Scrutton, L.J.—Until 1925 the wages of a seaman ceased on the wreck of his ship, but he was returned to the United Kingdom at the expense of the shipowner. On the 31st July 1925, there came into force an Act of Parliament (15 & 16 Geo. 5, c. 42) designed to give effect to certain International Conventions arrived at in 1920 and 1921. Such conventions have no effect in Great Britain until they are embodied in statutes, though if the language of the statute is ambiguous, the language of the Convention may be resorted to to assist in interpreting the statute. The title of this statute employs the phrase " an unemployment indemnity for seamen in the case of loss or foundering of a ship." The material section reads as follows: [the learned Lord Justice read sect. 1, sub-sect. (1) (2)] It is obvious that the wreck or loss of a ship on which a seaman is serving will always happen before the date contemplated for the termination of his service. The sub-section, therefore, gives him for two months after the wreck a right to receive wages at the rate mentioned in the agreement. If I understood correctly the argument of Mr. Dunlop for the shipowner, he contended that under this sub-section alone the seaman could not get wages for any period after the date at which, had there been no wreck, the agreement to serve would have terminated. I cannot obtain this result out of the language of sub-sect. (1), which appears to give wages for a fixed term of two months from the wreck, " subject to the provisions of the section." The relevant provision is sub-sect. (2) which I have just read. This puts the burden on the shipowner to prove certain facts which would displace the right to wages acquired by the seaman under sub-sect. (1). He may show that the unemployment was not due to the wreck or loss of the ship. The seaman is obviously unemployed on the ship in which he served because of its loss. But his actual unemployment on any ship at all may be primarily or proximately due to his own disability, as if he breaks his leg after he has safely landed, or after the same date gets sent to prison. Unemployment may also be directly due to the fact that he has made no attempt at all to obtain other employment, though vacancies on other ships were being offered, but simply gone on the " dole." In such a case, if proved by the shipowner, I think the unemployment would not be due to the wreck. The seaman may prove that at the time of the wreck he had either a promise of employment on the next voyage, or a reasonable expectation from past history of obtaining such employment. For instance, where for some years the seaman has been regularly re-engaged after the voyage, and his agreement terminates, I think the seaman would be entitled to say that he was unemployed as the result of the wreck. But the employer might still displace it by showing that the seaman has made no attempt at all to obtain substituted employment, though it was offering. I think a difficult question may arise, if the employer proves that the state of the labour market is such that if there had been no wreck the seaman on his engagement terminating would not have obtained employment either in the wrecked or any other ship. This is similar to the question on which there has been much discussion under the Workmen's Compensation Act. The question there arises in this way. By sect. 1 a workman suffering personal injury by accident is entitled to compensation from his employer, and, under sect. 9, sub-sect. 1, where partial incapacity for work results from the injury, a weekly payment calculated on certain rules, one item in which is the weekly amount he is able to earn after the accident. This is accompanied by a provision that if the workman proves he has taken reasonable steps to obtain employment and has failed, and that his failure is a consequence wholly or mainly of the injury, the judge may order his incapacity to be treated as total incapacity. On these provisions the question has arisen: " What is the position where, though the workman lost his employment through accident, on his recovery, a partial recovery, the condition of the labour market is such that even if the workman had never met with an accident he

would have been out of work, and could not get employment?" In such a state of facts the House of Lords has held that unemployment is not a consequence wholly or mainly of the accident or injury, but is a consequence of the state of the labour market, and that "able to earn" relates to physical capacity to earn, and not to the state of the labour market: (*Bevan* v. *Nixon's Navigation*, 139 L. T. Rep. 647; (1929) A. C. 44; *Lyon* v. *Taylor Brothers* (1929, 21 W. C. C., 416).

I have come to the conclusion that these decisions turn on the special language of the Acts applicable, and that no principle involved in those decisions enables the employer under the Act now under consideration to prove that the unemployment is not "due to the wreck" by proving the state of the labour market, and so to defeat the claim. In other words, where, either by express agreement, or on reasonable probability from past history, the seaman would but for the wreck have continued to be employed in the wrecked vessel, his loss of employment is due to the wreck, even though in the state of the labour market he finds difficulty in getting employment. Apart from evidence of refusal to serve on any particular day, the cause, or the effective cause, of his unemployment is the wreck.

The second part of sub-sect. (2) enables the employer to defeat the *primâ facie* claim under sub-sect. (1) by proving in respect of any day that the seaman was able to obtain suitable employment that day. This is a different and independent provision. The employer may not be able to prove it, and yet may succeed under the first part of sub-sect. (2) as if the employer proves that the day after the seaman was safely back in England he broke his leg and was laid up for two months, or, to take an extreme case, if the employer proves that on the same day the seaman was sent to prison for two months. But I do not think the employer satisfies the second condition in sub-sect. (2) by proving vacant places for which any seaman might apply and no attempt to obtain them. That, in my opinion, will be relevant under the first condition. To satisfy the second condition the employer must prove an offer to the seaman of suitable employment, and refusal by the seaman. I can see that difficult questions may arise when the wages offered are less than the wages earned before the wreck, and it is questionable whether the difference is due to changed conditions of the labour market or to different value between the labour originally done and the labour offered. It will be seen that, in my view, each case must depend on its own facts, but I have endeavoured to lay down certain principles for the construction of the statute, by which the particular facts in each case may be tested. I now turn to the two cases in question, with the warning that the decision in each case does not necessarily apply to each man involved in the wreck in question.

THE CROXTETH HALL.

The *Croxteth Hall* was wrecked off Flushing on the 27th Feb. 1929. John Murray was then engaged in her on an agreement dated the 29th Oct. 1928 for a voyage not exceeding two years from Manchester to the Persian Gulf, trading within certain limits, and to end at such port in the United Kingdom or Continent as may be required by the master. After reaching Antwerp with a homeward cargo the ship was proceeding to the United Kingdom and was advertised to load cargo for a new outward voyage—at Hull, the 21st March; Middlesbrough, the 11th March; London, the 15th March; South Wales, the 22nd March; and Glasgow, the 27th March. Murray had been previously engaged in the *Croxteth Hall* on four voyages, with one break, and usually stood by on pay while the ship was in port after he was paid off till he signed on again. Before the wreck he had been asked by the chief officer to stand by the ship when she got to Middlesbrough, which was apparently then treated as the end of the voyage, and was expected to be reached on the 10th or 11th March. After the wreck Murray was taken to Liverpool and there paid off on the 4th March. He claimed two months' wages from the 4th March. This was clearly wrong, as the two months began on the 27th Feb., and he had been paid up to the 4th March. It is further clear that but for the wreck he would have been paid up to the 10th or 11th March on arrival at Middlesbrough. In my opinion also the evidence shows that but for the wreck he would have been employed on the Croxteth Hall, standing by at Middlesbrough, coasting, and on the next voyage. So that the shipowner to displace his liability must show that on some named day Murray could have obtained suitable employment. I am not very satisfied with Murray's behaviour. He did not apply to the owners of the *Croxteth Hall* for employment; he energetically repudiated the suggestion that he should apply to their shipping clerk. "It was as much for the firm to give an offer to me as for me to give an offer to the firm." He did apply to one of the Hall boats for a job, the *City of Athens*, and another man got the job. He attended the signing on of a number of other ships, but being an elderly man and a stranger to the chief officer of the particular ship, he did not get a job. I am satisfied that unless the shipowner orders the chief officer of a particular ship to take on a particular man, or men, from the wrecked ship, that man—particularly if he is elderly—is not very likely to get a job. A ship's officer, unless ordered by his employers, naturally prefers men he knows, and men of as much youth as is consistent with experience. The evidence in my opinion does not show that Murray on any particular day was able to get employment on any particular ship, or that he made no attempt to obtain employment, or that his unemployment was not the result of the wreck. Under these circumstances he is entitled to receive from the shipowner two

months' wages from the 27th Feb., less any amount the shipowner has already paid him as wages. But he is not entitled to receive both the " dole " and wages, and his counsel admitted this, and that the court should make some provision to prevent it. I think the proper way to deal with the point is to order that the shipowner may satisfy the judgment against him by paying to the Ministry of Labour the amount which Murray has received in respect of the " dole " from the labour exchange, in respect of the two months in question, and by paying the balance of the judgment, if any, to Murray. It will be seen that this judgment does not apply to any other seaman of the *Croxteth Hall* except in so far as the facts of his particular case come within the principle of this judgment. While the judgment is varied to the extent I have indicated, and I do not agree with some part of the reasoning of the President, the appeal must be dismissed with costs.

The Celtic.

The *Celtic*, a White Star boat trading to and from Liverpool, was wrecked off Queenstown on the 10th Dec. 1928. Comerford, a refrigerating greaser, was brought back to Liverpool, and there paid off on, and up to, the 11th Dec. 1928. Comerford, with the exception of twelve months, had been employed in the *Celtic* for nine years, and the White Star officials say they could not have a better man. I am satisfied that it was a result of the wreck that he was not employed on the *Celtic* during the two months in question. Comerford tried to get on a number of ships, including some of the White Star boats, but did not get a job. He did not apply to the White Star office, or its shipping master, for a job ; I suspect this was the result of the instructions of the union officials. But whether this is so, the White Star officials did not offer him an engagement on any particular boat, and in the result are, in my opinion, unable to prove that he was able to obtain suitable employment on any particular day. I think in the case of engineers, the second engineer who takes on men, in the absence of definite instructions from his employers—which were not proved—is not likely to give any special preference to men from other wrecked ships of the line. Comerford is, therefore, entitled to receive two months' wages from the date of the wreck, less any wages he has received, and the appeal must be dismissed with costs.

There is no information about the " dole " in this case, but I trust the local labour exchange will look into the matter, both in this case and any future case.

I appreciate the difficulties of the shipowners in these cases. Perhaps they will consider whether by registered letter they should make an offer of employment in a named ship to each man they wish to employ, and instruct their chief officer or engineer to make that offer effective. I am also not satisfied with a system under which the seaman, whether under instructions of union officials or not, intentionally makes no application to his previous employers for employment, and then claims on them for unemployment. If such an intentional course of conduct is proved, it may have a serious bearing on the question whether the shipowners have not proved that the seaman's unemployment is not the result of the wreck.

Greer, L.J.—John Murray, the plaintiff in the first-named case, signed articles in Oct. 1928 by which he undertook to serve on board the steamship *Croxteth Hall* for a voyage to the Persian Gulf, and thence to other ports between 75° north and 60° south latitude, and to end at such port in the United Kingdom or Continent of Europe within home trade limits as might be required by the master. He was selected by the master to act as quartermaster during the voyage at 9*l.* 10*s.* per month. The vessel was wrecked off Flushing on the 28th Feb. 1929. The President of the Probate, Divorce, and Admiralty Division, who heard the action, found that if there had been no wreck the voyage would have ended at Middlesbrough on the 11th March 1929. The plaintiff claimed under the Merchant Shipping (International Labour Conventions) Act 1925 (15 & 16 Geo. 5, c. 42) two months' wages from the 4th March 1929, when he was paid off. He was clearly not entitled to wages for more than two months from the 28th Feb., the date of the wreck, and it is not disputed that the judgment will have to be varied so far as the amount is concerned. It was contended for the appellant shipowners that he was only entitled to wages down to the date when his service under the articles would have terminated at the end of the voyage, *i.e.*, the 11th March 1929. The learned President decided against this contention. In my judgment he was right in so deciding. I can state my reasons quite shortly. The evidence established a probability almost amounting to a certainty, that if the voyage had ended normally on the 11th March, the plaintiff would have been forthwith employed by the shipowners in the same capacity on the same ship. The material parts of sect. 1 read as follows : [the learned Lord Justice read sect. 1.] The plaintiff was in fact unemployed for two months from the date of the wreck, though he was paid his wages to the 4th March. Sub-sect. (1) entitled him to wages up to the 28th April unless the defendants proved facts which would disentitle him to receive his wages or some part thereof under sub-sect. (2). In my judgment the defendants did not show that the unemployment from which he in fact suffered was not due to the wreck. If they had proved that in the event of the vessel completing her voyage there was no reasonable probability that he would have been employed on the *Croxteth Hall*, it might have been contended that his unemployment in fact was not, after the 11th March, due to the wreck, as it would have happened if there had been

no wreck. It seems to me clear that the section is not dealing with unemployment under any existing contract, but with unemployment in fact, that is to say actual unemployment. In my judgment the words of sub-sects. (1) and (2) are plain and unambiguous, and we are therefore not entitled to look at the preamble or the draft convention contained in the schedule to the Act for the purpose of giving a special meaning to words which are in themselves plain and unambiguous. It is conceivable that it might have been the intention of the Legislature to provide the seaman with an indemnity against the loss of wages which he would otherwise have earned under the contract of service which was in operation at the date of the wreck, but it is impossible, in my judgment, to interpret the words of the two sub-sections as having a meaning which would confine the seaman's rights to wages to a right which would not exceed wages for the period during which his existing contract would have continued. I think the words plainly mean that if his services end before the date contemplated in the agreement, and he is in fact unemployed for the period of two months from the date of the wreck, he is entitled to receive wages for every day during those two months during which he is unemployed, unless his employer proves that he would have been unemployed if there had been no wreck. The question whether his actual unemployment was caused by the wreck is a question of fact to be determined on the evidence. The evidence in the present case makes it reasonably certain that if the *Croxteth Hall* had not been wrecked the plaintiff would not have been unemployed. The fact that he might have got employment if the state of the labour market had been better than, in fact, it was, has, in my judgment, no bearing on the question whether the unemployment from which he in fact suffered, under the circumstances of the case, was due to the wreck. Even if the court were entitled to look at the schedule, I doubt whether it would make any difference in the result. Art. 2 of the convention is not necessarily concerned with an indemnity against unemployment under the contract in operation at the date of the wreck, it is concerned with indemnity against unemployment resulting from the loss of the ship. It may well be that those responsible for the convention intended to indemnify the seaman against actual unemployment whenever it was established that the unemployment was, in fact, due to the wreck. I see no reason to conclude from the words of the convention that the parties to it intended to confine the indemnity to an indemnity against a loss of wages under the contract in operation at the date of the wreck ; but be this as it may, I think the words of the statute are plain and ought to be interpreted in the manner above stated.

In the present case I am satisfied that if the vessel had not been wrecked, the plaintiff would not have been unemployed from and after the 11th March and, therefore, that the shipowners failed to show that his unemployment was not due to the wreck. Nor am I able to say that the learned president's finding that the defendants had failed to prove that the seaman was able to obtain suitable employment on any day during the two months is not justified by the evidence. I agree with the view expressed in my Lord's judgment as to both points, and find it unnecessary to refer to the evidence in detail.

A reference was made in the course of the argument to cases under the Workmen's Compensation Act, such as *Cardiff Corporation* v. *Hall* (104 L. T. Rep. 467 ; (1911) 1 K. B. 1009), and *Bevan* v. *Nixon's Navigation Company* (139 L. T. Rep. 647 ; (1929) A. C. 44). I do not think that these cases afford any help in the interpretation of the statute we have to apply in the present case. They turn on the meaning of the words " able to earn " in the Workmen's Compensation Act. It was decided that, looking at the general purpose and scope of the Workmen's Compensation Act, " able to earn " means physically able to earn. The decisions in those cases seem to me to have no bearing on the interpretation of sect. 1 of the Merchant Shipping (International Labour Convention) Act of 1925.

In the second case the facts raise the same question as to the effect of sect. 1 on the claim made by the plaintiff Comerford, and the defence raised by the owners of the *Celtic*, and in this case I do not find it necessary to say anything except that for the reasons stated in dealing with the first case, I am of opinion that the plaintiff is entitled to retain the judgment he obtained in the court below, and the appeal should be dismissed with costs.

The order of the court in *Murray's* case will, by consent of the plaintiff by his counsel, take the form mentioned in the judgment of Scrutton, L.J.

Slesser, L.J.—In these cases I regret that I have come to a conclusion different from that of the majority of the court.

These appeals raise important questions under the Merchant Shipping (International Labour Conventions) Act 1925, which purports to give effect to certain draft conventions adopted by the International Labour Conference relating (among other things) to an unemployment indemnity for seamen in the case of loss or foundering of their ship. In my opinion this is a case where, owing to the ambiguity of the language used in the Act, and its intention as expressed in the preamble and schedules, a reference to the preamble and title is justified as a means of ascertaining the general object and intention of the Legislature for the purpose of solving the ambiguity. This is in accordance with the well-known passage of Tindall, C.J. in the *Sussex Peerage* case (11 Cl. & F. 85), where he says, at p. 143 : " If the words of the statute are in themselves precise and unambiguous, then no more can be necessary than

to expound those words in their natural and ordinary sense. The words themselves alone do, in such case, best declare the intention of the law-giver. But if any doubt arises from the terms employed by the Legislature, it has always been held a safe means of collecting the intention to call in aid the ground and cause of making the statute, and to have recourse to the preamble, which, according to Dyer, C.J., is ' A key to open the minds of the makers of the Act, and the mischiefs which they intend to redress ' " : (see Lord Macnaghten in *Fenton* v. *Thorley*, 89 L. T. Rep. 314 ; (1903) A. C. 443, at p. 447).

In this case the Legislature has thought fit in the peculiar circumstances of the case, the statute being the ratification of an International Convention, to annex the convention to the preamble by a schedule to the Act itself. This preamble, which is very exclusive, is as follows : " Whereas at Genoa the General Conference of the International Labour Organisation of the League of Nations on the ninth day of July, nineteen hundred and twenty, adopted a draft Convention concerning unemployment indemnity for seamen in case of loss or foundering of their ship, and had at Geneva on the eleventh day of November, nineteen hundred and twenty-one, adopted two other draft conventions, namely, a draft Convention fixing the minimum age for the admission of young persons to employment as trimmers and stokers, and a draft Convention concerning the compulsory medical examination of children and young persons employed at sea :

" And whereas the said draft Conventions contain (together with other provisions) the provisions set out in Parts I., II., and III. respectively of the First Schedule to this Act :

" And whereas it is expedient that for the purpose of giving effect to the said draft Conventions, such provision should be made as is contained in this Act :

" Be it therefore enacted . . ."

The First Schedule, Part I., of the Act to which I have referred contains the draft Convention concerning unemployment indemnity in case of loss or foundering of the ship which is mentioned in par. 2 of the preamble.

The assistance which the preamble provides in interpreting sect. 1 of the Act, the meaning of which is here in dispute, is to be found in art. 2 of the First Schedule, which is in the following terms : " In every case of loss or foundering of any vessel the owner or person with whom the seamen has contracted for service on board the vessel shall pay to each seaman employed thereon an indemnity against unemployment resulting from such loss or foundering. This indemnity shall be paid for the days during which the seaman in fact remains unemployed at the same rate as the wages payable under the contract, but the total indemnity payable under this Convention to any one seaman may be limited to two months' wages."

The word " indemnity " which is used in this article, does not appear in sect. 1, but in so far as the appellant is here contending that sect. 1 is limited to an indemnity, and as the section is ambiguous and is capable of such a construction, the preamble and the schedule do indicate that an indemnity, and no more than an indemnity for unemployment in the case of loss or foundering of the ship is what the section intends to confer upon the seaman.

An indemnity is an undertaking express or implied to indemnify against the liability. And it is material to consider what is the matter against which the statute calls upon the shipowner to indemnify. By sect. 158 of the Merchant Shipping Act 1894, where the service of a seaman terminates before the date contemplated in the agreement by reason of the wreck or the loss of the ship, he shall be entitled to wages up to the time of such termination, but not for any longer period. This is the provision which is amended by sect. 1 of the Act now under consideration, and, were it not for that Act, as the Merchant Shipping Act provides, the right to wages would cease when the services of the seaman terminated before the date contemplated in the agreement in case of wreck or loss.

In the case of the *Croxteth Hall* the plaintiff had signed articles to serve for a voyage of not more than two years' duration commencing at Manchester and to end at such port in the United Kingdom or Continent of Europe (within home trade limits) as may be required by the master. The ship was wrecked on the 28th Feb. 1929, and the learned President has found that had there been no wreck the voyage would have terminated on the 11th March 1929. In any event, under sect. 1, the plaintiff would not be entitled to wages for more than two months from the 28th Feb., but it is argued for the appellants that, having regard to the fact that his services under the articles would have terminated on the 11th March 1929, and having regard to the fact that he was actually paid until the 4th March, he is only entitled to wages from the 4th March until the 11th March. On the evidence it appears very probable that if the voyage had ended on the 11th March, the plaintiff would have been further employed by the defendants, but, in the view which I have taken, such a consideration is not open under the statute.

It is true that sect. 1, sub-sect. (1), speaks of the seaman being " in fact unemployed during a period of two months from the date of the termination of the services where his service terminates by reason of the wreck or loss of the ship before the date contemplated in the agreement." But sub-sect. (2) of the same section is in the following terms :

" A seaman shall not be entitled to receive wages under this section if the owner shows that the unemployment was not due to the wreck or loss of the ship and shall not be entitled to receive wages under this section in respect of any day if the owner shows that the seaman was

able to obtain suitable employment on that day." This provision enables the owner to prove—the onus being upon him—that the unemployment was not due to the wreck or loss of the ship. Having regard to the fact that sect. 158 of the Merchant Shipping Act, which this Act in terms seeks to amend, provides that where the service of a seaman terminates before the date contemplated in the agreement by reason of the wreck he shall be entitled to wages up to the time of such termination and having regard to the view which I have formed that the present section operates by way of indemnity, I think that once the employer has shown as a fact that the agreement of service would have terminated in any event on a particular date, that he has discharged the onus upon him of showing that unemployment beyond that date was not due to the wreck or loss of the ship. If, on the facts of this case, it had not been found that the agreement would have ended at Middlesbrough on the 11th March 1929, it might have been otherwise. But I find it impossible to think that the mischief to which the Act was addressed and the benefits which the Legislature intended to confer upon the seaman, by the language used, were more than this; that where the shipowner failed to prove that the unemployment was not due to the wreck or loss of the ship, the seaman might recover wages for two months. In my judgment it does no more than to put the seaman in the like position as to wages, subject to a two months' limitation, *qua* his employer as he would have been if the wreck or loss of the ship had not occurred.

I am fortified in the view which I have formed by a consideration of the decisions under the Workmen's Compensation Act which seem to me to be *in pari materia*. Par. 3 of the First Schedule to the Workmen's Compensation Act 1906 (now repealed) provided that in fixing the amount of weekly compensation, the weekly payment should in no case exceed the difference between the amount of the average weekly earnings of the workman before the accident and the average weekly amount which he is able to earn in some suitable employment.

In *Ball* v. *Hunt and Sons Limited* (106 L. T. Rep. 911; (1912) A. C. 496, at p. 508), Lord Shaw, commenting on the words "able to earn" in Sched. I. (3) of the 1906 Act, said: "It does not appear to me to be any part of the scheme of the statute to make the employer responsible for a non-employment which is owing to general economic causes. The non-employment must be connected with the injury which has been received and with the incapacity for work which has been thereby produced. Even treating that incapacity as inclusive of the case of the impossibility or improbability of obtaining work, as well as of doing it, that impossibility or improbability must be traceable to the thing which has differentiated this workman from his other able-bodied comrades, namely, the injury received: (see also *Bevan* v. *Nixon Navigation Company Limited*, 139 L. T. Rep. 647; (1929) A. C. 44; *Cardiff Corporation* v. *Hall*, 104 L. T. Rep. 467; (1911) 1 K. B. 1009, to the same effect).

In my view, the employer has here imposed upon him no more than an indemnity for loss of employment under the agreement which the seaman has sustained by reason of the wreck or loss of the ship. When the obligation of the employer would have come to an end in any event if the ship had not been wrecked—which termination is for the employer to prove—any further unemployment due to the labour market or other causes cannot be said to be an unemployment due to the wreck, any more than inability to earn under sect. 9 of the Workmen's Compensation Act, which is the result of the labour market, can be said to be due to the accident. In construing this section as no more than an indemnity, I apply the maxim *causa proxima non remota spectatur*.

The second case, the *Celtic*, falls to be decided upon the same principle. In that case the wreck was on the 10th Dec. 1928. The learned president has found that, but for the wreck, the plaintiffs' services under the articles would be terminated on the 11th Dec., and he would have been paid off with wages up to and including that date; that the vessel was homeward bound at the time of being lost, making for Liverpool, which would have been, as is found, the port of discharge under the articles. In this case, therefore, the employers, by showing that the agreement would have ended in any event on the 11th Dec., have discharged the burden of showing that any subsequent unemployment was not due to the wreck, and, therefore, have discharged themselves from the liability imposed by sect. 1 of the 1925 Act.

For these reasons I think that these appeals should be allowed.

(Before Scrutton, Greer, and Slesser, L.JJ.

Cosmopolitan Shipping Company (Inc.) *v.* Hatton and Cookson Limited (Liverpool). (a)

APPEAL FROM THE KING'S BENCH DIVISION.

Carriage of Goods—Bill of lading—Freight payable—Ship or goods lost or not lost—Loss of ship and goods at sea—Goods never

(a) Reported by T. W. Morgan, Esq., Barrister-at-Law.

delivered—Claim for balance of freight—Warranty of seaworthiness—Exceptions clause in bill of lading—Shipowners not liable.

The respondent-defendants, in Oct. 1919, *shipped* 412 *tons of West African produce on the appellant-plaintiffs' schooner, the* Rostellan, *for carriage from Cabinda on the west coast of Africa to Liverpool. A clause in the bill of lading provided that freight was due on shipment and should be payable on demand, ship or goods lost or not lost. The defendants paid half the freight on shipment. The vessel and cargo were lost during the voyage, and as the goods never reached Liverpool, the defendants refused to pay the plaintiffs the balance of freight, and the plaintiffs now claimed the balance of freight. The defendants pleaded that the vessel was in fact unseaworthy, and that therefore the bill of lading contract could not be enforced against them.*

By clause 2 *of the bill of lading :* " *The company shall not be liable for, or for any loss or damage arising from or due to, collision, . . . or any other peril of the sea . . . of whatsoever nature or kind, whether any perils, causes, or things in this clause mentioned are due to or arise . . . from the wrongful act, omission, or error in judgment or negligence of . . . any person whomsoever in the service of the company . . . and whether due to or arising . . . from unseaworthiness of the ship . . . provided in case of any loss, injury or damage arising from or due to unseaworthiness of the ship at the beginning of the voyage all reasonable means shall have been taken to provide against such unseaworthiness. The company may entrust to experienced or qualified officers, servants, or agents the duty of providing against unseaworthiness, and shall then be deemed to have fulfilled its obligations hereunder. . . .*"

Held, that the defendants had failed to discharge the onus which lay on them of proving that the vessel was unseaworthy at the beginning of the voyage. Moreover, even if the vessel had in fact been unseaworthy the plaintiffs were protected by clause 2 *of the bill of lading, as* (1) *they had taken all reasonable means to provide against unseaworthiness, and* (2) *they had entrusted to experienced and qualified officers, servants, or agents, the duty of providing against unseaworthiness, and must therefore be deemed to have fulfilled their obligations under the bill of lading.*

Appeal by the plaintiffs, the shipowners, from a judgment of Finlay, J.

The plaintiffs' schooner, the *Rostellan*, was abandoned in a sinking condition about 400 miles off the coast of Bermuda in Feb. 1920, while on a voyage from Cabinda to Liverpool with a cargo of West African produce. The plaintiffs claimed to recover from the defendants, Messrs. Hatton and Cookson, Liverpool, the cargo-owners, for balance of freight due under contracts of affreightment in respect of a cargo of palm oil and palm kernels shipped by the defendants from the Belgian Congo in Oct. 1919.

One of the clauses in the bill of lading provided that freight was due on shipment and should be paid on demand, ship or goods lost or not lost. By arrangement with the plaintiffs' local agents the defendants paid half the amount of freight on shipment ; but the vessel being lost on the voyage to Liverpool the cargo-owners refused to pay the balance of the freight. The shipowners now claimed to recover the balance. The defendants, the cargo-owners, counterclaimed for 19,660*l.* damages for loss of cargo, on the ground that the vessel was unseaworthy at the beginning of the voyage.

Finlay, J. gave judgment for the cargo-owners for 18,219*l.*, the amount claimed but reduced by 1442*l.*, the balance of freight which would have had to be paid had the goods been delivered.

By clause 2 of the bill of lading, the company shall not be liable for, or for any loss or damage arising from or due to, collision, stranding, straining, jettison, or any other peril of the sea, rivers, navigation, or land transit, of whatsoever nature or kind, whether any perils, causes or things in this clause mentioned are due to or arise directly or indirectly from the wrongful act, omission, or error in judgment or negligence of . . . any person whomsoever in the service of the company, or any person or persons or company for whose acts the company would otherwise be liable, or not, and whether on the ship carrying these goods or not ; and whether due to or arising directly or indirectly from unseaworthiness of the ship, vessel, craft, or lighter at the commencement of the carriage or during the carriage or any part thereof ; provided in case of any loss, injury, or damage arising from or due to unseaworthiness of the ship at the beginning of the voyage all reasonable means shall have been taken to provide against such unseaworthiness. The company may entrust to experienced or qualified officers, servants, or agents the duty of providing against unseaworthiness, and shall then be deemed to have fulfilled the obligations hereunder. This clause shall be construed as in addition to and not in derogation of or in substitution for any statutory exemption or provision in favour of the company."

The plaintiffs, the shipowners, appealed.

Cyril Atkinson, K.C. and *Justin Lynskey* for the appellants.

J. E. Singleton, K.C. and *R. K. Chappell*, K.C. for the respondents.

Cur. adv. vult.

Nov. 27, 1929.—The following judgments were read :

Scrutton, L.J.—This appeal by shipowners against a judgment of Finlay, J., which finds that their ship was unseaworthy and that they themselves are liable for nearly 20,000*l.* for cargo which was not delivered owing to the unseaworthiness of their ship as found by the

learned judge, raises difficult questions of fact and some, but not so difficult, questions of law.

I propose to deal first with the legal relations between the parties, for the reason especially that I think that the contest in the court below with regard to the facts has led to insufficient consideration being given to what are the relevant questions of law.

The voyage in question was from ports on the West Coast of Africa to Liverpool with a cargo of palm oil in casks and palm kernels. The ship was put on the berth to receive shipments from individual shippers. No bills of lading were signed, but it has now been decided that the terms of carriage were contained in an indorsement on the back of mates' receipts, and were to be found in clauses 1 to 22 of a form of bill of lading indentified and produced to us.

The most important clause is clause 2, which reads as follows : " The Company shall not be liable for, or for any loss or damage arising from or due to, collision, stranding, straining, jettison, or any other peril of the sea, rivers, navigation, or land transit, of whatsoever nature or kind, whether any perils, causes or things in this clause mentioned are due to or arise directly or indirectly from the wrongful act, omission or error in judgment or negligence of . . . any person whomsoever in the service of the company . . . ; and whether due to or arising directly or indirectly from unseaworthiness of the ship . . . at the commencement of the carriage or during the carriage or any part thereof ; provided in case of any loss, injury or damage arising from or due to unseaworthiness of the ship at the beginning of the voyage all reasonable means shall have been taken to provide against such unseaworthiness. The company may entrust to experienced or qualified officers, servants, or agents the duty of providing against unseaworthiness, and shall then be deemed to have fulfilled its obligations hereunder. . . ."

In my view this has in most respects the same effect as the Harter Act, which does not itself apply to this case as the voyage was not to or from a port of the United States. That effect is that (1) there is an implied warranty of seaworthiness when the ship sails on her voyage ; (2) the burden of proving a breach of this warranty is on the cargo owner ; (3) if the cargo owner proves unseaworthiness at the beginning of the voyage, the shipowner can limit his obligation by proving that he took all reasonable means to provide against unseaworthiness, the burden of proof being on him.

That this is the effect of the Harter Act appears from the American decision of the *Carib Prince* (1898) 170 U. S. Rep. 655), and Channell, J. has taken the same view in *McFadden* v. *Blue Star Line* (10 Asp. Mar. Law Cas. 55 ; 93 L. T. Rep. 52 ; (1905) 1 K. B. 697).

The bill of lading added a further protection to the shipowner in a clause that if the shipowner proves that he has entrusted the duty of providing against unseaworthiness to " experienced or qualified officers, servants or agents," he shall " be deemed to have fulfilled his obligations hereunder," that is, his obligations to use all reasonable means to provide against unseaworthiness at the beginning of the voyage. A vital question in the present case is, therefore, whether, assuming that there was initial unseaworthiness, the shipowner proved that he had entrusted to experienced or qualified officers or servants the duty of providing against it. If he did, he is protected ; or he is deemed to have used all reasonable means, which protects him against liability for damage caused by the initial unseaworthiness.

It is important to make this clear, for owing to the course which the case took at the trial, the learned judge did not expressly deal with this point at all in his judgment. He took the view that if the ship was initially unseaworthy all the exceptions went, including that with regard to unseaworthiness.

It is difficult to understand this, for the only point of the exception with regard to unseaworthiness is that it should apply to a case of initial unseaworthiness and provide in what circumstances the shipowner shall be liable. If the exception is excluded by initial unseaworthiness there is nothing to which the exception can apply.

That the learned judge took this view is, I think, clear from his judgment. He relies on the judgment of Bankes, L.J. in *Paterson Zochonis and Co. Limited* v. *Elder Dempster and Co. Limited* (16 Asp. Mar. Law Cas. 68, 351 ; 128 L. T. Rep. 577 ; (1923) 1 K. B. 420 ; 131 L. T. Rep. 449 ; (1924) A. C. 522), and after finding that the shipowner did not take all reasonable means to guard against unseaworthiness, he says : " I do not, if I have correctly apprehended the case, think that that finding is of importance "—that is because the exception involving it is rendered ineffective by the breach of the initial warranty of seaworthiness. Taking this view, at the end of his judgment he had not expressly found anything about " entrusting to experienced or qualified officers," for he regarded the finding as of no importance.

Counsel then asked him for a finding : " May I mention one other matter on the questions which arise on the bill of lading in case the matter has to be discussed elsewhere. In clause 2, your Lordship dealt with the question by saying that your Lordship found that it was not made out that all reasonable means had been taken to provide against such unseaworthiness. Your Lordship remembers that there are further words in that clause." Finlay, J. — " Yes, I remember. When I found that, I intended to find it generally, including the particular thing as to leaving it to a qualified person." Mr. Singleton : " That it was not left to a qualified person ? " Finlay, J. : " Yes."

This, as will be seen, does not find whether Miller or Bishop, the two ship's officers mentioned in the evidence, were or were not experienced or qualified persons, or whether the duty of providing against unseaworthiness was or was not entrusted to them, and we have not, therefore, the benefit of the judge's detailed views on the question. I am of opinion that the exception with regard to unseaworthiness did "limit or oust," to use Lord Sumner's words, the initial warranty of seaworthiness, if the shipowner proved that he had entrusted the question of initial seaworthiness to experienced or qualified persons. In that event, to use the language of Cozens-Hardy, L.J. and Fletcher Moulton, L.J. in *James Nelson and Sons Limited* v. *Nelson Line (Liverpool) Limited (No.* 2) (10 Asp. Mar. Law Cas. 390; 96 L. T. Rep. 402; (1907) 1 K. B. 769) affirmed in the House of Lords, 97 L. T. Rep. 812; (1908) A. C. 16): "The initial warranty is in force except in one event," *i.e.*, in this case, the shipowners proving an entrusting within the clause, in which case the initial warranty is "limited."

The shipowner sought to use the fact that the exceptions applied to bring in three clauses: (1) The part of clause 2 which enabled him to prove "entrusting," and so to satisfy his liability; (2) clause 1, to require production of invoices and declarations of value; and (3) clause 10, with regard to time of claim.

In my view the shipowner is not entitled to rely on clauses 1 and 10 because they do not apply to the present case. Clause 1 I will take as read. In the present case there were in the ordinary course of business no declarations of value or invoices. The freight was per ton, and did not depend on the value of goods, which there was no need to declare. Apparently, the goods were shipped by owner's agent to owner, in which case there would be no invoices of value. The clause cannot impose an obligation to produce documents which in the ordinary course of business do not exist. Clause 10 requires that a claim for loss shall be made within two days after the delivery or failure to deliver the goods. In the case of loss of ship at sea it is difficult to say what is the date of failure to deliver. I think that the clause is probably applicable to short delivery of part of a parcel. Exceptions should be construed against the shipowner framing them, and if the shipowner wants his clause to apply to total loss of ship and goods he must say so in clear terms. In my view the provisions of clauses 1 and 10 do not in any event avail the shipowner.

The question with regard to the applicability of the exception of seaworthiness in clause 2 is more complicated. In *The Europa* (11 Asp. Mar. Law Cas. 19; 98 L.T. Rep. 246; (1908) P. 84) it was decided, and the decision was approved in *Kish* v. *Taylor* (12 Asp. Mar. Law Cas. 217; 106 L. T. Rep. 900; (1912) A. C. 604) that a breach of the initial warranty of seaworthiness did not give rise to a claim against the shipowner unless it caused the loss. Subsequent authorities have said that this is not logical, but it is common sense. I prefer to say that it is determined by authorities which bind me.

In *Bank of Australasia* v. *Clan Line Steamers Limited* (13 Asp. Mar. Law Cas. 99; 113 L. T. Rep. 261; (1916) 1 K. B. 39) there was a clause in the bill of lading which provided that "the shipowners shall be responsible for loss or damage arising from any unfit state of the vessel to receive the goods, or any unseaworthiness of the vessel when she sails on the voyage. But any latent defect in the hull, machinery, equipment or fittings shall not be considered unfitness or unseaworthiness; provided that the same do not result from want of due diligence of the shipowner or of the ship's husband or manager." There was also another—clause 12—to the effect that "no claim that may arise in respect of goods shipped by this steamer will be recoverable unless made at the port of delivery within seven days from the date of steamer's arrival there."

Some of the goods were transhipped, and the question was which steamer's arrival the seven days were to date from. Bailhache, J. held that as the steamer was unseaworthy at starting, the defect not being latent, clause 12 did not apply. The Court of Appeal held that, as there was an express provision in the bill of lading about unseaworthiness, clause 12 did apply; but, as it was ambiguous in the case of transhipment, it did not apply to the particular case. The express provision was, it will be seen, a statement of responsibility with a limitation in the case of proof of certain facts which did not exist.

In the *Atlantic Shipping and Trading Company Limited* v. *Louis Dreyfus and Co.* (127 L. T. Rep. 411; (1922) 2 A. C. 250), there was nothing about unseaworthiness in the bill of lading. The ship was unseaworthy at starting, and the House of Lords held that a clause requiring arbitration within a certain time was excluded by breach of the warranty. Lord Sumner said that it would be different if there was "an express exception of unseaworthiness," meaning, as I understand, an express provision with regard to unseaworthiness which ousted or limited the initial implied warranty.

In *Paterson, Zochonis and Co.* v. *Elder Dempster and Company Limited* (*sup.*) the clause was the same as in the present case, but the exception originally relied on by the shipowner was bad stowage, which was in a different sentence in the bill of lading from the clause about perils of the sea, whether due to unseaworthiness or not. The majority of the Court of Appeal held that the ship was unseaworthy at starting by reason of bad stowage, and escaped from the seaworthiness exception by saying that the ship was unseaworthy at starting, and therefore the exception of unseaworthiness did not apply. They also held that the clause was so ambiguous as to be no protection, with regard to which it seems to me that the

clause, which gives the same protection as the Harter Act, is clear in giving the shipowner protection if he proves—and the burden is on him—that he used reasonable means to provide against unseaworthiness, which he may prove by proving that he entrusted the matter to experienced and qualified officers. On this matter, Bankes, L.J. says that no evidence was given in the court below.

The House of Lords held that bad stowage, not affecting the safety of the ship, was not unseaworthiness, so that the whole foundation of the judgment of the majority of the Court of Appeal went. But Lord Cave said that the shipowners had not proved the existence of the conditions referred to in the proviso, which, as the point had not been raised before Rowlatt, J., appears accurate.

Lord Sumner says (16 Asp. Mar. Law Cas. at p. 360; 131 L. T. Rep. 449 (1924) A. C. at p. 548): "The contract of carriage excepts liability for damage by improper stowage, but, if there was a breach of the implied warranty of seaworthiness, which there is nothing in the contract to limit or to oust, none of the exceptions or limitations contained in the bill of lading avail to prevent the cargo-owner from recovering."

But if the contract does limit the implied warranty of seaworthiness that limitation must be given effect to; and if the shipowner proves himself within the limited warranty, the fact that he has not proved compliance with the unlimited warranty does not, in my opinion, destroy the limited warranty. If the implied warranty would be of A. and B., and there is an express clause in the contract that the shipowner shall not be liable if B. does not exist provided he complies with A. I cannot see how he can be liable for B. This is my view, which is, I think, consistent with the judgments already referred to in *Nelson's* case (*sup.*); and if the judgments of the majority of the Court of Appeal in *Paterson's* case (*sup.*) are inconsistent with it I prefer those in the earlier case.

I therefore approach the facts of this case on the footing that in law the shipowner will succeed if he proves that he has entrusted the duty of providing against unseaworthiness to experienced and qualified persons, even though the ship was unseaworthy at starting. On the facts we have to consider whether the ship was unseaworthy on starting, the cargo owners' allegation being (i) that she was so wormeaten in her rudder that it was unable to withstand the ordinary perils of the sea and broke adrift; and (ii) that her sails were defective and insufficient.

It was also argued, though not with much vigour, (iii) that her cargo was so stowed as to be a danger to the ship in that the palm kernels were stowed among the casks and that heat melted the palm oil, which choked the bilges, while the kernels gave off an offensive gas; and (iv) that the captain and crew were incompetent. The learned judge found the first two allegations proved, but did not, as I understand him, make any findings on the last two, and he found that such unseaworthiness caused the loss.

The Rostellan was a four-masted schooner of a common American type. She was built in the State of Maine in 1906, and was at the time of her starting on the voyage in question, in October, 1919, just over thirteen years old. There was nothing in her age to prejudice a wooden vessel. She had the highest class in the American Register of shipping, and in 1916 had passed the survey to maintain her class. Her next survey was not due till 1920. The present plaintiffs had bought her soon after her survey in 1916, and spent some 650*l.* on her at the end of 1917, when she was dry-docked. Miller had joined her as captain in July 1917, and was her captain till 1st June 1919. He had been over twenty years a master, was obviously a very experienced and competent man, and had the full confidence of his owners. Bishop had joined her as mate in Oct. 1917, became her captain on 1st June 1919, and was in command when she started on the voyage in question, and when she was abandoned in Feb. 1920. He had then been at sea some fifteen years, four or five years before the mast, sometimes as sailmaker, then second mate for three years, then chief mate for seven years in American schooners trading to South America, the West Indies and coastwise. On vessels of the *Rostellan's* size no licence is needed for mates by the United States regulations. Before the voyage in question he had obtained, apparently under American regulations, a provisional licence as master; and after the voyage in question he obtained after examination in the United States, a regular licence as master for sailing ships and chief mate for steamships. He had sailed for two years with Miller, who spoke highly of his competence, and was obviously, from what had happened on the voyage, a man of courage and resource who had the confidence of his crew. At the end of 1917 the *Rostellan* went on a voyage from the States to Port Elizabeth, South Africa, and back. She made the voyage successfully, and delivered her cargoes safely; there was no appreciable leakage. She was again dry-docked and her bottom put in good condition, two coats of copper paint being applied to her waterline as a protection against worms, and on 31st Aug. 1918, she left for New York for a voyage to Boma, a town a little way up the Congo, in Belgian territory. On this voyage near Bermuda she met with a severe hurricane, she sprang a leak, and suffered considerable damage to hull, masts, and sails. With other ships injured in the same storm she put into Bermuda. There she was three times surveyed by independent surveyors; part of her cargo was discharged and the specific leak was located.

On 14th Oct. 1918 a third survey report was given, stating that the vessel had stopped

leaking, but that a diver should be employed to examine the bottom, and recommending certain work to be done on her. Some 1350*l.* was spent on her repairs; the diver located the leak and considerable caulking was done, a good coat of copper paint was put over the lower section of the hull, the cargo was reloaded, and on 6th Nov. 1918, a final certificate was given:

"And after a careful and minute examination found that the cargo recommended to be landed in former survey had been put back in the ship, repairs as recommended carried out to the master's satisfaction, two new gasoline pumps installed, vessel now making only a small amount of water; and we consider the said schooner, *Rostellan*, to be in fit condition and sufficiently seaworthy to proceed to her port of destination, the Belgian Congo, West Africa."

She did proceed on the 17th Nov. 1918, had an uneventful voyage, with no appreciable leakage, and arrived in safety with her cargo on the African coast, arriving at Banana, at the mouth of the Congo, at the end of March. In entering the port the wind dropped and the vessel was carried by the current on to the Stella Bank, variously described as of mud or sand. A tug towed her off next day; there is no evidence of her leaking in consequence of this Stella Bank grounding.

A difficult commercial situation then arose not directly connected with the seaworthiness of the ship. By her contract of affreightment she was to deliver her outward cargo at Boma, a short distance up the Congo. But the river current was so strong that a sailing ship could not get to Boma under her own sail, and the tug and lighter company wanted 1650*l.* to take ship or cargo to Boma. Prolonged discussion with the consignees occurred, the vessel meanwhile lying at Banana with her cargo on board. Also the tug started a claim for salvage. There was a general average contribution to be obtained from the consignees of the outward cargo, for the port of refuge expenses. The result was that Miller, with the approval of the owners, put Bishop in command of the vessel and devoted himself mainly to these difficulties, which culminated in litigation in the local Courts. The vessel lay at Banana sixty-seven days; her discharge at Banana beginning on 21st June 1919 and finishing on 7th July. It was intended to charter her, but she was ultimately put on the berth to load palm oil and palm kernels at Cabinda and Landana, two places on the coast to the north of the Congo. She started for Cabinda on the 4th Aug., but again, owing to the wind dropping, got on to the Stella Bank. There she remained until the 7th Aug., when she was got off the Bank, by her own gear, sailed for and arrived at Cabinda on the 8th Aug. She is not recorded as making any water, other than the slight "seepage" which every wooden ship makes. After discharge she had the usual overhaul. A certificate of fitness to load cargo was given her by the chief pilot and his assistant on 20th July. There was a similar certificate before she loaded cargo at Cabinda. She loaded cargo at Cabinda in the open sea, the shipper and Featherstone, the shipper and ship's agent, being constantly on board, and the latter acting as interpreter between Bishop and the workmen loading. She then proceeded to Landana and again loaded in the open sea, returned to Cabinda on the 23rd Oct. and left on her voyage on the 30th Oct. 1919. There is no evidence that she was leaking at all during the whole of her stay on the coast. There is evidence that, to an extent which it appears to me impossible to determine, worms had bored into her planking.

The Teredo worm, very prevalent in tropical waters, at a certain stage of its life floats on the surface and if it floats against a ship may bore a very small hole into the side. Once in, it bores and grows and ultimately has made a very considerable tunnel and attained to a very considerable size. If many get in, the wood may become so fragile and honeycombed as to give way. The progress of deterioration sometimes is rapid, and three months may destroy the wood. The shipowners called as a witness the London surveyor to the Norwegian Veritas for wooden vessels for twenty-five years, after being eighteen years master of sailing vessels. He said that you generally found signs of worms in any wooden ship that had been in tropical waters, and unless the signs were very considerable he would not regard them as serious in his survey. Many wooden ships were copper bottomed to protect them against tropical worms, many were not. Copper paint was also used along the waterline, which protected the timber for a short time. In his view six months would not be enough for serious damage to develop.

The *Rostellan* started homeward on the 30th Oct. We have the advantage of a log carefully kept by Peters, the chief mate, in an educated handwriting, and apparently recording every event of importance. From the 30th Oct. to the 24th Dec., nearly fifty-five days, the vessel is not recorded as making any water worth mentioning. In fact there is only one entry on the subject on the 14th Nov., when the ship is recorded as making 3 inches a day, nothing under 2 inches an hour being of any importance.

The only weather to be noticed is the heavy swell, with ship rolling badly occasionally mentioned. The ship caught the southeast trades on the 1st Dec., and they lasted till about the 16th Dec., when she crossed the line, and appears to have entered the Doldrums, a stretch of sea of varying size, between the south-east and north-east trade winds. This region, the terror of the old sailing ship days, is characterised by calms and very slight baffling winds from every direction, coupled with heavy swells caused by the adjoining trade winds.

In this voyage, on the first fifty-five days damage is recorded on several occasions to the sails, particularly to the spanker, but always in heavy swell. Otherwise there is nothing of importance in the fifty-five days' voyage till the incident of the 24th Dec., which is of cardinal importance in the case. There appears to me nothing to suggest unseaworthiness on the first fifty-five days of the voyage, and I now come to the breaking of the rudder on the 24th Dec., the cause of which in my view is the vital point in the case. Looking at the log, on the afternoon of the 23rd Dec., there was no wind, but a heavy swell, and the sails were eased. This continued on the morning of the 24th, and the jibs were taken down to ease them. The sea increased from the north-east ; still no wind, and all ordinary sails were taken down, and only two storm trysails set on the two aft masts. " Noon—heavy sea struck vessel on starboard quarter and carried away rudder. Vessel rolling heavily and starting to leak."

Next morning she was leaking 6 inches an hour, which is serious. She had strong winds and heavy seas for some days while they were making and rigging the jury rudder and rolling in the trough of the sea, but by the 2nd Jan. the leakage had dropped to 3 inches an hour, which the pumps had no difficulty in dealing with. It is difficult to make out exactly what happened, whether the rudder broke away from the rudder post, in which case the gudgeons must have pulled out of the wood, or the rudder post broke away from the sternpost, in which case the fastening of the pintles must have gone. The ship was not fully laden in weight, 1,100 tons of cargo, against 1,500 tons which could be carried, so that more of the rudder than usual would be out of water, in which case, according to the evidence, a heavy swell could smack against it. That a rudder should break in these circumstances is unusual, but the plaintiffs' seafaring witnesses give evidence of their own experience of serious damage done in calm weather by a heavy swell which does not break as a wave. Evidence was given a long while after the event of examination of the rudder and no sign of worm found, though worm holes are found in the hull.

I have carefully considered the evidence and documents and have come to the conclusion that the burden being on the cargo owners to prove the ship unseaworthy because of the worm-eaten rudder, they have not supported it. If the evidence is equally consistent with either view, those on whom the burden is of proving the allegation fail : (*Wakelin* v. *London and South-Western Railway Company*, 1886 ; 55 L. T. Rep. 709 ; 12 App. Cas. 41).

It was argued that a heavy blow on a sound rudder must have acted violently on the man at the wheel, and he was not called. On the other hand, the swell was sufficiently heavy to require all the ordinary sails to be lowered, and only two stormsails hoisted ; and the sudden leaking of the ship suggests a heavy blow. In the result I am not satisfied that the rudder on sailing was unseaworthy through worm, or that it was unseaworthy through worm at the time of the accident. Whatever be the cause there is no doubt of the result of the breaking of the rudder. For twenty days the ship was rudderless, lying in the trough of the sea, and rolling heavily. On the 18th Feb. the ship being then 111 days out, the captain and crew determined to abandon the ship, leaking badly, food and water nearly finished, all hands about played out.

The learned judge below has found her unseaworthy at starting in two respects ; worm-eaten rudder, and sails. With regard to the rudder, I have said that the cargo owner has not satisfied me that the ship was unseaworthy. The question of the sails stands in this position. The fact that a sail or several sails are blown away on a sailing ship voyage is in itself no evidence that they are unfit for the voyage, no sails can stand some gales or " savage squalls " or continuous heavy rolling in a calm when the sails flap and are torn. For these accidents spare sails are carried. No evidence was called from Lloyds' Register about the extent of spare sails fore and aft sailing ships should carry, but the London surveyor for the Norwegian Veritas, which surveys many wooden ships, said that his society said ships " should have generally about a suit and a half." A full suit for this schooner was twelve sails, and she started with either twenty-one or twenty-two sails, which had given no trouble on the voyage out, and some spare canvas for repairs. It was not till the 1st Feb. that her materials for repairs gave out. I am quite unable to find that she was unseaworthy at starting in respect of her sails, and I say this having carefully considered the records of sail damage and the weather when they were damaged.

The two other allegations of unseaworthiness —bad stowage of dangerous cargo and inefficiency of master and crew—the judge did not base his judgment on ; and counsel for the plaintiffs, while reserving his rights, did not seriously argue them. With regard to the cargo, palm oil in casks and palm kernels are staple cargo from the African coast. Sometimes the casks leak, as they did in *Paterson, Zochonis and Co.* v. *Elder Dempster and Co.* (16 Asp. Mar. Law Cas. 68, 351 ; 131 L. T. Rep. 449 ; (1924) A. C. 522), and the kernels may give off gas. But I see no evidence that the leakage or unpleasant smell caused the loss, and Featherstone, though shipper's agent, saw the stowage at Cabinda and made no objection. I think that the cargo owners can make nothing of this point. Again, with regard to the efficiency of master and crew, I see no reason to think that this inefficiency existed, or that if it existed it caused the loss. There are fewer Europeans in the crew than on the voyage out, but an extra number of natives accustomed to work in schooners on the coast were taken, and Bishop speaks well of them.

I am unable therefore, to agree with the findings of the learned judge below, that the

Rostellan was unseaworthy by reason of (1) her worm-eaten condition, and (2) the condition of the sails. I am not satisfied on the first point; on the second point I find that she was seaworthy in respect of sails. But if I am wrong on these two points there remains the question whether the shipowner has not protected himself under the exception by proving that he has "entrusted to experienced and qualified officers the duty of providing against unseaworthiness."

This point the judge below, owing to his view, with which I cannot agree, that the benefit of the exception had gone if the ship was found unseaworthy, did not deal with in detail. There are obviously cases where it is the duty of the owner to give his master specific instructions about some technical information the owner has upon some special point about the ship which a master could not be expected to know. An example of this is special information about the stability of the ship, the failure to communicate which was held to be negligence of the owners in *Standard Oil Company* v. *Clan Line Steamers Limited* (130 L. T. Rep. 481; (1924) A. C. 100). But I cannot think it is necessary for an owner who is sending a certificated master of experience out on a voyage to give him detailed instructions in all the ordinary points of a master's duty, such as the condition of sails and the "tightness and staunchness of the hull." I have no doubt that Miller was an experienced and qualified officer of great efficiency and while he was engaged on the disputes with the cargo owners after the 11th June, he was also in close touch with the ship and looking after it up to about the 12th Aug., and in consultation with Bishop after that date. Miller had experience with worms and looked into the matter of danger from them. With regard to Bishop, in the year he abandoned the ship, the United States authorities, after examination, gave him a certificate as master of sailing ships, with full knowledge of his records, and he had a temporary certificate for the voyage under American regulations. I am satisfied that he was fully competent to deal with the sail question; and with regard to worms, he had the active assistance of Miller and the surveyors on the coast.

This exception is meant to protect the owner against mistakes of his officers, if he has appointed experienced and efficient men, and I should find that the owners in this case had done so. This finding renders it unnecessary to deal with the defence to the plaintiffs' claim for freight based on the unseaworthiness of the ship. I think the point was academic, as if the goods arrived the goods owner agreed that he would have to pay the freight to get the goods, and that if they did not arrive he should deduct from the hypothetical arrival value the amount that he must pay to get them. I doubt, however, if a plea of circuity of action would have been useful, as the amount of advance freight paid does not necessarily increase the value of the goods by the exact amount paid, and the plea of circuity of action only avails when the two claims are between the same parties and of the same amount.

Having given the best consideration I can to this not very easy case, I think that the judgment appealed from should be set aside and judgment entered for the plaintiffs on the claims for the amount claimed, and on the counterclaim with costs here and below.

Greer, L.J. [stated the facts and issues, referred to clause 2 of the bill of lading, and continued:] I do not regard this clause in the bill of lading as a clause which expressly provides that the shipowner shall be liable for damage occasioned by the provision of an unseaworthy vessel if he has failed to take reasonable means to provide against unseaworthiness. I think it is a clause which recognises the obligation to provide a seaworthy vessel which is implied by law, and seeks to limit that obligation by a proviso that the company shall not be liable for the results of unseaworthiness if they have taken all reasonable means to provide against it; and it further provides that they shall be deemed to have brought themselves within the proviso if they have entrusted to experienced or qualified officers or agents the duty of providing against unseaworthiness—that is to say, it does not create the obligation, but only puts limits on the obligation implied by law.

I have come to the following conclusions on the evidence in this case: (1) That the vessel was not proved to be unseaworthy at the material times; (2) that in any event the plaintiffs by their servants or agents did in fact take all reasonable means to provide against the alleged unseaworthiness; and (3) that they did in fact entrust to experienced or qualified officers, servants, or agents the duty of providing against the alleged unseaworthiness. The learned judge found that the vessel was unseaworthy in two respects; (*a*) that she sailed with an inadequate supply of proper sails, and (*b*) that when she sailed her rudder had become weakened by worm damage, and that she was, therefore, in these respects in an unfit condition to withstand the ordinary risks that she would be expected to meet on a voyage from the West Coast of Africa to Liverpool. The defendants' counsel also contended before us that the vessel was unseaworthy in that she had been badly strained by events which happened on the other side of the Atlantic, that the effects of the straining could not then be sufficiently corrected, that she ought to have been dry docked when she got to Africa, and that by reason of the straining and her consequent liability to leak she was unseaworthy when she started from the West Coast. He also relied on the method of stowage adopted, and alleged that this also rendered her unseaworthy.

The learned judge did not find either of the two contentions proved, and I can deal with them quite shortly by saying that there is

nothing in the evidence to show that when the vessel started from the West Coast she had been so strained as to make her unseaworthy. After the damage she met with in very bad weather when she left New York she was surveyed at the Bahamas after her cargo was partly discharged. All the requirements of the surveyors were complied with and a certificate of seaworthiness was granted to her. Nothing happened on the voyage to the West Coast of Africa to indicate that there was anything in the condition of the vessel that ought to cause anxiety. She was a very considerable time on the coast, and after she sailed she was subjected to considerable strains, and no leakage of any consequence took place until after the loss of her rudder. As regards the alleged bad stowage, in my judgment, there was no evidence of any sort of bad stowage which rendered the vessel unseaworthy. The stowage was only of the kind which was held in the case of *Elder Dempster and Co. Limited* v. *Paterson, Zochonis, and Co. Limited* (16 Asp. Mar. Law Cas. 68, 351; 131 L. T. Rep. 449; (1923) 1 K. B. 420; (1924) A. C. 522), not to amount to unseaworthiness. It was also faintly contended that she was unseaworthy in that she had an unqualified and incompetent master and was undermanned. I think it is unnecessary to deal with that part of the case, except to say that the learned judge did not find unseaworthiness in that respect, and I think there was no evidence which would have justified such a finding.

It remains to consider (1) the alleged inadequacy of the sails, and (2) the alleged weakness of the rudder. If a cargo owner relies either by way of defence or by way of claim on an allegation of unseaworthiness, the onus is clearly on him to prove the allegation. I do not think that this means, as counsel for the shipowners contended, that he must give evidence which makes it quite certain that the vessel was unseaworthy. All he need do is to give evidence which establishes unseaworthiness beyond the reach of reasonable doubt. If the evidence merely raises a suspicion, or if it goes beyond suspicion but leaves in the mind of the tribunal a reasonable doubt whether unseaworthiness is established, the cargo owner alleging unseaworthiness fails. Some repairs were required to the sails when the vessel was in the Bahamas. Those repairs were done to the satisfaction of the surveyors, and it does not seem to have occurred to anyone, either to the owner or to Captain Miller, the experienced captain, then in charge of the vessel, or to any of the marine surveyors, that she had an inadequate supply of sails. There was evidence from expert witnesses that the quantity she had, which is described as one suit and a half, was sufficient according to the accepted standard. She had a supply which is regarded as rather more than one suit and a half. Capt. Kverndal, surveyor in London for the Bureau Veritas, said that one suit and a half would have been passed by Bureau Veritas as an adequate supply. After this the fact that some marine surveyors say she ought to have had two suits does not seem to me to be sufficient to enable the court to find that unless she had more sails than she in fact had, the vessel was unseaworthy.

While she was on the West Coast the sails were overhauled under the supervision of Captain Bishop. I am inclined to think that the spanker was not in very good condition, but that in all other respects the sails were reasonably fit for the voyage on which the vessel started. I think the vessel would have been lost anyway, even if the spanker had been in better condition than it was, and the fact that it does not appear to have been in very good condition may be disregarded as unimportant. The question of the rudder is more difficult.

The defendants put their case with regard to the rudder in two ways. They say that the rudder broke in such circumstances that the court is entitled to infer that it must have been weakened in some way or other before the vessel started on her voyage, because nothing had happened after the vessel put to sea which would be sufficient to account for the breaking of the rudder if it had been in a reasonably fit condition when the voyage started. The defendants also say that the evidence provides them with a sufficient explanation of how the rudder became so weak as to be unable to withstand the ordinary incidents of the voyage. They say that it had been badly wormed some time when it was on the West Coast before it started for Liverpool. The ship started from Cabinda on the 30th Oct.; she lost her rudder on the 24th Dec. After the loss of the rudder there were twenty days on which she remained at the mercy of heavy swells when there was no rudder to control her. I have no doubt whatever that it is right to attribute the subsequent damage to the vessel, and her ultimate abandonment and loss, to the loss of her rudder on the 24th Dec.; and the question that arises for decision is whether it is right to infer from the evidence that the defendants have discharged the onus which lies upon them of establishing that the ship lost her rudder on the 24th Dec. because it was in an unseaworthy state when she started her voyage on the 30th Oct. [His Lordship then discussed the evidence on that point and continued:] I do not think this is a case in which the court can infer that the loss of the rudder is difficult to account for on any theory other than that it was unfit for its work when the ship started.

The considerations appropriate to the solution of the questions involved in this part of the case are clearly and authoritatively stated by Lord Lindley in *Ajum Goolam Hossen and Co.* v. *Union Marine Insurance Company* (9 Asp. Mar. Law Cas. 167; 84 L. T. Rep. 366; (1901) A. C. 362, at p. 366). That was a case in which it was alleged that the fact that a vessel foundered in calm water

within twenty-four hours after she started was sufficient evidence that she was unseaworthy when she started. Lord Lindley says this, dealing with that situation: "The underwriters have the great advantage of the undoubted fact that the vessel capsized and sank in less than twenty-four hours after leaving port without having encountered any storm or other known cause sufficient to account for the catastrophe; and there is no doubt that if nothing more were known they would be entitled to succeed in the action. If nothing more were known, unseaworthiness at the time of sailing would be the natural inference to draw; there would be a presumption of unseaworthiness which a jury ought to be directed to act upon, and which a court ought to act upon if unassisted by a jury. But if, as in this case, other facts material to the inquiry with regard to the unseaworthiness of the ship are proved, those facts must also be considered; and they must be weighed against the unaccountable loss of the ship so soon after sailing, and unless the balance of the evidence warrants the conclusion that the ship was unseaworthy when she sailed, such unseaworthiness cannot be properly treated as established, and the defence founded on it must fail. The law on the point was finally settled in *Pickup* v. *Thames and Mersey Marine Insurance Company* (4 Asp. Mar. Law Cas. 43; 39 L. T. Rep. 341; 3 Q. B. Div. 594), which followed *Anderson* v. *Morice* (3 Asp. Mar. Law Cas. 31; 31 L. T. Rep. 605; L. Rep. 10 C. P. 58). In these cases the court pointed out the danger and error of acting on the presumption in favour of unseaworthiness in case of an early loss of which the assured cannot prove the cause; and the court pointed out the necessity of bearing in mind that the defence of unseaworthiness must be overruled unless supported by a sufficient weight of evidence in its favour, after duly considering all the evidence bearing on the subject, including, of course, the very weighty evidence with which the underwriters start their case.

In my judgment the weather from the 17th to the 24th Sept. is sufficient to account for the loss of the rudder, and the facts do not require for their explanation that the court should find, contrary to the evidence of the ship's officers supported by the certificates obtained on the West Coast of Africa, that some part of the rudder had been so badly wormed as to render the ship unseaworthy.

I have come to the conclusion that the defendants have not discharged the onus which rests on them to prove that the ship was lost because she was unseaworthy when she loaded her cargo, or when she sailed with it from Cabinda.

If I should be wrong about this, I would still think that the plaintiffs ought to succeed, as I am satisfied that they took reasonable means to provide against unseaworthiness, and in any case that they entrusted to experienced officers, servants, or agents the duty of providing against unseaworthiness, and, therefore, they committed no breach of the implied warranty of seaworthiness as limited by the express words of the bill of lading.

I fail to see what course other than that which they took of examining the hull, and obtaining the best experts they could on the spot to examine and survey the condition of the vessel, they could have taken, or what other reasonable means were open to them to provide against unseaworthiness. In voyages of sailing vessels and tramp steamers which are of long duration, and which leave the vessel in small ports a long way from the owners' headquarters, business would be impossible if it was not considered reasonable to trust the agent and captain on the spot to use their best judgment with regard to whether the ship is, or is not, reasonably fit to encounter the perils of the voyage.

In my judgment the appeal should be allowed with costs and judgment should be entered for the plaintiffs for the amount claimed by them, with costs, and on the counterclaim with costs.

Slesser, L.J.—I agree that this appeal should be allowed. The learned judge has found that the vessel was unseaworthy at the time of sailing, but, as in my view, the finding cannot be supported, any question which would arise on an assumption of unseaworthiness need not be considered. The implied liability of the company for unseaworthiness in the absence of any express undertaking of seaworthiness, which express undertaking is absent from the contract of carriage in this case, is limited by clause 2 of the contract of carriage. Clause 2 operates to limit the liability of the company and limits the liability for perils of the sea arising from unseaworthiness if all reasonable means have been taken to provide against such unseaworthiness at the beginning of the voyage. The clause continues "The company may entrust to experienced or qualified officers, servants, or agents the duty of providing against unseaworthiness, and shall then be deemed to have fulfilled its obligation hereunder." That is to say, that if the company do entrust such duty to experienced or qualified officers they must be taken to have used reasonable means to provide against loss, injury, or damage.

Lord Cave, L.C. in *Elder Dempster and Company Limited* v. *Paterson, Zochonis and Company Limited* (16 Asp. Mar. Law Cas. at p. 355; 131 L. T. Rep. 449; (1924) A. C. 522, at p. 533) said: "It becomes unnecessary to consider whether, in the event of unseaworthiness being found, the conditions of the bills of lading would have been sufficient to protect the charterers from liability. It is enough to say that, in my opinion, they are not sufficient for that purpose, the requirements of the proviso to condition No. 2 not having been satisfied."

This, though *obiter*, is an authority for the proposition that where the requirements of the proviso are satisfied the conditions may protect the charterers from liability. Viscount Finlay says (16 Asp. Mar. Law Cas. at p. 359; 131 L. T. Rep. 449; (1924) A. C. at p. 547): "The appellants have entirely failed to show that this condition was fulfilled." The company never entrusted to anyone the duties there material.

In my opinion the company in this case have discharged the onus of showing that both their officers were experienced and qualified and were acting within the scope of the matter with which they were properly entrusted. If, then, the company have entrusted to experienced or qualified officers the duty of providing against unseaworthiness, they are to be deemed under the second condition to have fulfilled their obligations, and, once this is established, the history of the voyage becomes of secondary importance. If, however, it were the case that the company did not so entrust to experienced and qualified officers the obligation of providing against unseaworthiness, then I am of opinion that in any event the evidence shows that all reasonable means have been taken to provide against unseaworthiness.

Having regard to the limitations of the warranty contained in the contract—limitations resembling those imposed by the Harter Act—I think that the defendants, apart from all question of reasonable means taken by the plaintiff company and its officers, have failed to discharge the onus which lies on them to show that the ship was unseaworthy: (*Steel* v. *State Line Steamship Company*, 3 Asp. Mar. Law Cas. 516; 37 L. T. Rep. 333; 3 App. Cas. 72; *The Glenfruin*, 5 Asp. Mar. Law Cas. 513; 52 L. T. Rep. 769; 10 Prob. Div. 103).

I have come to the conclusion (1) that the company did entrust to experienced or qualified officers the duty of providing against the unseaworthiness of the ship; (2) that the company have taken all reasonable means to provide against unseaworthiness; and (3) that the defendants have failed to prove that the ship was unseaworthy.

In the result the plaintiffs are free from all liability to the defendants due to the loss of the ship, and should succeed on the claim and counterclaim.

Appeal allowed.

Solicitors for the respondents, *Hill, Dickinson*, and *Co.*, Liverpool.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Tuesday, Dec. 17, 1929.

(Beford Lord HEWART, C.J., AVORY and TALBOT, JJ.)

MANCHESTER SHIP CANAL COMPANY *v.* DIRECTOR OF PUBLIC PROSECUTIONS. (*a*)

Factory—Docks—Process of unloading a ship—Fencing or covering of hatches that are not in use—Hatches that have been used—On whom duty lies—Stevedore or ship—Whether process of unloading includes fencing or covering of such hatches—Factory and Workshop Act 1901 (1 *Edw.* 7, *c.* 22), *ss.* 79, 85—*Docks Regulations* 1925 (*S.R. & O.* 1925, *No.* 231), *reg.* 34.

By reg. 34 *of the Docks Regulations* 1925: "*Where there is more than one hatchway, if any hatch of a hold exceeding 5ft. in depth, measured from the level of the deck in which the hatch is situated to the bottom of the hold, is not in use for the passage of goods, coal, or other material or for trimming, and the coamings are less than 2ft. 6in. in height, such hatch shall either be fenced to a height of 3ft. or be securely covered.*"

Under the head of "*Duties*" *in these regulations it is provided:* "*It shall be the duty of every person who by himself, his agents or workmen carries on the processes, and of all agents, workmen and persons employed by him in the processes, to comply with Part IV. of these regulations (which includes reg.* 34). "*Provided that while the processes are being carried on it shall be the duty of the owner, master or officer in charge of a ship to comply with reg.* 34, *so far as it concerns those hatches which are not in use and which, during the processes, have not been used, and are not about to be used for the purpose of the processes.*"

Held, that on the proper construction of these regulations the duty, under reg. 34, *to fence or cover the hatches that have been used when unloading is upon those who carry out the process of unloading: the duty (whilst the process of unloading is being carried on) of the owner, master, or officer in charge of the ship in the case of a hatch not in use is to comply with reg.* 34 *so far as it concerns hatches which during the processes have not been used and are not about to be used for the purpose of the processes.*

Held, further, that the process of unloading such a hold includes the fencing or covering the hatches that have been used and is not complete until such hatches have been fenced or covered.

Whatever obscurity there may be in the text of the Docks Regulations 1925, *that this construction is correct appears from the consideration of the earlier regulations* (*S.R. & O.* 1904, *No.* 1617),

(*a*) Reported by C. G. MORAN, Esq., Barrister-at-Law.

and the subsequent decisions thereon of Owner v. C. J. King and Sons Ltd. (1922, 128 *L. T. Rep.* 307) *and* Howlett v. Shaw-Savill and Albion Company Limited (1924, 40 *Times L. Rep.* 778 ; 19 *Lloyd's List Rep.* 176).

CASE stated by the chairman of Quarter Sessions for the County Palatine of Lancaster. An information was preferred by the Director of Public Prosecutions at the County Police Court, Strangeways, Manchester, against the Manchester Ship Canal Company, the appellants, for that they being persons who by themselves or by their agents or workmen were carrying on processes within the meaning of the Docks Regulations 1925, made in pursuance of the Factory and Workshop Act 1901 on the steamship *Manchester Citizen*, then lying at the Sun Mills Berth, Trafford Wharf, Stretford, did unlawfully neglect to comply with No. 34 of the regulations, in that the shelter deck hatch of hatchway No. 6 of the said steamship, being the hatch of a hold exceeding 5ft. in depth measured from the level of the deck in which the said hatch is situated to the bottom of the hold and being a hatch of which the coamings were less than 2ft. 6in. in height, having been used for the said processes, but having ceased to be in use for the passage of goods, coal, or other material, was neither fenced to a height of 3ft. nor securely covered contrary to sect. 85 of the Factory and Workshop Act 1901. The appellants were convicted and fined 5*l.*, but appealed to Quarter Sessions, who confirmed the conviction but consented to state and sign the following case.

Upon the hearing of the appeal, the following facts were admitted.

On the 30th Oct. 1928 the steamship *Manchester Citizen* was laying at the Sun Mills Berth, Trafford Wharf, Stretford, loaded with grain. She had six cargo holds and six hatchways, No. 1 hold being at the bow and No. 6 at the stern. She had three decks. There were three decks above holds numbered 1 to 5, and two decks above hold numbered 6. These two decks were known as the top deck and the shelter deck respectively. There was a hatch on the top deck to hold No. 6, and a considerable distance below that was the shelter deck in which there was another hatch to hold No. 6. The bottom of hold No. 6 was some 28ft. below this hatch in the shelter deck, and the coamings round this hatch on the shelter deck were only 6in. in height.

Holds Nos. 1 to 5 were being unloaded by the Co-operative Wholesale Society, who had commenced unloading on the 29th Oct. 1928, and had continued the unloading from about eight a.m. on the 30th Oct. 1928. On that date they were unloading hold No. 4 until about three p.m., then hold No. 2 until about 3.30 p.m., and then hold No. 5 until five p.m., at which time there was a break for tea. From about 5.30 p.m. they continued to unload hold N. 1 until ten p.m.

Hold No. 6 was being unloaded by the appellants. They commenced to unload it at about eight a.m. on the 30th Oct. 1928. When the appellants first went on the steamship on that date the hatch of hold No. 6 on the top deck was covered, but the hatch of the hold on the shelter deck was not covered but was open. The appellants removed the hatch cover of hold No. 6 on the top deck and put an elevator in hold No. 6 for the purpose of unloading. They unloaded the grain out of hold No. 6 until about 2.30 p.m. on the 30th Oct. 1928, by which time all the grain in the hold had been unloaded. The appellants were then engaged until about 3.45 p.m. in removing the elevator. The appellants then replaced the cover of the hatch of hold No. 6 on the top deck, and left the ship. The appellants did not cover the hatch on the shelter deck of hold No. 6 or in any way fence this hatch. The shelter deck in the vicinity of the hatch to hold No. 6 was made completely dark by the replacement of the cover of this hatch on the top deck.

Between 4.30 p.m. and 5 p.m. on the 30th Oct. 1928 a man fell into hold No. 6 and was killed.

For the appellants it was contended :

(*a*) That the facts did not disclose the offence of which the appellants were convicted ; (*b*) That the conviction was erroneous and unjust ; (*c*) That the said Docks Regulations only applied to a person carrying on a process during the time that a process was being carried on by him ; (*d*) That the appellants had ceased to carry on on the said ship any process when they removed their tackle and left the ship ; (*e*) That it was not in the circumstances obligatory upon the appellants to fence or cover the said hatchway ; (*f*) That the covering or fencing of the hatches is not a part of the process of unloading as defined by the said regulations.

For the respondent it was contended :

(*a*) That the conviction of the appellants was right ; (*b*) that the hatch of hold No. 6 on the shelter deck of the said steamship having been used by the appellants during the unloading of hold No. 6, but having ceased to be in use for the passage of goods, coal or other material ought to have been fenced to a height of 3ft. or securely covered by the appellants upon such cessation and before leaving the steamship ; (*c*) that the process of unloading hold No. 6 included the fencing of the hatch of hold No. 6 on the shelter deck of the said steamship to a height of 3ft. or the covering of the said hatch securely upon its ceasing to be in use for the passage of goods, coal or other material, and (*d*) that the process of unloading hold No. 6 was not complete until the hatch of hold No. 6 on the shelter deck of the said steamship was fenced to a height of 3ft. or securely covered. On the part of the respondent the attention of the court was directed to the decision in *Stuart* v. *Nixon and Bruce* (1901, 84 L. T. Rep. 65 ; (1901) A. C. 79. The question for the High Court was whether upon the above statement

of facts the Court of Quarter Sessions came to a correct determination in point of law.

The Factory and Workshop Act 1901 (1 Edw. 7, c. 22) provides:

Sect. 79: Where the Secretary of State is satisfied that any manufacture, machinery, plant, process or description of manual labour, used in factories or workshops, is dangerous or injurious to health or dangerous to life or limb, either generally, or in the case of women, children or any other class of persons, he may certify that manufacture, machinery, plant, process or description of manual labour to be dangerous; and thereupon the Secretary of State may, subject to the provisions of this Act, make such regulations as appear to him to be reasonably practicable and to meet the necessity of the case.

Sect. 85 prescribes fines for failure to comply with regulations made under the Act.

The Docks Regulations 1925 (S.R. & O. 1925, No. 231) were made by the Secretary of State under sect. 79 (*sup.*) in respect of "the processes of loading, unloading, moving and handling goods in, on, or at any dock, wharf or quay, and the processes of loading, unloading and coaling any ship in any dock, harbour, or canal." These regulations revoked the earlier regulations made by the Secretary of State in respect of the same processes (S.R. & O. 1904, No. 1617).

In the regulations of 1925 there were the following definitions:

"'Processes' means the processes above mentioned or any of them."

"'Person Employed' means a person employed in the processes."

"'Hatch' means an opening in a deck used for the purpose of the processes or for trimming or for ventilation."

"'Hatchway' means the whole space within the square of the hatches, from the top deck to the bottom of the hold."

Par. (*d*) under the head of "Duties" in these regulations is as follows:

(*d*) It shall be the duty of every person who by himself, his agents or workmen carries on the processes, and of all agents, workmen and persons employed by him in the processes, to comply with Part IV. of these Regulations. Provided that while the processes are being carried on, it shall be the duty of the owner, master or officer in charge of a ship to comply with Regulation 34 so far as it concerns those hatches which are not in use and which during the processes have not been used and are not about to be used for the purpose of the processes.

Reg. 34 is in Part IV. of the regulations, and is in these terms:

(*a*) Where there is more than one hatchway, if any hatch of a hold exceeding 5ft. in depth measured from the level of the deck in which the hatch is situated to the bottom of the hold, is not in use for the passage of goods, coal or other material or for trimming, and the coamings are less than 2ft. 6in. in height, such hatch shall either be fenced to a height of 3ft. or be securely covered. Provided that the regulation shall not apply (1) during meal times or other short interruptions of work during the period of employment; (2) to trimming hatches which are not accessible to persons employed. (*b*) Hatch coverings shall not be used in the construction of deck or cargo stages, or for any other purpose which may expose them to damage. (*c*) Hatch coverings shall be replaced on the hatches in the positions indicated by the markings made therein in pursuance of Regulation 14.

G. P. Langton, K.C. and *J. Lustgarten*, for the appellants.—The facts shown by the evidence and set out in the case stated did not disclose an offence under reg. 34. The appellants left the ship as they found it; they replaced the cover to the hatch of hold No. 6 on the top deck, but did not place the cover on the hatch of that hold on the shelter deck, but left that hatch as they found it, when they went on board. There is no provision in the Dock Regulations 1925 requiring the appellants to cover this hatch after they have finished unloading. The Docks Regulations 1925 only apply to a person carrying on a process, during the time when a process is being carried on by him. The facts show that there were two distinct processes: the process of unloading holds Nos. 1 to 5 on the *Manchester Citizen*, and the process of unloading hold No. 6. At the time when this accident happened the process of unloading hold No. 6 had been finished. The appellants ceased to carry on any process on this ship when they removed their tackle and left the ship. It is provided under the head of "Duties" in the Docks Regulations 1925 (see par. (*d*)) that it shall be the duty of every person who "carries on" the processes to comply with Part IV. of these regulations in which is contained reg. 34. The verb is in the present tense, "carries on." The appellants had ceased to carry on the process of unloading at the material time. They had fulfilled the duty laid upon them. They were not bound to fence or cover this hatchway, for the covering or fencing of the hatches was not a part of the process of unloading within the meaning of these regulations. In *Stuart* v. *Nixon and Bruce* (84 L. T. Rep. 65; (1901) A. C. 79) it was held that an injury to a workman from iron beams slung across a hatchway was in the course of the process of loading, although the cargo had at the time of the injury been put into the hold, as the process of loading was not complete till the hatchway was secured. But for that decision there is good reason, as the hatch covers must be placed on a ship before she can proceed safely on her voyage. But that case is no authority for holding that the process of unloading is not finished until the hatches are fenced or covered. Lord Davey said in *Stuart's* case (*sup.*) (see 84 L. T. Rep. 70 and (1901) A. C. at p. 98): "Notwithstanding that the actual putting of the goods into the hold has been completed, I think this was 'relating to the process'—in fact, I find an admission before the learned County Court judge that the process was incomplete, without the putting in of these beams. . . . If the two operations had been in fact severed and the one had been

done by a contractor, and the other had been done by the master of the ship, that might not have been so." As to the finding in the case that the shelter deck in the vicinity of the hatch to hold No. 6 was made completely dark by the replacement of the cover of this hatch on the top deck, by reg. 12 and par. (6) of the heading "Duties" a duty is imposed on the owner, master or officer of the ship efficiently to light the ship while the processes of loading and of unloading are being carried on.

Sir *William Jowitt*, K.C. (A.-G.), *H. M. Giveen*, and *W. Gorman* for the respondent.—It is plain that the Factory and Workshop Act 1901 was designed to protect, not only those who are employed in the factory but also anyone who is working on the premises although not so employed. (See sects. 10, 12, and 13, and especially sub-sect. (4) of sect. 12.) That purpose of the Act should be borne in mind in construing regulations made pursuant to that Act. Regulations were made under sect. 79 of the Factory and Workshop Act 1901, in 1904, the predecessors of those now under consideration (see S. & O. 1904, No. 1617). Two decisions were given under those regulations: *Owner* v. *C. J. King and Sons Limited* (16 Asp. Mar. Law Cas. 107; 1922, 128 L. T. Rep. 307) and *Howlett* v. *Shaw, Savill and Albion Company Limited* (1924, 40 Times L. Rep. 778; 19 Lloyd's List Rep. 176), which illustrate and illuminate the proviso to par. (d) under the heading of "Duties" in the regulations of 1925, namely, "Provided that while the processes are being carried on, it shall be the duty of the owner, master, or officer in charge of a ship to comply with regulation 34 so far as it concerns those hatches which are not in use and which during the processes have not been used and are not about to be used for the purpose of the processes." In *Owner's* case (*sup.*) the point for which the respondent here contends was assumed; it was taken that the stevedores working on No. 2 hold were responsible for leaving that hatchway covered; the claim was under reg. 19 of the 1904 regulations, that they were responsible for covering No. 3 hatchway where the crew and not the stevedores had been working. Lord Hewart, C.J., in giving judgment in that case, supporting the decision of the justices, said (see 16 Asp. Mar. Law Cas., at p. 109; 128 L. T. Rep., at p. 309): "They have found . . . that each employer is responsible only for the protection of those hatchways upon which he has been employed to carry out work; in other words those hatchways which have been or are being used or are to be used by the particular persons employed by him or by his agents upon the carrying out of the process." It will at once be seen that those who framed the proviso above cited defining the duties of the "ship" used the language of Lord Hewart, C.J., in defining the duties of the employer, to show the duties for which the "ship" was not responsible. *Howlett's* case (*sup.*) was an action under the Fatal Accidents Acts by the mother of a joiner's labourer who was working on a steamship in dock, when he was killed by falling down an unfenced hatchway. The Court of Appeal held that as the plaintiff's son was not employed on unloading the vessel there was no breach of duty towards him, on the part of the shipowners, since he was not employed in any of the processes mentioned in the regulations of 1904, and also as the unloading though not finished had so completely stopped, that it could not be said to be still going on within the meaning of the regulations. These two cases led to the amendment of the regulations of 1904. In the regulations of 1925 the paragraph in the regulations of 1904, setting out the persons for whose protection the regulations were made, was omitted, and this proviso to paragraph (d) under the head of "Duties" was inserted by which the "ship's" duty was to comply with regulation 34 "so far as it concerns those hatches which are not in use and which during the processes have not been used and are not about to be used for the purpose of the processes." [Lord HEWART, C.J.—Omitting "hatches that have been used."] It is plain that there was a duty on someone to cover or fence this hatchway to hold No. 6. By par. (d) it was the duty of every person who carries on the processes, one of which is "unloading," to comply with Part IV. of the regulations, which included reg. 34. Then the proviso enumerates the duties of the ship. The argument that the fencing or covering of this hatchway was not part of the process of unloading comes thirty years too late (see *Stuart* v. *Nixon and Bruce*, 1901, 84 L. T. Rep. 65; (1901) A. C. 79), where it was held that the process of loading was not complete until such a hatchway was secured. It is clear that in that case for this purpose no distinction was made between loading and unloading. See the judgment of Lord Halsbury, where he said: "The loading or unloading must be treated as a whole transaction" (see 84 L. T. Rep. at p. 68; (1901) A. C. at p. 91). And if safety be the criterion, it is safer to fall down a hatchway when the hold is full of cargo than when it is empty. The two cases I have cited, *Owner's* case (*sup.*) and *Howlett's* case (*sup.*) clearly pre-suppose the argument for the appellants as impossible. Experience has shown that of those two bodies of persons —those concerned with the loading or the unloading and the owner, master, or officer in charge of the ship—each endeavours to leave the duty of closing those hatchways to the other. The regulations of 1925 have made the duties of each body clear. The person who carries on the process and his men are liable in the case of hatches that have been used by them; the process of unloading is not complete until the lid or cover is placed upon the hatch. The ship is liable while the processes are being carried on for those hatches which are not in use and which during the processes have not been used and are not

about to be used for the purpose of the processes. [AVORY, J.—What do you say as to the use of the present tense in par. (d), "carries on the processes?" On your argument would you not expect the past to be used, "who has carried on?"] This provision is not concerned with time; it is attempting to describe a class of persons.

G. P. Langton, K.C. in reply: In *Owner's* case the crew were working on hold No. 3, down which the workman fell, and there was no reason why the stevedores should have been held responsible. And it appears from the judgments in *Howlett's* case that one must look at the time when the accident happened to see upon whom the obligation to cover or fence the hatch falls. Bankes, L.J. said (see 19, Lloyd's List Rep. at p. 178): "Yet at the time of the accident this unloading had so completely stopped—it is quite true not for all time—that it could not be said that the process of unloading was going on, even although the unloading was not complete; and I think myself that the proviso to [reg.] 19 indicates that the object of the regulation is to provide for what is to happen while the process of unloading is going on." Scrutton, L.J. said (see 19 Lloyd's List Rep. at p. 179): "I cannot see any obligation in the regulations to fence a hatch on which the hatchways have not been put after unloading has ceased. Reg. 19 in the first paragraph does seem to be absolute; but the proviso appears to show that the obligation either to fence or cover the hatch only applies during the period of employment; and in the case of a 'tween deck hatch, which it is not necessary to close for the safety of the ship or cargo I cannot see any obligation to fence it at a time when the people working on discharging are no longer working."

Lord HEWART, C.J.—This is a case stated by the justices of the Salford Sessions, and the question which is involved arises in the following way: an information was preferred by a solicitor, acting on behalf of the Director of Public Prosecutions, under the Factory and Workshop Act 1901, against the appellants "for that they being persons who, by themselves or their agents or workmen were carrying on processes within the meaning of the Docks Regulations 1925, made in pursuance of the Factory and Workshop Act 1901, on the steamship *Manchester Citizen*, then lying at Trafford Wharf, did unlawfully neglect to comply with No. 34 of those regulations, in that the shelter deck hatch of hatchway No. 6 of that steamship, being the hatch of a hold exceeding five feet in depth, measured from the level of the deck in which the hatch was situated, to the bottom of the hold, and being a hatch of which the coamings were less than 2ft. 6in. in height, having been used for the said processes, but having ceased to be in use for the passage of goods, coal or other material, was neither fenced to a height of 3ft. nor securely covered, contrary to sect. 85 of the Factory and Workshop Act 1901." The justices having heard the information, convicted the appellants and fined them £5. Thereupon the appellants appealed to the Quarter Sessions and the Court of Quarter Sessions having heard the appeal, dismissed it and confirmed the conviction. Afterwards, upon request, the Court of Quarter Sessions stated the present case for the opinion of this court.

The facts which are found may be quite briefly summarised. The ship referred to—the *Manchester Citizen*—which was loaded with grain and which had six cargo holds and six hatchways, had above the holds numbered 1 to 5 inclusive three decks. Above hold No. 6 there were two decks known as the top deck and the shelter deck respectively. There was a hatchway on the top deck to hold No. 6, and a considerable distance below that was a shelter deck, where there was another hatch to hold No. 6, and the bottom of hold No. 6 was 28 feet below the hatch in the shelter deck. More than that, the coamings round that hatch on the shelter deck were only 6 inches in height. With regard to the holds numbered 1 to 5, they were being unloaded, it is found, by the Co-operative Wholesale Society, but hold No. 6 was being unloaded by the appellants. The times at which work was commenced and finished on the several holds is set out in the case. With regard to the appellants it is found that when they first went on the ship on the 30th Oct. 1928 the hatch of hold No. 6 on the top deck was covered, but the hatch of the hold on the shelter deck was not covered, but was open. The appellants removed the hatch cover of No. 6 hold on the top deck. They then put an elevator in hold No. 6 for the purpose of unloading, and they began to unload the grain. They went on unloading until 2.30 p.m. of the 30th Oct., by which time the grain in this hold had been unloaded. The appellants were then engaged until about 3.45 p.m. in removing their elevator. They completed that task and they replaced the cover of the hatch of hold No. 6 on the top deck and left the ship, but they did not cover the hatch on the shelter deck of hold No. 6, nor did they in any way fence that hatch. The effect of the replacing of the cover on the top deck was to make the neighbourhood of the hatch on the shelter deck completely dark. Between 4.30 and 5 p.m. on the same day a man fell through this hatchway on the shelter deck into hold No. 6 and was killed.

The contentions on behalf of the respondent were that the hatch of No. 6 hold on the shelter deck, having been used by the appellants during the unloading of that hold, and having ceased to be in use for the discharge of goods, ought to have been fenced to a height of 3 feet or securely covered by the appellants upon the cessation of the work and before they left the steamship. Further that the process of unloading hold No. 6 included the fencing of the hatch of hold No. 6 on the shelter deck of the steamship to a height of 3 feet or the covering

of the said hatch securely upon its ceasing to be in use for the passage of goods, coal or other material. And finally that the process of unloading hold No. 6 was not complete until the hatch of hold No. 6 on the shelter deck of the steamship was fenced to a height of 3 feet or securely covered. The contrary contention was that the regulations only applied to a person carrying on a process during the time that the process was being carried on; that the appellants had ceased to carry on any process when they removed their tackle, and that there was no obligation upon them to fence or cover the hatchway; and finally, that the covering or fencing of hatches is not a part of the process of unloading as defined by the regulations.

Now in approaching the question whether the Court of Quarter Sessions in upholding the decision of the justices, came to a correct conclusion, it is a little important to have regard to the history of this matter. By sect. 79 of the Factory and Workshop Act 1901: "Where the Secretary of State is satisfied that any manufacture, machinery, plant, process, or description of manual labour used in factories or workshops is dangerous or injurious to health, or dangerous to life or limb"—he may certify that manufacture, machinery, plant, process, or description of manual labour to be dangerous, and he may make regulations. Regulations were, in fact, made, and in the year 1904 by Statutory Rules and Orders No. 1617, a series of regulations came into existence in respect of the processes of loading, unloading, moving and handling goods in, on, or at any dock—docks being expressly named in the Factory and Workshop Act 1901. Those regulations, as experience proved, were in some respects insufficient; for example, while, in general, it is the purpose of the Factory and Workshop Acts to protect the life and limbs, both of persons employed by the owners of the factory, and all persons working in the factory, although not so employed, these regulations were described as regulations for the protection of persons employed in the processes or any of them, and so forth. When one comes to the particular regulation, which in that series is No. 19, about hatchways, in that case also experience proved that for the purposes of the Act, the regulations were not complete. In *Owner* v. *C. J. King and Sons Limited* (16 Asp. Mar. Law Cas. 107; 1922, 128 L. T. Rep. 307), it was held that the words of reg. 19, read in connection with the other regulations had to do only with a case where there was more than one hatchway within the sphere of the activities of the person carrying out the work or of his employees. In giving judgment in that case, if I may refer to my own words, I said this (see p. 309): "The justices have found in this case the facts, which it is not necessary for me to dwell upon, and that each employer is responsible only for the protection of those hatchways upon which he has been employed to carry out work; in other words, those hatchways which have been or are being used, or are to be used by the particular persons employed by him or by his agents upon the carrying out of the process." Then came the decision in *Howlett* v. *Shaw, Savill, and Albion Company Limited* (1924, 40 Times L. Rep. 778; 19 Lloyd's List Rep. 176), to which I need not more particularly refer. But in consequence of those decisions it would appear that new regulations were made—S. R. & O. 1925. No. 231. And it was under these regulations that the prosecution now in question was launched. The words limiting the benefit of the regulations to persons employed in the processes were omitted. And the words which I have referred to in my judgment in *Owner* v. *C. J. King and Sons Limited* (*sup.*) form the basis of the proviso that has been cited. And the substantive provision of the regulation and the proviso were founded upon the assumption that no one in the case of *Owner* v. *C. J. King and Sons Limited* (*sup.*) had in any way attempted to dissent from the proposition that a person who is loading or unloading at a hatchway must look after that hatchway. Accordingly one finds on page 2 of the regulations under the head of "Duties" these words: "(*b*) It shall be the duty of the owner, master, or officer in charge of a ship to comply with Part II. of these regulations. (*c*) It shall be the duty of the owner of machinery or plant used in the processes, and in the case of machinery or plant carried on board a ship not being a ship registered in the United Kingdom, it shall also be the duty of the master of such ship, to comply with Part III. of these regulations. (*d*) It shall be the duty of every person who by himself, his agents or workmen, carries on the processes, and of all agents, workmen and persons employed by him in the processes, to comply with Part IV. of these regulations." "Processes" are defined in the regulations as the processes above mentioned, or any of them, and the processes above mentioned are "loading, unloading, moving and handling goods in, on, or at any dock, wharf or quay, &c. Now stress was laid by Mr. Langton in the course of his argument upon the use of the present tense in the words "carries on," in par. (*d*) of "Duties"; and that argument is, no doubt, the basis of the contention urged, as the case finds, by the appellants, that the regulations applied only to a person carrying on a process, during the time when the process was being carried on by him. I cannot take that view of these words. In my opinion these words in par. (*d*) "who by himself, his agents or workmen, carries on the processes" are merely descriptive, words designating the person—that is to say the person who is engaged in the occupation of loading or unloading or moving or handling the goods. Then comes the proviso: "Provided that while the processes are being carried on, it shall be the duty of the owner, master or officer in charge of a ship to comply with Regulation 34, so far as it concerns those hatches which are not in use and which during

the processes have not been used and are not about to be used for the purpose of the processes." In other words, that enumeration closely follows the enumeration observed in the judgment in the case of *Owner* v. *C. J. King and Sons Limited* (*sup.*) distinguishing three things: hatches not in use, hatches which have not been used, and hatches which are not about to be used; and in the proviso, as in that judgment, an exception is most deliberately made about hatches that have been used. And it is to be observed that these words appear in this proviso, which places certain duties upon the owner, or master or officer. The substantive part of this provision is to describe the duty of the person who carries out the processes, and I think that it is quite obvious, when one looks at these words, side by side with the cases which were decided between the time of the passing of the old regulations and the passing of the new, that it was intended that the person doing the unloading should have placed upon him the responsibility as to the hatch which he was using, and had used; that is to say that he most observe, for example reg. 34, and excepting during meal times, or other short interruptions, as the trimming of hatches not accessible to persons employed, the hatch covers must be replaced on the hatches in the position indicated by the markings. Now it is strongly urged that the replacing of such hatches, or the covering in of hatches which were in such a position, and in such a condition as to require fencing or secure covering, was no part of the work of unloading; and reference for that purpose was made to the case of *Stuart* v. *Nixon and Bruce* (1901, 84 L. T. Rep. 65; (1901) A. C. 79). It was sought with no little ingenuity and persistence, to distinguish in this respect the work of loading from the work of unloading. It is quite obvious that, in the circumstances of that case at any rate, it had been found that the task of covering in was a part of the work of loading, notwithstanding that at the time when the operation of covering in began all the cargo, as might be expected, had already been stowed in. But it seems to me that the attempt to distinguish loading and unloading for that particular purpose entirely fails, and the matter is made quite clear, as it seems to me, by what was said by Lord Halsbury at page 91 of the Law Reports, which I need not repeat. It seems to me as obviously true of the process of loading as it is of the process of unloading to say that "covering in" is ancillary to the main transaction and is a part of the work, and a part of the operations for which the Legislature contemplated that protection was desirable.

In my opinion, therefore, upon the true construction of these regulations, especially when they are regarded in the light of the two antecedent decisions to which I have referred, the Court of Quarter Sessions came to a right conclusion. The present appellants were engaged in unloading at hold No. 6, and when they had taken out all the grain it remained for them to see that that hatch covering was put in its proper place—where it ought to be; in other words, they were to leave the place safe for persons passing to and fro upon the ship. It seems to me that to attempt to distinguish between the two processes of loading and unloading so far as the ancillary or final operation of "covering in" is concerned, is quite impossible, and there is no distinction between the two. I think, therefore, that the contentions which were urged before Quarter Sessions on the part of the respondent were right, and that the justices came to a right determination in point of law in accepting them.

I abstain from criticising the phrasing of these regulations tempting as it might be to essay that task. Knowing something of the difficulties under which these regulations were brought into existence, I desire to refrain from unnecessary criticism. And so far as these particular regulations are concerned, which we have had to consider, whatever obscurity there may appear to be in construing them, when they are regarded simply within the four corners of the text, that obscurity is, I think, removed when one looks back at the history of these regulations and of the cases decided upon them to which our attention has been directed by the Attorney-General. For the reasons I have given, I think that the appeal fails and must be dismissed.

AVORY, J.—I am of the same opinion. The question raised by this information was whether it became the duty of the appellants, the Manchester Ship Canal Company, in the circumstances proved, either to fence or to secure and cover this hatch, which was situate at the 'tween decks. That depends, it seems to me, upon whether they come within the terms of No. 34 of these regulations. If they come within reg. 34 then this duty appears to me to follow from the definition of "Duties" under par. (*d*) of these regulations, by which: "It shall be the duty of every person who by himself, his agents or workmen, carries on the processes, and of all agents, workmen and persons employed by him in the processes, to comply with Part IV. of these regulations." Part IV. includes reg. No. 34. The whole question, therefore, resolves itself into this: Were the appellants carrying on the process of unloading this ship? It has been contended before us that these words should be construed as imposing a duty only upon them while they are actively engaged in the actual unloading, and that as soon as the actual unloading is concluded, they cease to be persons who are carrying on the process. In my opinion that is not the proper construction, in view of the history, and all the circumstances in which these regulations came into force. I think that the words "carries on the processes" may be properly paraphrased by saying that the person who in fact does the loading of the ship, and that the person who, in fact, does the unloading, is to be liable for the duty imposed

by reg. No. 34. There is no question that the appellants were the persons who, in fact, did the unloading. I think, therefore, that the justices were right.

TALBOT, J.—I am of the same opinion. Speaking for myself, I must say that looking at these regulations by themselves only, it is most difficult to ascertain what the true answer is to the question raised in this case. But looking at the two decisions of *Stuart* v. *Nixon and Bruce* (*sup.*) and *Owner* v. *C. J. King and Sons Limited* (*sup.*), to which we have been referred, and more particularly to the judgment of the Lord Chief Justice in the last-mentioned case, it seems to me that if we were to interfere with this decision of Quarter Sessions we should be introducing fresh and unnecessary confusion into the law on this matter.

Appeal dismissed.

(Before WRIGHT, J.)

FIUMANA SOCIETA DI NAVIGAZIONE *v.* BUNGE AND COMPANY LIMITED. (*a*)

General average—Centrocon charter-party—Fire—Spontaneous combustion in bunkers—Cargo loaded while fire in progress—Claim by shipowners for contribution—Unseaworthiness—York–Antwerp Rules 1924.

The plaintiffs were the owners of the steamship Alberto Fassini *under charter to carry coal from Cardiff to the Plate and there load a cargo of grain for Antwerp or Rotterdam. The vessel bunkered at Rotterdam with sufficient coal to take her out and back to Europe or at least to the Islands. On arrival at the Plate she was detained fourteen days at Villa Constitucion before she could get into her berth. After completing the discharge of the outward cargo she proceeded to Santa Fé her first loading port. By the time she arrived there she had been a month in the Plate and the bunker coal had been on the ship for about two and a half months and had been carried through the tropics. While loading at Santa Fé the coal was found to be on fire in the upper-bunkers on both sides. The fire was got under after some days, some* 200 *tons of coal being put on deck in the process.*

The vessel then proceeded to San Nicholas her next loading port. On the way fire again broke out in the bunkers and continued, although the loading had been completed, for several days and was only extinguished with great difficulty. The shipowners claimed a general average contribution for expenses incurred in dealing with the fires, relying on the terms of the bills of lading which embodied the York–Antwerp Rules 1924. *The defendants alleged that the ship was unseaworthy at the time of the loading of their grain and counterclaimed for the amount, if any, they might be liable for in general average.*

Held, on the evidence that there was a defect in the coal at the dates of loading which resulted in fires and that the ship was unfit to receive cargo till labour, time and money were expended to make her fit for the voyage. She was therefore unseaworthy, and the plaintiffs' claim failed.

Held, further, for reasons given in Tempus Shipping Company Limited *v.* Louis Dreyfus and Company (post, p. 152); (1930) 1 *K.B.* 699, *the exception of latent defects and Rule D. of the York–Antwerp Rules of* 1924 *which provides that a claim in general average is not to be barred because it arose by default of the carrier, could not prevail over the absolute warranty of seaworthiness.*

ACTION tried before Wright, J. in the Commercial List.

Miller, K.C. and *Harold Stranger* for the plaintiffs.

Sir *Robert Aske* and *F. Martin Vaughan* for the defendants.

The facts and arguments are fully apparent from his Lordship's considered judgment.

March 12.—WRIGHT, J. read the following judgment:

This is a claim by shipowners against cargo owners for a general average contribution. The plaintiffs are the owners of a vessel called the *Alberto Fassini*, of 4560 tons gross measurement, and the defendants are bill of lading holders, indorsees of the bill of lading from certain shippers, an allied company registered in the Argentine as Bunge and Borne Limitada. These shippers were charterers of the vessel under a charter-party dated the 11th Aug. 1927, under which the vessel then on her way from Cardiff with coals for Villa Constitucion or Rosario was to load at a port in the River Plate a cargo of grain including maize, to deliver the same at Antwerp or Rotterdam at various freights depending on the port of loading. I need only refer to two clauses in the charter-party. One is clause 31, which provides that "average, if any, is payable according to York-Antwerp rules, 1924." The other is the exception clause, clause 29: "The steamer shall not be liable for loss or damage occasioned by the act of God, by quarantine restrictions, by perils of the sea" and certain other perils or any latent defects in hull, machinery or appurtenances, by collision, stranding or other accidents arising in the navigation of the steamer, even when occasioned by the negligence, default or error of judgment of the pilot, master, mariners or other servants of the shipowners or persons for whom they may be responsible

(*a*) Reported by R. A. YULE, Esq., Barrister-at-Law.

(not resulting, however, in any case from want of due diligence by the owners of the steamer, or by the ship's husband or manager)." That charter is the well-known "Centrocon" form.

The vessel bunkered at Rotterdam, which port she left on the 30th June with 1618 tons of Westphalian coal, which was usual coal of good reputation, and which was shipped in the usual mixture of screened and unscreened. I refer to the 1440 tons loaded at Rotterdam. There had been about 117 tons only on board before the bunker coal was loaded at Rotterdam, which had been previously shipped, but of that quantity the bulk had been shipped shortly before at Hamburg, and in the events which happened I attach no importance to the small quantity which I think must have been used and disposed of before any matters material to this question arose. The cargo of coal which was shipped at Cardiff was destined to Villa Constitucion, and the bunker coal, which had been shipped in the large quantities that I have indicated, was intended to take the vessel out to the Plate and bring her back to Europe or to the Islands. Such a practice of bunkering for the round voyage or for the principal part of the round voyage is common in this trade. The vessel sailed from Cardiff early in July. She arrived in the Plate or Buenos Ayres on the 12th or 13th Aug. Her bunker coal shipped at Rotterdam had been partly put in the No. 4 hold. That hold was required for cargo on the voyage back from the Plate, and at Buenos Ayres, or shortly after leaving that port, that coal was shifted from No. 4 hold to the bunkers. The permanent bunkers, apart from the hold used as a cross bunker, were identical in arrangement on each side with an immaterial exception. The lower bunkers went up to the 'tween decks from the tank top. They continued through the engine room space and the boiler space, being recessed in the boiler space. Above them were the upper bunkers on the bridge deck. There was a coal shoot to the bridge deck with a hatch opening out on the weather deck. There were three hatches on the bridge deck to the lower bunkers on each side, and there was a shoot on each side for putting coal into the lower hold from the top deck. The hatches in the 'tween deck opening into the lower bunkers were, so far as I follow, generally left open so that there was a communication between the coal above and the coal below. The total capacity of the bunkers was 530 tons in all, about 350 in the lower bunkers and about 280 tons in the upper bunkers.

The vessel, when she was at Villa Constitucion and had discharged her cargo, had about 706 tons of coal left, some of which I suppose must have been on deck or in some place other than in the permanent bunkers. She was kept waiting in the roads at Villa Constitucion exposed to the sun for fourteen days before she could get into her berth. The discharge of the coal was finished on September 7th. She then proceeded to Santa Fé, where she arrived, as her first loading port, on the 10th Sept. and began to load. Six hundred tons of bunkers were then left on board. At that time she had been more than a month in the Plate, and the coals had been on the ship since about June 30th and had been carried through the tropics.

On the afternoon of the 14th Sept. fire was discovered in the upper bunkers on both sides. According to the log, which was put in evidence, several plates were hot, some paint was falling off on the upper portion on a line with the 'tween deck bunkers. Water was used to extinguish the fire, but without effect. Next day water was also used, and the coal was shifted from the bunker to the deck, a wood bulkhead at the after end between the bunkers and the deck having been removed. On the 16th, water was still being poured into the bunkers, and the fire was spreading forwards. On the 17th, shifting of the coal was still going on, and at 5 a.m. flames were coming out of No. 2 bunker hatch. Plenty of water, according to the log, was used, and the fire was localised. In the end the coal was all shifted from those bunkers except about 5 tons on each side. Probably about 200 tons were so shifted.

The master and the chief engineer gave evidence before the case was opened, and were allowed to go away. They had left the ship for some time and the events in question occurred two-and-a-half years or so before they gave evidence. I regret that their evidence was not more carefully tested by reference to the logs. The master says he saw fire, but he does not say at what time he saw it, nor does he explain its obstinacy or failure to yield to the application of water, which application went on for nearly three days. He speaks to two separate fires on the port side close to No. 2 hatch, that is about the middle lengthways of the bunker, one small, like a football, one rather larger near the inside wall, and he says in between he found coals which were not too hot to take into his hand. On the starboard a vein in a curved line about 1ft. thick was what he saw going forward from No. 2 hatch near the bottom of the bunker. He also says he felt the walls of the bunkers on each side, and did not find them warm. The Chief Engineer adds nothing material, except that he says he used his thermometer after the first fire in the bunkers, and found nothing wrong. I think the entries in the two logs indicate a much less localised and more extensive fire than would appear from the officers' evidence, which, however, may be quite true of what they observed at some time or times. They could not enter the bunkers until after water had been poured on the coal.

With about 200 tons of coal shovelled on deck the ship proceeded to San Nicolas to complete loading.

On the way, on the 21st Sept., smoke and a strong gas smell were observed in the engine room, indicating a fire in the bunkers, the plates being heated. On that and the following two days water was poured into the bunkers to

extinguish the fire, and on the 24th they began shifting coal on deck. Loading had then been completed and the ship shifted to the roads. Discharging of the coal was difficult and slow because of the small hatches, and it could only be done by means of small baskets, and fumes and gasses made the work difficult. By the 4th Oct. the coal was finally all discharged on deck. Water had been constantly used on the burning coal even to the 2nd Oct., and on the starboard side the fire in the coal was still burning. By the 7th Oct. the coal had been all replaced in the bunkers and the ship sailed on the 8th Oct. I think these log entries made at the time give a much truer picture of the nature and extent of the fire than the officers' evidence, and I repeat my regret that I had no chance of putting them to the officers. The master says that on the starboard side the second fire was aft near the engine room bulkhead, and the engineer says much the same, and as to the port side also puts the fire in the after corner. The master says he saw it in two or three places each side. The engineer says it was difficult to ascertain the exact seat of the fire because as the coal was being shifted it collapsed to the bottom. The engineer's log under date the 7th–8th Oct. says 533 tons of bunker coal were then on board, one-third not usable, showing heavy wastage by fire and also a heavy loss compared with the quantity of 585 tons on board before the fire. The impression made on me by the master and engineer is that while they did not seek to deceive the court, they simply did not remember. I infer and find that a large portion of the coal was on fire, probably still more was heated, and the fire was only extinguishable by the actual use of water for days and by the shifting of the coal on deck. If the fire had been merely in one, two or three isolated patches I think the water would have put it out much sooner.

Small bunker fires in the Plate are said to be not uncommon, and are dealt with by the engineers and crew, who shovel out and flood a ton or so of burning coal. In three years recently 335 larger fires were reported to the Board of Trade, a very small proportion of the cargoes or bunkers handled in the world. It seems to me that fire such as happened in this ship, requiring days to extinguish, must rank in the category of more important fires. Why they happen may not admit of precise explanation, nor may their happening in any particular case be easily foreseen, at least without very special investigation.

I have had the benefit of a distinguished expert on this subject, Dr. Lessing, who has developed in a most interesting manner the extreme difficulty in analysing in any particular case the precise concurrence of circumstances which may lead to spontaneous combustion. Coal, he says, is always in process of oxidation, which is due to the effect of oxygen on the coal, but the heating process may be almost imperceptible and will certainly be harmless so long as the process is neutralised by the proper proportion of air to coal and you carry off the heat. But actual fires are very exceptional, even in cargoes or bunkers kept in confined holds for considerable periods. The material conditions are ventilation. proportion of dust, the sizes of the pieces of coal and the relative arrangement *inter se* of the pieces of different sizes. Where all these conditions co-operate in a manner most favourable to heating, then heating may ensue ; but the arrangement of the pieces of coal may be constantly changing, for instance, while the bunkers are being worked or even by the motion of a ship pitching at sea. Whether or not a bunker fire occurs he says may be regarded as a matter of chance, namely, the due concurrence of the appropriate conditions at one moment. He seems to be of opinion that the fires in question were sudden in their origin and outbreak and did not show any prolonged previous heating. But this view seems to be based on accepting the evidence of the master that the first fires were of the size of a football and the other similar evidence I have referred to. He agrees, however, that once a fire is started there is a difficulty in finding where it started and he agrees that a diffused and not localised fire would indicate a degree of heating for some length of time. While refusing to dogmatise on the causes of fire in coal he says that the time that it has been confined in the compartment, the fact that it has come through the tropics, the fact that it has been in a compartment, one side of which is the ship's plates, which have been exposed to the sun's rays in a hot climate, are all factors relevant for consideration. These are in fact all present in the coal which fired in this case. There is no evidence of what he regards as the vital element of temperature, namely, the sun temperatures, but only of shade temperatures to some of which Dr. Lessing seemed somewhat doubtfully to attach importance, and I find it difficult to agree with him.

On the whole, having regard to what I regard as the true extent of the fires (on the whole of the evidence), I think the true inference is that these fires which occurred in four different bunker spaces almost simultaneously in each pair of instances, upper and lower bunkers, were mainly governed by the common factors, the class of coal, the long voyage, the long stay at the Plate, especially in the roads at Villa Constitucion, all of which conditions had existed before loading either at Santa Fé or San Nicolas. In my judgment there was a defect in the coal at those dates of loading which did in fact result in fires, though perhaps in other similar cases no fires have occurred. I cannot regard the concurrences as a result of mere casual and sudden and sporadic conditions in coal otherwise free from any liability to spontaneous combustion. On this finding the ship was unfit to receive the cargo and, indeed, the voyage could not be proceeded with, as the claim for general average admits, until labour, time and money were expended to

make her fit for the voyage. *Primâ facie,* therefore, she was unseaworthy.

The practice of carrying bunker coals on the voyage out and back may always, I think, involve this risk of fire. Even though in many cases fire may not ensue the ship may be unseaworthy, just as a ship is unseaworthy with a latent defect in the crankshaft, though the defect may not develop and operate until after several voyages and though the shipowner may neither know of nor be able to avert the danger. Such a case is *The Glenfruin* (5 Asp. Mar. Law Cas. 413; 1885, 52 L. T. Rep. 769; 10 Prob. Div. 103). In the present case the possibility of coal deteriorating before the grain is loaded cannot be absent from the shipowner's mind. Indeed, the practice is adopted, I imagine, from motives of economy. It probably is or ought to be present also to the merchant's mind, and Mr. Miller has contended that as it must be in the contemplation of both parties, shipowner and merchant, it cannot be regarded as unseaworthiness for which the shipowner is liable. No doubt in *Greenshields, Cowie, and Co.* v. *Stephens and Sons Limited* (10 Asp. Mar. Law Cas. 597; 99 L. T. Rep. 597; (1908) A. C. 431) shippers, whose coal had been shipped without negligence and had taken fire through its inherent nature, were held not to be debarred from claiming contribution in general average from the shipowners on the ground that the danger was equally within or outside the contemplation of both parties. But the distinction between that case and this is that in that case there was not a contract by the shipper containing a term comparable to the warranty of seaworthiness. The shipowner here warrants the fitness of his ship, and the more obvious the danger the more obvious seems the necessity to have the express exception if immunity is desired. But there is here in the contract no exception of unseaworthiness. The warranty of seaworthiness is absolute, not merely that they, the shipowners, should do their best to make the ship fit, but that the ship should really be fit: (per Lord Blackburn in *Steel* v. *State Line Steamship Company* (3 Asp. Mar. Law Cas. 516; 1877, 37 L. T. Rep. 642; 3 App. Cas. 72). Mr. Miller has also contended that even if the warranty is absolute there are degrees of fitness, so that such unfitness, as I have here found to have existed in the coal, is not a breach of the warranty because the factors involving danger in the coal are so shifting, inconstant, and incalculable that the occurrence of the danger and of the heating before loading was no breach of the warranty. As I have already explained, I do not so regard the facts, but even so the same might be predicated of so uncertain an occurrence as the development of a latent defect. Mr. Miller further seeks to support his contention by a citation of *Burges* v. *Wickham* (1 Mar. Law Cas. (O.S.) 303; 1863, 8 L. T. Rep. 47), where there was an insurance of a boat constructed for river navigation in India on the passage out from the builders in this country. In that case it was held that the standard of seaworthiness was relative to the nature of the adventure and hence was different from that applying to an ordinary seagoing vessel. That, however, was the case not of fitness to carry cargo, but to face the perils of the sea, and was a case of a known exceptional voyage and exceptional risk. The present is an ordinary commercial contract for the carriage of grain, and the question is one of fitness to carry cargo. I cannot see any reason why the ordinary degree of fitness should not be required, including the supply of safe bunkers. Mr. Miller also cited *McFaddon* v. *Blue Star Line* (10 Asp. Mar. Law Cas. 55; 93 L. T. Rep. 52; (1905) 1 K. B. 697), where the warranty was held to be broken by the defective packing of a valve chest which existed, unknown to the owner, though through someone's negligence, before the goods which were thereby damaged were loaded. In the present case, if the point were material to consider, the plaintiffs had the better means of surveying or investigating the condition of the coal, if they thought fit to do so, especially after the first fire, knowing, as they did, how long and in what climates the coal had been on board. But knowledge or ignorance is immaterial.

Mr. Miller relies on a passage in Carver on Carriage by Sea, sect. 18, which was quoted with approval by Channell, J. in *McFadden* v. *Blue Star Line* (*sup.*). A vessel "must have that degree of fitness which an ordinary careful and prudent owner would require his vessel to have at the commencement of her voyage, having regard to all the probable circumstances of it. . . . If the defect existed, the question to be put is, Would a prudent shipowner have required that it should be made good before sending his ship to sea, had he known of it? If he would, the ship was not seaworthy within the meaning of the undertaking." I think this is rather against Mr. Miller's contention, because I think if the owner had realised the actual condition of the coal before loading he would have dealt with it before loading or sending the ship to sea. Either he did not think of the matter at all, or he took the risk.

The onus of establishing unseaworthiness is on the defendants, but I have held that the onus is satisfied, as I understand the facts, having regard to the way these two pairs of fires occurred, their extent and the history of the coals from shipment at Rotterdam. Sir Robert Aske has contended that the mere unexplained occurrence of these fires is in itself sufficient to establish unseaworthiness on the same principles as in the case of a ship which sinks soon after leaving port with no weather or other circumstances to account for her loss. In that case unseaworthiness may be presumed—*Pickup* v. *Thames and Mersey Marine Insurance Co.* (4 Asp. Mar.

Law Cas. 43; 1878, 39 L. T. Rep. 341; 3 Q. B. Div. 594. In the present case nothing happened at or after loading the maize except what would normally be expected to occur. On this ground also I think that it is a reasonable presumption that it was the condition of the coal, and that alone, which caused the fires, thus arguing a defect or unfitness in the coal amounting to a breach of warranty.

I hold the ship was unseaworthy and, according to *Schloss* v. *Heriot* (1 Mar. Law Cas. (O.S.) 335; 1865, 8 L. T. Rep. 426; 14 C. B. (N. S.) 59), the plaintiffs cannot recover the general average contribution for sacrifices due to their own fault and breach of contract. This is subject to two contentions of law raised by Mr. Miller, (1) that the exception of latent defects, etc., justifies the claim, and (2) that Rule D of the York–Antwerp Rules, 1924, provides that a claim in general average is not to be barred because it arose by default of the carrier. I think both these contentions are unsound for reasons which I have fully discussed in the judgment I have recently given in *Tempus Shipping Company* v. *Louis Dreyfus and Co.*, and which I need not repeat.

There will be, therefore, judgment for the defendants with costs.

Judgment for defendants.

Solicitors: for plaintiffs, *Stokes* and *Stokes* for defendants, *Ince, Colt, Ince*, and *Roscoe*.

(Before ROWLATT, J.)

Tuesday, June 17, 1930.

CORPORATION OF TRINITY HOUSE *v.* OWNERS OF THE STEAMSHIP CEDAR BRANCH. (*a*)

Light dues — Foreign - going ship — Picks up cargo at one home port for another home port—Both ports lading stations for foreign venture—Action for light dues as "home-trade" ship—Nature of voyage not changed — Merchant Shipping (Mercantile Marine Fund) Act 1898 (61 & 62 *Vict. c.* 44), *s.* 5 *and Sched. II.*

A vessel registered at Swansea as a foreign-going vessel and paid light dues accordingly. She proceeded to various ports in the United Kingdom to pick up cargo for the foreign venture. At Glasgow she picked up cargo for Liverpool, her last port of call before going abroad, in addition.

Held, on a claim for dues as a home-trade vessel, that the action failed. The scheme of the list of 1898 *was to make dues payable by voyages, and the governing principle was that while a vessel was performing a foreign voyage she was not liable on any other sort of voyage she was doing at the same time.*

(*a*) Reported by R. A. YULE, Esq., Barrister-at-Law.

ACTION tried before Rowlatt, J. in the Commercial List.

The defendants were the owners of the steamship *Cedar Branch* of 2222 tons register. In Dec. 1929 the steamer registered at Swansea as a "foreign-going" vessel and paid light dues accordingly. She loaded cargo at Swansea and proceeded to the Tyne, London, Glasgow, and Liverpool for the rest of the cargo. At Glasgow she picked up a cargo for Liverpool, her last port of call before proceeding on her foreign venture. The plaintiffs, the Corporation of Trinity House, claimed 18*l.* 1*s.* as light dues, alleging that the steamer was a "home-trade" ship by reason of the cargo carried from Glasgow to Liverpool. The owners, the defendants, refused to pay, on the ground that the nature or character of the venture had not been changed and they were only liable for the one payment under par. 2 of the Second Schedule to the Merchant Shipping (Mercantile Marine Fund) Act 1898. The relevant portion of par. 2 of the schedule reads: "A ship shall not pay dues both as a home-trade ship and as a foreign-going ship for the same voyage . . . and a ship trading to a port outside home-trade limits and loading cargo . . . at any port within home-trade limits shall be deemed to be on one voyage as a foreign-going ship from the time she starts from the first port of loading of cargo or passengers destined for a port beyond home-trade limits."

Raeburn, K.C. and *A. T. Bucknill*, for the plaintiffs.

Clement Davies, K.C. and *Mr. Lennox McNair*, for the defendants.

ROWLATT, J.—This case is within a very narrow compass, but it is not without difficulty, and it is not very easy to express oneself upon the point which arises.

The scheme of the Act under which these charges are imposed is that abandoning the previous principle they are now made payable by the voyages; and I am bound to say, looking at what the charge is, namely, a charge in respect of the enjoyment by vessels travelling on the sea of the advantage of light on the voyage—you do not expect to find that she would be charged twice in respect of two categories which she might come into at the same moment. We find under rule 2 it is expressly provided that: "A ship shall not pay dues both as a home-trade ship and as a foreign-going ship for the same voyage." I do not know whether that was primarily intended to negative the idea that there could be concurrent voyages; but I think it is rather directed to providing that what is one voyage shall not be cut up into a succession of voyages one after the other. The rule is oddly drafted. It is not well conceived, and the word "but" is used in a confusing sort of way. But what it really aims at explaining is that a foreign-going ship shall be on only one voyage until, if she is an inward ship, she comes to the last

place at which she discharges her cargo, and, if she is an outward ship, from the time when she begins to take up her cargo; and that shall be a voyage as a foreign-going ship however short the foreign transit may be in comparison with the successive home transits. That is what I understand it to mean.

Now when one looks at the latter part of the rule nothing can be clearer but that this ship was on one voyage from Swansea to London, Newcastle, Glasgow and Liverpool and abroad, because she loaded cargo at all those four United Kingdom ports. She was there on that one voyage. She paid for that voyage dues as a foreign-going ship, and, of course, she was not a home-trade ship between any of those ports in respect of calling there and taking up cargo—that is what it says. Then because cargo is put on board from Glasgow to Liverpool she is really said to be for this purpose concurrently engaged in another voyage. I do not think that will fit in with the framework of the rule. I think you pay for one capacity only at the same time.

I do not think the cases that have been referred to—although some of them illustrate it in connection with other matters—really help us here very much. It seems to me that the governing principle here is that while you are doing what is said to be one voyage as a foreign-going ship, in the rule you are not liable as doing another sort of voyage at the same time.

I wish to leave open the point which may arise: supposing—taking this ship as an instance—that no cargo had been taken on board at Liverpool, so that Liverpool would not be a port which came within the description of the latter part of rule 2.

In those circumstances I think this claim fails, and there must be judgment for the defendants with costs.

Judgment for defendants.

Solicitors: *Sandilands* and *Co.*; *Botterell* and *Roche*, for *Botterell* and *Roche*, Sunderland.

Supreme Court of Judicature.

COURT OF APPEAL.

June 30, *July* 1 *and* 29, 1930.

Before SCRUTTON, GREER and SLESSER, L.JJ.)

TEMPUS SHIPPING COMPANY LIMITED v. LOUIS DREYFUS AND CO. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Charter - party — General average — Fire in bunkers — Expenditure at port of refuge —Claim for general average contribution—Unseaworthiness—York and Antwerp Rules 1924, *r. D—Exceptions—Fault—Privity—Merchant Shipping Act* 1894 (57 *&* 58 *Vict. c.* 60), *s.* 502.

By sect. 502 *of the Merchant Shipping Act* 1894: "*The owner of a British sea-going ship, or any share therein, shall not be liable to make good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases, namely,* (*i*) *where any goods, merchandise, or other things, whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship.*"

The steamship Campus, *having carried coal from England to the Plate, was chartered to load a cargo of grain in the River Plate and bring it to certain British or Continental ports as ordered. The charter-party, which was dated the* 16*th May* 1928, *and described the steamer in the words* "*on passage Wales/Las Palmas since* 11*th inst., with cargo and after discharge proceeds in ballast,*" *was in the Chamber of Shipping River Plate Charter-party* 1914 (*Homeward*) *form and contained a number of clauses which included the following. By clause* 29, "*the steamer shall not be liable for loss or damage occasioned by . . . perils of the sea . . . fire, from any cause or wheresoever occurring . . . or any latent defect in hull machinery or appurtenances . . . even when occasioned by neglect default or error of judgment of . . . the servants of the shipowners* (*not resulting however in any case from want of due diligence by the owners of the steamer . . .*)"; *and by clause* 31, "*Average if any payable according to York-Antwerp Rules* 1924."

Rule D of the York-Antwerp Rules was as follows: "*Rights to contribution in general average shall not be affected though the event which gave rise to the sacrifice or expenditure may have been due to the fault of one of the parties to the adventure; but this shall not prejudice any remedies which may be open against that party for such default.*"

The steamer went to the River Plate and loaded a cargo of grain, as required, at Rosario and Villa Constitucion. In order to save the expense of coaling at the Plate the ship had carried sufficient bunkers on the outward voyage to take her home. Having loaded, the ship started for home. It was then found that the bunker coal was in a dangerous condition. Some of it had caught fire and she had to put into Montevideo as a port of refuge to have her fire extinguished. Port of refuge expenditure was incurred. In the result part of the defendants' cargo was damaged and part of it was lost.

The shipowners sued the cargo owners for contribution to general average expenditure, to which the cargo owners replied that as the expenditure was occasioned by the fault of the shipowners in sending an unseaworthy ship to sea, they could not recover such expenditure. The cargo owners claimed the value of the maize destroyed by fire. The shipowners replied that sect. 502 *of the Merchant Shipping Act* 1894 *protected them.*

(*a*) Reported by R. A. YULE and T. W. MORGAN, Esqrs., Barristers-at-Law.

Held, that having regard to Virginia Carolina Company *v.* Norfolk and North American Steam Shipping Company (105 *L. T. Rep.* 810; (1912) 1 *K.B.* 229) *it must be assumed that damage by fire caused by unseaworthiness was within the protection of sect.* 502 *of the* Merchant Shipping Act 1894, *if the shipowners established that such unseaworthiness was without their fault or privity, and there was nothing in the facts of this case which deprived the shipowners of the right to contribution claimed in the action. It was not suggested that the section relieved the shipowners from their liability to contribute, but only that it put them in such a position that they could not be deprived of their right to a contribution from the cargo owners on the ground that the expenses were incurred merely on their own behalf and not on behalf of the cargo owners. Nor was it contended that the shipowners were freed from making their own contributions to the general average, but only that there was nothing in the facts that deprived them of the right to say that as between them and the cargo owners the cargo owners must contribute to the general average expenditure which was incurred on behalf of all the interests concerned. So held by a majority of the court (Scrutton, L.J. dissenting).*

Held, also, as regards the counterclaim for the loss of the cargo, that the shipowners were protected by the exceptions in the charter-party of "fire" and "latent defects in appurtenances," and that as the damage by fire had occurred without their actual fault or privity they were protected by sect. 502 *from liability.*

APPEAL from a judgment of Wright, J. (*infrà*) in the Commercial List.

The following statement of facts is taken from his Lordship's considered judgment:

"In this case the shipowners, the owners of the steamship *Campus*, claim against the defendants, who are endorsees and holders of the bill of lading, a contribution in general average. The defence to that claim is an allegation that the ship was unseaworthy, and there are various questions of law raised in connection with that issue. There is also a counter-claim, in which the defendants are claiming against the plaintiffs for loss of or damage to the cargo, and to that counter-claim various answers are raised.

"The *Campus* is a modern vessel of 6650 tons dead weight; it has four cargo holds, and in addition a cross-bunker called No. 2A, which is separated by a wooden bulkhead from hold No. 2. Cross-bunker No. 2A is separated from the stokehold by an unprotected steel bulkhead. I shall refer to the bunker arrangements a little later.

"The *Campus* left Cardiff on the 11th May 1928 with a cargo of coal for Teneriffe, and she carried sufficient bunkers (1426 tons in all), which she had taken at Cardiff and which were calculated to be enough to bring her out to the Plate under the charter, and to bring her back at least to the Islands without further bunkering.

"The vessel arrived at the Plate without incident and thereupon proceeded to take up service under the charter-party under which these bills of lading were issued. That charter-party was dated the 16th May 1928. It was made between the plaintiffs as shipowners and an Argentine Company, Sociedad Anonima Commercial de Exportacion e Importacion (Louis Dreyfus and Cia) Lda., of Buenos Aires, as charterers. Those charterers are not identical in law with the defendants, although they are, as their name would indicate, a closely allied company. Under the charter-party the vessel was to load a cargo of various grain and was to proceed to one or other of various ports in the United Kingdom or on the Continent between Bordeaux and Hamburg at certain freight. There are only two clauses to which I need refer in this voluminous document which is a Centracon charter-party. One is the Exception Clause, clause 29, which provides: 'The steamer shall not be liable for loss or damage occasioned by the Act of God, by quarantine restrictions, by perils of the sea, or other waters, by fire from any cause or wheresoever occurring, by barratry of the master or crew,' and various other perils, 'or any latent defects in hull, machinery or appurtenances, by collision, stranding or other accidents arising in the navigation of the steamer even when occasioned by the negligence, default or error of judgment of the pilot, master, mariners, or other servants of the shipowners or persons for whom they may be responsible (not resulting, however, in any case from want of due diligence by the owners of the steamer, or by the ship's husband or manager).' The other is clause 31, which provides: 'Average, if any, payable according to York-Antwerp Rules 1924.' The '1924' has first been struck out and then replaced in type." [The statement of facts described the bunker arrangements in detail, and continued:] "No trouble is reported in connection with the coal on the way out. The vessel's first loading port was Rosario, where she loaded 4,280 tons of maize, filling *inter alia* cross bunker No. 2A. She finished loading on the 28th June, or early on the 29th June 1928, and she actually sailed to her next loading port, which was Villa Constitucion, during the course of the 29th June. In the early morning of the 29th June a fire broke out in the port pocket bunker, which then contained two-and-a-half to three tons, and the plates became red hot. The fire was shovelled out and extinguished with water, or was extinguished with water and then shovelled out, and the vessel went on her voyage. She began to load at Villa Constitucion, and while there a second fire broke out on the 29th June in the port casing. That fire was more or less limited in its area. The fire was put out, and about a ton of coal had to be shovelled out. The loading proceeded and was finished in due course, and

on the 1st July the vessel started off again on her voyage. The captain and the engineer, according to their evidence, went round the stokehold bulkhead and felt whether the stokehold bulkhead was hot or not in order to see if there was heating in the port reserve bunker. But they took no further steps to investigate the condition of the coal in that port reserve bunker, which was an important bunker, holding about 100 tons. It had a door into the stokehold, and the coal from that bunker was not being used; the top hatchway was covered up with the coal in the port reserve bunker.

"The bills of lading incorporating the terms of the charter-party were duly issued and were endorsed to the defendants, who thereupon became holders for value, though in essence the two concerns were closely allied, however independent in point of law.

"The ship got to the Martin Garcia Bar where she was held up for want of water. She arrived and anchored there on the 2nd July. On the 4th July while she was still waiting, those on board the ship experienced a strong smell from No. 2A cross-bunker, which they said was like heated maize or coffee. At first they put it down to wet maize. They took the hatch off and could not see anything wrong because the top appeared to be all in order and at that moment they did nothing further. On the next day, the 5th July, there was noticed a thick stream of smoke from the ventilator of the port reserve bunker, and the after-side of the bunker, that is to say the unprotected steel bulkhead in the stokehold, was found to be hot. The captain thereupon diagnosed that the coal was on fire, and he flooded the bunkers. The fumes at the same time continued to proceed from the maize. On the 6th July, from consultation by telegram or wireless to the surveyors and agents, it was decided to proceed to Montevideo. The crew at that time were working at the coal in the reserve bunker, which was burning, and flooding it with water. On the 8th July the vessel arrived at Montevideo. Meantime, fires kept breaking out in the reserve bunker. The coal was being worked out on to the deck and water was being constantly thrown on to it and some of the coal was thrown overboard. It was decided to discharge the grain from No. 2A, which was obviously a perfectly proper step to take, just as it was perfectly proper under the circumstances to proceed to Montevideo as a port of refuge. The coal in the port reserve bunker was burning and the maize was heating. In the two holds, Nos. 2A and 2, which were only separated by wooden bulkheads, there was 2,400 tons or thereabouts of maize, and it was obvious to anyone that the safety of the ship and cargo were being imperilled unless the fire was stopped in the reserve bunker, and the heated maize was taken out to be reconditioned or cooled. On the 9th July the coal was still burning, and there was a fierce heat from the reserve bunker. A commencement was made of working the maize into lighters. On the 10th July the coal was still burning and the discharge of the maize was still going on. On the 11th July there was a fierce fire in the bunkers, and the discharge was continued. On the 12th July the bunkers were still on fire, and the discharge of the grain into lighters was going on. On the 13th July they came to burning maize in the cross-bunker in the corner against the port reserve bunker. That evening there was still a fierce fire in the maize, but by two o'clock that afternoon the fire in the bunker had been completely extinguished. On the 14th July the discharge went on and was completed. On the 15th July the ship was left to cool down a little, and on the 16th July the bunkers were reshipped—that is to say, they had not been thrown overboard, but were put on deck and were brought back into the port reserve bunker—and a commencement was made of reshipping the maize. These operations went on on the 17th and 18th July, and they were finished on the 19th July, when the vessel sailed. About 500 tons were discharged into various lighters, and about 350 tons, or perhaps rather more, were reloaded. What was not reloaded was a quantity of about 131 tons which had been loaded into one of the lighters and that took fire on the 14th July. While it was in the lighter it had to be flooded with water to stop the fire, and it was in such a condition that the best thing to do was to sell it there and then. That was done, and the amount realised was 180*l*. The vessel took 60 tons of coal on board before she sailed from Montevideo. She took some further bunkers at St. Vincent on her way home, and she arrived at Hamburg on the 25th Aug. after this prolonged voyage. The only other incident which I have to notice is that on the 18th and 19th Aug. fumes were found to be coming from the maize in Nos. 2 and 3 holds, which undoubtedly was heating. That had nothing to do with the fire which I have already been describing; but that damage is the subject of an item in the counterclaim, with which I shall have to deal. It is not now disputed that the heat of the maize was due to the effect of the coal in the port bunker. I need not examine the circumstances which point to that conclusion, which was the conclusion arrived at by those on the spot, and I think it is beyond dispute."

Clement Davies, K.C. and *Simey* for the plaintiffs.

Sir *Robert Aske*, *Martin Vaughan* with him, for the defendants.

The arguments of counsel appear sufficiently from the judgment.

Cur. adv. vult.

March 12.—Wright, J. (after the above statement of fact) read the following judgment:

The plaintiffs' claim is for a general average contribution, to which the defendants' reply that, on the principle of *Schloss* v. *Heriot* (1 Mar. Law Cas. (O.S.) 335; 1863, 8 L. T. Rep. 246;

14 C. B. (N. S.) 59) such a claim cannot be sustained, as the ship was unseaworthy and the general average expenditure was caused by that unseaworthiness. The principle is well stated in *Kish* v. *Taylor* (11 Asp. Mar. Law Cas. 544; 106 L. T. Rep. 900; (1912) A. C. 604, 620) by Lord Atkinson, and it is also stated in *Strang, Steel, and Co.* v. *A. Scott and Co.* (6 Asp. Mar Law Cas. 419; 1889, 61 L. T. Rep. 597; 14 App. Cas. 601). What is alleged as unseaworthiness is the condition or character of the coal at the date or dates of loading in the port reserve bunker in close proximity to the grain in hold No. 2A, which was only separated from the grain by an unprotected steel bulkhead. It was contended that the ship was not unseaworthy in this respect, although perhaps not very strenuously. The coal no doubt was of a class usual for bunkers and of the recognised first-rate quality, but situated as it was, and at the time when the cargo was loaded and the voyage commenced, it was, in my judgment, unfit for safe carriage and rendered the ship unseaworthy.

No expert evidence was given as to the mode in which coal comes to suffer from spontaneous combustion. In the present case the coal in the port reserve bunker had remained confined in the ship since the previous May and had thus passed through the Tropics.

On the evidence in this case I cannot arrive at any conclusion save that the coal was unfit for the voyage and that the ship was, in that respect, unseaworthy.

Mr. Clement Davies then relied on the exception in the charter-party with regard to latent defects in the hull, machinery, or appurtenances. I do not think this exception helps him in this case. In the first place, these words cannot be applied to the liability of the bunker coal to spontaneous combustion without an unnatural and pedantic use of language foreign to a contract such as this, and, furthermore, whatever be the precise limitation of the term "latent defects," I do not think the character of this coal can be described as "latent" when regard is had to the two small bunker fires which had already occurred before sailing; an investigation of the coal in the reserve bunker could have been made, though it would have involved some trouble and perhaps delay, and the proximity of this coal to the maize was obvious, and small bunker fires are not unknown in the Plate. But in any case the term "latent defects," without express words applying it to the commencement of the voyage, does not exclude the warranty of seaworthiness: (see *The Christel Vinnen*, 16 Asp. Mar. Law Cas. 292, 413; 1924, P. 208; 132 L. T.Rep. 337). Furthermore, a specific exception in a charter-party or bill of lading such as "latent defects" does not affect questions of contribution in general average. It was so held in *Schmidt* v. *The Royal Mail Steamship Company* (4 Asp. Mar. Law Cas. 217; 1876, 45 L. J., Q. B. 646) in the analogous case of an exception of fire. The position is different where the ship-owner is excused by the contract from liability for negligence or breach of the warranty of seaworthiness as was held in *The Carron Park* (6 Asp. Mar. Law Cas. 543; 63 L. T. Rep. 356; 15 Prob. Div. 203) and *Milburn* v. *Jamaica Fruit Company* (9 Asp. Mar. Law Cas. 122; 83 L. T. Rep. 321; (1900) 2 Q. B. 540), because in such cases the shipowner is entitled to say that he stands free of the breach of duty which is not to be charged against him as barring his claim to contribution or any other purpose. An exception like fires or perils of the sea, or latent defects, does not give him rights to claim contribution, but merely, by express terms, relieves him from liability to loss or damage, as carrier.

Mr. Clement Davies has still two further points in answer to the defence of unseaworthiness. His first is that Rule D of the York-Antwerp Rules 1924, which are incorporated in the charter-party, applies. Rule D is in these terms: "Rights to contribution in general average shall not be affected, though the event which gave rise to the sacrifice or expenditure may have been due to the fault of one of the parties to the adventure; but this shall not prejudice any remedies which may be open against that party for such fault." Mr. Clement Davies contends that the word "fault" is *primâ facie* wide enough to cover a breach of warranty of seaworthiness. This clause, however, has only effect between the plaintiffs and defendants as a term of the contract of carriage, and must be read as a part of that contract. But on often repeated authority, for instance *Nelson Line* (*Liverpool*) v. *James Nelson and Sons* (10 Asp. Mar. Law Cas. 581; 97 L. T. Rep. 812; (1908) A. C. 16), the warranty of seaworthiness can only be excluded in such a contract by express and unambiguous words. No such words are to be found in Rule D, and hence the shipowners cannot avail themselves of the rule in a case of unseaworthiness where the contract is, as here, an unusual contract containing no express exception of unseaworthiness. The word "fault" is not apt to excuse a breach of warranty of seaworthiness. In addition, I think that in this case the last words of Rule D would apply so that if the shipowner could claim contribution, the cargo owners could claim back a similar amount as damages for breach of the contract, and hence the shipowners' claim would be dismissed to avoid circuity of action, as contemplated in *Schloss* v. *Heriot* (*sup.*). No doubt this would involve, by applying what I think to be the rules of the English law in interpreting contracts of carriage, that the second part of the rule would here nullify the first part. But the clause is a document which might be incorporated in contracts of sea carriage depending on other systems of law, in which different rules of construction may prevail. In any case, the final words of the rule are quite general and may well mean that if the goods' owner has to disburse money, even to the shipowner, as a

general average contribution necessitated by a breach of contract by the shipowner, his right to recover that loss or damage for the breach is not to be prejudiced.

This contention fails and equally, in my judgment, does the further contention of Mr. Clement Davies based on sect. 502 of the Merchant Shipping Act. Sect. 502 is in these words: "The owner of a British sea-going ship, or any share therein, shall not be liable to make good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases, namely, (1) where any goods, merchandise, or other things whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship." No doubt in this case there was fire on board the ship and no doubt the general average expenditure occurred by reason of that fire. But the section is expressed and intended as a weapon of defence by a shipowner against whom claims are made for loss of or damage to goods. The plaintiffs seek to use it here as a weapon of offence to justify claims by them against the cargo owners, and, furthermore, not in respect of claims to loss of or damage to cargo, but loss to their pockets. The language of the section entirely fails in my judgment to meet such a case as this, and indeed it has been held in *Greenshields, Cowie and Co.* v. *Stephens and Sons* (11 Asp. Mar. Law Cas. 167; 99 L. T. Rep. 597; (1908) A. C. 431) that the section has no reference to claims in contribution to general average, which deal, not with claims for loss of or damage to goods, but with claims for the sharing of voluntary sacrifices or expenditure on the equitable principles of the sea law among the various parties to a maritime adventure.

Greenshields, Cowie, and Co. v. *Stephens and Sons* (*sup.*) is *a fortiori*, because there the claim was against the shipowner who sought to rely on the section as a defence, whereas here the claim is by the shipowner who seeks to rely on the section to support his claim.

I think the defence succeeds and that the plaintiffs' claim fails.

It now remains to consider that part of the counterclaim, which includes a claim for loss and damage to the cargo loaded on one of the lighters, either for the whole loss sustained to the 131 tons or thereabouts, or to the proceeds of the salvage, namely, 180*l*. The total of this claim is 1245*l*. The claim for the proceeds of sale is not resisted by the plaintiffs, but as to the other claim the plaintiffs rely on sect. 502 of the Merchant Shipping Act 1894. Sir Robert Aske denies the application of that section for various reasons, namely, that the damage, if by fire, was not by reason of fire on board, and indeed that there is no sufficient proof of fire on board the ship, but only of heating, so far as concerns these goods, and, therefore, that the plaintiffs have not established that the loss occurred without their actual fault or privity. It is established that the unseaworthiness of a ship does not debar the shipowner from relying on the section, even if the unseaworthiness causes the loss or damage: *Lennards Carrying Company* v. *Asiatic Petroleum Company* (13 Asp. Mar. Law Cas. 81; 113 L. T. Rep. 195; (1915) A. C. 705). In other words, the section is expressing the condition, "Without the owners' actual fault or privity," has excluded any other condition. It is clear that fire due to spontaneous combustion constitutes a case of fire within the bill of lading exception of fire or an insurance against fire (if questions of inherent vice are excluded) or of fire within sect. 502 of the Merchant Shipping Act.: *Greenshields, Cowie, and Co.* v. *Stephens and Sons* (*sup.*). In *The Knight of St. Michael* (8 Asp. Mar. Law Cas. 360; 78 L. T. Rep. 90; (1898) P. 30) a loss of freight through heating of cargo was held to be a loss (not indeed by fire, but within the general words of the policy as *ejusdem generis*. Mere heating, which has not arrived at the stage of incandescence or ignition, is not within the specific words "fire."

Sir Robert Aske has contended that there was no incandescence or ignition at any time material to the maize loaded into the lighter.

The facts to be considered here are that there was actual ignition observed in the reserve bunker as early as the 6th July, and I should, if necessary, be prepared to find as a matter of inference, that there was at least incandescence in the coal in that space before the 4th July, when the heating in the maize, which was caused by the coal, was observed. The discharge of the maize from hold No. 2A began on the 9th July, when the coal in the bunker was still bursting into flame. There is no evidence when this particular lighter was loaded, and the fire on it was not observed until the 14th July; but the discharge of the maize was necessary, because the maize in the hold was heating by reason of the fire in the coal, and the fire in the maize which broke out on the lighter must have been by reason of at least seeds of fire having been communicated to it by heating from the burning coal before discharge.

Precise proof cannot be expected, and Sir Robert Aske has contended that part of the heating of the maize may have been caused by the coal heating before it became incandescent so that it cannot be said that the heating of any specific part of the maize was due to fire and not to coal simply heating. This is a narrow ground, and the fairer inference seems to me to be that the heating of the maize was due to the incandescence of the coal originally at the back and corner of the bunker, and later to the actual burning coal some days before discharge. The words of the section require, indeed, a causal connection between the loss or damage and the fire on board. The causal connection need not be by immediate contact if it is operative in fact. Thus in *The Diamond* (10 Asp. Mar. Law Cas. 286; 95

L. T. Rep. 550; (1906) P. 282) damage due to smoke and water used to quench fire was held to be within the section as damage caused by reason of fire. I do not think the damage need be consummated on board the ship, since the words "on board" are to be construed with the word "fire," and not with "loss and damage." In the earlier statutes the words were "fire happening on board," and I do not think that the omission of the word "happening" was intended to change the effect of the section. In the present case I think the damage and loss of the maize in the lighter was the direct and necessary consequence of the coal on board being on fire, and I, therefore, think that, so far, the statute applies. The case cited—*Morewood* v. *Pollok* (1853, 1 E. & B. 743)—a case of a fire occurring on a lighter on its way to be shipped on the vessel, is oviously different.

There remains the question whether the plaintiffs have established that the loss occurred without their actual fault or privity. The onus to do so is on them; *Asiatic Petroleum Company* v. *Lennards Carrying Company* (*sup.*) and *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company* (12 Asp. Mar. Law Cas. 82; 105 L. T. Rep. 810; (1912) 1 K. B. 229). The plaintiffs are a limited company. But it is now established that an incorporated body can, for the purposes of this section, be deemed guilty of actual, that is, personal, negligence such as can be attributed to the corporate entity, even though in a sense that body can only act through agents, whereas the actual fault postulated must not be the negligence or failure on the part of some servants or agents. In such cases it is established that the court must ascertain as a matter of fact, in all the circumstances of the case, what is the head or brain, or central or governing management of the company, and whether the erroneous or faulty decision falls within the purview of that authority. The plaintiff company have three directors, who are also members of the firm of Sir William Seager and Co., and who managed the company's affairs. I find that these three persons, either as directors or as managers, or more correctly in their dual capacity, are those whose fault or privity, if any, in managing the affairs of the company, may properly be ascribed to the plaintiff company as the company's actual fault or privity, and it is in that capacity, as I think, that Mr. G. L. Seager has given evidence.

Sir Robert Aske does not urge that the failure of the Master to investigate the condition of all the bunkers on the ship can, in itself, be deemed to be the actual fault or privity of the plaintiff company; that is clearly the fault of a servant, assuming it to be a fault. Nor can it, I think, be truly held, that there was any fault in bunkering the ship at Cardiff for the round voyage, or at least as far as back to the islands. No doubt there had been occasional fires in bunkers in the Plate, where bunkers had been shipped at Cardiff or other European points of departure; but there is no evidence that these had been serious or other than the master and his crew could cope with, neither ship nor cargo being in peril. That was how the master and engineer regarded the small fire before sailing. The managers followed the usual practice of the trade in regard to bunkering and shipped the best bunkers, of first-rate reputation. No doubt the motives of economy have determined this practice without which presumably freights in this trade would be higher. Sir Robert Aske, for the defendants, has said that the managers of the plaintiff company were in fault in not giving specific instructions to the master before sailing as to what he should do if fire appeared in the bunkers. On the evidence in my opinion survey might not have revealed the danger. If I am not able to say definitely that the master was in fault in doing as he did, I do not feel able to say that the managers were in fault in not imposing on the master a specific instruction.

The two cases principally relied upon by Sir Robert Aske were of a different character. In *Asiatic Petroleum Company* v. *Lennards Carrying Company* (*sup.*) the management were fully cognisant of the age and state of the boilers of the vessel and had information showing their inadequate and defective condition and yet did not order new boilers. That was a matter perfectly within the knowledge and scope of the management and was held to involve actual fault or privity of the owners. In *Standard Oil Company of New York* v. *Clan Line Steamers* (16 Asp. Mar. Law Cas. 273; 130 L. T. Rep. 481; (1924) A. C. 100), the master, though an experienced seaman, was, in fact, kept quite inexcusably ignorant that the steamer was liable to capsize if in a particular trim; there had been a disaster due to that liability in the case of another similar steamer some years before, but though the builders had sent a full explanation and warning to the owners, these vessels being of special construction, the owners had not passed it on to the master. It was held, that the failure to warn the master was actual fault or privity of the owners. In that case it was held that the matter in question involved a question of scientific calculation, which might well be beyond the scope of a ship's master. But in the present case, in my judgment, if the emergency arose of a bunker fire at the Plate, the managers might well feel that it could be left to the practical sense and experience of the master, charged as he was with the safety of the lives and ship and cargo, and with means of consulting surveyors on the spot. I find that there was no actual fault or privity in the plaintiff company, and that they have discharged the onus which rests upon them.

Sir Robert Aske has reserved for argument hereafter, if need be, the point decided by the Court of Appeal in *Ingram and Royle* v. *Service*

Maritimes du Tréport (12 Asp. Mar. Law Cas. 387; 108 L. T. Rep. 304; (1914) 1 K. B. 541), namely, that the terms of the contract of carriage such as this do not exclude the operation of sect. 502. There, as here, there was an express exception of fire, but no exception of unseaworthiness. The Court of Appeal held, that the shipowner was not barred from relying on sect. 502, rejecting the somewhat paradoxical argument that words intended to reduce the shipowner's liability, should be deemed to increase it.

I hold that the defendants' claim for 1245*l.* fails.

The second head of counterclaim is for 247*l.* 18*s.* 7*d.*, because certain maize from holds Nos. 2 and 4 was delivered in a damaged condition at Hamburg. The plaintiffs, by letter, admitted the fact and the amount of the damage, but reserved the right to dispute liability. The matter has been left in a curious position on the pleadings. The defendants are indorsees of the bills of lading, and are admitted to be owners of the goods. They are a separate firm—however closely allied—from the Argentine company, who were charterers and shippers, and hence, as independent indorsees, are entitled to rely on the estoppel contained in the bill of lading, namely, "Shipped in good order and condition," and on the undertaking to be delivered "in like good order and condition." The plaintiffs may then, if so minded, rely on an exception such as inherent vice or sea perils. But the plaintiffs have pleaded nothing of that kind, and simply put the fact in issue on the pleadings, afterwards, by letter, admitting the fact and the amount of damage found on discharge at Hamburg. There is little evidence that the damage was in the feeders of Nos. 2 and 4 holds, and had no relation to the fire or heating in No. 2A. The master said in evidence that the maize on shipment seemed to him in good condition. The ship arrived at Hamburg on the 25th Aug., having been delayed fourteen days or more by the deviation rendered necessary by what I have found to be unseaworthiness. On the 19th Aug., heating at places mentioned was observed in the maize. There was some rain while the ship was at Montevideo, and the hatches seem to have been open there from time to time for ventilation. It seemed impossible to me at the close of the case, when the matter was first gone into, to allow the plaintiffs to amend their reply and raise an issue of inherent vice, which was a new issue of fact, and would have involved evidence from the shippers in the Plate, and also would have raised further issues by way of answer. On the pleadings as they stand this claim is undefended, and the defendants are entitled to judgment for the amount claimed.

In the result, the claim is dismissed and judgment is entered for defendants with costs. On the counterclaim judgment is entered for defendants for 247*l.* 18*s.* 7*d.* and for 180*l.* 16*s.*, and they are also awarded the general costs of the action. But as defendants had failed on the counterclaim for 1245*l.* 11*s.* 10*d.* in respect of loss of or damage to their cargo, costs on that issue are awarded plaintiffs, except that costs incurred before the amendment pleading sect. 502 are to be paid by plaintiffs.

Judgment for defendants on claim and part of counterclaim.

The plaintiffs appealed against the order giving judgment for the defendants on the claim, and the defendants cross-appealed against the order dismissing their counterclaim for 1245*l.*

Raeburn, K.C., *Clement Davies*, K.C. and *Simey* for the appellants, the plaintiffs.

Sir *Robert Aske*, for the respondents, the defendants.

Cur. adv. vult.

July 29.—The following judgments were read:

SCRUTTON, L.J.—This appeal raises a question in the higher altitudes of the law of shipping and general average, which has been the subject of much difference of opinion in the Profession for many years. It can be stated shortly to be, what is the real meaning and limitations of sect. 502 of the Merchant Shipping Act 1894, which relieves the shipowner from certain liabilities in the case of fire, when applied to cases where the ship was unseaworthy at starting, and the unseaworthiness caused the fire and general average expenditure to avoid future fire?

Fortunately, the facts are not really in dispute. The steamship *Campus*, having carried coal from England to the Plate, was chartered to take a cargo of grain to Hamburg. The shipowner, to save the expense of coaling at the Plate, had carried sufficient bunkers on the outward voyage to take him home. But, as has happened in many other cases, the bunker coal at the Plate turned out to be in a dangerous condition. While the ship was loading, there were two small fires in two separate bunkers on the port side, which the captain, unfortunately, did not report to his agents or owners. On starting, before the vessel got over Martin Garcia Bar, another and more serious fire broke out in a third and larger bunker on the port side, and the maize next to that bunker was found to be heated and in danger of catching fire. It became necessary to put into Montevideo as a port of refuge, in which process port of refuge expenditure was incurred. The shipowner then sued the cargo-owner for contribution to this general average expenditure to which the cargo owner replied that as the expenditure was occasioned by the fault of the shipowner in sending an unseaworthy ship to sea, the shipowner could not recover such expenditure. The cargo-owner claimed the value of the maize destroyed by fire; to this and to the previous defence of the cargo-owner the shipowner replied that sect. 502 of the Merchant Shipping Act 1894 protected him. Wright, J. in a very careful judgment, held

that the section protected him against the cargo-owner's claim, but did not support or justify his own claim for general average contribution.

It is possible to deal shortly with the cargo-owner's appeals. Sect. 502 is in these terms: "The owner of a British sea-going ship, or any share therein, shall not be liable to make good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases, namely, (i) Where any goods, merchandise, or other things whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship." If there were no authority it would, I think, be a difficult and important question whether the section protected the shipowner if the fire was caused by initial unseaworthiness. It is clear that in such circumstances the exception in the contract of affreightment "fire on board" would not protect the shipowner from the breach: (see *The Glenfruin*, 5 Asp. Mar. Law Cas. 413; 1885, 52 L. T. Rep. 769; 10 Prob. Div. 103; and *Tattersall* v. *National Steamship Company*, 5 Asp. Mar. Law Cas. 206; 1884, 50 L. T. Rep. 299; 12 Q. B. Div. 297). But whether the unseaworthiness of the ship causing the fire destroys the statutory protection has, in my opinion, been decided in the negative by authorities binding this court, though the question is well worthy of review in the House of Lords. In *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company* (12 Asp. Mar. Law Cas. 83; 105 L. T. Rep. 810; (1912) 1 K. B. 229), two preliminary questions were ordered to be tried: (1) whether unseaworthiness of the ship causing fire destroyed the protection given by sect. 502; (2) whether a special contract as to unseaworthiness contained in the bill of lading prevented the shipowner from relying on sect. 502. As to the first question Bray, J., and the Court of Appeal held that such unseaworthiness did not destroy the protection of the statute. They held (2) that the special clause in the bill of lading did destroy the protection of the statute. The case was taken to the House of Lords which, on the 21st Oct. 1912, declined to decide the questions asked till it was ascertained whether the ship was in fact unseaworthy. On the case being tried on this issue—the trial of which, on evidence, the order for trial of preliminary questions had been intended to avoid—the ship was found seaworthy, and the questions became academic in that case and the House of Lords did not decide them. It respectfully seems to me a pity that the House would not answer the first question, as, if they agreed with the Court of Appeal, the unseaworthiness of the ship was immaterial, and the trial of an expensive issue of fact would have been avoided.

In 1913 I had to try a similar question in *Ingram and Royle* v. *Services Maritime du Tréport* (12 Asp. Mar. Law Cas. 387; 108 L. T. Rep. 304; (1913) 1 K. B. 538), and endeavoured to follow the decision of the Court of Appeal in *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company* (*sup.*). On appeal, the court followed the *Virginia Carolina* case (*sup.*), on the first question, but held that I had misapplied its decision on the second question. The result is that this court is bound to hold that the protection given by sect. 502 of the Merchant Shipping Act 1894, against claims for loss of or damage to goods is not removed if unseaworthiness causes the fire, though in such a case the protection of the exceptions in the bill of lading is lost. The matter can only be dealt with by the House of Lords. The claim of the cargo-owner is then for damage caused to his goods by fire; this is the exact thing from which the words of sect. 502 protect the shipowner. The cargo-owner in his cross-appeal relies on two points: (1) That there is no sufficient evidence that the damage to the maize was caused by fire in the adjacent bunker, the maize being seen to steam before fire was actually seen in the bunker. I have considered the details of the evidence and am satisfied that there is no ground for interfering with the decision of Wright, J., on this point. (2) That the judge below should have found "actual fault or privity" in the managing director of the plaintiff company, destroying the protection of the statute. There is no ground for saying that improper bunkers were supplied to the ship, or that the owners knew of the two early fires, but it is said that there was actual fault in not giving instructions to the master as to what to do if signs of fire in the bunkers showed themselves. This seems to me not to be a case like *Standard Oil Company of New York* v. *Clan Line Steamers Limited* (16 Asp. Mar. Law Cas. 273; 130 L. T. Rep. 481; (1924) A. C. 100), where the owners had special information as to the stability of a particular type of ship, which a master could not be expected to know, and were held in fault for not communicating that information to the master. It is rather like our decision in *Cosmpolitan Shipping Company (Incorporated)* v. *Hatton and Cookson Limited (Liverpool); The Rostellan* (*ante*, p. 130; 1930, 143 L. T. Rep. 296), where we held that owners were not bound to give experienced and competent officers detailed instructions as to examination of hull and sails before starting on a voyage.

For these reasons the cross-appeal of the cargo-owners against the decision of Wright, J., dismissing their claim for damage to their goods by fire on the ground that sect. 502 protects the shipowner, must fail.

The appeal of the shipowner raises much more difficult questions, and requires a careful consideration of the nature of the claim and the words of the statute. The shipowner's protection is from liability where goods are lost or damaged by fire on board his ship; his present claim is for a contribution to general average

expenditure incurred to prevent ships and goods being lost or damaged by fire in the future. There is a marked difference between general average sacrifice of ship or goods, such as jettison, the whole of which can be recovered from the underwriter as a loss by perils insured against fire: (*Dickenson* v. *Jardine*, 3 Mar. Law Cas. (O.S.) 126; 1868, 18 L. T. Rep. 717; L. Rep. 3 C. P. 639), and general average expenditure, which cannot be so recovered: (*The Mary Thomas*, 7 Asp. Mar. Law Cas. 495; 71 L. T. Rep. 104; (1894) P. 108; see also Arnould on Marine Insurance, s. 976). The recovery of a contribution to general average expenditure does not relate to damage to goods, but to a matter peculiar to the law of the sea relating to general average. The authorities lay down that sect. 502 has nothing to do with general contributions and cannot be used as a defence against them.

In *Schmidt* v. *Royal Mail Steamship Company* (4 Asp Mar. Law Cas. 217n; 1876, 45 L. J. Q. B. 646) on the voyage, without fault of shipowner or cargo-owner, fire broke out, and in extinguishing it other goods were damaged by water thrown down the hold. When the shipowner was asked to contribute to the cost of this measure as a general average sacrifice he replied that sect. 502 freed him from damage by fire and, therefore, from this claim. Blackburn, J., and Lush, J., held that the section was no defence to a claim for contribution to the cost of sacrifices made for the general benefit to avert loss by fire.

This was confirmed in *Greenshields, Cowie, and Co.* v. *Stephens and Sons Limited* (11 Asp. Mar. Law Cas. 167; 99 L. T. Rep. 597; (1908) A. C. 431), by the House of Lords. There a fire broke out in the cargo of coal while on the voyage, without the fault of shipowner or cargo-owner, though from the fault of the cargo, and the vessel, as in the present case, put into a port of refuge to save the whole adventure. The cargo-owners claimed from the shipowner contribution to the general average sacrifice of the coal. The shipowner, among other points, took the point that as the claim was consequent on the fire, he was freed by sect. 502 from liability. The House of Lords, affirming the Court of Appeal, and approving *Schmidt* v. *Royal Mail Steamship Company* (*sup.*), held the statute was no defence. Lord Halsbury said (99 L. T. Rep. 597; (1908) A. C. at p. 435): "As to the point under the statute, I agree with the Court of Appeal that it is much too late to raise such a point now, even if there were more in it than I think there is. The real answer, however, is that the statute is not dealing with average at all, and this has been in effect decided long ago, either upon the words of this statute or words which would have raised the same point in other statutes." If the statute is held to be no defence to the shipowner against a claim for general average contribution to sacrifice or expenditure caused by, and used to, avert fire, it is difficult to see how it can be used to support such a claim. The argument is put in this way. By the law of the sea, apart from York-Antwerp Rules, a party to the adventure cannot recover a general average contribution to avert a peril which is caused by his own "fault." "Fault" has been interpreted as "actionable fault." Therefore, in *The Carron Park* (6 Asp. Mar. Law Cas. 543; 63 L. T. Rep. 356; 15 Prob. Div. 203) Sir James Hannen refused to allow the negligence of the ship-owner's servants to prevent the ship-owner from claiming a general average contribution to expenditure to avert a peril caused by such negligence. He did so for the reason that as in the charter the shipowner had an exception protecting him against the negligence of his servants, he was not legally "in fault." The Court of Appeal, in *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (11 Asp. Mar. Law Cas. 122; 83 L.T.Rep. 321; (1900) 2 Q. B. 540) in similar circumstances held the same thing. But the present case is quite different. Unseaworthiness has caused the fire, and the ship owner has no protection under the contract of affreightment against unseaworthiness. That the ship started unseaworthy prevented the shipowner from relying on the exception "fire on board" or any special provision of the York-Antwerp Rules 1924, altering the law of the sea. Indeed, counsel for the appellants agreed he could get no protection out of those rules, in view of the proviso to Rule D. The ship-owner then attempts to say in answer to a defence to the claim, which is "You are in fault for providing an unseaworthy ship where the unseaworthiness caused the fire," the reply: "But I am not in fault for sect. 502 protects me from liability for damage to goods by fire." But the answer of *Greenshields, Cowie, and Co.* v. *Stephens and Sons Limited* (*sup.*) is: "The statute has nothing to do with general average contribution to expenses incurred to avert fire in the future and is not a defence to such a claim." It is an answer to a claim for damage to goods caused by fire, though the ship is unseaworthy, if the decision in *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company* (*sup.*) is right, but on the authority of the House of Lords in *Greenshields, Cowie, aand Co.* v. *Stephens and Sons Limited* (*sup.*), it has nothing to do with claims for general average contribution, though fire caused the sacrifice or expenditure. The point may be put in other words thus: there is no exception in the contract of affreightment against unseaworthiness, and as the fire was caused by unseaworthiness the exception "fire on board" and the inclusion of the York-Antwerp Rules do not protect the shipowner. As far as the contract of affreightment is concerned, he is "in fault" with no contractual protection. When, therefore, he tries to recover, not the loss of goods or ship's tackle, which under *Dickenson* v. *Jardine* (*sup.*) he might, perhaps, recover against underwriters as a loss by fire, but general average expenditure to avert future

fire, the whole of which, under *The Mary Thomas* (*sup.*) he could not recover from underwriters as a loss by fire, the cargo-owner meets him with a defence : "The general average expenditure was due to your fault for which the contract of affreightment does not excuse you, as it did in *The Carron Park* (*sup.*) and *Milburn* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*)." "That may be so," says the shipowner, "but sect. 502 of the statute excuses me, so I am not in fault." The answer is that the statute by its words does not excuse the shipowner from liability for general average contribution to expenditure, as was decided by the House of Lords in *Greenshields, Cowie, and Co.* v. *Stephens and Sons Limited* (*sup.*), and, therefore, the shipowner remains in his original fault under the contract of affreightment of unseaworthiness causing loss, not excused by a statute which does not free him from liability to contribute to general average expenditure caused to avoid future fire. The wording of sect. 502 does not seem to have any relation to claims for general average expenditure.

In my view, Wright, J. came to a correct conclusion on both the appeal and the cross-appeal. They should both be dismissed with costs, with a set-off of costs. But as my brothers take a different view on the appeal by the shipowner, the judgment of the court will be as they propose.

GREER, L.J.—The liability to contribute to general average arises when in the course of a voyage a sacrifice is made of some of the property at risk, or expense is incurred in order to avert some impending danger to all the property at risk. Though the obligation to contribute, and the right to demand contribution, may be controlled by contract, it did not in origin depend upon contract, but on an equitable rule adopted from the Rhodian laws to the effect that extraordinary sacrifices made or expenses incurred for the preservation of the ship and cargo in the time of peril should be borne proportionally by all who are interested : (see per Vaughan Williams, L.J., and A. L. Smith, L.J., in *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (11 Asp. Mar. Law Cas 122; 38 L. T. Rep. 321 ; (1900) 2 Q. B. 540).

"Before either the shipowner or the owner of the cargo can claim contribution as general average for a sacrifice of his property, or an expense incurred by him, in order to avert a total loss of ship and cargo, he must be in a position to prove in case of need that the total loss in question was not one for which he himself would have had to pay." This definition is quoted from Lowndes on General Average, 6th edit., at p. 35. I think it accurately summarises the essential elements involved in the conception in English law of a right to share in general average. Judges have from time to time stated in varying words the circumstances which give rise to a right to general average contribution. For example, Blackburn, J. in *Kemp* v. *Halliday*, said 2 Mar. Law Cas. (O.S.) 271 ; (1865, 14 L. T. Rep. 762 ; 6 B. & S. 723, at p. 746) : "In order to give rise to a charge as general average, it is essential that there should be a voluntary sacrifice to preserve more subjects than one exposed to a common jeopardy, but an extraordinary expenditure incurred for that purpose is as much a sacrifice as if, instead of money being expended for the purpose, money's worth were thrown away. It is immaterial whether a shipowner sacrifices a cable or an anchor to get the ship off a shoal, or pays the worth of it to hire those extra services which get her off." Lord Kingsdown in *Ex Galam Cargo*, said (33 L. J. Adm., 97, at p. 102) : "It is a loss incurred for the general benefit of the ship and cargo, to which those who have received the benefit are by law liable to contribute rateably." The effect of the judicial definitions given from time to time with regard to general average is stated in art. 108 of Scrutton on Charter-parties 12th edit., at p. 313, as follows : "All loss which arises in consequence of extraordinary sacrifices made or expenses incurred for the preservation of the ship and cargo comes within general average, and must be borne proportionably by all who are interested. To give rise to a claim for general average contribution : (1) There must be a common danger which must be real, and not merely apprehended by the master, however reasonably. (2) There must be a necessity for a sacrifice. (3) The sacrifice must be voluntary. (4) It must be a real sacrifice, and not a mere destruction and casting off of that which had become already lost and consequently of no value. (5) There must be a saving of the imperilled property through the sacrifice. (6) The common danger must not arise through any default for which the interest claiming a general average contribution is liable in law. Therefore, the fact that the common danger arises from the nature of the cargo—for example, from spontaneous combustion of coal—does not prevent the cargo-owner from claiming contribution for sacrifice of the cargo, unless he was guilty of some breach of contract or of duty in shipping it."

The question has been discussed from time to time whether the liability to contribute arises out of contract or independently of contract. From the nature of the case it seems that in origin the right to contribution was quite independent of any contract. The law governs the relations of cargo-owners to shipowners between whom there is a contract of carriage, and the relations between one cargo-owner and another cargo-owner between whom no contractual nexus subsists. Though the origin of the rights to a general average contribution does not arise from contract, it may as between shipowner and cargo-owner be controlled by contract, and the York-Antwerp Rules were drawn up for the purpose of regulating the contractual rights of ship and cargo-owner so far as consistent with the express contract made between them. It might well

have been decided at one time that it was inequitable to allow a shipowner who had by his fault brought about the danger which gave rise to the general average sacrifice any right to any contribution in the nature of general average. It might have been held that the law disabled him from recovering if he was in fault quite irrespectively of the question whether the contract between him and the cargo-owner excused him from the consequences of such fault, and as pointed out by counsel for the appellants in argument, the late Mr. Carver adopted this view of the law until he felt himself precluded from maintaining it by the decision of the Court of Appeal in *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*), which approved and affirmed the decision in *The Carron Park* (6 Asp. Mar. Law Cas. 543; 63 L. T. Rep. 356; (1890) 15 P.D. 203). The effect of these two decisions appears to me to be that in considering whether the shipowner is in fault so as to lose his right to contribution, the question is whether, having regard to his obligations to the cargo-owners, he has committed an actionable wrong which has given rise to the need for the general average sacrifice or expenses. In *Kish* v. *Taylor* (12 Asp. Mar. Law Cas. 217; 106 L. T. Rep. 900; (1912) A. C. 604) Lord Atkinson describes the shipowner who is disentitled to recover as a wrongdoer. In *The Carron Park* (*sup.*), the charter-party contained an exception of neglect or default of the master, crew, or other servants of the shipowner. The defendants incurred a general average expenditure to which they were held to be entitled to call on the cargo-owner to contribute on the ground that the loss would not have fallen on the shipowner, and the expenditure and sacrifice made by him was not made to avert loss from himself alone, but was made to avert a loss that would fall on all the interests involved. In that case the President relied upon the statement of Lord Watson in *Strang, Steel and Co.* v. *Scott and Co.* (6 Asp. Mar. Law Cas. 419; 61 L. T. Rep. 597; (1889) 14 App. Cas. 601), that the fault of the master would prevent the owner of a ship from recovering a general average contribution (61 L. T. Rep. 597, at p. 5; 14 App. Cas. at p. 609) "unless the conditions ordinarily existing between parties standing in that relation have been varied by special contract between them and their shippers." This case was approved and followed in the Court of Appeal in *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*). The argument that prevailed in the latter case was very clearly stated by Walton, J.—then Mr. J. Walton, Q.C. The reason why by the law maritime the shipowner cannot obtain general average contribution in respect of a sacrifice or expense necessitated by his servant's negligence is that, in the absence of a negligence clause, he is in default, and has committed through his servant a breach of duty; and he cannot claim contribution towards the sacrifice or expense incurred by him in endeavouring to obviate the danger occasioned by his default. But, where the negligence of the master and crew is mutually excepted, the shipowner is not in default by reason thereof, and, therefore, there is no reason in such a case why the right to general average contribution should not exist in his favour.

It seems to me that the question which has to be asked in cases of this kind is: "Is the danger which occasions the sacrifice or the expense sought to be recovered one for which the shipowner is responsible to the cargo-owners, so that it can be said that he has made the sacrifice or incurred the expense not for the benefit of all concerned, but for his own benefit only?" I think it is not *ad rem* to say that the shipowner's non-responsibility for the danger is due to a statutory provision, and not to the terms of the contract. The fact remains that whether the responsibility is taken off his shoulders by a clause in an Act of Parliament, or by the terms of the contract of carriage, he is incurring general average expenses acting for the benefit of all concerned, and not for his own sole benefit. It was suggested in the course of the argument that the statute does not provide that the shipowner shall not be deemed to be in fault, but only provides that he shall not be liable to make good the loss or damage caused by reason of fire without his actual fault or privity. I do not think there is any substance in the alleged distinction between a statutory elimination of a duty, and a statutory provision that there shall be no liability for an act. In either case it seems to me the default is negatived. Assuming, as we must do, having regard to the decision in *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company* (12 Asp. Mar. Law Cas. 82; 105 L. T. Rep. 810; (1912) 1 K. B. 229) that damage by fire occasioned by unseaworthiness is within the protection of sect. 502 of the Merchant Shipping Act 1894, if the owner establishes that such unseaworthiness was without his actual fault or privity, I am of opinion that there is nothing in the facts of this case to deprive the shipowner of the right to contribution claimed in this action.

Certain cases were relied upon by Wright, J. and in the argument for the respondent before us as inconsistent with this view, especially *Schmidt* v. *Royal Mail Steamship Company* (4 Asp. Mar. Law Cas. 217; 45 L. Jour., Q. B. 646) and *Greenshields, Cowie, and Co.* v. *Stephens and Sons* (99 L. T. Rep. 597; (1908) A. C. 431). Neither of these cases was a case in which the shipowner's liability to obtain contribution from the cargo-owners was in question. They were both cases in which the claim was by the cargo-owner against the ship. In *Schmidt* v. *Royal Mail Steamship Company* (*sup.*) it was held that an exception in the charter-party did not exempt the shipowners from the liability to contribution in general average, nor did sect. 503 of the

Merchant Shipping Act 1854. It is not suggested in the present case that sect. 502 of the Merchant Shipping Act 1894 relieves the shipowner from liability to contribute, but only that it puts him in such a position that he cannot be said to be deprived of his right to a contribution from the cargo-owners on the ground that his expenses were incurred merely on his own behalf and not on behalf of all the interests. It is not contended in the present case that the shipowner is freed from making his own contribution to the general average, but only that there is nothing in the facts of the case that deprives him of the right to say that as between him and the cargo-owners he was not in default, and, therefore, the cargo-owners must contribute to general average. It seems to me that neither *Schmidt* v. *Royal Mail Steamship Company* (*sup.*) nor *Greenshields, Cowie, and Co.* v. *Stephens and Sons* (*sup.*), have any bearing on any question we have to determine in this appeal. The appellant does not rely upon the statute as giving him a right to recover contribution from the cargo-owners, but he says that if the cargo-owner pleads that he is disentitled to recover by reason of the fact that the expenses were incurred solely for himself, he then can reply, that is not true, because by reason of the provisions of the Act which have not been altered by agreement he was not in default at all, and that when he incurred the general average expenses for which he is claiming, he incurred them not on his own behalf, but on behalf of all the interests concerned.

It is no doubt true, as Lord Halsbury said in *Greenshields, Cowie, and Co.* v. *Stephens and Sons* (*sup.*) that sect. 502 of the Merchant Shipping Act 1894 is not dealing with general average at all. It does not qualify the rule that if the shipowner is in default, and the expenses he seeks to recover are expenses he incurred to save himself from a loss that would fall on him alone, he is not entitled to call on cargo-owners for contribution. But the statute does alter the situation that arises when the decision is taken by the master to incur the expenses in question. By reason of the immunity from liability created by the statute, the expenses incurred by the master are incurred not for the ship alone, but for all the interests concerned. I do not think *The Ettrick* is a decision to the contrary. Sect. 502 is a section which does not take away the ship's responsibility for damages; it only limits the amount. Therefore, when general average expenses are incurred, it cannot be truly said that they are incurred for the benefit of the ship alone. Sect. 502 has nothing to do with the question whether the shipowner is in default or not; it only provides that where he is in default the amount of the damages that can be recovered from him is limited.

The respondents also relied upon the decision of the majority of the Supreme Court of the United States in *The Irrawaddy* (1898), 171 U.S. 195. The majority of that court decided that the Harter Act had no effect upon the right of the shipowner to recover contribution from the cargo-owners in a case in which a section of the Act relieved him from responsibility in damages. I think the decision of the majority turned on distinctions which exist between the law of the United States and the law of this country on the question of the liability of shipowner to cargo-owner. It is pointed out (171 U.S., at p. 195) that "whatever may be the English rulings as to the effect of contract immunity from negligence as entitling the shipowner to claim in general average, we do not think the cases are parallel. By the English law the parties are left free to contract with each other, and each party can define his rights and limit his liability as he may think fit. Very different is the case where a statute prescribes the extent of liability and exemption." It is not correct to say that sect. 502 of the Merchant Shipping Act 1894 prescribes the extent of the liability and exemption of each party. It only provides for what are to be the obligations in a certain event of the shipowner in the absence of any agreement to the contrary. In any event we are not bound by the decision in *The Irrawaddy* (*sup.*), and the reasoning of the judgment of the minority in that case seems to me more convincing than that of the majority.

With regard to the counterclaim, the learned judge had to determine upon the evidence whether the damage was due to fire, or merely to heat, and whether want of privity of the owner was established. He had to exercise his judgment on the probabilities of the case and I do not feel myself justified in saying that his conclusions of fact were wrong. On this part of the case I agree with the judgment of Scrutton, L.J.

In my opinion the appeal of the plaintiffs should be allowed with costs, and the cross-appeal dismissed with costs.

Slesser, L.J.—The points of claim in this case allege that the steamship *Campus*, the property of the plaintiff company, suffered fire on board during a voyage to Las Palmas which made it necessary for her to put into Montevideo, whereby expense arose.

The defendants, are, by indorsement of bill of lading, owners of cargo which was carried on the voyage, and it is alleged that expenditure in running to the port of refuge was incurred by the plaintiffs to avoid a total loss of all interests for which the defendants, owners of cargo, are liable in general average. The defendants plead, in so far as is material to this appeal, that the steamer was unseaworthy and unfit, and that the matters alleged as founding a claim to general average were occasioned by default of the shipowner, namely, by such unseaworthiness or unfitness; they give the particulars as to the treatment of the bunker coal as the cause of fire, which have been stated by my Lord. The defendants counterclaim that their cargo was burned or injured in breach of the contract of carriage by the plaintiffs, and assess their claim at 1572*l*. 4*s*. 10*d*.

The real issue which arises on the claim is whether the common danger, which is alleged, did not arise through a default for which the plaintiff company, claiming the general average contribution, is liable in law. The learned judge on the evidence says: "I cannot arrive at any conclusion save that the coal was unfit for the voyage, and that the ship was in that respect unseaworthy." There is in this contract no exception for unseaworthiness, and I agree with Scrutton, L.J., that the fact that "the ship started unseaworthy prevented the shipowners from relying upon the exception 'fire on board,' or any special provision of the York-Antwerp Rules 1924," here incorporated in the contract.

Were the matter to rest there, it is clear that the defendants, on the finding of the learned judge on unseaworthiness, would be entitled to succeed as to the claim and could properly say that the common danger was due to the default of the shipowner, and that, therefore, he would lose whatever right he might otherwise possess to general average contribution; but the real point here to be decided is whether, having regard to sect. 502 of the Merchant Shipping Act 1894 the shipowner is or is not saved from the consequences of default by that section, and so nevertheless is entitled to recover. Sect. 502, which thus becomes of vital importance in this case, is as follows: "The owner of any British sea-going ship, or any share therein, shall not be liable to make good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases, namely (i.) where any goods, merchandise, or other things whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship."

My Lords are in agreement that, on the facts of this case, it is not possible to say that there was actual fault or privity of the owners, and respectively I agree with them. Whatever error was made was the fault of officers, not alleged to be incompetent, and not of the owners' actual fault or privity: (see *Cosmopolitan Shipping Company (Inc.)* v. *Hatton and Cookson Limited (Liverpool)*, 143 L. T. Rep. 296). The section, therefore, stands to protect the shipowner from any liability to make good the damage to the cargo, but the question remains, does it extend to enable him to claim the general average contribution which otherwise he would have lost by his own default of unseaworthiness?

The decision in *The Carron Park* (6 Asp. Mar. Law Cas. 543; 63 L. T. Rep. 356; 15 Prob. Div. 203) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* cases (11 Asp. Mar. Law Cas. 122; 83 L. T. Rep. 321; (1900) 2 Q. B. 540), make it clear that if the liability of the shipowners, which would otherwise arise, is excluded by exception in the contract, it has thereby been taken out of the provision that where the common danger arises from his own default, he cannot claim general average, and in such a case, not being directly liable for the default, his sacrifice—which, if it had not been made and the goods lost, would have laid upon him no actionable liability—is one for which he can claim contribution. It still remains to be decided whether sect. 502, which, in the absence of fault or privity, protects him from liability to make good the damage, does or does not extend to the point of saying that, therefore, the common danger does not arise through any default for which he is liable in law.

It is to be noticed that the section does not contain any absolute exception of liability, but is limited to protection to make good damage to goods, merchandise or other things. Is there still left, notwithstanding this saving of liability, a default or wrongdoing causing the common danger over and beyond which excludes the shipowner from making a claim to general average? No direct authority exists to conclude this problem, but certain cases turning on sect. 502 must be considered.

In *Schmidt* v. *Royal Mail Steamship Company* (4 Asp. Mar. Law Cas. 217; 45 L. J., Q. B. 646) there was fire on board without fault of shipowner or cargo-owner, and goods were damaged. The shipowner was sued in general average in that he had injured goods in saving the ship. He pleaded sect. 502, and argued that because he was freed of liability to damage to the goods, he was, therefore, not liable for general average contribution. It was held that the words of the section only protected him from damage to the goods, but had nothing to do with general average, and that, notwithstanding the section, he was liable. This was followed in *Greenshields, Cowie, and Co.* v. *Stephens and Sons* (11 Asp. Mar. Law Cas. 167; 99 L. T. Rep. 597; (1908) A. C. 431) in the House of Lords. These cases seem clearly to follow the actual words of the statute which in terms limit the liability of the shipowner to cases where he might otherwise be liable to make good damage to goods. The liability to general average, it was said, is not liability to damage to goods, and, therefore, was held to be unaffected by the section.

I cannot see how these cases really help to elucidate the present problem; they turn upon the extent of the immunity of the shipowner, and when the language of the section is considered, it is clear that it does not extend to an immunity on the part of the shipowner for general average; the problem here rather is—the shipowner not being entitled to claim general average where the common danger has arisen through his default for which he is liable in law—Is there any actionable default for which it can be said he is liable in law, except the actionable wrong of injuring the cargo-owners' goods from which he is expressly protected?

It is argued for the cargo-owners that there may be a default on the part of the shipowner over and above that for which he is not liable under sect. 502, and that directly there is any default whatever, there is no sacrifice, but I

asked in vain during the argument to have that actionable default defined. It must be admitted that whatever the shipowner did to save the cargo, if he had not done it, no action would have lain against him. If this be true, his whole behaviour was a voluntary sacrifice. This fact distinguishes this case from that of *The Ettrick* (1881, 6 P. D. 127), which was a contribution to salvage case decided under sect. 54 of the Merchant Shipping Act 1862, now substantially sect. 503 of the present Act. Brett, L.J., says (6 P. D., at p. 136): "But then it is said that the statute which limits the liability to 8*l*. purges the negligence and the default and puts the plaintiff on the payment of the 8*l*. into the position of a perfectly innocent person." As is there pointed out, under that section the owner's liability is limited in certain cases of injury or damage to 8*l*., but over and above that sum it may properly still be said that he has committed an actionable wrong which would exclude him from the contribution to salvage there claimed. Applying that section to this case, the owner on claiming general average, if he could only rely on sect. 503, would be met by the plea that he was still a wrongdoer to the extent of all damage beyond 8*l*., and that consequently the common danger caused by unseaworthiness could yet be said to arise through his default.

The case of *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company* (12 Asp. Mar. Law Cas. 83; 105 L. T. Rep. 810; (1912) 1 K. B. 229) has decided that fire caused by unseaworthiness is within the protection of sect. 502 of the Merchant Shipping Act 1894, and the result in my judgment is that the statute has produced the same state of affairs as did the exception in the contract in *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*), so that it is not possible to say that the common danger has arisen through any default for which the shipowner is liable in law.

For these reasons I agree with the judgment of Greer, L.J., that this appeal must be allowed as in the claim. It follows from my judgment, as to absence of fault or privity on the part of the shipowner, that the cross-appeal must be dismissed.

Appeal allowed.
Cross-appeal dismissed.

(Before SCRUTTON, LAWRENCE and GREER, L.JJ., assisted by Nautical Assessors.)

THE CHATWOOD. (*a*)

ON APPEAL FROM THE ADMIRALTY DIVISION.

Collision — River Scheldt — Vessels meeting in the vicinity of swinging or turning vessel—Duty of vessel navigating against the tide to stop her way over the ground—Obligation to take off way when vessel is aware of other vessels—Delay in taking off way until turning vessel is reached—Regulations relating to the navigation of the River Scheldt, 1926, *art.* 40, *r.* 3.

By art. 40, *r.* 3, *of the Regulations relating to the navigation of the River Scheldt, a vessel proceeding with the current which is desirous of swinging is required to make this known to vessels in the vicinity by sounding a prescribed whistle signal; every vessel in the vicinity proceeding against the current,* " *must in that event stop her way over the ground and each vessel in the vicinity proceeding with the current must reduce its speed until the vessel swinging does no longer afford any impediment for passing through.*"

Held, that art. 40, *r.* 3, *is not complied with by taking off way or reducing speed when the approaching vessels are about to pass each other. The obligation under the article is to act as soon as the approaching vessels are aware of the turning vessel and of each other.*

APPEAL from a decision of Lord Merrivale, P., assisted by Trinity Masters.

The plaintiffs (respondents) the owners of the steamship *Bruges*, claimed damages from the defendants (appellants), owners of the steamship *Chatwood*, in respect of a collision which took place in the River Scheldt shortly after 8 p.m. on the 11th Oct. 1929.

At the time of the collision the *Bruges*, a vessel 331ft. in length, was bound down river from Antwerp in the course of a voyage to Harwich with mails and passengers. The *Chatwood*, 306ft. in length, was bound up river laden with coal. Whilst the two vessels were approaching the entrance to the Kruisschans Dock a Swedish steamer, the *Atland*, 380ft. in length, was swinging in the river in order to enter Kruisschans Dock. The tide at the time was flood, and the *Atland*, about seven minutes before the collision gave the prescribed signal for a steamship turning in the River Scheldt. The mast head lights of the *Atland* and her tug were then visible to those on board the *Bruges* and the *Chatwood*, and each vessel could also see the lights of the other over the land. The case for the plaintiffs was that the *Bruges* then sounded one short blast, continuing on making about 14 knots. When the *Atland*, which was apparently swinging head to the westward in the west channel was heard to sound three short blasts, the *Bruges* again sounded and

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

repeated her signal of one short blast, and she continued on keeping well over to her own starboard side of the channel. When a signal of three short blasts, which was thought to come from the *Chatwood*, was heard about one minute before the collision, the engines of the *Bruges* were reduced to slow speed ahead. Shortly afterwards when the *Chatwood* continued to come ahead, keeping her green light open, the engines of the *Bruges* were stopped and put full speed astern about half a minute before the collision. The case for the *Chatwood* was that when the *Atland*, which was proceeding up river ahead of the *Chatwood* was heard to sound the prescribed turning signal of one long and one short blast, those in charge of the *Chatwood* reduced their engines to slow speed, and shortly afterwards sounded two short blasts and starboarded their helm a little and steadied in order to pass under the stern of the *Atland*, which had started to turn under port helm, with the assistance of her tug, and had sounded three short blasts. When the *Chatwood* saw the *Bruges* coming on instead of waiting above the bend, three short blasts were sounded as a warning, and the engines were stopped. When the *Chatwood* was clear of the *Atland*, the helm was put hard-a-port and the engines full speed astern, and three short blasts were sounded and afterwards repeated.

The regulations relating to the navigation of the River Scheldt from one kilometre above the southern end of the quays at Antwerp to the Dutch frontier, promulgated by Royal Decree of the King of the Belgians of the 26th Oct. 1926, provide as follows :

Art. 40—Meeting near a channel, bridge, &c., and signals to be sounded in connection therewith :

1. If vessels approach each other in a tidal channel near a channel, bridge or stopping place or bend where the passage is so narrow that to pass the other vessel there would involve danger, the vessel proceeding against the current must suitably stop her way over the ground until the vessel proceeding with the current has passed the narrows, bridge, bend or jetty.

2. If, in the fairway, where no current is running a vessel meets another vessel at a bend, so that risk exists that, if they should pass each other in the said bend, the vessel which has the larger curve at her starboard side must proceed on her way, and the other vessel, or the other vessels, must wait until the bend is clear.

3. If a vessel proceeding with the current is desirous of swinging, the said vessel must make this known to vessels in the vicinity by sounding one prolonged blast followed by one or two short blasts, according as to whether she wishes to swing to starboard or to port. Every vessel in the vicinity proceeding against the current must in that event, stop her way over the ground, and each vessel in the vicinity proceeding with the current must reduce its speed until the vessel swinging does no longer afford any impediment for passing through.

4. If a vessel is desirous to swing in a fairway where no current is running, she must make known such to vessels in the vicinity by sounding the signal referred to in the third paragraph of this article and vessels being in the proximity must, if needs be, make room.

Lord Merrivale, P. held the *Chatwood* alone to blame. The defendants appealed.

Dunlop, K.C. and *Alfred Bucknill* for the appellants.

Langton, K.C. and *Naisby* for the respondents.

The arguments of counsel and the material facts fully appear from the judgment of Scrutton, L.J.

SCRUTTON, L.J.—This is an appeal against a judgment of the President, with Trinity Masters, who has held, in a collision between the *Bruges* and the *Chatwood*, the *Chatwood* alone to blame, and absolved the *Bruges* from liability. The *Chatwood* appeals.

The efforts of counsel, assisted by certain works of fiction, on the part of the witnesses, caused this case to take six days in the court below, and involved a long judgment from the President, after consulting the assessors.

In the view I take of the case, the problem can be reduced to a short one, although it involves points of considerable difficulty, as to which my mind has fluctuated during the course of the hearing.

The simple elements of the problem are these : The collision is in the Scheldt at night. The *Bruges*—the regular Harwich mail steamer running a regular course twice a week between Harwich and Antwerp—was going down the river. The *Chatwood*, a moderately large tramp over 300ft. long, laden with coal, was coming up the river. The time was just before high tide, the flood was still running. The President finds—and I see no reason to dissent from his view—that it was a two-knot tide, but it was getting near high water.

But for the incident I am about to mention there would have been no trouble in the case at all. The *Bruges* would have come down, and the *Chatwood* would have gone up, on their respective proper sides, and would have passed —although it was on a bend—port side to port side. The trouble is that on the bend there is a dock—apparently a dock recently opened —and coming up ahead of the *Chatwood* was a heavily laden Swedish steamer, 380ft. long, although, of course, being night the other boats did not know exactly what length she was, except that she was showing two masthead lights, and, therefore, was over 300ft. long. That boat was—as she had a right to do —going to swing head to tide, and continue her turn either directly, or very shortly, across to the eastern bank of the river in order to go into the Kruisschans Dock. The trouble has arisen from the fact that both the down-coming steamer, the *Bruges*, and the up-going steamer, the *Chatwood*, did arrive in the neighbourhood of the *Atland's* turning at a time when she was undoubtedly blocking half the channel at least. Under these circumstances they contrived to run into each other, and the question is who is to blame—the one ship, or the other ship, or both of them, or neither of them ?

There is this further circumstance that navigation in the Scheldt is governed by a

by-law which is far more in favour of the turning ship, and far harder on the up- and down-going ships which are near it, than any by-law I have ever seen. It is far harder than the Thames by-law which imposes considerable liability on the turning ship itself. In my view this case largely falls to be determined upon the construction that the court puts upon art. 40, r. 3, of the Scheldt by-laws, apparently made by the Belgian Government, and applying to that part of the river which is in Belgian territory.

Questions have been raised before us—and were raised still more in the court below—as to the application and meaning of art. 40, r. 1, which, as I read it, is a by-law regulating the relations between the up-going and the down-coming ships in certain situations which are mentioned, without regard to other ships in the sense that they are very indirectly concerned. I am not stating this as an authoritative definition of its meaning, but it applies to cases where you are near a *chenal*—whatever that may be—or a bridge, or a stopping place, which may be a jetty, or may be merely a place where steamers tie up, or a bend where the passage is so narrow that there would be danger for both to go into it at the same time. The court below expressed an opinion about the application of that rule. In my view it is not necessary to deal with that clause of the article in this case at all, because the difficulty in this case is—what is the position when, in addition to the down-coming and the up-going ship, there is a ship turning between them. That particular case seems to have been expressly provided for by rule 3 and rule 4. There is no need to investigate what would happen under rule 1, because you have got the express case dealt with of a turning ship in the two further rules. The first of those deals with the case when there is a tide running, and the second with the case when there is no tide running—which must be a very limited time such as at the top of high water. Dealing with the last case first, at the very limited time when there is no tide, what the rule says is quite clear: the up-going or down-coming ships have to keep out of the way of the turning ship. They must, in case of need, give place to it, and that puts the turning ship, of course, in a much better position than it is in most by-laws, and in most rivers, with which I am acquainted. When there is no tide, ships coming up and going down must keep out of the way of the turning ship.

When you come to the case when there is a tide—which is the more usual case—you cannot do it in that simple way, because the ship coming with the tide will be in great difficulty. If it tries to stop itself over the ground, it will lose steering way. If it goes hard-a-starboard until it is holding its way over the ground in spite of the tide it will have lost, or comparatively lost, control of itself. On the other hand, the ship coming against the tide will be able to hold itself up over the ground by the use of its engines against the force of the tide that is running. So, in the case where there is a tide, rule 3 deals with the two ships differently. It deals, first of all, with the turning ship—I am using the word "turning" in the French. What the Dutch is I do not know, and I should not be any the wiser if I did know. The French is *virer* and *virer*—which looks like our word to veer—seems to me to mean turning or swinging. It is suggested that it may mean "heave to" also. It is particularly applicable to the case where a ship coming up with the tide wants to go into a dock on the other side of the river, and, as a preliminary, swings round to get its head to the tide. The ship that proposes to do that, which is what the *Atland* was proposing to do, must give notice of its intention to ships *à proximité*. *Proximité*, of course, is a word which has a pretty wide meaning. You have some difficulty in knowing when a ship is *à proximité*, but when a notice has been given, the vessel coming against the tide must stop its progress over the ground—*arrêter sa marche par rapport au fond*—and the vessel navigating with the tide must lessen its speed until the ship which turns no longer presents any obstacle "*au passage*." Now whether "*au passage*" means the passage of both ships, or the passage of the one ship in whose water the turning ship is not, may be a troublesome question.

But the view I take of this case is that it is not directed to the moment when the ships get up to the turning ship—when the up-going and down-coming ships get up to the turning ship. It is directed to the time when they are coming towards the turning ship, and do not know exactly where she will be when they get to her. They are told, it seems to me, by the express direction—just as they were told in rule 4—to give place to her in case of need, and that seems to me to mean this: you see a ship turning ahead of you; she occupies a certain part of the channel, and you cannot be sure what; you are some way from her, and to avoid any risk of speculating whether she will or will not be clear when you get to her, the ship coming against the tide has to stop herself over the ground. Then she will not get into any trouble. The ship which is coming down with the tide—which is in the difficulty of stopping herself over the ground, is to lessen her speed so as, as far as possible, to give way to the turning ship. The material time seems to be not when you get there and say "halloo, this is all right, I have chanced it and it has come off," but before you get there and when you do not know what exactly is happening, you are to hold yourself up so that there may not be any trouble by your getting there at the wrong time. That I take to be the meaning of art. 40, r. 3. That applies before you get to the place of the turning ship and is to avoid your interfering with the turning ship when you get there, and, of course, incidentally is to save you from being in the passage at the time when the other ship, coming the other way, is also in the passage. Each ship is to

keep away from the turning ship so that the width of the channel being interfered with by the turning ship, you are not to have any difficulty of two ships trying to get through the same limited channel. That is my view of the meaning of art. 40, r. 3.

It is common ground—because one now comes to see what the two ships did—that each of them knew seven minutes before the collision that the *Atland* was turning. The collision happened seven minutes after they, either by signal or sight, knew that the *Atland* was turning off the Kruisschans Dock.

What did they know about the *Atland*? She was in fact a ship 380ft. long, and the width of the channel there is about 1100ft. They did not know the 380ft., but they knew she was over 300ft., because they saw the masthead lights on two masts which would tell them she was over 300ft. long. They saw she had a tug, and the President finds, with the advice of the Elder Brethren, that 30 fathoms of tow rope is about the length the tug would be having—there is 180ft. more. The tug according to the President—with the assistance of the Elder Brethren—is about 70ft. long. If you add those three figures together, and if for this time so to speak the tug was in a straight line with the *Atland*, you have got 630ft., considerably more than half the channel. Now, of course it is improbable that the combined line will be 630ft., because if the vessel is turning the tug will be towing on one bow and you cannot be sure of the angle. The angle between the two being considerable it may be that it is much less than 630ft. Also you cannot be sure of the exact angle across the river. You will find when you get up to this turning ship that you cannot be sure where in the river she will be because it is found, and accepted, that the ordinary way for a vessel of that sort, coming up that way with the tide to turn, would be to get over to the east side of the river out of her proper water and then begin to turn, the tug towing on her starboard bow, the tug, at a certain stage, holding her head, while the tide swings her stern round.

That would mean, as one will see by thinking about it, that when her head has got eight points round, and she is right athwart the river, half her length—195ft.—would have swung out towards the eastern side, possibly into the western side, but possibly partly into the east. At the time of this actual collision she had swung round twelve points, and she would have reduced that 190ft. by 95ft. It seems to me that the dangerous time—the time they have got to think about—is when she has got to the eight points, when she is taking up most of the river. One has to bear in mind—when I say "one" I mean the two approaching ships have to bear in mind—that they cannot be sure when they see her turn where she will have got to when they have got to her. Her engines may, or may not, be working. In this case a three-blast signal was heard, showing she was going astern. When I say "going astern," it may be they were checking her headway, but she was using her engines for the purpose of going astern and it seems to me quite impossible for a boat some way off, knowing that the ship is turning, to be sure where they will find her when they got to the place where she is. In my view this rule is not meant to allow them to speculate and to go on and say, "I think she will be all right when I get there, and so I will go on." When they find her ahead of them so as to block a considerable part of the channel, they must act then. The ship coming against the tide must stop then; the ship coming with the tide must diminish then, and not . . . say, "yes, it is quite true I never stopped at all, but by good luck when I got there there was room for me to get through." That in my view is a breach of art. 40, r. 3, though, luckily, it might end in no damage. That is my view of what you must be prepared for when you have a turning ship, with this addition, that there is nothing requiring the turning ship to stop when she is straight and not go into dock. She is turning for the purpose of going into dock, and it may be when you get there you will find her coming across into the dock, and you must take that into account as part of the turn which you may find when you get up. So much for the rule, and so much for what the vessel that gets notice of the turning ship may have to expect or to consider.

Now, what did the two boats do when they got either to hear the turning signal or a sight of the turning ship? I say that because the master of the *Bruges* says that he never heard the turning signal, but he did see the turning ship. The pilot of the *Bruges* says that he did hear the turning signal. Now, what did they do? The *Bruges* seven minutes before the actual collision, as we know now, went full speed ahead at fourteen knots for six minutes about. I say "about," because the times are taken to half a minute, and they may be between the minute and the half minute, and I say "about" therefore a minute. For six minutes she went full speed ahead at fourteen knots. She had seen that there was a boat coming up the river with the tide, behind the *Atland*, so she knew that there might be danger of another boat, a boat that had only to diminish speed and not to stop over the ground. For six minutes she went on at full speed, fourteen knots, till about a minute before the collision. There was a difference of opinion between the master and the pilot as to what should be done. The pilot was going to say "half speed." The master said, "No, slow." She did not stop and she went on at slow till just before the collision, and she only stopped and reversed within half a minute before the collision, and she is found to have some three or four knots headway. She went on and did some damage—not so much as is alleged by the *Chatwood's* witnesses—to a very substantial looking dolphin which was ahead of her.

Now, does that comply with the rule that every vessel near, going against the tide, shall

stop her way over the ground? It seems to me pretty clear it does not. She had so regulated her speed that she is arriving at the place of collision close to the turning ship. She has not stopped at all till the *Chatwood*, coming down, is very nearly into her. Now, why did the captain of the *Bruges* do that? He expresses his views on the subject at question 592 and onwards: "Was there anything to prevent you from waiting above the place of collision? A. Nothing to prevent me. 593: Q. You have twin screws? A. Yes. 594. Q. And you could have kept her under complete control? A. Yes. 595: Q. And could have brought yourself up, according to you, within a very short distance if you had been so minded? A. Yes. 596: Q. But you were determined to go on and pass through the gap? A. I had my passage to make—mails and passenger trains to catch. 597: Q. And you wanted to make the best passage you could with your mails and with your passengers? A. Yes. 598: Q. And you had a fast ship? A. Yes." He continues on the next page. Mr. Dunlop is suggesting to him that if he had waited by slowing sooner this collision would not have happened—the *Chatwood* would not have collided with the *Bruges*. "A. Not with the *Bruges*, no; but do you realise, sir, that I took account that we overtook and passed nineteen ships from Antwerp to Flushing, and passed twenty-three ships that were going up the passageway? 629: Q. You are very proud, are you, of your speed? A. No; but I only wish to impress it upon you that had we stopped for every ship we should never have caught the mail or passenger train. 630: Q. But if the rule requires you to stop and wait and stem the tide? A. Naturally, if I thought there was any danger of collision, or risk of collision, I would most decidedly risk losing the train rather. 631: Q. Do you mean that, unless there is in your view a risk of collision, you are at liberty to keep on because you are carrying passengers and mails? A. If we can do it without any risk to other ships." And again, when he is asked: "Why in your deposition when you state the circumstances of the collision do not you mention the existence of the *Atland* at all?" he says, at question 314: "The *Atland* I took it as clear of me, and it would not affect me." In my view the master of the *Bruges* took quite a wrong view of his position under the rules. He treats himself as a vessel which, carrying mails and passengers, should not slacken speed unless she is absolutely obliged to because she has got to catch the trains on the English side. He speculates, he takes the risk, he goes on fast, and hopes it will go all right. He does not read the rule as requiring him to stop if there is a turning vessel ahead of him at a distance when he cannot be sure where he will find the turning vessel when he gets to her. He seems to have thought it sufficient—and the learned President and Trinity Masters below seem to have thought it sufficient—if when he gets there there is in fact room, no matter what has been happening during the previous time, and no matter what the risk was of the turning ship being in the way in going into the dock, that will be enough if he has speculated and the risk has come off. In my view that is quite a wrong reading of the rule. The rule requires you when there is a risk some way off—when you do not know what is to happen, and see a turning ship, to lessen that risk, if you are going against the tide, by stopping your way over the ground, and if you are going with the tide, going slow until you are sure what the position is. From that point of view, on the admitted facts (I will say something about the advice we have received from our assessors in a moment), it appears to me that the *Bruges* broke the rule.

Now, what about the *Chatwood*? The *Chatwood* is in a more difficult position, coming up with the tide, than the boat that is going down against the tide, because the boat going down against the tide can stop its way over the ground by means of its engines. The boat coming down with the tide, as I have said, if it tries to stop its way over the ground will be in the position that it has lost steering way and will find itself in considerable difficulties. As I read the learned judge's judgment, he says this: "In the particulars I have mentioned, as it seems to me, there can be no doubt that the *Chatwood* was to blame." He is condemning the *Chatwood* for two things. First of all, as appears in the middle of p. 175, the learned President was induced by an argument of Mr. Langton—of which Mr. Langton has now repented in sackcloth and ashes—to form the opinion that the *Chatwood* made what the learned judge called "a violent alteration," "a great divergence," from its course of 7 points to port of her up-river course, and holding that view the learned President has condemned the *Chatwood* for the violent diversion of 7 points to port of her up-river course. And, secondly, finding there was this violent diversion he has said "You never signalled your starboard helm." It is true that you blew a starboard helm signal when first you heard the turning signal, but when you made this violent divergence you made no signal at all, and all you say is—as Mr. Dunlop has said to us—"Well, but what is the good of blowing any signal to the *Bruges*? She does not pay any attention to it, if she hears it, so I need not blow a signal"—which again is speculation as to what the master of the *Bruges* will or will not hear—speculation of a dangerous character. The trouble we have had about this is that it turns out, both as a matter of arithmetic and as a matter of looking at the chart, and seeing what must have happened, that that violent divergence of seven points to port was all wrong—it cannot have happened. It was got at in this way. Mr. Langton said to the captain of the *Chatwood*, "Assume the angle of the blow—which the President afterwards found—as three-and-a-half points, and you say that when you ultimately starboarded your helm you got round three-and-a-half points; add

these two three-and-a-half's together and you have got seven points, and you must therefore at some time have been seven points off your up-channel course." The difficulty about that, and what is wrong with that is, that it assumes that the *Chatwood* was off her up-channel course, whereas it was quite clear from the course made, and from the repeated statements of her captain, that she never diverged from that course, that she was on an up-channel course, but was heading to starboard of it, heading for the Beacon light, and on an up-river course. Once that is so the seven points is gone. Mr. Langton gave up a point and a half of it—he may have to give up more, but at any rate there was not a seven points divergence. It seems to me there is something much stronger that that. When you look at the position—at the course that the *Chatwood* must have been following, when you remember that before Buoy No. 56, where the bend began, she must have been coming along as she says in mid-channel, on a pretty straight course, which would have taken her ashore well above the Kruisschans, she must have over-ported her helm. Nobody but a lunatic would have gone straight on because it would have taken them straight ashore in a very short time. She must have therefore, when she got to Buoy No. 56 over-ported, as she could, by the proper calculating of porting, have gone through between the *Atland* and the eastern shore, without any starboarding at all. Yet she says she starboarded not seven points but slightly — a point.

It is pretty obvious from that—and we got Mr. Langton to lay down on the chart what he thought was the course of the *Chatwood*—and the course that he laid down exactly confirms what we have suggested that the *Chatwood* must have over-ported which if continued would have taken her ashore on the eastern bank, that she had to starboard so much by reason of her over-porting that she could not get round straight up the river but went into the *Bruges*. When one looks at the course which Mr. Langton laid down on the chart, as representing his argument as to what happened—a chart which of course will go with the papers if this case should go to any superior tribunal—it is clear that the fault of the *Chatwood* was not a seven-point starboarding (which cannot have happened unless you assume that the *Chatwood* goes up nearly touching the *Atland* and there gets round nearly at right angles, which, looking at the chart, seems absurd)—she has over-ported, she has made a faulty judgment in over-porting, and then has to starboard to try and correct her over-porting, but, starboarding at that time, has not been able to get round again without hitting the *Bruges*, which is well over to the eastern side of the river. It appears to me that the *Chatwood* is first of all to blame for that over-porting and consequent starboarding which has put her into the difficulty which landed her into the *Bruges*. Secondly, when she starboards she does not give the starboard helm signal, and it was all the more necessary that she should give the starboard helm signal because when you look at the chart, and visualise the position of the *Atland* and the *Bruges*, you see that the *Atland* was between the *Bruges* and the *Chatwood*, and consequently the *Bruges* would not have the opportunity of sighting very accurately or of judging what the *Chatwood* was doing, and would require a sound signal—a helm signal to tell her that the boat which is coming up, and which she cannot see because of the *Atland*, has starboarded. So one has two things to consider—first of all, you have laid a wrong course down because you have over-ported, having regard to the *Atland* ahead of you, and you have starboarded at such speed that you cannot get round but must go right over to the eastern side; and, thirdly, when you did that starboarding you did not give a helm signal to tell the boat above what you were doing. Mr. Dunlop, as I understood him, has two answers to that when the difficulty which was in the mind of the court was made clear to him. He said first—which was the most important thing—"What was the good of blowing a signal to the *Bruges* because she will not hear it, or will not pay any attention to it." But, as I have said, I do not think that that is a valid excuse for not blowing a signal, even if you think the other man is an ass or will not understand it. But he said—and as to which I have come to a clear conclusion—"that the *Atland* gave her turning signal when we were so near her that the necessity for starboarding was forced upon us suddenly." That, of course, turns upon how far the *Chatwood* was from the *Atland* when the *Atland* gave her turning signal, and the learned President has found that to be at least half a mile—I think it was quite possibly a little further.

If that was the position the *Chatwood* was practically at Buoy No. 56, and had ample time to judge of the situation and to make the right kind of porting. Therefore, it appears to me that the *Chatwood* is obviously also to blame. The real blame on both of them is that neither of them paid any attention to the rule. The rule tells them to give way to the turning ship and keep out of the way as long as she is turning, and they both of them came on at a time when the turning ship was obstructing at least half the river, and when you could not be sure which half, or which part of it, it was. If, as might easily have happened, the *Atland* had completed her turn, and had started off to go into dock, the *Bruges* would have been in a very bad position. The *Bruges* could not possibly tell that that was not what she would do; in the same way the *Chatwood* could not be sure of what the *Atland* was doing. She had blown a three-blast signal showing that her engines were working astern, and she had started on the east side of the river, and just at the time when the *Chatwood* had to decide, probably the *Atland* had made her eight-point turn, and was more across the river than she would be at a later period.

For these reasons, on the construction of the rule, and the admitted facts, I came to the conclusion myself that both vessels were to blame, and I saw no ground for distinguishing the blame between the two; they seemed to me to have equally disregarded the rule. Of course, the construction of the rules is for the court, and not for the assessors, though no doubt sometimes the assessors may make very valuable remarks which may assist the court in the construction of the rules. But we thought it right, although the construction of the rules is for us, to ask our assessor ; for, unfortunately, illness during the course of the case, deprived us of the very valuable assistance of Captain David, and the parties agreed to go on with one assessor rather than delay the case while another assessor was brought in to whom Mr. Dunlop would have had to repeat all his argument on the first day—we asked the assessor, who, of course, had the advantage of conversation with Captain David during the first part of the case, although Captain David had not the advantage of hearing the argument addressed to us by Mr. Langton—we asked him, first of all, this question : (1) Was the *Bruges* justified in keeping full speed of fourteen knots till about a minute before the collision, while the *Atland* was turning and the *Chatwood* was coming up-stream ? (2) In not stopping and reversing till just before the collision when the *Atland* was still turning and the *Chatwood* was on the eastern side of the channel (*a*) as a matter of good seamanship, assuming art. 40, r. 3, applies, (*b*) as a matter of good seamanship, assuming art. 40, r. 3, does not apply ? And our assessor answered in this way : "(*a*) Assuming that art. 40, r. 3, does apply—(1) The *Bruges* was not justified ; (2) The *Bruges* was not justified in postponing reversing her engines until after the risk of collision was apparent. (*b*) Assuming art. 40, r. 3, does not apply (1) the *Bruges* was justified in maintaining her speed until the risk of collision became apparent, but although she was justified in doing so, she would have shown a better interpretation of good seamanship and prudence if she had allowed as much room as possible to oncoming ships by taking more drastic action when the necessity did arise by getting sternway." The second question that we asked our assessors was this : "Was the *Chatwood* justified when she saw the *Atland* turning in proceeding on such a course and at such a speed that she passed the *Atland* in the eastern half of the channel at a time when the *Bruges* was close approaching in the same half of the channel, and came into collision with her in the extreme east of the channel." The answer that our assessor gives to that is : "The *Chatwood* was not justified in the manner in which she shaped her course and speed across the river, which made her a danger to the *Bruges* or any other approaching vessel." As we have held that art. 40, r. 3, does apply, the answers of our assessor confirm the view to which I myself had come, and the result, therefore, is that both ships are held to blame, and in equal proportions.

LAWRENCE, L.J.—I entirely agree ; and do not think I could usefully add anything to the judgment given by my Lord.

GREER, L.J.—I agree that the judgment of this court should be that both vessels were to blame for the collision and its consequent damage.

I think it is unnecessary to say anything on the question as to whether the *Chatwood* was in fault because the court below, and the Trinity Brethren, and my Lord and our assessor, have come to the conclusion that the *Chatwood* was to blame, and it would be a waste of time for me to add anything further on that subject.

The important question is whether the other vessel—the *Bruges*—which was coming from Antwerp was also to blame for this collision, and that depends not merely on the true meaning of art. 40, r. 3, but it depends, or may depend, upon the question—whatever the meaning of that article—did not the *Bruges* behave in such a way as the court deems to amount to negligent navigation under circumstances for which she was to blame. With regard to the meaning of art. 40, r. 3, I am inclined to take a somewhat wider view of its meaning than that which was indicated in my Lord's judgment. These regulations are regulations relating to the navigation of the Scheldt and I suppose it is right to say that, like the regulations which in this country are called Regulations for the Prevention of Collisions at Sea, they are at any rate regulations for the prevention of accidents arising in the course of the navigation of the Scheldt. The Scheldt is in places a narrow highway—a narrow highway which is very much used by vessels large and small. An illustration of that was given by the evidence of Captain West, the captain of the *Bruges*, when he said that on his way from Antwerp to Flushing he overtook and passed nineteen vessels and he met and passed twenty-three vessels coming the other way. It is a matter of grave importance that there should be regulations which will enable vessels coming up and down safely to navigate the river. One of the difficulties that vessels coming up and down may have to encounter is the difficulty created when they are approaching a vessel which is turning in the river, which is swinging in the river to get round. I cannot help thinking that this regulation is a regulation for the purpose of, so far as possible, ensuring the safety of vessels navigating the river at a time that these turning movements take place, just as much as it is directed to the safety of the turning or swinging vessel. The rule has got to be applied until the turning vessel no longer presents an obstacle to the passage—"*au passage*." I think that that is directed to secure that the rule shall be obeyed until no difficulty remains in the navigation of the river by reason of the turning movement. The turning movement may have gone so far that there is no risk to either vessel even though

the turning movement has not in fact been completely made, and if it has gone so far that there is no risk to any vessel coming up and down then I think the rule no longer has any application.

That being the rule this case, so far as concerns the conduct of the *Bruges*, seems to me to depend upon certain vital facts which may be stated in this way: seven minutes before the collision both vessels heard the signal of the *Atland* and knew that a turning movement was about to take place—a turning movement by the *Atland*. Neither vessel knew how long it would take the *Atland* to perform that turning movement. Neither vessel could know where exactly the moving obstacle would be in the channel when they got up to it, and, from the moment they realised that a turning movement was going to take place, it was the duty of those in charge of both vessels to exercise the very greatest care in their navigation from that time. But from that time until just shortly before the collision the *Bruges* did nothing except continue her full speed in the hope that there would be sufficient room for both vessels where the turning movement was taking place. In not slowing before she did I think that she was to blame. But there are other facts which make her conduct more seriously to blame than the fact that she did not slow in time. She could stop in her own length when at full speed; her own length was 331ft. If she was slowing at the time when she reversed her engines she could obviously stop in something less than 331ft. But what happened was that she did not stop until practically at the moment of the collision when the stopping and reversing could have been of no importance at all except, possibly, to diminish the force of the blow when the two vessels came into contact.

The next vital fact, as it seems to me, is this: If the captain of the *Bruges* is to be accepted as a witness whose statements can be treated as somewhere near the facts, it is plain from what he said, as recorded on pp. 29, 30, and 31 of the evidence, that when he was at least—and it may be more—at least a quarter of a mile away he saw that the *Chatwood* was coming round the stern, or commencing to come round the stern, of the *Atland*; that he did not immediately do anything even then, though it must have been apparent that at that time he was within the area indicated by the word "*proche*" in the rule; he did not even slow. I think it is quite clear that he ought to have stopped and reversed; but what he did was he waited till he heard the signal which almost immediately followed his seeing the vessel coming round the stern of the *Atland*; he waited until he heard the signal from the *Chatwood* that the *Chatwood* was going astern; and it was only when he got the signal from the *Chatwood* that the *Chatwood* was going astern that he then slowed his engines.

If, even at that time, having regard to his power of stopping, he had stopped and reversed there would have been no collision.

It seems to me impossible, under these circumstances, to find that the *Bruges* was not to blame for this collision and its consequent damage.

Mr. Dunlop invited the court to find, on the principle that we follow in dealing with common law cases as laid down in *Davis and Mann* (1842, 10 M. & W. 546), that the *Bruges* ought to be held alone to blame because she was guilty of the final negligence which occasioned this collision and its consequent damage. At one time that argument rather appealed to me, but, in the result, I have come to the conclusion that the vessels had got so near to one another at the time when the extent of the negligence of the *Chatwood* was apparent, or would be apparent to those on board the *Bruges*, that this is one of those exceptional cases which are referred to in *The Volute* (15 Asp. Mar. Law Cas. 530; 126 L. T. Rep. 425; (1922) 1 A. C. 129), when things are happening so rapidly that it is right to say that the collision, and the consequent damage, were the joint effect of the negligence of the two vessels. I agree with my Lord that the circumstances here are such that we ought not to distinguish between the two vessels and that they ought to bear the result of their negligence in equal proportions.

Appeal allowed. Both vessels held to blame in equal degrees. Appellants to have costs of the appeal. Each party to bear own costs of trial.

Solicitors: for the appellants, *Botterell* and *Roche*; for the respondents, *Parker, Garrett, and Co.*, agents for *Botterell, Roche,* and *Temperley*, Newcastle-on-Tyne.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Friday, June 20, 1930.

(Before ROWLATT, J.)

BERGENS DAMPSKIBS ASSURANCE FORENING *v.* SUN INSURANCE OFFICE LIMITED. (*a*)

Insurance—Marine—"Arranged total loss"—No actual claim—Settlement by agreement.

The owners of a Norwegian steamship were insured with the plaintiffs and other underwriters. The plaintiffs re-insured their risk with the defendants. The insured steamship stranded in the Black Sea but was floated off and eventually reached Constantinople. Owing to the absence of adequate repairing facilities at this port, it was extremely doubtful that the vessel's condition would permit her to reach a port where repairs could be carried out without the risk of her becoming a total loss. In these circumstances the owners and underwriters agreed to settle the matter: the vessel was to be regarded as a total loss and the underwriters were to pay

(*a*) Reported by R. A. YULE, Esq., Barrister-at-Law.

an agreed sum which in fact was more than her full repaired value at the time. The plaintiffs claimed a proportionate part of the sum so paid from the defendants. The material portion of the policy of re-insurance was as follows: "Insurance . . . upon hull and machinery, &c. valued as in original policy. Being against total and (or) constructive and (or) arranged total loss of vessel only as per Bergens Damp Club policies and to follow their settlements."

Held, that the action failed. On the true construction of the contract there must be either a constructive total loss or a genuine claim for one which claim is settled by arrangement. The word "arranged" really meant compromised and did not cover an artificial total loss created by the will of the parties.

ACTION tried by Rowlatt, J. without a jury.

The plaintiffs and other underwriters insured the owners of a Norwegian steamship, the *Sverre* against, *inter alia*, perils of the sea during the year 1927. The plaintiffs' share of the risk was 120,000kr. and they re-insured themselves with the defendants to the extent of 12,500kr. In Feb. 1927 the *Sverre* stranded in the Black Sea and was severely damaged. She was floated off and eventually reached Constantinople. Here there were not adequate repairing facilities and the vessel's condition was such that it was doubtful if she would reach any port where the necessary repairs could be carried out. Owing to the risk of her becoming a total loss and the probability that repairs would cost more than her repaired value, the owners and underwriters agreed to settle on the terms that the vessel should be regarded as a total loss and that the underwriters should pay a sum agreed at 435,000kr. which actually was more than the full repaired value. The plaintiffs claimed from the defendants the due proportion of that sum.

For the plaintiffs it was contended that the agreement arrived at by the underwriters with the owners was an "arranged total loss" within the meaning of the policy. For the defendants it was contended that the arrangement come to was only valid if there had been a claim made on the underwriters for a total loss or there was evidence of a total constructive loss. In the present case there was only a heavy particular average loss.

Simey, for the plaintiffs.

David Davies for the defendants.

ROWLATT, J.—This is a very puzzling case; but the situation has been greatly relieved by two very excellent arguments by counsel on either side, which has made the hearing of it, so far as I am concerned, quite a pleasurable exercise.

I think I can first of all state exactly what my view of the facts is, because I think the case falls to be decided upon what the real transaction between the parties was, and is not to be influenced by the mere nomenclature which the parties may use in labelling the steps that they took. I do not think upon the facts that there ever was a real claim for a constructive total loss. Before the valuations were received, when the vessel was still aground, and shortly afterwards no doubt, there were expressions used indicating the view, that was certainly true, that the vessel was not as a chattel worth repairing, but the writers of the letters had not in mind, as is fairly conceded by Mr. Simey, on those occasions the circumstance that the figure to be dealt with in the particular claim was 800,000kr.—quite an artificial figure with regard to the true value.

When matters had proceeded a little further, and the valuations came in, it became apparent to everybody that if this vessel was going to be repaired it would be a very expensive business, and a business in which one could not be quite certain that one saw the end of the expense, because, supposing she was temporarily repaired to take the sea, after all she would have to come to a United Kingdom port or Holland for repair still insured, and she might go to the bottom and become a total loss, and there would be no mistake about it. At any rate, it was obvious that the expense would be very great to the underwriters and it became obvious that the underwriters could afford to offer to the owners a sum which at any rate would limit their loss to a fixed sum, and it would be worth while for them to have the sum fixed, and still give the owners something more than the ship would be worth if they got it restored to them, repaired. That was the business purpose. Under those circumstances this settlement was made. That was the attitude, I think, of the underwriters, the plaintiffs, when they had their board meeting. They made an offer on those lines. Then comes what is a most valuable letter for Mr. Simey, representing the plaintiffs here—the letter which is on pp. 35 and 36, which is the answer to an offer designed to screw it up a little, if I may use that expression. The letter begins: "We should be prepared to accept an arrangement based on the underwriters taking over the vessel as if the latter were condemned." That is to say, as if it were a constructive total loss: "The compensation offered by the underwriters is, however, much too low, and we think that 500,000kr. plus the remaining insurance premium of about 36,000kr., should be the minimum. As a matter of fact, the question as to whether the vessel is not, legally, fit for condemning, might be raised." Now that is all that is said—"might be raised"—and then they go on to discuss it, and then it is pointed out that the underwriters might accept the claim set out, "because the risk they would run thereby would be quite small as compared with if the vessel were condemned, with the consequence that the insured value of 800,000kr. would have to be paid." I do not think that was a claim. I do not think they ever did put forward a claim. The evidence of the plaintiffs goes to show that in the minds of the underwriters there was some idea of the possibility of a claim that could not be

quite valued. I do not think it comes to more than that. I have no evidence from the documents that they thought that really the vessel could not be moved at all—that she was fixed at Constantinople as a hopeless derelict, or about to become a derelict. I do not think they ever thought that, and it has not proved to be the fact. I do not think they thought there was any real danger of it being proved after having the valuations that the cost would amount to 800,000kr. in any way. I have been told that they had in their minds the possibility of par. 10 of the plan being evoked so that the valuation might be revised. That certainly means only that the valuation could be revised as at the date of the policy. I cannot help thinking that that paragraph would be very sparingly used to rebut the valuations.

I have no evidence before me of the value of the ship at the date of the policy, or how that valuation was reached, or anything about it. I do not think there was more than the vaguest conception in the minds of the underwriters that they were really going to be faced with a claim for 800,000kr. ; but what they did see very clearly was that they were going to be liable on the basis of a particular average loss to a very large and a very uncertain amount of expenses. Therefore, I do not think that this was a compromise of a claim for a constructive total loss ; but what the parties did by the arrangement that they made was, they dealt with it as a constructive total loss on a different value. To put it quite shortly, instead of paying 800,000kr. they paid 435,000kr., and took over the ship. What, then, is the application of the words of the policy to that state of facts ? I have to construe the words. I have not to imagine what the people had in their minds. There are three apparently separate things : a total loss, a constructive total loss, and an arranged total loss. It is very curious. Of course the words would quite clearly be satisfied if they are held to refer to a case where there is a claim for a total loss—a real claim for a total loss, and it is compromised, and a less payment is made in compromising that. That would be covered, although possibly if the facts were gone into afterwards it might be held to be proved that really there was not a constructive total loss. It would cover a claim where a total loss was compromised, as in *Street's* case (1914, 111 L. T. Rep. 235). But now does it go further, and does it mean that if you arrange that a vessel shall be treated as a constructive total loss by way of settling the claim, although it could not be arguably put forward that she was—if you transfer it by mere agreement into the category of total loss, does the policy cover that ? Mr. Davies has said that this is a policy which is against a total loss—a total loss of a ship which is valued, and the value governing it in this case is 800,000kr. ; and it cannot mean that by the agreement of the parties it can be treated otherwise than as a partial loss, that it can be transferred by agreement to the category of a total loss, and brought within this policy by virtue of the word " arranged." I think that is the right argument. I think that is the dominant consideration. This is a policy against total loss, and what, if I may use the expression, comes under " total loss." I do not think it can include a case where by the agreement of the parties a different case is put upon the basis of a total loss by mere arrangement, just as it might have been put upon any other basis. I think there must be either a constructive total loss, or a claim for a constructive total loss, which claim is arranged. Although the wording in *Street's* case was different, I think that it bears upon the matter. It shows that the word " arranged " really only means compromised. It does not mean an artificial total loss created by the will of the parties. On those grounds, therefore, I think the plaintiff fails in this case, and there must be judgment for the defendants with costs.

(Before Swift and Acton, JJ.)

Great Western Railway Company v. Kassos Steam Navigation Company. (a)

Deck cargo — Measurement of space occupied — Appropriate method of measuring — Measurement made by another method— Memorandum by Customs officer—Effect— Merchant Shipping Act 1894 (57 & 58 *Vict. c.* 60), *s.* 77, *sub-ss.* (1), (2), *s.* 85, *sub-ss.* (1), (3).

Measurement of the space occupied by deck cargo on a ship must, in accordance with the provisions of sect. 85, *sub-sect.* (3), *of the Merchant Shipping Act* 1894, *be made in the manner directed by rule* 1 *of the Second Schedule of the Act. A memorandum by an officer of Customs that the proper measurement has been made, if, in fact, that measurement has been made by some other method, is of no effect.*

Appeal from Cardiff County Court.

The plaintiffs, the Kassos Steam Navigation Company, were the owners of a Greek steamship called the *Chelatros*, and the defendants, the Great Western Railway Company, were the owners of a dock at Barry, Glamorganshire. In Aug. 1929 the *Chelatros* was in the defendants' dock for the purpose of loading a cargo of coal and coke. As some of the cargo was loaded on the deck, it was necessary that the tonnage space devoted to the carrying of that cargo should be ascertained for the purpose of calculating dock dues. Pending measurement, the plaintiffs paid the defendants on a basis that 454 tons of tonnage space had been

(a) Reported by T. R. F. Butler, Esq., Barrister-at-Law.

occupied by the deck cargo. Afterwards, upon a certificate being granted to them by an officer of the Customs, they came to the conclusion that the amount on which they ought to have paid was only 370 tons. The plaintiffs, accordingly, brought an action in the County Court, in which they claimed 5*l.* 1*s.* 6*d.*, the difference between the dues chargeable on 370 tons and 454 tons. The County Court judge gave judgment for the plaintiffs.

The defendants (the railway company) appealed.

The further facts and the arguments appear fully from the judgments.

W. N. Raeburn, K.C., *Wilfrid Lewis*, and *G. K. Rose* for the appellants.

Trevor Hunter, K.C. and *C. T. Miller* for the respondents.

Swift, J.—This is an appeal from a decision of His Honour Judge Thomas given at the County Court for the county of Glamorgan, held at Cardiff on the 8th April last, by which he adjudged that the plaintiffs should recover, as against the defendants, the sum of 5*l.* 1*s.* 6*d.*, with costs.

The action arose in this way. The plaintiffs, the Kassos Steam Navigation Company, are the owners of the Greek steamship *Chelatros*, and the defendants, the Great Western Railway Company, are the owners of the dock at Barry. In August of last year the *Chelatros* was in the dock at Barry and was loading a cargo of coal and coke. She not only filled that portion of the ship which was appropriate for the carriage of cargo, but also loaded some cargo upon the deck. It thereupon became necessary, in order that it might be ascertained how much should be paid to the railway company for dock dues, that the quantity of cargo on the deck, or the tonnage space which was devoted to the carrying of that cargo, should be ascertained and added to the registered tonnage of the ship. Pending that being done, the owners of the vessel by their agents paid the railway company on a basis of 454 tons of coal, or on a basis that 454 tons of tonnage space had been occupied by cargo which had been put upon the deck. After they had paid in respect of the 454 tons, the plaintiffs came to the conclusion, upon a certificate which was granted to them by an officer of the Customs, that the amount upon which they ought to have paid was only 370 tons. Thereupon the plaintiffs sought to recover from the defendants the sum of 5*l.* 1*s.* 6*d.*, being the difference between the dues chargeable on the 370 tons and on the 454 tons.

The action came before Judge Thomas in the Cardiff County Court, who, having heard the evidence in regard to the matter, and having considered the arguments put before him, gave judgment for the plaintiffs. From that judgment this appeal is brought, and, in my opinion, this appeal should be allowed.

The contention of the parties may, I think, be stated in this way. There can be no doubt that sect. 77 of the Merchant Shipping Act 1894 provides for the measurement of a ship which is about to be registered, and sub-sect. (2) of that section provides for the measurement of a ship for purposes other than registration, if occasion arises for it to be measured after it has been registered. Now, that section sets up two methods of measuring a ship, the first, according to a rule in the schedule, which is known as rule 1 and which comprises sub-rules 1 to 5, and the second according to rule 2, which comprises sub-rules 1 and 2. Those are both methods of measuring a ship in order to arrive at its tonnage. The method which is to be adopted is that which is appropriate to the particular ship, having regard to the terms of sub-sect. (1) and sub-sect. (2) of sect. 77. By that means the registered tonnage of the ship is to be ascertained. But cargo may be carried on a ship in excess of the registered tonnage of the vessel. That is well known. From time to time cargo is put upon the deck and is carried by the ship and dues ought to be paid in respect of it. Sect. 85 of the Act of 1894 provides in sub-sect. (1): "If any ship"—with certain exceptions which do not apply in this case—"carries as deck cargo, that is to say, in any uncovered space upon deck, or in any covered space not included in the cubical contents forming the ship's registered tonnage, timber, stores, or other goods, all dues payable on the ship's tonnage shall be payable as if there were added to the ship's registered tonnage the tonnage of the space occupied by those goods at the time at which the dues become payable." If, therefore, there is space occupied by cargo which is above and beyond the cubical contents forming the ship's registered tonnage, that space has to be paid for and what that space is has to be ascertained. Now, as I say, there are two methods of measuring a ship. So far, we have had nothing to do with measuring space or a portion of a ship as opposed to the whole of the ship; but when cargo is carried outside that portion of the ship, the cubical contents of which have been calculated in the registered tonnage, one must consider by what means that space is to be measured in order that one may arrive at the dues which are payable in respect of that extra cargo. Having said, first of all, in sect. 85, sub-sect. (1), that such extra cargo shall be paid for, the Act of Parliament in sub-sect. (3) goes on to say how the measurement is to be made. Now, there are two methods of measuring a ship. The Act of Parliament might have said: "You shall adopt one of these methods of measuring, or you shall adopt some quite different method which has nothing to do with the methods which we have laid down for the measuring of a ship as a whole." But what it in fact has done is this. It has said, in sub-sect. (3): "The tonnage of the space shall be ascertained by an officer of the Board of Trade or of Customs in manner directed as to the measurement of poops or other closed-in spaces by rule 1 in the Second Schedule to this Act." Therefore, this deck

cargo on the *Chelatros* was, according to the Act of Parliament, to be measured according to the method and the rules laid down by rule 1 of the Second Schedule to the Act. It is beside the question to say that rule 2 would have been a very much more convenient method of measuring, or to say that some other very much better method of measuring could have been found. Parliament, in its wisdom, has said that, when this space has to be measured, for the ascertainment of what dues are to be paid, the space shall be ascertained in the manner directed by rule 1 in the Second Schedule to the Act. With regard to the cargo on this vessel, that was not done. Possibly through no fault of his own, indeed probably through no fault of his own, the officer who ought to have measured, and who ought to have measured in accordance with the method laid down by rule 1, in fact measured in accordance with the method laid down by rule 2, and he did so, as he told the court, because he had received instructions from his superior officers, the Customs authorities, that that was the way in which he was to measure. But that is not a proper method of measuring under the Act.

The position which follows is this, that the plaintiffs, having paid a certain sum for dock dues, when they come to recover something which they say they have overpaid, have got to bring evidence before the court that, measuring the space on which deck cargo was carried in the proper manner, they have paid too much. They never measured it in the proper manner, however, and, therefore, they cannot say they have paid too much. They do not know what the figure would have been if they had measured it in the proper manner. There was before the learned County Court judge no evidence upon which, in my opinion, he could come to the conclusion that the plaintiffs had really measured and had really paid more than the true measurements rendered them liable to pay. There was no measurement later on. It is suggested that before the trial Mr. Nicol, the officer of Customs, measured under rule 1, sub-rule (5), and that the results show that if he had measured in the proper way originally according to the Act of Parliament the measurement would have been practically the same. The answer to that is, he never did make any such measurements. The ship had gone long before this case came on for trial. He measured once, and he measured once for all. Unfortunately, he did not measure in such a way as to enable him to make the calculations under rule 1, sub-rule (5). He had not got the materials to do that. The evidence which he gave to the learned County Court judge with regard to that matter was, even if it were arithmetically correct, which I am satisfied it was not, perfectly worthless, because it was not the measurement of the space, nor was it based upon the factors which the Act of Parliament requires. It was said by Mr. Hunter: "Well, this memorandum of the officials is conclusive," but having regard to the decision in the case of *The Franconia* (4 Asp. Mar. Law Cas. 1; 39 L. T. Rep. 57; 3 Prob. Div. 164) and the case of *Richmond Hill Steamship Company* v. *Trinity House Corporation* (8 Asp. Mar. Law Cas. 164; 75 L. T. Rep. 8; (1896) 2 Q. B. 134), both of which were cited to us, it is obvious that the memorandum is not conclusive at all in itself. Mr. Hunter then said: "If it is not conclusive as to the space measured it is, at any rate, conclusive as to the figures." I do not follow that, because it does not seem to me to be conclusive of anything and it does not seem to me that it prevents the dock authorities from saying that the memorandum was wrong in either that the measurements had never been made at all, or that the figures which were calculated as the result of those measurements were in truth wrong. Speaking for myself—it is quite immaterial for the purpose of deciding this case—I should doubt very much whether there ever was a certificate given at all under sect. 85 of the Act of 1894. That section requires a memorandum which is to be given to the master of the ship when the ship is coming into dock. It is quite obvious from the printed form upon which this memorandum has been put that that was the intention of the draftsman of it before it was printed. In this case that form has been utilised for quite a different purpose; it has been made to apply to the cargo of a ship which was going out of dock, and not coming in, and there is no evidence whatever that it was ever given to the master of the ship at all, and it was certainly, so far as we know, never produced by the master of the ship who, so far as I can ascertain the facts, was on his way to Buenos Aires long before any question in regard to this matter arose and probably long before the certificate was given. The certificate says the inspection was made upon the 8th Aug., and it is dated the 13th Aug.—some days later. Be that as it may, it seems to me that there was no evidence before the learned County Court judge upon which he could come to the conclusion that the plaintiffs had overpaid the defendants *5l.* 1*s.* 6*d.* Whether the plaintiffs had overpaid the defendants or not depended entirely on the measurement of the space for the purpose of calculating the tonnage on which they ought to pay under sect. 85. It is admitted that no such calculation was ever made until long after the payment was made, and, if one was made at all, it was only just before the County Court action. In those circumstances, in my opinion, there was no evidence upon which the learned County Court judge could find as he did, and I think his judgment ought to have been for the defendants. I think, therefore, that this appeal should be allowed, and that the judgment for the plaintiffs should be set aside and judgment entered for the defendants, with costs.

Acton, J.—I agree. I think that the error into which the learned County Court judge fell can be made clearly apparent by a reference

to some comparatively short passages in his judgment. In his judgment he said: "It appears that this vessel carries cargo in what has been described, and properly described, as unregistered spaces. The registration of the capacity of vessels, so far as Greek ships are concerned, is confined to the spaces below the decks, and as there are in this ship spaces above the deck upon which cargo may be and is carried, the plaintiffs are liable to pay the charges with reference to those spaces." Then the learned judge refers to sect. 85 of the Merchant Shipping Act 1894 as the important and proper section to be considered, and then he continues: "Therefore, that section provides in clear language that dues are to be payable upon goods shipped above the main deck." I think it would be more correct to say "upon space occupied by goods shipped above the main deck." He then refers to what was, of course, common ground in the case, that the practice appears to have been that the payment should be made not, in the first place, on measurement, but on a demand made by the defendants, and that upon such demand the plaintiffs paid to the defendants the sum of money which was supposed to represent the legal charges which the defendants were entitled to exact from the plaintiffs. He then goes on to say, and to say as a ground for the decision at which he arrived, that he finds that the officer of Customs, Mr. Nicol, made the necessary measurements as required by the Act. He says that, after drawing attention to the Second Schedule of the Act, rule 1, sub-rule (5). Then, in the course of his judgment, he says that it was admitted by the Customs officer, Mr. Nicol, who gave evidence, that he did not make his measurement in accordance with the Second Schedule, rule 1, sub-rule (5); he based his calculations upon rule 2, sub-rule (2), of the schedule, in conjunction with some instructions which were issued to officers like himself by the Board of Trade for their guidance. In saying "the Board of Trade," the learned judge, as everybody agrees, was in error, for such instructions as there were were issued by the Customs authorities, not by the Board of Trade. Those instructions, he says, were given in evidence, "and I hold that under the statutory enactments which were referred to they were properly admissible in evidence, and that the Custom House officer was entitled to base his calculations upon the method of measurement disclosed in the second rule of Sched. 2 and the instructions which were given to him by the Board of Trade officers"—where he was again falling into the same error as he had fallen into a few sentences previously.

Now, for the reasons which my Lord has given, it seems to me quite clear, and clear beyond argument, that in that the learned County Court judge was in error; he was in error certainly for the reasons already given by my Lord and also for the reason that I have drawn attention to, namely, that he made a mistake about the instructions being the instructions of the Board of Trade. The only difficulty in the course of the argument which presented itself to my mind was this, that there was evidence before the learned judge of what the correct measurement would have been if the method or principle indicated by rule 1, sub-rule (5), had been observed, instead of the method indicated by rule 2, sub-rule (2), of the schedule to the Act of 1894. I think, however, that the answer to that is the answer which has already been given by my Lord, that, in fact, that measurement had never been taken at all, and the opportunity of taking any such measurement had gone by; and, in the circumstances, it can form no answer to the objection taken in regard to the wrong method of measuring having been applied that if the right method of measurement had been applied the result would have been practically the same. The answer to that is that such measurement never was taken, and, therefore, I agree that this appeal should be allowed and judgment should be entered for the defendants.

Appeal allowed.

(Before WRIGHT, J.)

OWNERS OF STEAMSHIP ISTROS *v.* F. W. DAHLSTROEM AND CO. (*a*)

Charter-party — Clause providing that the captain shall prosecute all voyages with the utmost despatch—Exception clause—Construction—Claim for hire—Counter-claim for loss caused by delay in prosecuting a voyage—Arbitration.

The plaintiffs were the owners and the defendants the charterers of a steamer under the Baltic and White Sea Conference Uniform Time Charter 1912–20. *Under the agreement the captain was to prosecute all voyages with the utmost despatch, and if the charterers were dissatisfied they were to lodge a complaint and after investigation the owners were to make a change in the appointment. The owners made themselves liable for themselves or their manager for delay or loss in making the steamer seaworthy and fitted for the voyage or any other personal act or omission or default on their part or that of their manager, but the owners were not to be liable in any other case nor for damage or delay whatsoever and howsoever caused, even if caused by the neglect or default of the owners' servants. On a voyage which started from the Tyne the steamer met with unusually heavy weather and the captain put in at four ports of refuge whereby the voyage was unduly delayed. The owners made a claim for balance of hire and the charterers counter-claimed damages for the*

(*a*) Reported by R. A. YULE, Esq., Barrister-at-Law.

loss sustained by reason of the delay in prosecuting the voyage. The arbitrator found that the delay was due to the default of the captain, and holding that the owners were exempt from liability under the contract made an award in favour of the owners but stated a case for the opinion of the court.

Held, that the arbitrator was right. The delay caused by the default of the captain would have made the owners liable unless there was a clause in the contract expressly excluding this liability. The arbitrator had found that the delay was not due to want of diligence on the part of the owners or their manager in making the ship seaworthy and fitted for the voyage nor to any other personal act or omission on their part. The case of the owners clearly fell within the exception clause of the charter-party and the award must be affirmed.

Suzuki and Company Limited *v.* T. Beynon and Company Limited (17 *Asp. Mar. Law Cas.* 1; 134 *L. T. Rep.* 449) *referred to.*

Special case stated by an arbitrator.

The plaintiffs were the owners of the steamship *Istros* of 5660 tons, and the defendants were the charterers under the Baltic and White Sea Conference Uniform Time Charter 1912–20, the charter-party being dated the 3rd Aug. 1929 and the period four calendar months. The vessel duly went on service, and on a voyage which started from the Tyne on the 24th Dec. 1929 she met with bad weather. The captain put in at three ports of refuge: Margate Roads on the 29th Dec., Torbay on the 1st Jan. 1930 till the 6th Jan. 1930, and Corunna on the 9th Jan. to the 15th Jan. These circumstances caused a delay in the prosecution of the voyage. By clause 8 of the charter-party it was provided that the captain was to prosecute all voyages with the utmost dispatch and to render customary assistance with the ship's crew and also that if the charterers had reason to be dissatisfied with the conduct of the captain they were to report the same to the owners who were to investigate the complaint, and if necessary or practicable, make a change in the appointment. Clause 12 was an exception clause: "Owners to be responsible . . . during the currency of this charter if such delay or loss has been caused by want of due diligence on the part of the owners or their manager in making steamer seaworthy and fitted for the voyage or any other personal act or omission or default of the owners or their manager. Owners not to be responsible in any other case nor for damage or delay whatsoever and howsoever caused even if caused by the neglect or default of owners' servants." On a claim made by the owners for balance of hire and a counter-claim for loss caused by the delay in prosecuting the voyage, the arbitrator found that though the weather was unusually tempestuous and it might have been prudent for the captain to heave the vessel to on occasion, there was nothing to justify the captain of a well-found and laden vessel in putting into ports of refuge in the way that he did. The arbitrator also found that there was no evidence that "any delay or loss had been caused to the charterers by want of due diligence on the part of the owner or his manager in making the steamer seaworthy and fitted for the voyage or by any other personal act or omission or default of the owner or his manager." He therefore made an award in favour of the owners holding that they were protected by clause 12 of the charter-party, but stated a case for the opinion of the court.

The charterers, respondents, were absent and unrepresented.

Sir *Robert Aske*, for the shipowners, referred to *Suzuki and Co.* v. *T. Beynon and Co.* (*ubi sup.*) and pointed out that it was authority for the proposition that unless there was a clause clearly excepting the owners they would be liable. In the present case there was such a clause and the owners were therefore not liable.

Wright, J.—This case comes before me in the form of a special case for the opinion of the court stated by a very experienced business arbitrator, Mr. F. Newson. The claim was for a balance of hire and the claim was made by the owners of a Greek vessel called the *Istros*, which had been chartered under the Baltic and White Sea Conference Uniform Time Charter 1912, as revised in 1920, a charter dated the 3rd Aug. 1929, under which the owners chartered the vessel to a firm of F. W. Dahlstroem and Co., Hamburg, on a time charter for about four calendar months. The vessel duly went on the service and the only point with which I am concerned to-day has reference to what happened on a voyage which she made under the charter-party. The voyage in question started from the Tyne on the 24th Dec. 1929. The weather was very bad, and in fact the captain in prosecuting that voyage put into three ports of refuge; he put into Margate Roads on the 29th Dec., and stayed there for two days; he put into Torbay on the 1st Jan. 1930, and stayed there until the 6th Jan., and he put into Corunna on the 9th Jan. and lay there until the 15th Jan. These circumstances involved some delay in the prosecution of the voyage, and the charterer claims that that delay constituted breach of the contract and that he was entitled to set off against the owners' claim for balance of hire so much of the hire as was applicable to those periods of delay. The arbitrator has found that, though the voyage was unusually tempestuous, "the wind rising at times to almost hurricane force" so "that there were occasions when it might have been. and probably was, prudent for the captain to heave the vessel to, there was nothing in the weather encountered to justify the captain of a well-found and laden vessel in putting in to ports of refuge" in the way that he did. The arbitrator further finds that the vessel was properly seaworthy and properly efficient, and he also finds that there was no evidence that "any delay or loss had been caused to the

charterers by want of due diligence on the part of the owner or his manager in making the steamer seaworthy and fitted for the voyage or by any other personal act or omission or default of the owner or his manager." In effect his finding amounts to this, that there was on the part of the captain some failure of due care and due competence in putting in to the ports of refuge as he did, and that these were improper or negligent acts on the part of the master. In those circumstances it is necessary to consider whether the owners are entitled to claim that they are free from responsibility for these negligent or improper acts of the master by reason of the terms of the charter-party. Under clause 8 of the charter-party the captain is to prosecute all voyages with the utmost despatch and to render customary assistance with the ship's crew. By improperly putting into these ports of refuge it is clear, according to the finding of the arbitrator, that he did not prosecute this voyage with the utmost despatch. Clause 8 also goes on to provide that if the charterers have reason to be dissatisfied with the conduct of the captain they are to report the same to the owners who, on receiving the complaint, are to investigate that complaint promptly and, if necessary or practicable, make a change in the appointments. But apart from that, if there were a breach of clause 8 the owner would be liable in damages for the loss to the charterer by reason of that breach unless he were protected by the exceptions or qualification to be found in the charter-party—the case in which he was so held liable is the case of *Suzuki and Co. Limited* v. *T. Beynon and Co. Limited* (reported in 17 Asp. Mar. Law Cas. 1; (1926) 134 L. T. Rep. 449). But in this case the owners rely on the protection which they say is afforded to them by clause 12, which is in these terms: "The owners to be responsible only for delay"—I read those parts of the clause which appear to me to be material—"during the currency of this charter if such delay or loss has been caused by want of due diligence on the part of the owners or their manager in making steamer seaworthy and fitted for the voyage or any other personal act or omission, or default of owners or their manager. Owners not to be responsible in any other case, nor for damage or delay, whatsoever and howsoever caused, even if caused by the neglect or default of owners' servants." In terms that clause appears to me to be clear and wide enough to protect the owners against any claim in this case; and on that clause the arbitrator has come to the conclusion that the owners are not in law liable for the delay. He has made his award in their favour on this point, but subject to the opinion of the court as to whether or not he is right in law. The charterers have not thought fit to appear on the hearing of the special case, but I have had the benefit of an argument from Sir Robert Aske, who has very properly and candidly laid before me such considerations on both sides as appear to him to merit consideration, and has referred me to the authority which I have just cited.

In my opinion, the award of the arbitrator is right in law, and I therefore order that that award shall stand. Clause 12 appears to me, so far as the facts of this particular case are concerned, to be quite clear. There has been in this case no want of due diligence on the part of the owners or their manager in making the ship seaworthy and fitted for the voyage, and there has been no other personal act or omission, or default on their part. Any neglect or default that there has been has been that of the owner's servants. The arbitrator has found that there has been such neglect or default by the master, and that that has caused the delay. That seems to me to come within the precise words of clause 12. It is not necessary here to consider whether every possible case that may arise under clause 8 of a failure on the part of the captain to prosecute all voyages with utmost despatch is covered by clause 12. I have not in my mind at this moment any specific type of case of a breach of clause 8 by the act of the captain for which, notwithstanding clause 12, the owner would be responsible. But there may be such cases. In any view, it seems to me that clause 12 must receive effect where the case comes within its clear terms. If the effect of that is to render the owners free from any liability for loss or delay where there is a failure on the part of the captain to prosecute the voyage with the utmost despatch, then I think the owner is entitled to the full benefit of that clause. Clause 8, it may be said, has then no practical effect. It has a practical effect to this extent, that it contains clear recognition of the duty of the captain so to act, and the effect of clause 12 is not to modify or qualify the existence of that duty, although it may operate if an action is brought against the owner for damages as a defence. In one sense, every exception clause is *pro tanto* inconsistent with the primary obligations or the express obligations which at law and by contract rest upon an owner or a master in respect of the goods entrusted to his charge, and the duties arising under a charter-party; but they receive in due course, if the circumstances require it, their appropriate effect as a shield to a claim for damages; and I see nothing in the circumstances of this case to prevent the owner from relying here on the protection afforded to him by clause 12 of the charter-party. As I have said, the award will be upheld, and the owners will have the costs of this hearing before me.

Award affirmed.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Nov. 14, 15, and 17, 1930.

(Before LANGTON, J.)

THE LONDON. (a)

Collision—Lis alibi pendens—*Action in Scotland —Subsequent action in England by party who is defendant in action in Scotland in respect of the same subject matter—Application by defendant to stay proceedings in England—Discretion.*

In an action for damage by collision the plaintiffs were at the time when they began their action defenders in proceedings pending in Scotland in which the defendants in the action were pursuers. The proceedings in Scotland were in respect of the same collision as the English action.

Held, that the court would not exercise its discretion to stay the action in England.

The Peshawur (5 *Asp. Mar. Law Cas.* 89 ; 1883, 48 *L. T. Rep.* 796 ; 8 *Prob. Div.* 32) *considered and not followed.*

SUMMONS (adjourned into court).

The plaintiffs, owners of the steamship *Granli*, claimed damages in respect of a collision which took place on the 27th Oct. 1930 in the Firth of Tay between the *Granli* and the defendant's steamship *London*. The owners of the *London* began proceedings *in personam* in the courts in Scotland in respect of the damage sustained by the *London*. Subsequently, the owners of the *Granli* began an action *in rem* in England in which the owners of the *London* were defendants. Upon the plaintiffs threatening to arrest the *London*, an undertaking for bail was given. The defendants then applied by summons to stay the action, but the registrar refused to do so. The defendants then applied to the judge. Langton, J. adjourned the summons into court for argument.

Carpmael, for the defendants.—The action in England is oppressive and vexatious whilst the proceedings in Scotland are pending. The principle is that where an action is pending in a court of concurrent jurisdiction in England, Scotland, Ireland, or the Dominions, the court will, as a matter of course, stay any proceedings in England in respect of an identical subject-matter. Where an action is pending in a foreign court, different considerations would apply. [Reference was made to: *McHenry* v. *Lewis* (1882, 47 L. T. Rep. 549 ; 22 Ch. Div. 397) ; *The Bold Buccleugh* (19 L. T. (O. S.) 235 ; 7 Moo. P. C. 267) ; *The John and Mary* (Swa. 471) ; *The Lanarkshire* (2 Spinks, 189) ; *The Catterina Chiazzaro* (3 Asp. Mar. Law Cas. 130 ; 34 L. T. Rep. 588) ; *The Peshawur* (5 Asp. Mar. Law Cas. 89 ; 48 L. T. Rep. 796 ; 8 Prob. Div. 32) ; *The Christiansborg* (5 Asp. Mar. Law Cas. 491 ; 56 L. T. Rep. 612 ; 10 Prob. Div. 141) ; *Thornton* v. *Thornton* (54 L. T. Rep. 774 ; 11 Prob. Div. 176) ; *The Iasep* (12 Times L. Rep. 375, 434) ; *The Reinbeck* (6 Asp. Mar. Law Cas. 366) ; 60 L. T. Rep. 209 ; *The Mannheim* (8 Asp. Mar. Law Cas. 210 ; 75 L. T. Rep. 424 ; (1897) P. 13) ; *Logan* v. *Band of Scotland* (94 L. T. Rep. 153 ; (1906) 1 K. B. 141) ; *Egbert* v. *Short* (97 L. T. Rep. 90 ; (1907) 2 Ch. 205) ; and *The Janera* (17 Asp. Mar. Law Cas. 416 ; 138 L. T. Rep. 557 ; (1928) P. 55).]

Hayward, for the plaintiffs.—The plaintiffs are entitled to commence an action in this court. They have done nothing to disentitle themselves from proceeding here, and they ought not to be prevented from doing so. It is conceded that there is jurisdiction, but it is submitted that in the circumstances the discretion of the court should not be exercised against the plaintiffs. *The Peshawur* (*sup.*) is a doubtful authority. Notice of appeal appears to have been given against the decision of Sir R. Phillimore, but the case was settled before the appeal had been heard. In *The Christiansborg* (*sup.*) Sir R. Phillimore's decision was treated as of doubtful authority. There is really little difference between this case and *The Janera* (*sup.*), where Hill, J. said that a plaintiff ought not to be stayed merely on the ground that he was a defendant elsewhere. It is true that in that case the plaintiff was defendant in proceedings in a foreign court, but it is submitted that there is really no difference in principle, and the language used by Hill, J. is sufficiently wide to be applied to the present case.

Carpmael replied.

Nov. 17, 1930.—LANGTON, J.—This is a matter arising out of a collision which took place in Scottish waters on the 27th Oct. 1930, between the steamship *London* and the steamship *Granli*. The collision took place in the Firth of Tay. In those circumstances the owners of the *London* commenced an action in the Scottish Courts against the owners of the *Granli*. At a later date, on the 31st Oct., the owners of the *Granli*, finding the *London* within the jurisdiction of this court, threatened an arrest. Upon an undertaking being given the arrest was not actually completed, but an action was commenced in this court.

Mr. Hayward appears here for the *Granli* and, Mr. Carpmael for the *London*, and Mr. Carpmael moves the court to stay the action that has been commenced on behalf of the owners of the *Granli* in this court.

The matter struck me as one of importance and one in which the same circumstances might frequently recur, and I accordingly adjourned the summons into court for the purpose of having the whole matter fully argued. Mr. Carpmael has put before me, with his usual industry and candour, the whole of the relevant authorities that bear upon this point, and, though none of the time has been wasted, I think it is sufficient to deal with the

(a) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

three or four principal authorities on the point at issue. Of these authorities, the nearest to the point seems to me to be *McHenry* v. *Lewis* (1882, 47 L. T. Rep. 549, 22 Ch. Div. 397). Mr. Carpmael advanced as his main proposition that where there is an action pending in England, Scotland, Ireland, or the British Dominions overseas, the court will, as a matter of course, stay any second action commenced in respect of the same subject-matter, whether the plaintiff is or is not the same in both actions. *McHenry* v. *Lewis* (*sup.*) was the first of the authorities that he advanced in support of that proposition.

At first sight there is something to be said for the citation of this authority. The headnote says: " When a plaintiff sues a defendant for the same matter in two courts in this country, such a proceeding is *primâ facie* vexatious, and the court will generally, as of course, put the plaintiff to his election and stay one of the suits. And the same principle applies where one of the actions is in the Queen's Courts in Scotland or Ireland, or any other part of the Queen's Dominions." Mr. Carpmael frankly recognised that that authority, useful to him as it was upon one part of his proposition, could not be said to be a case directly in point, since in that case the plaintiff was the same in both actions; and it is not immaterial to notice in passing, that, as the statement is there couched in the headnote, the principle laid down is that the court will put the plaintiff to his election and stay one of the suits. In the present case, of course, we are confronted with a position in which the plaintiffs in one case are defendants in another, and *McHenry* v. *Lewis* (*sup.*) by itself would not carry nor did Mr. Carpmael contend that it would carry him the whole length of the way that he wants to go.

The next case seems to me to be near this point, so near as to call for mention, *The Peshawur* (5 Asp. Mar. Law Cas. 89; 1883, 48 L. T. Rep. 796; 8 Prob. Div. 32): it is a judgment of Sir Robert Phillimore, in a matter in which two proceedings were afoot. One was an action *in rem*, in this court, and the other was an action in the Vice-Admiralty Court of Ceylon. The subject-matter was a collision between ships. The plaintiffs in one case were the defendants in the other. That case is considerably nearer to the facts which I am now considering and have to consider in this present case. Unfortunately Sir Robert Phillimore, in giving judgment, put the matter entirely upon his discretion and did not throw any light upon the grounds which guided him to his decision; he put it purely as a question of discretion, and exercised his discretion in favour of stopping all the proceedings in this court until after the suit at Colombo had been heard. Mr. Hayward pointed out to me that from a note in the Law Reports one sees that the defendants, the owners of the *Peshawur*, appealed, but before the appeal came on for hearing the action in this court was settled by arrangement between the parties. If this decision stood, and stood in every way unimpugned, I should have difficulty perhaps in distinguishing it. It is conceded that the present case is one for my discretion, but I agree that I should have some difficulty, as a matter of discretion, in saying that the present case was a harder case for the party whose action is here asked to be stayed, than the case of *The Peshawur* (*sup.*); but that case does not stand entirely unimpugned. There is the point that it was under appeal but was never reviewed, and Mr. Hayward also reminds me that so far as he can discover the only case in which it was ever cited, or has been cited as an authority is *The Christiansborg* (5 Asp. Mar. Law Cas. 491; 1885, 53 L. T. Rep. 612; 10 Prob. Div. 141), where it received certainly no great honour and indeed was seriously impeached by the Master of the Rolls. In *The Christiansborg* (*sup.*) Lord Esher in dealing with *The Peshawur* (*sup.*) says this (5 Asp. Mar. Law Cas. at p. 495; 53 L. T. Rep. at p. 616; 10 Prob. Div. at p. 149): " Take the case of *The Peshawur* (*sup.*) which was an action *in personam* against the owner of the ship. It appeared, as stated in the headnote, that a . . . ' cause of damage *in rem* relative to the same collision had prior to the proceedings in this court been instituted by the owners of the *Peshawur* against the *Glenrory* in a Vice-Admiralty Court abroad, and was then pending.' That is all that was shown to the court. Sir R. Phillimore stayed the proceedings here, but he gives no reason for so doing, so that it is a decision contrary to the decision of the Court of Appeal. But it seems that the parties intended to appeal, but settled the dispute before doing so, and I cannot regard this case as any authority." It is true that Lord Esher was giving judgment in the particular case in hand *The Christiansborg* (*sup.*), but, in view of all the circumstances, I do not feel that I can regard *The Peshawur* (*sup.*) as a binding authority. Here we have the owners of the *Granli* saying to this court: " We have taken no step at all towards a proceeding in Scotland, and, in fact, in the only other matter arising out of this collision in which we could manifest our intentions—namely, a salvage action by a Scottish tug—we have appeared here in England and we want that case and this case tried here in England."

I think that, *primâ facie*, parties who come to this court have a right to have a trial in this court, and I think I am not justified in depriving them of this right until a very clear case has been made out against them.

Another case which was cited, and which bears upon the subject, is the case of *The Janera* (17 Asp. Mar. Law Cas. 416; 138 L. T. Rep. 557; (1928) P. 55). Hill, J. there said: " It seems to me quite clear that the court ought not to stay a plaintiff in the courts of this country on the ground that he happens to be a defendant elsewhere." If in that case the second action had been an action either in Scotland or some British Dominion, that dictum of Hill, J. would, of course, be fully

and directly applicable to this case, and I should not have had any of the difficulty that I have had in considering this case. I should very willingly have followed what Hill, J. there lays down. However, the second action in *The Janera* (*sup.*) was an action in Egypt, and, therefore, not in the British Dominions, and I do not think it would be fair to read the learned judge's judgment in that case in the sense for which Mr. Hayward contended, namely, in the widest sense of "elsewhere," as meaning not only in a foreign country, but in any British Dominion. I think it might be unfair to read the sentence in that way. Everyone who knows Hill, J. knows the care with which he used language, and knows the scrupulous care which he devoted to making his judgments appropriate to the case in hand, without travelling unnecessarily outside the matter. At a further stage he said this: "I cannot think that I ought to stay a proceeding properly brought in this country solely because the people who have brought that action are defendants in proceedings in Egypt." I do not think it would be fair to say that Hill, J. had in mind necessarily a case in which the second proceedings had been brought in Scotland. What he would have said upon that matter I cannot speculate upon, and I do not think I can shelter myself under Hill, J.'s judgment and say that he has laid this matter down as law. Nor, indeed, do any of these judgments, of course, conclude this case as a matter of law, where the matter is one of discretion. There may be a variety of small points, pointing one way or another, which would distinguish the cases from one another, and I do not desire that anything that I am saying now shall be in the nature of a binding decision for the future upon other cases to which other considerations may apply, even though the two proceedings are respectively a proceeding in this court and a proceeding in Scotland. It is only because that class of case might easily recur that I thought it might be useful to have the matter argued in open court.

The conclusion therefore at which I arrive is this: that this application fails, and that I shall not exercise my discretion in the way I am asked to stay the action which has been brought by the owners of the *Granli*. The appeal, of course, will fail, with costs.

House of Lords.

Nov. 10 *and* 27, 1930.

(Before Lords BUCKMASTER, DUNEDIN, BLANESBURGH, WARRINGTON and THANKERTON, assisted by Nautical Assessors.)

THE TOVARISCH. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Collision—Sailing vessel—Lights—Green pyrotechnic light shown to a steamship—"Flare-up" light—Whether green pyrotechnic light authorised by the regulations—Regulations for Preventing Collisions at Sea, 1910, *arts.* 1, 12.

Art. 1 *of the Regulations for Preventing Collisions at Sea*, 1910, *provides that no lights which may be mistaken for the prescribed lights shall be exhibited. Art.* 12 *provides that a vessel may, if necessary, in order to attract attention, in addition to the lights which she is by the rules required to carry, show a flare-up light.*

In a collision action,

Held, that art. 12 *did not prohibit the exhibition of a green light. It permitted any light excepting those that were specially referred to. The light, under the rule, was to call attention, and to do no more.*

Held further, on the facts, that the manœuvres of the respondent vessel had not contributed to the collision.

Decision of the Court of Appeal (ante, p. 58; 142 *L. T. Rep.* 372; (1930) *P.* 1) *affirmed.*

APPEAL from the decision of the Court of Appeal (Scrutton, Lawrence and Greer, L.JJ.) (reported 142 L. T. Rep. 372; (1930) P. 1) in an action in respect of a collision between the Russian sailing vessel *Tovarisch* and the plaintiffs' steamship *Alcantara*, which took place in the English Channel on the night of the 24th Feb. 1928, and in consequence of which the *Alcantara* sank with all hands but one survivor.

The collision took place in the following circumstances: When first sighted both side lights of the *Alcantara* were seen by those on board the *Tovarisch*, but subsequently the red light of the *Alcantara* closed, and although the vessels were then in a position to pass each other all clear, starboard to starboard, those on board the *Tovarisch* exhibited on the starboard side of the bridge a green pyrotechnic "flare-up" light. The light was not exhibited in a lantern, or screened, but was of the type which is held in the hand of the person exhibiting it, and shows an all round light. The *Tovarisch*, at the same time that the flare was lighted, commenced to starboard. Upon seeing the green "flare-up" light, the *Alcantara* apparently ported or hard-a-ported, bringing the two vessels into collision.

(*a*) Reported by EDWARD J. M. CHAPLIN Esq., Barrister-at-Law.

The Regulations for Preventing Collisions at Sea, 1910, provide as follows :

Art. 1. The rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other lights which may be mistaken for the prescribed lights shall be exhibited.

Art. 12. Every vessel may, if necessary in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light or use any detonating signal that cannot be mistaken for a distress signal.

The Court of Appeal held, reversing the decision of Hill, J. (*ante*, p. 58), that a green pyrotechnic light, of the type which is held in the hand of the person exhibiting it, displayed upon the starboard side of a sailing vessel, is not a light which can be mistaken for a prescribed light ; that the " flare-up " lights, the use of which is authorised by art. 12, are not limited to white lights but may include a green light ; and that there had been no breach of the regulations.

The owners of the *Alcantara* appealed.

Digby, K.C. and *Cyril Miller* for the appellants.

Dunlop, K.C., *Harold Stranger*, and *Krougliakoff* for the respondents.

The House took time for consideration.

Lord BUCKMASTER.—This is an appeal by the owners of the Italian steamship *Alcantara* against the owners of a ship known as the *Tovarisch*, a training ship used for cadets by the merchant marine of the Soviet Government, asking for damages consequent upon a collision that took place near to Dungeness on the 24th Feb. 1928.

It was a disaster which resulted in grave consequences, for the *Alcantara* was wholly sunk and all her crew but one were lost. The *Tovarisch* was damaged but suffered no loss of life.

The *Tovarisch* is a four-masted sailing ship 284ft. in length, and she was coming down channel on the night in question on a course S. 60 degrees W. at about 6½ knots. The *Alcantara*, a vessel 289ft. in length, was proceeding up channel from Carloforte in Sardinia to Calais with a cargo of 2700 tons of mineral ore, her course was N. 79 E. and she was making about 6½ knots. It is accepted by the learned judge that the *Tovarisch* was carrying the proper regulation lights, but they were not electric lights as were those of the *Alcantara*. None the less there is no evidence whatever to suggest that they were not visible at a sufficient distance to warn the *Alcantara* were those on board keeping a proper look out. It is in fact no longer alleged that those in charge of the *Tovarisch* were negligent in improperly failing to exhibit side lights. The two vessels approached starboard to starboard. The learned judge has held inferentially rather than by direct finding, that the green light of the *Tovarisch* was not seen by those on board the *Alcantara*, and if she did indeed see them, her conduct was certainly extraordinary, for she ported her helm with the result that a collision took place at an angle of about 45 degrees. Upon the evidence it appears to be impossible to hold that the green light of the *Tovarisch* was not visible to the *Alcantara*. The learned judge himself said on the evidence " I find that the green light was burning. The lamp is a good type of lamp and I am unable to find that the green light, in fact, was not being exhibited according to the rules." Did the matter rest there little ground would be afforded even for argument, but a further incident occurred in relation to which the greater part of the controversy arises. The *Tovarisch* as she was drawing near lit a green pyrotechnic flare from the starboard side of the bridge, which was about 72ft. forward of the wheel, its object being, as was said, to show the length of the ship. It is suggested that this light may have obscured the green starboard light, but there was no evidence called to show that this would be its effect, and that it did so is a pure conjecture. But it is further urged that the exhibition of the light was in defiance of the regulation for preventing collisions at sea, and that its result was to make the *Alcantara* think that she must instantly take some action, whereas, in fact, if she had pursued her normal course the collision would have been avoided.

Art. 12 of the regulations is in the following words :

Every vessel may, if necessary in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light or use any detonating signal that cannot be mistaken for a distress signal.

I agree with the judgment of the Court of Appeal in thinking that this does not prohibit the exhibition of a green light. It permits any light excepting those that are specially referred to, and I find myself unable to believe that these regulations intended for the use of men at sea, have to be construed by working backwards and seeing what other regulations have provided on previous occasions. The light, under the rule, was to call attention. It was to do no more and there is no foundation for the argument that it called upon the *Alcantara* to do anything except that which it was their duty to do when they saw a sailing vessel approaching with the lights green to green. Finally, the appellants contend that the manœuvres of the *Tovarisch* contributed to the accident. They did, in fact, first starboard and then port their helm, but the result, according to the finding of the learned judge, did not materially alter her course, and I cannot see that it in any way contributed to the accident. That lamentable event was due to the *Alcantara* attempting to cross the bows of the *Tovarisch*, and for this I cannot find any justification. I have throughout assumed that the *Alcantara* saw the green light of the *Tovarisch* before the flare was shown. I have stated my reasons for that conclusion. I also think that it follows that the *Tovarisch* was

known to be a sailing ship, and these are, to my mind, the two critical and material matters upon which responsibility for this disaster depends. In differing, as I do, from Hill, J., I think it right to say that the difference is due first to the question of the exhibition of the flare and secondly to the question of the visibility of the green starboard light of the *Tovarisch*. The learned judge nowhere holds that it was not in fact displayed or seen, but seems to conclude that the action of the *Alcantara* was so foolish that it can only be referable to the fact that it had not been seen. I fear I cannot go with him to that conclusion. The reasons that may have led to the *Alcantara's* action cannot now be accurately determined, but experience shows that it is not safe to assume that a thing cannot have been done because its commission would be an act of folly.

Lord Dunedin.—I concur. The whole argument of the *Alcantara* depended upon the assumption that the green flare was equivalent to an invitation or even an injunction to the other vessel to change its course. Now that assumption is not based on any of the nautical rules which have become embedded in positive law, nor, according to the advice given to us by our assessors, is it founded on any well-recognised practice of seamanship.

Lord Warrington.—I have had the opportunity of reading and considering the opinion of the noble Lord on the Woolsack and concur in it.

Lord Buckmaster.—Lord Blanesburgh desires me to say that he concurs.

Lord Thankerton.—I concur.

Appeal dismissed.

Nov. 4 *and Dec.* 9, 1930.

(Before Lords Dunedin, Blanesburgh, Warrington, Tomlin and Macmillan).

The Croxteth Hall; The Celtic. (*a*)

on appeal from the court of appeal in england.

Seamen's wages—Wreck—Right to receive wages during period of two months from the date of the wreck if unemployed—Voyage terminating within the period of two months—Payment of wages whilst unemployed during period subsequent to date when voyage was due to end — Merchant Shipping (International Labour Conventions) Act 1925 (15 *&* 16 *Geo.* 5, *c.* 42).

By the Merchant Shipping (International Labour Conventions) Act 1925, *s.* 1, *sub-s.* (1), *it is provided that "where by reason of the wreck or loss of a ship on which a seaman is employed his service terminates before the date contemplated in the agreement, he shall, notwithstanding anything in section one hundred and fifty-eight of the Merchant Shipping Act,* 1894, *but subject to the provisions of this section, be entitled, in respect of each day on which he is in fact unemployed during a period of two months from the date of the termination of the service, to receive wages at the rate to which he was entitled at that date." And by sub-sect.* (2) *it is further provided that "a seaman shall not be entitled to receive wages under this section if the owner shows that the unemployment was not due to the wreck or loss of the ship and shall not be entitled to receive wages under this section in respect of any day if the owner shows that the seaman was able to obtain suitable employment on that day."*

Held (Lord Blanesburgh dissenting), that under sub-sect. (1) *a seaman whose service by reason of the wreck or loss of his ship terminated before the date contemplated in the agreement of service could claim wages during two months from such termination for each day on which he was in fact unemployed and the effect of the qualification to be found in sub-sect.* (2) *was to enable the shipowner to prove certain things which if proved would disentitle the seaman to all or some part of that which otherwise he would have taken under sub-sect.* (1). *In no part of the section was anything to be found which introduced a cutting down of the two months' period by reference to the date at which but for the wreck or loss the service would have been terminated. Upon this view of the matter the respondents, who had proved that they were out of employment during the two months, were entitled to two months' wages from the date of the wreck or loss of the ship.*

Decision of the Court of Appeal (ante, *p.* 121; 143 *L. T. Rep.* 316; (1930) *P.* 179) *affirmed.*

Appeal from the decision of the Court of Appeal (Scrutton, Greer and Slesser, L.JJ.) in two wages actions (reported *ante*, p. 121; 143 L. T. Rep. 316; (1930) P. 197), which had been referred to the Admiralty Division under sect. 165 of the Merchant Shipping Act 1894.

The plaintiff in the first action signed articles as an able-bodied seaman and quarter-master on board the defendants' steamship *Croxteth Hall* for a voyage not exceeding two years' duration from the 29th Oct. 1928, terminating at such port in the United Kingdom or Continent of Europe within home trade limits as might be required by the master. The *Croxteth Hall* was wrecked near Flushing on the 27th Feb. 1929. and the plaintiff was returned to Liverpool on the 4th March 1929 at the defendants' expense and paid his wages up to the 4th March 1929. Had the *Croxteth Hall* not been wrecked she would have completed the voyage in respect of which the plaintiff had engaged at Middlesbrough on the 11th March 1929. The plaintiff

(*a*) Reported by Edward J. M. Chaplin, Esq., Barrister-at-Law.

was unemployed for a period of two months from the 27th Feb. 1929. He claimed wages at the rate provided for by the articles and subsistence allowance at the rate of 4*s.* per day. In the second action the plaintiff was an able-bodied seaman on board the defendants' steamship *Celtic.* The voyage described in the articles under which the plaintiff served was from Liverpool to New York, via Queenstown, Boston, and (or) if required to any ports within the North and South Atlantic Oceans, trading as might be required until the ship returned to a final port of discharge in the United Kingdom. On the 10th Dec. 1928 the *Celtic* was wrecked near Queenstown whilst homeward bound for Liverpool, which would have been her final port. Had the *Celtic* not been wrecked she would have reached Liverpool on the 11th Dec. 1928. The plaintiff, with the other members of the crew, was brought to Liverpool by the owners on the 13th Dec. 1928 and was paid his wages under the articles up to and including the 11th Dec. From the 11th Dec. the plaintiff, who was one of the regular crew of the *Celtic*, was unemployed. The plaintiff claimed wages for a period of two months from the 11th Dec. and subsistence allowance at the rate of 4*s.* per day.

The Court of Appeal affirmed the decision of Lord Merrivale, P. and held (Slesser, L.J. dissenting) that a seaman was entitled to wages for a period of two months from the date when his services terminated by reason of the wreck, notwithstanding that the voyage to which his agreement related would have come to an end but for the wreck within the period of two months.

The defendants appealed.

Sir *Leslie Scott*, K.C., *Dunlop*, K.C., and *A. J. Hodgson* for the appellants.

Lynskey, K.C. and *Fraser Harrison* for the respondents.

The House took time for consideration.

Lord Dunedin.—The facts in the first appeal, so far as material, are capable of being stated with the utmost brevity.

The ship *Croxteth Hall*, on board of which the respondent Murray was a seaman, was wrecked and lost on the 27th Feb. 1929. At that time she was homeward bound, and, if nothing untoward had happened, the crew would have been paid off at Middlesbrough on the 11th March 1929. The crew were brought home to Liverpool, and on the 4th March the respondent was paid off. The respondent claimed wages for two months from the 27th Feb. He was, in fact, unemployed for that period, and, though he had tried, he had not been able to secure employment. The appellants expressed their willingness to pay, and did pay, the wages up to the 11th March, the date on which the payment for the voyage would have taken place if it had been terminated in due course, but they refused to pay any more.

The respondent started proceedings to recover the two months' wages, so far as unpaid, in a court of summary jurisdiction in Liverpool. The case was referred to the Probate, Divorce, and Admiralty Division of the High Court, under the provisions of sect. 165 (iii.) of the Merchant Shipping Act 1894. Lord Merrivale, the President of that court, gave judgment in favour of the present respondent. Appeal was taken to the Court of Appeal, who, by a majority, Slesser, L.J. dissenting, confirmed the judgment. There had been, in fact, certain other points mooted before Lord Merrivale, but they have disappeared from the case and need not be mentioned. From that judgment there is the present appeal.

At common law, if a ship was lost on a voyage, a seaman who, although through no fault of his own, could not, in fact, perform his share of the contract of service could recover nothing. This was altered by sect. 158 of the Merchant Shipping Act 1894, which gave wages up to the time of the wreck that terminated the service. Then comes the statute on the interpretation of which the matter turns. It is the Merchant Shipping (International Labour Conventions) Act 1925, and sect. 1, the relevant section, is as follows:

(1) Where by reason of the wreck or loss of a ship on which a seaman is employed his service terminates before the date contemplated in the agreement, he shall, notwithstanding anything in section one hundred and fifty-eight of the Merchant Shipping Act 1894, but subject to the provisions of this section, be entitled, in respect of each day on which he is in fact unemployed during a period of two months from the date of the termination of the service, to receive wages at the rate to which he was entitled at that date.

(2) A seaman shall not be entitled to receive wages under this section if the owner shows that the unemployment was not due to the wreck or loss of the ship and shall not be entitled to receive wages under this section in respect of any day if the owner shows that the seaman was able to obtain suitable employment on that day.

(3) In this section the expression "seaman" includes every person employed or engaged in any capacity on board any ship, but, in the case of a ship which is a fishing-boat, does not include any person who is entitled to be remunerated only by a share in the profits or the gross earnings of the working of the boat.

I confess that I have had considerable difficulty in coming to a conclusion in this matter, but in the end I have come to think that the judgment of the Appeal Court is right. It is necessary to say that in the inquiry held before Lord Merrivale it was shown that it was the custom for men who had been on this ship to be allowed to sign on for the next voyage. In other words, if nothing untoward had happened, it would have been more likely than not that the respondent would at once have been taken on for the next voyage, and so would not have remained in unemployment. The appellants were very anxious to point out that the convention, to give effect to which the Act was passed, uses the word "indemnity," and the only proper indemnity that could therefore be given was the wages, so far as they could be due under contract, which contract

was frustrated by the wreck. I do not think there is anything in this argument, and for this reason. If "indemnity" is used in a loose sense, what is given by this Act is an indemnity whichever of the two views be taken, but if it is used in a strict sense—and unless it is so used it is of no use to the appellants—then it is very significant that although the framers of the Act are well aware of the word, for they refer to it in the preamble, when they come to the operative section they do not use it. I think, therefore, we must take the Act as it stands.

Now, I do not think that there is any doubt whatever as to the meaning, for I find no ambiguity, in sub-sect. (1) of sect. 1. There must be a wreck which terminates the service, which service is spoken of as being under an agreement; and, if so, it is obviously possible that the agreement provides for a definite termination. If that is so, then there must be in fact unemployment for two months, and, if all these facts concur, then the seaman is entitled to two months of his old wages running from the termination of the service, that is, the wreck. That is all expressed quite absolutely, and the question would be at an end were it not for the words "subject to the provisions of this section." That indicates that there is something else to come. That something else comes in sub-sect. (2), but here the onus, so to speak, is shifted. The seaman must show the various things that I have enumerated to bring him under sub-sect. (1). If he does that, his portion is accomplished. Then the shipowner, to get out of that position, must show what is demanded in sub-sect. (2): "if the owner shows. . . ." It has been found as a fact in this case that the owners cannot show that the seaman was able to obtain employment on any day within the two months.

The sole question, therefore, left is: Can the owners show that the unemployment was in fact not due to the loss of the ship? I do not think they can. The onus is on them. It is not for the seaman to show that he would have been employed. It is for the owners to show that he would not have been employed, and, on the face of the evidence as to what would have happened if the ship had still been in being, I do not think that the owners can do so.

But, as Scrutton, L.J. says, each case must depend on its own facts. On the facts in this case, I think that the respondent has clearly brought himself within sub-sect. (1), and the appellants have not discharged the burden imposed upon them in sub-sect. (2) to take the respondent out of the operation of sub-sect. (1).

I move, therefore, that the appeal be dismissed.

The second appeal is governed by the first.

My Lord Warrington authorises me to state that he concurs in the opinion I have delivered.

Lord Blanesburgh.—By sect. 7 of the Merchant Shipping (International Labour Conventions) Act 1925 it is directed that the Act is to be construed as one with the Merchant Shipping Acts 1894 to 1923. The Act—I will now refer to it as the Act of 1925—thus becomes a constituent part of a statutory code with special meanings attached to some of its terms by definition and to others by accepted usage or judicial decision. The result of course is that a meaning may necessarily be attributable to its provisions very different from that which would attach to the same words in an independent enactment.

And the incorporation of the Act in the code with that result supervening is of its very essence. It is passed, as its preamble states, to give effect (*inter alia*) to the convention set forth in its first schedule; and, as a reference to sect. 1 immediately shows, the method adopted to achieve that purpose is not, as it might have been, to transfer the international language of the convention to the body of the Act *simpliciter*, but it is to translate that language into the phraseology of the Merchant Shipping Acts and to give statutory effect to the convention in that form of words, for better or for worse.

Sect. 1 in the result is a pregnant section. It does not carry its full meaning upon its face. It is only by reference to the provisions of what I may call the code that its real effect can be ascertained, and most particularly is this true of the term "wages," the fundamental word of the section, three times repeated, almost insistently, and always without periphrasis or qualification. What does that word connote in the language of the code? Can it have attributed to it in its setting or at all the meaning which must be placed upon it if the respondents' claims, sustained by the Court of Appeal, are to succeed, or is its necessary interpretation such as to exclude those claims altogether?

And following an investigation of the provisions of the code, I have reached the conclusion that, whatever may be the meaning of the word in a dictionary sense, or even in a section of an isolated Act of Parliament, "wages," in a Merchant Shipping Act, has a perfectly definite signification which is quite inappropriate to quantify the respondents' present claims. It is, be it at once noted, neither compensation nor an indemnity nor a gratuity that the seaman is to receive under the section. He is to have "wages" and nothing else. The use of the word, I have satisfied myself, is deliberate. It is full of meaning as a code word. When that meaning is ascertained the first paragraph of the section, which on its face, as I quite agree, is unqualified, becomes at once restricted, inasmuch as it is now disclosed that there can be no "wages" properly so called receivable by a "seaman" properly so called beyond those provided for in his agreement with the owner current at the date of the wreck of his vessel and referred to in the section.

That conclusion, if it be right, enables me to place upon this section of the Act of 1925 a construction which appears to be at once consonant with the declared purpose of the Legislature, not inconsistent with sound sense, and in entire accord with the convention. Accordingly, I crave your Lordships' indulgence if I endeavour to justify it as concisely as I can, but nevertheless at greater length than I care for. I do so because I see in this case a problem of first importance both to the seamen and to the owners of lost ships, and it is fitting that it should be ventilated in your Lordships' House from every point of view.

In the sections of the code relating to seamen no provisions are so elaborate as those dealing with their "wages." The expression "seamen's wages," in their essential characteristics has been for generations a term of art in maritime law. Possibly for this reason the expression is not, in the code, made the subject of full definition, "wages" being there defined only to the extent of saying that the term includes "emoluments" (Merchant Shipping Act 1894, s. 742). And incidentally I may observe as illustrating by an early example the precision of meaning held to be attached to the word throughout the code, that even the addition to "wages" of "emoluments" does not bring "maintenance" within their ambit: (*Palace Shipping Company* v. *Caine and others*, 10 Asp. Mar. Law Cas. 529; 97 L. T. Rep. 587, at p. 589; (1907) A. C. 386, at p. 393). And the content of "the term 'wages' as used in the Act," to adopt Lord Macnaghten's phrase in the case cited, is, in all essentials, not to be mistaken. To a seaman's wages, invariably so called, there are annexed in the code privileges, incidents, restrictions, safeguards, elsewhere unknown to the law, and not even made incident to any advantage from his service accruing to a seaman under some other description.

A seaman's wages, for example, whether due or accruing, are not subject to attachment or arrestment; an assignment of them prior to accruer is not binding on the seaman; a power of attorney or authority to receive them is not irrevocable; payment of wages to a seaman is valid in law notwithstanding any previous sale or assignment, attachment, incumbrance or arrestment of the same wages (Merchant Shipping Act 1894, s. 163). Before 1906 a seaman might not insure his wages, even if earned: (see now the Marine Insurance Act 1906, s. 11).

On the other hand a seaman had and has in respect of wages two privileges the enjoyment of which furnishes, as will be seen later, a valuable clue to the true construction of the Act of 1925. He has for his wages, but for them only, a maritime lien upon his ship and he may also recover any wages due to him in a court of summary jurisdiction which, incidentally, may be situate in or near the place "at which his service has terminated" (Merchant Shipping Act 1894, s. 164)—words strongly indicative that there will be no "wages" coming to him after that date.

But what are the essential qualities of the "wages" to which these incidents—privileges and restrictions alike—are attached? These are, as I have already indicated, unmistakable. Beginning with the Merchant Shipping Act 1853, when the old doctrine that freight was the mother of wages was finally superseded (see now the Merchant Shipping Act 1894, s. 157), the word "wages" as used in Merchant Shipping Acts is in full consonance with Lord Stowell's well-known description of them in *The Neptune* (1 Hagg. Adm. 227)—a description peculiarly apposite in the present case. "The natural and legal parents of wages," Lord Stowell says there, at p. 232, "are the mariner's contract, and the performance of the service covenanted therein; they in fact generate the title to wages."

This description is now embodied and amplified in sects. 113 and 114 of the Merchant Shipping Act 1894. The seamen's wages are a principal subject-matter of the written agreement with the crew thereby made compulsory. That agreement, to which the old description of ship's articles still clings, must be in a form approved by the Board of Trade, and it must contain among its provisions: (*a*) particulars of the nature and duration of the voyage; and (*e*) "the amount of wages which each seaman is to receive"—the two cardinal points in the ship's articles on which, as Mr. Maclachlan observes (5th edit., p. 225), Lord Stowell was occasionally obliged to interpose for the protection of the seaman against the fraudulent devices of dishonesty—a task now entrusted to the Board of Trade.

And the seaman is entitled as "wages" to no sum which is not, as such, entered in that agreement. "Under sects. 113 and 114 of the Merchant Shipping Act 1894," said Coleridge, J., in *Thompson* v. *H. and W. Nelson Limited* (12 Asp. Mar. Law Cas. 351; 108 L. T. Rep. 847; (1913) 2 K. B. 523), paraphrasing earlier cases to the same effect, "a seaman can only recover as wages the amount specified in the articles."

Further, it is with reference to these wages alone, as has been already indicated, that in its application to seamen the word is used throughout the code. "Maintenance," as we have seen, is not "wages." The "double pay" for which the owner may be liable under the Merchant Shipping Act 1894, s. 135, is not "wages"; the compensation, "not exceeding one month's wages," recoverable under the Merchant Shipping Act 1894, s. 162, is not "wages"; nor is the compensation in like circumstances recoverable by a seaman who has signed a fishing-boat's agreement: (Merchant Shipping Act 1894, s. 411).

It should, however, be added that while the service covenanted in the articles, to repeat Lord Stowell's words, still remains one of their parents, "wages" in the statutory sense may nevertheless be payable to a seaman who has not rendered service in respect of them, *e.g.*, where he has been disabled by accident during the voyage: *Chandler* v. *Grieves* (2 H. Bl. 606*n*.).

But not for any time beyond the stipulated voyage, *ibid.* Accordingly, if the Act of 1925 be so limited in its operation, it has made no new departure in the use of the term. But not otherwise.

Now what are the *soi-disant* "wages" which each respondent is asking for in this case? They represent a sum claimed from the owners of a ship that has been lost, with whom the respondent has no agreement for its payment, in return for no service to be rendered by himself, with no voyage in contemplation, and no ship to undertake one. It is only as "seamen," of course, that the respondents are under the Act entitled to receive anything. But in relation to these claims the respondents are not even such. "A seaman" (Merchant Shipping Act 1894, s. 742) is a "person . . . employed or engaged . . . on board any ship."

Is it not, therefore, now plain—I suggest to your Lordships it has become so—that to assert with regard to such a claim, as the respondents must, that it is a claim to receive "wages" as a "seaman," is a statutory contradiction in terms?

And this examination of the code instructs a statement of the rival views of the Act of 1925 which may at this point be helpful. The appellants' view is that subject to the provisions of sect. 1, a seaman is entitled, during unemployment, to receive his "wages" for a period of two months after the wreck of his ship if his service contemplated by the articles would but for the wreck so long have continued; the respondents' view is that the seaman is so entitled to receive his "wages" whether these are in any sense covered by the articles, even, indeed, if they are altogether outside the articles or other agreement with the owners.

More briefly expressed, the maximum period over which wages may under the section be received is two months from the date of the wreck if, in the appellants' view, there are for so long under the articles wages to be paid—whether, in the respondents' view, there are wages so to be paid or not.

Now, in contrasting these rival views of this section the appellants have, I suggest, one initial advantage. They reach their conclusion without the addition to the section of any words not already there. Their construction would, of course, have been clear to demonstration if the section had run "in respect of each day of the contemplated term of service." But, if the draftsman is using the word "wages" in what I may call the sense of the code, he is entitled to have it said that words to the effect of the inserted words are already implicit in "wages" and that to repeat them would strictly be redundant, if not tautologous. And this draftsman is assuredly a man of few words.

The respondents are, in this matter, less fortunate. If wages are used in the sense of the code, then words of extension, or words making "wages" merely referential are, as it seems to me, essential, if the section is to be expanded to cover their demand. For instance, if a claim like theirs had ever been in contemplation at all, the precedent set by another section of the code—the Merchant Shipping Act 1894, s. 162—almost in *pari materia* and already referred to, would surely have been followed, and the seaman declared entitled to receive not "wages" but "compensation," or, if you prefer it, "an indemnity" or "a gratuity" "at the rate of the wages to which he was entitled at that date." By the addition of some such descriptive word, with the term "wages" merely referential, the respondents' construction of the section would have been established. But none of these descriptive words are to be found, nor is anything said from which their presence may be implied. On the contrary, the other provisions of, and the omissions from, as well as the form of, the section are, I think, eloquent to show that no such implication was ever intended—in other words, that the respondents' present claim is intended to be and is in fact outside the section altogether.

I will first refer to an omission from the section in justification of this statement. The scheduled convention, to which it is the avowed purpose of the Act of 1925 to give effect, provides in art. 3 that seamen are to have the same remedies for recovering their "indemnities" as they have for recovering arrears of wages earned during service. The remedies there pointed at are, so far as British seamen are concerned, those provided for in the Merchant Shipping Act 1894, s. 164, already summarised. Now there is no reference at all in the Act of 1925 to any such remedies. It is quite unnecessary, of course, that there should have been, if it is only code "wages" which are under the Act being made recoverable. But if, as the respondents contend, the word "wages" extends to something which is not code wages at all—*e.g.*, compensation, indemnity, gratuity—then the Act fails altogether to give effect to the Convention in this respect. It was suggested on behalf of the respondents, faced with this difficulty, that it was got over by the fact that the receipts under the Act are there described as "wages," a description of itself sufficient to attract to them all the code procedure relating to the recovery of wages properly so described. But here once again the respondent is called upon to recognise that the Act of 1925 is itself part of a code. And that code does not provide for such a case in that way. Sect. 1, if such were its effect, would be in this code quite *sui generis*. Where it is desired that something which is not "wages" shall be recoverable as such. the code says so in express terms. I refer as typical examples—the list might be greatly extended—to sect. 135, sub-sect. (3), and sect. 411 of the Merchant Shipping Act 1894 and to sect. 42, sub-sect. (2), of the Merchant Shipping Act 1906. This omission from the statute, not, as I think, to be explained if the respondents' view of the enactment be correct, is, I cannot doubt, strongly confirmatory of

the appellants' contention as to the true meaning of sect. 1.

But the provision of the section to which I now proceed is even more illuminating in this same direction. The Act of 1925, by sect. 1, becomes operative only if by reason of the wreck of the ship on which he was employed a seaman's service " terminates before the date contemplated in the agreement." The significance of these last words will not be lost when it is noted that, in point of effect, they are identical with and have been taken from sect. 158 of the Act of 1894, itself referred to in sect. 1. Indeed, if the two sections are laid side by side it is at once seen that they are completely complementary each to the other. A vessel is wrecked in the course of a voyage. Her seamen's wages under the articles prior to the wreck are dealt with in sect. 158; these wages, or some of them, subsequent to the wreck in sect. 1. But nothing except these wages is being dealt with in either section. True it is that in relation to " wages " one great extension, in point of principle, is made in 1925, beyond the stage reached in 1894—an extension which is never to be forgotten in this case, if the exceptional character, even of the admitted burden now laid upon owners, is to be fully appreciated. The wages for which, under sect. 158, the owner is made liable are in respect of services which, albeit fruitlessly, had at least been rendered to him by the seaman. Under sect. 1 of the Act of 1925 the owner is being made to pay " wages " although no service whatever need in return either be rendered or tendered to him by the seaman receiving them. Apart from this distinction, which certainly does not instruct judicially the extension of the owner's liability beyond express definition or clear implication, the correspondence of the two sections seems complete. The event is the same; the agreement in relation to any one seaman is the same; the " wages " in the Merchant Shipping Act 1894, s. 158, are indubitably " code wages," and if it remains in any way doubtful whether the " wages " in sect. 1 of the Act of 1925 are other than the same " wages " which but for the wreck would have been payable under the same agreement—the limitation established, as I suggest *aliter*—note how that doubt is weakened if not, indeed, resolved by the fact that to make either section operative the wreck of the vessel must have taken place before the termination of the seaman's contemplated service, and not later. To sect. 158 that condition was of course essential, for the reason that had it been omitted the whole section would have been otiose and superfluous. But the condition is transferred almost textually to sect. 1 of the Act of 1925, and for no other imputable reason, as I suggest, than that its presence in that section, on its only true construction, was essential if the section was to be in no circumstances inoperative. There must be at least one day's " wages " to be received under it if the section is to be of any use at all to the seaman.

But, on the other hand, if the " wages " to be receivable under this Act of 1925 have in point of duration no relation to the provisions of the current articles it is, I suggest, difficult to understand why a person whose remuneration now is based upon the profits of the voyage should be excluded from the benefit of the Act, sect. 1, sub-sect. (3), while it is inconceivable that the above condition could have been deliberately transferred over from sect. 158. In relation to such an enactment as is now hypothesized the condition is alike arbitrary and senseless. This is well illustrated by the case of the *Celtic*, the subject of the second appeal. The *Celtic* foundered off Queenstown on the 10th Dec. 1928, her voyage being contemplated to end at Liverpool on the next day, the 11th Dec. The respondent to that appeal, Comerford, has, by the Court of Appeal which accepted his contention, been awarded two months' wages from the earlier date. If, however, his vessel, instead of foundering off Queenstown on the 10th, had foundered off Liverpool on the 11th Dec., all benefit to Comerford must, under the section, have been refused, and yet one can descry no alteration of circumstance which could rationally instruct so amazing a change.

It almost seems that Scrutton, L.J. was conscious of this anomaly. He felt himself dispensed from facing it, however, by an assertion which, with the profoundest respect for the Lord Justice, I am quite unable to follow. " It is obvious," he says, " that the wreck or loss of a ship on which a seaman is serving will always happen before the date contemplated for the termination of his service." Why is it obvious? I would ask. Is that the reason why the same condition was inserted in the Merchant shipping Act 1894, s. 158? In a statute which applies to any voyage without reference to circumstance is there any greater likelihood that a ship will be lost on any one day of the voyage rather than on any other day? In the case even of the *Celtic* might not her foundering have *a priori* just as well happened off Liverpool on the 11th as off Queenstown on the 10th Dec. 1928?

I regret that the Lord Justice for a reason which seems to be no reason, felt dispensed from dealing with this matter. I should have been helped by his views upon it. All I can say, for want of any answer so far made, is that I see in this condition, and in the close correspondence both as to subject-matter and otherwise between sect. 158 of the Act of 1894 and sect. 1 of the Act of 1925, the strongest further indication that this Act of 1925 has no reference at all to such a claim as the respondents'.

I find also in the second paragraph of the section indications pointing to the same conclusion. Note, on this view of the section, how neatly it fits into the scheme: how appropriate for the decision of a court of summary jurisdiction is the only question that can now arise before it. On proof by a seaman that his vessel was lost on the voyage, on production

of the articles, and on further proof that he was in fact unemployed upon days included in the articles and within two months from the wreck, his case is established and he is entitled to judgment unless the owner can disprove his case by proof of such things personal to the seaman as Scrutton, L.J. refers to, or by proof, to borrow the language of unemployment insurance, that he has not been genuinely seeking work. There is no room or occasion for proof of any special circumstance in relation to the ship, *e.g.*, that if she had not been lost she would have been laid up or sold to another owner or otherwise disposed of, or in relation to the seaman himself that he would have been or would not have been again engaged, at the same or a lower wage, in the same or in another position. It is to my mind not without significance that in the section there is neither directly nor indirectly any reference to these vague and indefinite considerations which, if the respondents' view of it is right, are vital to every such claim as they now make.

But I do not further expand these considerations in a judgment already too along. I leave my analysis of the section at the point that I have reached, content, so far as I am concerned, with the results attained.

Three things only will I add. First, as I read Slesser, L.J.'s judgment, he arrives at the same conclusion as I have done by reliance primarily on the second paragraph of the section. I desire to say that for myself I doubt if I could have reached the same conclusion had I not been able to find the basic justification for it in the first paragraph, and I should also have distrusted its correctness, had it involved the placing of any qualification upon the words in the first paragraph "in respect of each day on which he is in fact unemployed." These words appear to me to be quite unambiguous, and they must, I think, in any true interpretation of the section have their ordinary meaning assigned to them.

Next, having reached the above conclusion without reference to the scheduled Convention to which it is the purpose of the Act of 1925 to give effect, I would now inquire, merely as a matter of interest, whether the conclusion is or is not in accord with the Convention. I cannot doubt that it is in complete accord therewith. The difficulty in comparing the Convention with the Act consists in the fact, already alluded to, that the draftsman has not transferred to the Act the words of the Convention, but he has translated them into the technical language of the Merchant Shipping Acts. And, if the Act be interpreted as I have sought to interpret it, his translation is to my mind in this matter entirely accurate. It seems to me clear that the "two months' wages" to which by art. 2 the "indemnity . . . may be limited" are not two months taken out of the life of the seaman, but two months taken out of the "contract for service," where the unexpired term of that contract exceeds two months. I do not find any suggestion in the Convention that the owner is to be made liable either at the contract rate of wages or at any other rate for days of unemployment covered by no contract at all with himself.

If, therefore, the respondents' construction of the Act is to be accepted it means that Parliament under no international obligation in that behalf, in a statute which contains no hint of any such intention, has gratuitously gone out of its way to impose on an owner a liability to a seaman for wages for which he has never contracted and, apart from the statute, is under no conceivable liability to pay. He is to have no return for the payments so to be made, and Parliament has chosen as the occasion for imposing upon him this liability, in relief it would seem, if the respondent *Comerford's* case may be regarded as typical, of the Unemployment Insurance Fund to which he has already contributed, at the moment when the owner is already confronted with the total loss of his ship.

Parliament can, of course, do anything, and I hope that judicially I shall never be other than obedient to its directions, whatever, when they are clearly expressed, these directions may be. But I should, as I conceive, be rendering a disservice to Parliament if without compelling words I were to impute to it an enactment which as sought to be interpreted by the respondents is as entirely discordant with legislative precedent as, in my judgment, it is opposed to good sense and fairness.

I do not suggest that this Act of 1925 is clear, I do not suggest that sect. 1 bears its meaning, as I have interpreted it, upon its sleeve. It yields up its secret only to the patient inquirer; its truth lies at the bottom of the well. It is obscure; it remains oblique, but it is not in the result ambiguous. The truth from the well is found, at the end of the search for it, to have been leaking out of the section itself all the time, just as the truth, in the words of a learned judge whom we all have in remembrance, may leak out sometimes even from an affidavit.

If the decision rested with me I would allow both appeals.

Lord Tomlin (read by Lord Thankerton).—The only question on these appeals is as to the construction of the Merchant Shipping (International Labour Conventions) Act 1925, which I shall refer to as the Act of 1925.

At common law where a ship was lost on a voyage the seamen could recover nothing.

By sect. 158 of the Merchant Shipping Act 1894 it was enacted as follows:

> Where the service of a seaman terminates before the date contemplated in the agreement, by reason of the wreck or loss of the ship, or of his being left on shore at any place abroad under a certificate granted as provided by this Act of his unfitness or inability to proceed on the voyage, he shall be entitled to wages up to the time of such termination, but not for any longer period.

On the 9th July 1920 the general conference of the International Labour Organisation of

the League of Nations adopted a draft Convention concerning unemployment indemnity for seamen in case of loss or foundering of their ship.

Art. 2 of the draft Convention was in the following terms :

In every case of loss or foundering of any vessel the owner or person with whom the seaman has contracted for service on board the vessel shall pay to each seaman employed thereon an indemnity against unemployment resulting from such loss or foundering.

This indemnity shall be paid for the days during which the seaman remains in fact unemployed at the same rate as the wages payable under the contract, but the total indemnity payable under this Convention to any one seaman may be limited to two months' wages.

The Act of 1925 is intituled "An Act to give effect to certain draft Conventions adopted by the International Labour Conference relating respectively to an unemployment indemnity for seamen in the case of loss or foundering of their ship" and other matters.

The preamble of the Act of 1925 recites the adoption of the Conventions referred to in the title and that such Conventions contain the provisions set out in the First Schedule to the Act. Art. 2 of the Convention of the 9th July 1920 is included in the First Schedule.

The preamble further recites that it is expedient that for the purpose of giving effect to the draft Conventions such provision should be made as is contained in the Act.

Sect. 1 of the Act of 1925 then enacts as follows :

(1) Where by reason of the wreck or loss of a ship on which a seaman is employed his service terminates before the date contemplated in the agreement, he shall, notwithstanding anything in section one hundred and fifty-eight of the Merchant Shipping Act 1894, but subject to the provisions of this section, be entitled, in respect of each day on which he is in fact unemployed during a period of two months from the date of the termination of the service to receive wages at the rate to which he was entitled at that date.

(2) A seaman shall not be entitled to receive wages under this section if the owner shows that the unemployment was not due to the wreck or loss of the ship and shall not be entited to receive wages under this section in respect of any day if the owner shows that the seaman was able to obtain suitable employment on that day. . . .

On the 29th Oct. 1928 the respondent in the first appeal was engaged by the appellants to serve on board the steamship *Croxteth Hall* as a quarter-master and able-bodied seaman at a wage of 9*l.* 10*s.* per month.

The articles under which the respondent was engaged were for a voyage of not exceeding two years' duration to any ports or places within the limits of 75 deg. north latitude and 60 deg. south latitude commencing and proceeding as mentioned in the articles and to end at such port in the United Kingdom or Continent of Europe (within home trade limits) as might be required by the master.

On the 27th Feb. 1929, before the date contemplated in the articles for the end of the voyage and while proceeding homewards on her voyage from Antwerp to Middlesbrough the ship was wrecked off Flushing.

Had the ship proceeded on her voyage without accident she would have reached Middlesbrough not later than the 11th March 1929. There the voyage would have ended and the crew would have been discharged from further service under the articles.

After the wreck the respondent was out of employment.

As the result of the judgments of the President and of the Court of Appeal (Slesser, L.J. dissenting) the appellants have been ordered to pay two months' wages from the date of the wreck and to satisfy the judgment by paying to the Ministry of Labour the amount which the respondent received in respect of unemployment pay from the Labour Exchange and by paying the balance, if any, to the respondent.

The appellants contend that upon the true construction of the Act of 1925 the statutory right of the seaman to recover wages is not a right to two months' wages, but only a right to wages till the time when the voyage would have terminated if there had been no wreck, but not in any event more than two months' wages.

To my mind sect. 1 of the Act of 1925, upon which the question depends, is free from ambiguity.

Under sub-sect. (1), disregarding for the moment the words "subject to the provisions of this section," I think that a seaman whose service by reason of the wreck or loss of his ship terminates before the date contemplated in the agreement of service can claim wages during two months from such termination for each day on which he was in fact unemployed. But there is a qualification introduced by the words "subject to the provisions of this section." That qualification is to be found in sub-sect. (2), and the effect of the sub-section in question is, in my opinion, to enable the shipowner to prove certain things which if proved will disentitle the seaman to all or some part of that which otherwise he would have taken under sub-sect. (1).

I cannot find in any part of the section anything which introduces a cutting down of the two months' period by reference to the date at which but for the wreck or loss the service would have terminated.

Nor do I think, assuming there is any divergence between the draft Convention and the Act, that it would be proper to resort to the draft Convention for the purpose of giving to the section a meaning other than that which in my judgment is its natural meaning. Upon this view of the matter I think that *primâ facie* the respondent, who has proved that he was out of employment during the two months, was entitled to two months' wages from the wreck. Further, the appellants have not upon the evidence discharged the onus thrown on them by sub-sect. (2), and the respondent's *primâ facie* right has therefore not been displaced.

The facts in the second appeal do not in any respect material to the matters which have been argued before your Lordships' House differ from those in the first appeal.

In my opinion both appeals fail, and should be dismissed.

Lord Macmillan (read by Lord Thankerton).—I am unable to find in sect. 1 of the Merchant Shipping (International Labour Conventions) Act 1925 the ambiguity which is said to lurk in it although counsel for the appellants sought diligently to persuade the House of its existence. It was suggested that it resided in the words " in fact unemployed " in sub-sect. (1), which were said to be susceptible of meaning either " out of work generally " or " not employed under the aforesaid agreement of service," and it was argued that the use of the word " wages " to describe the payment to the seaman supported the latter reading because the payment of wages connotes the existence of a contract of employment. In my view the words in question do not give rise to any such ambiguity. The uncompromising expression " in fact unemployed " seems to me to make it as precise as language can make it, that the statute requires no more of the seaman than that he shall have been actually out of work on each day of the two months for which he claims.

It is no doubt true that where the language used by the Legislature presents a choice of two or more meanings equally tenable it is admissible within certain limits to have resort to the aid of extraneous considerations and certainly to the context of the statute itself in order to discover which meaning was most probably intended: (see for example *Victoria City* v. *Vancouver Island, Bishop*, 1921, 2 A. C. 384), per Lord Atkinson, at pp. 387–8 and authorities there cited). But the terms of the statute in the present case offer no such choice to my mind, and only a sophisticated reading could import any ambiguity into them.

The object of representing the sub-section to be ambiguous, as your Lordships were frankly told, was to pray in aid of its interpretation the language of the preamble and of the scheduled Convention, to give effect to which the statute bears to have been enacted. But if it were legitimate or necessary to go outside the terms of the subsection and resort to these aids I do not think that they assist the appellants' case. For the word " indemnity," which both in the preamble and in the Convention is used to describe the payment to the seaman and which was specially relied on by the appellants, is certainly not applicable in its technical sense to the benefit which sub-section (1) confers on the shipwrecked mariner. If he has signed on for a six months' voyage and the vessel is wrecked at the end of the first month he will not receive five months' wages but a maximum of two months' wages, which may be an arbitrary compensatory payment but is not an indemnity.

The judgment of Slesser, L.J., who dissented in the Court of Appeal, approaches the question through the second sub-section. If I follow his reasoning, the learned Lord Justice holds that if the owner shows that any days included in the two months' claim are beyond the date on which the seaman's contract of employment would have terminated if there had been no wreck and the voyage had reached its natural end, then in law his unemployment during such days cannot be said to be " due to the wreck or loss of the ship." Hence the words " in fact unemployed " in sub-sect. (1) must be read as meaning " unemployed during what would have been the currency of the seaman's contract of employment subsisting at the time of the wreck had it not been frustrated by the occurrence of the wreck." With all respect to the learned Lord Justice I doubt the soundness of his reasoning. Sub-sect. (2) qualifies the right of the seaman to two months' wages, conferred by sub-sect. (1) " subject to the provisions of this section," by affording the shipowner two forms of defence to a claim for two months' wages. The first defence, on which Slesser, L.J. relies, permits the shipowner to escape liability if he can show, the onus being on him, that the unemployment which the seaman has in fact experienced " was not due to the wreck or loss of the ship." If the shipowner had been permitted to avoid liability by showing that the unemployment was not due to the premature termination of the seaman's service the argument might perhaps have had more force. But I am by no means satisfied, having regard to the common practice of re-engaging seamen for successive voyages in the same ship, that the Legislature intended that no unemployment extending in time beyond the date of the natural expiry of the frustrated contract could be regarded as " due to the wreck or loss of the ship." By the wreck of his ship the seaman is disappointed of the prospect of re-engagement for her next voyage which in the ordinary case he may reasonably entertain, and he must set about finding a new ship on which to serve, and this may not always be easy. It may well be that this was in the view of the Legislature when the arbitrary limit of two months was fixed, irrespective of the date on which the contract current at the date of the wreck would in any case have expired.

The facts in the case of the appeal relating to the steamship *Celtic* do not differ from those in the case of the appeal relating to the steamship *Croxteth Hall* in any respect material to the question argued at your Lordships' bar, and I concur in the motion that both appeals be dismissed with costs here and below.

Appeals dismissed.

Solicitors for the appellants in both appeals, *Hill, Dickinson*, and *Co.*

Solicitors for the respondent in the first appeal, *Pattinson* and *Brewer*, agents for *G. J. Lynskey* and *Sons*, Liverpool.

Solicitor for the respondent in the second appeal, *Alexander Smith*, agent for *D. H. Mace*, Liverpool.

Nov. 11, 13, 14, *and Dec.* 9, 1930.

(Before Lords Buckmaster, Dunedin, Blanesburgh, Warrington, and Thankerton.)

THE OTRANTO. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Collision — Vessels on crossing courses — Failure of "give-way" ship to take action— Action taken by the "stand-on" ship— Starboarding without taking off way—Negligence—Regulations for Preventing Collisions at Sea 1910, *Arts.* 19, 21 (*note*).

The respondents' steamship O. *sighted the appellants' steamship* K. M. *at a distance of about seven miles on her port bow. The* O. *accordingly kept her course and speed until about three minutes before the collision, when, the* K. M. *having taken no action to avoid her, the master of the* O. *determined that the* K. M. *could not avoid the* O. *by her own action alone, and he accordingly starboarded, and then hard-a-starboarded, and sounded two short blasts. The* K. M. *was then seen to be porting, and the* O. *thereupon went full speed astern on both engines. About a minute later the vessels came into collision.*

Held, that although the captain of the O. *was entitled to act, his action was not in accordance with the requirements of good seamanship. First, and before all things, he ought to have stopped and reversed his engines, and in addition to that, whatever action he took ought to have been under a port helm.*

Decision of the Court of Appeal (ante, *p.* 99; 142 *L. T. Rep.* 544; (1930) *P.* 110) *reversed.*

Appeal from the decision of the Court of Appeal (Lawrence and Greer, L.JJ.; Scrutton, L.J. dissenting) (reported *ante*, p. 99; 142 L. T. Rep. 544; (1930) P. 110) in a damage action.

The plaintiffs, owners of the Japanese steamship *Kitano Maru*, claimed damages from the defendants, owners of the steamship *Otranto*, in respect of a collision between the *Kitano Maru* and the *Otranto*, which took place at about 8.48 p.m., shortly after sunset, on the 11th Aug. 1928, in the North Sea, some miles from the mouth of the river Humber. The weather at the time was fine and clear. The *Kitano Maru*, a vessel of 7952 tons gross, 474ft. long, was in the course of a voyage from Middlesbrough to Antwerp with about 2000 tons of cargo. The *Otranto*, a vessel of 20,032 tons gross, 12,021 tons net, 658ft. in length, was on a voyage from Immingham to Copenhagen and other northern capitals, with a large number of passengers. The facts as found by Hill, J. were that the *Otranto* was travelling at about 16 knots, and saw about seven miles distant the *Kitano Maru* on a bearing which was accurately taken by the officer on watch; that the bearing continued the same for about ten minutes; and that the officer then sent a message to the master, who came on the bridge and took charge from the second officer. Eight minutes before the collision the *Kitano Maru* was judged to be two or two-and-a-half miles away, and about 3½ points on the port bow. The bearing continued almost the same, varying only by one degree. Three or four minutes before the collision, when the distance, as the master judged, was a quarter to half-a-mile, and was judged by the second officer to be hardly three-quarters of a mile, the *Kitano Maru* had not altered her course or her speed or given any signal. The master of the *Otranto* therefore recognised that the position was very dangerous, and he decided to take action, and approximately about three minutes before the collision he gave an order, "starboard," and immediately afterwards "hard-a-starboard." That order was carried out, and he gave two short blasts. He brought the *Kitano Maru* a little on the port bow, and then the *Kitano Maru* began to turn to starboard, and gave a short blast. Immediately upon that he gave an order "hard-a-port," but before it could be carried out he countermanded it, and repeated "hard-a-starboard," and followed that by full astern on both engines about a minute before the collision.

The Court of Appeal held (Scrutton, L.J. dissenting, upon the ground that the *Otranto* was to blame for not keeping her course), that the *Otranto* ought not to be held to blame for failing to take off her way. The relevant authorities established no general rule that a vessel in taking action justified by the note to art. 21, must first take off her way. The *Otranto* was therefore bound to take such action as in the circumstances might appear best calculated to avoid the collision, and the master of the *Otranto* was not negligent in taking the action which he took, notwithstanding that if the *Otranto* had taken off her way the collision might in the circumstances have been avoided.

The owners of the *Kitano Maru* appealed.

The Regulations for Preventing Collisions at Sea 1910, so far as material, are as follows:

Art. 19. When two steam vessels are crossing, so as to involve risk of collision, the vessel which has the other on her own starboard side shall keep out of the way of the other.

Art. 21. Where by any of these rules one of two vessels is to keep out of the way, the other shall keep her course and speed.

Note.—When, in consequence of thick weather or other causes, such vessel finds herself so close that collision cannot be avoided by the action of the giving-way vessel alone, she also shall take such action as will best aid to avert collision: (see Arts. 27 and 29).

Dunlop, K.C. and *R. F. Hayward* for the appellants.

A. T. Miller, K.C. and *H. C. S. Dumas* for the respondents.

The House took time for consideration.

Lord Buckmaster.—On the 11th Aug. 1928, in the North Sea, off the mouth of the Humber, the *Otranto*, a twin screw steamship of 2032 tons gross register and 658ft. in length, bound

(*a*) Reported by Edward J. M. Chaplin, Esq., Barrister-at-Law.

from Immingham in the Humber to Copenhagen on a cruise to Norway with 586 passengers was proceeding at a speed of about sixteen knots on a course of North 59° E. true. The *Kitano Maru*, a twin screw steamship of 7952 tons gross register and 474ft. in length, was bound from Middlesbrough to Antwerp partly laden with cargo. She was proceeding at a speed of about thirteen knots on a course of S. 38° E. true. The wind was light, the sea smooth and the tides were slack.

The courses of the vessels were crossing at about a right-angle, the *Kitano Maru* bearing about three-and-a-half points on the port bow of the *Otranto* and the *Otranto* bearing about four-and-a-half points on the starboard bow of the *Kitano Maru*. It was the duty of the *Kitano Maru*, being the vessel which had the other on her starboard side, to keep out of the way of the *Otranto* and avoid crossing ahead of her. The time of day was just after 8 p.m. The light was good, permitting of seeing approaching vessels without difficulty but making the estimate of distance a little uncertain. There resulted a collision between the two vessels in which both vessels were injured. Litigation was initiated at the instance of the owners of the *Kitano Maru* against the owners of the *Otranto* in which litigation the claim was met by a counter-claim. The case was heard before Hill, J. with the assistance of Trinity Masters who found both vessels to blame and made no apportionment of damage. Appeal was taken to the Court of Appeal who, sitting with assessors, by a majority, Scrutton, L.J. dissenting, found the *Kitano Maru* alone to blame. Appeal has now been taken to your Lordships' House and what is asked is to restore the judgment of Hill, J.

It has not been contended that the *Kitano Maru* was not to blame. Hill, J., before whom the case depended, found that the crew on board the *Kitano Maru* put forward an absolutely false account of the events prior to the collision. He said in plain words that the witnesses were liars. On the other hand, he believed the story given by the officers on board the *Otranto*. That estimate was agreed to by all the learned judges of the Court of Appeal. The facts of the case may, therefore, be taken according to the testimony on board the *Otranto*. The *Kitano Maru* was first observed from the deck of the *Otranto* a little before 8.30, at which time she was about six to seven miles distant, by Shurrock, the supernumerary second officer, who had come on duty at 8 p.m. At 8.29 he took a bearing of the *Kitano Maru*. This he took from the standard compass. He then returned to the bridge but went up again at 8.35 p.m. and took another bearing, and found it was the same as before. The *Kitano Maru* was still a good way off. He continued to watch her and finding that she was not altering her bearing he sent for the captain, who came at once at 8.40 p.m. At that time he estimated the distance between the two ships at about two-and-a-half miles. He went and took another bearing and found it practically the same. The story may now be taken up according to the testimony of the captain. On arriving on the bridge he was told by the second officer of what he had observed as to the bearing. He estimated the vessel at this time at about two-and-a-half miles off. He watched her closely and could see her quite well, but she held on her course without altering either course or speed. That continued five minutes, another report as to the bearing being unaltered was given by the second officer from the compass. By this time she was apparently up to a quarter to half a mile distant. Then, to give the captain's own words, " I considered that I was in a very dangerous position. She had shown no sign of altering her course or speed and I assumed that she was trying to cross my bow and I thought it was time for me to take immediate action." Accordingly, at 8.45 p.m. he ordered the helm hard a-starboard and sounded two short blasts. Up to this time there had been no alteration on the part of the *Kitano Maru* of either course or speed. Half a minute after the helm of the *Otranto* had been put hard to starboard and when the vessel had begun to pay off, the second officer suddenly shouted, " She is altering her course to starboard. She is porting," and then, again using the words of the captain, " I immediately gave an order ' hard-a-port,' but the ships were so close together then that I could see that a collision was inevitable, but, I think, before the helm was even amidships I put her helm back to hard starboard and from the time I starboarded my ship was swinging hard to port under a starboard helm. At 8.48 p.m. the collision occurred. One minute before the collision the engines of the *Otranto* were put hard astern."

The regulations applicable to this set of circumstances are these :

19. When two steam vessels are crossing, so as to involve risk of collision, the vessel which has the other on her own starboard side shall keep out of the way of the other.

21. Where by any of these rules one of two vessels is to keep out of the way, the other shall keep her course and speed.

Note.—When, in consequence of thick weather or other causes, such vessel finds herself so close that collision cannot be avoided by the action of the giving-way vessel alone, she also shall take such action as will best aid to avert collision : (see Arts. 27 and 29).

27. In obeying and construing these rules, due regard shall be had to all dangers of navigation and collision, and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

I agree with Greer, L.J. that these rules must aid each and that the note to rule 21 which relates to special conditions does not destroy the effect of rule 27 which is of general application.

In obedience to rule 21, therefore, the *Kitano Maru* was the ship bound to give way, and the *Otranto* to keep her course and speed. The negligence of the *Kitano Maru* was gross and palpable. She made no attempt whatever to give way until two minutes of the spot

where disaster was inevitable. She did not, in fact, stir from her course until thirty seconds after the *Otranto* had begun to swing to port, and she then turned to starboard under a port helm. It was impossible to excuse such manoeuvres, and, apparently recognising this fact, the story told on behalf of her owners was found to be a mass of deliberate and concocted lies.

With this comment she can pass from consideration, for the real issue in this case, on which there has been great divergence of judicial and nautical opinion, is whether the *Otranto* was negligent in what she did?

The negligence alleged against her can be summed up under four heads: (1) That she had no right to alter her course or her speed at the moment she did; (2) That if any step taken by her could be justified, it would have been that of reversing her engines; (3) That if she altered her helm, she should have altered it to port and steered her course to starboard; (4) That even if the engines had not been stopped before, they should have been stopped at once when she realised that the *Kitano Maru* was moving to starboard.

The only one of these points that is of general application is that relating to the moment when the *Otranto* altered her course, and upon this Hill, J. and Scrutton, L.J. are at variance. Much has been said about this rule in many cases. It is beyond all doubt of the utmost consequence that it should be obeyed. The ship that is bound to keep her course is not entitled to alter it at a moment when there is ample time for the ship that is bound to give way to discharge her duty, for that ship is entitled to rely upon obedience to the rule by the ship that has to keep her course. But, acknowledging to the full the vital consequence of strict obedience, there still remains the fact that these rules were made for the guidance of mariners and not of mathematicians, and that it is not right, by an elaborate process of calculation after the event, to decide that the ship that was bound to keep her course acted a little before the moment that in fact she need have done. When two ships are travelling at sixteen and thirteen knots an hour, the moment when safety has passed and peril has arrived cannot be determined to a hair's breadth. The rule was designed to secure that the standing-on vessel shall maintain her course until the last safe moment. What that safe moment is must depend primarily upon the judgment of a competent sailor, forming his opinion with knowledge of the necessity of obedience to the rule and in face of all the existing facts. Subsequent examination may show that his judgment could not properly have been formed, in which case the rule has been broken without excuse, but the ultimate decision is not to be settled merely by exact calculations made after the event, but by considering these facts as they presented themselves to a skilled man at the time. This is in close accordance with the view expressed by Lord Herschell in *The Tasmania*, where he says (6 Asp. Mar. Law Cas., at p. 518; 63 L. T. Rep., at p. 2; 15 App. Cas., at p. 226): "As soon then as it was, or ought to a master of reasonable skill and pruduence to have been, obvious that to keep his course would invoke immediate danger, it was no longer the duty of the master of the *Tasmania* to adhere to the 22nd (now the 21st) rule. He was not only justified in departing from it, but bound to do so, and to also use his best judgment to avoid the danger which threatened." And again with Vaughan Williams, L.J., in *The Olympic and H.M.S. Hawke* (12 Asp. Mar. Law Cas. 580; 1913, P. 214, at p. 245), where he says: "I am inclined to think that in a case where good seamanship would assume that collision cannot be avoided by the action of the giving-way vessel alone, the case falls with the exception"—namely, the exception to the rule to keep course and speed—"even though in fact the giving-way vessel could by her own action have averted collision." This is confirmed in other words by Lord Parker in the same case: (at p. 279). In *The Orduna* (14 Asp. Mar. Law Cas., at p. 576; 122 L. T. Rep., at p. 513; (1919) P., at p. 390), Bankes, L.J. comments on this but does not express disagreement, nor can I find there was any disapproval in the judgment of this house in *The SS. Orduna* v. *Shipping Controller* (1921, A. C. 250). A sentence from the opinion of Lord Sumner shows at once how that case differs from the present. At p. 260 he says: "The evidence of the officer of the watch, that at the moment when he took this helm action he judged the position to be a safe one, leaves him without excuse."

Here I have already referred to the evidence of the captain upon the point in chief and to it may be added his answers. In cross-examination, he is there asked: Q. "Was it then (namely, at 8.44) that you gave the order to starboard?" A. "Just after that." Q. "At that time do you say that it was a very dangerous position?" A. "Yes." And there is no evidence nor, in my opinion, any calculation that would justify us in saying he was wrong. In *The Albano* (10 Asp. Mar. Law Cas., at p. 207; 96 L. T. Rep., at p. 339; (1907) A. C. 193, at p. 207) Sir Gorell Barnes, in giving the judgment of the Privy Council, says this: "It must always be a matter of some difficulty for the master of a vessel which has to keep her course and speed with regard to another vessel which has to keep out of her way, to determine when the time has arrived for him to take action, for if he act too soon he may disconcert any action which the other vessel may be about to take to avoid his vessel, and might be blamed for so doing, and yet the time may come at which he must take action. Therefore he must keep his course and speed up to some point, and then act, but the precise point must necessarily be difficult to determine, and some little latitude has to be allowed to the master in determining this."

In these circumstances, I am not prepared to hold that the captain of the *Otranto* broke

any rule when he decided to act. The lives of 560 passsengers were in his care, and with such responsibility calculations cannot be expected to be as minute and accurate as when distances, speed, and times are afterwards plotted out in a law court on a sheet of paper. All the six experienced men who have advised the courts on this point are in agreement with this conclusion.

But although the captain was entitled to act, I am unable to find that his action was in accordance with the requirements of good seamanship. First, and before all things, he ought to have stopped and reversed his engines. Upon this point the nautical assessors by whom we have been advised are in agreement. This, by itself, might have saved an accident. But, in addition to this, whatever action he took ought to have been under a port helm, which would have tended to draw his vessel into line with the *Kitano Maru* and not opposed to it. I realise that his feeling was not to expose his unprotected flank to the beak of the Japanese ship, but in doing what he did he courted disaster, while the other manœuvre would have taken him into safety. I think, too, that, thirty seconds after he began to move, even if his engines had not been reversed before, they should have been reversed even then, though I doubt if, when once the initial mistake had been committed and the boat was swinging under a starboard helm, the collision could have been avoided, and had he changed to port helm, which he momentarily tried to do, he might have received the blow amidships.

I have examined, but I have not been able to find much assistance from, the authorities. It seems to me impossible to lay down a general rule that in all cases of crossing ships a starboard helm for the stand-on ship must necessarily be a negligent act. It probably often is so, and it is remarkable that in no case quoted has a port helm been held negligent in similar circumstances and in only one case the case of *The Rayford* (10 Ll. L. Rep. 743) has starboarding been excused. Scrutton, L.J., who was one of the members of the Court of Appeal, says that in that case the view taken was that the starboarding was so slight as not to affect the collision. In the present case, coupled with maintaining speed, it was, as our assessors advise, a negligent manœuvre for which the *Otranto* must suffer the consequences, and from these consequences I cannot hold her absolved by the subsequent action of the *Kitano Maru*. Upon the question of altering the share of responsibility each has to take, this is primarily a matter for the judge at the trial, and unless there is some error in law or fact in his judgment it ought not to be disturbed.

I am therefore of opinion that the judgment of Hill, J. was right in all respects and should be restored.

Lord Dunedin.—I concur. I confess I do so with the greatest regret, because I think the captain of the *Otranto* was put in a terribly difficult position by the utterly unjustifiable conduct of the *Kitano Maru*, but in view of the advice we got from our assessors, and also the views expressed already by my noble and learned friend on the Woolsack, I am unable to resist the conclusion that the captain of the *Otranto* was wrong in keeping full speed.

Lord Blanesburgh.—I also concur.

Lord Warrington.—I concur.

Lord Thankerton.—I concur.

Appeal allowed.

United States Shipping Board v. The Ship St. Albans. (*a*)

ON APPEAL FROM THE SUPREME COURT OF NEW SOUTH WALES

Collision — Evidence — Photographs taken from passing ship—Calculations made therefrom—Locality of collision.

In a collision action between two vessels in Sydney Harbour the evidence given at a court of inquiry included three photographs which had been taken by a passenger from an outward bound ship showing the vessels just before the collision, in collision, and afterwards. Each photograph had as a background a long stretch of the frontage of the harbour, showing outstanding objects in the background on either hand. Subsequently leave was given to embody the results of the photographs in a diagram, which was produced by three land surveyors, and the Full Court found the diagram to be a true presentment of the material facts as to the locality of the collision and based their judgment thereon.

Held, that the Court of Appeal, in Hindson v. Ashby (74 *L. T. Rep.* 327 ; (1896) 2 *Ch.* 1) *having demonstrated the necessity for careful delimitation of the uses for which photographs could be accepted as means of proof of matters of fact, the skill or science called for in the preparation of the diagram which had been accepted as evidence, was not that of a land surveyor, neither was there before the Court of Appeal the evidence of any witness skilled and experienced in such a task.*

Held, therefore, that standing alone the new evidence did not warrant departure from the

(*a*) Reported by Edward J. M. Chaplin, Esq., Barrister-at-Law

judgment of the court of first instance, which, without new evidence, was admitted to be unimpeachable.

Judgment of the Supreme Court of New South Wales, in Admiralty, reversed.

APPEAL from the Full Court of the Supreme Court of New South Wales dated the 17th Dec. 1928, reversing the judgment of Street, C.J. sitting in Admiralty Jurisdiction. The case arose out of a collision between the appellants' motor-ship *Crown City* and the respondents' steamship *St. Albans*, which occurred in Sydney Harbour in the neighbourhood of Bradley's Head, about 12.48 p.m. on the 22nd Oct. 1927. The *Crown City* was outward bound from Sydney to Melbourne and the *St. Albans* was inward bound from Japan to Sydney. The collision took place in daylight. The weather was clear, the wind fresh from south-south-east, and squally, and the tide was flood of very little, if any, force. Both vessels received damage. There was no counter-claim by the owners of the *St. Albans* for the damage which she received. The claim in the action related to the damage received by the *Crown City*. Under the provisions of the law locally applicable, a Commonwealth Court of Inquiry was held presently after the collision whereat both parties were present. Following on the enquiry, the appellants brought the present action, alleging the respondents by their servants to have been to blame for the collision, and it was agreed that the action should be tried on the evidence given at the inquiry. Three photographs were produced at the inquiry as having been taken by a passenger on an outward bound ship, showing the vessels just before the collision, in collision, and afterwards. Each photograph had as a background a long stretch of the frontages of the harbour showing outstanding objects in the background on either hand.

The Chief Justice stated that he was unable to form a trustworthy judgment on the contents of the photographs. He was therefore bound to deal with the case on the evidence of the eye witnesses and accordingly found the *St. Albans* to blame.

On appeal to the Full Court leave was given to adduce the evidence of surveyors to prove what conclusions ought to be drawn from the photographs. The evidence thus admitted was embodied in a diagram which purported to lay down the focal points at which the three photographs respectively were taken, and by reference to the backgrounds to extend to points thereon radial lines within which, it was said, the vessels lay at the material times.

The Full Court (Ferguson, Campbell, and Davidson, JJ.) found the diagram produced to be a true presentment of the material facts as to the positions of the two vessels at the material times. Acting upon this view they reversed the decision of the trial judge and found the *Crown City* alone to blame. The *Crown City* appealed.

Dunlop, K.C. and *Stenham* for the appellants.

Raeburn, K.C. and *Willmer* for the respondents.

The considered opinion of their Lordships was delivered by

Lord MERRIVALE.—The appellants, the United States Shipping Board, are owners of the *Crown City*, a steel screw motor-ship of 5428 tons gross register, and 426 ft. in length, which on the 22nd Oct. 1927, found herself in collision with the defendants' steel single screw steamship *St. Albans*, a vessel of 4119 tons gross register and 367 ft. in length, in Sydney Harbour near to Bradley Head, where is found the turning point and place of passing of the traffic into and out of the harbour. The *Crown City* was outward bound for Melbourne from Wooloomooloo Bay within the harbour. The *St. Albans* was inward bound from Japan.

In its actual incidents the collision, which took place in broad daylight, was of an ordinary kind involving simple questions to be determined upon the usual conflict of evidence as to the exact place of the casualty and the course and management of the ships. The proceedings in the litigation have been of an unusual kind. Under the provisions of the law locally applicable a Commonwealth court of inquiry was held, presently after the collision, whereat both parties now in litigation were represented by counsel. Following on the enquiry the now appellants brought their action in the Supreme Court of New South Wales (in Admiralty) alleging the respondents by their servants to have been to blame for the collision. After preliminary acts had been filed the parties agreed that the action should be tried on the evidence given at the inquiry. Respondents, however, called at the hearing before the Chief Justice of New South Wales a surveyor to explain certain photographs, hereafter mentioned at length, which had been produced by one of the witnesses at the inquiry. Then the troubles of the parties as to procedure commenced.

Before the Court of Appeal the respondents obtained leave to call further evidence, and in fact called three land surveyors who gave evidence which they stated to be proof of facts demonstrated by or demonstrable upon the photographs. On the strength of this additional testimony, the finding of the trial judge in favour of the appellants was reversed. What is mainly in question here is the admissibility of this evidence, and if it be received, its proper effect in the determination of the question of liability for the collision.

The nature of the additional proof received in the Court of Appeal and its value as evidence raise questions of law and practice of some general importance.

To make the main facts of the collision intelligible the courses of the two ships need to be appreciated.

The usual course of an outward bound vessel, upon rounding Garden Island, which lies eastward of Wooloomooloo Bay, is to get upon a heading of 95 degrees—that is E. 5 degrees S.

—and on that course to proceed across the harbour until Bradley Head Lighthouse is about abeam, and then under a starboard helm to steam out on a northward and eastward course towards the Sound (by West Channel or East Channel).

On the occasion in question the course of the *Crown City* outward bound from Wooloomooloo Bay and that of the *St. Albans* inward by way of West Channel to Wooloomooloo Bay brought them at about the same time to the immediate vicinity of the Head. At the moment of the collision the *Crown City* had not reached her turning point, and on the other hand the *St. Albans* coming from the West Channel had advanced southward, had had the lighthouse abeam, and had engaged herself in the necessary helm action for making her turn.

The *Crown City* had speed of about eight knots till just before the collision. The speed of the *St. Albans* for reasons not immediately necessary to be stated, was no more than about four knots. The exact course and position of the *Crown City* and the place of collision were in dispute.

The evidence at the public inquiry of witnesses from the *Crown City* and others called on behalf of the now appellants was that the *Crown City* set on her outward course off Garden Island well on the south side of the channel and continued upon a course of 95 degrees and remained on that course until her engines were put full speed astern to avoid collision with the *St. Albans*. That course it was said gave her a heading on which she would have passed with a moderate clearance under the stern of a French vessel, the *Commissaire Ramal*, which was at the time moored at a point about S.S.E. from Bradley Head Light at a distance from the Light of some 1500 ft.

The *Crown City* was in charge of a Sydney Harbour pilot who said he took the usual outward course until collision was imminent. The evidence from the ship corroborated this. It was also substantiated by testimony from the captain of the *Commissaire Ramal* and the pilot who was in charge of her, and by two public officers, the signalman at Garden Island and the signal master who was on duty on a signal tower eastward of the harbour. Each of the two last-mentioned witnesses described his observation of the collision and stated a line of sight from his own standpoint upon which it occurred.

The net effect of the *Crown City's* evidence was to define the place of collision as being upon a line southward of Bradley Head at a distance from the Light which could not well be less than 1500 ft.

The officer who was in charge of the *St. Albans* stated that she passed the Head at about 300 ft., that when they got abreast of the Light the helm was put hard aport and that the vessel was about 300 ft. off from Bradley Head at the collision. He said also that the *Commissaire Ramal* was lying not more than 500 ft. from the Head. The *St. Albans'* captain said that she was abeam of Bradley Head when she took her engine and helm action to avoid collision and was then 500 ft. from the Light with about 300 ft. of navigable water. Her second officer's evidence was that she passed Bradley Head at 300 ft. from the Light and thereupon took helm action. The officer in charge and the captain also deposed to having observed the *Crown City* on her eastward course at successive points practically in line with the Head—the more distant some 2500 ft. off and the nearer about 600 ft. They fixed the place of collision southward of the nearer of these points and purported to establish this by evidence of bearings taken—as was said—while the *St. Albans* was still at the place of collision.

The point so indicated appears to be something less than 1000 ft. in a south-westerly direction from the Light.

The three photographs which have been mentioned were produced at the public inquiry by the master of the outward bound steamship *Orungal*, as having been taken by a passenger on his ship when she was proceeding on her course by the West Channel after she had turned under starboard helm off Bradley Head. They show the vessels just before the collision, in collision, and afterwards, when the *Crown City's* stem was some three-fourths of her length eastward from the stem of the *St. Albans*. Each has as background a long stretch of the frontages of the harbour extending along its southern and south-western shores. By questions directed to the nautical witnesses who saw the collision and by evidence of a surveyor it was sought to be shown on behalf of the *St. Albans* that the place of collision could not have been substantially farther from Bradley Head than the point deposed to by the master and the other officers of the *St. Albans*. The surveyor by examination of the background of the photographs identified outstanding objects in the background on either hand, and by a process the reverse of that by which nautical bearings are taken, used the alignments of the identified buildings in order to draw transit lines and to ascertain the focal point at which such lines intersect, which point it was said must mark the position of the lens of the photographic camera when the view presented in the photograph was obtained. The surveyor plotted on a chart the position of the *Crown City* so determined and stated it to be a position in which the bow of the ship was about 950 ft. from the Bradley Head Light.

Importance was attached at the hearing in the Admiralty Court and in the arguments before their Lordships to evidence given by numerous witnesses at the public inquiry with regard to the course of the *St. Albans* in the five minutes immediately preceding the collision. Off Bradley Head incoming vessels bound for Wooloomooloo Bay must make a turn of five points to come over from the southerly course down the West Channel to their westward course towards the reach between Garden Island and Fort Denison.

The *St. Albans*' preliminary act states that her course when the *Crown City* was first seen was S.W. by S. ½ S. What was said generally by the *Crown City's* witnesses was that "she did not make the turn." Captain McCaw of the *Crown City* said she was on a course of about S.S.W. and to all appearances did not alter her course. The *Crown City's* pilot said the *St. Albans*' course when sighted was S.W. by S. ¾ S. and at the collision "was not higher than S.W. ½ S. and may be further south than that." The master of the *Commissaire Ramal* "did not think she made any change in her course."

The witnesses for the respondents gave evidence which on the whole was consistent with their preliminary act, where the respondents having stated their vessel's course when the *Crown City* was sighted said that the action taken by the *St. Albans* to avoid the collision was that "the engines of the *St. Albans* were put full speed astern, three short blasts blown, and the helm was put hard aport, and the starboard anchor dropped about two minutes before the collision." The master said "We got abreast of the Light and the helm was put hard aport. The ship began to swing but very slightly on account of her going so slow. Then we decided to go full speed astern and let go the starboard anchor." "The whistle was sounded three blasts and her engines put hard astern."

The *St. Albans*' chief officer spoke to the same effect. Her third officer said the ship hauled out when approaching Bradley Head, then the helm was put hard aport and her head swung S.S.W. to S.W. He "thought she canted a little to starboard." The vessel's speed was said not to have exceeded four knots, and the general impression given by the evidence of those in charge of her was that at that speed she did not come round for her intended westerly course as she was expected to do. The *St. Albans*' helmsman was not called at the inquiry and her engine room entries were not put in evidence.

The learned Chief Justice of New South Wales, before whom the appellants' action was heard in the Admiralty jurisdiction, placed under the inevitable disadvantage of deciding a collision case on a shorthand note of the statements of witnesses he had not seen, with such assistance, if any, as could be derived from the charts, sketches and photographs which were put in, came to the conclusion that the story of the plaintiffs' witnesses was the more trustworthy and was inherently more probable than that of those from the *St. Albans*. "I find it quite impossible," the learned judge said "to accept the story these latter tell." Assuming their place of collision even to be approximately correct, the learned judge could not see why if the *St. Albans* was under control and was being efficiently navigated, there should have been any collision. But he found as a fact, on the evidence of the *Crown City's* officers and the independent witnesses, that the collision took place something like 1000 ft. to the south of Bradley Head.

The photographs taken on board the steamship *Orungal* were considered by the Chief Justice in the light of conflicting evidence given by witnesses as to the inferences to be drawn from them, and he found himself unable to form a trustworthy judgment upon their contents and bound to deal with the case on the evidence of the eye-witnesses.

The learned Chief Justice held further that if the *Crown City* had been as near as 1000 ft. to the Head there should still have been room enough for the *St. Albans* to pass her in safety upon her proper side.

"I think, therefore," the learned Chief Justice concluded, "that for some unexplained reason the *St. Albans* kept too far to the southward before porting her helm to proceed up the harbour, and that she is to blame."

Arguments, which had been raised on the footing that the *Crown City* failed to keep to her starboard hand in a narrow channel, and again on the footing that the ships were crossing ships and that the duty of the *St. Albans* in that position was to keep out of the way of the *Crown City* and that of the latter vessel to keep her course and speed, were duly considered.

Very naturally, as it seems to their Lordships, the learned Chief Justice found himself in difficulties as to defining the limits of the narrow channel, to which in this case art. 25 of the Regulations for preventing Collisions at Sea would be applied, and declared himself unable to find that the *Crown City* was in fault under this head. He also held in favour of the *Crown City* that the *St. Albans* was under a duty by virtue of art. 19 of the regulations to keep clear of the *Crown City*, as that vessel had been on the *St. Albans*' starboard hand, and under art. 21 that the duty of the *Crown City* in the circumstances was to keep her course and speed.

On the appeal of the now respondents to the Full Court, application was made by them for leave to adduce new evidence, that, namely, of surveyors, to prove what conclusions ought to be drawn from the photographs which had been put in evidence. The application was strenuously opposed, but upon the opinion of the majority of the learned judges was allowed, and the evidence was in due course received. In view of the agreement of the parties as to the evidence to be received at the hearing of the action, this reception of evidence was made a ground of appeal to His Majesty in Council by the appellants. An interesting question of the operation of the relevant statute was thereby raised. As to this, however, no more need now be said, since the appellants did not eventually press the objection before their Lordships.

The evidence of the surveyors who were called by the respondents to apply in the case facts which they declared to be established by scientific use of the photographs in question was subjected before the Full Court to close cross-examination, but the appellants did not call surveyors or other scientific experts.

They insisted that the propositions of fact asserted against them could not be sustained on the material before the court.

The evidence admitted in manner stated before the Court of Appeal was for all practical purposes embodied in a diagram which purported to lay down the focal points at which the three photographs respectively were taken, and by reference to the backgrounds to extend to points thereon radial lines within which, as it was said, the vessels lay at the material times. Given the distance from the shore of each focal point and the angle of convergence thereon of the radial lines the situation of each ship could, it was contended, be geometrically determined with practical certainty. Proceeding on this footing the surveyors testified that the place of collision was virtually that alleged on the part of the *St. Albans*, and not more than 950 ft. from the shore.

The three learned judges in the Court of Appeal found the diagram produced as before mentioned to be a true presentment of the material facts as to the positions of the *Crown City* and the *St. Albans* at the material times. These the court held to be the facts demonstrated by the photographs. Acting upon this view the learned judges rejected the evidence of the eye-witnesses on which the learned Chief Justice had arrived at his decision and gave judgment for the now respondents. "I have no hesitation," the Acting Chief Justice said, "in discarding at once any oral evidence from either side so far as it is inconsistent with the facts disclosed by the photographs."

Campbell, J. said: "I see no reason for refusing to accept the evidence of the witnesses . . . called for the defendants on the hearing of the appeal . . . I accept their evidence and I look at the photographs in the light of it." Davidson, J. agreed.

The learned judges were also agreed in considering that upon the evidence given at the public inquiry the findings of the trial judge in favour of the *Crown City* were unimpeachable, if not inevitable. "I should have been unable," Campbell, J. said, "to come to any other conclusion."

The judgments in the Court of Appeal do not deal specifically with the question whether, assuming the place of collision deposed to by the surveyors, the *St. Albans* ought to be held to blame for the collision. The learned Chief Justice was of opinion that she ought.

The reasoning on which the professional witnesses in the Court of Appeal based their conclusions proceeds in this manner: On the photographs in question certain pairs of buildings and objects are seen to be more or less directly in line upon the same perpendicular plane: these same buildings and objects must lie horizontally in a more or less direct line from the lens in which the photographic picture was received; the point of intersection of converging lines extended horizontally through the respective pairs of buildings and objects will show what was the point at which the camera was used. The measurements taken by the surveyors were not challenged, nor was their good faith. What was in dispute was whether the premises assumed or obtained could warrant their conclusions of fact.

Underlying the matter last mentioned is the inquiry whether there was before the Court of Appeal evidence of fact upon which the findings of the court of first instance could be, or ought to be, displaced.

The evidence in question, its admissibility and its juristic effect, were subjects of close and prolonged examination in the arguments addressed to their Lordships on the hearing of the present appeal. Counsel reasoned the matter on general principles and it is useful under the circumstances to see what are the rules which on general principles are applicable to the case.

The use in evidence of photographic pictures and the limits within which they are judicially receivable by way of proof of matters of fact has often come under consideration before English courts. For instance, in a case of *Reg.* v. *United Kingdom Electric Telegraph Company Limited* (3 F. & F. 73), in 1862, Martin, B., after argument, received as evidence photographic views showing the configuration and general nature of the surface of a highway, where the matter in question was nuisance by an alleged obstruction, and in a more modern case, in the Court of Appeal, in *Hindson* v. *Ashby* (74 L. T. Rep. 327, at p. 336; (1896) 2 Ch. 1, at pp. 25–27), A. L. Smith, L.J., and other Lords Justices, demonstrated the necessity for careful delimitation of the uses for which, upon mere production of them, photographs can be accepted as means of proof of matters of fact. Clearly a photographic picture cannot be relied upon as proof in itself of the dimensions of the depicted object or objects, and cannot be made properly available to establish the relative proportions of such objects except by evidence of personal knowledge or scientific experience to demonstrate accurately the facts sought to be established.

The question of the evidential value of the testimony of the three expert witnesses for the defendants depends in like manner upon ascertained limitations which define the power of judges to accept opinions of witnesses as proof of matters of fact.

The extent to which the opinions or conclusions of skilled persons are receivable by way of proof in point of fact has not been seriously in doubt from the time when, in 1782, in *Folkes* v. *Chadd* (3 Dougl. 157), Lord Mansfield stated the grounds on which the evidence of Smeaton, the famous constructive engineer, was to be admitted upon a disputed question of obstruction to a harbour: "the opinion of scientific men upon proven facts may be given by men of science within their own science." Another Chief Justice, Lord Russell of Killowen, explained the rule in a modern case of *Reg.* v. *Silverlock* (72 L. T. Rep. 298; (1894) 2 Q. B. 766). The witness must have made a special study of the subject or acquired a special experience therein. "The question is," Lord

Russell said (72 L. T. Rep., at p. 301; (1894) 2 Q. B., at p. 771), "Is he *peritus*: is he skilled; has he adequate knowledge?"

Some of the scientific topics involved in the contest here were discussed by counsel in course of prolonged argument as to proofs afforded by the photographs, on the footing that judicial notice is taken of matters which are of common knowledge. Among these were subjects such as these; the difference of scale in the picture obtainable by a single lens of objects in the direct line of view and objects in the margins of the field; the effect in photography of the extent of the focal angle; the results due to development on a plane surface of pictures obtained in photographic perspective; the means of neutralising the effect of the curve of the field of the lens. Counsel purported to discuss the topics in question in the light of personal experience, as matters of common knowledge.

What are the limits within which matters such as those here mentioned are within judicial cognisance is not necessary now to be determined. Evidence of the sources of common knowledge, if not of its extent, may perhaps be obtained by reference to a cyclopædia and the lists of textbooks there to be found. Detailed information supplied from such sources requires usually to be established by experts.

That the extent to which and the processes by which an accurate topographic plan can be produced from a pictorial delineation of a scene are matters of common knowledge could hardly be said, though such questions have long occupied the attention of men of science. A well-known member of the Bar, who is also a distinguished student of applied mathematical science, has traced in a recent work (Generalised Linear Perspective with Special Reference to Photographic Land Surveying, by J. W. Gordon, K.C., London, 1922) the development of knowledge in relation to the subject since the time when an eighteenth century mathematician dealt with it in a treatise on generalised perspective. Two prerequisites for the conversion of a photographed picture of a landscape into a map or plan—after ascertainment of the viewpoint of the photographer—are said to be proof that the lens used had been accurately corrected to yield what is known as a flat field and knowledge of the angle to the horizontal plane at which the camera was held.

Reference is made here to the scientific problems which have just been indicated not by way of preface to any judicial conclusion as to the true value of the photographs in question as the basis for geometric surveys of the scenes they present, but to emphasise two manifest propositions, one that the skill or science called for by the task mentioned is not that of the land surveyor and the other that there was not before the Court of Appeal the evidence of any witness skilled and experienced in the discharge of such a task.

What follows in their Lordships' view upon the examination which has now been made of the new evidence received in the Court of Appeal is that standing alone it does not warrant departure from the judgment of the court of first instance, which, without new evidence, was admitted to be unimpeachable.

The judgment of the learned Chief Justice, moreover, as has already been mentioned, proceeded upon two grounds: firstly, acceptance of the *Crown City's* place of collision, and, secondly, consideration of the questions of nautical skill which arise if the *St. Albans'* place of collision be assumed.

Their Lordships had the advantage at the hearing of the assistance of nautical assessors to whom they submitted a series of questions bearing immediately on the case made for the *St. Albans.*

As to the point of time, and the place at which on her course, as stated on her behalf, the *St. Albans* could properly take helm action, engine action, or both, the view stated by the assessors was that the *St. Albans* ought not to approach the Light and Head nearer than 500 ft. and that she would be in a position to port her helm for rounding the head when the lighthouse was on a bearing of 276 degrees and at the distance of about 580 ft. shown in the line of her course marked on one of the plans put in evidence, but that this is a position nearer the shoal water than should be taken except to avoid collision.

As to the narrowest breadth of waterway in which the *St. Albans*, in good order and properly navigated, could certainly be able to make her turning movement so as to round Bradley Head in safety and proceed on her new course westward the assessors stated it at 250 ft., but added that with the *Crown City* in view and Bradley Head to be rounded, to round within this distance of the *Crown City* would involve considerable risk to both vessels.

Having regard to the accepted position of the *Crown City* in relation to the *Orungal* and the point northward of Bradley Head at which the *St. Albans* declaredly passed the *Orungal*, the assessors were asked whether the *St. Albans* would be hindered or embarrassed in shaping to pass on and keep clear of the *Crown City* if the *Orungal's* distance from the Light when abeam of the Light was 1100 ft. or 1200 ft. They replied that under these conditions the *St. Albans* should not have been hindered or embarrassed.

The assessors were asked further: assuming the place of collision alleged by the *St. Albans*, and the *Crown City* on the course of 95 degrees which brought her to that point, could the *St. Albans* by reasonable care have avoided collision? They replied that from a seaman's point of view the *St. Albans* on that assumption had a somewhat difficult problem, considering that her speed was only about 4 knots and her turning power therefore very slow. They amplified their answer thus: She had two alternatives (*a*) to go full speed ahead in hopes she could turn sufficiently fast to clear the *Crown City*; and give one short blast; (*b*) to go full speed astern and let go anchor; this

she did; but not soon enough. She veered her cable to 30 fathoms. Had she checked it at 15 or 20 fathoms it might have brought her up just in time to avoid collision. Reasonable care was taken, but just too late.

The last of these answers throws light on a striking part of the evidence in the case, that, namely, which suggests that the *St. Albans* both failed to make her turn and failed to bring up, as promptly as those in charge of her expected. The real cause of the collision seems to be probably found in this failure.

As far as the relative situations of the vessels at material points of time are concerned their Lordships, accepting as they do the advice of the nautical assessors, are satisfied that the collision was due not to the *St. Albans* being kept by the *Crown City* so close to the shore that she had not room to make her turning movement in safety, clear of the *Crown City*, but to her failure from causes incidental to her own navigation both to make the turn and keep clear of the *Crown City*.

The questions which were raised between the parties, as to the effect of the various Regulations for Preventing Collisions at Sea, which control navigation of vessels passing in a narrow channel and decide as between approaching vessels which is the "give way" ship, depend upon conclusions of fact as to the extent and bounds of the narrow channel to which the relevant regulation is to be applied and as to the relative movements of the *Crown City* and the *St. Albans*, before the collision, which, in view of the conclusions already stated, would not usefully be examined in the present case.

Their Lordships will humbly advise His Majesty that the appeal should be allowed, and the judgment of the Chief Justice restored, and that the respondents should pay the appellants' costs here and below.

Appeal allowed.

(Present: Lords MERRIVALE, ATKIN, RUSSELL, MACMILLAN, and Sir LAUNCELOT SANDERSON.)

STEAMSHIP EURANA *v.* BURRARD INLET TUNNEL AND BRIDGE COMPANY. (*a*)

ON APPEAL FROM THE EXCHEQUER COURT OF CANADA.

Canada—Railway bridge over navigable channel—Obstruction to navigation—Damage caused to ship—Statutory authority—Interference amounting to public nuisance—Railway Act (*R. S. Can.*, 1927, *c.* 170), *ss.* 3, 245, 248.

The respondent company, which was incorporated by a Dominion statute (9 *&* 10 *Edw.* 7, *c.* 74), *built a railway bridge over the Second Narrows in the harbour of Vancouver, B.C. By sect.* 16 *of that Act the Railway Act, c.* 68, *Statutes of Canada* 1919, *was made applicable to the company. The general plan for the bridge was approved by the Governor in Council in* 1913. *In July* 1923 *the company obtained a construction order from the Railway Board, but the plans of the bridge approved by such order differed from the general plan approved in* 1913. *Further alterations were required by the Railway Board, and the work was finally completed in Aug.* 1925. *By sect.* 8 *of the Act it was provided that the bridge was "not to interfere with navigation."*

In an action for damages arising from a collision between the appellants' steamship E. and the respondents' bridge, in which the appellants counter-claimed for damages to their ship on the ground that the bridge was an unlawful obstruction to navigation.

Held (1) *on the facts, that the bridge in its present form substantially interfered with navigation;* (2) *that even if the provisions of the Railway Act had been strictly observed in every particular, the power to construct and maintain the bridge was limited by the express condition that it was not to interfere with navigation; and* (3) *that the defendants had suffered damage by reason of a substantial interference with navigation amounting to a public nuisance for which there was no statutory authority. The counterclaim must accordingly be remitted for damages to be assessed.*

Decision of the Exchequer Court of Canada (1930) *Ex. C. R.* 38, *reversed.*

APPEAL from the judgment of Maclean, J. President of the Exchequer Court of Canada, dated the 8th Dec. 1929, affirming the judgment of Martin, L.J.A. for the Admiralty District of British Columbia. The appellants' steamship *Eurana* collided with the respondents' bridge across the Second Narrows of Vancouver Harbour while endeavouring to navigate through the bascule span in the bridge. The plaintiffs, the present respondents, claimed damages against the defendants, the present appellants, in respect of injury to their bridge, and the appellants counterclaimed for damages to their ship arising out of the bridge being an obstruction to navigation. The respondent company was created by Act of Parliament of Canada (9 & 10 Edw. 7, c. 74) with powers to build and operate a railway, including the bridge in question; and the Act incorporated the Railway Act. By sect. 8 the bridge was "not to interfere with navigation." Sect. 245 contained a general prohibition against impeding free navigation of any river, water, or canal over which the railway was carried. By sect. 248 before commencing the work the company had to submit to the Minister of Public Works for approval by the Governor in Council a general plan of the works to be constructed, and after approval apply to the board for an

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law.

order authorising the construction of the works. By sect. 3 the Act was to be construed as incorporate with the special Act, but where the provisions of the Act and of any special Act passed by the Parliament of Canada related to the same subject-matter the provisions of the special Act were, in so far as was necessary to give effect to such special Act to override the provisions of the Railway Act. Both courts found the vessel not to blame for the damage to the bridge, and there was no appeal from that decision. On the counterclaim that the damage was due to the bridge being an unlawful obstruction to navigation the trial judge found that the bridge substantially increased the natural difficulties of navigation, but he found, on the other hand, that the bridge was authorised by statute to be there in its existing form, and that the shipowners had no cause of action. The President of the Exchequer Court agreed with the trial judge as to statutory authority for the erection of the bridge. The case is reported (1930) Ex. C. R. 38. The shipowners appealed.

Martin Griffin, K.C. and *G. St. C. Pilcher* for the appellants.

Dugald Donaghy, K.C., *Theobald Mathew* and *Edmondson* for the respondents.

The considered opinion of their Lordships was delivered by

Lord ATKIN.—This is an appeal from a judgment of the President of the Exchequer Court of Canada dismissing an appeal from the Trial Judge in Admiralty for the Admiralty district of British Columbia. The action was brought by the Burrard Inlet Tunnel and Bridge Company, the present respondents, hereafter called the bridge company, against the owners of the steamship *Eurana* for damages sustained by the bridge company through the ship coming into collision with their bridge over the Second Narrows in the harbour of Vancouver. The shipowners counterclaimed against the bridge company in respect of the damage to their ship caused by the collision, alleging that the bridge was a wrongful obstruction to the navigation of the harbour. Both claim and counterclaim were dismissed by the trial judge, and on appeal by the shipowners the judgment dismissing their counterclaim was affirmed by the president of the Exchequer Court.

The harbour of Vancouver runs for some miles inland easterly from the sea. At two points known as the First and the Second Narrows the waterway is contracted. The bridge in question is built over the Second Narrows. It carries both a railway track and a road track and appears to afford a valuable connection between N. and S. Vancouver and the railways on either side of the harbour. It consists of five spans built on piers, some of which are in the waterway. The height is 22ft. above high water level, but one of the spans, 150ft. in width, is raised by a bascule and thus affords means for the passage of vessels. The navigable channel taken from the five-fathom lines at low water is at the site of the bridge 500ft. The adjacent land slopes more steeply to the water level on the south side than on the north. The ordinary course of navigation before there was a bridge was towards the southerly side of the waterway; the bascule span is the southernmost span of those covering the original navigable waterway. The tide runs both ways with considerable velocity, ranging from four to seven knots at flood on different tides. Before the bridge was built the Narrows were navigable at all stages of the tides by smaller vessels; larger vessels avoided the full strength of the larger tides, but otherwise were not restricted. The effect of the construction of the bridge is that, owing to the proximity of the open span to the southern shore, the space available for outgoing vessels to line up for the span is inconveniently restricted, and that all vessels are exposed to cross-currents sometimes acting only beneath the surface, which set them either away from the opening or across the bridge. The result is that it is found undesirable to navigate through the bridge except at slack water, which lasts about half an hour. Navigable hours, therefore, are confined to about two hours in the twenty-four. The difficulty of the navigation is illustrated by the collision in question. The *Eurana*, a steamship of 5,689 tons gross, 400ft. in length, 56ft. beam, was proceeding outward under charge of a pilot in daylight at 6 p.m. in March 1927. The tide was low water slack. She had straightened to pass the span, but when about 600ft. away and under slight starboard helm, her speed being about four knots, she took a sheer to starboard, and though engines were reversed and both anchors dropped, she collided with the central span of the bridge and suffered considerable damage to her top hamper. The trial judge found her not to blame, a decision affirmed by the president, from which there has been no appeal to this board. The ship counterclaims against the bridge company on the ground that the damage was due to the bridge being an unlawful obstruction to navigation. The trial judge found that the bridge substantially increased the natural difficulties of navigation in three respects: in contracting the space in which it is necessary for ships to line up outwards, and to manœuvre after passing inwards; in adding to the uncertain conditions of tidal currents in the vicinity of the bridge, and in increasing the force of the current through the open span. The learned judge, however, found that the bridge was authorised by statute to be there in its existing form and that the shipowners had no cause of action. The learned president agreed with the trial judge as to statutory authority, and did not find it necessary to express an opinion as to the effect of the bridge on navigation, except for a statement that at the time and place in question conditions prevailed that undoubtedly made navigation through the bascule span extremely

difficult. There was evidence that since the bridge was opened in Nov. 1925, and before the trial in Nov. and Dec. 1928, several other vessels had either collided or narrowly avoided collision with the bridge.

Having regard to the facts stated above and in particular to the important circumstance not mentioned by the trial judge that owing to the construction of the bridge navigation is now confined to the periods of slack water amounting in all to only about two hours of the twenty-four, their Lordships have no doubt that it was proved that the bridge in its present form substantially interferes with navigation. Unless, therefore, the bridge company can establish statutory authority for erecting such a bridge, they have caused a public nuisance by obstructing the navigable highway; and the shipowners who have suffered special damage in the damage caused to their ship by the nuisance will have a cause of action against them for damages.

It is necessary, therefore, to consider the statutes and the executive orders thereunder upon which the plaintiffs rely. The bridge company was incorporated by a dominion statute (9 & 10 Edw. 7, c. 74), an Act to incorporate the Burrard Inlet Tunnel and Bridge Company. By sect. 8: "The company may lay out, construct, operate, maintain and use a tunnel under the First Narrows of Burrard Inlet and a bridge over the Second Narrows of Burrard Inlet for foot passengers, carriages, street, railway and railway purposes with the necessary approaches from some convenient points on the south shore in or near the city of Vancouver to points on the opposite shore of Burrard Inlet so as not to interfere with navigation." The section proceeds to give powers to construct and operate lines of railway to connect with the lines of certain scheduled companies. By sect. 16 "The Railway Act shall apply to the company and its undertaking." It is to be observed that the authority given by the special Act is to construct and maintain a bridge "so as not to interfere with navigation." Relying on the special Act alone, the bridge company obtain no protection for a bridge which does interfere with navigation. But the plaintiffs found themselves on the provisions of the incorporated Railway Act. Under that Act they say they have to submit their plans to the Governor in Council and to the Railway Board, who are specially charged to consider matters of navigation, and without whose authority they may not construct the bridge. The Governor in Council and the Railway Board are, it is said, the bodies designated to decide whether the bridge interferes with navigation or not, and, if they are satisfied, no further question arises. Their Lordships cannot accept this contention. The Railway Act, a general Act, contains a fasciculus of clauses under a heading "Respecting Navigable Waters," which contains provisions for the protection of rights of navigation. Sect. 245 contains a general prohibition against causing obstruction in or impeding free navigation of any river, water, stream or canal over which the railway is carried. By sect. 47, whenever the railway is proposed to be carried over any navigable water by means of a bridge, the board may direct with what spans or headway or opening spans the bridge shall be constructed, "as to the board may seem expedient for the proper protection of navigation." By sect. 248, when the company desires to construct a bridge over navigable waters, the company, before commencing the work, shall submit to the Minister of Public Works for approval by the Governor in Council a general plan of the site and of the works to be constructed, and after approval apply to the board for an order authorising the construction of the work, transmitting the approved plans and also detail plans. No deviation from the site or plans approved by the Governor in Council is to be made without the consent of the Governor in Council. The board may alter the detail plans, and make an order for the construction of the work (sub-sect. (4)), and upon such order being granted the company shall be authorised to construct such work in accordance therewith; on completion the board may grant an order authorising the use or operation of the work. The Bridge Company from time to time made various applications for approval of their plans and for authority to construct and use the work, and obtained various orders upon which they rely. The shipping company contest the validity of these orders, alleging that the statutory requirements were not observed.

That the strict provisions of the statute were departed from is beyond question. In 1913 the company submitted to the Governor in Council a plan for a swing bridge. This was approved, but nothing further was done. In April 1923, the company submitted to the Governor in Council the plan of a bascule bridge and obtained approval. They then submitted this plan for approval, with detail drawings, to the Railway Board. They obtained a construction order from the Railway Board in July 1923, but the plans of the bridge approved by such order differed from the general plan approved by the Governor in Council. The latter provided for two spans and four piers; the new plans for three spans and five piers; the length of the bridge was altered, and the position of some of the piers was substantially changed. In 1924, when a considerable part of the work was done, fears were entertained as to the effect on navigation. A board of consulting engineers was set up, and in accordance with their recommendations plans were prepared showing alterations by raising the bridge 5ft., constructing two additional spans, making alteration in the structure of the piers, and dismantling and reconstructing part of the trestle superstructure.

These plans were submitted direct to the Railway Board and a construction order obtained in Mar. 1925. The bridge was constructed in accordance with these plans, and it was not till Aug. 1925, when the work was practically complete, that the new plans were

submitted for the approval of the Governor in Council. They were on this occasion not submitted by the Bridge Company on the recommendation of the Minister of Public Works under the Railway Act, but were submitted by the Vancouver Harbour Commissioners on the recommendation of the Minister of Marine and Fisheries under the Vancouver Harbour Commissioners Act for the purpose of obtaining permission to assist the Bridge Company financially to meet the expenses of altering the bridge. In Oct. 1925 the Railway Board made an order authorising the use of the bridge. The learned President was of opinion that though there might have been laxity in observing the precise directions of the statute, yet the precise order in which the Governor in Council and the Railway Board approved the plans was not of importance and the procedural defaults were waived in the final sanction of the plans of the bridge as completed. He came to the conclusion that the statutory conditions were complied with within the spirit and intent of the Railway Act. In the view their Lordships take of the case it is not necessary to express a final opinion upon this part of the case. They content themselves with saying that there is excellent authority for requiring statutory conditions to be strictly fulfilled if interference with public rights is to be justified. They must not be taken to assent to the view expressed on this part of the case in the courts below.

But even if it be assumed that the provisions of the Railway Act were strictly observed in every particular, will the Bridge Company be protected if in fact the bridge, when constructed, does interfere with navigation? In their Lordships' opinion there can be only one answer. The special Act which constitutes the Bridge Company and confers upon them the power to construct and maintain the bridge limits the power by the express condition that the bridge is not to interfere with navigation. This stipulation in favour of public rights controls the whole activities of the company. It is absolute and it cannot be supposed that the incorporation of provisions of a general Act implied the intention of the Legislature that nevertheless the bridge might interfere with navigation if the Railway Board so permitted. Their Lordships would have no difficulty in arriving at this conclusion apart from the express provisions of the Railway Act itself regulating the consequences of its incorporation with the special Act. But when those provisions are examined the conclusion is confirmed. By sect. 3 except as in this Act otherwise provided: "(*a*) This Act shall be construed as incorporate with the special Act. (*b*) Where the provisions of this Act and of any special Act passed by the Parliament of Canada relate to the same subject-matter the provisions of the special Act shall in so far as is necessary to give effect to such special Act be taken to override the provisions of this Act."

The provisions of the special Act with which this case is concerned deal with the same subject-matter as the general Act, namely, the protection of public rights of navigation. Even if, therefore, the protection of navigation in the Railway Act is qualified by the discretion of the Railway Board, as to which their Lordships express no opinion, that qualified protection would be overridden by the absolute protection which in their Lordships' opinion was given by the special Act. It is quite a different matter when the powers of the general Act to protect the public are invoked so as to interfere with the plans of the undertaking under the special Act having no special reference to public protection. There, as has been decided by the board in *Canadian Pacific Railway Company* v. *Corporation of Toronto and others* (104 L. T. Rep. 724; (1911) A. C. 461), the subject-matter is not the same.

Their Lordships, therefore, are of opinion that the defendants have suffered damage by reason of the construction and maintenance by the Bridge Company of a substantial interference with navigation amounting to a public nuisance, for which the defendants have no statutory authority. They are of opinion that the appeal should be allowed, and that so much of the order of Maclean, J. as dismissed the defendants' appeal with costs be set aside, and that so much of the judgment of Martin, J., dated the 22nd April 1929, as dismissed the counter-claim with costs and directed that the costs of the counter-claim be set off against the costs of the action, be set aside, and that in lieu thereof judgment be entered for the defendants on the counter-claim for damages to be assessed, and that the counter-claim should be remitted to the judge of the British Columbia Admiralty District. They will humbly advise His Majesty accordingly. The plaintiffs must pay the costs of the counter-claim and of the defendants' appeal to the Exchequer Court and of this appeal.

Appeal allowed.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Monday, Jan. 26, 1931.

(Before ROWLATT, J.)

WETHERALL AND CO. LIMITED *v.* THE LONDON ASSURANCE. (*a*)

Insurance (Marine)—General average—Time charter—Voyage charter—Damage to vessel in avoiding collision—Repairs carried out after termination of voyage—Claim by shipowners to be indemnified for loss of time hire—York-Antwerp Rules, rr. C., X. (d), *XI., XVIII.—Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *s.* 66.

(*a*) Reported by R. A. YULE, Esq., Barrister-at-Law.

The plaintiffs were the owners of the steamship B., which was insured with the defendants. On prosecuting a voyage she took the ground in avoiding a collision. After being refloated she accomplished her voyage, and then went into dock for repairs. She had suffered a general average damage and also particular average damage, and both sets of repairs were carried out simultaneously. The plaintiffs claimed indemnity under the policy for loss of freight while the vessel was under repair, basing their claim on the York-Antwerp Rules which were incorporated in the policy.

Held, that the defendants were not liable. The direct authority was The Leitrim (9 *Asp. Mar. Law Cas.* 317; 87 *L. T. Rep.* 240; (1902) *P.* 256), *and though the Marine Insurance Act was passed after that decision there was nothing inconsistent in sect.* 66 *of that Act with that case. Nor did rule C. of the York-Antwerp Rules* 1924, *which negatived only a claim for delay during a voyage, impliedly admit delay after the voyage.*

Action tried before Rowlatt, J. upon an agreed statement of facts.

The plaintiffs were the owners of the steamship *Blacktoft*, and as such, fully interested in a policy of marine assurance, dated the 19th Feb. 1929, by which the defendants, the London Assurance, insured the plaintiffs for part of the value of the steamer from the 20th Feb. 1929 to the 20th Feb. 1930, against the ordinary perils in respect thereof. The policy incorporated clause 9 of the Institute Time Clauses, Hulls, which provides, *inter alia*, that where the contract of affreightment so provides the general average adjustment shall be in accordance with the York-Antwerp Rules 1890 or 1924. In May 1929, the steamer loaded a cargo of coals at Goole for carriage to Rouen under the following contracts: (*a*) A time charter dated the 13th Nov. 1928, made between the plaintiffs as owners and Fenwick (W. F.) and Co. Limited, as charterers: (*b*) a voyage charter dated the 23rd May 1929 made between Fenwick (W. F.) and Co. Limited as owners, and the Humber Coal Company Limited, as charterers; (*c*) a bill of lading dated the 28th May 1929 duly signed by the master of the steamer and in which the Humber Coal Company Limited appeared as shippers. Each of these documents provided that general average should be settled in accordance with the York-Antwerp Rules 1924. The steamer left Goole at ten a.m. on the 29th May 1929, but a quarter of an hour later, in swerving to avoid a collision with another vessel, she took the ground on Goole Ness. She was not refloated until 12.45 p.m. on the 30th May 1929. The steamer suffered particular average damage which, together with certain other such damage on the 11th June 1929, amounted to 446*l.* 5*s.*, and general average damage which amounted to 432*l.* 5*s.* After being refloated, the steamer proceeded to Rouen, where she discharged her cargo on or about the 4th June 1929, and on her return carried another cargo from London to Goole. She then went into the Alexandra Dock, Hull, where she remained under repair from the 11th June to the 20th June 1929, the total period being nine days nine-and-a-half hours. The particular average repairs and the general average repairs were carried out concurrently and completed simultaneously. If the two sets of repairs had been carried out separately each would have occupied substantially the same time as was occupied in doing both together, namely, nine days nine-and-a-half hours. The plaintiffs estimated their loss by reason of the detention at 145*l.* 18*s.* 7*d.* made up of loss of time-hire or, alternatively, demurrage or loss of profit, less certain expense saved. An average statement dated the 13th Nov. 1929, apportioned the above loss attributing 71*l.* 16*s.* to general average damage, and 74*l.* 2*s.* 7*d.* to particular average damage. Including certain commission and interest charges, the total amount allowed in general average was 74*l.* 14*s.* 8*d.* If this amount were correctly allowed then if the plaintiffs were entitled to be indemnified by the defendants under the policy, their proportion would be 4*l.* 7*s.* 6*d.* as for a general average sacrifice, or 3*l.* 19*s.* as for a general average expenditure. The plaintiffs claimed one or other of these proportions. The defendants pleaded that the delay or detention of the steamer was outside the scope of a general average loss.

Miller, K.C. and *W. L. McNair* for the plaintiffs.

Le Quesne, K.C. and Sir *Robert Aske* for the defendants.

Rowlatt, J.—In this case the question is whether the plaintiff shipowners can recover against the underwriters in respect of delay to the ship, while repairs necessitated by a general average act were being executed after the voyage had been completed. The facts are embodied in an agreed written statement upon which the case was argued. I need not here set them out again.

The first point in logical order—for if it succeeds it excludes all other points—taken for the defendants was that the ship was bound to suffer this delay for the purpose of repairs due to a particular average loss incurred before the general average, and that, as the general average repairs were done in the same period, there was no delay attributable to the general average act. In my view it is not clear that the facts were as suggested, and the statement of facts upon which my decision was invited was not drawn to bring out this point. It seems to me that some of the particular average damage involved in the casualty of stranding may have occurred after some, at least, of the general average damage happened. If so, the general average loss was not incurred by a vessel already doomed to this delay (if I may use that expression) in respect of a particular average loss, and the point fails.

Another point which was mooted was whether the York–Antwerp rules were under

clause 9 of the Institute Time Clauses to be interpreted according to the French or English practice. I intimated my opinion that the English practice is the relevant one. The contention that it is the French is open to the plaintiffs in another court.

The question that remains may be stated thus: Mr. Miller, for the plaintiffs, contended that under the Marine Insurance Act, s. 66, and the York–Antwerp Rules, as understood in this country, loss by delay for the purpose of executing such repairs as these was in principle recoverable subject to an exception laid down in *The Leitrim* (9 Asp. Mar. Law Cas. 317; 87 L. T. Rep. 240; (1902) P. 256) as regards delay during the voyage when other interests were suffering delay also.

Mr. Le Quesne, on the other hand, contended that all delay was outside the scope of a general average loss altogether. He supported his argument by a critical examination of r. C. of the York–Antwerp Rules and by reference to rules XI., XVIII., and X. (*d*). He also argued that such cases as *The Field Steamship Company Limited* v. *Burr* (8 Asp. Mar. Law Cas. 348, 529; 80 L. T. Rep. 445; (1899) 1 Q. B. 579) and *Shelbourne* v. *The Law Investment Corporation* (8 Asp. Mar. Law Cas. 445; 79 L. T. Rep. 278; (1898) 2 Q. B. 626) show that delay is not for the present purpose a direct consequence of the general average act.

In *Field* v. *Burr* (*sup.*) it was held that the cost of discharging a cargo which had become putrid in consequence of a collision was not recoverable by the shipowner under a policy on hull and machinery. In *Shelbourne* v. *The Law Investment Corporation* (*sup.*) a barge owner failed to recover from his underwriters in respect of delay in doing repairs necessitated by a collision. The policy in the present case, said Mr. Le Quesne, is on hull and machinery, and consequently here, too, loss consequential on the actual damage, but outside the cost of repair, cannot be recovered. In the view I take it is not necessary, and therefore not advisable, to discuss the relevance of such cases to claims for a general average loss, a conception derived primarily from the contract of affreightment. In my view the defendants here are entitled to succeed in this court upon the direct authority of the judgment of Gorell Barnes, J. in *The Leitrim* (*sup.*). The material passage (9 Asp. Mar. Law Cas., at p. 321; 87 L. T. Rep., at p. 243; (1902) P., pp. 268, 269) is as follows: " But it does not at all follow that the mere loss of the profitable employment of the vessel as distinguished from actual expenses should in such a case be allowed. In the first place, so far as I can ascertain, a loss of this character has never been claimed in general average. It is not introduced in the York–Antwerp Rules, nor can I find any trace of it being allowed by the laws of any foreign country, though many of them contain provisions as to the allowance in the general average of the wages and maintenance of the crew. It may be said, why on principle should not the loss of time be compensated for where that loss is due to the necessity for repairing damage, itself the subject of general average? I think the answer is that although possibly there may be cases in which the loss of time is not common to all concerned, at any rate in cases like the present the loss of time is common to all the parties interested, and all suffer damage by the delay, so that the damage by the loss of time may be considered proportionate to the interests and may be left out of consideration."

It seems to me that, when the learned judge speaks of a " loss of this character " as being hitherto unknown and not introduced by the York–Antwerp Rules, he was speaking of all delay, and when, in pointing out that all interests are involved in the delay and that it is impracticable to work out all the claims, he allows that possibly there may be cases where the delay does not affect them all. He does not mean that in these cases there would be exceptionally be a different rule, but is indicating that the possibility of such cases does not affect the practical principle.

I have not forgotten that the Marine Insurance Act was passed after the decision in *The Leitrim* (*sup.*), but I cannot read the language of sect. 66 as inconsistent with it. Nor do I forget that rule C. of the York–Antwerp Rules 1924 negatives only a claim for delay during the voyage. But I cannot accept the view that this rule by the omission expressly to exclude impliedly admits delay after the voyage. From one point of view, as Mr. Le Quesne said, one would think it was excluded *a fortiori*, or to put it in another way, a claim in that respect may not have been contemplated as calling for mention.

In the result, there must be judgment for the defendants with costs.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Monday, Jan. 12, 1931.

(Before Lord MERRIVALE, P.)

THE ESKBRIDGE. (*a*)

Action in rem—*Claim for freight—Owner of the ship domiciled in England—Judicature* (*Consolidation*) *Act* 1925 (15 *&* 16 *Geo.* 5, c. 49), *s.* 22—*Administration of Justice Act* 1928 (18 *&* 19 *Geo.* 5, *c.* 26), *s.* 6.

The Admiralty Court has no jurisdiction to entertain an action in rem *for freight by the owner of a ship domiciled in England.*

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

MOTION to set aside the writ and subsequent proceedings.

By a writ *in rem* the plaintiffs, North of England Steamship Company Limited, owners of the steamship *Eskbridge*, claimed against the defendants, the owners of 480 quarters of wheat ex the steamship *Eskbridge*, 338*l.* 13*s.* 3*d.*, being insurance charges and freight due in respect of the carriage of the said cargo, arising out of an agreement relating to the use or hire of the *Eskbridge*, and the expenses of storage, realisation, and costs. The writ was stated to have been issued by Messrs. Botterell and Roche, agents for Messrs. Botterell, Roche, and Temperley, of West Hartlepool, solicitors for the plaintiffs, who reside at West Hartlepool.

The *Eskbridge* was chartered by Arcos Limited, as agents for Exportlieb, of Leningrad, to carry a cargo of grain to Hull, where she arrived on the 21st Nov. 1930. On that date the bills of lading had not reached the consignees, and the cargo was accordingly discharged into a warehouse at Hull in the names of the shipowners. The plaintiffs' agents at Hull then agreed to release the cargo to the consignees upon receiving from them an indemnity against any loss or damage resulting from release without production of the bills of lading, and payment of freight. The receivers accordingly gave the necessary indemnity, and paid the sum of 3200*l.* in respect of the freight. The shipowners then repudiated the action of their agents in agreeing to release the cargo upon a letter of indemnity and payment of 3200*l.*, and claimed freight and insurance charges amounting to 3538*l.* 13*s.* 3*d.* On the 2nd Dec. 1930 the shipowners issued the writ *in rem* in the present action for the balance of freight and insurance charges due, amounting to 338*l.* 13*s.* 3*d.* The defendants refused to accept service of the writ, and the plaintiffs thereupon proceeded to serve the writ on the wheat lying in the warehouse without separating from the whole 448 quarters, the quantity upon which the freight represented the sum in dispute. On the 9th Dec. the bills of lading were received and presented to the plaintiffs together with the full amount of the freight and insurance charges due, and the plaintiffs released the whole cargo to the receivers. The defendants then entered an appearance under protest, and moved to set aside the writ and subsequent proceedings.

By sect. 22, sub-sect. (1) (*a*) (xii.), of the Supreme Court of Judicature (Consolidation) Act 1925 (15 & 16 Geo. 5, c. 29) the High Court has Admiralty jurisdiction to hear and determine "any claim (1) arising out of an agreement relating to the use or hire of a ship; or (2) relating to the carriage of goods in a ship . . . unless it is shown to the court that at the time of the institution of the proceedings any owner or part owner of the ship is domiciled in England." By sect. 4, as amended by sect. 6 of the Administration of Justice Act 1928 (18 & 19 Geo. 5, c. 26), it is provided that "Without prejudice to the provisions of this Act relating to the distribution of business in the High Court, all jurisdiction vested in the High Court under this Act shall belong to all the Divisions alike."

Cyril Miller for the defendants.—There is no jurisdiction to entertain an action *in rem* where the owner of the ship is domiciled in England. Here it appears from the writ that the owner is domiciled at West Hartlepool; and there is, therefore, no jurisdiction to entertain the action.

Sir *R. Aske* for the plaintiffs.—The proviso to sect. 22, sub-sect. (1) (*a*) (xii.), does not apply where the owner of the ship is plaintiff. The proviso ought to be construed to apply only where it is sought to proceed against a vessel the owner of which is domiciled in England. The earlier statutes show that the intention of the Legislature was always to prevent a vessel from being made liable in an action *in rem* where the owner was capable of being proceeded against *in personam.* If the section is to be construed in the manner contended for by the defendants the result will be to place British shipowners at a substantial disadvantage with foreign owners, since the latter will have the benefit of being able to proceed *in rem.* It cannot be supposed that the Legislature intended such a differentiation which in practice would be very unfair. Sect. 6 of the Administration of Justice Act 1928 has now made it plain that all judges of the High Court enjoy, and may exercise, identical jurisdiction. To this extent the decision of the Court of Appeal in *The Sheaf Brook* (17 Asp. Mar. Law Cas. 157; 134 L. T. Rep. 534; (1926) P. 61) is now obsolete.

Lord MERRIVALE, P.—The discussion which has been raised on this motion relates to a point of considerable practical importance. The position was this. The shipowners, having their residence within this jurisdiction, being a company registered in England, brought to Hull from a Russian port a cargo of grain in bulk. The cargo was consigned to another English company. When the cargo arrived at Hull it was found that no bills of lading were available and the owners of the cargo were not personally present to take delivery. So the cargo owners were in default and neither by themselves nor by their assignees were they in a position to take delivery. All the difficulties in the case have arisen out of that default of the cargo owners. There were negotiations and the assignees of the cargo, the English assignees, who had not at the time the bills of lading, proposed that the goods should be delivered on payment of a sum which did not amount to the whole freight, and on the giving of a letter of indemnity to the shipowners. The shipowners' agents were minded to do business by way of agreement, but not to do business upon precisely the terms proposed, and the negotiations broke down. If it were material I should have been disposed to hold that no shipowner could be bound by such a contract as that which was alleged against the agents of the shipowners in respect of this cargo.

The matter being in that situation, on the 2nd Dec. 1930 the shipowners issued a writ for freight amounting to 338*l.*, which they attributed to a certain parcel of cargo as 480 quarters of wheat lying in a Hull warehouse. They were in this difficulty, that they had notice of the existence of alleged owners of cargo, but they had no bills of lading presented, and they had no owner of the cargo within the jurisdiction who at that time was offering them the whole freight in exchange for delivery. They were also perhaps in some uncertainty as to the question who was in truth at the moment the person entitled to claim delivery of the bulk cargo. No doubt after some consideration of the relevant statute they came to the conclusion that they could effect service of their writ by identifying a parcel of the cargo, 480 quarters, and issuing the writ as a writ in an action *in rem* against that parcel of the cargo, making that parcel the *res.* There was no specific parcel of 480 quarters, but they met that difficulty by conversation with a representative of the railway company, who said that if it would facilitate business they would take care that the tail end—the residue—of a parcel of the grain in a particular granary should not be released until the shipowners were settled with. So there was a kind of notional proceeding by which the writ was taken to be served upon that *res.* A few days afterwards the bills of lading arrived and the holders of the bills of lading, having by that time a complete title to the grain, claimed it, paid the freight, and received the cargo.

The action commenced by the writ on the 2nd Dec. was in the air. The business part of the transaction had been cleared up, but the writ was outstanding, and the question now remaining is, who shall pay the costs to which the shipowners have been put by reason of the delay in taking delivery of the cargo, owing to the bills of lading not being forthcoming. The argument addressed to me has been directed to ascertaining whether the defendants named in the writ, the owners of that parcel of cargo, who have now appeared and are identified as the owners, are liable for the costs of this action, or whether the costs must fall upon the shipowners, because—as suggested by the defendants—there was no jurisdiction which warranted the issue of a writ *in rem* in the Admiralty Division at the time when the writ was issued and there was no High Court jurisdiction to deal with this claim.

That has been stoutly contested, and I feel the force of the argument addressed to me by Sir Robert Aske as to the advantage there would be, apparently, in a practice where, as a matter of business, if a shipowner who is brought into an English port does not find an owner of the cargo at the dockside ready at the proper time to receive it, he should be entitled to proceed and clear up the transaction by dealing with the wheat and exacting from its owner, by the sale of the wheat if necessary, the amount due for freight.

That, however, is not the matter which is in question here. This is not a branch of the Legislature but a Division of the High Court of Justice, and the question is whether there is jurisdiction to clear up the matter in the manner proposed by the plaintiffs. It is conceded that before 1920 there was in the High Court no power by which such steps as were taken here could rightfully be taken in the exercise of the jurisdiction of the court. It is quite immaterial that in the county courts, under particular statutes, there is a limited power to deal with small matters in some such way ; but what is conceded is that down to 1920 there was not in the High Court this power purported to be exercised here. Therefore, the real question in the case is whether the Administration of Justice Act 1920 and the Supreme Court of Judicature (Consolidation) Act 1925—in which the additional powers of the Act of 1920 are incorporated—give to the shipowners in this case the right or power to take proceedings which in fact they have taken.

The material provision of the Act of 1925 is sect. 22, sub-sect. (1) (*a*) (xii.). That provides that the High Court shall in Admiralty matters have jurisdiction in respect of any claim arising out of an agreement relating to the carriage of goods in a ship " unless it is shown to the court that at the time of the institution of the proceedings any owner or part owner of the ship was domiciled in England." It is admitted that the owners of this ship, being an English company, were domiciled in England, and this section provides that the jurisdiction of the High Court shall be jurisdiction in respect of claims relating to the carriage of goods in a ship, unless the shipowners—these present plaintiffs—are at the material time domiciled in England. When the matter is put in that way it seems to me clear that the limited jurisdiction given by the statute of 1920, incorporated in the Consolidation Act of 1925, does not extend to the present case.

Sir Robert Aske very persuasively presented the case of the plaintiffs. He pointed out its great hardship. First of all, he said that they ought to be at least as well off as plaintiffs not domiciled in this country. Why, he asked, should English shipowners be at a disadvantage compared with alien shipowners ? It is really not the function of this court to answer that question, but if it were I could invent a good many reasons why it might be thought that foreign owners of a ship brought here under a contract, who had not advantages possessed by persons domiciled within the jurisdiction, should be given facilities for clearing up business which were not necessary in the case of a shipowner domiciled here. I am not persuaded by the *argumentum ab inconvenienti.*

Then it is said that one must construe these powers under the Act of 1920, incorporated in the Act of 1925, with due regard to the provisions of the Admiralty Court Act 1861. What that Act provided by sect. 6 was that an owner or consignee or assignee of goods carried into any port in England or Wales in any ship might

proceed under the Admiralty jurisdiction in respect of damage done to the goods, or any part thereof, by negligence or breach of the contract of carriage, unless it is shown to the satisfaction of the court that at the time of the institution of the cause any owner or part owner of the ship is domiciled in England or Wales. It is damage done by the ship. It relates to a totally different matter. It gives the owner of goods a right to proceed *in rem* where he is not able to proceed *in personam*. It does not seem to me that the provision in the Act of 1861 has any real bearing on this case.

Then it is said that there has been a decision in *The Sheaf Brook* (17 Asp. Mar. Law Cas. 157; 134 L. T. Rep. 534; (1926) P. 61) where, if one gives the widest possible interpretation to some of the wording of the judgments in the Court of Appeal, one might spell out of them a meaning of the section in question which that section would not otherwise have.

Judgments, as well as statutes, must be construed with regard to the subject-matter and business under consideration, and when I construe the judgments in *The Sheaf Brook* (*sup.*) with regard to the position in which this case stands I do not find that it really helps me. At any rate it does not help the plaintiffs to sustain the argument which has been presented on their behalf.

I think this writ is outside the jurisdiction of the court, and there can be no further proceedings upon it except that the plaintiffs—though I sympathise with them—must bear the costs to which they have put the defendants.

Supreme Court of Judicature.

COURT OF APPEAL.

Jan. 30, *Feb.* 2, 3, 4 *and* 16, 1931.

(Before Scrutton, Greer and Slesser, L.JJ.)

Foscolo Mango and another v. Stag Line Limited. (a)

Charter-party — Bill of lading — Liberty to call at any ports in any order for "bunkering or other purposes" — "Trial trip"— Whether deviation—"Any reasonable deviation"—Rule that deviation excludes right to rely upon exceptions—Whether still exists, after Act of 1924*—Loss of c.i.f. cargo at sea, before property has passed—Measure of damages—Carriage of Goods by Sea Act* 1924 *(*14 *&* 15 *Geo.* 5, *c.* 22*) Schedule, Rules Relating to Bills of Lading, Art. IV., rr.* 2 *and* 4.

Plaintiffs V. sold a cargo of coal to plaintiffs F. on c.i.f. terms for delivery from Swansea to Constantinople. By the bill of lading, the coal was to be carried from Swansea to Constantinople by steamship Ixia *with liberty . . . to call at any ports in any order for bunkering or other purposes or to make trial trips after notice . . ." By the bill of lading all the provisions of the Carriage of Goods by Sea Act* 1924 *were to apply to the contract. By Art. IV., r.* 2, *in the schedule to that Act: "Neither the carrier nor the ship shall be responsible for loss or damage arising or resulting from* [inter alia] *perils of the sea." And by rule* 4 *of the same article: "Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom."*

The ship was fitted with Wyndham's superheater, and Wyndham's engineer and the superintendent engineer of the defendants, the shipowners, joined the ship at Swansea to test the superheater, when on the voyage. In the ordinary course the test would have been completed by the time the ship reached Lundy, and the two engineers could then have left the ship with the pilot. In fact, some of the firemen were drunk when the ship left Swansea, and so no proper head of steam could be obtained such as was required for the test. The captain therefore arranged to carry on the engineers to conclude the test, and to put them ashore at St. Ives. The ship made a course rather more E. than it would have made but for this arrangement, and when off St. Ives, a course more E. into St. Ives Bay, where the ship lay for one-and-a-half hours about a mile from the shore, before the two engineers were taken off by boat. The ship then, instead of regaining the normal course, coasted, and a little way from St. Ives the captain left the second officer in charge of the vessel with instructions to keep her a mile-and-a-half off the shore (no compass bearing). Shortly afterwards the steamship Ixia *ran onto the Vyneck Rock, and eventually became a total loss. No notice had been given to the cargo-owners of the test, and the property in the cargo had not passed to the purchasers at the time of the loss.*

Held, (1) *that the course taken by the ship was not within the liberty "to call at any port or ports in any order for bunkering or other purposes." Detailed consideration by the court as to the construction of the words "bunkering or other purposes."*

Held, also (2), *that this was a "trial trip" without notice, was not part of the contract voyage, and was therefore a deviation, both in delay, and in route and risk.*

Held, also (3), *that the course taken by the ship was not a "reasonable deviation" within the meaning of Art. IV., r.* 4.

As to what is a "reasonable deviation" under Art. IV., r. 4.

Per Scrutton, L.J.: The interests to be considered must be those of the parties to the contract

(a) Reported by C. G. Moran, Esq., Barrister-at-Law.

adventure, which may involve consideration of the position of the underwriters. Rule 4 was not intended to extend the permissible limits of deviation (apart from deviation to save property), as stated in The Teutonia (1872, 1 *Asp. Mar. Law Cas.* 214 ; 26 *L. T. Rep., at p.* 52 ; *L. Rep.* 4 *P. C., at p.* 179).

Per Greer, L.J. : The words of rule 4 are not confined to cases of permitted deviation recognised at common law : (see The Teutonia, sup.). *The words mean a deviation whether in the interests of the ship or the cargo-owner or both, to which no reasonably minded cargo-owner would raise any objection.*

Per Slesser, L.J. : I adopt the view expressed by Wright, J. in Foreman and Ellams Limited *v.* Federal Steam Navigation Company (17 *Asp. Mar. Law Cas., at p.* 449 ; 138 *L. T. Rep., at p.* 584 ; (1928) 2 *K. B., at p.* 431) : " *Its reasonableness must depend upon what would be contemplated reasonably by both parties having regard to the exigencies of the route, known or assumed to be known to both parties.*"

Held, also (4), *that the rule of law that a deviating ship lost the benefit of the exceptions in the contract of carriage had not been abrogated by Carriage of Goods by Sea Act* 1924.

Held, also (5), *that the measure of damages was not* 6000*l., the contract price, but* 8000*l., the market price of the cargo at the date when it should have arrived at Constantinople : (see* Finlay and Co. *v.* Kwik Hoo Tong Handel Maatschappij, 17 *Asp. Mar. Law Cas.* 566 ; 140 L. T. Rep. 389 ; (1929) 1 *K. B.* 400).

Accordingly, as there had been deviation from the agreed contract voyage which was not a " reasonable deviation " under Art. IV., r. 4, the shipowners were not protected by the exception of " perils of the sea," and the appeal was dismissed.

APPEAL from a judgment of Mackinnon, J. in favour of the plaintiffs for 8000*l.*

Messrs. Vivian, who were added as plaintiffs after issue of the writ, sold a cargo of coals to Messrs. Foscolo Mango and Co., the original plaintiffs, who were dealers in coal at Constantinople, on c.i.f. terms under a contract for shipment by the steamship *Ixia*, and Messrs. Vivian undertook to insure the cargo at a valuation of the c.i.f. price, plus ten per cent. profit.

The terms of the contract of carriage were contained in the bill of lading dated the 29th June 1929, which incorporated all the terms, conditions, and exceptions contained in a charter-party dated the 14th June 1929, and also provided that " all the terms provisions and conditions of the Carriage of Goods by Sea Act 1924 and the Schedule thereto are to apply to the contract contained in this bill of lading. . . . If or to the extent that any term of this bill of lading is repugnant to or inconsistent with anything in such Act or Schedule it shall be void." The bill of lading provided that the coal should be shipped at Swansea in the *Ixia*, and contained the exception of " perils of the sea." The agreed route was expressed to be from Swansea to Constantinople " with liberty to sail without pilots, to call at any ports in any order for bunkering or other purposes, or to make trial trips after notice or adjust compasses, all as part of the contract voyage." Art. III., r. 1, of the Rules, relating to Bills of Lading in the Schedule to the Carriage of Goods by Sea Act 1924, provides that the carrier shall be bound before and at the beginning of the voyage to exercise due diligence to make the ship seaworthy. Art. IV. provides, in par. 1, that the carrier shall not be liable " for loss or damage arising or resulting from unseaworthiness unless caused by want of due diligence on the part of the carrier to make the ship seaworthy." Art. III., by rule 2, provides that : " Subject to the provisions of Art. IV. the carrier shall properly and carefully load, handle, stow, carry, keep, care for, and discharge the goods carried," and Art. IV., by rule 2, provides that : " Neither the carrier nor the ship shall be responsible for loss or damage arising or resulting from " *inter alia* " perils . . . of the sea." By rule 4 of Art. IV. : " Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom."

On the preceding voyage of the steamship *Ixia* there had been fitted on that vessel Wyndham's superheater, a device designed to preserve waste heat or steam for re-use, so as ultimately to diminish the bill for fuel. Complaints had been made about the working of this apparatus, and the defendants, the Stag Line Limited, shipowners, arranged that a representative of Messrs. Wyndham should investigate the complaints and make a test of the superheater on the steamship *Ixia* when she was starting on this voyage from Swansea. Accordingly, Messrs. Wyndham's engineer and the defendant's superintendent engineer joined the ship at Swansea. The intention was to make the test immediately on the ship leaving Swansea, when the two engineers could have left the ship with the pilot at or before reaching Lundy Island. In fact some of the firemen were drunk when the ship left Swansea, so that no proper head of steam was then obtained to carry out the test. The two engineers were unable to leave the ship with the pilot, and the captain arranged to carry on the engineers to conclude the test, and to put them ashore at St. Ives. The ship made a course rather more East than it would have made but for this arrangement, and when off the entrance to the port of St. Ives, a course was made so as to put into St. Ives Bay. The ship lay to about a mile from the shore, whistling for a boat which, on arrival, took off the two engineers. The ship, after laying to for one hour-and-a-half, proceeded round the coast towards Pendeen, and a little way out from St. Ives,

the captain left the second mate in charge of the vessel with instructions to keep a mile-and-a-half off the coast, without instructions to sail on any particular compass course. The steamship *Ixia* shortly afterwards ran on to the Vyneck Rock, was badly damaged, and eventually became a total loss. No notice had been given to the cargo-owners of the test.

The ship was lost on her first day out from Swansea, and the invoice, policy, bills of lading, and bills of exchange had not been sent by the plaintiffs, Messrs. Vivian, the sellers of the cargo, to the plaintiffs, Messrs. Foscolo, Mango, and Co., the purchasers, at the time of the loss, and they did not subsequently send them. Messrs. Vivian collected the money payable under the insurance policy as agents for Messrs. Foscolo, Mango, and Co., and eventually transmitted to them the difference between the insured value and the contract price. The market value of such coal as that lost had increased in Constantinople at the date when the cargo should have been delivered there. The plaintiffs claimed the market value of the coal at that date as damages for breach of the contract of carriage of the coal, which admittedly was not carried to and delivered at the agreed destination. The defendants pleaded by their defence that they were not liable on the contract, as the loss was due to perils of the sea. The plaintiffs replied that the defendants were not entitled to rely upon this exception as the shipowners had deviated from the agreed course.

Mackinnon, J. found that the usual and customary route for the voyage from Swansea to Constantinople was to pass a few miles south of Lundy, and then set a straight course to a point about five miles off Pendeen, near Cape Cornwall, and at that point to alter the course slightly to the East, to a line passing off Finisterre. He held that this was the route upon which by the contract the coal was to be carried. No doubt there was liberty "to call at any ports in any order for bunkering or other purposes." In his view that was a limited permission. The turning aside of the vessel into St. Ives Bay was for a purpose in which the cargo-owner had no interest, as he would have had for bunkering purposes. There was, therefore, a deviation from the agreed route.

It had been contended that the effect of the rules in the schedule to the Carriage of Goods by Sea Act 1924 was to annul the implication of the contract of carriage that a deviation from the agreed voyage destroyed the right of the shipowner to rely on the exceptions. It had also been contended that rule 4 of Art. IV. of the schedule was not permissive and additional, but controlling and restrictive, merely intimating those sorts of liberties as regards route in any bill of lading which alone should be regarded as permissible. He was unable to agree with either of those contentions. As to the construction of rule 4 of Art. IV., in his opinion the deviation to St. Ives Bay was not "a reasonable deviation" within the meaning of that rule.

As to damages, although after the loss of the cargo, Messrs. Vivian could not transfer any property in the coals to Messrs. Foscolo, Mango, and Co., because the coals had ceased to exist, they were bound under the c.i.f. contract to transfer to them the choses in action represented by the documents, one of which was the right of action against the ship under the bill of lading for damages for breach of the bill of lading in not carrying the coals to Constantinople. Though the cause of action had accrued when the bill of lading was still held by Messrs. Vivian it was for damages of which the measure was the market value when the coals should have been delivered at Constantinople, the value that by handing over the documents in pursuance of their c.i.f. contract they transferred to Messrs. Foscolo, Mango, and Co.

Accordingly, as there had been a deviation from the agreed route, which was not "a reasonable deviation" within the meaning of rule 4, Art. IV. of the schedule to the Carriage of Goods by Sea Act 1924, the right of the shipowners to rely upon the exception for "perils of the sea" was destroyed. There would be judgment for the plaintiffs for 8000*l*. damages on the basis of the market value of the cargo at Constantinople.

The defendants, the shipowners, appealed.

C. R. Dunlop, K.C. and Sir *Robert Aske* for the defendants, the shipowners, appealing. —The steamship *Ixia* did not deviate from the contract voyage from Swansea to Constantinople. She had liberty to call "at any ports in any order for bunkering or other purposes." St. Ives, as appeared from the evidence, was a port, and the ship was entitled to call there for any business purpose, even if the purpose was not connected with that particular voyage, and even if the purpose was not one in which the cargo-owners had some interest: (*Leduc* v. *Ward*, 1888, 6 Asp. Mar. Law Cas. 290; 58 L. T. Rep. 908; 20 Q. B. Div. 475, and *Glynn* v. *Margetson and Co.*, 7 Asp. Mar. Law Cas. 366; 69 L. T. Rep. 1; (1893) A. C. 351). Lord Esher said in the former case (6 Asp. Mar. Law Cas., at p. 292; 58 L. T. Rep., at p. 910; 20 Q. B. Div., at p. 482): "It was argued that that clause gives liberty to call at any port in the world. Here, again, it is a question of the construction of a mercantile expression used in a mercantile document, and I think that as such the term can have but one meaning, namely, that the ports, liberty to call at which is intended to be given, must be ports which are substantially ports which will be passed on the named voyage. Of course, such a term must entitle the vessel to go somewhat out of the ordinary track by sea of the named voyage, for going into the port of call in itself would involve that. To 'call' at a port is a well-known sea term; it means to call for the purposes of business, generally

to take in or unload cargo or to receive orders; it must mean that the vessel may stop at the port of call for a time, or else the liberty to call would be idle. I believe the term has always been interpreted to mean that the ship may call at such ports as would naturally and usually be ports of call on the voyage named." In the latter case, Lord Herschell, L.C. said (7 Asp. Mar. Law Cas., at p. 367; 69 L. T. Rep., at p. 2; (1893) A. C. at p. 355): "There is no difficulty in construing this clause to apply to a liberty in the performance of the stipulated voyage to call at a particular port or ports in the course of the voyage. That port, or those ports, would differ according to what the stipulated voyage was, inasmuch as at the time when this document was framed the parties who framed it did not know what the particular voyage would be, and intended it to be equally used whatever that voyage is. The ports, a visit to which would be justified under this contract, would, no doubt, differ according to the particular voyage stipulated for between the shipper and the shipowner; but it must, in my view, be a liberty consistent with the main object of the contract—a liberty only to proceed to and stay at the ports which are in the course of the voyage. In saying that, I am, of course, speaking in a business sense. It may be said that no port is directly in the course of the voyage . . . inasmuch as, in merely entering a port or approaching it nearly, you deviate from the direct course between the port of shipment and the ultimate port of destination. That is perfectly true; but in a business sense it would be perfectly well understood to say that there were certain ports on the way between Malaga and Liverpool, and those are the ports at which, I think, the right to touch and stay is given." Both these passages were cited by Phillimore, L.J. in *Morrison (James) and Co.* v. *Shaw, Savill, and Albion Company Limited* (13 Asp. Mar. Law Cas. 504, at p. 507; 115 L. T. Rep. 508, at p. 511; (1916) 2 K. B. 783, at p. 798). [Scrutton, L.J.—Under this liberty, might the master put into a port for the purpose of arranging a charter for the next voyage?] It is difficult to answer that. I submit the ship may call for any business purpose, *e.g.*, to land a pilot in fog or bad weather, to land a stowaway, or a sick seaman. In no one of these cases has the cargo owner any interest. The insertion of the word "bunkering" in no way limits the purposes for which the ship may call. The word "bunkering" is only used as an illustration. The *ejusdem generis* rule is inapplicable when there is only one species; in such a case there can be no *genus.* MacKinnon, J., in construing this liberty clause, relied on *Attorney-General* v. *Seccombe* (105 L. T. Rep. 18; (1911) 2 K. B. 688). That case involved the construction of a taxing Act and is of no real assistance here.

Secondly, if this call of the vessel was not within the words of the liberty clause, and so there was deviation, it was "a reasonable deviation" under rule 4 of Art. IV. of the Rules Relating to Bills of Lading in the Schedule to the Carriage of Goods by Sea Act 1924. A "reasonable deviation" must mean any departure of the ship from the usual course of the agreed voyage, which is in fact reasonable in the circumstances. These general words were used, as it was impossible to particularise all the cases that would be reasonable. [Greer, L.J.—May not it be put in this way: Suppose the cargo-owner was on the ship, what would he say as to the deviation being reasonable? If he refused, would it not be unreasonable?] All the circumstances of the case must be considered. It is submitted that the deviation in this case was reasonable. [Slesser, L.J.—Do you say that the rules in the Schedule to the Act of 1924 have changed the law? (See Scrutton on Charterparties, 12th edit., at p. 299, and *The Teutonia* (1872) 1 Asp. Mar. Law Cas. 214; 26 L. T. Rep. 48; L. Rep. 4 P. C. 171).] Yes, that is clear. Deviation is now permitted to save property, and further, any reasonable deviation is not to be deemed to be an infringement of the contract of carriage. Here, if there had been no test of the superheater, there might have been a waste of fuel that was unnecessary. MacKinnon, J. said that he found great difficulty in giving any meaning to the words "any reasonable deviation." [Greer, L.J.—In a case tried by judge and jury which would find whether a deviation was reasonable?] The jury. See *Phelps, James, and Co.* v. *Hill* (7 Asp. Mar. Law Cas. 42; 64 L. T. Rep. 610; (1891) 1 Q. B. 605), where the question was left to the jury whether the master had acted reasonably. There is nothing in rule 4 to suggest that a deviation to be reasonable must be in the interests of both ship and cargo. [*Scaramanga and Co.* v. *Stamp* (1880, 4 Asp. Mar. Law Cas. 295; 42 L. T. Rep. 840; 5 C. P. Div. 295) and *Morrison (James) and Co. Limited* v. *Shaw, Savill, and Albion Company Limited* (13 Asp. Mar. Law Cas. 504; 115 L. T. Rep. 508; (1916) 2 K. B. 783) was also referred to.] If the appellants are wrong on the first two points, it is submitted alternatively that the effects of the rules in the Schedule to the Carriage of Goods by Sea Act 1924 is to annul the implication formerly present in the contract of carriage that a deviation from the agreed voyage destroys the right of the shipowner to rely upon the exceptions. There is nothing in the Act of 1924 which suggests that if there be deviation, all the statutory exceptions are eliminated. If there is unreasonable deviation, no doubt there is a breach of contract, and the shipowners are liable in damages, but the exceptions remain, and the shipowner can take advantage of them. The property in these coals had not passed to the buyer at the time of the loss, and the only party who can recover damages is the seller, and the damages suffered is the contract price of the coals—6000*l*.

Sir *Robert Aske* followed.—Scrutton, L.J., in the course of the argument, has raised the question whether this part of the voyage was a trial trip within the meaning of the liberty clause. This point was not taken before MacKinnon, J. It was not a trial trip. The mere fact that two engineers came aboard cannot make it a trial trip. [SCRUTTON, L.J.—It appears from the evidence that the engineers would have required the helm to be put hard over and all three auxiliary engines to be started suddenly and similar operations for the purposes of the test to the super-heater.] A trial trip, like a trial ball at cricket, is a passage that takes place before the regular voyage. In the course of five or seven hours' voyage all that was or would be done for the purposes of the test, might well occur if there had been no test. The fact that the helm was put hard over does not turn this part of the contract voyage into a trial trip. Alternatively, if it was a trial trip, it finished long before the ship turned aside to go into the Bay of St. Ives. On the first point argued, if there is any limitation on the words " or other purposes " in the liberty " to call at any ports in any order for bunkering or other purposes," that limitation is not due to the presence of the word " bunkering." If there had been a catalogue of such terms, that would be another matter. But here there were no two species out of which to construct a *genus*, and the rule of *ejusdem generis* does not apply. [SLESSER, L.J.—Is there authority that you cannot construct a *genus* from a single category ?] I submit that is to be found in *Tillmanns and Co.* v. *Steamship Knutsford Limited* (99 L. T. Rep. 399 ; (1908) 2 K. B. 385 ; see judgment of Farwell, L.J., 11 Asp. Mar. Law Cas. 105, at p. 112 ; 99 L. T. Rep., at p. 406 ; (1908) 2 K. B., at p. 402). [He cited also the following cases : *Baerselman* v. *Bailey* (8 Asp. Mar. Law Cas. 4 ; 72 L. T. Rep. 677 ; (1895) 2 Q. B. 301), *Steamship Knutsford Limited* v. *Tillmanns and Co.* (11 Asp. Mar. Law Cas. 105 ; 99 L. T. Rep. 399 ; (1908) A. C. 406), *Thorman* v. *Dowgate Steamship Company* (11 Asp. Mar. Law Cas. 481 ; 102 L. T. Rep. 242 ; (1910) 1 K. B. 410), *Aktieselskabet Frank* v. *Namaqua Copper Company Limited* (15 Asp. Mar. Law Cas. 20 ; 123 L. T. Rep. 523), and *Cheshire and Co.* v. *Vaughan Brothers and Co.* (17 Asp. Mar. Law Cas. 449 ; 123 L. T. Rep. 487 ; (1920) 3 K. B. 240).] As to rule 4 of Art. IV. of the rules in the Schedule, deviation in saving life or property at sea is permitted, and neither of these deviations is of any concern to the charterer. And the reasonable deviation permitted need not be in the interest of the charterer. " Reasonable " must mean reasonable from the point of view of the shipowner having regard to all the facts—distance, time, and risk. [He cited *Phelps, James, and Co.* v. *Hill* (7 Asp. Mar. Law Cas. 42 ; 64 L. T. Rep. 610 ; (1891) 1 Q. B. 605) and *Foreman and Ellams Limited* v. *Federal Steam Navigation Company* (17 Asp. Mar. Law Cas. 449 ; 138 L. T. Rep. 582 ; (1928) 2 K. B. 424).]

A. T. Miller, K.C. and *R. F. Hayward* for the cargo owners.—[SCRUTTON, L.J.—We need not trouble you on the point as to measure of damages.] As to the liberty clause, the words " or other purposes " are limited by the preceding word " bunkering." The *genus* consists of the two species " bunkering " and " other purposes." See judgment of Hamilton, J. in *Attorney-General* v. *Seccombe* (105 L. T. Rep. 18, at p. 23 ; (1911) 2 K. B., at pp. 702-3). [GREER, L.J.—Is that the only case where there is only one category ?] Yes. The argument for the appellants seeks to obtain from the liberty clause a wider right to deviate than that afforded by Art IV., r. 4. If there were such a wider right of deviation it would be null and void. See Art. III., r. 8. Regard must be had first and last to the contract voyage. It cannot be part of the contract voyage to call at ports in any order. The case of *Margetson* v. *Glynn and Co.* (7 Asp. Mar. Law Cas. 148 ; 66 L. T. Rep. 144 ; (1892) 1 Q. B. 337) shows that the words in this liberty clause must be subject to some limitation. [SCRUTTON, L.J.—You may compare Lord Mansfield's observations in *Moore* v. *Magrath* (1774, 1 Cowp. 9, at p. 12).] The liberty cannot mean that the vessel may call at a port for any business purpose. The purpose must be one of the same kind as that of bunkering, a purpose in which the cargo-owner has an interest. If this was a trial trip, it was admittedly made without notice. Notice would give the cargo-owner the opportunity of considering his insurances. [GREER, L.J.—There would seem to be nothing to prevent the master trying his engines, whilst on the way to Constantinople ; but if he went away from his route, that would be another matter.] I submit he has no right to run his vessel on tests unless he has given notice to the cargo-owner. I submit that from the evidence it appears that some of the tests were continued after the vessel has turned aside from the contract route near Lundy. As to rule 4 of Art. IV., the phrase " reasonable deviation " had a meaning before the Act of 1924 was passed—see *Phelps, James, and Co.* v. *Hill* (*sup.*) and *The Teutonia* (*sup.*). It is no reason for the abrogation of that meaning and construction of the phrase that rule 4 permits deviation to save property. [GREER, L.J.—If your contention is correct that rule 4 has not altered the law, except as to the right to deviate to save property, it is very odd drafting. It would have been easy to limit deviation to such as is " reasonably necessary to avoid imminent peril." It may well be, in this case, that it was a reasonable deviation to put in to St. Ives Bay to land these two engineers, and an unreasonable deviation then not to return at once to the course of the contract voyage, and instead to continue coasting round a dangerous coast.] There are four views that have been taken as to what is reasonable deviation : (*a*) That the law has not been altered from that stated in *The Teutonia* (*sup.*) except that there is a right to deviate to save property—that is

the view I put forward. (*b*) The view taken by MacKinnon, J. in this case that the deviation to be reasonable must be in the interests of both ship and cargo. (*c*) The view taken by Wright, J. in the case of *Foreman and Ellams Limited* v. *Federal Steam Navigation Company Limited* (*sup.*), where he said : " Its reasonableness must depend upon what would be contemplated reasonably by both parties having regard to the exigencies of the route, known or assumed to be known to both parties," and (*d*) the view that has been advanced before this court by the appellants.

R. F. Hayward followed. [*Hick* v. *Raymond* (7 Asp. Mar. Law Cas. 233 ; 68 L. T. Rep. 174 ; (1893) A. C. 22) and *London and North Western Railway Company* v. *Neilson* (127 L. T. Rep. 469 ; (1922) 2 A. C. 263) were also cited.]

Dunlop, in reply, on the construction of the liberty clause referred to *Packwood* v. *Union Castle Mail Steamship Company Limited* (1903, 20 Times L. Rep. 59) and *Baerselman* v. *Bailey* (*sup.*), and, as showing the distinction between bad navigation and deviation, *Rio Tinto Company* v. *Seed Shipping Company* (1926, 17 Asp. Mar. Law Cas. 21 ; 134 L. T. Rep. 764).

Cur. adv. vult.

SCRUTTON, L.J.—This is an appeal by a shipowning company from a judgment of Mackinnon, J. holding them liable for a loss of a cargo of coal while their ship was on a voyage from Swansea to Constantinople because the loss occurred while the ship was without justification deviating from the contract voyage. To appreciate the position it is necessary to state the facts in some detail.

The *Ixia* was an old ship fitted with a device called a superheater. The object of this fitting is to collect the waste steam and heat which would otherwise go up the funnel and to use it again to reheat the steam and so to save fuel. The steam to be collected may come from the main propelling engines or from the auxiliary engines, such as the dynamo, steam steering gear or donkey engine. The efficiency of the device depends on the correct adjustment of valves to the needs of the actual work being done. If they are too loose too much steam may escape ; if too tight, too much steam may be retained and exercise detrimental back pressure on the engines. On the voyage preceding the one in question the captain had reported that the superheater was not working well and that there was danger from it to the steering gear and dynamo engines. Accordingly the shipowners had the matter looked into by the makers of the superheater and at Swansea a new valve or valves were fitted. I gather that the correct size of valve is not a theoretical matter but is rather empirical, depending like the shape of the propeller on actual experience on the particular ship at work with her usual cargo, speed and sea conditions. Accordingly it was arranged that when the ship started from Swansea with a full cargo of coal two engineers, one from the makers of the superheater and one the superintendent engineer of the shipping line, should accompany her for a short distance to make a test or trial (both words are used) of the efficiency of the setting of the valves under ordinary working conditions and to correct any defects by readjustment of the valves. It was expected that this test or trial would take some five hours or so and that the engineers would be dropped with the pilot off Lundy. Unfortunately, when the time for starting came the firemen came on board in such a condition as to sobriety that they could not do their work effectively. Nevertheless the ship started, but the firemen could not or would not raise a full head of steam, and such a full head was essential for the trial. When Lundy was reached no satisfactory trial had been obtained. Under ordinary circumstances the ship off Lundy would have been set on a course S.W. ¾ W. magnetic till she reached five miles off Pendeen, when her course would have been set for Finisterre to pass along the middle of the channel between the rock-strewn coast of Cornwall to the East and the Seven Stones and Scilly Rocks to the West, a channel about eleven miles wide. In view of the desirability of completing the trial, the captain decided not to follow the ordinary course but to lay a course nearer to the coast of Cornwall, which would take him to the entrance to St. Ives Bay, where he would turn into the bay and get a boat to come out to take the engineers off. This he did, having to wait about one-and-a-half hours in St. Ives Bay. He then had to get back to his original course and might have done so quite safely by going straight out till he got on the course that would take him five miles off Pendeen. Instead of that, he proceeded to coast round the Cornish cliffs at a supposed distance of one-and-a-half miles till he got off the Longships, where he would lay his course again. The captain, owing to the events of the morning, had been a long time on duty, and he went below during this coasting, leaving the second officer in charge. The weather is described as " cloudy and showery," " overcast, with slight rain," and somehow the second mate managed to run the vessel on to the Vyneck Rock, where she sustained such injury that she was totally lost. The second mate said it was the master's fault for leaving him to carry out the dangerous navigation on such a rocky coast. The master said it was entirely the second mate's fault for not doing what he was told to do, keeping a certain distance from the shore. The evidence of the sub-commander of pilots for the St. Ives district, which the judge accepted, was : " (A.) The proper course is to pass within four or five miles of Pendeen, the safe course down the channel. (Mr. Miller) Then haul down to the southward to make Finisterre ? (A.) And then steer down for Finisterre. (Q.) Would you consider it safe or proper to bring a ship in within a mile-and-a-half ? (A.) Not a safe course. (Q.) And if a vessel, instead of running on that course, stands in for the coast and anchors or stops off St. Ives, is she running any greater risk ? (A.)

Certainly she would be running a greater risk than if she stood on her proper course from Lundy down five miles off Pendeen. (Q.) Such risk as is attached to coasting on a rocky coast ? (A.) Certainly. It is a very dangerous coast from St. Ives round," and that coasting course was certainly not the ordinary or safe course from Swansea to Finisterre.

On this evidence the plaintiffs argued that the shipowners had improperly deviated, that the loss occurred on and because of the deviation, that the excepted perils, such as perils of the sea, therefore did not protect the shipowners. The shipowners in answer relied on the terms of the bill of lading and the Rules of the Schedule to the Carriage of Goods by Sea Act, 1924 incorporated thereunder. They argued first that their voyage was within the voyage allowed by the contract, and that what they did was therefore not a deviation at all. They had liberty under the bill of lading "to call at any ports in any order for bunkering or other purposes . . . as part of the contract voyage." The cargo-owners replied that these wide words must on the authorities be restricted by the nature of the main adventure to ports having some relation to the joint adventure of carrying cargo from Swansea to Constantinople ; that the words "other purposes" must receive a similar limitation. It could not be that the ship might call for "any purpose," *e.g.*, if the captain wanted to see his wife ; and the mere presence of the word "bunkering" supported this view, as it was not wanted, if calling for "any purpose" was allowed. They also argued that what had happened was a "trial trip" and it was made "without notice" and, therefore, was not part of the contract voyage. There is a well-known principle of construction expressed by Lord Halsbury, L.C. in the case of *Thames and Mersey Marine Insurance Company* v. *Hamilton* (1887, 6 Asp. Mar. Law Cas., at p. 202 ; 57 L. T. Rep. 695, at p. 696, 12 A. C. 484, at p. 490) : "Words, however general, may be limited with respect to the subject matter in relation to which they are used." This is expressed by Lord Herschell, L.C. in *Glynn* v. *Margetson and Co.* (7 Asp. Mar. Law Cas., at p. 367 ; (1893) 69 L. T. Rep. 1, at p. 2 ; A. C. 351, at p. 355) thus : "Where general words are used in a printed form which are obviously intended to apply, so far as they are applicable, to the circumstances of a particular contract, which particular contract is to be embodied in or introduced into that printed form, I think you are justified in looking at the main object and intent of the contract and in limiting the general words used, having in view that object and intent." In that case a clause "bound for Liverpool, with liberty to proceed to and stay at any port or ports in any station in the Mediterranean, Levant, Black Sea, or Adriatic, or on the coasts of Africa, Spain, Portugal, France, Great Britain and Ireland, for the purpose of delivering coals, cargo, or passengers, or for any other purpose whatsoever" was construed as giving a liberty consistent with the main object of the contract, a liberty only to proceed to and stay at the ports which were in the course of the voyage in a business sense.

The same limitation would apply to the wide words "other purposes" ; they must be purposes of the contract adventure. The preceding word "bunkering" assists that view. As Lord Mansfield says in *Moore* v. *Magrath* (1774, 1 Cowp., at p. 12) : "It is very common to put in a sweeping clause ; and the use and object of it in general is, to guard against any accidental omission ; but in such cases it is meant to refer to estates or things of the same nature and description with those that have been already mentioned." I do not propose to discuss the numerous cases that have explained and confused the so-called rule of *ejusdem generis ;* but the presence of the word "bunkering" shows that there is a limitation on the general words following. If they were unlimited its mention would be unnecessary. To land a maker's engineer and a ship's engineer who has been detained on the ship while making a trial trip not authorised by the contract of affreightment because of the drunkenness of the firemen and to land them at a port on a dangerous coast and not in the course of the voyage does not seem to me to be for a purpose or on a voyage permitted by the contract.

As to the clause, "with liberty to make trial trips with notice," some trials require to be made with a full cargo as, for instance, to test fulfilment of a contract as to the speed of the vessel fully loaded. They might involve departure from the contract voyage, as in runs backwards and forwards over the measured mile. They might involve use of the engines for other purposes than those of the contract voyage. The trial of the superheater valves, the representative of the maker says, is sometimes done by starting from, for example, Barry and making a run to the Nash Light and back. He also says that the trial takes from five to seven hours and that ordinary working conditions with a full head of steam are necessary. The engineers then go round the machinery and see that everything is working all right and that the relief valve is functioning under sea conditions, such as putting the helm hard over and seeing that she is opening out to any relief. From the captain's letter of the 16th April 1929, and the engineer's report of the 16th May 1929 as to the previous voyage, it appears that owing to the relief valves not working well the back pressure was preventing the steering gear from working properly. It is obvious that manœuvres would have to be performed with the steering gear and auxiliary engines which would not necessarily be performed at that time on an ordinary voyage. The bill of lading gives power to perform trial trips on the contract voyage if notice is given. The notice is presumably to allow cargo-owners to see that their insurance is in order. No notice was given in this case, the ship's representative says because he did not anticipate

any trouble and thought the firemen would be all right and the trial over by Lundy. It is evident he did not look at his bill of lading. In my opinion this trial trip was not part of the contract voyage and was therefore a deviation, both in delay and in route and risk.

If what was done was not part of the contract voyage, the next question is: Was what happened a justifiable deviation? Art. IV, r. 4, of the Schedule to the Act of 1924 is as follows: "Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom." This certainly alters the previous law in one respect. Previously, deviation to save life was allowed, but not deviation to save property, unless, as has not been unusual lately, there was a clause in the bill of lading allowing it. A deviation to save property and earn salvage in which the cargo-owner would not share, might cause greatly increased risk and delay with no benefit to the cargo-owner. The rule, however, now allows a deviation to save property. The rule proceeds to allow "any reasonable deviation." It gives no indication whose interests are to be considered. For instance, where the master finds a stowaway on board, it may be "reasonable" if only the interest of the ship is concerned to get rid of him by a deviation to some port even if some distance away. The delay may be detrimental to the cargo-owner. I think the interests to be considered must be those of the parties to the contract adventure, which may include a consideration of the position of their underwriters. Mackinnon, J. has confessed himself quite unable to understand what "reasonable" here means. I think it is a pity that word was used without more indication of whose interests were to be considered. But I am disposed to adopt the meaning given to the word by the House of Lords in *Hick* v. *Raymond* (1892, 7 Asp. Mar. Law Cas. 233; 68 L. T. Rep. 175; (1893) A. C. 22). The question there was whether a reasonable time for loading was to be the reasonable time in ordinary circumstances or in the circumstances then existing. Lord Herschell phrases it thus (7 Asp. Mar. Law Cas., at p. 234; 68 L. T. Rep., at p. 176; (1893) A. C., at p. 29): "The only sound principle is that the 'reasonable time' should depend on the circumstances which actually exist. If the cargo has been taken with all reasonable despatch under those circumstances, I think the obligation of the consignee has been fulfilled. When I say the circumstances which actually exist, I, of course, imply that those circumstances, in so far as they involve delay, have not been caused or contributed to by the consignee." Applying this to the present case, the present deviation was necessitated by the steamer starting with drunken firemen and a short supply of steam which might, if a storm had sprung up, have landed the owner into difficulties as to unseaworthiness. I do not think rule 4 was intended to extend the permissible limits of deviation as stated in the *Teutonia* (1872, 1 Asp. Mar. Law Cas. 214; 26 L. T. Rep. 48, at p. 52; L. R. 4, P. C., at p. 179): "It seems obvious that, if a master receives credible information that, if he continues in the direct course of his voyage, his ship will be exposed to some imminent peril, as, for instance, that there are pirates in his course, or icebergs, or other dangers of navigation, he must be justified in pausing and deviating from the direct course, and taking any step which a prudent man would take for the purpose of avoiding the danger," and I cannot believe that the passage in the Law Reports on page 180 was intended always to exclude the necessity of considering the interests of both parties to the adventure or of preventing the consideration of the fact that the deviation was entered upon because of the default of one party to the adventure. I agree with the view of the judge below that this was not a reasonable deviation.

One further point was argued as to the effect of the deviation, if proved. There is sometimes difficulty in distinguishing deviation from negligence in navigation, as illustrated by the case of *Rio Tinto Company* v. *Seed Shipping Company* (1926, 17 Asp. Mar. Law Cas. 21; 134 L. T. Rep. 764). But in that case the master intended to pursue the contract voyage, though by negligence he set an entirely wrong course. In the present case the master intended not to pursue the ordinary course of the voyage. Before the Carriage of Goods by Sea Act 1924, the effect of unjustified deviation was clear; the ship was deprived of the protection of exceptions for they only applied to a ship on the contract voyage. It was argued that the Act of 1924 had altered the law and (if I understood the argument, I am not sure that I did) that the exceptions applied even to an unjustified deviation. I cannot accept this argument in the absence of any clear words effecting such a serious alteration of the law. When the Legislature intended by the Act of 1924 to abolish the absolute warranty of seaworthiness, they said so in clear terms in sect. 2. I should expect equally clear words to abolish the well-recognised rule as to the consequences of deviation. If I understood the argument I cannot accede to it.

One further point on damages was raised. The cargo of coal was sold by vendors to purchasers on c.i.f. terms, but the property had not passed at the time of the loss. The contract price was roughly 6000*l.*; the cargo was insured for 7000*l.*, and the arrived market value at Constantinople was 8000*l.* The defendants argued that as the property had not passed the vendors could not recover more than the price they would get if the cargo arrived. The judge disregarded the contract and gave them the market price on arrival. In my opinion it is clearly established that this is the correct measure of damage. Unless

the contract was in the contemplation of both parties its terms cannot be used either to reduce damages, because the vendors would not have got the market value if the cargo had arrived but only the contract price; or to increase damages because that is what the vendor has really lost: (see *Rodocanachi* v. *Milburn* (1886) 6 Asp. Mar. Law Cas. 100; 56 L. T. Rep. 594; 18 Q. B. D. 67, *Williams Brothers* v. *Agius* (1914) 110 L. T. Rep. 865; A. C. 510, and *Finlay and Co.* v. *Kwik Hoo Tong* (1928) 17 Asp. Mar. Law Cas. 566; 140 L. T. Rep. 389; (1929) 1 K. B. 400). Both vendors and purchasers are appearing as plaintiffs by the same solicitors, and it is not necessary to make any distinction between them in the judgment. The appeal must be dismissed with costs.

Greer, L.J.—This is an appeal by the defendants from a judgment of Mackinnon, J. whereby he adjudged the defendants to pay to the plaintiffs 8000*l.* damages, and costs, for breach of contract, or for breach of duty, as carriers in respect of a cargo of coal which they undertook to carry from Swansea to Constantinople on the terms contained in a bill of lading dated the 29th June 1929. The acts complained of by the plaintiffs were alleged to be either breaches of contract or breaches of duty, and any decision with regard to the liability of the defendants must depend not merely on the express terms of the contract, but also on the terms which the bill of lading is obliged to incorporate by reason of the Carriage of Goods by Sea Act 1924.

The following are the relevant facts proved in evidence. By the bill of lading the goods are stated to be shipped at Swansea on the steamship *Ixia* bound for Constantinople "with liberty to sail without pilots, to call at any ports in any order for bunkering or other purposes, or to make trial trips after notice, or adjust compasses all as part of the contract voyage." As required by the Carriage of Goods by Sea Act 1924, the bill of lading stated that all the terms, provisions and conditions of that Act and the schedule thereto were to apply to the contract contained in the bill of lading, and the owners and the charterers were to be entitled to the benefit of all privileges, rights and immunities contained in such Act and the schedule thereto as if the same were therein specifically set out. If, or to the extent, that any term in the bill of lading was repugnant to or inconsistent with such Act or schedule it was to be void. Before she started on the voyage to be considered in the present case, the owners had installed on board the steamship a superheater. This is an apparatus for the purpose of utilising what otherwise would be waste heat for the purposes of the steam steering gear and other engines or apparatus ancillary to the main engines. The superheater was not required to enable the vessel duly to perform the voyage contracted for. It is a device which enables her to economise in the use of coal. It was a matter of no consequence to the cargo-owners whether the steamer had a superheater or not, or whether if it had a superheater the same was in working order. The superheater on the *Ixia* had not been working satisfactorily, and before the ship started on the voyage to Constantinople alterations had been made to the superheater, with a view to rendering it efficient. On the 30th June 1930 the *Ixia* started on her voyage from Swansea, where the alterations to the superheater had been effected. She took on board the defendants' superintendent engineer, and a representative of the firm responsible for the superheater, with the object of ascertaining by test whether the superheater was satisfactory or not. This test could be adequately made only if the engines developed a full head of steam. When the vessel started the firemen were drunk, and until they sobered down it was impossible to get a full head of steam. As far as somewhere near Lundy the vessel proceeded on the usual sea route on a voyage from Swansea to Constantinople. It had been intended that the two experts should be put on the pilot boat when the pilot left the steamer in the neighbourhood of Lundy Island, but as the test had not then been completed it was necessary to make some other provision for preventing the experts being carried too far on the journey. Thereupon the captain altered the course of the vessel so as to bring her somewhere near St. Ives Bay. The test continued on this altered course, and when the vessel arrived opposite St. Ives Bay she changed her course to go farther in the bay, signalled for a boat, and dropped her two passengers. The captain then, instead of directly returning to the usual route as he might have done, possibly to save some time, directed the second officer to follow the coast line, keeping a mile and a half from the coast. If he had strictly obeyed this injunction there would have been no accident, but he failed to do so, with the result that the vessel struck a rock and became a total wreck, and the plaintiffs' cargo was lost. In these circumstances the plaintiffs contended that at the time of the loss the vessel was engaged in an unauthorised deviation, and was, therefore, disentitled to the immunity from liability for damage occasioned by perils of the sea, which she would otherwise have been entitled to under Art. IV., r. 2, of the Schedule to the Carriage of Goods by Sea Act 1924.

The learned judge found for the plaintiffs, and awarded them 8000*l.* damages, which he estimated to be the market value that the goods would have had if they had been duly carried to Constantinople.

The appellants contended that the goods were lost while the ship was by reason of the liberty contained in the bill of lading pursuing her contract voyage; and secondly, that in any event the deviation was a reasonable one within the meaning of rule 4 of Art. IV. of the schedule to the Act. On the other hand, it was contended for the respondents (1) that the deviation was not a deviation to call at a port

for bunkering or other purposes within the meaning of the bill of lading; (2) that if it was, it was a liberty to deviate in excess of the deviation permitted by Art. IV., r. 4, and was therefore unlawful; (3) that the loss happened as a consequence of the vessel having made a trial trip without giving notice, and as there is a special provision for making trial trips after notice, such a trip could not be within the meaning of the words "other purposes" in the bill of lading; and lastly, that on the evidence in the case the judge was right in holding that at the time of the loss the vessel was not engaged in a reasonable deviation. Mackinnon, J. held that when the vessel was lost she was not calling at a port for any purpose included in the words "for bunkering or other purposes," that she was, therefore, deviating from the agreed contract voyage, and that such deviation was not a reasonable deviation within Art. IV., r. 4, of the Schedule to the Carriage of Goods by Sea Act 1924.

The first question to be determined is whether or not the learned judge was right in holding that the vessel was at the time of her loss deviating from the contract voyage. The contract voyage in the present case is described as a voyage to Constantinople, with liberty to do certain things in the course of the voyage which would not ordinarily be included in the contractual duty to proceed to Constantinople. In my view the liberties mentioned in the bill of lading are part of the description of the contract voyage, and any action of the ship within the prescribed liberties could not be described as deviation, but would be described accurately as acts in performance of the contract voyage. The point to be determined is whether the words "liberty to call at any port in any order for bunkering or other purposes" included what the ship did in the present case. It was contended for the respondents that the words "other purposes" should by their context be limited to purposes similar to bunkering, which were for the furtherance of the joint adventure of shippers and shipowners. On the other hand, the appellants contended that the *ejusdem generis* rule has no application to general words in a contract which follow one specific instance, but that the rule is confined to cases where general words follow a number of specific instances which can be said to belong to a class or genus. In support of this view they relied especially on the decision of the Court of Appeal in *Baerselman* v. *Bailey* (8 Asp. Mar. Law Cas. 4; 72 L. T. Rep. 677; (1895) 2 Q. B. 301). In that case the court was concerned with the meaning of the following words in the bill of lading, "any act negligence default or error in judgment of the pilot, master, mariners, or other servants of the shipowner in navigating the ship, or otherwise." It was there held that the general words did not indicate something resembling negligence in navigation, but related to negligence in navigating the ship, and in matters other than navigating it. In that case it seems clear from the words of the bill of lading that the exception was intended to cover not merely the acts of the pilot, master and mariners, the only persons concerned in navigation, but also the acts of other servants of the company. It does not seem to me to be a decision to the effect that in no case can the *ejusdem generis* doctrine, or some similar canon of interpretation, be applied to the interpretation of general words preceded by only one specific instance. In the case of *Packwood* v. *Union Castle Steamship Company* (1903, 20 Times L. Rep. 59) Walton, J. held that the words of an exception of damage arising from any act, neglect, or default of the master, officers, crew, or any servant of the shipowner in providing, despatching, and navigating a vessel or otherwise, were wide enough to cover the negligence of some servant of the company who was not engaged in either providing, despatching or navigating the vessel. Walton, J. seems to have thought that the case was within the authority of *Baerselman* v. *Bailey* (*sup.*). This seems to be right, as the clause was necessarily intended to protect the shipowners from the acts of servants other than master, officers, and crew, who were the only persons except the owner who were engaged providing, despatching, and navigating the vessel. It does not seem to me that these cases afford any authority for the view that the doctrine of *ejusdem generis* cannot be applied to words such as those which are used in the bill of lading under consideration. I think, as I said in the case of *Aktieselskabet Frank* v. *Namaqua Copper Company Limited* (1920, 15 Asp. Mar. Law Cas. 20; 123 L. T. Rep. 523) that in applying the *ejusdem generis* rule it is not necessary to ascertain with exactitude what is the scientific definition of the genus to which the general words are supposed to be confined. I think it is sufficient if one can reasonably say that the event that has happened was of a like kind to someone or more of the specific events which precede the general words. In *Attorney-General* v. *Seccombe* (105 L. T. Rep. 18; (1911) 2 K. B. 688) the court had to construe the words of a Taxing Act that property subject to tax should include "property taken under any gift, whenever made, of which property *bona fide* possession and enjoyment shall not have been assumed by the donee immediately upon the gift, and thenceforward retained to the entire exclusion of the donor or of any benefit to him by contract or otherwise." Hamilton, J. held that the words "or otherwise" must be read as meaning some arrangement *ejusdem generis* with contract, that is to say an enforceable arrangement. In my judgment the reasoning that led him to this conclusion is applicable to the point under consideration in this case. I think the words "bunkering or other purposes" indicate a genus of which "bunkering" is a species—that is to say, purposes reasonably required in the interest of both parties for the furtherance of the carrying voyage. In every case the words of the contract are to be read with their context. The context of general words may be a number

of specific instances or one only, and in either case the general words are to be interpreted by the light of their context. To call at a port for bunkering purposes is to call for a purpose in furtherance of the joint adventure of the ship and cargo. It was admitted in argument that some limitation must be put on the words "other purposes," and that they are not wide enough to include any purpose whatsoever. It was contended that they should be limited only to purposes which were business purposes of the ship, whether they were of any interest to the cargo-owner or not. In my judgment, construing these words in the light of the general objects of the contract recorded in the bill of lading and of the contiguity of the word "bunkering," their true meaning is that the purposes must be purposes relevant to the furtherance of the joint adventure, and that they are not wide enough to include the visit of this ship to St. Ives Bay, a visit which was not in any way essential to the carriage of the respondents' goods from Swansea to Constantinople.

I therefore think that the learned judge was right in holding that when the vessel was lost she was not on her contract voyage, and the ship is liable for the loss of the cargo unless she is protected by Art. IV., r. 4, of the Schedule to the Carriage of Goods by Sea Act 1924. That article is as follows: "Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom." Apart from the provisions of the Act, the ship was entitled to deviate from the agreed voyage for the purpose of saving life, or when such deviation was reasonably necessary to avoid imminent peril. The cases of *The Teutonia* (1872) 1 Asp. Mar. Law Cas. 214; 26 L. T. Rep. 48; L. Rep. 4 P. C. 171) and *Phelps, James and Co.* v. *Hill* (7 Asp. Mar. Law Cas. 42; 64 L. T. Rep. 610; (1891) 1 Q. B. 605), afford instances of the latter permitted deviation recognised at common law. Those cases probably depend upon an implied term in the contract. I do not think the words of rule 4, Art. IV., of the Act are confined to cases of this kind. I think rule 4 is to be read as enlarging the area in which a deviation will not be deemed to be a breach of the contract. I think the word "reasonable" is used in its ordinary sense in relation to what would otherwise be a deviation occurring in the course of the voyage. We must picture to ourselves the cargo-owner and the shipowner being present when the occasion for the deviation arises and ask ourselves: "Could the cargo owner object to the course taken by the vessel without being unreasonable?" It is to be remembered that the statute was passed to give effect to a convention between representatives of shipowners and traders. One can understand shipowners objecting to the hardship they suffered, by having the advantages of their contract entirely taken away, by a slight deviation from the contract route of such a character that no reasonable cargo-owner would object to it. I do not think that the words "reasonable deviation" ought to be treated as confined to what is reasonably necessary or required or directed to the interests of both parties. I think the words mean a deviation, whether in the interests of the ship or of the cargo-owner or of both, to which no reasonably minded cargo-owner would raise any objection. In my judgment if the ship had contented herself with going into St. Ives Bay and there putting the two engineers ashore, and had then proceeded directly to get back on to the usual route for vessels going from Swansea to Constantinople, the deviation would have been a reasonable deviation within the meaning of the rule. This is not what the ship did. By the master's orders, after landing the engineers, the ship proceeded along a dangerous coast instead of getting back to the safe waters where she would have been if she had not deviated at all. In my judgment, from the time that the mate took charge under the master's orders and began to navigate the vessel along the coast, the deviation became an unreasonable one. The ship ought to have been taken, according to the evidence, to a position where she would pass within four or five miles of Pendeen, where she would have been on a safe course down channel instead of being taken within a mile-and-a-half off the coast which was not a safe course, but which was a course along a very dangerous coast.

It was further contended on behalf of the appellants that the well-established rule of law that a deviating ship loses the benefit of the exceptions in the contract no longer applies since the Act of 1924. I agree with the learned judge that there is nothing in this point. The provisions of the Act import into the agreement compulsorily certain exceptions, but there is nothing in the Act to show that these exceptions can be relied upon while the vessel is not pursuing the contract voyage, but is pursuing a voyage, or part of it, which is not covered by the contract at all. Many other points were discussed in the course of the argument before us, but if I am right in the view I have expressed this is sufficient to determine the appeal, and in my judgment it is not necessary to express any opinion on other matters which I do not think arise for decision at present.

As regards the measure of damages, I am of opinion that the learned judge was right. As the property had not passed from Messrs. Vivian and Co. at the time of the loss they were the proper plaintiffs. The fact that they had sold the goods at a price which was less than the market price that the goods would have had on arrival at Constantinople cannot, according to the authorities, be used in order to diminish the damages, just as it could not be used to inflate the damages if it happened to be a larger sum than such market price. So far as this court is concerned we are bound to accept this view of the law by the decision

in *James Finlay and Co.* v. *N. V. Kwik Hoo Tong* (17 Asp. Mar. Law Cas. 566; 140 L. T. Rep. 389; (1929) 1 K. B. 400). Scrutton, L.J. states the result of the decided cases in the following words: "Before the decision in *Hall* v. *Pim (Junior) and Co.* (139 L. T. Rep. 50), we had been brought up to understand that, as a general rule, sub-contracts entered into by a buyer cannot be used to increase or minimise his damages, as the sub-contracts are incidental matters with which the seller had nothing to do. I find that laid down in *Rodocanachi* v. *Milburn* (*sup.*), which was affirmed in *Williams Brothers* v. *Agius* (*sup.*), and in an unreported case in which Greer, L.J. was counsel, the House repeated the language used in *Williams Brothers* v. *Agius* (*sup.*) and affirmed *Rodocanachi* v. *Milburn* (*sup.*). This court in *Slater* v. *Hoyle and Smith* (122 L. T. Rep. 611; (1920) 2 K. B. 11), applied the same principle, that unless the seller contemplates the possibility of a sub-contract under which a claim may be made on the buyer, the sub-contract must be disregarded for the purpose either of increasing or diminishing the damages."

I agree that this appeal should be dismissed with costs.

Slesser, L.J.—I agree that this appeal fails.

In this action, the plaintiffs claimed damages from the defendants for breach of contract or breach of duty as carriers to carry certain goods under bills of lading to an agreed destination on an agreed voyage. It is conceded by the defence that the goods were lost during the agreed voyage, but such loss, being due to the perils of the sea or the wreck of the ship, it is said that under the exception in the contract the defendants are not liable in damage. There is no doubt that the goods were so lost owing to the perils of the sea or the wreck of the ship, but the plaintiffs reply that the defendants cannot here rely on the exception or perils of the sea or wreck of the ship because, in the circumstances, they had lost the right to rely upon the exception which would otherwise protect them, in that they have broken the contract by not doing the thing contracted for in the way contracted for, and, consequently, cannot rely on conditions which were only intended to protect them if they carried out the contract in the way they had contracted to do it: (see per Scrutton, L.J. in *Gibaud* v. *Great Eastern Railway Company* 125 L. T. Rep. 76, at p. 81; (1921) 2 K. B. 426, at p. 435). The plaintiffs seek to come within this principle for two reasons: first, they say that on the facts of this case the language of the bills of lading excludes the right of the defendants to rely on the exception of perils of the sea or wreck of the ship, and secondly, they rely upon the Carriage of Goods by Sea Act 1924 and the schedule thereto.

The material facts of the case are as follows: There was shipped upon the *Ixia* at Swansea for Constantinople under a number of bills of lading containing similar terms certain steam coal. On a previous voyage, without the knowledge of the plaintiffs, the defendants had used an apparatus called a superheater, the object of which was to utilise waste steam so as to make an economy in running. It is not necessary to consider the working of this device except to say that, owing to its failure to work properly on this previous voyage, when the *Ixia* started on the contract voyage to Constantinople which is here in question, she had on board a representative of the makers of the superheater and also the superintendent engineer of the defendants, both of whom joined the ship at Swansea. The intention had been that the tests should thereafter immediately be made and that these two experts should leave the ship with the pilot at or before they reached Lundy Island; but owing to a failure of the firemen, who were drunk, to get up a proper head of steam which was necessary for the test of the superheater, the two gentlemen had to remain on the ship after the pilot had left. They then arranged with the captain that the ship should go to the small port of St. Ives in Cornwall which was admittedly a deviation from the normal voyage to Constantinople, taking the vessel more to the eastward and by a route more dangerous, as the evidence shows, than otherwise would have been the case. The *Ixia* lay to in St. Ives Bay; a boat came alongside, and the engineers got into it and went to the shore. The ship then proceeded on its way. After a short time the captain went below and left the second mate in charge with instructions to keep a mile-and-a-half off the coast and follow down in that way—not to sail by a compass course. In the event, the second mate ran the vessel on to a rock called the Vyneck Rock, where she became a total loss. The goods of the plaintiffs were also lost, and it is in respect of that loss that they claim damages.

With this brief statement of facts I proceed to consider the arguments which have been addressed to us by way of appeal from the judgment of Mackinnon, J. who has decided that the plaintiffs recover 8000*l.* damages and that both under the terms of the bill of lading itself and under the 1924 statute the defendants fail in their endeavour to rely upon the exception in the contract which might otherwise protect them. The case for the defendants on the bill of lading that they were within their contract depends upon the liberty therein given them "to call at any ports in any order for bunkering or other purposes." They say, first of all, as indeed they must, that St. Ives is a port within the meaning of the liberty, and in so far as there is no limitation of the word "port" in the bill of lading I think they are right in this contention. It was shown in the evidence and in the documents disclosed that St. Ives is a port. The real difficulty in the defendants' way lies in the consequent words "for bunkering or other purposes." It is argued for the defendants that the words "other

purposes " here are wide enough to include any business purpose connected with the voyage. Mr. Dunlop had to concede during the argument that for the captain to call for the purpose of visiting his wife would not be an " other purpose " within the meaning of those words. On the other hand, it was argued by Sir Robert Aske that it is not possible here to apply the doctrine of *ejusdem generis* inasmuch as the word " bunkering " appears as an isolated species of purpose and that there is no genus to which the words " other purposes " can be assimilated. The authority which is cited against him on this head of the argument, which was relied upon by the learned judge in the court below, is the case of the *Attorney-General* v. *Seccombe* (105 L. T. Rep. 18 ; (1911) 2 K. B. 688). That was a case under the Customs and Inland Revenue Acts as applied by the Finance Act 1894, wherein occurred the words that certain property should be affected by taxation if retained to the entire exclusion of the donor or of any benefit to him under contract or otherwise. Here, also, it was argued that the words " or otherwise " should not be read as *ejusdem generis* with contract, in that the word " contract " was itself but a species and there was, therefore, no genus. Hamilton, J., now Lord Sumner, said (105 L. T. Rep., at p. 23 ; (1911) 2 K. B., at p. 703 : " The words 'by contract or otherwise' indicate a genus of which contract is one species and all other species are intended to be swept in. I do not see the difficulty of saying that there is a genus of which contract is a species." On a strict application of the *ejusdem generis* rule it may be argued with some force that to construct a genus out of one species and undefined general words (which together with the species has gone to form the genus) in order to define the denotation of those general words is but a *petitio principii*, but, however, that may be, on the wider consideration of the intention and context, there is ample authority for Lord Sumner's view. In *Monck* v. *Hilton* (1877, 36 L. T. Rep 66 ; 2 Ex. Div. 268) the appellant was convicted for using a device " by palmistry or otherwise " to deceive. He pretended to have the supernatural faculty of obtaining from invisible agents messages or powers. Baron Cleasby said : " It was further contended that the words 'or otherwise' following the particular word 'palmistry' must be read as having reference to arts or pretentions of the same description as palmistry, according to a general rule of construction limiting the effect of general words following a particular description. As to the general rule, no authority was necessary " (36 L. T. Rep., at p. 68 ; 2 Ex. Div., at p. 275). In *Williams* v. *Golding* (1865, 13 L. T. Rep. 291 ; L. Rep. 1, C. P. 69) the *ejusdem generis* rule was applied to the single term " district surveyor " or other person, and it was held that a right to one month's notice of action for anything done under the Metropolitan Building Act 1855 was limited to persons *ejusdem generis* with a district surveyor. Under the heading " generic words following more specific " in Maxwell's Interpretation of Statutes, 7th edit., p. 284, appears the following : " It is, however, the use of a general word following one or more less general terms *ejusdem generis* which affords the most frequent illustration of the rule." I mention this in deference to Sir Robert Aske's argument that the doctrine cannot logically be applied where there is only one species, but once this view is rejected it becomes a question of the intention of the parties as expressed in their written agreement whether they did mean to limit the words " or other purposes " and, if so, what limitation they intended to place upon them. In *Margetson* v. *Glynn and Co.* (1892, 7 Asp. Mar. Law Cas. at p. 150 ; 66 L. T. Rep. at p. 144 ; 1 Q. B. 337, at p. 344, Fry, L.J. in construing a liberty under a bill of lading to proceed to and stay at any port or ports in any rotation . . . for the purposes of delivering coals, cargo or passengers or for any other purposes whatsoever, holding with the rest of the court that the general words of the bill of lading must be limited with reference to the specific voyage, and that they allowed the ship to proceed only to ports which were fairly and substantially in the ordinary course of the voyage, said : " Our decision depends, as it appears to me, upon an ancient and well-established principle of construction of which *Leduc* v. *Ward* (1888, 6 Asp. Mar. Law Cas. 290 ; 58 L. T. Rep. 908 ; 20 Q. B. Div. 475) is one of the most recent illustrations. I think that principle of construction is not confined to this class of documents, but is applicable to all documents. This principle is applicable wherever specific words are used to express the main object and intent of the instrument, and in some other parts general words are used which in their utmost generality would be inconsistent with and destructive of the main object of the contract. When the court, in dealing with a contract or document of any kind finds that difficulty, it always, so far as I know, follows this principle, that the general words must be limited so that they shall be consistent with, and shall not defeat the main object of the contracting parties." The words of the species of liberty in this present case are far narrower than in *Margetson* v. *Glynn and Co.*, being confined to " bunkering." I think that the word " other " in this context means purposes other than but analogous to bunkering. This does not include all other possible purposes, but points to a dichotomy between " bunkering " and " purposes in the nature of bunkering," which latter words, nevertheless, are to be read as in one genus with the former. An essential element of such a synthesis of bunkering and other purposes would be the taking on board of materials necessary for the prosecution of the voyage. In my judgment, to call at a port to take on board other materials than coal—provisions, medical supplies and the like—may properly be said to be purposes in the

nature of, though other than, bunkering. It is very possible that on a liberal construction of the words "calling at ports" for repairs might possibly fall within the definition, but I am clear that the genus "bunkering or other purposes" should not be extended to include any and every business purpose so long as it is connected with the voyage. So to hold would be to construe the words as a general liberty to call, say to discharge or to take in cargo, in which case the word "bunkering" would be otiose, and so offend the doctrine that upon the true construction of bills of lading words must be read reasonably and with a view to all the circumstances: (*Knutsford Steamship* v. *Tillmans* (11 Asp. Mar. Law Cas. 105; 99. L. T. Rep. 399; (1908) A. C. 406). In *Baerselman* v. *Bailey* (8 Asp. Mar. Law Cas. 4; 72 L. T. Rep. 677; (1895) 2 Q. B. 301) the wider language of the liberty was held to justify a wider connotation, but that case does not, in my view, at all help the defendants in this one.

Applying these considerations to the present case, I have come to the conclusion that the setting down of these two men for their convenience or for the convenience of the shipowners was not a calling for the purpose of bunkering or any other similar purpose. It was not necessary for the prosecution of the voyage for, as far as the cargo-owner was concerned, there was no reason why these two engineers should not be carried on to Constantinople, if, indeed it were necessary to have them on board at all. If we have regard to the intention of the parties, it is impossible to think that the words "liberty to call at any port for bunkering or other purposes" can properly be extended to cover all conveniences of the shipowners or of a third party. Moreover, on the facts disclosed in this case the deviation occurred for a trial trip. Trial trips with notice to the cargo-owner are expressly permitted during the performance of the contract, but here, in my view, the deviation to land these men was a consequence and part of a trial trip without notice which is by implication excluded from the contract, and so in its turn, when undertaken, excludes the benefits of the exceptions to the shipowners.

The second defence, that raised under the statute, is one of great difficulty and of great importance. Before the passing of the Carriage of Goods by Sea Act 1924 certain deviations were undoubtedly permissible—such deviations "being an exception to the general rule that in the absence of express stipulation to the contrary the owner of a vessel, whether a general ship or chartered for a special voyage, impliedly undertakes to proceed in that ship without unnecessary deviation in the usual and customary manner": (Scrutton on Charterparties, 12th edit., art. 99). According to the authorities, of which *Scaramanga* v. *Stamp* (1880, 4 Asp. Mar. Law Cas. 295; 42 L. T. Rep. 840; L. Rep. 5 C. P. Div. 295) is a leading example, a deviation for the purpose of saving life was justified, but not a deviation for the mere purpose of saving property. If a master receive credible information that if he continue in the correct course of his voyage his ship or cargo would be exposed to some imminent peril he would be justified in reasonable deviation to avoid the peril. He may take any step that a prudent man would take for the purpose of avoiding the danger: (*The Teutonia* (1872, 26 L. T. Rep. 48; L. Rep. 4, P. C. 172). This, being the law before the passing of the 1924 Act, it is not suggested that in the present case the deviation into St. Ives Bay could have been justified as a deviation, apart from any specific liberty, before the statute, for there was here no question of saving life nor of avoiding peril. But the defendants here contend that the Schedule to the 1924 Act, rules relating to bills of lading, Art. IV., r. 4, has given them a statutory right to deviation on the facts of the present case. The provisions of Art. IV., rule 4, are as follows: "Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom." These provisions create two new classes of deviation, namely, first, any deviation in saving or attempting to save property at sea, and, secondly, any reasonable deviation. It is under the latter permission that the defendants here seek to come, and the problem thus arises: What is the meaning of the words "reasonable deviation" in this article? It is argued by Mr. Dunlop, as I understand him, that it can be extended to cover any deviation during a contract voyage which a prudent owner or master of a vessel might think fit, which is a question of fact. At the other extreme, it is said that the section has really made no difference to the existing law beyond adding the right to deviate to save property. As between these two conditions, both of which I reject, there are the views expressed by Wright, J. in the case of *Foremans and Ellams* v. *Federal Steam Navigation Company* (1928, 17 Asp. Mar. Law Cas. 449; 138 L. T. Rep. at p. 584; 2 K. B., at p. 431). There the learned judge says: "The expression 'reasonable deviation' may give rise to considerable difficulties. I think it is clear that a deviation would not be reasonable merely because it was convenient to the shipowner. Its reasonableness must depend upon what would be contemplated reasonably by both parties, having regard to the exigencies of the route, known, or assumed to be known to both parties." And he goes on to give as an example of his meaning: "I think in this case that shippers on a cargo liner of this type must be deemed to have known the circumstances of mercantile geography such as the position as to the amount of water available . . . and the probable draught of a vessel of this type, and it is on that ground that I do not think the deviation here, the only deviation which I think

is before me, can be regarded as unreasonable." This view would appear to indicate that the criterion of reasonableness must depend upon what would be contemplated reasonably by both parties or assumed to be known to both parties. In the present case, Mackinnon, J. takes a slightly different view. He has searched the dictionary for definitions of the word "reasonable." He says that he has not the faintest idea what is to be regarded as reasonable deviation, but he is satisfied that the putting into St. Ives was not a reasonable deviation. He appears to treat the matter as one of fact, but also states that it was no concern of the cargo-owners and not part of any joint interest of the cargo-owners and the shipowners. It will be observed that both these learned judges associate the cargo-owner and the shipowner together in considering what test is to be applied, Wright, J. looking to what was known or assumed to be known to both parties in order to test the reasonableness of the deviation; Mackinnon, J. apparently deciding the matter as one of fact, or taking his standard from the point of view of the interest of the parties. I do not know that there is any very vital difference between these points of view; but for myself I adopt the view presented *obiter* by Wright, J. for the following reasons. The rules which are by the statute to be applied to bills of lading are in effect implied terms thereof imported into the individual contract. Sect. 2 of the Act, for example, provides: "There shall not be implied in any contract for the carriage of goods by sea to which the Rules apply" certain undertakings. Such a statutory provision is sometimes put positively as in the Coal Mines (Minimum Wage) Act 1912, which, by sect. 1, sub-sect. (1), provides that: "It shall be an implied term of every contract" that certain conditions shall obtain. With regard to the specific provisions of Art. IV. as to deviation for the saving of life or property, no question of the knowledge of the cargo-owner can arise, for these are rights of deviation specifically bestowed upon the shipowner in certain defined events, as in the common law case of avoiding perils, but as regards the phrase "reasonable deviation," had a similar specific provision appeared in the bill of lading itself before the passing of the Act, I think that the bilateral nature of the contract, the mutual interest in the voyage and in the security of the ship and goods, would induce the court to say that the test of reasonableness of the deviation would have had to be regarded from the point of view of reasonableness in regard to conditions in or about the voyage known or contemplated by both parties. In deviation the parties contracting have voluntarily substituted another voyage for that which has been agreed: (per Roche, J. in *Rio Tinto Company* v. *Seed Shipping Company* (1926, 17 Asp. Mar. Law Cas. 21; 134 L. T. Rep. 764; 42 Times L. Rep. 316), citing Lord Mansfield in *Lavabre* v. *Wilson* (1779, 1 Douglas, 284)). "So soon as the parties have agreed upon the voyage and have written that in, the definition of the voyage must, as a matter of business, cut down the general words as to what is fairly applicable to the voyage which has been agreed upon and defined": (per Bowen, L.J. in *Margetson* v. *Glynn and Co.*, 7 Asp. Mar. Law Cas., at p. 150; 66 L. T. Rep. 144; (1892) 1 Q. B., at p. 343). If these observations be true in construing a bill of lading containing the phrase "deviation," I cannot see why a similar standard should not obtain when the words are imported into the contract by operation of statute.

Applying this test, it is evident in the present case that neither the existence nor the deficiencies of the superheater nor the necessity, if it existed, for its trial, nor the landing of the engineers were known or could fairly be assumed to be known to the cargo-owners. This is not a case like that of *Foremans and Ellams* v. *Federal Steam Navigation Company* (*sup.*), where the circumstances of mercantile geography and the probable draught of a vessel of a certain type might be held to be in the knowledge or contemplation of the parties to make a deviation in certain waters reasonable. I have, therefore, adopting Wright, J.'s criterion, come to the conclusion that the defendants fail to establish any protection under the Carriage of Goods by Sea Act 1924.

If, however, as Mackinnon, J. seems to indicate, the question of reasonableness of deviation is one wholly of fact, then, as in the case of *Nelson and Sons* v. *Nelson Line* (*Liverpool*) (10 Asp. Mar. Law Cas. 544; 96 L. T. Rep. 402; (1907) 1 K. B. 769), the question of reasonableness may be one which might be left to a jury without further direction, and, although this is not my view, for, as I have indicated, I think that the test laid down by Wright, J. is a correct one, yet, if it be so, the learned judge has found against the appellants that this was not, in his opinion, on any construction, a reasonable deviation, and, for this reason also, there being evidence on which the learned judge could so find, I am of opinion that this appeal should fail.

Appeal dismissed.

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

Feb. 25, 26, 27, *and March* 17, 1931.

(Before ROCHE, J.)

GREEN STAR SHIPPING COMPANY LIMITED *v.* LONDON ASSURANCE AND OTHERS. (*a*)

General average expenditure — Fire while loading — Subsequent collision — Total loss of ship — Voyage abandoned — Policy on hull and machinery — Policy on cargo's proportion of general average and right to indemnity from club for cargo's proportion of general average not otherwise recoverable— Apportionment between the various risks— York-Antwerp Rules 1890—*Marine Insurance Act* 1906 (6 *Edw.* 7, *c.* 41), *s.* 66, *sub-s.* 4.

The plaintiffs were the owners of the steamship A. *While loading a general cargo at New York a fire broke out and general average expenditure was incurred. The share of the cargo-owners amounted to* 18,000 *dollars and this was paid to the plaintiffs. After repairs and reloading the* A. *proceeded on her voyage, but was struck and sunk by another steamer. The cargo was discharged and the* A. *raised and taken into Chester, near Philadelphia, where the voyage was abandoned. Further general average disbursements were made. By the law and practice of Philadelphia cargo-owners were not liable to pay more than the salved value of the cargo. This they paid. The first defendants, the London Assurance, were the insurers in part of the hull and machinery against perils of the sea and fire. The second defendants, the British Traders Insurance Company Limited, were the insurers of part of the cargo's proportion of general average disbursements, and the fourth defendant, A. H. Henderson, was an underwriter of a similar policy at Lloyds for the other part. The third defendants, the United Kingdom Mutual Assurance Association Limited, were a club of which the plaintiffs were members, and as such entitled to be indemnified against liabilities for cargo's proportion of general average not otherwise recoverable. The plaintiffs claimed under the policies. The London Assurance denied liability. The third defendants admitted liability if and when any balance was ascertained. The other insurers disputed the amount claimed and the method of computation. The bills of lading provided that general average should be adjusted under the York-Antwerp Rules* 1890, *and under the policies the same rules were to apply.*

Held, that the 18,000 *dollars recovered in New York must be taken into account when computing the liability of the disbursements underwriters. In the case of the hull underwriters the values to be considered were those at the termination of the adventure and the loss incurred by reason of the diminution or extinction of the value of the cargo was a loss which fell upon the assured, the shipowner, and came within sect.* 66, *sub-sect.* (4), *of the Marine Insurance Act* 1906.

ACTION tried before Roche, J. without a jury.

The following is taken from the statement of facts :

1. The question is whether and to what extent the plaintiffs are entitled to recover certain general average and other losses and expenditures from their insurers.

2. The plaintiffs were the owners of the steamship *Andree*. On the 14th April 1922 the vessel commenced loading a general cargo at New York for Barcelona and African ports. On the 20th April a fire broke out in her holds and did serious damage to vessel and cargo. The latter had to be discharged and various general average expenses were incurred by the plaintiffs. The vessel was repaired and, having reloaded part of the damaged cargo and taken in fresh cargo, left New York on the 21st May for her said intended voyage. Part of the damaged cargo was left at New York and either sold or returned to the shippers.

3. On the 22nd May 1922, the *Andree* was struck and sunk by the steamship *H. F. Alexander*. The cargo was again discharged and the *Andree* was raised and taken into Chester, near Philadelphia, where the voyage was abandoned. Further general average expenses were incurred by the plaintiffs by reason of the collision.

4. The bills of lading provided for general average to be adjusted according to the York-Antwerp Rules 1890.

5. An average adjustment was prepared (dated the 30th Dec. 1924) by Messrs. Willcox, Peck, and Hughes, of New York, wherein the amount of general average expenditure adjusted upon the cargo was 73,941.31 dollars. By the law and practice of Philadelphia owners of cargo are not liable to pay in general average more than its value ultimately salved. This value was paid by the owners of the cargo, and the cargo was then released to them, and they refused to pay any further sum. The adjustment was made in accordance with the law and practice of the port where the adventure terminated, namely, Philadelphia, and the plaintiffs contend that by virtue of the law and practice above mentioned, the cargo-owners were not liable to pay more than they have paid as above mentioned.

6. By a policy of marine insurance, dated the 7th July 1921, and effected on behalf of the plaintiffs who were fully interested, the defendants, the London Assurance, insured the hull and the machinery of the *Andree* in the sum of 5595*l.* (part of 100,000*l.*) for twelve months from the 24th June 1921 against perils of the seas and fire. The policy contained the Institute Time Clauses, one of which provides that general average is to be adjusted according to York-Antwerp Rules and subject thereto according to the law and practice obtaining at the place where the adventure ends.

(*a*) Reported by R. A. YULE, Esq., Barrister-at-Law.

7. By a final average adjustment dated the 7th Dec. 1926 of Messrs. Manley, Hopkins, and Co., it is shown (after taking into account certain matters not dealt with in Messrs. Willcox's adjustment including payment on account and sums recovered from the owners of the *H. F. Alexander*) that there is due from hull underwriters the sum of 5776*l.* 9*s.* 4*d.*, of which the share of the defendants, the London Assurance, is 323*l.* 3*s.* 11*d.*

8. By a further policy of marine insurance dated the 3rd Feb. 1925, but in fact arranged after the fire in April and before the collision in May 1922, and effected on behalf of the plaintiffs, the defendants, the British Traders Insurance Company Limited, insured the *Andree's* cargo's proportion of general average disbursements for the second voyage in the sum of 7500 dollars, being part of an aggregate insurance of 30,000 dollars against the usual perils, and it was declared that the said insurance was on (*inter alia*) average disbursements applicable to cargo only; to pay the proportion attaching to any amount by which the property might be reduced in value owing to any subsequent accident, &c. And by another policy of marine insurance dated the 30th Jan. 1925 the said disbursements were insured at Lloyd's on the same terms for the sum of 22,500 dollars, being the balance of the sum of 30,000 dollars. The last-mentioned policy was underwritten by the defendant Henderson in the amount of 400 dollars.

9. By reason of the collision on the 21st May 1922 (being a subsequent accident within the meaning of the two policies last mentioned) the cargo was seriously damaged and reduced in value, and there were incurred general average expenditure and special charges on the cargo amounting to 55,912.32 dollars, of which the plaintiffs incurred expenditure and charges amounting to 34,447.98 dollars, namely, 34,241.76 dollars general average expenditure and 202.22 dollars special charges on the cargo. Upon the basis adopted in an average adjustment or statement of claim prepared by Messrs. Willcox and Co., dated the 2nd Oct. 1925 (if on the construction of the two said policies and in the circumstances hereinbefore agreed that basis is held to be correct) the plaintiffs are entitled to recover from the defendants, the British Traders Insurance Company Limited and from the defendant Henderson the sums of 1376*l.* 4*s.* 8*d.* and 67*l.* 3*s.* 2*d.* respectively. Upon the basis adopted in the points of defence of the two said defendants (if on the construction of the two said policies and in the circumstances hereinbefore agreed that basis is held to be correct) the plaintiffs are entitled to recover from the two said defendants the respective amounts brought into court by them and no more. The plaintiffs have received the net proceeds of the cargo amounting to 18,048.91 dollars, referred to in par. 8 of the points of defence of the disbursement underwriters.

10. The plaintiffs are members of the indemnity club of the defendants, the United Kingdom Mutual Steamship Assurance Association Limited, and were duly entered therein in respect of the *Andree.* By rule 2 (*c*) of the said club the plaintiffs are entitled to be indemnified against liabilities for cargo's proportion of general average and if and so far as it is not recoverable from the insurers mentioned in pars. 7 and 9 hereof is "not otherwise recoverable" within the meaning of the said rule.

11. The rate of exchange on the 2nd Oct. 1925 was 4.84 dollars to the £. At this rate the sterling equivalents of

29,643.12 dollars is 6397*l.* 6*s.* 10*d.*
26,643.90 dollars is 5504*l.* 18*s.* 9*d.*
6,660.97 dollars is 1376*l.* 4*s.* 8*d.*
19,982.93 dollars is 4128*l.* 14*s.* 1*d.*
325.05 dollars is 67*l.* 3*s.* 2*d.*

The plaintiffs claimed from the London Assurance 323*l.* 3*s.* 11*d.*; from the British Traders Insurance Company Limited, 1376*l.* 4*s.* 8*d.*; from H. H. Henderson 67*l.* 3*s.* 2*d.* The London Assurance denied liability altogether. The British Traders Insurance Company and H. H. Henderson limited their liability to 55*l.* 0*s.* 3*d.* and 2*l.* 18*s.* 8*d.* respectively, which sums were paid into court.

Miller, K.C. and *R. I. Simey*, for the plaintiffs.

Raeburn, K.C. and Sir *Robert Aske*, for the London Assurance.

G. R. Mitchison, for the British Traders Insurance Company Limited, and Mr. A. H. Henderson.

James Dickinson, K.C. and *Cyril T. Miller*, for the United Kingdom Mutual Steamship Assurance Association Limited.

Cur. adv. vult.

March 17, 1931.—ROCHE, J. read the following considered judgment:

This case raises questions of novelty and great difficulty in marine insurance law. Those questions were very fully argued by counsel for the various parties, to whom I am much indebted for their assistance, and at the conclusion of the hearing I reserved my judgment.

The hearing proceeded upon the basis of an agreed statement of facts supplemented by the material contained in several average statements. It was agreed by counsel that I should deal in the first instance with principles only, leaving all questions of amount for subsequent settlement or determination. Accordingly, where figures appear in this judgment they are to be regarded as symbols only employed to identify the items in dispute and not as binding upon either the parties or the court.

The facts may be summarised as follows: The plaintiffs at the material time were the owners of the steamship *Andree.* The defendants, the London Assurance, were underwriters on hull and machinery under a time policy containing the Institute Time Clauses, and I refer to them hereafter as the hull underwriters. The defendants, the British Traders

Insurance Company Limited, and the defendant Henderson (one of the underwriters of a Lloyds' Policy) were underwriters of a special risk relating to general average losses, and for convenience I refer to them hereafter as the special risk underwriters. The defendants, the United Kingdom Mutual Steamship Assurance Association Limited, of which the plaintiffs were members, undertook subject to its rules to indemnify members against divers liabilities, including cargo's proportion of general average not otherwise recoverable. I refer to this association hereafter as the club. In the year 1922 two casualties befell the *Andree* on one voyage—the first in April at New York by reason of a fire during loading, and the second in May by collision occurring on her voyage. As a result of the collision the *Andree* was sunk, but was salved with some of her cargo and taken to or near Philadelphia, where the voyage was abandoned. In connection with each of these casualties general average expenditure was incurred by the plaintiffs. The contract of affreightment provided for the adjustment of general average according to York-Antwerp Rules. The policy issued by the hull underwriters by clause 9 of the Institute Time Clauses provided as follows: "General average to be adjusted . . . if the contract of affreightment so provides according to York-Antwerp Rules, but in all matters not specifically referred to in York-Antwerp Rules 1 to 17 inclusive, the adjustment shall be in accordance with the law and practice obtaining at the place where the adventure ends, and as if the contract of affreightment contained no special terms upon the subject." The material York-Antwerp Rule is rule 17 of the Rules of 1890, which provides that the contribution to a general average shall be made upon the actual value of the property at the end of the adventure, and also that deductions shall be made from the value of the property of all charges incurred in respect thereof subsequent to the general average act, except such charges as are allowed in general average. By the law and practice obtaining at Philadelphia where the adventure ended owners of property are not liable to pay more than its salved value.

As between the parties to the contract of affreightment on the facts and under the stipulations of the contract, the position seems to me to be clear especially after the authoritative exposition of the law as regards York-Antwerp Rules in the case of *Chellew* v. *Royal Commission on the Sugar Supply* (15 Asp. Mar. Law Cas. 393; 126 L. T. Rep. 103; (1922) 1 K. B. 12). The position and rights and liabilities of these parties I find to be as follows. The general average expenditure of the plaintiffs in connection with the first casualty (New York fire) was about 63,000 dollars. (This figure and consequently sums to be recovered in this action based thereon may be subject to some reduction if actual payments are found to be less than certain estimated liabilities.) Part of the cargo was discharged at New York and was not re-loaded. The net value of such cargo which was saved by reason of the General Average Act was about 18,000 dollars. This 18,000 dollars worth of cargo was the only property in the adventure which was available for the purpose of contribution in the first general average because the expenditure occasioned by the second general average, the collision, fell to be deducted from the values of ship and cargo (York-Antwerp Rule 17) for the purposes of the adjustment of the first general average. After this deduction was made the values of the rest of the cargo and of the ship were nil. Contribution from the owners of the cargo saved at New York was due up to its full value and the plaintiffs have received in respect thereof a sum of rather over 18,000 dollars. Apart from this they have not received and are not entitled to any further contribution from owners of cargo. Accordingly they are out of pocket some 45,000 dollars of general average expenditure in respect of the fire.

In respect of the second general average act the figures stand approximately as follows. The general average expenditure of the plaintiffs was about 18,000 dollars. The salved value of the ship at the termination of the adventure was about 116,000 dollars and the salved value of the cargo was rather over 26,000 dollars. The owners of this cargo are liable to make contribution up to its full value, and the plaintiffs have received this contribution amounting to 26,249 dollars. Apart from this they have received and are not entitled to any further contribution from owners of cargo. Accordingly, they are out of pocket some 155,000 dollars of general average expenditure in respect of the collision. As to 116,000 dollars of this sum there could in the circumstances have arisen no right to contribution since that amount of the expenditure would clearly have remained to be borne by the ship, representing 100 per cent. of its salved value. The incidence of the balance of about 39,000 dollars alone has to be regarded when the policies come to be considered.

I now turn to the much more difficult question of the position as between the plaintiffs and their underwriters and the club. As I have stated above, the amounts to be considered for this purpose are sums of about 45,000 dollars in respect of the fire, and about 39,000 dollars in respect of the collision—84,000 dollars in all. But the controversy is narrowed and the amount in dispute is diminished by reason of the following facts. The American adjusters have proceeded on the basis and the hull underwriters agree that the hull underwriters are on any view liable for a considerable part of this sum. Broadly speaking, the amount to be deducted from the above figure of 84,000 dollars, and indisputably falling upon the hull underwriters is about 55,000 dollars to 56,000 dollars, leaving an amount in controversy of about 29,000 dollars. The main reason for this reduction in amount, as I gather, is as follows: the point of view of the American adjusters adopted by the underwriters was

that for the purpose of ascertaining the ship's proportion of general average the value of ship and cargo had to be looked at and assessed at the time of the fire and of the collision respectively. So far as this point of view is advanced, as it is advanced, as a ground for limiting the extent of the liability of the hull underwriters, I will discuss later in my judgment. At present I am merely explaining how the net figure in dispute of approximately 29,000 dollars is arrived at. To show what is the real controversy between the parties the explanation of how this figure of about 29,000 dollars is arrived at may be stated in another way as follows: The American adjusters treated two sums not recovered from cargo but arrived at on the basis of the notional valuation of the cargo at the times of the fire and collision respectively as constituting cargo's proportion of general average (beyond the sums of about 18,000 and 26,000 dollars in fact contributed). These sums were about 24,862 dollars in respect of the fire, and about 4780 dollars in respect of the collision, or somewhat more than 29,000 dollars in all. This way of looking at the matter is, I think, useful in considering the case generally, and particularly in connection with the liability of the special risk underwriters. The liability of these underwriters falls to be considered and determined before the liability of the other defendants is dealt with. Whatever the special risk underwriters are liable for diminishes the liability, or possible liability, of the other defendants. The contracts for the special risk insurances were made soon after the fire and before the vessel started on her voyage. The actual policies were issued considerably later. These policies are in all material respects of the same tenor which may be summarised as follows: The assured were insured at and from New York for a total amount of 30,000 dollars on cargo's proportion of general average disbursements as per specification attached. The specification or average disbursements clause contained the following amongst other stipulations: "On average disbursements applicable to cargo only interest admitted—amount at risk to be subsequently declared and valued. To pay the proportion attaching to any amount by which the property may be reduced in value owing to any subsequent accident, loss, damage, general average, salvage or charges without benefit of any other insurance." By the proportion of average disbursements applicable to cargo was meant the disbursement made in connection with the first (fire) general average, and it was not suggested that the special risk policies extend to the second (collision) general average. The question, therefore, is for what part of the 24,862 dollars above mentioned are these defendants liable. The two main points at issue between the plaintiffs and these defendants were: (*a*) The plaintiffs contended that as between themselves and these defendants the 18,000 dollars realised from the cargo which was not carried on from New York did not come into the account. These defendants contended at first that they were entitled to credit for the whole amount. (*b*) These defendants submitted that the plaintiffs were not the persons who expended all the moneys claimed to be general average expenditure by ship, or, put another way, that the plaintiffs were not interested to the full amount of their claim. As to (*a*) I hold that the 18,000 dollars must come into the account for the following, amongst other, reasons: The cargo which went on from New York was reduced in value by the collision and second general average from about 193,000 dollars to nothing. Had there been no collision the full contribution recoverable from cargo in respect of the first general average (fire) would have been recovered. But if the cargo which went on to meet with the collision had not met with that collision and the resulting reduction in value, the cargo which remained at New York would not have been liable to make contribution up to 100 per cent., as it, in fact, did in the circumstances as altered by the collision. The contract sued upon being a contract of indemnity this must be taken into account and some credit given in respect of the contribution of 100 per cent. by the cargo worth about 18,000 dollars. The question is for how much? The figures finally contended for by Mr. Mitchison for the special risk underwriters were as follows: Deduct 18,000 from a figure of about 32,000 dollars appearing in the New York average statement and leave 14,000 as the sum lost by the collision for which his clients were responsible subject to his other points. I incline to the view that this figure is approximately correct, but I am not sure precisely how a figure of about 19,000 dollars arrived at by the New York adjusters was arrived at, and whether this figure may not be more correct than the figure of 14,000 dollars. Accordingly, whilst deciding that the 18,000 dollars does come into the account, I leave for further settlement and determination the result in figures of this finding.

Since preparing this judgment there has been sent to me the report of a judgment of the United States Circuit Court of Appeals in the suit of Armour and Co. against the present plaintiffs. By this judgment the judgment of Mr. Justice Wolsey (37 Lloyd's List Rep. 178), and which was referred to in the arguments of counsel in the present case, was reversed. Armour and Co. were owners of cargo on this voyage, and the action related to their rights against and in respect of the sum recovered from the owners of the other steamship, the *Alexander*, concerned in the collision. It may be—I do not know that it is so—that this reversal of Mr. Justice Wolsey's judgment may affect the figures in the present case and the figures relating to the first general average and the 18,000 dollars. At any rate, I am fortified in the opinion I had already arrived at that the figures ought to be left in such a way that the parties could consider them afresh without any binding decision from me at the present stage on any question of amount.

As to (*b*)—that is the contention as to the interest—this is really a question of fact. I have no doubt on the facts that the New York Adjusters were correct in treating all the expenditure, the subject matter of the claim, as made by or on behalf of the shipowners. Further interest is admitted by the policies and I think this was interest in the whole of the expenditure, the subject matter of the claim.

Whatever figure is finally arrived at as representing the liability of the special risk underwriters, be it 14,000 dollars or 19,000 dollars or some intermediate or other sum, it is apparent that there remains of the plaintiffs' claim a balance of some 10,000 to 15,000 dollars, which, on the basis I have adopted above, is not recoverable from the special risk underwriters. The real question is whether the hull underwriters or the club are liable for this balance, which for convenience is hereafter described as the balance. Counsel for the club argued somewhat faintly that the club might not be liable even if the hull underwriters were not liable. But the real strength of his argument went in support of the plaintiffs' contention that the hull underwriters are liable for the balance. If I were not of opinion that the hull underwriters are so liable I should certainly hold that the balance in those circumstances fell within the description of rule 2 (*c*) of the club's indemnity rules, that is to say, would be cargo's proportion of general average not otherwise recoverable. But I have arrived at the conclusion that the parties liable for the balance are the hull underwriters. This question to my mind presents very great difficulty and is also, in my view, one bare of authority. Its decision seems to me to depend upon the terms and meaning of sect. 66, sub-sect. (4), of the Marine Insurance Act 1906. The sub-section is in the following terms: "Subject to any express provision in the policy, where the assured has incurred a general average expenditure, he may recover from the insurer in respect of the proportion of the loss which falls upon him; and, in the case of a general average sacrifice, he may recover from the insurer in respect of the whole loss without having enforced his right of contribution from the other parties liable to contribute." The rest of sect. 66 has some bearing upon the matter. Sub-sects. (1) to (3) define or formulate the rules of general average as between the parties to the contract of affreightment. The rest of the sub-sections deal with the rights of the assured or liabilities of insurers. Sub-sects. (6) and (7) call for no comment. Sub-sect. (5) deals with the case where the assured has not made an expenditure, but has paid or is liable to pay a contribution to another party's expenditure. That contribution he can recover from his insurer. Sub-sect. (4) deals with two cases: general average expenditure and general average sacrifice. The latter an assured can recover in full, as it was decided he could in *Dickenson* v. *Jardine* (3 Mar. Law Cas. (O.S.) 126; 1868, 18 L. T. Rep. 717; L. Rep. C. P. 639). It was suggested by the plaintiffs that some small part of the so-called expenditure in the present case consisted of sacrifices. Counsel for the hull underwriters at once agreed that if this were so his clients were liable to that further extent and no question as to that falls to be determined in this judgment. The real question was, and is, this: The plaintiffs and the club contended that the whole of the general average expenditure which had been incurred by the plaintiffs and was not met by contributions from the cargo represented and constituted the proportion of the loss which fell upon the plaintiffs and that this proportion of the loss, or rather, the balance after recovery from the special risk underwriters, was recoverable from the hull underwriters. On the other hand, Mr. Raeburn, for the hull underwriters, supported the view put forward by the New York adjusters that the proportion of the loss which fell upon the assured should, for the purpose of the hull insurance, be arrived at by assessing the values of the respective interests at the time when the expenditures were incurred for and on behalf of those interests. Moreover, he strenuously contended that the New York adjusters had so dealt with the matter and had apportioned the sums now claimed as cargo's proportion of general average and that their decision could not be reviewed. The decision of Mr. Justice Gorell Barnes and of the Court of Appeal in *The Mary Thomas* (7 Asp. Mar. Law Cas. 495; 71 L. T. Rep. 104; (1894) P. 108) was relied upon in support of this contention, and also as an authority directly and wholly opposed to the plaintiffs' claim upon the hull underwriters. As to the construction of sect. 66, sub-sect. (5), it was conceded by Mr. Raeburn that though this was a codifying Act it might alter the law (see *Polurrian Steamship Company Limited* v. *Young*, 13 Asp. Mar. Law Cas. 59; 112 L. T. Rep. 1053; (1915) 1 K. B. 922), but it was said that it required clear words to lead to the conclusion that the law was altered by the Act and that so far from the words being clear in that direction they could themselves bear the construction which these defendants contended for and which they said was to the same effect as the law as laid down in *The Mary Thomas* (*sup.*).

I will deal shortly with these various contentions, but before doing so it is to be observed that the rules laid down by sect. 66 are laid down subject to any express provisions in the policy. There is no express provision in the policy now in question varying in favour of the insurers the rules of sub-sect. (4). So far as there is express provision bearing on the matter in dispute, it is contained in the provision making general average rules govern the rights and liabilities of the parties, and that provision, in my opinion, operates in favour of the assured in the present case.

As to the contention that the New York adjustment is binding and cannot be

reviewed, it was held in *Harris* v. *Scaramanga* (1872, 1 Asp. Mar. Law Cas. 339; 26 L. T. Rep. 797; L. Rep. 7, C. P. 481), *De Hart* v. *Compania Anonima De Seguros Aurora* (9 Asp. Mar. Law Cas. 345, 454; 89 L. T. Rep. 154; (1903) 2 K. B. 503) and *The Mary Thomas* (*sup.*), that the foreign adjustments were binding because the contracts provided that general average was payable according to (or per) foreign statements. Here there is no such stipulation but merely clause 9 of the Institute Clauses, and it seems clear from the language of Romer, L.J. in the second of the above cases (89 L. T. Rep., at p. 158; (1903) 2 K. B., at p. 509) that had the Institute Clauses stood alone the foreign adjustments would not have been held to be binding. In my judgment there is nothing in the present case making the New York adjusters' views or statement binding upon the parties as to the effect of provisions of the York-Antwerp Rules or as to any matter now in controversy.

As to the more general application of the decision in the case of *The Mary Thomas* (*sup.*), I do not regard that decision as supporting these defendants' contention. It was a case where the foreign adjusters, whose adjustment both Gorell Barnes, J. and the Court of Appeal held to be binding, had apportioned a certain amount to cargo as its contribution. The Dutch courts had held that the shipowner could not recover that contribution because his servant, the master of the vessel, had been negligent. The English courts held that the shipowners could not go behind the foreign adjustment and recover from their underwriters what they had failed to recover from the cargo-owners. It is also to be observed that, as was expressly stated by Lindley, L.J., "Nothing turns on York-Antwerp Rules," and I respectfully agree with the observation of Scrutton, L.J. in *Chellew* v. *The Royal Commission on the Sugar Supply* (15 Asp. Mar. Law Cas. at p. 397; 103 L. T. Rep., at p. 108; (1922) 2 K. B., at p. 20) that Gorell Barnes, J. in *The Mary Thomas* (*sup.*) was adopting the view that by English law, as apart from York-Antwerp Rules, the rights and liabilities of the parties were to be assessed as at the time when the expenditure was incurred rather than at the time when the adventure terminated. In these circumstances I feel that the decision in *The Mary Thomas* (*sup.*) not merely does not conclude this case, but affords me little, if any, guidance for its decision. Apart from *The Mary Thomas* (*sup.*), counsel were unable to refer me to any case before or after the date of the Act arising on facts and documents comparable with the facts and documents in the present case. Mr. Raeburn, for the hull underwriters, relied upon the fact that no case was to be found as an indication that such a claim was foreign to our law, and he suggested that the observations in *Chellew's* case (*sup.*) of Mr. Mackinnon (the arbitrator who stated the special case) and of Scrutton, L.J. as to special insurance of the risk of loss of cargo, indicate that the idea of an existence of a claim against ordinary underwriters on ship was also foreign to the minds of those high authorities on the law of marine insurance. I think the observation is not without weight, but the point never really arose for discussion, still less for determination, in *Chellew's* case (*sup.*), and I must now decide it for myself as a matter of first impression on the true effect and construction of sub-sect. (4) of sect. 66 of the Act in its application to the facts of this case. In my opinion, where the contract of insurance provides for the adjustment of general average according to York-Antwerp Rules if the contract of affreightment so provides (as it did here), then as between the insurer and the assured as well as between the parties to the adventure the values which are alone material are the values at the termination of the adventure. It seems to me to be unnatural, if not impossible, to adopt and act upon values estimated or assessed at two different dates, the termination of the adventure and the incurring of the expenditure. The intention of an insurance contract in the present form seems to me to be that as regards general average the contract of affreightment and the contract of insurance shall in respect of the matters now in question proceed upon the same basis and principles. Accordingly, if a shipowner, being the assured under a policy in the present form, incurs expenditure for general average and the cargo's contribution falls short of what is hoped or expected by reason of the diminution or extinction of its value before the adventure terminates, then I think that loss falls into the category of the proportion of the loss which falls upon the assured, the shipowner, and is within the meaning of those words in the Marine Insurance Act, s. 66, sub-s. (4).

I, therefore, hold that the plaintiffs are entitled to recover the balance of their claim against the defendants, the hull underwriters.

The result of these findings is that I give judgment for the plaintiffs against the defendants, the London Assurance, the defendants, the British Traders' Insurance Company Limited, and the defendant, Arthur Henry Henderson, for their respective proportions of the divers sums or items which I have held above to be in principle the sums or items recoverable under the several policies. I give judgment for the defendant association.

Judgment for the plaintiffs.

Solicitors for the plaintiffs, *Botterell* and *Roche*, for *Vaughan* and *Roche*, Cardiff.

Solicitors for the defendants, The London Assurance, British Traders Insurance Company, and A. H. Henderson, *Waltons* and *Co.*

Supreme Court of Judicature.

COURT OF APPEAL.

March 9 *and* 10, 1931.

(Before SCRUTTON, GREER and SLESSER, L.JJ.)

THE VARING. (*a*)

ON APPEAL FROM THE COURT OF PASSAGE OF THE CITY OF LIVERPOOL.

Charter-party—"Scanfin" charter-party—Mode of discharge—Consignee entitled to select any one or more of alternative modes "if customary and available"—Alternative mode selected not available—Delay—Damages.

The defendants were consignees of certain wood goods shipped in the plaintiff's vessel V. *under bills of lading incorporating the terms of the Scanfin form of charter-party. By clause* 13 *of the said charter-party it was provided that the cargo was to be discharged in the customary manner "on to the quay and (or) into lighters and (or) craft and (or) wagons and (or) on to bogies and thereon stowed and (or) stacked as customary at the port of discharge, the consignees having the right to select any one or more of these alternatives if customary and available at the time of discharge."*

The V. *duly proceeded to the port of* G., *which was the port of discharge. At* G. *the customary mode of discharge for cargoes which require sorting or storing is into railway wagons known as "domestic" wagons, in which the cargo is conveyed to storage grounds which are under the control of the railway company, who also own the docks at* G. *In the case of cargoes which do not require to be sorted or stored, the customary mode of discharge is into main line railway wagons for conveyance direct to destination.*

When the V. *arrived at the port of* G., *the railway company, owing to congestion of storage grounds, refused to admit to a discharging berth any vessel whose cargo required to be taken in "domestic" wagons to the storage ground, but they were willing to admit and discharge any vessels whose cargo could be discharged into main line wagons and dispatched to its destination without requiring to be taken to the storage ground. The defendants, who had not sold their cargoes, insisted upon them being taken to the storage ground. The railway company thereupon refused to admit the* V. *to a discharging berth, and she was accordingly delayed. The plaintiffs claimed damages.*

Held (reversing the decision of the presiding judge of the Liverpool Court of Passage) that although discharge into "domestic" wagons for conveyance to the storage ground was a customary mode of discharge at the port of G., *it was not an available mode of discharge at the time when the* V. *arrived, and that the consignees were not therefore entitled to insist upon their cargo being taken to the storage ground. The plaintiffs were therefore entitled to recover damages in respect of the delay of the* V.

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

APPEAL from the Liverpool Court of Passage. The plaintiffs, Fornyade Rederiaktiebolaget Commercial, owners of the steamship *Varing*, appealed against the judgment of the presiding judge of the Liverpool Court of Passage (Sir W. F. Kyffin Taylor) dismissing their claim for demurrage amounting to 195*l*., or alternatively for damages, against the defendants, W. V. Blake and Co., timber merchants, Manchester, and Joseph Green, a timber merchant of Keighley.

The *Varing* was chartered under the terms of two Scanfin charter-parties, dated respectively the 9th and 10th Aug. 1927, to load part cargoes of wood goods and to proceed to Garston "or so near thereto as she could safely get." The defendants were the holders of bills of lading incorporating all the terms and conditions of the said charter-parties, including the following clause:

Clause 13. The cargo shall be discharged by the vessel in the customary manner as fast as the vessel can deliver during the ordinary working hours of the port, on to the quay and (or) into lighters and (or) craft and (or) wagons and (or) on to bogies and thereon stowed and (or) stacked as customary at the port of discharge, the consignees having the right to select any one or more of these alternatives if customary and available at the time of discharge.

The charter-parties further provided that demurrage was to be payable at the rate of 30*l*. per day in the event of the vessel not being loaded or discharged with despatch, and that the steamer should have liberty to complete with the same and (or) other goods for the same and (or) other ports.

The plaintiffs alleged that before the *Varing* arrived in the Mersey they were informed by the dock authorities, the London Midland and Scottish Railway Company, that owing to congestion they were unable to accept any more vessels for which storage accommodation was required for any material portion of the cargo, but that they would accept vessels where the whole of the cargo was to be discharged into railway wagons and sent direct from ship to destination; that the plaintiffs indicated this to the defendants, who refused to allow their timber to be so dealt with, and moreover on the 15th Sept., when the vessel arrived at Garston Docks, that the defendants required their timber to be sorted and stored on the dock estate, with the result that the dock authorities refused to allow the vessel to enter; that the dock authorities stated that they could not say when a berth would be available for the vessel whose consignees required such services; that it might be two or three months, but it was impossible to say; that the plaintiffs were ready and willing to take their vessel into dock for discharge into main line railway wagons direct or by any other method, but the

defendants, although well aware of the position, throughout persistently refused to agree to the above method of discharge, whereby the *Varing* was unable to enter the said dock or to get further until the midnight tide of the 27th Sept. 1927, when she was allowed to dock, the defendants having then agreed to discharge into main line wagons without sorting or storing.

The plaintiffs brought an action in the Liverpool Court of Passage, claiming that the *Varing* was an "arrived" ship on the 15th Sept. 1927, and that thereupon her time for discharge began to run, or alternatively they claimed damages for breach of contract by wrongfully preventing the discharge of the *Varing* or failing to accept delivery of their cargo.

The presiding judge of the Liverpool Court of Passage (Sir W. F. Kyffin Taylor) gave judgment for the defendants, and stated his findings of fact and conclusions as follows :

A substantial portion of the *Varing's* cargo belonging to the defendants had not been sold or disposed of, and wherever delivered was under the necessity of being sorted and stored until the defendants were in a position to dispose of it. This fact at all material times was known both to the defendants and the plaintiffs and the dock authorities.

On the 10th Sept. the dock authorities asserted that the sorting ground at Garston Park Dock was so congested with timber that they were disabled from receiving any more cargoes of timber which required thus to be dealt with, and this condition continued in fact until the end of the year, and on and after the end of September this prospect was known to be probable.

It was essential that the dock authorities should know before allowing any vessel with timber to enter their docks whether the cargo required thus to be dealt with. If the timber cargo had been disposed of and could be loaded into wagons and sent direct from the dock estate to the destination outside, there was in fact less difficulty, although there might be some delay. This also was known to the plaintiffs and to the defendants.

The fact that a portion of the cargo had to be sorted and stored was originally known only to the defendants, and while that fact did not concern the plaintiffs, the plaintiffs and the defendants were bound on the insistent inquiry of the dock authorities to disclose it.

The mode of discharge at Garston for timber cargoes is by shore crane to wagons. If the cargo has to be sorted and stored it is landed into domestic wagons and transported to the sorting ground on the estate. If it is to be sent away it is delivered into main line wagons ; the domestic wagons never leave the estate and are unfit for transit on main lines though in cases of emergency main line wagons are sometimes used for domestic purposes.

On the 15th Sept. the *Varing* arrived in the Mersey and anchored in the Sloyne, and remained there until she entered the Garston Dock. I find that the Sloyne is a customary and usual place or area where vessels anchor to await entrance to Garston. I understood that other anchorages were sometimes used. No evidence was given as to the precise distance from the Sloyne to Garston, nor as to whether or not it was practicable to anchor nearer to Garston, nor of any custom to regard a vessel destined for Garston and anchored in the Sloyne as being as near as she could safely get to Garston, in fact vessels could get safely to the dock gates, but there was no evidence as to whether a vessel could lie near the said gates and deliver cargo into lighters.

On the 11th Sept. the master of the *Varing* and Mr. Beck, ship's agent, saw Mr. Thompson, of the dock authorities, for the purpose of "stemming" the vessel, that is to enter particulars as to the vessel in the stemming book, which entry indicates acceptance of the vessel by the dock authorities and decides the order of admittance to the dock.

As a substantial portion of the cargo had to be sorted and stored no entry was made in the stemming book, but particulars in writing were taken and admission was refused. When the vessel was allowed to enter on the 27th Sept. entry was made in the stemming book by interlineation as to the 15th Sept.

If the cargo could have been sent away after delivery to a destination outside Garston the vessel could have been admitted into the dock on the 24th Sept. A discussion then began between the plaintiffs, the defendants, and the dock authorities, chiefly by correspondence, as to what was to be done and as to alternative ports of discharge.

The plaintiffs, from consideration of the expense to the defendants—and incidentally to themselves—did not desire to act in a high-handed manner and adopt an alternative port. Preston, Liverpool, and Manchester were debated, but I find that Preston was in fact so congested as not to be available, Liverpool was expensive and objected to by the defendants, and Manchester required expenditure on additional freight canal dues, dock dues, pilotage, and towage. Time was consumed in controversy.

The plaintiffs maintained the view that the defendants should receive the cargo into main line wagons to be carried direct to points outside Garston, and that this was a customary and available method of discharge, and the only one available at the time. The defendants throughout insisted on their alleged right to have the cargo delivered at Garston, and that the expenses of an alternative port should be paid by the plaintiffs, and later, that they should be shared.

The plaintiffs ultimately proposed that the cargo should be delivered without prejudice to the settlement of liability for extra expenses being decided by legal process if unavoidable. Objection was made by the defendants to this portion of the correspondence being read as being "without prejudice." I admitted it, being of opinion that it would be difficult to appreciate the position without knowledge of it, and considering that it did not constitute an offer to settle made without prejudice, but contained a suggested expedient for saving time and reservation of the question of liability for later discussion.

Whatever course had been adopted, this question, in the absence of final agreement, would have remained for decision. The plaintiffs never adopted an alternative port or place of discharge, although very near to such a decision on the 19th Sept. (the learned judge referred to the correspondence), but this attitude was not persisted in.

The difficulty was solved on the 27th Sept. by the dock authorities, who obtained a storage ground at Widnes which they agreed to regard "as if" Garston in all respects. Neither the plaintiffs nor the defendants had any share in this solution in which, as it suited their interests, they both acquiesced.

I have read all the authorities cited to me in argument which I hope I have understood, and as a result of consideration of the cases and the facts

of this case, I find that the *Varing* was not an "arrived" vessel until the 27th Sept. She arrived at Garston on that date, and not before, and also was not before that date as near as she could safely get so as to deliver the cargo, always afloat. I think the onus is on the plaintiffs to satisfy me as to this.

The circumstances were such as to make it reasonable for the plaintiffs to adopt an alternative port or place for delivery of the cargo if the ship was as near as she could safely get, but the plaintiffs never did adopt or select an alternative or substituted port or place for the discharge, nor did they give any effective notice to the defendants of any such suggestion.

The contention of the plaintiffs that the defendants ultimately agreed to something which they had at first wrongfully and unreasonably refused, namely, to discharge into main line wagons without sorting or storing, is not supported by evidence. The *Varing* was refused entry because the dock authorities knew that a substantial portion of the cargo had to be sorted and stored at Garston. This was a fact which the defendants had to concede and were unable to alter, and this cargo in fact required sorting and storing.

They did not refuse discharge into main line wagons, but they did state that their timber, not being disposed of at any destination outside of Garston, required sorting and storing there. This fact, known to the dock authorities, was, in my view, the cause of the refusal to allow entry and of the consequent delay, and was not, in my judgment, a breach of their contract by the defendants.

The defendants did insist on delivery at Garston, but this insistence was not the cause of the refusal by the dock authorities nor of the delay. It may be that the defendants were unreasonable in rejecting the plaintiffs' proposals and demanding a share of the expenses of delivery. This may have caused some of the delay, but this was not the cause of action, nor was it relied upon by counsel nor discussed, nor was any attempt made to apportion any part of the delay attributable to this cause. The plaintiffs, on the facts existing up to the 27th Sept., could have cut the knot but refrained.

If the proposal of the plaintiffs had been accepted the loss by delay might have been diminished, but the question of liability would have remained for settlement.

I think the plaintiffs fail, but in case my view of the facts or the law is held to be erroneous, and the plaintiffs are held to be entitled to recover, I think the amount claimed is correct and assess provisionally the damages at 195*l*.

I give judgment for the defendants with costs.

The plaintiffs appealed.

Gething for the appellants.

Sellers for the respondents.

Scrutton, L.J.—This is an appeal from the Court of Passage, the claim being a claim for either demurrage or what I may call quasi demurrage in respect of a Norwegian ship called the *Varing*, which was chartered under the Scanfin form of charter to proceed to a Scandinavian port to load timber, and therewith proceed to Garston, or so near there as she could safely get. At the discharging port, by clause 13, the cargo of the ship was to be discharged by the vessel "in the customary manner as fast as the vessel can deliver during the ordinary working hours of the port, on to the quay and (or) into lighters and (or) craft and (or) wagons and (or) on to bogies and thereon stowed and (or) stacked as customary at the port of discharge, the consignees having the right to select any one or more of these alternatives if customary and available at the time of discharge."

It is always important to remember that this Scanfin charter is a general form of charter made out so as to be applicable to a large number of ports, and consequently some of these words frequently have no application whatever to the particular case which is then under consideration; and that is particularly true of clause 13, because there are many ports at which you cannot discharge into lighters, and there are many ports which have not got many bogies, and there are some ports which have not got a quay. Clause 13, therefore, has to be considered in the particular instrument by the circumstances of the particular port for which the Scanfin charter has been used. This court had, about a year ago, a case of the owners of the ship *Svendborg* suing the railway company which own the docks at Garston: (*Dampselskat Svendborg* v. *London, Midland, and Scottish Railway Company*, *ante*, p. 27; 141 L. T. Rep. 521; (1930) 1 K. B. 83). There was a great deal of evidence, and the question there was, inasmuch as the regular mode of delivery at Garston is into wagons, at what point of transit from the ship to the wagon does the ship's liability to expense cease and the consignees' liability for expense begin? There was a long discussion as to which party was to stow the timber that came in the crane as it was dropped into the wagon. It was quite clear, in all that discussion, that the ship had nothing whatever to do with the matter after the timber reached the wagon. Consequently, it never became necessary to look into the question which is the subject matter of this case, namely, what is to happen to the cargo when it comes away in the wagon, and therefore nothing will be found about that part of the case in the judgment. But I see that I reserved my opinion on a matter which might have some relevance in this case, and that is where the ship delivers its consignments of timber in a heap or in a lump. I said in the course of my judgment (*ante*, p. 29; 141 L. T. Rep. at p. 523; (1930) 1 K. B. at p. 93): "I mention, to show that I had not overlooked it, that it is not ordinarily good delivery to tender goods to two consignees claiming different marks mixed up together and to leave the consignees to sort them," unless the consignees have acquiesced in that form of delivery. Obviously the ship must make delivery of each parcel to each consignee in the absence of express agreement, and must not discharge all its contents in a heap and say: "Now sort it out for yourself." In many ports, to avoid the delay of sorting, the goods are tumbled out in a heap and sorted by the dock company, as agents partly of the ship

and partly of the consignees, and then delivery is made to the respective consignees.

Now what has happened in this case is this: I should mention, first of all, that the charter purports to be to Garston, not to Garston docks, and if there had been another place of delivery in Garston—in the locality known as Garston—the circumstances would have been quite different from what they are in this case where it is admitted that there was no "usual place of delivery" in Garston, except Garston Dock. At the time that this timber was shipped there was great congestion of timber in the Lancashire ports with the result that the storage ground at Garston docks into which cargo which had to be sorted, or which the consignee wished to store until he had sold it, was put, was full up for a very considerable time. Other Lancashire ports were also in somewhat similar difficulties, and the congestion was so great that the London, Midland, and Scottish had to put up notices that in the case of a ship with timber coming into their dock, if the consignees were not ready to take it straight away by what are called "main line trucks" on the railway, but wanted to have it stored, the railway company could not take that ship into dock because they had no room to store the timber which the consignee desired to have sorted and stored until he could sell it. "On the other hand," said the railway company, "if what you want to do does not involve sorting and storing, but if the ship is ready to make delivery to you into railway wagons which will go straight out, we can take the ship if the whole of the cargo is ready, or substantially the whole of the cargo is ready, to go that way." That was the position at the time that this vessel arrived off Garston. When she got to Garston (I will explain what I mean by that in a moment) on the 15th Sept., that was the position. One can illustrate it by two letters. On the 15th Sept., the day on which the *Varing* arrived in the neighbourhood of Garston, a letter was written to Blake, one of the consignees. There were three consignees of timber—Mr. Blake, Mr. Green, and Mr. Craig—having between them about 500 standards, of which Blake had about 300, Green 100 or a little over, and Craig a little under 100—ninety, I think. The letter I refer to reads: "We are in receipt of your letter of yesterday's date with respect to the above steamer, and have taken this matter up with the railway company, but regret to have to advise you that they will not accept this steamer for Garston unless practically the whole of her cargo can be loaded into main line wagons at ship's side, and sent away from Garston, without sorting or measuring on this estate"—that is, the Garston estate. That was answered by Blake direct to the railway company on the next day, the 16th: "We understand from Messrs. Ed. Nicholson Limited this morning that you are refusing to accept this steamer for Garston unless practically the whole of her cargo can be loaded into main line wagons at the ship's rail and sent away from Garston without measuring or sorting and we must kindly ask you to reconsider your decision. Failing this, we beg to advise you that we have no option but to hold you responsible for any loss which we may sustain through your refusal to accept this vessel at your port, as no notice was given of this refusal before the vessel sailed from the loading port."

The position therefore was this. The railway company say: "We can take no ship which claims that its cargo shall be sorted and stowed on our storing ground." The consignee says: "I insist on your taking the ship, and I am going to have the cargo sorted and stowed on your storage ground." The consequence of that was that for some days—I will not mention how many days for the moment—the ship was refused admission to the dock because the consignees said: "We insist on the cargo when it is landed on the quay"—in the way I will describe in a moment—"we insist on its being sorted and stored on your estate until we have sold it and until we can know where we are going to send it to." The question is what is the effect of that attitude of the consignees to the claim of the ship? The ship proceeded to the usual place in the River Mersey—which is not Garston—where ships waiting to get into dock lie, a place on the opposite side of the Mersey called the Sloyne Channel. It is agreed that the Sloyne is not a usual place of discharge, though it is a usual place of waiting, and the charter-party said "to Garston," or as near thereto as she could safely get. The liability and rights of a ship in that position have been laid down once and for all in *Nelson* v. *Dahle* (3 Asp. Mar. Law Cas. 392; 1880, 44 L. T. Rep. 381; 6 App. Cas. 38), and an infinite number of differences arise which give opportunities to industrious counsel to cite a number of other cases which are not the case before the court, and to explain in what respect they differ or agree with the case before the court. But, after all, one goes back to *Nelson* v. *Dahle* (*sup.*), and as I understand the decision of the House of Lords, it is this: When you are chartered to go to a discharging place and cannot get there, first of all you are bound to wait a reasonable time before having recourse to the clause "or as near thereto as she can safely get." You cannot arrive and, when you find that you cannot get in at the exact minute, or on the exact day you desire, immediately go off to a place which you describe as "as near thereto as she can safely get." When a reasonable time has elapsed, and when there is no chance of your getting in to your discharging place within a reasonable time, the ship is at liberty to go to a reasonable discharging place—"as near thereto as she can safely get"—and can call upon the consignee to take delivery at the substituted place. But the shipowner must make up his mind what he is going to do and give notice to the consignee, saying "I am going to such-and-such a place, being the nearest discharging berth to which I can safely get, and you must take my cargo there." Obviously, inasmuch as it involves

the question whether the ship has waited a reasonable time, and as it involves the question whether a particular place is a reasonable place —" as near thereto as she can safely get "—shipowners should always be slow before taking a decided course of that sort, and landing themselves with a lawsuit in which it will be uncertain what the result may be on the facts. In the present case, although everybody wrote a great many letters, the plaintiffs never did take the decided course of saying : " We are going," for instance, " to Liverpool and shall tender you the cargo there and you will be liable for all costs if you do not take the cargo at the place, 'as near thereto as we can safely get,' where we propose to discharge it."

The consignees held out for a considerable time in their insistence on storing and stowing their timber at Garston; and the dock authorities held out for a considerable time that they were not going to let a ship in to stow and store its cargo at Garston. The shipowners also insisted that, in some way or other, they were going to claim the costs of the delay occasioned to them by the claim of the consignees which, said the shipowners, " is one which you have no right to make."

Various suggestions were made—I am only going to refer to one of them—and a number of these suggestions were without prejudice to the ultimate rights (that is to say, the fact they were made was not to prejudice the ultimate rights) of the consignees, Blake and Craig, who were, apparently, acting in concert with Green. Messrs. Blake wrote, for instance : " We are prepared, entirely without prejudice, to arrange for our goods to be sent away all direct *ex* ship at Garston, avoiding sorting and storing at this port, but the extra expenses we shall incur doing this will amount to about 12*s*. 6*d*. for standard."

I now come to a question which arises on the charter. It appears that in Garston you do not discharge on to the quay and you do not discharge on to lighters or into carts; you do discharge into wagons but into two sorts of wagons. If you are going to send the goods straight away you discharge into main line railway wagons. If you are going to store the goods at the port you discharge into what are called " domestic or red wagons," which take the timber away to the sorting ground. If a ship does deliver in such a way that all its cargo has to be sorted, then the cargo is taken away in the domestic wagons to the sorting ground. The right which the consignee has of selection is the right to select any one or more of those alternatives if customary and available at the time of discharge. Now, taking goods that are going to be stored in domestic wagons to the sorting ground is customary, but it is quite clear that it was not available at the time of discharge, for, if the consignee had said to the dock company : " We are going to have these goods stored at Garston dock," the ship would never have got into dock because the railway company, having no more room in the storing ground for any more cargo of that sort, would have refused to take them in.

In these circumstances, were the consignees right in insisting that they were going to store at Garston ? In my view they were not right because the method of discharge into domestic wagons to go into store at Garston was not then available. Consequently, in my opinion, unless a certain state of facts existed (which I will mention in a moment), the consignees were preventing, and wrongfully preventing, the ship from reaching the place provided for in the charter. The result would not be demurrage technically, but it would be damage for preventing the ship from reaching her place of discharge—which would have practically the same result as if there were a claim for demurrage.

Now the state of facts which presents a difference to that position is this : a ship, if required to do so, must deliver to each consignee separately and the ship must do the sorting necessary to make delivery. It is only by some special form of contract or custom that the ship can do what is done in many timber ports—tumble the whole of the cargo out and then pay for the sorting on the dock premises. An attempt was made here to prove that delivery could not have been made without sorting on the quay or the storing ground. In my opinion it failed. The defendants called no evidence at all, and, therefore, one was left on the facts as proved by the plaintiffs plus some evidence given by Mr. Topham, the manager of the dock. Mr. Topham's expressed opinion was—perhaps as the result of long experience of such timber cargoes—that he really would not have been able to deliver direct to wagons without sorting, and he went so far as to say that the cargo in this particular ship—about which I do not think he remembered much—could not have been delivered without sorting. The answer to that is that it is not a fact, because one of the three consignees did take his cargo right away from the ship in railway wagons without any storing at all. It appears that the cargo was so stowed in the ship that by means of stowage plans it could have been delivered, without sorting, direct to the railway trucks and it could have gone away. That is borne out by the letter to which I have already referred in which Blakes themselves offer to have the cargo go straight away, without sorting, in railway trucks. That is the state of facts, and in the view which I take of the facts it follows that there is a claim for damages against these two consignees for preventing the ship from going into dock to her place and discharging so that she never became an " arrived ship " and did not become an " arrived " ship until a later date. In effect, the consignees were endeavouring to put upon the ship a burden occasioned by the fact that the consignees had not sold their cargo on the arrival of the ship, and therefore wanted to store it at Garston.

The learned and very experienced judge of the Court of Passage has taken a different view,

but having read his judgment very carefully I have really not been able to ascertain why he took that view. I have stated the view which, in my opinion, ought to have been taken. Part of the learned judge's opinion is, I think, the result of a mistake of fact. He says: "They"—that is the consignees—"did not refuse discharge into main line wagons, but they did state that their timber was not being disposed of at any destination outside Garston, and required sorting and storing there. This fact, known to the dock authorities, was, in my view, the cause of the refusal to allow entry and of the consequent delay, and was not, in my judgment, a breach of their contract by the defendant." Then he goes on: "The defendants did insist on delivery at Garston, but this insistence was not the cause of the refusal of the dock authorities nor of the delay." I do not know why the learned judge says that. It was their insistence on having the goods stored at Garston which was the cause of the dock company refusing to admit the ship into Garston and the cause of the delay.

For the reasons I have given, I think the learned judge came to a wrong conclusion. The only question that remains is how much the learned judge has found by way of damages, in case he is wrong. He found for the plaintiffs in 195*l.* damages. But I think, again, he has not appreciated all the facts. It was proved by Mr. Topham that if the consignees had not insisted on having their goods stored at Garston, the *Varing* would have got into Garston Dock on the 24th. But she did not, as a matter of fact, get into Garston until, I think, the night tide of the 27th and the morning of the 28th. She got in because the dock company, making a great effort to get rid of the congestion which prevailed, arranged to take the goods, without any extra expense, to the storing ground at Widnes, ten miles from Garston, a thing which would not have fitted in with the contract at all unless the ship and the consignees were agreed about it. The result of that appears to me to be that there being some slight difference as to the exact times, the 195*l.* which the learned judge has suggested to be the damages, should be reduced to 100*l.*, which would substantially represent the damage, in my view, caused by the breach of contract by the consignees.

The appeal must be accordingly allowed and judgment entered for the plaintiffs against the consignees, for 100*l.*, with the costs here and below.

Greer, L.J.—I agree. But for the fact that the learned and accomplished judge who presided over the Court of Passage has held that the plaintiffs made no case against the defendants, I should have thought that this was a case in which the plaintiffs were plainly entitled to succeed—at least for the amount which my Lord has mentioned.

There were three consignees, holders of bills of lading, of wood cargo on board the *Varing*. The bills of lading were incorporated in the terms of the two charter-parties. My Lord has read clause 13, and I begin the consideration of this case with the well-known principle that the discharge of a ship is a double operation in which the consignees have got to take their part and the ship has got to take its part. The ship has nothing to do with enabling the consignees to perform the consignees' duty. The law was laid down a long time ago by the late Lord Esher in *Peterson* v. *Freebody* (8 Asp. Mar. Law Cas. 55, at p. 56; 73 L. T. Rep., at p. 164; (1895) 2 Q. B. D. 294, at p. 297), in these words: "The operation, therefore, which is to take eight days"—there were eight lay days in that case—"is an operation to be performed as between the shipowner and the consignees. Whichever word be used, whether it be called a 'discharging' or a 'delivery,' and whatever be the circumstances of the delivery, one party is to give and the other is to take, delivery at one and the same time, and by one and the same operation. It follows that both must be present to take their part in that operation. Those parts are, the ship has to deliver and the consignee to take delivery—where? Each has to act within his own department. The shipowner acts from the deck or some part of his own ship, but always on board his ship." That last sentence has to be modified by reason of some subsequent decision, but the rest of the words to which I desire to call attention refer to what a receiver has got to do—which is the important matter to consider in the present case. The learned Master of the Rolls went on to say: "The consignee's place is alongside the ship where the thing is to be delivered to him. If the delivery has to be on to another ship, he must be on that ship; if into a barge or lighter, on that barge or lighter; if on to the quay, on the quay." It seems to me it is no concern of the ship what the consignee may desire as to the kind of vehicle in which he is going to receive his cargo. He has got to be at the place of discharge with his vehicle—if it is to be delivered into a vehicle—ready to receive the cargo.

In this case there were three consignees and three separate bills of lading, and the evidence satisfies me, beyond any reasonable doubt, that it was possible for the ship to distinguish between the cargo covered by each of these three bills of lading and to deliver to each consignee if he was ready to receive it, the cargo, the subject of his bill of lading. "But," the defendants say, "I could not take delivery because the railway company refused to store and sort the goods." The goods did not want sorting and the railway company could not store them because they had not got storage room. That seems to me entirely to be a matter for which the consignees must take the responsibility and not a matter for which the ship is in the least responsible. The consignee has got to be there with wagons that will take the cargo. If they prove that some unforeseen event made it impossible for them to have the wagons there at all, then they might have a good defence to the action, but they did not prove anything of the kind. All

they proved was that the only wagons they could get there ready to receive the consignment were wagons which would immediately go off the dock premises, and they could not get wagons in which the dock company would agree to take the goods to a storage place and there store them. That seems to me to be a matter with which the consignees alone are concerned.

These considerations, in my judgment, are sufficient to enable the court to say the plaintiff was entitled to damages. It was no answer for the consignee to say : " We did not want these goods in main line wagons. We wanted them in wagons which would be taken by the dock company so that they could be stored at the dock premises." By their continued refusal to take these goods, unless they were delivered into wagons for storage on the dock premises, they were breaking their contract. The contract was that, as soon as the vessel was an "arrived ship," they were to take the goods which were tendered to them by the ship. Now the vessel at one time, it was suggested, was an " arrived " ship—on the 15th Sept. On the evidence, however, it appeared that she could not get into the place where she had to go, namely, the usual loading place in Garston Dock on the 15th Sept.—and only got there on the 24th Sept., and, therefore, she cannot claim anything in respect of the delay up to the 24th Sept. But by reason of the attitude taken up by the consignees, and the demands they made, she was subjected to a further delay until the 28th Sept., and, therefore, she was entitled to claim damages in respect of that delay. She is not entitled to demurrage properly so-called, because, after she got to the place of discharge, she was discharged within the contract time. But what she is entitled to is damages for detention during the four days in which she was prevented, by the wrongful attitude taken up by the receivers, from getting into the place of discharge. It is not definitely proved that the delay was four days ; it may have been only three days and part of a day. Accordingly, I think the case will be met by awarding the plaintiffs the amount of damages which my Lord has mentioned, namely, 100*l*.

Slesser, L.J.—I agree. Were it not that we were differing from the learned and experienced judge who heard this case, I should have been content to have added no more. But there are one or two indications as to the issues which were really at stake in this case which, I think, may profitably be considered. The substance of the defence is contained in par. 5, where the pleader says that by clause 13 of the charter-parties, when the *Varing* became an " arrived " ship the defendants had the right to select any one or more of the customary methods of discharge, if available at the time. On the *Varing's* arrival on the 28th Sept. 1927 none of the customary methods of discharge of a cargo destined for Garston was available owing to congestion. The defendants were asked for particulars of what they meant by " customary methods of discharge," and in their further particulars the defendants divide " customary methods of discharge " into two classes, namely, firstly, " goods destined for Garston or which required sorting before being forwarded by rail in wagons," and, secondly, " cargo that is destined for direct dispatch into main line wagons." As to the former, they say " they should be taken in ' red ' or ' domestic ' wagons to the storage ground."

My Lord has pointed out that these charter-parties are of general application, and that in clause 13 they deal with a number of definite ways in which cargo may be discharged, some of which are appropriate for one port and some for another. It is said that the consignees have the right to select any one or more of these alternatives if customary or available at the time of discharge. There is little doubt, I think, upon the evidence that, so far as customary alternative is concerned, that was the system of discharging into wagons. The question arises then whether such customary alternative was available. It is said that the wagons which were available were not the kind of wagons which were indicated in the intention of the parties and in the custom, because here the only wagons into which the consignee could properly call for the goods to be discharged were " red " or " domestic " wagons, and the reason the defendants gave for that, as I read their particulars, is that the cargo was destined for Garston itself or required sorting.

I do not find in the instrument any trace that one type of wagon is distinguished from another. I think that the customary and alternative methods that are there set out are alternative—not strictly alternative, because there are more than two—delivery into lighters, or into wagons, or into bogies, and the particular method here selected was that of wagons ; and so far as that is concerned the railway company were prepared to discharge into wagons, that is to say into main line wagons, and it is clear that that class of wagon was available. I cannot see any indication in the charter-party that the destination would be in any event anywhere but Garston. Garston was the port of discharge, and it was no concern of the ship's whether after the goods were discharged at Garston, they were to be left at Garston or sent to Liverpool or any other port of the United Kingdom. The obligation of the ship is to discharge at Garston " in the customary manner." That leaves only the alternative distinction, that the method of using " red " or " domestic " wagons must be invoked, when the cargo requires sorting. The learned judge has found upon that that these goods would require sorting. Although it is true that one witness, Mr. Topham, used language which might bear that construction, it is abundantly clear that when the facts of the case are considered, and the letters written

by the defendants themselves are considered, that they were under no such apprehension. On the 28th Sept., for example, in addition to what my Lord read, Messrs. Blake and Co. say: "We confirm telephone conversation with Mr. Thompson this morning when we understand that you propose giving this vessel a berth at 1 p.m. to-day, and that it is your intention to load goods direct from ship into wagons." Now that means without sorting, and in the next sentence they say: "We agree to your adopting this course on the understanding that the charges would be the same as if the goods were handled at Garston, and we understand this to be the case."

In my view, in the light of that letter it is for the defendants to say what sorting was necessary before the goods could properly be discharged. But there is, I think, a slight confusion of thought with regard to two different matters here. It may well be that it is the duty of the shipowner, where he carries a mixed cargo, to sort it before he delivers it. That is one thing; the question of the construction of this particular charter-party is another, and so far as this charter-party is concerned the obligation is to deliver into wagons, and the mere fact that sorting is there required—which may be required under the general law—does not justify the reading of the obligation as an obligation to deliver into "domestic" or "red" wagons in the way that has been contended for here by the defendants.

The result, therefore, of the evidence here is this: that on the 24th Sept. the goods could have been discharged into wagons in the customary manner, discharged into wagons by means of cranes at this port. It might have been possible, in spite of that, for the defendants to have argued that these goods were so mixed that in fact they physically required sorting, altogether apart from the construction of the charter-party. The evidence, however, is clear, that not only the goods of Mr. Blake, but the goods of Mr. Craig were delivered at Widnes. The learned judge is consequently mistaken in coming to the conclusion that they needed sorting. In my opinion the defendants are without any defence to the claim for breach of contract, and I agree with my Lord that this appeal must be allowed to the extent, and with the consequences, that he has stated.

(Before BATESON, J.)

THE RING. (a)

Practice—Undertaking by solicitor to appear and put in bail—No writ issued—Vessel subsequently sold in other proceedings—Writ issued by party to whom undertaking given—Delay—Whether undertaking enforceable.

A solicitor who has given an undertaking to enter an appearance and put in bail in any proceedings which may be commenced by parties to whom the undertaking is given, thereby securing the freedom of the vessel from arrest, will not be relieved of such undertaking if the writ is in fact not issued until after the vessel has been sold in other proceedings in rem.

MOTION on originating summons by Messrs. Ince, Roscoe, Wilson, and Glover, a firm of solicitors, asking to be relieved of their undertaking to enter an appearance and put in bail in any proceedings commenced by the plaintiffs against the owners of the Norwegian steamship *Ring.*

In June 1930 the *Ring* brought a cargo of timber to Warrington and Manchester. The plaintiffs, owners of cargo laden on the *Ring*, made a claim in respect of damage to their cargo, and threatened to arrest the *Ring*. Thereupon Messrs. Ince, Roscoe, Wilson, and Glover, in order to avoid the arrest of the *Ring*, gave an undertaking to the solicitors acting for the plaintiffs to accept service and provide bail on behalf of the *Ring*. No writ was issued by the plaintiffs until the 14th March 1931, after Messrs. Ince, Roscoe, Wilson, and Glover had taken out the present summons. In the meantime the *Ring* had been sold by order of the court in other proceedings. Messrs. Ince, Roscoe, Wilson, and Glover accordingly moved the court to release them from their undertaking.

Wilmer for the motion.—The *Ring* has already been sold in an action *in rem*, and the plaintiffs cannot now arrest her. The consideration for which the undertaking was given has thus failed, and the solicitors are no longer bound by it. Alternatively, the undertaking was to enter an appearance and provide bail to a writ issued within a reasonable time, and this writ was not issued within a reasonable time.

Sir *R. Aske* for the plaintiffs.—At the time when the undertaking was given the *Ring* could have been arrested, and the undertaking was therefore given for a good consideration.

(a) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

It does not matter that the *Ring* cannot now be arrested. There was nothing unreasonable in waiting from June until March before issuing the writ, and the solicitors have not been prejudiced by the delay.

BATESON, J.—The *Ring* brought a general cargo from Riga about June of last year for Manchester and Warrington, and the cargo owners, thinking they had some claim against the ship for damage to cargo, were threatening, apparently, to arrest her. They got into touch with Messrs. Weightman, Pedder, and Co., their solicitors, who, in turn, got into touch with Messrs. Ince, Roscoe, Wilson, and Glover, who, fearing that arrest, telegraphed to Messrs. Weightman, Pedder, and Co. as follows: "*Ring*. Please accept this telegram undertaking accept service provide bail on behalf of *Ring*." That was on the 5th June. No writ was sent by Messrs. Weightman, Pedder, and Co., who acknowledged receipt of the telegram, and the question that arises is whether, having sent that offer with acceptance of service, and, in fact, no writ being issued for some months, Messrs. Ince can now retract from it. On the 12th June the *Ring* left the jurisdiction again and, I think, on the following day correspondence between the solicitors ceased for a time.

On the 29th Dec. the matter awakened and a letter was sent by Messrs. Weightman, Pedder, and Co. to Messrs. Ince with information that the cargo and general average of various claims had now been made and "we are now in a position to inform you of the amount of bail required." The ship, in fact, was sold under some other proceedings on the 7th Jan. 1931. On the 2nd March Messrs. Ince issued the originating summons in this case for the determination of the following question: Whether Messrs. Ince are still bound by the undertaking to accept service, appear and provide bail on behalf of the *Ring* given by them as solicitors for the owners in June 1930.

It is that question that I have to decide. I think Messrs. Ince are bound by the undertaking. It is, in terms quite plain, an undertaking to accept service when the writ was issued, that is to say they must accept service. The point is taken that no writ was issued for many months and they were now not bound to accept service when it is. Now, it is quite clear that if the writ had been issued they would have been bound to accept it. Can they be bound to accept it now? Does it make any difference because the writ was not issued? I think not. The point Mr. Wilmer so skilfully took does not appeal to me. He says now the owners of the cargo cannot bring an action because the ship has been sold. That might or might not be perfectly true, but I do not think it makes the least difference because the shipowners through their solicitors have undertaken to accept service of the writ, appear and provide bail. It is said the contract is mutual on the part of one side to issue the writ and on the other side to give the undertaking, but I do not see that anywhere in the contract. In his affidavit Mr. Ernest Wilson, a member of the firm of Messrs. Ince, in par. 14 says he always understood it to be the practice of solicitors in the Admiralty Division when an undertaking is given to commence proceedings at once or while the vessel is still within the jurisdiction of the court. He does not say that the writ must be issued before the undertaking is given but only while the vessel is within the jurisdiction. He also submits that the issue of the writ is essential directly the undertaking is obtained, showing it is not necessary for the writ to be in existence, as I do not think it is.

I see in the affidavit of the managing clerk for Messrs. Weightman that he says his view is not quite the same. He says he has known many cases in his own personal experience in which the writ has not been issued until the vessel has left the jurisdiction; indeed, it is not uncommon for solicitors' undertakings to be limited in point of time. I am satisfied that there is no necessity for the writ to be actually in existence, it may be it can be issued afterwards. In most cases the writ is issued straightaway and the real bargain, as I understand it, is that the solicitor gives an undertaking that he will accept service when the writ is issued and appear and give bail. The consideration is that the ship shall not be arrested and shall be allowed to go as soon as she wishes to do so. In the case of a foreign ship it is important that she should not try to avoid service. The fact that they have got into difficulties and got the ship sold makes no difference in the matter I have to construe.

Then it has been said that it is the same as a caveat, which can always be withdrawn at any time. But they have not withdrawn their undertaking in this case. I do not know that they could, because they gave it for good consideration to get their ship freed from arrest, and to withdraw a caveat is not the same thing. The ship must be in the country. It is also said that the writ must be issued within a reasonable time. Having regard to the evidence connected with this ship, I cannot say that a wait of six months to issue the writ is an unreasonable time. The mere putting of the writ on the file to issue it does not seem to me to be a serious matter at all, because nothing could be done under the writ until they had got to know the exact position and what the state of things was with regard to the cargo and the averages taken. I cannot grant this application on this originating summons, and it will be dismissed with costs.

Solicitors: *Ince, Roscoe, Wilson*, and *Glover*; *Botterell* and *Roche*, agents for *Weightman, Pedder*, and *Co.*, Liverpool.

May 20 *and* 21, 1931.

(Before BATESON, J. and Elder Brethren.)

THE CARLTON. (*a*)

Towage—Contract—Port of London Authority—Vessel in tow of Authority's tugs—Damage by striking dock walls — Negligence of Authority's signalman—Towage conditions—Indemnity—Damage arising " in the course of and in connection with the towage or transport."

The plaintiffs' steamship when about to pass through the Connaught Road Cutting in the London Docks, which was under the control of the servants of the defendants, sustained damage by striking the dock wall, owing to the negligence of the defendants' signalman in charge of the signalling arrangements at the cutting. The steamship was at the time being towed by the defendants' tugs under a towage contract or order which contained (inter alia) *the following conditions :*

" 4. *The owners . . . of the ship . . . being towed or transported hereby agree and undertake to bear and pay for any damage to any of the Port Authority's property . . . or premises occurring in the course of and in connection with the towage or transport which may arise from or be occasioned by the following causes, perils, or other things, namely, perils of . . . navigation, collisions . . . whether such causes, perils or other things have been caused or contributed to by the negligence, default or error in judgment of any officers or servants of the Port Authority whatsoever.*"

" 5. *The owners . . . of the ship so being towed or transported hereby agree and undertake to indemnify and hold harmless the Port Authority against all claims for and in respect of . . . loss or damage of any kind whatsoever and howsoever or wheresoever arising in the course of and in connection with the towage or transport, and whether such loss or damage be caused or contributed to by any negligence, default or error in judgment on the part of any officers or servants whatsoever of the Port Authority. . . .*"

Held, that the negligence of the defendants' signalman in signalling the plaintiffs' vessel into the cutting was not negligence arising in the course of and in connection with the towage or transport so as to render the plaintiffs liable to indemnify the defendants under clause 5, which was framed as an indemnity against claims by third parties.

Held further, that the defendants were not entitled to recover from the plaintiffs damages for the injury done by the steamship to the dock wall, since clause 4 was confined to damage occurring " in the course of and in connection with " the towage.

DAMAGE ACTION.

The plaintiffs, owners of the steamship *Carlton*, claimed damages from the defendants, the Port of London Authority, for damage sustained by the *Carlton* by striking the dock walls whilst manœuvring in the Connaught Road Cutting, leading from the Royal Albert Dock to the Royal Victoria Dock, in the London Docks. The *Carlton* was being towed by two of the defendants' tugs. The cutting was under the control of the defendants' servants. The defendants counterclaimed for damage done by the *Carlton* to their dock walls.

The facts, arguments of counsel, and material terms of the towage contract under which the *Carlton* was being towed by the defendants' tugs, fully appear from the judgment.

Raeburn, K.C. and *Hayward* for the plaintiffs.

Dickinson, K.C. and *Carpmael* for the defendants.

The following cases were referred to : *The President van Buren* (16 Asp. Mar. Law Cas. 444 ; (1924) 132 L. T. Rep. 253), and *Durnford and Sons* v. *Great Western Railway* (1928, 139 L. T. Rep. 145).

May 21, 1931.—BATESON, J.—In this case I think there must be judgment for the plaintiffs. The damage to the *Carlton* was due to the negligence of the defendants, and I cannot see that the *Carlton* did anything wrong, and the Elder Brethren agree with me.

The accident happened to the *Carlton* shortly before six o'clock on the 29th Dec. 1930 in the Connaught Road Cutting, which passes between the Royal Albert Dock and the Royal Victoria Dock. The *Carlton* is a steel screw steamship of 5000 odd tons gross, 390ft. long and 53ft. beam, and she was bound to the Royal Victoria Dock from the Royal Albert Dock. In order to get from the one to the other she had to pass through the Connaught Road Cutting, which is a cutting about 300ft. long and 80ft. wide. There is a road bridge over the cutting, and that road bridge can be swung towards the north side of the cutting so as to allow ships to pass in and out.

The wind was fresh from the S.S.W.—that would be from the south towards the north side of the cutting. The weather was dark and clear, and, of course, there was no tide in the dock. There were a certain number of lights about the cutting—exactly where they were, or what sort of lights they were, I do not think was proved.

The *Carlton*, in charge of a transporting pilot, had two *Sun* tugs—which were at that time in the employ of the Port of London Authority—fast to her, one ahead and one astern. The *Sun VIII.* was the one ahead, and the *Sun VIII.* was attached to the *Carlton* by a scope of rope which allowed a space of water between the stern of the tug and the stem of the *Carlton* of about 10ft., according to the master of the *Sun VIII.* There was a good deal more rope out between the two, and having regard to the places on the two ships where it was made fast, and the angle from the bow down to the hook, the tug-master's view was that his stern was only about 10ft. from the bow of the *Carlton*.

Both tugs and ship had their regulation lights all burning. The bridge was against the

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

Carlton. She could not go through ; it had to be swung off to let her through, and a man named West was apparently working the bridge and signalling for the purpose of letting the *Carlton* through.

The bridge was swung off, and before it was completely swung West had given instructions to a tug called the *Deanbrook* to go through out of the Victoria Dock into the Albert Dock, the opposite way to which the *Carlton* was coming. It was a very foolish thing for West to do, but the *Deanbrook*, no doubt, thought it might be a good opportunity to get out of the Victoria Dock into the Albert Dock, and she proceeded to go down the cutting, following the bridge round—*i.e.*, as the bridge was swinging off she was proceeding through the cutting. She got a substantial distance through the cutting, but before she got as far as she did ultimately the *Carlton* was seen coming into the cutting, West having signalled to the *Carlton* to come in, so that West had told the two vessels, the one to go out and the other to come in, much about the same time, but probably the *Deanbrook* was the first that he signalled to to come in.

The *Deanbrook* is a twin screw steam tug 90ft. 9in. long and 21ft. beam, so that there was just room in the cutting for the beam of the *Carlton* and the beam of the *Deanbrook*, with a few feet to spare. But as the tug saw the *Carlton* and the *Carlton* saw the tug the courage of the tug-master to go through and chance it failed him. He thought he could not get through, and so he backed out of it. The *Carlton* came in with her engines at slow, and the *Sun* tug ahead, pulling with her engine at full speed, holding the ship up to windward as well as she could. In these circumstances it was really obvious to the people on the *Carlton* that the *Deanbrook* could not get past her with any hope of safety, but not knowing what she was going to do—they saw she was coming along—she came through past where the roadway naturally crossed the cutting—there was considerable risk of collision under the circumstances.

The *Carlton* and the *Deanbrook* went astern full speed. The tug backed away and the *Carlton* was able to pull up sufficiently so as not to touch the tug. They got, in fact, to within 100ft. to 115ft. of each other as it was. In thus avoiding collision the *Carlton* got out of position. No doubt the propeller reversing would help it, and the wind on the port bow, and the *Sun* tug not being, perhaps, able to give as much angle as she might have done owing to the presence of the *Deanbrook* in the cutting, the *Carlton's* bow fell against the north side of the cutting about 120ft. or so from the north-east corner, and received damage. Then she bounced off and hit the other side of the cutting with her other bow also, which received damage. It is that damage to the bows that the *Carlton* sues for in this case.

There is no question that West, who signalled both vessels to come in—he was the signalman at the bridge—was negligent.

The point was made that the *Carlton* ought to have done nothing because the tug could quite easily have backed away and did, in fact, back away in time. I do not take that view myself. The *Carlton* could not possibly tell what the *Deanbrook* was going to do. She had come from the north-west angle of the cutting down through the cutting more than half-way, and there was space for her to go past the *Carlton*—there was space for her to go past the forward end of the *Carlton* because, of course, the forward end is narrower than the broadest part of the beam, and whether she was going to try and get through before the bulk of the *Carlton* got into the cutting, or whether the *Carlton* was coming rather faster than would permit of that, the people on the *Carlton* could not tell and something had to be done by both, as one of the witnesses agreed.

If the *Carlton* had done nothing—as was suggested by the Port of London people that she should have done—and an accident had happened it might have been a very serious one. The master of the *Carlton* was put in the position of having to choose whether he would damage his side on the dock wall, or whether he would, perhaps, squeeze the tug with very disastrous results to anybody down below in the engine room of the tug, and, of course, possibly sink the tug in the cutting, which would have been a very serious thing to happen.

The tug gave no indication of any sort or kind of when or how soon she was going to put her engines astern and back away. She never gave three blasts on her whistle, and I think that, even if it could be said that the *Carlton* could have escaped by doing nothing, ordinary prudence would have required her to take some step to assist in avoiding collision with the *Deanbrook*. My view is that unless both had taken action there was almost certain to have been a collision between the two. There is no doubt that the *Deanbrook* entered the cutting at an improper time and that West was negligent. There is no doubt that the *Carlton* had no warning about what the *Deanbrook* was going to do, and there is no doubt that the *Carlton* was approaching quicker than was anticipated by West and, probably, by the *Deanbrook*.

It has been so often said in this court that vessels must get their way off in time to avoid collision, and when we find a steamer has done what was constantly being laid down in this court is what should be done, I think it is impossible to say that she was the author of her own wrong in this case.

I am satisfied that the pilot of the *Carlton* here chose the right course.

I think it is a clear case of damage due to the negligence of the defendants and there was no negligence of any sort or kind on the part of the plaintiffs.

Now that does not dispose of the case, because the defendants rely upon the terms of

the towage contract, and the towage contract is in these terms:

Please supply upon the terms and conditions endorsed hereon two tugs to tow the vessel *Carlton* from lock to berth, such assistance, which includes removal to and from any intermediate berth or mooring which the vessel may occupy, to be supplied at your published rate for one charge only payable by .... and we hereby accept and agree to be bound by the said terms and conditions.

Now it is quite clear that that is a contract for towage from the lock to the berth, including removal. It is called a "towage order." On the back of it are the following terms and conditions:

1. For the purpose of these terms and conditions the towage or transport shall be deemed to have commenced when the tow rope has been passed to or by the tug and to have ended when the tow rope has been finally slipped.

2. During and for all purposes connected with the towage or transport the masters and crews of the tugs and the transport men shall cease to be under the control of the Port Authority and shall become subject in all things to the orders and control of the master or person in charge of the ship, vessel, or craft being towed or transported, and shall be held to be identified with and to be the servants of the owner or owners of and (or) the person or persons interested in the same.

3. The port authority, its servants and agents, shall be bound before and at the beginning of the towage to exercise due diligence (*a*) to make the tug, her engines, equipment, and gear in all respects seaworthy and fit for the said towage or transport; and (*b*) properly to man, equip, and supply the tug.

4. The owner or owners of and (or) the person or persons interested in the ship, vessel, or craft so being towed or transported thereby agree and undertake to bear and pay for any loss of or damage to any of the port authority's property (including the tug or tugs engaged in such towage or transport), or premises occurring in the course of and in connection with the towage or transport which may arise from or be occasioned by the following causes, perils, or other things, namely, perils of the seas, rivers, or navigation, collisions, strikes, lockouts, riots, civil commotions, labour disturbances or disputes, or anything done in contemplation or furtherance thereof, whether the port authority be parties thereto or not, bursting of boilers, breakage of shafts or tow ropes, breakdown of or accident to or latent defect in the tug or any portion of her equipment or gear, and whether such causes, perils, or other things have been caused or contributed to by the negligence, default, or error of judgment of any officers or servants of the port authority whatsoever, provided always that the said causes, perils, or other things have not resulted from any breach by the port authority, its servants or agents, of the obligations referred to in clause 3 hereof, but the burden of proof of any such breach shall be upon the owner or owners of and (or) the person or persons interested in the ship, vessel, or craft so being towed or transported.

5. The owner or owners of and (or) the person or persons interested in the ship, vessel, or craft so being towed or transported hereby agree and undertake to indemnify and hold harmless the port authority against all claims for or in respect of loss of life, or injury to person or loss or damage of any kind whatsoever and howsoever or wheresoever arising in the course of and in connection with the towage or transport, and whether such loss, injury, or damage be caused or contributed to by any negligence, default, or error of judgment on the part of any officers or servants whatsoever of the port authority, provided always that such loss, injury, or damage has not resulted from any breach by the port authority, its servants or agents, of the obligations referred to in clause 3 hereof, but the burden of proof of any such breach shall be upon the owner or owners of and (or) the person or persons interested in the ship, vessel, or craft so being towed or transported.

By clause 1 towage commences from the time the tow rope is fast and ends when it is finally slipped. Clause 2 makes the masters and crews of the tugs the servants of the hirer of the tugs. Clause 3 puts the obligation on the Port of London Authority to supply a proper tug, properly manned—I am only summarising the clauses. Clause 4 makes the hirer liable for damage to the port authority's property occurring in the course of and in connection with the towage or transport arising from certain specified causes. Clause 5, which is the one chiefly in question, is an indemnity clause. The main question argued on that clause is whether that is an indemnity against third party claims, or whether it is a clause under which the hirer is prevented from recovering for damage to his own ship. I come to the conclusion that clause 5 is no more than an indemnity against third party claims, as Mr. Raeburn argued. Clause 5 is said to relieve the defendants of liability in this case, because—omitting unnecessary words—"the plaintiffs undertake to indemnify and hold harmless the port authority against all claims for damage of any kind arising in the course of and in connection with the towage caused by negligence." There is a proviso, of course, that clause 3 of the conditions has to be complied with by the port authority, namely, to supply seaworthy tugs.

I do not agree with that contention. The clause, I think, is framed to protect the port authority from third party claims, not claims made by the hirer of the tug. There is no part of this clause, to my mind, which protects the authority from claims due to the negligence of their own servants which does not arise in the course of, and in connection with, the towage or transport.

The damage in this case arose from the negligence of their servant West, in the course of signalling that the road was clear for the *Carlton* to proceed. He had signalled two ships into the cutting instead of only one. It had nothing to do with the towage, or the tugs, or the crews of the tugs, or the transporting. Transporting, I think, in this clause means either towing or shifting of ropes or heaving on the ship by means of ropes from one position to another.

If the port of London Authority want to protect themselves from such negligence as there was in this case, they ought to use clear terms, and they have not done so. The damage must arise in the course of and in connection with towage. The word is "and." It is not "or,"

and I think it is impossible to say that this accident, and the damage due to it, was in connection with the towage. It had nothing to do with the towage at all, it was damage which was occasioned by the ship coming astern to avoid the negligence of West in ordering two ships into the cutting at the same time. The tugs had nothing whatever to do with it.

Mr. Dickinson relied for his contention that it covered not only third party claims, but party and party claims, on the proviso.

The proviso only provides that the authority must supply seaworthy tugs and so on. He says that because that relates to party and party obligations clause 5, as a whole, must also relate to party and party as well as to third party. I do not see that that is necessary at all as I understand the clause. Put shortly in a concrete case, it means that the authority say to the hirer, "You indemnify me against a claim by a third party provided I give you a seaworthy tug"—which seems to be quite good sense.

It does not follow, to my mind, that because the Port of London Authority have to give a seaworthy tug—which is a party and party bargain—that you must, therefore, indemnify the authority against your own claim against them. There is no necessity to conclude this as an inference from the proviso, which makes perfectly good sense without it. It seems to me that the words "indemnify and hold harmless" are apt words for third party claims. Mr. Dickinson says that they mean the same as "insured." I think they might have said so if that is what they meant. I think that the two cases I was referred to of *Durnford and Sons v. Great Western Railway* (139 L. T. Rep. 145) and the *President van Buren* (16 Asp. Mar. Law Cas. 444; (1924) 132 L. T. Rep. 253), so far as they go support my view.

Finally what the authority want is a guinea or so for damage to their wall under clause 4. Clause 4 is confined to damage occurring in the course of and in connection with the towage, and I have already said what I have got to say in regard to those words. I do not think that this damage occurred in the course of and in connection with the towage.

Moreover, I doubt very much whether what happened here—which was an accident in the regulating of a ship from one dock into another through the cutting—is covered by the particular clause with regard to causes. I am satisfied that this accident did not happen in connection with the towage as I have said. Mr. Raeburn also made the point that, even if they were liable, his clients would be entitled to recover over against the authority by adding to the amount of their claim the amount of the counter-claim.

For these reasons the plaintiffs succeed and there must be judgment for them for an amount to be found by the registrar.

(Before Lords DUNEDIN, WARRINGTON, ATKIN, THANKERTON, and MACMILLAN.)

LOUIS DREYFUS AND CO. v. TEMPUS SHIPPING COMPANY LIMITED. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Charter-party—General average—Fire in bunkers—Expenditure at port of refuge—Claim for general average contribution—Unseaworthiness—York and Antwerp Rules 1924, *r. D—Exceptions—Fault—Privity—Merchant Shipping Act* 1894 (57 *&* 58 *Vict. c.* 60), *s.* 502.

By sect. 502 *of the Merchant Shipping Act* 1894: *"The owner of a British sea-going ship, or any share therein, shall not be liable to make good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases, namely,* (i.) *where any goods, merchandise, or other things whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship." The steamship* Campus, *having carried coal from England to the Plate, was chartered to load a cargo of grain in the River Plate and bring it to certain British or Continental ports as ordered. The charter-party, which was dated the 16th May* 1928, *and described the steamer in the words "on passage Wales/Las Palmas since 11th inst., with cargo and after discharge proceeds in ballast," was in the Chamber of Shipping River Plate Charter-party* 1914 (*Homeward*) *form, and contained a number of clauses which included the following: clause* 29, *"the steamer shall not be liable for loss or damage occasioned by . . . perils of the sea . . . fire, from any cause or wheresoever occurring . . . or any latent defect in hull machinery or appurtenances . . . even when occasioned by neglect default or error of judgment of . . . the servants of the shipowners (not resulting however in any case from want of due diligence by the owners of the steamer . . .)"; and by clause* 31, *"Average if any payable according to York-Antwerp Rules* 1924." *Rule D of the York-Antwerp Rules was as follows: "Rights to contribution in general average shall not be affected though the event which gave rise to the sacrifice or expenditure may have been due to the fault of one of the parties to the adventure; but this shall not prejudice any remedies which may be open against that party for such default." The steamer went to the River Plate and loaded a cargo of grain, as required, at Rosario and Villa Constitucion. In order to save the expense of coaling at the Plate the ship had carried sufficient bunkers on the outward voyage to take her home. Having loaded, the ship started for home. It was*

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law.

then found that the bunker coal was in a dangerous condition. Some of it had caught fire and she had to put into Montevideo as a port of refuge to have her fire extinguished. Port of refuge expenditure was incurred. In the result part of the defendants' cargo was damaged and part of it was lost. The shipowners sued the cargo owners for contribution to general average expenditure, to which the cargo owners replied that as the expenditure was occasioned by the fault of the shipowners in sending an unseaworthy ship to sea, they could not recover such expenditure. The cargo owners claimed the value of the maize destroyed by fire. The shipowners replied that sect. 502 *of the Merchant Shipping Act* 1894 *protected them.*

Held, (1) *there being no actionable wrong in what the shipowners did, the shipowners were by virtue of sect.* 502 *of the Merchant Shipping Act* 1894 *entitled to recover against the cargo owners a contribution towards general average expenditure incurred through a fire by the unseaworthiness of the ship; but* (2) *that the counterclaim of the cargo owners for the value of the cargo destroyed by fire failed, the shipowners being protected by sect.* 502, *as the damage by fire had occurred without their actual fault or privity.*

Milburn and Co. *v.* Jamaica Fruit Importing and Trading Company of London (9 *Asp. Mar. Law Cas.* 122; 83 *L. T. Rep.* 321; (1900) 2 *Q. B.* 540) *applied.*

Greenshields, Cowie and Co. *v.* Thomas Stephens and Sons (11 *Asp. Mar. Law Cas.* 167; 99 *L. T. Rep.* 597; (1908) *A. C.* 431) *explained.*

Virginia Carolina Chemical Company *v.* Norfolk and North American Steam Shipping Company Limited (12 *Asp. Mar. Law Cas.* 82; 105 *L. T. Rep.* 810; (1912) 1 *K. B.* 229) *and* Ingram and Royle *v.* Services Maritimes du Tréport Limited (12 *Asp. Mar. Law Cas.* 387; 109 *L. T. Rep.* 733; (1914) 1 *K. B.* 541) *followed.*

Decision of the Court of Appeal (*ante, p.* 152; 144 *L. T. Rep.* 13; (1931) 1 *K. B.* 195) *affirmed.*

Appeal from the decision of the Court of Appeal (Scrutton, Greer, and Slesser L.JJ.) reported *ante*, p. 152; 144 L. T. Rep. 13; (1931) 1 K. B. 195.

The facts, which are sufficiently summarised in the headnote, appear fully from their Lordships' judgments.

The Court of Appeal held (Scrutton, L.J. dissenting) that having regard to *Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company Limited* (12 Asp. Mar. Law Cas. 233; 105 L. T. Rep. 810; (1912) 1 K. B. 229) it must be assumed that damage by fire caused by unseaworthiness was within the protection of sect. 502 of the Merchant Shipping Act 1894, if the shipowners established that such unseaworthiness was without their fault or privity, and there was nothing in the facts of this case which deprived the shipowners of the right to contribution claimed in the action. It was not suggested that the section relieved the shipowners from their liability to contribute, but only that it put them in such a position that they could not be deprived of their right to a contribution from the cargo owners on the ground that the expenses were incurred merely on their own behalf and not on behalf of the cargo owners. Nor was it contended that the shipowners were freed from making their own contributions to the general average, but only that there was nothing in the facts that deprived them of the right to say that as between them and the cargo owners the cargo owners must contribute to the general average expenditure which was incurred on behalf of all the interests concerned. Held also by the court, as regards the counterclaim for the loss of the cargo, that the shipowners were protected by the exceptions in the charter-party of "fire" and "latent defects in appurtenances," and that as the damage by fire had occurred without their actual fault or privity they were protected by sect. 502 from liability. The cargo owners appealed.

Sir *Thomas Inskip*, K.C., Sir *Robert Aske* and *F. Martin Vaughan* for the appellants.

W. N. Raeburn, K.C. and *R. I. Simey* for the respondents.

The House took time for consideration.

Lord Dunedin.—The respondents are the owners of the steamship *Campus*, and the appellants are the owners of a cargo of maize and grain shipped on board the *Campus* on a return voyage from the River Plate to the United Kingdom. Shortly after starting on the homeward voyage fire broke out in the ship's bunkers, which heated and destroyed a part of the maize and threatened to spread and destroy more cargo and endanger the ship. The captain accordingly put into the port of Monte Video, threw part of the maize overboard, and put more of it into lighters, some of which, from its condition, had to be destroyed. In doing this, general average expenses were incurred.

The present action was raised at the instance of the ship against the cargo owners for a contribution to the general expenses so incurred. The cargo owners denied liability, and counterclaimed for the value of the maize destroyed. This they did upon the ground that the fire was due to bad bunker coal or, in other words, the unseaworthiness of the ship. The case was heard before Wright, J. who held that the ship was unseaworthy. He held that the claim by the ship for general average contribution was not good, and that the counterclaim for damage to the cargo failed on account of the provisions of sect. 502 of the Merchant Shipping Act of 1894. That section, so far as the material part is concerned, is as follows: "The owner of a British sea-going ship, or any share therein, shall not be liable to make

good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases, namely: (1) Where any goods, merchandise, or other things whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship." Wright, J. held that the loss happened without the actual fault or privity of the owners and that the destroyed maize was lost by reason of fire on the ship.

An appeal being taken to the Court of Appeal, that court unanimously upheld Wright, J.'s judgment as to the counter-claim, but differed as to the claim for general average. Scrutton, L.J. agreed with Wright, J. but Greer and Slesser, L.JJ. held that the claim for general average succeeded.

Appeal is now being taken to this House by the cargo owners.

There are thus two questions distinct in themselves, and it is expedient to consider them separately.

First, as to the claim of the cargo owners for the destruction by fire, the fire being caused by a condition of things which amounted to unseaworthiness. Now, as to authoritative decision on this point, so far as the courts below were concerned, there can be no doubt. Where there was an exception in the bill of lading of fire on board, it had been held that that did not protect the ship when the fire was due to unseaworthiness. But whether the statutory exception against fire was elided by proving that the fire was due to unseaworthiness came up for decision in the *Virginia* case (*Virginia Carolina Chemical Company* v. *Norfolk and North American Steam Shipping Company Limited* (12 Asp. Mar. Law Cas. 82; 105 L. T. Rep. 810; (1912) 1 K. B. 229), where Bray, J. held that it was not, and his judgment was affirmed unanimously by the Court of Appeal in *Ingram and Royle* v. *Services Maritimes du Tréport Limited* (12 Asp. Mar. Law Cas. 387; 109 L. T. Rep. 733; (1914) 1 K. B. 541). Now these cases, though binding on the Court of Appeal, are not binding on your Lordships, and if you thought that they clearly were wrong it would be your duty to hold that they were wrongly decided. But these cases were not only the unanimous decision of learned judges but they have ruled the conduct of shipping for seventeen years, and it would obviously be against your Lordships' custom to disturb such a practice unless, as I say, you thought they were clearly wrong. I cannot say any such thing. As far as my own opinion is concerned, I think they were rightly decided. No doubt the point was very arguable. The arguments *pro* and *con* are most clearly and candidly put by Kennedy, L.J. in the *Virginia* case (*sup.*). But what turned the scale was that, to come to the result opposite to that of the decision would be, as Vaughan Williams, L.J. put it (12 Asp. Mar. Law Cas. at p. 86; 105 L. T. Rep. at p. 812; (1912) 1 K. B. at p. 238): "to change the words of the section from 'a British sea-going ship' into 'a British sea-going seaworthy ship.'" The judges in the *Virginia* case (*sup.*), while thus pronouncing on the interpretation of sect. 502, held that in that case sect. 502 was impliedly excluded by the terms of the bill of lading, and the appellant has put forward the same argument in this case. The same argument was urged in the case of *Ingram and Royle* v. *Services Maritimes du Tréport Limited* (*sup.*) but was unsuccessful, it being pointed out that the reason of the exclusion in the *Virginia* case (*sup.*) was based on the fact, not that the bill of lading mentioned fire as one of the exceptions, but that it went on in the concluding part to deal exhaustively with the question of seaworthiness, while in *Ingram and Royle's* case (*sup.*) there was no such concluding part. The same answer must be made in this case. In other words, the bill of lading equiparates with the bill of lading in *Ingram and Royle's* case (*sup.*), and not with the bill of lading in the *Virginia* case (*sup.*).

I am, therefore, for these reasons, of opinion that the decision of the courts below on the first point, that is to say, the counterclaim for damage to the maize, was right.

The second question, whether the ship could demand a general average contribution under the circumstances of the case, is not dealt with by direct authority. But there is a body of decided authority on several propositions, and the question is how that general authority is to be applied to this case. That the expenditure here was of the class which gives rise to a claim for general average contribution is not denied. It was incurred in order to save the ship and cargo from the further peril from fire. "But then," say the appellants to the respondents, "the fire was caused by unseaworthiness due to your fault, and therefore, on the authority of *Schloss* v. *Heriot* (1 Mar. Law Cas. (O.S.) 335; 8 L. T. Rep. 246; 14 C. B. (N.S.) 59), an authority upheld by *Strang, Steel and Co.* v. *Scott and Co.* (6 Asp. Mar. Law Cas. 419; 61 L. T. Rep. 597; 14 App. Cas. 601), you cannot recover because it was your own fault which necessitated the average expenditure." To which the respondents retort: "It was settled by *The Carron Park* (6 Asp. Mar. Law Cas. 543; 63 L. T. Rep. 356; 15 Prob. Div. 203), and again by *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company* (9 Asp. Mar. Law Cas. 122; 83 L. T. Rep. 321; (1900) 2 Q. B. 540) that where there was an exception in the bill of lading against fault as causing fire the rule has no application, and the statutory exception against fire in sect. 502 must have the same effect." These counter propositions, so far as based on the cases quoted, are all correct, so that the crucial question is whether the statutory exception of liability introduced by sect. 502 has the same effect as had the exception in the bill of lading in *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*). It is also possible to contend, and the appellants' counsel did so contend, that the two cases of *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit*

Importing and Trading Company of London (*sup.*), which are not binding on your Lordships, though they were on the courts below, were wrongly decided.

It is, I think, best first to consider the ground on which the answer to a demand for contribution is made when the circumstances which give rise to the necessity for general average expenditure are due to the fault of the person claiming the contribution. The most authoritative statement is to be found in the opinion of Lord Watson in *Strang, Steel and Co.* v. *Scott and Co.* (*sup.*). In that case, that which caused the necessity of sacrificing something for the general safety of all was negligent navigation by the master. The loss incurred was by the jettison of cargo. The litigation arose in a somewhat peculiar way. The ship having arrived, the agents for the ship gave notice to all the consignees of cargo that they would not be allowed to remove their goods unless they made a deposit of 5 per cent. on the value "against probable average claims." In order to get their goods, certain consignees paid the deposit under protest and then raised action to get back the money so paid. They also said they had made a sufficient tender, but that aspect of the case may be disregarded. In their pleadings the plaintiffs added a plea that they were not liable to contribute to general average on account of the ship or cargo (*i.e.*, sacrificed cargo) because the jettison was rendered necessary by the negligence of the master. The recorder at Rangoon, before whom the case was defended, gave effect to this plea and ordered the return of the money. This could only be right if under the circumstances there could not arise any general average claim. Lord Watson, in delivering judgment, which reversed the decision of the recorder, said (6 Asp. Mar. Law Cas. 420; 61 L. T. Rep. at p. 598; 14 App. Cas. at p. 605): "In the course of the argument upon this appeal, three separate points were raised and fully discussed: The appellants argued (i.) that innocent owners of cargo sacrificed for the common good are not disabled from recovering a general contribution by the circumstance that the necessity for the sacrifice was brought about by the shipmaster's fault; (ii.) that in respect the bills of lading for the cargo of the *Abington* specially excepted 'any act, neglect, or default whatsoever of pilots, master, or crew in the management or navigation of the ship,' the owners of cargo saved are not, so far as concerns any question of contribution, in a position to plead the fault of the master," and then the question of tender, which may be disregarded.

Lord Watson then went on to discuss the origin of the doctrine of general average based on the Rhodian law, and his opinion may be summed up in the words of the headnote (14 App. Cas. 601): "The rules of maritime law relating to the rights and remedies resulting from a proper case of jettison are: (1) Each owner of jettisoned goods becomes the creditor of ship and cargo saved. (2) He has a direct claim against each of the owners of ship and cargo for a *pro rata* contribution towards his indemnity, which he can recover (*a*) by direct action; (*b*) by enforcing through the shipmaster, who is his agent for that purpose, a lien on each parcel of goods sold to answer its proportionate liability."

Then (6 Asp. Mar. Law Cas. 421; 61 L. T. Rep. on p. 599; 14 App. Cas. on p. 608) Lord Watson went on to discuss the exceptions to the law of general contribution, and he expressed himself thus: "When a person who would otherwise have been entitled to claim contribution has, by his own fault, occasioned the peril which immediately gave rise to the claim, it would be manifestly unjust to permit him to recover from those whose goods are saved, although they may be said, in a certain sense, to have benefited by the sacrifice of his property. In any question with them he is a wrongdoer, and, as such, under an obligation to use every means within his power to ward off or repair the natural consequences of his wrongful act. He cannot be permitted to claim either recompense for services rendered, or indemnity for losses sustained by him, in the endeavour to rescue property which was imperilled by his own tortious act, and which it was his duty to save.

And then, after approving of *Schloss* v. *Heriot* (*sup.*), he sums up thus (6 Asp. Mar. Law Cas. 421; 61 L. T. Rep. at p. 600; 14 App. Cas. at p. 609): "The fault of the master being matter of admission, it seems clear, upon authority, that no contribution can be recovered by the owners of the *Abington*, unless the conditions ordinarily existing between parties standing in that relation have been varied by special contract between them and their shippers."

Now, it will be observed that contention (ii.), as above, was exactly the contention in *The Carron Park* case (*sup.*). That contention (ii.) Lord Watson refused to decide because it was not proved that the bills of lading did all contain the exception, but I think it is clear that he inserted the rider: "Unless the conditions ordinarily existing between parties standing in that relation have been varied by special contract between them," because he foresaw that the same case as subsequently arose in *The Carron Park* (*sup.*) might emerge. He refused, as I have already said, to decide it, but he pointedly said that the case would be open when the question of the average adjustment came to the front.

Now, that brings me to the case of *The Carron Park* (*sup.*) itself, as approved of in *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*). I should say that I think that Lord Watson's opinion in *Steel and Co.* v. *Scott and Co.* (*sup.*) gives one an indication that he would have approved of the judgment in *The Carron Park* (*sup.*), and that for two reasons. In the first place, he was examining the whole law, and if he had thought that the second point was irrelevant as stated, I think he would have said so, instead of saying

that he would not decide because he was not sure of the facts. In the second place, in his general discussion he had clearly put the exception as being based on the tortious act of the shipowner and his agent, the captain, and it was that conception of tortious act which postulates an actionable wrong that was the prevailing argument in *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup*). And here, again, we are faced with the question of interfering with judgments which have held the field for a long time, and on which shipping practice has been based, for *The Carron Park* (*sup.*) was decided in 1890 and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*) in 1900, and now we are in 1931. I am therefore of opinion that it would be wrong for your Lordships to hold that *The Carron Park* (*sup.*) and *Milburn* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*) were wrongly decided.

And now arises the last and most difficult question. *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*) were both cases where the cause of the danger which led to the position of general average was the negligence of the captain. Though unseaworthiness was pleaded in *The Carron Park* (*sup.*), the President found against that plea and put the negligence as a negligence during the voyage. *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*) was a case of collision by negligence, and there is no doubt that, had the trouble arisen from unseaworthiness, the decisions would have been, apart from a possible argument on the statute of 1894, the other way, for a mere exception against fault in the bill of lading does not cover unseaworthiness—*Steel and another* v. *State Line Steamship Company* (3 Asp. Mar. Law Cas. 516; 37 L. T. Rep. 333; 3 App. Cas. 721).

Does, then, sect. 502, decided as it has been to include unseaworthiness, bring about a position the same as that of *The Carron Park* (*sup.*)? This is what has caused the difference of judicial opinion in the courts below, and I do not hesitate to say that the first inclination of my mind was to agree with Scrutton, L.J. and Wright, J.; but in the end I have come to the opposite conclusion. The argument for their opinion is, I will not say based, but greatly fortified by, the dictum of Lord Halsbury in *Greenshields, Cowie and Co.* v. *Thomas Stephens and Sons* (11 Asp. Mar. Law Cas. 167; 99 L. T. Rep. 597; (1908) A. C. 431) where, dealing with this very section, he said (10 Asp. Mar. Law Cas. at p. 169; 99 L. T. Rep. at p. 598; (1908) A. C. at p. 436): "The statute is not dealing with average at all." Moreover, at first sight, it is startling that a section which was framed as one to limit liability, *i.e.*, so to speak, is of a negative complexion, may be used to give a right which does not otherwise exist, *i.e.*, so to speak, is of a positive complexion. The argument which prevailed in the end with me was this: the answer to the exception of the right to claim general average which was held good in *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*), which I have already held were rightly decided, turned entirely on the question of whether the shipowner, as in a question with the shipper, had committed an actionable wrong.

Now sect. 502 says that, if fire is the cause of the trouble, there is no actionable wrong committed by the shipowner however much he may have caused the fire; and by decision (which here, again, I have already approved) this is explained to embrace fire when caused by unseaworthiness. Therefore in this case there is no actionable wrong in what the shipowner did, and consequently the answer to the exception is not a good one, just as was found in *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*). Put in other words, the argument may read thus: "The effect of sect. 502 is to incorporate that section in every bill of lading," or, if it is better expressed, "to impose an added contract besides that expressed in the bill of lading." Once so incorporated or added, there is obviously no actual wrong committed by the owner of the ship, and the principle of *The Carron Park* (*sup.*) and *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*) applies. I ought, perhaps, to add that as the expression in sect. 502 is "shall not make good any loss," the appellants argued that there was still an actionable wrong, and that all the statute did was to say you shall not pay for it. I think that argument is the argument of a drowning man. An actionable wrong for which you can recover nothing is a contradiction in terms.

Now, as to the dictum of Lord Halsbury. It was a case where coal caught fire by spontaneous combustion, and it was argued that the owner of the rest of the coal which had been damaged by water poured on it could not claim a general average contribution because the whole trouble had come from what was termed the inherent vice of the coal. But Lord Halsbury disposed of that by pointing out that "inherent vice" was really a faulty expression. Had the fire been traced to an actual fault on the part of the owner of the coal it would have been otherwise, on the principle of *Schloss* v. *Heriot* (*sup.*), but there was no fault on the part of the owner of the coal. He knew nothing wrong about it, and the shipowner approved without demur, to the shipping of that particular coal. Then an additional argument upon sect. 502 was brought in. It was said that, as sect. 502 says the shipowner is not to be liable to pay for any loss by fire, he cannot be called on to contribute to general average for the benefit of the coal-owner, to which the obvious answer was that a general average contribution does not rest on any idea of loss on the part of the person called to make it, or, in other words, a section

which absolves you from loss does not absolve you from something which is not loss at all, and Lord Halsbury added the observation in question. It was quite true, as he said, that the section was not dealing with general average, but none the less the result of the section may have an effect on general average. I therefore think that the argument I have set forth is not displaced by Lord Halsbury's remark.

I move that the appeal be dismissed with costs.

Lord Warrington.—The respondents in the present appeal are the owners of the steamship *Campus* and were plaintiffs in the action in which the appeal arises. The appellants are the owners of cargo shipped on the *Campus* and were defendants in the action.

The claim of the respondents was for a contribution to certain expenses, now admitted to be general average expenses, to which the appellants, as cargo owners, would *primâ facie* be bound to contribute. They defended the action on the ground that the emergency giving rise to the expenditure was caused by the unseaworthiness of the ship, and that the shipowners were therefore in default, and, under the well-established principles of the law of general average, were debarred from claiming contribution from the owners of the cargo. These principles are stated in the judgment of the Judicial Committee prepared by Lord Watson in *Strang, Steel and Co.* v. *Scott and Co.* (6 Asp. Mar. Law Cas. 419; 61 L. T. Rep. at p. 599; 14 App. Cas. at p. 607), and as so stated are not in dispute. To this defence it was replied by the respondents that under the provisions of sect. 502 of the Merchant Shipping Act 1894, they were under no liability to the appellants for loss or damage to their goods, and were therefore not in default, in spite of the fact that they had committed a breach of the contract of carriage in respect of the unseaworthiness of the ship. The question, therefore, in the action is whether the reply of the respondents is well founded. It was rejected by Wright, J., who dismissed the action. In the Court of Appeal it was accepted by the majority, Greer and Slesser, L.JJ.; Scrutton, L.J. dissenting.

The material facts on this point are no longer in dispute, and I will only summarise the result.

The trouble was fire on board arising from the character and condition of the coal carried in the bunkers, and the damage to cargo was occasioned by the near proximity of one of the holds, in which maize was stored, to a bunker, the coal in which took fire, and the insufficient protection of the hold against fire in the bunker. These circumstances were found by Wright, J. to constitute unseaworthiness causing the loss of and damage to cargo, and this finding is accepted.

The material part of sect. 502 is as follows:

502. The owner of a British seagoing ship or any share therein shall not be liable to make good to any extent whatever any loss or damage happening without his actual fault or privity in the following cases, namely, (i) Where any goods, merchandise, or other things whatsoever taken in or put on board his ship are lost or damaged by reason of fire on board the ship.

In the present case the loss of or damage to the appellants' cargo happened by reason of fire on board the ship, and without any actual fault or privity on the part of the respondents, the shipowners. The shipowners were therefore completely freed from any liability to make good such loss or damage. It is not alleged that the breach of the ordinary implied warranty of seaworthiness gave rise to any other pecuniary claim.

The first question to be decided is what, under the circumstances, is the true effect of the contract of carriage in the present case. In my opinion, inasmuch as there is nothing in the contract expressed in the bill of lading by reference to the charter-party to exclude the operation of sect. 502, the provisions of that section become an addition to the terms expressed in such contract. I am further of opinion, on the authority of *Ingram and Royle* v. *Services Maritimes du Trépori Limited* (*sup.*), that the terms of the section are operative, notwithstanding that the cause of the trouble was the unseaworthiness of the ship. It follows that in the present case no part of the loss of or damage to the cargo can be recovered from the shipowners, but the whole of it falls upon the cargo owners themselves. On the other hand, of course, any damage to the ship falls to be borne by the shipowner.

The next question is, how does the contract between the shipowner and the cargo owner affect the right of the former to contribution by the latter to general average expenses? I agree with Greer, L.J. that the right to contribution arises whenever the expenditure is incurred or the sacrifice made in the interest of both the parties and not of one of them alone. In the present case, inasmuch as the whole of the loss of or damage to the cargo falls on the cargo owner, the expenditure in question is incurred in the interest of both parties, and a due proportion thereof in the shape of contribution in general average would be recoverable by the shipowner.

If the immunity of the shipowner were derived simply from a bill of lading absolving him from liability in the event which happened the case would be completely covered by *The Carron Park* (*sup.*) and *Milburn* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*). Can it make any difference that the immunity is found in the added term supplied by sect. 502? I can see no logical reason for so holding. The statutory provision is as much part of the contract as if the parties had written it out in the bill of lading itself. In my judgment, therefore, the decisions in the two cases above mentioned are applicable to the present case. I agree that they were rightly decided, but even if I were doubtful on this point I should not, for reasons expressed

in the opinion of my noble and learned friend Lord Dunedin, which I have had the advantage of reading, have been prepared now to overrule them.

I am of opinion, therefore, that the order of the Court of Appeal, reversing the judgment of Wright, J. in the original action, should be affirmed.

As to the counterclaim, I agree that the order appealed from should be affirmed.

It remains only to say a few words about the dictum of Lord Halsbury in *Greenshields, Cowie, and Co.* v. *Thomas Stephens and Sons* (11 Asp. Mar. Law Cas. 167; 99 L. T. Rep. at p. 598; (1908) A. C. at p. 436), that "sect. 502 is not dealing with questions of general average." On the facts of that case the provision of sect. 502 was really irrelevant to the claim of the cargo owner to contribution by the ship, and the statement of Lord Halsbury was a dictum only. But though, in a sense, it is true that the section is not dealing with general average, yet when, as in the present case, its provisions become an added term of the contract of carriage, and the rights and liabilities of the several parties to contribution in general average depend, as they do, upon the terms of the contract, the provisions of the section of necessity affect those rights and liabilities.

On the whole I agree that the appeal should be dismissed with costs.

Lord Warrington.—I have been asked to say that my noble and learned friend Lord Macmillan concurs in the judgments that have been delivered.

Lord Atkin.—The question in the present case arises on the claim of the respondents, the owners of the steamship *Campus*, against the appellants, the owners of a grain cargo shipped on board the *Campus*, for contribution in respect of a general average expenditure occasioned to avert a loss caused by fire on board. The appellants reply that the fire was caused by the respondents' fault in that it was due to unseaworthiness of the ship. The respondents rejoin that the appellants cannot rely on any such fault by reason of the provisions of sect. 502 of the Merchant Shipping Act 1894. This raises an interesting issue in the law of general average, at one time the subject of controversy, but, as I venture to suggest to your Lordships, now settled by authority of the Court of Appeal and accepted by the shipping world for about a generation. It will only be necessary to deal shortly with the facts, as many of the issues that arose in the course of the proceedings have disappeared in the progress of the case to this House.

The ship proceeded from Cardiff with a cargo of coal and sufficient bunkers to take her outwards to the Argentine and part of the way home. On her way out she was chartered by an Argentine company on the terms of the Centrocon charter-party to load a cargo of grain at Argentine ports and proceed to a Continental or United Kingdom port. The exception clause of the charter provides: "The steamer shall not be liable for loss or damage occasioned by . . . fire from any cause or wheresoever occurring . . . even when occasioned by the negligence, default or error of judgment of the master, mariners or other servants of the shipowners or persons for whom they may be responsible." The charter also provides: "Average if any payable according to York-Antwerp Rules 1924." The ship duly loaded a cargo of maize under bills of lading of which the appellants are the holders, which merely incorporate the terms of the charter as to exceptions and expressly repeat the terms adopting the York-Antwerp Rules of 1924. Having received a full cargo she started on her homeward voyage, but before she left the Plate fire broke out in the bunkers and reached part of the cargo. The ship in consequence put in to Montevideo, discharged part of the damaged cargo, and incurred expenditure which, it is common ground, was general average expenditure. The question in dispute is whether the ship can recover a contribution for it from the cargo. It has been found that the fire was due to unseaworthiness without the fault or privity of the owners. The ship therefore cannot rely on the exceptions which are not so drawn as to include unseaworthiness. In these circumstances the cargo owners apparently thought themselves in a position to counter-claim for damage to their cargo caused by fire, including the general average contribution, if any, to which they were liable. This claim was defeated by the provisions of sect. 502 of the Merchant Shipping Act. It was contended by the cargo owners that the protection given by the section was not extended to cases of fire occurring in an unseaworthy ship. I am satisfied that this contention fails. It has been decided to the contrary in the Court of Appeal; I see no reason why a condition so important, and, if included, so easily expressed, should be read into a clause which was obviously intended to give relief against possibly overwhelming claims to shipowners who were themselves not in actual fault.

The case therefore before us has been confined to the shipowners' claim for contribution. The answer of the cargo owner is based on the finding that the fire was due to unseaworthiness. The shipowner, says the cargo owner, cannot claim contribution where the peril threatening the whole adventure is due to his fault. The reply of the shipowner is that such a defence can only be made where the alleged fault is an actionable wrong, and that it has been held that where the contract of carriage relieves the shipowner from responsibility for what otherwise would be an actionable wrong the rule no longer applies, and that in the present case the statute has the same effect as an express exception relieving the shipowner from liability for unseaworthiness causing fire. The cargo owner in this House has made a double rejoinder. In the first place he attacks

the decisions which allow the shipowner in general average to rely upon contractual exceptions to relieve himself of the consequences of fault; in the second place he says that assuming such decisions to stand, the statutory provisions have not the same effect and cannot be used as having any influence at all on any question of general average.

It is now well established in our municipal law that a shipowner cannot claim a contribution for a general average sacrifice or expenditure where the peril that occasioned the sacrifice or expenditure was due to the fault of himself or his servants. But this proposition is of little practical value until a correct connotation is given to the word "fault." The first appearance of the doctrine in a reported case so far as I am aware is to be found in *Schloss* v. *Heriot* (*sup.*). That was an action by a shipowner against cargo owner for contribution in respect of a general average loss. The defendant for a fourth plea averred that the ship was unseaworthy at the commencement of the voyage, and that the average loss "was caused and occasioned and arose and happened from and in consequence of such unseaworthiness." The case was decided on demurrer, counsel for the defendant arguing that the plea was good inasmuch as it showed that the loss was occasioned by the actionable negligence and misconduct of the plaintiff himself. Erle, C.J., in giving judgment, said (14 C. B. (N. S.), on p. 641): "The fourth plea, I think, is a good one. It shows that the plaintiff was himself the cause of the loss—that his actionable negligence and misconduct produced the very damage for which he seeks to recover contribution from the defendants. Further, I am of opinion that, if necessary, the plea is sustainable on the ground that the defendants would be entitled in a cross-action to recover back the whole sum claimed by the plaintiff in this action." Willes J. and Keating, J. concurred. It is plain that the decision in that case proceeded on the footing that the fault relied on was actionable: the first head of the judgment is that the plaintiff himself caused the loss by his actionable negligence and misconduct; the second head is circuity of action which necessarily involved actionable fault. In *Prehn* v. *Bailey and others* (4 Asp. Mar. Law Cas. 465; 45 L. T. Rep. 399; 6 Prob. Div. 127), the owner of a ship which had been sunk by a collision for which the ship was to blame had raised the ship, and having limited his liability in accordance with the statute claimed a contribution from the cargo owner for either salvage or general average. The Court of Appeal refused contribution, Brett, L.J. saying if the general average contribution arose by reason of a default of his he cannot claim anything. Cotton, L.J. said that it would be against equity to say that a person who himself has done the wrongful act which caused the expenditure shall claim from anyone else. I think it plain that Brett, L.J., in speaking of "default," and Cotton, L.J., in speaking of "wrongful act," had in mind the class of act which was the subject of their discussion, namely, an actionable wrong, in that case negligence causing collision. Similarly in *Strang, Steel and Co.* v. *Scott and Co.* (6 Asp. Mar. Law Cas. 421; 61 L. T. Rep. at p. 599; 14 App. Cas., at p. 608), Lord Watson, in stating the principle that where a person has by his own fault occasioned the peril it would be unjust to permit him to recover from the cargo owners, proceeds to say that in any question with them he is a "wrongdoer" and must seek to mitigate the consequences of his "wrongful act." He then refers to the property imperilled "by his own tortious act" and cites *Schloss* v. *Heriot* (*sup.*) as the leading English authority. The English law on this matter is to be found in these authorities; and I can find no trace of any principle other than that the fault which deprives the claimant of his right to contribution must be fault which is an actionable fault against the person from whom contribution is claimed. A statutory limitation of liability of course does not defeat the principle: it leaves the fault actionable, as was decided in *The Ettrick* (*sup.*). I myself find it difficult to conceive of a fault in this relation which, though not actionable, is yet in some manner so blameworthy as to deprive the party of his right to contribution. It is further to be noted that the principle does not prevent an act which otherwise complies with the conditions from being a general average act. For such a purpose one does not look at the cause of the peril, but the quality of the acts done to avert it. In other words, a cargo owner who has suffered a general average sacrifice may claim contribution from his fellow cargo owners though the peril be incurred by the negligence of the ship. If any authority be required for this it is to be found in *Strang, Steel and Co.* v. *Scott and Co.* (*sup.*). The question, therefore, always is one of the immediate relations between the claimant for contribution and the contributory interests.

I have dwelt upon the necessity for the fault to be actionable to illustrate the cases relied on by the shipowner which seem to me to decide that, where the act causing the peril is by convention of the parties not actionable, the claimant who has committed the act is not precluded from obtaining contribution.

The first of these is *The Carron Park* (*sup.*), decided by Sir James Hannen in 1890. There a cargo of sugar was loaded on the defendant's ship on the terms of a charter-party which contained an exception clause, "neglect or default whatsoever of the pilot master crew or other servants of the shipowner always excepted." The cargo was damaged by water through a valve being negligently left open by one of the engineers of the vessel. The action was for damage to cargo; the shipowner pleaded the exception and counter-claimed for a general average contribution. The President gave effect to the exception on the claim, and held the shipowner entitled to contribution in general average. He says (6 Asp. Mar. Law Cas. at p. 545; 63 L. T. Rep. at p. 358; 15 Prob. Div. at p. 207): "The claim for

contribution as general average cannot be maintained where it arises out of any negligence for which the shipowner is responsible; but negligence for which he is not responsible is as foreign to him as to the person who has suffered by it." After citing from Lord Watson in *Strang, Steel and Co.* v. *Scott and Co.* (*sup.*), he proceeds: "Here it appears to me that the relation of the goods owner to the shipowner has been altered by the contract—that the shipowner shall not be responsible for the negligence of his servants in the events which have happened." This decision, which was criticised at the time by a writer of great authority on such matters, the late Judge Carver, in his work, Carriage of Goods by Sea, 4th edit., s. 373 (*b*), was affirmed and followed by the Court of Appeal in *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*). In that case the shipowners had chartered the *Port Victor* to the defendants by a charter-party which contained an exception clause, "negligence of the master . . . or other servants of the shipowner or charterers always mutually excepted." The captain was to be at liberty to sign bills of lading at any rate of freight the charterers might choose without prejudice to the stipulations of the charter-party, and the charterers agreed to indemnify the owners from any consequence that might arise from the captain signing bills of lading. During the currency of the charter the captain by the charterers' instructions signed bills of lading for cargo without a negligence clause. The ship collided with another ship through the negligence of the captain. The ship in consequence incurred certain general average expenditure. The shipowners sued the charterers for an indemnity, alleging that by reason of the absence of the negligence clause they had lost their right to a contribution against the bill of lading holders. The defence, argued by Mr. Carver, K.C., and Mr. Scrutton, was that if the bills of lading had contained a negligence clause still the shipowner would not have been entitled to contribution, and that the decision in *The Carron Park* (*sup.*) was wrong. The court by a majority, A. L. Smith, L.J. and Romer, L.J.; Vaughan-Williams, L.J. dissenting, gave judgment for the shipowner and affirmed *The Carron Park* (*sup.*). A. L. Smith, L.J., a judge of large experience in these matters, said (9 Asp. Mar. Law Cas. at p. 124; 83 L. T. Rep. at p. 323; (1900) 2 Q. B. at p. 546): "To create the shipowner a wrongdoer as regards the cargo owner there must be the breach of some duty, and, if by agreement between the two it has been agreed that it shall be no breach of duty for the master to be guilty of negligence, in other words, that as between the two the negligence of the master shall be always excepted, it cannot be said that it is a breach of duty towards the cargo owner for the master to be guilty of that which the cargo owner and shipowner have agreed shall be no breach of duty at all." Romer, L.J. expressed the same reasoning, pointing out that with the negligence clause at the moment of the sacrifice shipowner and cargo owner between themselves stood on a footing of equality.

Since that date the decision has stood undisturbed by any authority. It has been followed in Scotland. Countless contracts of carriage by sea must have been made on the footing that it was correct, and general average claims adjusted accordingly. Even if one were to assume that had the case at the time come on appeal for decision before your Lordships, the balance of argument would have been on the side of the cargo owners, I apprehend that at the present date your Lordships would have felt the greatest difficulty in overruling a decision not unreasonable in itself upon which so many people have acted and regulated their mutual obligations in an important branch of commerce. It is noteworthy that the statutory exceptions in the Carriage of Goods by Sea Act 1924 must have been agreed to on the footing that the law was as laid down in these cases. I should therefore myself have been content to accept the decision on this ground alone. But I think the reasoning correct. If by convention between the parties the so-called fault is an act which is not actionable, as between them the foundation for the doctrine invoked disappears. It is no longer a wrong of the shipowner which has caused the peril: it is no longer inequitable for him to enforce a contribution. Counsel for the cargo owner fell back upon another argument. Assume, they said, that the ship recovers if the exception is so drawn as expressly to displace the duty, as by saying negligence excepted, yet if the exception does not expressly displace the duty but merely says that the ship is not responsible for the consequences of the negligence then the original principle survives. My Lords, this seems to me much too narrow a view to find a place in the construction of a commercial contract. The object of the exception is to protect the person committing the act in question from liability for any consequences of it; and this is effectively secured whether it is said that there shall be no duty to avoid doing the act, or no obligation to pay any compensation if it is done. Both forms of words, according to English law, prevent any liability from arising either in contract or tort.

I think that up to this point there has been no difference of opinion in the courts below. I see no disposition on the part of Wright, J. or Scrutton, L.J. to question the correctness of the decisions in *The Carron Park* (*sup.*) and in *Milburn and Co.* v. *Jamaica Fruit Importing and Trading Company of London* (*sup.*). The only difference has been upon the effect of sect. 502. As a matter of principle I am unable to see any distinction in this context between a contractual exception and a statutory exception. If the words of the statute had been written into the charter-party there could be no doubt that the right to contribution would not be defeated, always

assuming that *The Carron Park* (*sup.*) was, as I have held, rightly decided. That the act or omission is made by statute not actionable, rather than by agreement, can hardly be a circumstance affecting the ultimate liability. By the most effective method it is prescribed that in cases falling within the statute there is no actionable fault. If so the right to contribution is not destroyed. With unfeigned respect to the two very learned judges who took a different view, whose opinions on such a matter are of the greatest weight, they have, I think, imputed to a sentence of Lord Halsbury in *Greenshields, Cowie and Co.* v. *Thomas Stephens and Sons* (*sup.*), more than it was intended to convey. In that case fire having broken out in a cargo of coal the whole cargo was damaged by water in the course of saving both ship and cargo. The cargo owners claimed against the ship contribution in general average. The ship set up the provisions of sect. 502. This House, affirming Channell, J. and the Court of Appeal, held that the section afforded no answer. It applied to a liability sought to be imposed upon a shipowner for damage to goods by fire where otherwise he would be liable on his contract of carriage or by reason of his custody of the goods. Lord Halsbury said: "The statute is not dealing with average at all." This statement seems in its context to be reasonably plain. Similarly if the shipowner had sought to protect himself from a contribution by relying on a bill of lading exception it would rightly be said the bill of lading is not dealing with average at all. For, I think, there can be no doubt that the bill of lading exceptions operate to relieve the shipowner from the consequences of non-delivery of goods or delivery of damaged goods in breach of duty arising from his having agreed or assumed to carry them: *Schmidt* v. *Royal Mail Steamship Company* (4 Asp. Mar. Law Cas. 217*n*; 45 L. J., Q. B. 646; *Crooks and Co.* v. *Allan and another*, 4 Asp. Mar. Law Cas. 217; 41 L. T. Rep. 800; 5 Q. B. Div. 381; and *Burton and Co.* v. *English and Co.*, 5 Asp. Mar. Law Cas. 187; 49 L. T. Rep. 768; 12 Q. B. Div. 218). Indeed, if it were otherwise, the exception of "perils of the sea," alone, the oldest of exceptions, would have made the cargo owners' right of contribution against the ship of little practical value. The statute then is not dealing with average, but it is dealing with actionable fault, and as the suggested defence to the claim for contribution is actionable fault of the claimant the statute defeats such a defence. I have not thought it necessary to deal with the decision of the Supreme Court of the United States in *The Irrawaddy* (171 U. S. Rep. 187), because, as pointed out by Greer, L.J., in the Court of Appeal, that case was decided on distinctions then existing between the law of the United States and this country to which the majority of the Supreme Court expressly drew attention. In my opinion the view of the majority of the Court of Appeal in this case ought to prevail, and this appeal should be dismissed with costs.

Lord Thankerton.—I have had the opportunity of reading and considering the opinion of my noble friend, Lord Dunedin, and I entirely concur in it.

Appeal dismissed.

Solicitors for the appellants, *Ince, Roscoe, Wilson*, and *Glover*.

Solicitors for the respondents, *Botterell* and *Roche*, agents for *Vaughan* and *Roche*, Cardiff.

Supreme Court of Judicature.

COURT OF APPEAL.

May 11, 12, 13 *and* 22; *June* 15, 1931.

(Before Scrutton, Greer and Slesser, L.JJ., assisted by Nautical Assessors.)

The Bremen. (*a*)

ON APPEAL FROM THE ADMIRALTY DIVISION.

Collision—Fog—Whistle of steamship heard a little abaft the beam—Whistle heard again on the same bearing—Failure to stop—Regulations for Preventing Collisions at Sea, art. 16 *—Nautical Assessors—Disqualification of an assessor.*

Art. 16 *of the Regulations for Preventing Collisions at Sea requires a steam vessel hearing, apparently forward of her beam, the fog signal of a vessel, the position of which is not ascertained, to stop her engines and then navigate with caution until danger of collision is over.*

The B., *an Atlantic liner, was bound down channel in dense fog, making about four knots, when those on board heard abeam or a little abaft the beam the fog signal of the steamship* B. G. *The fog signal was again heard on four or five occasions on the same bearing, louder and drawing nearer. The* B. *then starboarded, and also used her engines to assist her helm. Very shortly afterwards the* B. G. *appeared crossing the course of the* B. *from starboard to port, and the two vessels came into collision.*

Held (*Greer, L.J. dissenting*) *that although art.* 16 *did not apply, good seamanship nevertheless required the* B. *to stop her engines when the fog signals of the* B. G. *were heard on the same bearing getting louder and nearer, indicating danger of collision, and that the* B. *was* 20 *per cent. to blame for failing to do so.*

Decision of Bateson, J. affirmed.

Per Scrutton, L.J.: Where one of the nautical assessors summoned to assist the Court of Appeal has at any time been in the service of either of the parties to the appeal, such service should be disclosed before the hearing of the appeal is begun.

(*a*) Reported by Geoffrey Hutchinson, Esq., Barrister-at-Law.

Appeal and cross-appeal from a judgment of Bateson, J. holding the plaintiffs' steamship *British Grenadier* 80 per cent. to blame and the defendants' steamship *Bremen* 20 per cent. to blame for a collision between the *British Grenadier* and the *Bremen*, which took place in the English Channel off Dungeness on the 24th April 1930.

The *British Grenadier* was a steel screw steamship, 6888 tons gross and 4078 tons net register, 440ft. in length, 57ft. beam, fitted with geared turbine engines of 642 h.p. nominal, and at the time of the collision was in the course of a voyage from Abadan to Grangemouth with a cargo of about 9300 tons of crude petroleum.

The *Bremen* was a steel quadruple screw steamship belonging to the port of Bremen, 51,656 tons gross and 21,583 tons net register, 939ft. in length and 102ft. beam, fitted with geared turbine engines of 96,000 h.p. indicated, carrying a crew of 1005 hands. She was on a voyage from Bremerhaven to New York via Southampton and Cherbourg with 971 passengers.

The collision took place at about 10.21 a.m. on the 24th April 1930, in the English Channel, about four-and-half miles off Dungeness during a dense fog. Bateson, J. held that the *British Grenadier* was 80 per cent. to blame for the collision, and that the *Bremen* was 20 per cent. to blame. The case is reported on the question of the liability of the *Bremen*. The facts material to her navigation were found by Bateson, J. as follows:

After 9.8, when she encountered fog, the *Bremen* felt her way down channel, dealing carefully with the traffic, of which there was a good deal, and from 9.22 she worked her way mostly with her two inner screws only, which at half speed give her about four knots. About 10.11 she was all stopped and she blew the two long blast signal certainly once, perhaps twice. At 10.12½ she went on half speed on the two inner screws sounding a long blast. About 10.16 the *Bremen* heard the *British Grenadier* for the first time, apparently a little abaft the starboard beam. I am satisfied that the whistle of the *British Grenadier* was somewhere about the beam or a little abaft it. Under these circumstances there was no necessity under art. 16 for the Master of the *Bremen* to stop his engines and he did not do so. To go on after hearing one whistle on the beam is perfectly safe in that position, because the rule as to stopping only applies to a sound signal apparently forward of the beam. Then the whistle sounded louder and nearer. The master heard it about six times and always on the same bearing, and thereafter, I think, it indicated risk, but he kept on until about 10.19½, when he decided that he must act, and he starboarded his helm. He had not seen the *British Grenadier* at that time. The *Bremen* did not go off as quickly as the master wished under her starboard helm, and he increased his engine power, first putting both starboard engines full speed ahead to assist the helm, and then all four engines. Almost immediately afterwards he saw the *British Grenadier* at a distance of about 100-150 yards bearing about six or seven points on the starboard bow, crossing and passing him. As soon as he saw her he put all four engines full speed astern, but the two vessels came together at 10.21, the starboard bow of the *Bremen* striking the port side of the *British Grenadier*.

The learned judge went on to say that he had no doubt that the *British Grenadier* was more to blame than the *Bremen*, and then continued:

"The navigation of the *Bremen*, on the other hand, was most careful. In the last ten minutes she had been all stopped for fog. She heard the whistle of the *British Grenadier* on her beam as she thought, and I think she was right. But there is a difficult question in her case. I think she was very unlucky to have met the *British Grenadier*, but I cannot excuse her entirely for her navigation after hearing the fog signals of the *British Grenadier*. I have considered carefully with the Elder Brethren the following matter, and I put it to them not exactly in the form of a question, but in this way: The *Bremen* heard single long blast signals of the *British Grenadier* abeam, or abaft the beam. That vessel must be either a ship on the same course, an opposite course, a diverging course, or a converging course. If it is one of the first three of those it does not matter—it is only the last that matters. If the vessel is on a converging course going up-channel the courses would intersect astern of the *Bremen;* if the vessel is going down-channel, there is a danger of the courses intersecting ahead of the *Bremen.* The fact that the signals keep the same bearing, and get louder and nearer, is a clear indication of danger of collision. What ought a good seaman to do? I think—and the Elder Brethren think—the right navigation is to wait and see. That is to say, stop your engines as soon as you realise that the bearing is not changing. You are not bound to stop under the rules because the whistle signals are not forward of your beam, but when the vessel abeam of you is blowing signals on the same bearing, getting nearer and louder, I think a ship ought to stop. If you stop, the bearing may draw ahead, or it may remain the same. If it does not draw ahead, but remains the same, still getting nearer, at any rate you will know what the ship is doing and you will be prepared for any action that may be necessary. You have then ascertained what the other ship is doing; if it draws ahead you remain stopped. If the master was afraid of his flank—having regard to the number of lives he had got on board his ship—he might perhaps when he stopped have reversed his port propellers and starboarded his helm, and he might not then be to blame if he guesses right. But I think there would be even a risk in that. At any rate, it seems to me that stopping was the right manœuvre. In this case the master of the *Bremen*, a fine seaman, thought it best to preserve his flank from attack if he could, and he thought it best to keep his speed, such as it was, and turn his ship away. He was in a difficult position, but I think the right navigation is that which I have described. He ought to have stopped when he knew for certain, as he would after the second

or third blast, that the ship was approaching on the same bearing causing danger of collision. It is perhaps rather hard measure under these circumstances, but when one remembers how important it is in fog to stop your engines I do not think I am wrong in saying that he is somewhat to blame in this particular case. I have marked my view of the difference between the negligence of the two ships in the proportions which I have arrived at."

The defendants appealed, and the plaintiffs cross-appealed.

Raeburn, K.C. and *Hayward* for the appellants, the owners of the *Bremen.*

Dunlop, K.C. and *Noad* for the respondents and appellants in the cross-appeal.

SCRUTTON, L.J.—The *Bremen*, the well-known Atlantic liner, and the *British Grenadier*, an oil tanker, came into collision off Dungeness in thick fog. On the collision action being tried by Bateson, J., assisted by Trinity Masters, both ships were found to blame in the proportions of 80 per cent. attributable to the *British Grenadier* and 20 per cent. to the *Bremen*. Both ships appeal.

The actual hearing of the appeal took place as usual with two nautical assessors. But at the close of the hearing one of the parties brought to the attention of the court the fact that some years before one of the assessors had been in the service of one of the parties. On enquiry this was found to be so, though, of course, none of the professional gentlemen engaged were aware of it. The service referred to was nine years ago, and there had been no pecuniary or other relations between the parties since. Of course, such a relation should have been disclosed before the hearing of the appeal commenced, though in view of the fact that judges are not disqualified from hearing a case by the fact that when at the Bar they have appeared for or against one of the parties in other cases, it is quite intelligible that the assessor should not have appreciated the necessity for disclosure of his previous relations. The court gave the parties the opportunity of a re-hearing with other assessors, but the parties agreed, with the sanction of the court, that the court should treat the appeal as heard without assessors, discarding from their consideration any advice they had received from their assessors, and only considering as evidence the advice given by the assessors below.

The appeal of the *British Grenadier* can be shortly disposed of. There is, in my opinion, no ground for lessening the liability the judge has placed on her. [The learned Lord Justice then dealt with the navigation of the *British Grenadier*, and continued :] In my opinion, there is no ground for attributing to the *British Grenadier* a less percentage of blame than the 80 per cent. with which the judge has burdened her.

The appeal of the *Bremen* raises much more difficult questions. She was proceeding at a slow speed, three to four knots, in dense fog, sounding her long blast for fog at intervals of about a minute. At 10.16 she says she heard slightly abaft her beam on her starboard side a long blast. She heard it again, apparently, on the same bearing and getting louder, five or six times before the collision, at 10.21. That it appeared to be on the same bearing showed risk of collision. The *Bremen* did not stop her engines, but proceeded at the same speed, but under a starboard helm. The ships came into collision at an angle of 45 degrees leading forward on the *British Grenadier.* The question is, whether under these circumstances, the *Bremen* should have stopped as soon as the second and (or) third whistle heard from the *British Grenadier*, apparently on the same bearing as the first whistle and getting louder, told her there was risk of collision.

The judge, after discussing the matter with his assessors, summarises their joint opinion in the judgment that under these circumstances the master of the *Bremen* ought to have stopped when he heard the second or third blast getting louder, and, apparently, on the same bearing. I have come to the same conclusion as the judge below, as advised by his assessors. I treat the opinions of the assessors as evidence which I must consider, and form my own judgment upon. The appellant, however, is not supported by the opinion of any nautical men.

In my opinion the less ships move in fog, the better. If all ships stopped when there was fog, and either anchored or remained stationary where there was no risk of their drifting into danger of stranding, there would be no collisions. Rule 16 is imperative in requiring a vessel hearing apparently forward of her beam a fog signal to stop her engines, so far as the circumstances of the case admit, although from one whistle she cannot tell the course of the other ship, or what she is doing. Lord Gorell's well-known judgment in *The Campania* (9 Asp. Mar. Law Cas. 151, 153 ; 84 L. T. Rep. 673 ; (1901) P. 289, 296) disposes of the suggestion that large liners must go through fog at nine knots or so, and the same judge's remarks in *The Britannia* (10 Asp. Mar. Law Cas. 65 ; 92 L. T. Rep. 634 ; (1905) P. 98) negative the view that if the whistle heard seems a long way off the hearing vessel need not stop. In *The Aras* (10 Asp. Mar. Law Cas. 358 ; 96 L. T. Rep. 95 ; (1907) P. 28) Lord Gorell held that a steamer after stopping her engines was not justified in going slow ahead on the assumption that the sound of the whistle was broadening on her bow. He asked the Elder Brethren a question (10 Asp. Mar. Law Cas. at p. 360 ; 96 L. T. Rep. at p. 98 ; (1907) P. at p. 34) which shows his view as to the course which should be adopted, the reason for it being the uncertainty of bearings of whistles in fog. Lord Gorell said : "I have asked the Elder Brethren this question : 'When the *Oakmore* continued on her course'—the explanation of that is that according to her evidence she stopped, and then, finding she was falling off, put her engines ahead again and brought herself on to her course and kept on

for something like twenty minutes—' were the indications such as to show to her master, distinctly and unequivocally, that if both vessels continued to do what they appeared to be doing they would pass clear without risk of collision ?' The answer is 'No.' Then the Elder Brethren were asked by me: 'What ought to have been done in those circumstances on board the *Oakmore* ?' And their view is that she ought not to have continued on in the way she was doing, with that big steamer coming closer and closer and doing what I have already said, but that she ought to have stopped, it may be only from time to time, even at the risk of falling off somewhat, because recollect, there is a sound signal to be given if a vessel is absolutely stopped; that even if it would not have been advisable to keep continually stopped, by a touch ahead from time to time she could have been kept sufficiently on her course and under control instead of going on for something like twenty minutes at slow speed." Rule 16, however, only applies in terms to whistles heard, apparently, forward of the beam. The results of hearing a whistle slightly abaft the beam are not very clear as far as the express rules are concerned. The vessels may, in fact, be on crossing courses so as to involve risk of collision. In such a case, in clear weather, the *Bremen* would have to keep out of the way and the *British Grenadier* to keep her course and speed (art. 19). But Lord Gorell (then Barnes, J.) held in *The Cathay* (9 Asp. Mar. Law Cas. 35, at p. 36; 1899, 81 L. T. Rep. 391, at p. 392) that, in such a case, the stand-on vessel, in clear weather must, in fog, not stand on, but act on rule 16 rather than on rule 21: "It seems to me that although art. 21 is a general rule, it is qualified by art. 16 in cases where the latter article applies; and this is one of those cases, because this vessel undoubtedly heard, forward of her beam, the fog signal of the *Clan Macgregor*. It is said by Mr. Walton that those on board the *Cathay* could and did ascertain the position of the whistle which was heard. I do not agree with that contention, nor do the Elder Brethren. It is clear that the captain did not, and could not, properly ascertain the position of the vessel, and was not in the least justified in assuming she would pass under his stern. To my mind, on hearing that vessel he should have stopped the engines and navigated with caution until the danger was over. If he had done so there would have been no collision. No doubt her speed was kept up until the last moment, and then she crashed into the *Clan Macgregor* and sank her. I think it would be extremely dangerous to hold that in a dense fog, when vessels can be seen only at a very short distance, the vessel, which from an ultimate knowledge of the respective courses, is shown to be the one which in clear weather should keep her course and speed is to be held to be justified in keeping her course and speed when there is such a fog that the vessels cannot see each other at all, and cannot be certain of each other's position. I hold, without any doubt, that a ship in the position of the *Cathay* ought to have stopped her engines and taken off her speed in order to comply properly with art. 16." I appreciate, of course, that in the present case the judge has found, contrary to the case of the *British Grenadier*, that the *Bremen* did not hear the *British Grenadier's* whistle forward of her beam. But a similar question would arise if the whistle was heard more than two points abaft the beam.

The overtaking rule (art. 24) is said to apply to vessels coming up with another vessel from any direction more than two points abaft the overtaken vessel's beam, and if by day the overtaking vessel is in doubt she must assume she is an overtaking vessel. The overtaking vessel will not become a crossing vessel as she comes up to the overtaken vessel. The limitation "by day" is inserted because by night, if the weather is clear, she will see the sidelights of the overtaken vessel at less than two points abaft the beam of the overtaken vessel. The position in fog was discussed by Lord Gorell (then Barnes, J.) in *The Britannia* (10 Asp. Mar. Law Cas. 67; 92 L. T. Rep. 634; (1905) P. 98). The *Ribera*, proceeding dead slow in dense fog, heard the whistle of a vessel apparently overtaking her on her port quarter. The *Ribera* did not take any action for this whistle. The *Ribera* said she did not stop because she was afraid of the overtaking vessel coming up and striking her. Lord Gorell treated this as "a flimsy excuse" and, apparently, took the view that both vessels should have stopped on hearing each other's whistles. The case is also interesting as showing Lord Gorell's considered views on the unreliability of whistle signals in fog. I refer to his remarks: (10 Asp. Mar. Law Cas. 67, at p. 68; 92 L. T. Rep. at p. 636; (1905) P. at p. 103). As rule 16 refers to whistles heard forward of the beam and rule 24 to whistles heard more than two points abaft the beam, whistles supposed to be heard abaft the beam but not more than two points abaft seem to be in a position not expressly dealt with. It may be that, in view of the unreliability of the inferences to be drawn as to the position shown by sounds in fog, the master should, except in very clear cases, treat such sounds as either before the beam or more than two points abaft the beam, and in either case in fog stop his engines. He is told in rule 24 to give the benefit of the doubt, if in doubt, to the conclusion that a vessel is an overtaking ship, as defined in that rule. I think Lord Gorell's general view, as shown in his decisions, was that on hearing a whistle in fog a vessel should always stop. If every vessel acted on this, and blew whistles in fog, there would be very few collisions. The views expressed by the House of Lords in *The Otranto* (*ante*, p. 193; 144 L. T. Rep. 251; (1931) A. C. 194) as to stopping if in doubt support this opinion.

The note at the commencement of the Steering and Sailing Rules, before art. 17, emphasises the importance of no change of bearings when two vessels are approaching, as showing risk of collision. When two cars are approaching on intersecting roads, each being

visible to the other, if as the cars come on the bearing does not alter it is common knowledge that they will arrive at the point of intersection at the same time, unless their relative speeds alter, and that the fact of no change of bearings involves risk of collision. The note emphasises the same point in clear weather at sea. In fog the sound of the whistle, if getting louder on the same bearing, affords a similar test of risk of collision, though not so certain because of the uncertainty of sound in fog. In the present case the *British Grenadier's* whistle was heard from the *Bremen* to get louder, apparently, on the same bearing, and the assessors below take the view that at the second, certainly at the third, whistle the *Bremen* should have stopped. She could, at a speed of four knots, by stopping and reversing have taken her way off in fifty yards, one-sixth of her length. Complaint was made that this point as to stopping at the second or third whistle was not put to the master of the *Bremen* at the trial. But the first question put to him in cross-examination was why he did not stop on hearing the first whistle. He had given in his log, after careful consultation with his officers, the reason why he acted as he did. He appears to have acted on the view that the approaching whistle was that of an overtaking vessel "more aft than abeam," and, therefore, he need not alter his speed. But the judge's finding negatives the suggestion that the whistle was "more aft than abeam." If it were, Lord Gorell's views as expressed in *The Britannia* (*sup.*) would require the *Bremen* to stop its engines. If the whistle was heard forward of the *Bremen's* beam, art. 16 would require the *Bremen* to stop. I find it difficult to see any reason why for a whistle supposed to be between abaft the beam and two points abaft the beam, but apparently continuing on the same bearing, good seamanship did not require the *Bremen* to stop, especially in view of the difficulty of getting precise information as to the position of a ship whistling in fog.

In my opinion, in fact, if the *Bremen* had stopped when she heard the second whistle, apparently on the same bearing, the collision would not have happened, as the *British Grenadier* would have passed ahead of the *Bremen* in safety. On the finding of the judge as to the respective speeds of the two ships, the *British Grenadier* must have heard the *Bremen's* whistle forward of her beam and should have stopped under rule 16. If, then, both vessels had stopped still less would there have been a collision. I gather the argument for the *Bremen* is that she could not really tell what the *British Grenadier* was doing, and she might have been going to cross astern. But rule 16 requires the vessel hearing one whistle forward of her beam to stop her engines though she cannot know from one whistle what the other ship is doing. I think the judgments of Lord Gorell already referred to point to the conclusion that in fog, unless the vessel, hearing a whistle, is quite clear that to continue course and speed will not involve risk of collision, she should stop her engines. And in this case the *Bremen* did, from the whistles, form the opinion that the *British Grenadier* was continuing her course and speed so as to involve risk of collision if the *Bremen* kept her speed.

In my opinion the decision of the judge, and the opinion of the assessors below, as to the liability of the *Bremen* were correct, and there was no ground for interfering with the judge's proportion of damage.

Each appeal fails, but to avoid any expensive taxation of the costs incurred by each respondent there should be no costs of the two appeals.

GREER, L.J.—On the 24th April 1930 the *British Grenadier*, a steel screw steamship of 6888 tons gross, 440ft. in length, and 57ft. in beam, came into collision with the *Bremen*, a vessel of 51,656 tons gross, 939ft. in length and 102ft. beam, in the English Channel, about four-and-a-half miles from Dungeness. The owners of the *British Grenadier* brought an action *in rem* against the owners of the *Bremen* for damages due to the negligent and improper navigation of the *Bremen*. The owners of the *Bremen* defended the action on the ground that the collision and the consequent damage were not due to any negligence on their part, and they counter-claimed for the damages suffered by their vessel, alleging that the *British Grenadier* was alone to blame for the collision. Bateson, J. had no difficulty in finding that the navigation of the *British Grenadier* was negligent, and that her negligence was one of the effective causes of the collision, but he held with considerable reluctance that the *Bremen* was also "somewhat" to blame, and he apportioned the damage by finding that 80 per cent. should be borne by the *British Grenadier* and 20 per cent. by the *Bremen*.

From this decision the owners of the *Bremen* appeal, and there is a cross-appeal by the owners of the *British Grenadier*, who allege that the collision was caused entirely by the negligent navigation of the *Bremen*.

The learned judge who heard the witnesses believed the witnesses called on behalf of the *Bremen* with regard to her navigation up to the time when the two vessels came into collision, and he disbelieved the account given by the witnesses on board the *British Grenadier* with regard to her navigation, and this appeal is to be determined by accepting the learned judge's decision as to the credit to be attached to the evidence given by the witnesses on the one side or on the other. The question, therefore, whether the *Bremen* was in any respect to blame falls to be determined by the evidence given by those on board the *Bremen* which the learned judge has accepted as both truthful and accurate.

It seems to me unnecessary to consider the history of the *Bremen's* navigation before 10.16 on the morning in question. There was a dense

fog in the channel. The *Bremen* was proceeding down-channel in a south-westerly direction at about 228 degrees true, when a whistle was heard from a vessel slightly abaft her starboard beam. She was then proceeding at about four-and-a-half knots per hour, which the judge rightly held to be a safe speed under the circumstances provided that she continued, as she had done coming down-channel, to exercise reasonable navigating care, and to attend to the sound signals made by other vessels. The whistle that sounded from slightly abaft her beam showed that if the vessel so signalling was approaching her, such vessel should, under art. 16, stop her engines and then navigate with caution until danger of collision would be over. The *Bremen* was, therefore, entitled to proceed on her course, giving the usual signal, as she in fact did, that she was so proceeding. When she heard the second and third signals she must have known, of course, that the approaching vessel had not stopped her engines. Her witnesses say that they judged by the sounds that the bearing of the approaching vessel continued to be the same. I understand this to mean that they knew approximately that she was not altering her direction, but was keeping in the same direction, and that as the sounds grew louder she was approaching the course the *Bremen* herself was on, and that the two courses were bound sooner or later to intersect, and that there was, therefore, risk of collision. But I think the bearing could only be approximately judged, and I do not think that those on board the *Bremen* could ascertain exactly how near the course which the *British Grenadier* was keeping was to the course which the *Bremen* was on. The navigation of the *Bremen* is to be judged not by the event, but by what would appear to be the circumstances under which the master of the *Bremen* was called upon to act. In fact, if the *Bremen* had on hearing the second or third whistle from the *British Grenadier* stopped her engines, the *British Grenadier* would probably have passed ahead of her and there would have been no collision, but I do not think that those on board the *Bremen* were able sufficiently to gauge the distance the course of the *British Grenadier* was from their course so as to enable the master to decide whether it would be safe for him to stop the engines of his vessel. If the course of the *British Grenadier* was nearer to the course of the *Bremen* than it turned out to be, the latter would have been running a very grave risk by stopping her engines and presenting what would very nearly be a broadside target to the *British Grenadier*. The master had to choose between two courses: (1) To stop his engines and if necessary reverse, or (2) to go ahead and try to keep as nearly as possible on a parallel course. He chose the latter alternative, which, by reason of facts which he could not know, was the wrong course, as events turned out, but, inasmuch as if the master of the *Bremen* had taken the other course and stopped his engines, there might, so far as the facts appeared to him at the time, have been a much more serious collision than the one which in fact took place, I find it impossible to hold that this "fine seaman," who had navigated the vessel with conspicuous care and skill until a few minutes before the collision, was guilty of negligence in failing to appreciate that he was wrong in thinking that to stop his engines would have placed his long, heavy, and valuable ship, with its crew of 1005 hands and 971 passengers, in grave danger.

It is clear in the findings of the learned judge that the *British Grenadier* was guilty of a breach of art. 16 of the Regulations for Preventing Collisions at Sea. It is equally clear on the findings that the *Bremen* did not break any of the express rules as to navigation in a fog. The only blame that can be alleged against her is that she neglected some precaution required "by the ordinary practice of seamen or by the special circumstances of the case" within the meaning of art. 29. This means that, though she did not break any of the rules, she still may be found to blame if she was negligently navigated under the circumstances. The complaint in the statement of claim with regard to the *Bremen's* failure to stop was that she failed to stop on hearing the whistle of the *British Grenadier* forward of her beam. The learned judge has found that the witnesses for the *Bremen* are right in saying that the whistle that was sounded was the whistle of a vessel abaft the *Bremen's* beam. I do not think that without an amendment of the statement of claim it was open to the *British Grenadier* to make the case that the *Bremen* should have stopped if the *British Grenadier's* whistle was abaft her beam. Nor do I think that the cross-examination of the *Bremen's* witnesses was directed to this point at all. Mr. Raeburn told us that the form of Mr. Dunlop's question did not convey to his mind that the plaintiffs were alleging that even if the whistle of the *British Grenadier* was slightly abaft the beam of the *Bremen*, the *Bremen* ought to have stopped. But though the questions were put from a different point of view the captain did get an opportunity of stating why he did not stop the *Bremen*. He was asked: "If you had stopped your engines at 10.16 this collision would not have happened?" His answer is: "It would happen much dangerous—much more—because she would not hit us on the head, she might hit us right on the bridge." This accords with the account of the collision given in Capt. Ziegenbien's deposition: "Together with several other signals at 10.16 a.m., the distinct navigation signal of a steamer was suddenly heard on starboard side from an afterly direction. Her subsequent signals becoming louder proved that she was approaching strikingly quickly. Steamship *Bremen* was heading 228 true at a speed of three knots. Visibility was 100–150 metres. Replying to the signal of the steamer, navigation signals were sounded in short intervals with the typhoon. The steamer approached strikingly rapidly, the signals of the steamer, from the time she was heard first until she came into sight, were heard five or six times and answered about ten times.

The position was unanimously judged as follows: The other vessel is an overtaking one. She is approaching from a direction more aft than abeam, without altering her bearing. Therefore our fog signals must be heard by her in any case from a forward direction. (Therefore, from the moment she heard our signal for the first time, it was her duty to stop.) Stopping did not come into question, for the steamship *Bremen*, because: (1) The signals of the other steamer were heard from a direction more aft than abeam; (2) the approach of the other vessel, judging by the increasing strength of sound of her signals, took place so rapidly that there was an immediate danger of the steamship *Bremen* then being rammed broadside at a blunt angle; (3) in case of stopping the *Bremen*, the danger of the collision broadside would have remained to completely the same extent, if the other vessel reduced her speed. For these reasons, at 10.19 a.m., when the signals were heard in the immediate vicinity from an afterly direction, at the moment of immediate danger, when a collision was inevitable if the course were kept, it was tried to turn the steamship *Bremen* to port by means of hard-a-starboarding the helm, and, if possible, to bring her on to a parallel course with the invariably nearing vessel: (arts. 21, 27 and 29 of the Regulations for Preventing Collisions at Sea). As altering the course at the low speed was not possible within the time still at disposal, solely by means of helm action, the intended turn had to be assisted by means of propeller action on the rudder. (With first of all 'starboard full ahead,' then 'all ahead'—working propellers and the helm 'hard over,' the vessel, according to experience, is turned from a stationary position almost at the spot in the smallest circle)."

Sound signals in a fog can only give an approximate guide to the bearing or course of an approaching vessel. As that experienced Admiralty judge Sir Gorell Barnes says in *The Britannia* (10 Asp. Mar. Law Cas. at p. 768; 92 L. T. Rep. at p. 636; (1905) P. at p. 103): "It is not correct to say that a whistle having been heard can be located so as to be certain it is a precise bearing on the bow." In the circumstances of this case it seems to me that the court ought not to have found the *Bremen* guilty of negligent navigation. She was faced with the problem of dealing with an unascertainable situation. The captain could not know where the point of intersection of the two courses would be. If he stopped his engines the point of intersection might be somewhere near the amidships section of his long vessel. If the course of the *British Grenadier* should be further away than it actually was, the manœuvre that the *Bremen* executed might have brought the vessels in parallel courses so that a collision would have been avoided, and in any case the results of a collision would by his action be much less serious than they would be if a collision took place with his ship amidships. I cannot think that the court was right in holding the *Bremen* guilty of negligence or unseamanlike navigation. If this case fell to be determined by my judgment the cross-appeal of the *Bremen* would be allowed with costs and the appeal of the *British Grenadier* dismissed with costs and judgment entered for the *Bremen* with costs.

I have said nothing about the assessors in this court, because the facts have been fully stated by my Lord, but I may say that my provisional opinion was not altered when I read the answers that the assessors gave to the questions my Lord put to them.

SLESSER, L.J.—In this case the learned judge has accepted the history of this collision as recounted by the oral evidence and documents tendered on behalf of the *Bremen* and rejected the evidence and documents of the *British Grenadier* as far as they conflict with the story told by the *Bremen*. That history has been sufficiently set out by Scrutton, L.J. I content myself, therefore, with the following facts immediately material to my judgment.

The *Bremen* was travelling down-channel on a south-westerly course at three to four knots in a thick fog at about 10 a.m.—she was sounding a powerful whistle about every minute. There is no evidence that she was off her normal course about opposite Dungeness. At about 10.16, summer-time, the *Bremen* first heard a long blast abaft her beam on the starboard side. She continued to hear it five or six times increasing in volume approximately on the same bearing. The *Bremen* did not stop her engines, but continued under a starboard helm at the same speed. At 10.21 a.m. the vessels collided at 45 degrees.

The learned judge, in agreement with the Trinity Masters, has found the *Bremen* to blame, to the extent of 20 per cent., in that she should in his opinion have stopped, at least on hearing the third whistle of the *British Grenadier*, which was, as I have said, getting louder on the same bearing, thus indicating a convergence. It must be added that the judge has accepted the evidence of the *Bremen* that she did not hear the whistle of the *British Grenadier* forward of her beam. In these circumstances she has rightly held that rule 16 did not require the *Bremen* to stop her engines as she did not hear the fog signal of the *British Grenadier* apparently forward to her beam. The question remains, however, whether, apart from rule 16. under rule 29 the master of the *Bremen* did not neglect a precaution which may be required by the ordinary practice of seamen or by the special circumstances of the case. The navigation of the *Bremen* is found to have been most careful coming down through the traffic. But for the last ten minutes before the collision she had been almost stopped for fog. The visibility was not more than 150 metres. Having regard to the fact that distance and bearing cannot be exactly determined in a fog (see Gorell Barnes, J. in *The Britannia*, 10 Asp. Mar. Law Cas. 65; 92 L. T. Rep. 634;

(1905) P. 98), and that the weather was apparently such that the *British Grenadier* could not be seen in time to avoid her, I agree with Bateson, J. that the *Bremen* ought to have stopped notwithstanding that rule 16 did not apply or at least reduced her speed after hearing the second or third blast of the *British Grenadier*, for a time had arrived when there was certainly a serious risk of collision: (see *The Ceto*, 6 Asp. Mar. Law Cas. 479; 1889, 62 L. T. Rep. 1; 14 App. Cas. 670; *The Dordogne*, 5 Asp. Mar. Law Cas. 328; 1884, 51 L. T. Rep. 650; 10 Prob. Div. 6). In *The Otter* (2 Asp. Mar. Law Cas. 208; 1874, 30 L. T. Rep. 43; L. R. 4 A. & E. 203), Sir Robert Phillimore said: "I am of opinion that the Legislature could not have intended to lay down the rule that there may not be circumstances in which it may become the duty of a steam vessel, when she finds herself in a fog to bring up." If the case falls within art. 16 the duty to stop is absolute; here the duty to stop or reduce speed, in my opinion, arose imperatively after hearing the whistle of the *British Grenadier* three times on the same bearing rapidly increasing in volume.

Moreover, even if there was not a duty absolutely to stop, in the uncertainty of the dense fog, I think on the evidence, notwithstanding the view of the learned judge, it was scarcely possible for the *Bremen* to know whether the whistles which she heard were or were not more than two points abaft her beam. I think it is not unfair to her captain to say that, having regard to all the circumstances, including the unexpected direction from which the *British Grenadier* was approaching, that he was really in doubt whether the *Bremen* was forward of or abaft this direction. He should, therefore, as a matter of prudent seamanship have slackened, stopped, or reversed (rules 23 and 24).

Giving every fair consideration to the rapidity with which the emergency developed and to the reckless and incalculable behaviour of the *British Grenadier*, I have come to the conclusion that for the *Bremen* to go ahead and try to keep as nearly as possible on a parallel course was not the right manœuvre, and I am glad to think in coming to a decision in this difficult question that the Trinity Masters are themselves of the same opinion. I agree, therefore, with Scrutton, L.J. that the appeal of the *Bremen* must be dismissed with the consequences by him stated.

With regard to the appeal of the *British Grenadier*, I agree with my Lords that this appeal should be dismissed and I have nothing to add.

Appeal and cross-appeal dismissed.

Solicitors for the appellants, the owners of the *Bremen*, *Constant* and *Constant*.

Solicitors for the respondents, the owners of the *British Grenadier*, *Wm. A. Crump* and *Son*.

HIGH COURT OF JUSTICE.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

Friday, July 31, 1931.

(Before LANGTON, J.)

THE ADRIATIC. (a)

Conflict of laws—Claim for distance freight—Freight engagement notes made in Egypt—Charter of Swedish vessel—English charter-party—English bills of lading—Law of flag—Lex loci contractus.

M. and P., a partnership firm registered and carrying on business in Egypt, by freight engagement notes made in Egypt with the defendants, an English firm having a branch in Egypt, contracted for shipment of cotton seed from Egypt to England. In order to perform their part of the contract M. and P. chartered a Swedish vessel through brokers in London, and subsequently bills of lading were issued to the defendants. The freight engagement notes, the charter-party and the bills of lading were all in English, the latter documents being in well known English forms. The goods were duly shipped, but were lost during the voyage to England. M. & P. claimed distance freight, alleging that the contract contained in the freight engagement notes was to be construed by the law of the flag, namely, Swedish law, or by the lex loci contractus, *namely, Egyptian law. By either of these systems of law distance freight is recoverable. The defendants contended that the intention of the parties was that English law should apply.*

Held, that in order to ascertain the intention of the parties, regard must be had to all the circumstances in which the contract was made, and that consideration of these circumstances in the present case showed that the intention of the parties was that the contract should be governed by English law.

TRIAL of a preliminary point of law in an action *in personam* in which the plaintiffs, J. P. Mitchell and L. Polnauer, claimed distance freight on the carriage of a cargo of cotton seed in the Swedish steamship *Adriatic* against the defendants, Behrend and Co. Limited.

Throughout the year 1929 the plaintiffs, J. P. Mitchell and L. Polnauer, were a firm carrying on business at Alexandria, Cairo, Port Said, Port Sudan and Khartoum, the principal office being at Alexandria. The partners in the plaintiff firm were J. P. Mitchell, who is a Scotsman and was at all material times registered at the British Consulate-General, Alexandria, as a British subject, and L. Polnauer, who was at all material times a Hungarian subject.

(a) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

The plaintiff firm was at all material times registered in Egypt under Egyptian law.

The defendants, Behrend and Co. Limited, are an English limited company, whose registered office is at 31, Great St. Helens, London, E.C. 3, and they have a branch office at Alexandria.

The owners of the steamship *Adriatic* were at the material times the Atlantic Transport Line A/B (manager, J. Kallmann), of Gothenburg, a Swedish corporation incorporated under the Swedish law.

The steamship *Adriatic* was at all material times a Swedish steamship of 3024 tons gross register, and classed 100 A1 at Lloyds.

On the 9th July 1929 and the 19th Nov. 1929 two freight engagement notes were entered into between the plaintiffs and defendants, by which the parties contracted for the carriage of a cargo of cotton seed from Alexandria to London.

On the 11th Oct. 1929 F. C. Lohden and Co. Limited, an English limited company of London, acting as agents for the plaintiffs, entered into a charter-party with Matthews, Wrightson and Co., Limited, an English limited company, of London, acting as agents on behalf of the owners of the *Adriatic*, whereby the *Adriatic* or substitute was chartered to the plaintiffs for a voyage from Alexandria to the United Kingdom, Rotterdam, or Hamburg. The charter-party, which was signed in London, was in English, in a printed form.

On the 30th Dec. 1929 or thereabouts the plaintiffs loaded on board the steamship *Adriatic* the cargo referred to in the freight engagement notes together with certain other cargo belonging to other shippers, and on the 31st Dec. 1929 the plaintiffs signed the bill of lading for the defendants' cargo "for B/L as agents only." The bill of lading was in the form of the General Produce Black Sea Azoff and Danube Steamer Bill of Lading 1890, approved by the London Corn Trade Association. During the voyage the *Adriatic*, having been damaged in collision, put into Cadiz, when she was found to be a total loss. The defendants accordingly took delivery of the cargo at Cadiz. The plaintiffs claimed distance freight.

The case was set down for trial of the preliminary question whether the contract was governed by Swedish or Egyptian law, as the plaintiffs contended, or by English law, as the defendants contended. It was admitted that if Swedish or Egyptian law applied distance freight was payable, but that it was not payable if the contract was governed by English law.

Raeburn, K.C. and Sir *Robert Aske* for the plaintiffs.

A. T. Bucknill, K.C. and *David Davis* for the defendants.

LANGTON, J.—This case belongs to a difficult class—in fact, I think it was only the peculiarly refined intelligence of Lord Halsbury that ever enabled him to describe a case of this class as "simple." I have found it a particularly difficult example of what I believe to be a difficult class, and I wish to say that I arrive at my judgment with the greatest possible diffidence. If reflection would enable me to express it with greater confidence, I should certainly have deferred giving my judgment in order to consider the matter. But I am afraid that I should have reached the position, which Mr. Raeburn tells me he has already reached, of being able to discover only this, that there is abundance of authority for practically any proposition that has been put forward. It will suffice, perhaps, to say that four counsel have addressed me in this case. Each of them has, in turn, captivated me by the convincing note of his address, but neither of those who have been in the position of followers have, in any way, repeated what was said by their colleagues in advance. That, I think, will show how possible it is to deduce an excellent argument and an excellent authority for every kind of proposition that is necessary in this case. The choice lies—as between the plaintiffs and the defendants—between finding that the law applicable to the case is the law of the flag—or, alternatively, the law of the place in which the contract was made (which is the plaintiffs' contention); or, finding that it is the law of England (which is the defendants' contention). It is perhaps noteworthy in passing that those three alternatives have, in reality, a fourth lurking behind, in that the main arguments for saying that the proper law to apply is the law of England, all reinforced by those arguments which go to say that the *lex loci solutionis*—which is the law of the place where the contract is to be finally carried out—is also open to the defendants. So that perhaps it may be said that there are four alternatives—two open to the plaintiffs, and two open to the defendants.

Now the facts of the case are succinctly set out in the statement of facts, and I need, therefore, not recite them any further. The only matter in the agreed statement of facts which has turned out not to be completely agreed is an assertion in that statement that the plaintiffs' firm was, at all material times, registered in Egypt under Egyptian law. It is a very small matter, and whether it be the fact or not, my judgment would have been quite unaffected by it. There is no doubt that the firm of Mitchell and Polnauer do carry on business in Egypt, and the mere fact of their registration one way or the other would not greatly strengthen or weaken the position. Otherwise, the agreed statement of facts, I think, may be taken to express the general position.

The claim is a claim by the plaintiffs for distance freight—a class of claim which is unknown to English law, but a class of claim which is recognised by other Continental nations. Fortunately, I have not to determine what the effect may be of the judgment which I have to give. Now, amidst much that is obscure, one thing at least appears to be completely plain. Everybody is agreed that

the test, or criterion, of what law is to apply is to be found in the intention of the parties. That statement, I think, runs through all the authorities and therefore I need not cite any particular authority in its favour. But just how one is to arrive at the intention of the parties no authority is precise to define. Sir Robert Aske, on behalf of the plaintiffs, commenced his argument by pointing to certain presumptions, and he began with the excellent authority of Professor Dicey—the fourth edition of Dicey's Conflict of Laws, p. 644, rule 166B, which is as follows : " Subject to the exception hereinafter mentioned, the effect and incidents of a contract of affreightment (*i.e.*, a contract with a shipowner to hire his ship or part of it, for the carriage of goods) are governed by the law of the flag.

" Provided that the contract will not be governed by the law of the flag if, from the terms or objects of the contract, or from the circumstances under which it was made, the inference can be drawn that the parties did not intend the law of the flag to apply."

Now that is a statement as to a presumption that the law of the flag will apply unless the evidence shows that the parties intended something else. Mr. Raeburn further elucidated the position as regards presumptions by reminding me that in ordinary cases of contracts the usual presumption of law was that the *lex loci contractus* was the law which applied. He said that that presumption in a contract of affreightment was no departure from the ordinary rule, but was in effect only the application of it to a contract of affreightment in that a ship must be taken to be a part of the country whose flag she flies. Therefore, if you are dealing with a contract of affreightment you would naturally take the law of the flag as being, to all intents and purposes, the actual *lex loci contractus*. That, I think, states the presumption of law as accurately as it can be stated, and what I have to determine here is in all the circumstances (and I am bound to look at all the surrounding circumstances) is there evidence here to show that the intention of the parties was to displace that *primâ facie* presumption.

Now, turning to the facts of this case, Mr. Bucknill reminded me that there are three principal documents which are recited in the statement of claim. The first of those documents is a charter-party between the owners of the *Adriatic*, who were a Swedish company—the Atlantic Transport of Sweden—and the plaintiffs, in this case Mitchell and Polnauer. Mr. Raeburn said, as regards that charter-party, that it really was a comparatively irrelevant document in this case. The shipowners were not parties to this action, and the charter-party was in no way incorporated in the bills of lading, and, therefore, the defendants in the action had no knowledge of the charter-party. Now, that at first sight, seems to be quite an accurate statement of the case. I should not for a moment suggest that anything which Mr. Raeburn said was not an accurate statement, but I am not quite sure that it is a comprehensive statement. The plaintiffs, it is true, are Messrs. Mitchell and Polnauer, but, seeing that the claim is for distance freight—and therefore a claim which is in reality a claim on behalf of the shipowners—I am not sure that it is correct to say that the charter-party is an irrelevant document. I am not sure that it is even comparatively irrelevant. I think it is, in this case, part of the surrounding circumstances of the case. The essence of the matter as appears from the statement of facts was this. The defendants, Behrend and Co. Limited, were anxious to get transport for certain parcels of cotton seed. The step that they took to this end was to engage space by certain freight engagement notes with the plaintiffs, Mitchell and Polnauer. The freight engagement notes did not specify in any way the identity, or nationality of the ship. The plaintiffs merely engaged the ship to carry cotton seed from Alexandria to London and stated the form of bill of lading which would be used for that shipment. Indeed, so much did the plaintiffs deal with the matter " on their own " that although one of these freight engagement notes was entered into subsequent to the charter-party, they did not even then tell the defendants. I am not suggesting that they were wrong in doing so, but they did not, as a matter of fact, tell the defendants that the ship on which they were proposing to ship this parcel was of any particular nationality or, indeed, in any way did they reveal the identity of the ship. In the meantime they had, by this charter-party, chartered the *Adriatic* to load a full cargo from Alexandria to London. I thought at first that from the language of the charter-party it might not be quite clear that they had chartered the whole of the ship, but Mr. Raeburn put all my doubts on that subject to rest. They had undoubtedly chartered this ship to load a full and complete cargo of some kind of seed or produce, for shipment from Alexandria to London, therefore I think it is material to look at the charter-party. I do not say for one moment that the charter-party forms any part of the contract between the parties who are actually here at grips, but I bear in mind the fact that Mitchell and Polnauers, having no claim for this distance freight upon their own account, are claiming here only as trustees for the shipowners, and I do think in these circumstances that it is relevant at least to look at the bargain between themselves and the shippowners as one of the surrounding circumstances. Now when one looks at that document—I agree that it is the least important of the three—nothing more English than that document could very well be devised.

It is on a printed form at the instance of the well-known charterers, Fred C. Lohden and Co. Limited, 2 and 4 St. Mary Axe, London. It was entered into between those brokers and Matthews, Wrightson and Co. Limited, another equally well-known firm of London brokers.

It was entered into in English, with every circumstance accompanying the ordinary English charter-party, including the agreement that any dispute under the charter should be settled by arbitration in London, each party appointing an arbitrator, and that the decision of the umpire selected by them should be final. It, indeed, has no feature about it whatever which could, as that document stands, suggest that any law other than English law was ever for one moment contemplated as the law governing that charter-party. So much for the charter-party, and one passes then to the freight note. The freight note is headed "Alexandria, Egypt," and the plaintiffs—Mitchell and Polnauer—unquestionably are a firm carrying on business in Egypt. It transpired that Mr. Mitchell is by birth a Scotsman and Mr. Polnauer is by birth a Hungarian. There is no doubt whatever that this engagement was entered into in Egypt, and, indeed, the defendants' firm, Behrend and Co. Limited, have a branch in Egypt. So that Mr. Raeburn was on strong ground when he said that the *lex loci contractus*, in this case—if you take the freight engagement note as the governing document—is Egypt, but I am not certain, again, that the freight engagement note is in any sense, the dominating document. After all, as I think Mr. Davies pointed out, there is not a word in the freight engagement note about distance freight. There is no suggestion in the freight engagement note of any nationality of any particular ship, and in order to get the actual contract of carriage—which must be the document upon which the plaintiffs depend—we have to look at the bill of lading. Now the bill of lading, from many points of view, is what I may call a non-committal document. It might support a good many points of view standing alone. It is in the form of the General Produce Black Sea, Azoff, and Danube Steamer bill of lading 1890. It is couched entirely in the English language. It contains all the well-known English bill of lading exceptions, and it even has in the margin a reference to war risks, in which His Majesty's Government is named. Against that it is on the form of J. P. Mitchell and Polnauer, who state on the bill of lading that their head office is in Alexandria, and that their branches are respectively in Port Said, Port Sudan, and Khartoum. Finally, the bill of lading states that the delivery is to be in London, and that freight is to be paid on delivery. No one, I think, looking at that bill of lading, could say it was not a perfectly good English bill of lading in the ordinary English form, such as would be employed between two English parties, if they desired to contract for an ordinary carriage of goods by sea. The steamer named in the bill of lading is the *Adriatic*, and Mr. Bucknill took a point as to that that that might also be an English ship. However, I am not much impressed by that, because the name is no doubt an equally good Swedish name, and I cannot think that there is any particular nationality in a proper name.

Now those are the three documents, and it is upon the transaction which those three documents evidence that I have to determine what the law is which should apply to the question in issue. Mr. Bucknill cited a case as being the nearest case on the facts to the present case, which was decided by Greer, L.J., then a judge of first instance. The case is the *A/B Freuchen* v. *Hansen* (1919) 1 Ll. L. L. Rep. 393). I think Mr. Bucknill was right in saying that it is perhaps the nearest in the facts to the present case of any of those which have been cited at the Bar. But admitting that it certainly is very near, the facts quite shortly were that the steamer, which was a Norwegian steamer, had been delayed—to use a neutral term—in sailing from an English port during the war, and the judge was asked to determine, as a matter of law, what law in that case applied. The charter was not the matter in issue—it was the Baltic and White Sea Conference Coal Charter—and therefore there were none of the complications of the present case, of a bill of lading and a freight engagement note. I need scarcely say that I should not differ, except with the greatest possible diffidence, from any pronouncement of Greer, L.J. in any matter of law, still more so in a matter of this class in which he is an acknowledged master. But his judgment in this case seems to proceed largely upon what has been called, as a compendious form of expression, the argument of uniformity. He takes this charter—the Black Sea charter—and he says that he finds there all the old familiar friends of the English charter, and because the charter is in what we may call the old English form, he says that the parties must have intended to apply English law for the determination of their disputes. Now Greer, L.J. is not lacking in high authority for that argument. He is not the first person who has seen the force of those contentions and he only restates them with his usual lucidity and force. But even sanctified as it is by high authority, I must say that, for my own part, I have some doubts as to the value of this argument based upon uniformity. I cannot shut my eyes to my own personal experience in the formation of some of these agreed documents, and I think that if I were to take the Hague Rules, for example—in the formation of which I had some personal part—if two Italians were told that because they agreed that the Hague Rules should be framed in English and French they therefore agreed that either the English or the French law should apply to the determination of any disputes between them, they would not only be surprised, but they would express their disgust with their usual vehemence and vigour. Therefore, although I see the great advantages of interpreting documents in the English language by English law, I am not to be taken as following this case upon that ground alone. Another basis upon which the Lord Justice proceeds is that in the particular case which he was deciding the question which arose for decision was a question of the behaviour of the

parties at the port of loading. I see some inconveniences in allocating the law to the particular branch or portion of the voyage which happens to be in question. It seems difficult to imagine that there could be one law applicable if the point in dispute concerned a question arising at the port of loading, another law applicable if the matter concerned the conduct of the master during the voyage, and a third law applicable if it concerned a question at the port of delivery. It only needs, I think, an examination of just one case to show into what ramifications these arguments can extend and how difficult the matter becomes if one attempts to solve it along one line only. I think it is necessary and right in this class of case to take the broadest possible view and although, as I say, I am not personally impressed with the argument of uniformity, I am impressed with the argument of convenience. It is, perhaps, unwise to attempt to generalise at all upon the actions of any class of the community, particularly that hard-headed person, the business man, but I think one cannot be going very far wrong when one says that if you want to define the intentions of two business men you may take it that they intended to do what was most convenient.

Now I will try to review this case for a moment in the light of that consideration. One cannot, I think, shut one's eyes to the fact that the British position in Egypt has been, for many years, a predominant position. I think it would be idle and foolish to attempt to shut one's eyes to that known fact. We find, therefore, in this case a British firm, Behrend and Co. Limited, arranging for the shipment of a consignment of goods from Egypt. They do their business in English with, it is true, an Egyptian firm, but an Egyptian firm with no particularly Egyptian stamp about them. One could hardly say that the names of Mitchell and Polnauer would convey to any Englishman that he was doing business with people who were distinctly Egyptian, and, in fact, as we know they were in reality, a Scot and a Hungarian. At the moment when they did this business it is not suggested or it is not a condition of the contract, that the goods should be shipped by any ship of any particular nationality. The matter is left completely open, and the British firm merely stipulate for the bill of lading in a certain form that is well known to that British firm—a bill of lading in which they will know the full extent of their liability and will have knowledge which will enable them to cover their operations by appropriate insurance. If one views the matter in that broad and general light it seems to me that the most convenient thing for all parties would be that the law of England should apply. The shipment is made to England; the bill of lading will, to the knowledge of both parties, provide that the delivery shall be in England and the payment of freight shall be in England; and if there is any dispute at the end of the journey everybody knows that the courts of England will be open and ready to deal with that dispute, and will be equipped to deal with that dispute, in that all the documents concerned in the case are documents in the English language. I am not sure that it is a relevant consideration, but I think it is worth mentioning, that the plaintiffs did seek the British court and not any other court. If their case had first been launched in Alexandria, I think there would be a good deal more to be said for the point that somebody thought that Egyptian law applied. But no, they come and bring their case in an English court. Again, I hope I am not doing the plaintiffs an injustice when I say that even now they cannot tell me with any certainty which law they say the parties intended to apply. They have put themselves upon the alternative of the law of the flag, the law of the Swedish ships, or the law of the place of the contract—Egypt.

Now it seems to me again a weakness in their case that they should come and say to me "we cannot tell what law is intended to apply, but we can say that it was one or other of two laws." The defendants speak with no uncertain voice. They say: "There is no question of alternative laws, the law which we say the parties intended to apply was our law—the defendant's law. Wé were shipping on an English form of bill of lading; we were dealing with parties who knew we were English; we were shipping to England where we should have to pay the freight: and we say that the law you have to infer from that is the English law."

As I say, I deal with this matter with considerable diffidence because I am not at all insensible to the powerful arguments which have been addressed to me as to the difficulty of rebutting the presumptions which Sir Robert Aske and Mr. Raeburn so clearly stated. But I think there is no doubt that those presumptions can be rebutted, and, in many cases they have been rebutted, by the evidence. An amusing instance of the difficulty of getting precise authorities in this class of case was afforded to me by the citation, on the one hand by Mr. Bucknill, of a case called *The Wilhelm Schmidt* (1 Asp. Mar. Law Cas. 82; 1871, 25 L. T. Rep. 34)—a decision of Sir Robert Phillimore—which was immediately countered by the citation by Mr. Raeburn of a case called *The Express* (1 Asp. Mar. Law Cas. 355; 1872, 26 L. T. Rep. 956) a year afterwards which on almost identical facts, presented an almost reverse result. Therefore, it seems to me that the only possible way on which one can proceed is to try to take a fair and broad view of all the circumstances of the contract.

At the back of my mind I have always kept the fact of this charter-party because that, after all, is the document upon which the real beneficiary—the plaintiff shipowner—depends. But I think I should have come to the same conclusion if the charter-party had not entered into the matter at all.

I think, as I say, that one has to concentrate one's mind upon what could fairly be said to

be the convenient thing to the plaintiff and the defendant at the moment when they made this contract, and for the reasons I have given I am impressed with the fact that the convenient thing would, I think, be to consider that the dispute should be regulated by the English law. Lord Halsbury in the case of *Re Missouri Steamship Company Limited Monroe's Claim* (6 Asp. Mar. Law Cas. 423; 1889, 61 L. T. Rep. 316; 42 Ch. Div. 321) in the course of the argument (42 Ch. Div. at p. 333) makes this observation: "All the cases go on the footing that what law is to govern depends on a variety of circumstances. Among these we must consider the place which the parties must be supposed to have regarded as the place where a remedy for a breach of contract would be sought." The first part of that dictum is the foundation really for the judgment in all these cases. The second part is, perhaps, some small authority for saying that it is not altogether irrelevant to look at the place where the parties did seek a remedy in the particular instance. The only other passage in the authorities which I think it is useful to cite in support of the view I have taken, is the judgment of Lord Esher in *The Industrie* (7 Asp. Mar. Law Cas. 457, at pp. 460, 461; 70 L. T. Rep. 791, at p. 794; (1894) P. 58, at p. 73): "What is the true inference? In order to see that, you must make up your mind what must have been the intention of the parties. You cannot look into the minds of these people; but when you have two men of business dealing in that way, under such circumstances, with a contract made in London, between English brokers and an English firm, who are not supposed to know German law, but who are supposed to know English mercantile law; with a contract made upon an English form, and on a printed form in common use; with a contract made with nothing but English phrases in it, and with a contract made with phrases peculiar to English contracts, what inference can be drawn but that these two people must have meant that this contract was to be construed according to English law? All the circumstances together show that the intention was to make an English contract, and that is all we want." That is a complete authority, if any authority were needed, for the proposition that you have to look at all the circumstances and that if they do show, to the mind of the court, that the English law was intended, the presumptions of the law of the flag or the *lex loci contractus*, are displaced. Whilst accepting, therefore, to the full the statement of the presumption which has been made on behalf of the plaintiffs, I think that the evidence here is sufficient to show that the parties intended that the English law should apply.

Solicitors for the plaintiffs, *Ince, Roscoe, Wilson*, and *Glover*.

Monday, Oct. 12, 1931.

(Before Lord Merrivale, P. and Langton, J.)

The Aldington Court. (*a*)

Discharge of grain cargo—Wheat in bags—Bag "starting" to bulk before discharge—Discharge by bucket grain elevator—Rate applicable—Schedule of rates of Stevedores' Association of Bristol, Avonmouth, and Portishead, 1927.

The schedule of rates of charges for discharge of grain cargoes at Avonmouth provides a higher rate payable in respect of bag cargoes than that payable in respect of bulk cargoes. The appellants' steamship carried a cargo of wheat in bags to Avonmouth, where the receivers, in order to discharge part of it by means of their bucket grain elevator, "started" the bags, i.e., *slit open the tops, so that the wheat could be discharged as bulk. By the terms of the charter-party and the custom of the port the receivers were entitled to discharge the vessel as stevedores at the shipowners' expense (in so far as the shipowners were liable for such charges), and they accordingly deducted from the freight the shipowners' proportion of such costs, calculated at the rate payable for bag cargoes. The shipowners claimed that the rates payable in respect of bulk cargoes applied.*

Held, affirming the decision of the county court judge by whom the case was tried, that the cargo was a bag cargo and not a bulk cargo, and that the rates applicable to bag cargoes applied.

Appeal from a decision of His Honour Judge Parsons, K.C. at the Bristol County Court.

The plaintiffs (appellants) were the United British Steamship Company Limited, owners of the steamship *Aldington Court*, and the defendants (respondents) were the Co-operative Wholesale Society Limited, who were the receivers of a part cargo of wheat carried to Avonmouth by the *Aldington Court*.

By the terms of the charter-party it was provided (*inter alia*) that the *Aldington Court* should proceed to one or two ports in South Australia and there load a cargo of wheat in bags, and should proceed to (*inter alia*) a port in Great Britain and there deliver in accordance with the custom of the port for steamships.

The *Aldington Court* was ordered to Avonmouth, where by the custom of the port the defendants, as receivers, became entitled to discharge their part of her cargo as stevedores using their own apparatus, and to charge the shipowners with the expenses of so doing, in so far as they were liable for such expenses. The defendants in fact discharged their cargo by means of their bucket grain elevator into their flour mill at the Royal Edward Dock. Before discharging, and in order to enable them to make use of their bucket elevator, the defendants "started" the bags to bulk, *i.e.*, they slit open the tops of the bags, so that the contents could be discharged as bulk.

A schedule of rates, dated the 1st Aug. 1927, is in operation at Avonmouth by which the

(*a*) Reported by Geoffrey Hutchinson, Esq., Barrister-at-Law.

following rates are provided for discharging grain cargoes :

" *Grain and Seed—Bulk Cargoes.*

Wheat .... 7½*d.* per ton

Bag Starting.

Where shipowner provides all labour ....80*s.* per 1000 bags

Where merchant provides portion ....60*s.* per 1000 bags

....

Bag Cargoes Weighed on Deck.

Wheat .... 1*s* 11*d.* per ton

....

In the event of any of the above bag cargoes being discharged unweighed, the rates will be :

....

Bags weighing more than 145lb. . .1*s.* 9*d.* per ton."

An earlier schedule of rates, dated the 2nd July 1923, under which the defendants had at first calculated the cost of discharge, contained the following note at the foot of the schedule of rates for bulk cargoes : " *Starting to Bulk.*—When the shipowner provides all the labour, 80*s.* per 1000 plus 20 per cent. When the merchant provides portion, 60*s.* per 1000 plus 20 per cent."

The defendants claimed to calculate the costs of discharge at the schedule rates appropriate to bag cargoes, namely, 1*s.* 9*d.* per ton. The plaintiffs claimed that the defendants were only entitled to the costs calculated at the rates for bulk cargoes, namely, 7½*d.* per ton. There was evidence that a small proportion of cargo in bags had necessarily to be stowed with all bulk grain cargoes to ensure stability.

The county court judge held that the cargo was a bag cargo and gave judgment for the defendants. The plaintiffs appealed.

Holman for the appellants.

Trapnell, K.C. for the respondents.

Lord Merrivale, P.—This is an interesting point and has been well argued by counsel on each side. It is a question of the proper application to a cargo of wheat from Australia, shipped in bags, of the schedule of rates at Avonmouth. The wheat in question was 31,000 bags, part of a cargo described in the bill of lading as " 109,465 bags of wheat." The 31,000 bags came to be delivered at Avonmouth to the Co-operative Wholesale Society, under conditions prevailing at Avonmouth whereby the Wholesale Society were entitled to discharge the bags and to debit the plaintiffs—the shipowners —with charges for it as charges incurred by stevedores at the plaintiffs' expense.

When the wheat had been discharged, upon reference to the schedule of rates prevailing at Avonmouth in 1931 (schedules which had been introduced in 1923 and amended in 1927), the parties fell out as to what was to be the allowance against freight which was to be made to the defendants, who had become owners of the cargo. The amount in dispute is not great. On the one side it was said the allowance was to be just under 250*l.* ; on the other side it was said it was to be just over 200*l.* The Wholesale Society seem not to have been aware of the change of rates which had taken place in 1927, and they pleaded, originally, upon the old scale of rates, but when the matter came before the learned judge of the county court it was agreed that he had to apply the current schedule of rates operating since the 1st Aug. 1927. On the part of the appellants, the shipowners, it is said that this cargo was discharged as a bulk cargo ; as between the parties it was a bulk cargo. The bags were split in the hold, and the stevedores brought their bucket apparatus into use and raised the wheat out of the hold by means of their bucket elevator. The appellants contend, therefore, that the appropriate rate is the bulk bucket cargo rate. The receivers, on the other hand, say : " No, this was a bag cargo—everybody who knew anything about it spoke of it as a bag cargo." That perhaps does not go for very much, but for my own part I have some difficulty in deciding now for myself as to when it could be said to have became a bulk cargo. Looking at the matter broadly and applying the schedule of rates as best I can, I think that this cargo comes within the denomination of a bag cargo, and must be dealt with on that footing in the schedule of rates. It is true the schedule of rates had got a little confused. The 1923 schedule, which was in evidence, dealt broadly with bulk cargoes, bag cargoes. general cargo and wood goods, on good broad distinctions. In the amended schedules of rates the draftsman still dealt with bulk cargoes and placed them first, but put a sub-head under bulk cargoes " allowance in respect of bag starting," *i.e.*, an allowance in respect of the splitting of the bags to convert the bag wheat into bulk wheat. Then the schedule goes on to deal with bag cargoes, but it deals with them as " bag cargoes weighed on deck," followed by a proviso as to what the rate should be if they were discharged unweighed. Mr. Holman very properly stressed some conceivable ambiguity which is introduced into the bargain of the parties by reason of the mode in which the draftsman who amended the schedule had dealt with it. But trying to understand what the schedule really means, I have come to the conclusion that this was to be regarded as a bag cargo, and that the rate as to bag cargoes applies. The learned judge was accordingly right in the conclusion at which he arrived and the judgment must be affirmed.

Langton, J.—In this case the argument for the appellants has been based upon two grounds Mr. Holman invited us to look at the matter, first, upon the construction of the schedule and secondly upon the ground of common sense. I will deal with the second contention first. Unfortunately that somewhat abused expression " common sense " is very apt to result in diversity rather than in clarity of opinion. Many a man would shrink from construing a document and say modestly that he felt the matter was beyond him, but I have never yet met a man who was so modest as to say that he had not sufficient common sense to decide any question under the sun. In this case if one were to apply the test of common sense I imagine that one would endeavour to discover what this schedule was intended to mean, upon the assumption that the schedule was made by far-sighted and fair-minded people, and I think that we would be unwise to make assumptions of that sort. What Mr. Holman has asked us to say is that we have here really a bulk cargo. I have sympathy with that line of argument because a discharge of cargo in bulk costs the receivers less than the discharge of cargo in bags. But to say so at the outset seems to me perilously near assuming the point to be decided.

If, on the other hand, one turns to the construction of the schedule—by which I mean to what the schedule actually says—I think, whether we look, as my Lord has said, at the earlier schedule of 1923, or at the earlier schedule of 1927, that the position in which the phrase " bag starting to bulk " is found is highly significant. In the first instance,

in the schedule of 1923, "Starting to bulk" appears as a mere footnote to bulk cargoes. It would be strange, indeed, as a matter of interpretation of words, if it were construed as applying to everything that follows, namely, to the division of bag cargoes, general cargo, and wood goods. It seems to me clear that in that schedule it can only be intended to apply to bulk cargoes. When one turns to the 1927 schedule the division is not quite so clear. "Bag starting" does not appear as a mere footnote to bulk cargoes, but it still appears in exactly the same position, just under "bulk cargoes," before "bag cargoes," and before "timber." Therefore, I think that the meaning of this schedule is that "bag starting" applies to bulk cargoes. To that Mr. Holman answers, "Yes, but do not forget that I say that this was a bulk cargo." Here, again, is the seductive argument that seems so close to a *petitio principii*. There can be no doubt that this cargo commenced the voyage, made the voyage, and arrived as a bag cargo, and it only became a bulk cargo by reason of "bag starting." I cannot see that in this schedule there is any provision in words for a bag cargo which becomes a bulk cargo by "bag starting." I think that the proper interpretation of this schedule as it stands to-day—whether it was so intended or not—is the interpretation which the county court judge placed upon it.

For these reasons I agree with the judgment that my Lord has delivered.

Appeal dismissed.

(Before Lords BUCKMASTER, WARRINGTON, ATKIN, RUSSELL and MACMILLAN.)

Foscolo Mango and Co. and another v. Stag Line Limited. (*a*)

ON APPEAL FROM THE COURT OF APPEAL IN ENGLAND.

Charter-party—Bill of lading—Liberty to call at any ports in any order for "bunkering or other purposes"—"Trial trip"—Whether deviation—"Any reasonable deviation"—Rule that deviation excludes right to rely upon exceptions—Whether still exists, after Act of 1924—Loss of c.i.f. cargo at sea, before property has passed—Measure of damages—Carriage of Goods by Sea Act 1924 (14 *&* 15 *Geo.* 5, *c.* 22) *Schedule, Rules Relating to Bills of Lading, Art. IV., rr.* 2 *and* 4.

The respondents were the owners of a cargo of coal shipped on the appellants' steamship Ixia *for delivery from Swansea to Constantinople. By the bill of lading the coal was to be carried from Swansea to Constantinople "with liberty . . . to call at any ports in any order for bunkering or other purposes or to make trial trips after notice . . ." By the bill of lading all the provisions of the Carriage of Goods by Sea Act* 1924 *were to apply to the contract. By Art IV., r.* 2, *in the schedule to that Act : "Neither the carrier nor the ship shall be responsible for loss or damage arising or resulting from* (inter alia) *perils of the sea." And by rule* 4 *of the same article : "Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom." The ship was fitted with Wyndham's superheater, and Wyndham's engineer and the superintendent engineer of the shipowners, joined the ship at Swansea to test the superheater, when on the voyage. In the ordinary course the test would have been completed by the time the ship reached Lundy, and the two engineers could then have left the ship with the pilot. In fact, some of the firemen were drunk when the ship left Swansea and so no proper head of steam could be obtained such as was required for the test. The captain therefore arranged to carry on the engineers to conclude the test, and to put them ashore at St. Ives. The ship made a course rather more east than it would have made but for this arrangement, and when off St. Ives, a course more to the east into St. Ives Bay, where the ship lay for one-and-a-half hours about a mile from the shore, before the two engineers were taken off by boat. The ship then, instead of regaining the normal course, coasted, and a little way from St. Ives, the captain left the second officer in charge of the vessel with instructions to keep her a mile and a half off the shore. Shortly afterwards the steamship* Ixia *ran into the Vyneck Rock, and eventually became a total loss. No notice had been given to the cargo-owners of the test, and the property in the cargo had not passed to the purchasers at the time of the loss.*

Held, (1) *that the operation involved in landing two men at a port that was not on any part of the specified route did not come within the liberty "to call at any port or ports in any order for bunkering or other purposes"* ; (2) *that upon the facts the deviation was not a reasonable deviation, and the shipowners, therefore, got no protection from Art. IV., r.* 4.

Decision of the Court of Appeal (ante, *p.* 210 ; 145 *L. T. Rep.* 146 ; (1931) 2 *K. B.* 48) *affirmed.*

APPEAL from the decision of the Court of Appeal (Scrutton, Greer and Slesser, L.JJ.), reported *ante*, p. 210 ; 145 L. T. Rep. 146 ; (1931) 2 K. B. 48.

The facts, which are sufficiently summarized in the headnote, are stated in the opinion of Lord Buckmaster.

The Court of Appeal held, affirming the decision of MacKinnon, J., (1) that the course taken by the ship was not within the liberty "to call at any port or ports in any order for bunkering or other purposes"; (2) that this was a "trial trip" without notice, was not part of the contract voyage, and was therefore a deviation, both in delay, and in route and risk ; (3) that the course taken by the

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law.

ship was not a "reasonable deviation" within the meaning of Art. IV., r. 4; (4) that the rule of law that a deviating ship lost the benefit of the exceptions in the contract of carriage had not been abrogated by the Carriage of Goods by Sea Act 1924; and (5) that the measure of damages was not 6000*l.*, the contract price, but 8000*l.*, the market price of the cargo at the date when it should have arrived at Constantinople: (see *Finlay and Co.* v. *Kwik Hoo Tong Handel Maatschappij*, 140 L. T. Rep. 389; (1929) 1 K. B. 400). Accordingly, as there had been deviation from the agreed contract voyage which was not a "reasonable deviation" under Art. IV., r. 4, the shipowners were not protected by the exception of "perils of the sea," and the appeal was dismissed. The shipowners appealed.

Dunlop, K.C. and Sir *Robert Aske* for the appellants.

A. T. Miller, K.C., *Le Quesne*, K.C., and *R. F. Hayward* for the respondents.

The House took time for consideration.

Lord Buckmaster.—The appellants are the owners of the steamship *Ixia*, of 4,300 tons dead weight exclusive of bunkers, which they chartered to the respondents, Foscolo Mango and Co., Limited, under a charter-party dated the 14th June 1929, made between the appellants and the second respondents, who acted as agents for the charterers. The vessel was chartered to carry a cargo of coal, sold by the second respondents to the first, not exceeding 4350 tons nor less than 4100 tons, and to proceed from Swansea, where the coal was to be loaded, with all possible despatch to Constantinople. The terms of the charter-party were incorporated in the bill of lading. The charter-party contained a clause (clause 6) giving the vessel liberty "to call at any ports in any order for bunkering or other purposes, or to make trial trips after notice." The usual and customary route for the voyage was from Swansea, south of Lundy, thence in a straight line to a point about five miles off Pendeen, on the north coast of Cornwall, and then with a slight alteration to the east to Finistère, and so on.

The ship had been fitted with a heating apparatus designed to make use of the heat which might otherwise be wasted as steam, and so to diminish the bill for fuel. This apparatus had not been working satisfactorily, and the owners therefore arranged to send representatives of the engineers to make a test when the vessel started on her next voyage. Two engineers accordingly joined the boat, the intention being that they should leave the ship with the pilot somewhere off Lundy.

The firemen on board the ship were not in possession of their full energies when the boat started at 1.45 in the morning on the 31st June 1929, owing to excessive drinking before they joined the ship. The result was that a proper head of steam necessary for making the test was not got up in time to enable the test to be made before the pilot was discharged. Accordingly the engineers proceeded on the voyage until the ship was off St. Ives, when the ship was turned about five miles out of its course to enter the St. Ives Harbour in order that the engineers might be landed. After landing them the ship did not go straight back to the recognised route that she ought to have pursued, but hugged too closely the dangerous coast of Cornwall, and ran on a rock called the Vyneck rock, with the result that the vessel and cargo were totally lost, though fortunately there was no loss of life. The accident took place at about 3.20 p.m., there was a moderate wind from E.N.E., the weather was cloudy, but visibility was moderately good up to six miles.

The respondents sought to recover damages for loss of their cargo upon the ground that there had been an unlawful deviation from the contracted course. The appellants made three answers to this claim; first, they set up the clause of the charter-party to which reference has been made, and, secondly, they said by the Carriage of Goods by Sea Act 1924 the rules in the Schedule must be regarded as incorporated in the contract and, by those rules, they were entitled to make the deviation which led to the disaster.

As is well known, the statute provides that the rules are to have effect in connection with the carriage of goods by sea in ships carrying goods from any port in Great Britain or Northern Ireland to any other port, whether in or outside Great Britain or Northern Ireland. The rules that are relevant are to be found in Art. IV. of the Schedule, clause 2, which provides:

> "Neither the carrier nor the ship shall be responsible for loss or damage arising or resulting from—
>
> "(*a*) Act, neglect, or default of the master, mariner, pilot, or the servants of the carrier in the navigation or in the management of the ship: . . .
>
> "(*c*) Perils, dangers and accidents of the sea or other navigable waters."

Clause 4 of the same article is in these terms:—

> "Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation, shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom."

The appellants' argument upon the statute is that, firstly, the accident was a peril of the sea, and, secondly, that the deviation in question was a reasonable deviation and consequently was not an infringement of the contract of carriage.

It is well to consider these arguments in the order in which I have stated them. With regard to the clause of the charter-party, the contention is that to land the two engineers at St. Ives was an "other purpose" within the meaning of clause 6 and consequently permitted by the charter-party itself. This argument depends upon the view that it is impossible to get a specified category in which the words "other purposes" may be confined when the illustrative word at the beginning of the sentence consists only of one description. I find it difficult, and I think it is undesirable, to attempt to specify in exact language what are the limitations imposed by the use of such a word prefacing others of general import. To my mind, it is impossible to frame a rule applicable to all the various documents in which such phrases are to be found. General words in a will following a specific instance may require different interpretation from that demanded by similar words in an Act of Parliament or a charter-party. To attempt in these circumstances to say that two or more words are essential before you can define a class does not assist in the present case. The word "bunkering" must have some demonstrative and limiting effect, and the phrase "or other purposes" following it cannot be so construed as to disregard the effect of the first example, and to assume that any purpose is thereby permitted. If that were so, the word "bunkering" might be left out. Nor am I prepared to define what are the limitations within which the phrase "other purposes" must be confined, but I can find

nothing kindred to bunkering or associated with the operation that is involved in landing two men at a port that is not on any part of the specified route.

The passage from the judgment of Lord Herschell in *Glynn* v. *Margetson* (7 Asp. Mar. Law Cas. 366; 69 L. T. Rep. 1, at p. 2; (1893) A. C. 351, at p. 355), is in exact accordance with the view which I have expressed. I agree with Scrutton, L.J.'s judgment upon this point, and I do not think that it demands further discussion.

To turn from the words of the contract itself to the implied clauses introduced by the statute, the first point can, I think, be disregarded. It involves the view that perils and accidents of the sea are not qualified by the provisions as to deviations and that such perils exempt the shipowner from responsibility for damage if they arise from or in the course of deviation, whether such deviation be reasonable or not. In my opinion, clause 4 must be given its full effect without rendering it to a large extent unnecessary by such an interpretation, for it would follow from the arguments that a peril encountered by deviation, wholly unreasonable and wholly unauthorised, would be one for which the shipowner would be exempted from loss. In other words, reasonable deviation would then apply only to questions of demurrage, whatever the deviation might be.

The real difficulty in this case, and it is one by which I have been much oppressed, is whether in the circumstances the deviation was reasonable. It hardly needed the great authority of Lord Herschell in *Hick* v. *Raymond and Reid* (7 Asp. Mar. Law Cas. 233; 68 L. T. Rep. 175; (1893) A. C. 22) to decide that in construing such a word it must be construed in relation to all the circumstances, for it is obvious that what may be reasonable under certain conditions may be wholly unreasonable when the conditions are changed. Every condition and every circumstance must be regarded, and it must be reasonable, too, in relation to both parties to the contract and not merely to one. But if, when full consideration has been given to this fact, two courts have decided that a set of circumstances is reasonable unless it can be shown that the learned judges have misdirected themselves in reaching their conclusion, or have overlooked any important consideration or introduced considerations that did not deserve notice, it would not, I think, be in accordance either with good sense or the comity of the courts to decide that what they thought was reasonable other people did not. In this case three judges have decided that the deviation here could not be so regarded—and Greer, L.J. has agreed for a slightly different reason, because he thought the original deviation was permissible to St. Ives but not afterwards—but I think that all of them have really considered the facts that were necessary for the purpose, and I am not prepared to differ from the conclusions that they have reached. I do not think elaborate definitions, whether contained in dictionaries or in judgments, are of much use in determining the value of a word in common use which means no more in this context than a deviation which, where every circumstance has been duly weighed, commends itself to the common sense and sound understanding of sensible men.

I notice that Scrutton, L.J. also supports his judgment upon the view that the rules in the schedule did no more than incorporate in a codified form the permissible limits of deviation which had previously been stated in *The Teutonia* (1872, 1 Asp. Mar. Law Cas. 214; 26 L. T. Rep. 48, at p. 52; L. Rep. 4 P. C. 171, at p. 179). Upon the view that I take it is unnecessary to consider the soundness of this conclusion, and I express no opinion upon it. Nor again is it necessary to determine whether Greer, L.J. was right in assuming that the deviation became unreasonable after St. Ives, but I think there is much to be said in support of his reasoning. The deviation had not ended at the port. It continued until the contracted line of route was resumed, and to deviate by going along the coast, though it may be regarded as bad seamanship, might none the less be an unreasonable deviation.

For these reasons I think the appeal should be dismissed.

Lord Warrington (read by Lord Tomlin).—The respondents were the owners of a cargo of coal shipped on board the appellants' steamer Ixia for carriage from Swansea to Constantinople. The cargo was lost off the coast of Cornwall as the result of the stranding of the vessel—namely, a peril of the sea—incurred owing to negligence on the part of the persons in charge. The action was brought by the owners of the cargo for damages occasioned by the loss. The shipowners pleaded that under the contract of carriage perils of the sea and loss through negligence of their servants were excluded, and therefore they were not liable. The cargo-owners replied that the shipowners had without justification departed from the contract route and were therefore disentitled to rely on the exceptions in question. MacKinnon, J.—before whom the action was tried—gave judgment for the respondents, and his judgment has been affirmed by the Court of Appeal (Scrutton, Greer, and Slesser, L.JJ.). Hence the present appeal.

The contract of carriage was contained in a bill of lading dated the 29th June 1929, which incorporated the terms of a charter-party dated the 14th June 1929, and which also contained a stipulation that all the terms, provisions, and conditions of the Carriage of Goods by Sea Act 1924, and the schedule thereto, were to apply to the contract contained in the bill of lading, and the owners and the charterers were to be entitled to the benefit of all privileges, rights, and immunities contained in the said Act and the schedule thereto as if the same were therein (namely, in the bill of lading) specifically set out.

There is no dispute that the contract route was from Swansea to Constantinople, and that the accident happened at a time when the ship was not on that route, and the question is whether the deviation was justified by the contract. The deviation resulted from the decision of the master to call at St. Ives for the purpose of dropping there two engineers who had been taken on board at Swansea for the purpose of testing and adjusting certain steam and fuel saving apparatus, a process which could be effected only under sea-going conditions and with a full head of steam. The shipowners attempted to justify the deviation in two ways: First, they said that the contract allowed the ship to call at any ports in any order for bunkering or other purposes, and that under this they were entitled to call at St. Ives for the purpose above mentioned; and, secondly, they relied on Art. IV., r. 4, of the schedule to the Act of 1924, which is in the following terms: "Any deviation in saving or attempting to save life or property at sea, or any reasonable deviation, shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom."

MacKinnon, J. and the members of the Court of Appeal have decided against the appellants on both points.

As to the first point, as a matter of construction the words "or other purposes" cannot, in my opinion, receive the same wide construction as they might have received had bunkering not been specifically mentioned. They must at all events be limited by reference to the nature and purpose of the contract voyage, and I agree with the learned judges in the courts below that the purpose of landing the two engineers was not a purpose which could be brought within the liberty relied upon. I may add, however, that I do not base my conclusion upon the particular circumstances—namely, the drunkenness of the stokers and the consequent delay in raising a full head of steam—which induced the master to decide to land the two engineers at St. Ives rather than at Lundy as originally proposed; I think the calling at St. Ives would not have been justified, whatever had been the cause of the delay in concluding the work of the engineers.

But there remains the further question whether the deviation to St. Ives and thence to the contract route was a reasonable deviation and therefore justified by the provisions above mentioned contained in the schedule to the Act of 1924.

I confess I do not feel the difficulty experienced in the courts below, and particularly by MacKinnon, J. in giving a meaning to the word "reasonable."

It is quite usual for a tribunal—it may be a jury or it may be a judge sitting alone—to decide whether or not a course of action or a particular transaction is reasonable. This is a question of fact and has to be answered after giving due consideration to all the relevant circumstances and not on any dictionary meaning of the word. In the present case we find a contract under which the ship is *primâ facie* bound to pursue a certain course. It did not in fact do so, but pursued a course which brought it into a much closer proximity to the Cornish coast. This deviation was in the interest of the ship alone. In my opinion, this fact did not by itself make it unreasonable. It may well be that the interests of the cargo owners were affected in so slight a degree that the master, acting as a reasonable man and responsible for both ship and cargo, was entitled to regard the proposed course as one that he was free to take. If he had decided, after leaving St. Ives, to stand away from the coast and thus regain the contract course, I should have felt some difficulty in saying that the deviation was not reasonable and should have preferred the view of Greer, L.J., but, even so, it would not follow that we should be justified in saying that the conclusions of the other judges in the courts below were wrong, and unless we could say so we ought not to reverse their decision, which, as I have said, is a finding of fact. But, in my judgment, all difficulty in the way of agreeing with their view is removed by one element in the course selected by the master—namely, his decision that after leaving St. Ives the course should be at one-and-a-half to two miles from the coast. I think it is clear that this course placed the ship and cargo in a position of peril to which they would not have been exposed if after leaving St. Ives the master had at once made for the open sea on his way to rejoin the contract route, and I fail to see any good reason for his not doing so. Nor can I agree that his decision amounted to mere negligent navigation. I think the course pursued from St. Ives southwards was as much a part of the deviation as that from Lundy to St. Ives, and the deviation would be justified only if the whole of it could be said to be reasonable. On the whole, I come to the conclusion that on this point also the appeal fails, and that it should be dismissed, with costs.

Lord Atkin.—This case assumes importance because it involves a question of the construction of the Carriage of Goods by Sea Act 1924 and has evoked a construction of that Act from at least one judge of great authority on such matters which I venture to think is based on a wrong method of approach to that Act. The *Ixia*, a ship of 1828 tons net register, sailed from Swansea to Constantinople with a full and complete cargo of coal under a charter-party in the terms of the Chamber of Shipping Welsh Coal Charter 1896, as amended on various dates, the last of which was the 21st Dec. 1924. A bill of lading was taken by the charterers, making the cargo deliverable to named consignees, Messrs. Foscolo Mango and Co. Limited, "with liberty to call at any ports in any order for bunkering or other purposes . . . all as part of the contract voyage; all the terms, conditions, and exceptions contained in the charter-party are herewith incorporated." The liberties given in the bill of lading are the same liberties as those given in the charter-party, and it appears to me with respect that whether the plaintiff be the charterer or the consignee the document to be construed is the charter-party.

I do not propose to set out the facts but to discuss the points of law raised. The position in law seems to be that the plaintiffs are *primâ facie* entitled to say that the goods were not carried safely; the defendants are then *primâ facie* entitled to rely on the exception of loss by perils of the sea; and the plaintiffs are *primâ facie* entitled in reply to rely upon a deviation. For unless authorised by the charter-party or the Act the departure to St. Ives from the direct course to Constantinople was admittedly a deviation. I pause here to say that I find no substance in the contention faintly made by the defendants that an unauthorised deviation would not displace the statutory exceptions contained in the Carriage of Goods by Sea Act 1924. I am satisfied that the general principles of English law are still applicable to the carriage of goods by sea except as modified by the Act; and I can find in the Act nothing which makes its statutory exceptions apply to a voyage which is not the voyage the subject of "the contract of carriage of goods by sea" to which the Act applies. It remains therefore for the shipowners to show that the suggested deviation was authorised by the contract including the terms incorporated by the Act. They first rely upon the express liberty given by the charter-party "to call at any ports in any order for bunkering or other purposes . . . all as part of the contract voyage." What exactly the Chamber of Shipping and the Documentary Council of the Baltic and White Sea Conference (who we are told in the document adopted this form of charter-party) meant by these words I wish they could be asked. We have to struggle to find a meaning. They cannot be unlimited in scope, or they would authorise the shipowner to direct the ship to any part of the globe for any purpose that he thought fit. Even if limited to any port or ports on the geographical course of the voyage, as I think on authority they clearly must be, the purpose of the call must receive some limitation. The liberty could not reasonably be intended to give the right to call at an intermediate port to land or take on board friends of the shipowner for the purposes of a pleasure trip. On the other hand, I find it very difficult to adopt the view which has found favour with one of your Lordships that they involve some limitation which is kindred to or associated with bunkering. Even if the purpose be extended beyond taking in motor fuel or supplies, necessary for the navigation of the ship, to supplies for the

maintenance or comfort of passengers, I find it difficult to put such a restricted meaning on the words in view of the collocation "any ports in any order" which seems to point to some purposes other than the restricted ones suggested. Logically I find a difficulty in excluding a suggested purpose from a class until I have formed some more or less definite conception of the nature of the class. I think myself that the purposes intended are business purposes which would be contemplated by the parties as arising in carrying out the contemplated voyage of the ship. This might include in a contract other than a contract to carry a full and complete cargo a right to call at a port or ports on the geographical course to load and discharge cargo for other shippers. It would probably include a right to call for orders. But I cannot think that it would include a right such as was sought to be exercised in the present case to land servants of the shipowners or others who were on board at the start to adjust machinery and were landed for their own and the owners' convenience because they could not be transferred to any ingoing vessel. I think, therefore, the shipowners are not excused by this clause.

There remains the provision of Art. IV., r. 4, of the schedule to the Carriage of Goods by Sea Act 1924, which with the other rules in the schedule is incorporated expressly in the bill of lading pursuant to sect. 3 of the Act: "Any deviation in saving or attempting to save life at sea, or any reasonable deviation, shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom." In approaching the construction of these rules it appears to me important to bear in mind that one has to give the words as used their plain meaning, and not to colour one's interpretation by considering whether a meaning otherwise plain should be avoided if it alters the previous law. If the Act merely purported to codify the law, this caution would be well founded. I will repeat the well-known words of Lord Herschell in the *Bank of England* v. *Vagliano Brothers* (64 L. T. Rep. 353, at p. 365; (1891) A. C. 107, at p. 144). Dealing with the Bills of Exchange Act as a code he says: "I think the proper course is in the first instance to examine the language of the statute and to ask what is its natural meaning, uninfluenced by any considerations derived from the previous state of the law, and not to start with inquiring how the law previously stood, and then, assuming that it was probably intended to leave it unaltered, to see if the words of the enactment will bear an interpretation in conformity with this view. . . . The purpose of such a statute surely was that on any point specifically dealt with by it, the law should be ascertained by interpreting the language used instead of, as before, by roaming over a vast number of authorities in order to discover what the law was." He then proceeds to say that of course it would be legitimate to refer to the previous law where the provision of the code was of doubtful import or where words had previously acquired a technical meaning or been used in a sense other than their ordinary one. But if this is the canon of construction in regard to a codifying Act, still more does it apply to an Act like the present, which is not intended to codify the English law, but is the result (as expressed in the Act) of an international conference intended to unify certain rules relating to bills of lading. It will be remembered that the Act applies only to contracts of carriage of goods outwards from ports of the United Kingdom: and the rules will often have to be interpreted in the courts of the foreign consignees. For the purpose of uniformity it is therefore important that the courts should apply themselves to the consideration only of the words used without any predilection for the former law, always preserving the right to say that words used in the English language which have already in the particular context received judicial interpretation may be presumed to be used in the sense already judicially imputed to them.

Having regard to the method of construction suggested above, I cannot think that it is correct to conclude, as Scrutton, L.J. does, that rule 4 was not intended to extend the permissible limits of deviation as stated in *The Teutonia* (*sup.*). This would have the effect of confining reasonable deviation to deviation to avoid some imminent peril. Nor do I see any justification for confining reasonable deviation to a deviation in the joint interest of cargo-owner and ship as MacKinnon, J. appears to hold, or even to such a deviation as would be contemplated reasonably by both cargo-owner and shipowner as has been suggested by Wright, J. in *Foreman and Ellams Limited* v. *Federal Steam Navigation Company Limited* (17 Asp. Mar. Law Cas. 447; 138 L. T. Rep. 582, at p. 584; (1928) 2 K. B. 424, at p. 431), approved by Slesser, L.J. in the present case. A deviation may, and often will, be caused by fortuitous circumstances never contemplated by the original parties to the contract, and may be reasonable though it is made solely in the interests of the ship or solely in the interests of the cargo or indeed in the direct interest of neither; as, for instance, where the presence of a passenger or of a member of the ship or crew was urgently required after the voyage had begun on a matter of national importance, or where some person on board was a fugitive from justice, and there were urgent reasons for his immediate appearance. The true test seems to be what departure from the contract voyage might a prudent person controlling the voyage at the time make and maintain, having in mind all the relevant circumstances existing at the time, including the terms of the contract and the interests of all parties concerned, but without obligation to consider the interests of any one as conclusive. I think this view conforms to that of Greer, L.J., the only criticism of whose test I would make is that it appears unnecessary to introduce the reasonable cargo-owner into the discussion. The decision has to be that of the master or occasionally of the shipowner; and I conceive that a cargo-owner might well be deemed not to be unreasonable if he attached much more weight to his own interests than a prudent master, having regard to all the circumstances, might think it wise to do.

On applying, then, this test, was this deviation reasonable? I do not discuss the facts except to say that I see no ground for suggesting that the deviation was due to some default of the shipowners in respect of the firemen. In the absence of evidence directed to that issue it does not seem right to impute blame to the owners in that respect. I desire to refrain from expressing an opinion on whether the question whether a deviation is reasonable is a question of law or of fact. In the present case we are judges both of law and of fact; and if the question is of fact the concurrence of the learned judges below seems to me to lose some of its value when regard is had to the meaning which they attributed to the issue that they were determining. I think that Greer, L.J. is plainly right in applying the test of reasonableness to the deviation as a whole. It could not, however, be laid down that as soon as the place was reached

to which deviation was justified there was an obligation to join the original course as directly as possible. A justified deviation to a port of refuge might involve thereafter a shorter and more direct route to the port of destination compared with a route which took the shortest cut to the original course. On the other hand, though the port of refuge was justifiably reached, the subsequent voyage might be so conducted as to amount to an unreasonable deviation. Taking all the facts into account, I am pressed with the evidence which the learned judge accepted, that after St. Ives the coasting course directed by the master was not the correct course which would ordinarily be set in those circumstances. It is obvious that the small extra risk to ship and cargo caused by deviation to St. Ives was vastly increased by the subsequent course. It seems to me not a mere error of navigation, but a failure to pursue the true course from St. Ives to Constantinople which in itself made the deviation cease to be reasonable. For these reasons I agree that this appeal should be dismissed.

Lord Russell (read by Lord Thankerton).—The provisions of the contract in the present case which are relevant to the decision of this appeal are three in number. 1. There was an exception of perils of the seas. 2. There was liberty "to call at any ports in any order for bunkering or other purposes . . . as part of the contract voyage." 3. The appellants in all matters arising under the contract were to be entitled to the rights and immunities contained in Art. IV. of the schedule to the Carriage of Goods by Sea Act 1924. I need not repeat the other facts of the case; they have already been stated.

That there was a departure from the direct route between Swansea and Constantinople is conceded, but it was said that the exception of perils of the seas still operated in favour of the appellants because the call at St. Ives fell within the liberty above mentioned, and was accordingly either part of the contract voyage or a permitted deviation therefrom.

While I appreciate the difficulty of applying what is called the *ejusdem generis* rule where only one species is available out of which to construct the genus, nevertheless it seems clear that some limitation must be placed upon the words "other purposes." If they are to be read as free from any limitation, then it was unnecessary to specify the bunkering purpose. Some restriction must therefore exist; and for myself I am in agreement with the view that the *Ixia's* call at St. Ives, not being a call for the purposes of the contract venture, was not a call for other purposes within the meaning of the liberty.

The appellants next prayed in aid the provisions of par. 4 of Art. IV. in the schedule to the Act of 1924. The schedule is a schedule of rules relating to bills of lading which (by sect. 1 of the Act) are to have effect in relation to and in connection with the carriage of goods by sea in ships from any port in Great Britain or Northern Ireland to any other port whether in or outside Great Britain or Northern Ireland. Par. 4 of Art. IV. provides that "any deviation in saving or attempting to save life or property at sea, or any reasonable deviation, shall not be deemed to be an infringement or breach of these rules or of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom."

It was said that the call at St. Ives was a reasonable deviation within this rule, with the result that the exception of perils of the seas still operated in exoneration of the appellants.

Whether the deviation was or was not reasonable appears to me to be a question of fact to be determined in each case upon the facts of each case. The trial judge here came to the conclusion that the reasonableness of the deviation had not been established; in other words, he held that upon the facts proved the deviation was not a reasonable deviation. With this view, Scrutton, L.J. agreed, and, as I read his judgment, Slesser, L.J. also. Greer, L.J. took a somewhat different view. He thought that the whole deviation was unreasonable, by reason of the course which was set after leaving St. Ives.

For myself I am not prepared to differ from the view upon this question of fact, which was adopted by the trial judge and concurred in by the majority of the Lords Justices, namely, that upon the facts of the present case the deviation here was not a reasonable deviation. It follows accordingly that the appellants get no protection from par. 4 of Art. IV.

The appellants advanced one further argument which in no way depended for its decision upon fact, and which, if successful, would have far-reaching consequences. They contended that the Act of 1924 freed them from responsibility for loss arising from perils of the sea, notwithstanding any deviation, reasonable or unreasonable; in other words, that the Act had effected an alteration in the law which had hitherto prevailed. It was said that the obligation not to deviate only arose under par. 2 of Art. III., under which the carrier must "properly and carefully load, handle, stow, carry, keep, care for and discharge the goods carried," and that inasmuch as that paragraph was expressed to be subject to the provisions of Art. IV., the obligations imposed by par. 2 of Art. III. (including the obligation not to deviate) were expressly made subject to the provisions of par. 2 of Art. IV., which provided that neither the carrier nor the ship should be responsible for loss or damage arising or resulting from (amongst other things) "perils, dangers, and accidents of the sea or other navigable waters." That was, as I understood it, the line of reasoning.

In my opinion, the argument is unsound. It was well settled before the Act that an unjustifiable deviation deprived a ship of the protection of exceptions. They only applied to the contract voyage. If it had been the intention of the Legislature to make so drastic a change in the law relating to contracts of carriage of goods by sea, the change should and would have been enacted in clear terms.

For these reasons I agree that the appeal should be dismissed.

Lord Macmillan.—On the 30th June 1929 the steamship *Ixia* ran on a rock off the coast of Cornwall and the ship and her cargo of coal were totally lost. The owners of the cargo now seek to recover from the shipowners a sum representing the damage which they have sustained by reason of the casualty. The shipowners reply that the cargo was lost by a peril of the sea, as it undoubtedly was, and that consequently they are relieved from liability by virtue of the exception of such perils contained in the charter-party and incorporated in the bills of lading and also under Art. IV., 2 (*c*), of the Schedule to the Carriage of Goods by Sea Act 1924, which provides that "neither the carrier nor the ship shall be responsible for loss or damage arising or resulting from . . . perils, dangers, and accidents of the sea. . . ." The bills of lading, as required by sect. 3 of the Act of 1924

contain an express statement that the shipowners are to be entitled to the privileges, rights, and immunities contained in (*inter alia*) Art. IV. of the Schedule to the Act.

To this plea the cargo-owners rejoin that the shipowners have forfeited the benefit of the immunity because of their having acted in breach of the contract of affreightment by deviating from the contractual course of the voyage.

This, in turn, is countered by the shipowners, who maintain (1) that the immunity from liability conferred by Art. IV., 2 (*c*), of the Schedule to the Act of 1924 is absolute and is not affected by any breach of contract on their part; (2) that they committed no breach of contract because under the charter-party and bills of lading they had liberty "to call at any ports in any order for bunkering or other purposes," and their alleged deviation in calling at St. Ives was in the exercise of that liberty; (3) that if there was a deviation it was a reasonable deviation within Art. IV., par. 4, of the Schedule to the Act of 1924, which provides that "any reasonable deviation shall not be deemed to be an infringement or breach . . . of the contract of carriage, and the carrier shall not be liable for any loss or damage resulting therefrom." There was also a suggestion that the vessel was making a trial trip within the permission to make such trips contained in the contract documents, but this is so clearly untenable that I need do no more than mention and reject it.

Turning then to the three contentions of the shipowners which I have set out above, I have no hesitation in negativing the first, which is so extravagant that if it were upheld the shipowners would be exempt from liability for loss resulting from a peril of the sea even if that peril was encountered when the vessel was on a deviation from her contract voyage which was not reasonable under par. 4 of the same article.

As to the second contention, the liberty to call at any ports "for bunkering or other purposes" cannot be read as meaning that the ship was to be at liberty to call at any ports for bunkering purposes or any purposes other than bunkering, for that would be tantamount to saying that she might call at any port for any purpose. I read the words as meaning "for the purpose of bunkering or for any similar purpose." What purposes are similar to the purpose of bunkering I shall not attempt to define. It suffices to say that in my opinion the purpose for which the *Ixia* called at St. Ives was not a purpose in any way resembling so ordinary a maritime incident as bunkering.

There remains the shipowners' third contention, which is the real crux of the case. Was the deviation to St. Ives a "reasonable" one? The statute does not supply any criterion of reasonableness, and I doubt if it would have been possible to formulate a criterion of universal applicability, for the contingencies and emergencies which arise in maritime transport are as infinite in their variety as the vagaries of the sea itself. An undefined standard of reasonableness may sometimes be difficult to apply, but the task is one which judges and juries have had daily to perform from time immemorial. To give a single instance, the Sale of Goods Act 1893 uses the expression "reasonable time" in six of its sections without any definition, though it prescribes in sect. 56 that the question of what is a reasonable time is to be treated as a question of fact, and I am not aware that any serious difficulty has in consequence arisen in the administration of the statute. This at least has been laid down for our guidance that the reasonableness of an act must be judged in relation to the circumstances existing at the time of its commission and not by any abstract standard. The act, too, must be considered as a whole, in the light of all the attendant circumstances. A conclusion so reached that a particular act was reasonable or unreasonable is in general a conclusion of fact; it is an inference of fact from a given set of facts.

Now in the present case there are concurrent judgments of the judge of first instance and the Court of Appeal finding unanimously that the deviation in question was not reasonable. Even if I were disposed to think otherwise—I do not for a moment say that I am—I should be slow indeed to disturb such a finding unless I were satisfied that those who had reached it had in so doing infringed some principle of law. It is no doubt obvious that the learned judges have considered the episode from varying points of view and have, as was natural, each been influenced by the aspect of it which appeared to him most conspicuous. But it cannot be inferred from this difference of emphasis that they have disregarded any circumstance which they ought to have considered or have taken into account any circumstance which they ought not to have considered. Thus I do not think that MacKinnon, J., in giving weight to the circumstance that in his view the deviation was not in the joint interest of cargo and ship, intended to lay down or to apply any absolute rule that no deviation could be reasonable which was not in the joint interest of cargo and ship. The absence of the element of joint interest may well be an important indication of unreasonableness without being conclusive. Nor do I think that Scrutton, L.J. intended to lay down or apply any absolute rule that only a deviation to avoid imminent peril could be regarded as reasonable.

It is important to remember that the Act of 1924 was the outcome of an international conference and that the rules in the Schedule have an international currency. As these rules must come under the consideration of foreign courts it is desirable in the interests of uniformity that their interpretation should not be rigidly controlled by domestic precedents of antecedent date, but rather that the language of the rules should be construed on broad principles of general acceptation.

As I have heard nothing to satisfy me that the judges below have reached their conclusion on wrong principles, I concur in the motion that the appeal be dismissed.

Appeal dismissed.

Solicitors for the appellants, *Holman*, *Fenwick*, and *Willan*.

Supreme Court of Judicature.

COURT OF APPEAL.

Nov. 16 *and* 17, 1931.

(Before SCRUTTON, GREER and SLESSER, L.JJ.)

Dawson Line Limited v. Aktiengesellschaft Adler für Chemische Industrie of Berlin. (*a*)

Charter-party—Freight—Shipper's weight in—Bill of lading presented by shipper—Shipper agent of charterer—Bill of lading signed by master on loading as required by charter-party—Understatement of weight of cargo—Indemnity by charterer against consequent loss.

By a charter-party freight was to be paid on shippers' weights inserted in the bill of lading, less two per cent. in lieu of weighing, or at the option of the receivers on delivered weight, and the master was required to sign the bill of lading as presented to him by the charterer within twenty-four hours after the steamer was loaded. The charterer presented a bill of lading in which the weight of the cargo was substantially understated.

Held, that the charterer was bound to present a bill of lading which was accurate as to the weight of cargo shipped. If that weight was inaccurate, the charterer must make good the loss consequent upon the inaccuracy, i.e., *he must pay freight on the full weight delivered.*

Semble, *per Slesser, L.J.—This indemnity is due to the mere fact of the presentation of the bill of lading by the charterer with the weight of the cargo inaccurately stated therein.*

Elder, Dempster, and Co. *v.* Dunn (11 Asp. Mar. Law Cas. 337; (1909) 101 *L. T. Rep.* 578), *and* Kruger and Co. *v.* Moel Tryvan Ship Company (10 Asp. Mar. Law Cas. 465; 97 *L. T. Rep.* 143; (1907) *A. C.* 272) *followed.*

APPEAL from a decision of Rowlatt, J. on an award stated in the form of a special case.

By a charter-party dated the 9th Oct. 1930 the Dawson Line Limited (hereinafter called the shipowners) chartered the steamship *Lady Brenda* to the Aktiengesellschaft Adler für Chemische Industrie of Berlin (hereinafter called the charterers) to proceed to Berdiansk to load at a usual base or bases as customary a full and complete cargo of coal tar pitch in bulk from such suppliers as charterers may direct, and being so loaded shall therewith proceed with all possible dispatch to Ghent (Belgium). By clause 6 it was provided: "Demurrage not to accrue during any time the steamer is withdrawn from charterers' disposal for loading." By clause 11: "The bills of lading shall be in the form endorsed on the Chamber of Shipping Coal Charter 1920, and the weights shown therein shall be the shippers' weights. Such bills of lading to be signed by the master, agent, or owner of the steamer at the offices of charterers' agents within twenty-four hours after the steamer is loaded. The master may be required to sign separate bills of lading for pitch in different holds or for parcels properly separated by charterers." By clause 14: "The steamer shall deliver her cargo . . . on being paid freight at and after the rate of 12*s.* 6*d.* British sterling per ton of 20cwts., or 1015cwt. on bill of lading weight less 2 per cent. in lieu of weighing, but receivers to have the option (which must be declared in writing before breaking bulk) to pay on delivered weight, in which event cargo to be weighed on board or alongside by official weighers. Consignees paying all expenses, but owner or agent having liberty to provide check clerk at steamer's expense. . . ."

The steamship loaded a full and complete cargo of coal tar pitch at Berdiansk, the total weight of which, according to the shippers, was approximately 4476 English tons. One bill of lading was issued for the whole cargo, and this quantity was inserted in the bill of lading. The master of the *Lady Brenda* was not satisfied that the quantity stated in the bill of lading was accurate, as, according to the draught of the steamer, he calculated that a larger quantity of cargo had been shipped. On the 9th Nov. 1930 the day when the loading was completed, and the bill of lading was dated, the master addressed a letter of protest to the shippers in the following terms: "Referring to the bill of lading I signed to-day I beg to call your attention to the fact that by the steamer's draught the quantity of cargo shipped must exceed the quantity stated on the bill of lading. If, at the port of discharge, this is found to be the case, the receivers are to be held responsible for the freight on the total quantity discharged. I am reporting this matter to my owners." The master added at the foot of the bill of lading the words, "Weight, quality, and quantity unknown to me." Before the arrival of the *Lady Brenda* at Ghent the charterers, who were also the receivers, gave notice to the shipowners that they would pay freight on the bill of lading quantity less 2 per cent. The shipowners were not prepared to accept freight upon the quantity stated in the bill of lading in view of the information received from the master. The charterers advised the shipowners' agents that if it should be ascertained that the quantity stated on the bill of lading was a mistake they would pay freight on the ascertained quantity less 2 per cent. The shipowners, therefore, made arrangements to have the cargo officially weighed, and this having been done, the outturn was 4608 English tons—132 tons more than shown by the shippers' weight. Thereupon the charterers admitted that the bill of lading weight was inaccurate, and without any admission of liability, and without prejudice, paid to the shipowners the cost of the weighing and also freight calculated upon the official outturn weight, but they deducted therefrom 2 per cent., namely, 57*l.* 12*s.* 6*d.*, which was the amount in dispute between the parties.

The arbitrator found as a fact that the bill of lading quantity was inaccurate, and that the quantity shipped was 4608 English tons, and not 4476 English tons, but he awarded, subject to the opinion of the court, that the shipowners were not entitled to recover the 2 per cent. deducted—57*l.* 12*s.* 6*d.*—so that nothing was due from the charterers to the shipowners. The question for the opinion of the court was whether, upon the true construction of clause 14 of the charter-party, the shipowners were entitled to be paid freight on the delivered weight of the cargo or on the delivered weight less 2 per cent. Rowlatt, J. upheld the award of the arbitrator.

(*a*) Reported by C. G. MORAN, Esq., Barrister-at-Law.

The shipowners appealed.

Le Quesne, K.C. and *Carpmael* for the appellants.

Sir *Robert Aske* for the respondents.

Scrutton, L.J.—This case has now been fully argued, and matters have been brought to the attention of the court which apparently were not before Rowlatt, J. In the circumstances, I think that he came to a wrong conclusion.

The difficulty that gave rise to this case, arose from the fact that in respect of a cargo of coal tar pitch a wrong weight was inserted in the bill of lading, coupled with this, that in the charter-party there is a clause that freight may be paid on the bill of lading weight, less 2 per cent. in lieu of weighing, with an option to the receiver to pay on delivered weight, in which case he pays the cost of weighing. The question raised is what is the position when the bill of lading states the weight, and on the cargo being weighed it is found that the bill of lading weight is substantially wrong. This clause about paying freight on the bill of lading weight, less 2 per cent. because the cargo is not weighed on delivery, is one that has been in existence for a long time. One of its justifications is that if the shipowner has to weigh the cargo he is obliged to keep the ship longer than he otherwise would, and if he is not required to weigh he allows the receiver to pay freight on the bill of lading weight, less 2 per cent., in order that he may get his ship away earlier. An instance of the operation of the practice may be found in *Dillon* v. *Livingston and Peninsular and Oriental Company* (1895, 11 Times L. Rep. 313). This company received every year in Bombay 50,000 tons of coal. It was no advantage to them to get the coal unloaded quickly, as they always had large stocks. They were quite content to pay freight on the delivered weights; but as the ship wanted to get away as soon as possible, the master asked the Bombay agents of the company to give the ship a speedy discharge by waiving their rights to have the cargo weighed. A question arose whether the master had authority to make that bargain, and the evidence was that the company had always had the alternative offered them of having the cargo weighed, which would involve keeping the ship longer, or only to pay freight on the bill of lading weight less 2 per cent. The evidence about coal was that the average shortage on the outturn was 1 per cent. In this case what the ship complains of is that it has had to weigh the cargo and has not saved time, and the receivers say that they are liable to pay freight less 2 per cent. on cargo less than that actually carried. Rowlatt, J. thought that it looked wrong that the ship should be paid freight on less than the cargo actually delivered.

By the charter-party the charterers have contracted to supply a full cargo of coal tar pitch at Berdiansk from such suppliers as the charterers might direct. The charterers are to get the cargo from the suppliers whom they nominate. The charterers are to put the cargo on board, and the charter-party provides by clause 11 that "the bills of lading shall be in the form endorsed on the Chamber of Shipping Coasting Coal Charter 1920, and the weights shown therein shall be the shippers' weights." The shippers in this case were the agents of the charterers to supply the cargo, and by the charter-party (clause 11) the bills of lading were to be signed "by the master, agent, or owner of the steamer at the offices of charterers' agents within twenty-four hours after the steamer is loaded. The master may be required to sign separate bills of lading for pitch in different holds or for parcels properly separated by charterers."

The steamship *Lady Brenda* having loaded the cargo of coal tar pitch at Berdiansk, the master, owing to the draught of the ship, thought from the start that there was more cargo on board than that shown by the shippers' weight. Accordingly he put on the bill of lading: "weight, quality, and quantity unknown to me." He was, however, there to sign the bill of lading with the shippers' weight stated therein, though he suspected that it was wrong. The shipowners said that they would weigh the cargo on discharge and they did so, the quantity delivered at Ghent being found to be 4608 tons, that is, 132 tons more than the shippers' weight. There is no suggestion of fraud. The charterers recognised that something ought to be done, but what they did, they did without prejudice: they paid not on the bill of lading weight, but on the delivered weight, from which, however, they claimed to make the 2 per cent deduction, because they had not asked the ship to weigh. To that the shipowners objected.

Before Rowlatt, J. it does not appear to have been argued what was the effect of the clause in the charter-party by which the master had to sign the bills of lading with the shippers' weights. That question has been discussed in two cases, both in the House of Lords, which in my view show that the view taken by Rowlatt, J. was erroneous. In the later of the two cases (*Elder, Dempster, and Co.* v. *Dunn*, 11 Asp. Mar. Law Cas. 337; (1909) 101 L. T. Rep. 578), it appears that the charterer presented a bill of lading with wrong marks, in consequence of which the ship got into difficulties, through not delivering the goods according to the marks. The House of Lords held that such a tender of bills of lading by the charterer involved the obligation upon the charterer to indemnify the ship against the damage that had been thereby caused. A somewhat similar point arose in *Kruger and Co.* v. *Moel Tryvan Ship Company* (10 Asp. Mar. Law Cas. 465; 97 L. T. Rep. 143; (1907) A. C. 272). There also the master had to sign bills of lading as presented. The charterers presented a bill of lading which made the shipowners liable for negligence, by which the shipowners were exposed to liability. The shipowners claimed to be indemnified by the charterers in respect of the injurious consequences following upon the presentation of the bill of lading not in accordance with the charter-party. The House of Lords held that the charterers were liable to indemnify the shipowners. In these cases I was counsel for the successful parties, the shipowners; and I remember that considerable discussion took place as to the lines upon which the claim to indemnity should be put. Some of the judges said that the charterers were liable upon two grounds. The first of them was that a right to indemnity followed from the terms of the charter-party because it required the master to sign the bills of lading in a particular form, and consequently that the charterers must be liable if loss followed in consequence of presenting inaccurate bills of lading. The second ground has nothing to do with the charter-party, but turns upon the principle stated in *Sheffield Corporation* v. *Barclay* (93 L. T. Rep. 83; (1905) A. C. 392) and *Birmingham and District Land Company* v. *London and North Western Railway Company* (1886, 55 L. T. Rep. 699; 34 Ch. Div. 261). This is that a mere request from the charterers, involving as it did the shipowners in a liability in which otherwise they would not have been involved, raised the implication of an indemnity against those consequences.

Some judges took the one view ; others, the other ; and some judges based their decision on both views.

In this case it is sufficient to say that as the master was required to sign the bills of lading as presented to him, the charterers were bound to present an accurate bill of lading as to the weight shipped. The shippers were the charterers' agents to supply the cargo and present the bill of lading ; they presented an inaccurate bill of lading with consequent loss. The charterers must make good that loss consequent upon the presentation by their agents of the inaccurate bill of lading.

Counsel for the respondents pointed out that there are clauses in the Schedule to the Carriage of Goods by Sea Act 1924 which affect the question. In my opinion it is unnecessary to consider them, as the Act does not apply to charter-parties, and the liability in this case is a liability arising from the charter-party and the provision therein that the bill of lading is to be signed by the master, as presented by the charterers' agents. The result at which we arrive, I am glad to think, fits in with the commercial aspect of the case. For the charterers to claim the deduction of 2 per cent. from the freight when the ship was not saved weighing is wrong. For the reasons I have given the appeal must be allowed, and the shipowners entitled to recover the sum claimed.

Greer, L.J.—I have come to the same conclusion as my Lord, that this appeal should be allowed, but not without encountering a number of difficulties. My only reason for giving a separate judgment is that I am anxious that nothing should be said which might throw doubt on one of the fundamental principles of our law, namely, that where parties agree upon a written form of words to regulate their contractual obligations, those obligations are to be found in that document, and the court will not lightly weaken its effect by reading in qualifications or implied understandings inconsistent therewith. It seems to me, especially at the present day, most important that there should be certainty with regard to the law. If this case depended solely upon the words used in the charter-party, I should have come to the conclusion that the shipowners by the express terms of the charter-party, have agreed to accept freight measured by the bill of lading weight, and that there is nothing in the charter-party from which there can be implied an exception to that obligation. But I agree that the position may be altered by reason of some collateral contract between the parties, and I regard the decisions in the two cases of *Elder, Dempster, and Co.* v. *Dunn* (*sup.*) and *Kruger and Co.* v. *Moel Tryvan Ship Company* (*sup.*) as meaning this and no more, that if the charterer or some person for whom he is responsible presents a bill of lading to the master, which the latter is bound to sign as part of the terms of the contract, there may be implied from the act of presenting the bill of lading, taken together with the terms of the contract, a warranty of the correctness of the figures, description, or marks stated in the bill of lading.

The only question which is not without difficulty in the case is whether, having regard to the terms of the charter-party, we are entitled or bound to treat the charterers as presenting the bill of lading for signature. At one time in the course of the argument, I was inclined to think that the charterers could not be so treated, but counsel for the appellants has called attention to the language used in several clauses of the charter-party which has led me to the conclusion that it is right in this case to treat the suppliers when they presented the bill of lading for signature as the agents of the charterers By clause 1 the steamship is to "load at a usual berth or berths as customary a full and complete cargo . . . from such suppliers as charterers may direct." That means that the charterers have undertaken that they will direct other people to perform the obligation they themselves have undertaken to load the ship. That view of the contract is confirmed by clause 6, which contains these words : "Demurrage not to accrue during any time the steamer is withdrawn from charterers' disposal for loading"—again indicating that for the purpose of the performance of this charter-party whoever in fact brings the cargo to the ship to be put on board is to do this on behalf of the charterers. Clause 11 contains a reference to the bill of lading being signed by the master, agent, or owner of the steamer at the offices of the charterers' agents, further indicating to my mind that the charterers were the persons who by their agents were loading the vessel and who presented the bill of lading to the master for signature.

In these circumstances it seems to me that this case is covered by the two decisions to which I have referred. It does not seem to me to matter whether the right view is that the freight should first be paid and thus that there should be a counter-claim for breach of contract. That would be an unbusinesslike way of dealing with the question. As I understand the arbitrator was asked to decide the question of principle, namely, whether the loss should be borne by the one party or the other subject to our view. Our view is that it should be borne by the charterers and not by the shipowners.

Slesser, L.J.—I agree that this appeal should be allowed. For myself I am not conscious of any substantial variation of reasoning between my Lords in the judgment they have delivered. But if there be any question whether this decision is to depend upon proceedings collateral to the charter-party, namely, the presentation of the bill of lading, or upon the argument that the decisions in *Kruger and Co.* v. *Moel Tryvan Ship Company Limited* (*sup.*), and the earlier case of *Elder, Dempster, and Co.* v. *Dunn and Co.* (*sup.*) establish that construing clause 11 alone, apart from any other circumstances, the obligation in that clause that the weights shall be the shipper's weights, involves necessarily a right to indemnity from the charterer, I prefer to limit the grounds for decision in this case to those stated by Greer, L.J., and to leave open the wider question, if there be one, as to the effect of clause 11, apart from any other circumstances.

Appeal allowed.

The Edison. (*a*)

ON APPEAL FROM THE ADMIRALTY DIVISION.

Collision — Damages — Loss of use — Dredger totally lost — Dredger engaged at time of loss in connection with the performance by her owners of contract to execute harbour works—Loss and expense incurred by owners owing to their inability through lack of financial resources to replace dredger—Loss of profits and incidental losses on contract—Natural consequence of collision—Measure of damages.

The plaintiffs' dredger was sunk in a collision with the defendants' steamship, for which the defendants admitted liability. At the time of the loss the plaintiffs were performing certain works in the harbour at Patras, under contract with the Harbour Commissioners, and the dredger was employed in certain essential dredging operations connected with the performance of the contract. After the collision the plaintiffs were unable, owing to their lack of financial resources, to purchase another dredger, and in consequence various delays involving loss and expense were incurred. Subsequently the plaintiffs hired another dredger, which they ultimately purchased. The registrar in his report allowed a sum for the value of the dredger, and also sums for the losses and expenses incurred during the delay, including the cost of hire of the substituted dredger, the extra cost of dredging with the substituted dredger as compared with the lost dredger, and loss of profit and incidental losses, such as salaries, rent and interest, incurred during the period when the contract could not be performed owing to the loss of the dredger. Langton, J. affirmed the report.

Held, that Langton, J. and the registrar had adopted the wrong measure of damage. The damages recoverable were those which were the direct and natural consequences of the collision, and did not include losses and expenses which were attributable to the lack of financial resources of the plaintiffs, or profits which were uncertain or speculative. The plaintiffs having been awarded the value of the dredger at the time and place of the loss, together with interest from the date of the loss, which represented the true measure of damage, were not entitled to recover anything further for loss of profits, or the additional costs of obtaining another dredger.

Appeal of the defendants allowed.

APPEAL from judgment of Langton, J., affirming a report of the Admiralty Registrar.

The plaintiffs, owners of the dredger *Liesbosch*, claimed damages for the loss of the *Liesbosch* as the result of a collision with the defendants' steamship *Edison*, which took place in the harbour of Patras on the 26th Nov. 1928. In consequence of the collision the *Liesbosch* was lost. The defendants admitted liability for the collision. At the time of the collision the owners of the *Liesbosch* had entered into a contract with the Harbour Commissioners at Patras for the excavation of the basin of the harbour and for a trench for the laying of foundations of new holes, together with the construction of piers, &c., and other work. The contract was for the sum of 36,540,000 drachmas, and one of the terms of the contract was that the work should be completed within three years. The contract was subsequently enlarged to 68,000,000 drachmas, covering a period of five years. The plaintiffs, owing to lack of financial resources, as appeared from the evidence, were unable to purchase a dredger to take the place of the *Liesbosch*, but they ultimately hired the Italian dredger *Adria*, which arrived at Patras on the 16th June 1929. The *Adria* was on hire to the plaintiffs until the 3rd July 1930, when the plaintiffs purchased her for 3,442,500 drachmas. The plaintiffs divided their claim for damages into five parts. In Part I. they claimed the value of the *Liesbosch*, together with the expense of purchasing the *Adria*, amounting to 3,772,320 drachmas, which the registrar allowed in full. Under Part II. they claimed expenses incurred between the 26th Nov. 1928 and the 16th June 1929, which was the period from the date when the *Liesbosch* was lost until the *Adria* was obtained, during which work was suspended. The amount claimed in respect of these expenses, which represented salaries, wages, rent, insurance, and interest on capital, amounted to 4,626,314.35 drachmas, of which the registrar allowed 4,007,476.45 drachmas. Under Part III. the plaintiffs claimed expenses of hiring the *Adria*, *i.e.*, cost of transporting, travelling expenses, &c., amounting to 7,606,257.30 drachmas, of which the registrar allowed 6,888,790.45 drachmas. Under Part IV. the cost of operating the *Adria* as compared with the *Liesbosch*, amounting to 156,037.50 drachmas, was claimed and allowed in full. Under Part V. the plaintiffs claimed 882,568 drachmas for loss of profit owing to cessation of all work under the contract from the 26th Nov. 1928 to the 16th June 1929. The registrar allowed 294,189.33 drachmas.

On the defendants' motion to set aside the report, the following judgment was given by Langton, J.

July 29, 1931.—**Langton, J.**—I have taken time to consider my judgment in this case, not because I have entertained any considerable doubt as to the correct determination of the matter, but because it has been urgently pressed upon me by Mr. Dickinson on behalf of the defendants that the main question in issue raises a novel and most important point in the law of damages. It was not without regret that I learned from Mr. Raeburn for the plaintiffs that he was unable to accede to this view. The career of a pioneer in almost any field is touched with the glamour of adventure, and possesses a certain attractiveness even in the comparatively humdrum domain of the law. It was accordingly disappointing to hear from Mr. Raeburn that the case presented no opportunity for blazing a trail for the enlightenment of future generations, and was, in truth, confined to a very ordinary question of fact which the registrar had already determined in his favour.

The case comes before me upon motion in objection to the registrar's report in the following circumstances.

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

On the 26th Nov. 1928, a collision occurred in Patras Harbour between the defendants' steamship *Edison* and a dredger called the *Liesbosch* belonging to the plaintiffs. As a result of the collision the *Liesbosch* was sunk and totally lost. On the 5th May 1930 the defendants admitted liability for the collision, and on the 7th May 1931 the registrar made the report to which objection is now taken. Since the main point which was raised and discussed before me was a question of principle, I do not think that it is necessary for me to go into the multifarious items of the plaintiffs' claim or even to recite in detail the somewhat singular consequences of the collision out of which this claim arises.

Stated quite shortly the main chain of events is as follows:

At the time of the collision the *Liesbosch* was the property of some persons acting together as a company or syndicate to perform under contract certain extensive dredging and improvement works to the Harbour at Patras. The contract was for the important sum of 36,540,000 drachmas, and one of the terms imposed by the harbour commissioners upon the contractors was that the work should be completed within three years. The contract was subsequently enlarged to one of 68,000,000 drachmas, covering a period of five years. When one bears in mind the *locus in quo* it is not perhaps startling to find that a time limit for the completion of the work should have been insisted upon, or that the harbour commissioners also retained powers of imposing penalties for delay. The unusual feature of the transaction, which has led in turn to the complication of the claim and to the determined resistance of the defendants to the payment of a large portion thereof, lies in the fact that the contractors appear to have strained to the uttermost their entire resources of cash and credit to obtain the necessary plant which would qualify them to perform the contract. The sudden and untoward disappearance of the main item of that plant, namely, the dredger *Liesbosch*, left them financially beggared, and, from the point of view of further action under their contract, temporarily paralysed. It is not unimportant to notice at this stage that, although the collision took place on the 28th Nov. 1928, there was no admission of liability by the defendants until the month of May 1930.

In this unhappy plight the plaintiffs with a single eye towards the preservation of what was to them a valuable contract upon which they had already staked their all, prosecuted inquiries over a wide field with a view to replacing the lost *Liesbosch* either by purchase or by hire. The introductory statement to the plaintiffs' claim avers tersely that they were "unsuccessful in finding one"; but Mr. Dickinson contended, and Mr. Raeburn did not disagree, that this statement required some amplification. The result of the plaintiffs' efforts would be more accurately expressed by saying that they were unsuccessful in finding any means of paying for a dredger or of inducing any dredger owner to part either permanently or temporarily with his property upon such security as they could offer.

Eventually, after a lengthy delay, a situation which was becoming tense between the commissioners and the contractors was relieved by a contract of hire of a dredger called the *Adria*, together with a tug and hoppers, which the contractors entered into with an Italian firm on the 4th May 1929. The *Adria*, which was in Sardinia, was brought to Patras, and the contractors restarted work on the 16th June 1929. In the following year the contractors, who were feeling the strain of a high rate of hire, approached the commissioners, and on the 30th June 1930 the commissioners purchased the *Adria* from her Italian owners. Subsequently, by a somewhat lenient contract of re-sale, dated the 5th Sept. 1930, the commissioners re-sold the *Adria* to the contractors upon a scheme comprising monthly payments extending over four years. By means of these involved and rather tortuous transactions the plaintiffs were eventually able to carry on this contract upon which their fortunes had been so liberally embarked, but the course adopted was naturally attended by heavy expense.

The plaintiffs presented their claim under five heads: (i.) The actual value of the lost *Liesbosch*, together with certain expenses attendant upon the purchase of the *Adria*; (ii.) expenses incurred during the period the 26th Nov. 1928 to the 16th June 1929, that is, the period during which the plaintiffs were unable to carry on any of the work of dredging, but were obliged to maintain certain members of their staff and minor items of plant; (iii.) the hiring expenses of the *Adria* from the 4th May 1920 to the 30th June 1930; (iv.) extra cost of operating the *Adria* as compared with the *Liesbosch*; and (v.) loss of profit owing to cessation of all work under the contract for the period the 26th Nov. 1928 to the 16th June 1929. The registrar, after hearing evidence, allowed part (i.) of the claim in full. With certain reductions, he also allowed the larger portion of parts of (ii.), (iii.) and (iv.), and about one-third of the amount claimed under part (v.).

Mr. Dickinson had objections to all the allowances under each part, which I will notice more in detail presently; but the real gravamen of his objection, which lay at the root of his argument, was that the defendants were being called upon to pay not only for the replacement of what they had destroyed, but for a chain of remote consequences which sprang from the commercially indecent poverty of the plaintiffs and not from the wrongdoing of the defendants. His proposition of law was that a defendant, either in contract or in tort, is by law obliged to make good the normal and only the normal consequences of his misdeeds. It is not, he said, a normal consequence of a tort that a plaintiff should be so poor as to be unable to carry on his business by reason of the tort, more especially when the business happens to be a very expensive one, involving the expenditure of comparatively large sums even while the work thereof is being held in abeyance. If I may venture to summarise and paraphrase his argument, it was that damages in law are awarded by way of restitution and not in relief of destitution.

In support of this not unattractive proposition, Mr. Dickinson took me through many familiar and one or two unfamiliar cases concerning the remoteness of damage. Amongst others he cited old and well-tried authorities such as *Hadley* v. *Baxendale* (1854, 9 Ex. 341), *Sharp* v. *Powell* (26 L. T. Rep. 436; L. Rep. 7 C. P. 253), and *The Mediana* (8 Asp. Mar. Law Cas. 493; 80 L. T. Rep. 173; (1899) P. 127, 139), and found passages to assist him in the modern cases of *The London* (12 Asp Mar. Law Cas. 405; 109 L. T. Rep. 960; (1914) P. 72), *Weld-Blundell* v. *Stephens* (123 L. T. Rep. 593; (1920) A. C. 956), and *The Valeria* (16 Asp. Mar. Law Cas. 25; 128 L. T. Rep. 97; (1922) 2 A. C. 242). The pronouncement from amongst these which seemed to me to come nearest to his proposition is in the judgment of Lord Collins when sitting as a Lord Justice in *The Mediana* (8 Asp. Mar. Law Cas. at p. 501; 80

L. T. Rep. at p. 180; (1899) P. 127, 139): "In the present case," said the Lord Justice, "there was a standby, but the consequences would be serious if the fact that the board had a standby deprived them of damages as decided in the court below. It would mean that, apart from special damage, the damages to the rich man must be different from the damages to the poor man, if you are to assess them differently where a man has many of some particular kind of chattel, and where he has only one. Why has a millionaire from whom a picture is taken away to recover a smaller sum of money for the loss of that particular chattel, during a particular time, than A., B. and C., who have no claim to be millionaires? There is no principle involved: it is merely a matter of prejudice." From this Mr. Dickinson argued that since a man was to have no less damages because he happened to be rich, so he can have no more if he happened to be poor. In the present case the defendants are being called upon to pay twice as much, or more than twice as much as the value of the article destroyed merely because the plaintiffs happened to be poor. It follows, says Mr. Dickinson, that the damages consequent upon the mere poverty of the plaintiffs are too remote and cannot be recovered in law.

Simple and lucid as this reasoning may appear to be, it seems to me to be based upon a fallacy. Lord Collins does not say, and surely does not mean to say, that the damages for injuring A. must always be the same in amount as the damages for inflicting a like injury upon B. Take the simplest and commonest illustration: A highly skilled and highly successful surgeon and a navvy each suffer the loss of their right hand in the same railway accident. Will the court or even a jury award them the same sum by way of compensation in damages? Is it not rather true to say that the court will direct itself or the jury to assess the damages in each case upon the same principle, namely, what is the worth to each plaintiff of what he has lost? I am of opinion that this is exactly what Lord Collins means; the sum may be very different, but the principle is the same, and the principle is not determinable, and in some cases not assisted by looking to the financial situation of the plaintiff.

To my mind the proper method of approach to this case is not to commence by straining one's imagination after a notional phantom which will be recognisable when intellectually captured as "the normal dredger-owner," and having first determined what he would have suffered by the loss of his dredger, to proceed to rule out all other items of damage as too remote. I think the correct method is first to examine what these plaintiffs actually claim to have lost, and to test each item by the plain criterion whether it was properly and necessarily incurred. It is along this pedestrian path that the learned registrar appears to have proceeded, and it is the path which I propose to follow. In the reasons for his report the registrar enunciates the law applicable to the situation as follows: "The plaintiffs were then entitled to take all reasonable steps in this emergency to carry out their contract with as little delay as possible, having regard to all the existing circumstances, such as the severe terms of their contract in regard to penalties, and their want of liquid resources. They were equally bound to minimise the damages flowing from the sinking of the *Liesbosch* by the defendants' vessel." This appears to me to be a comprehensive and unexceptionable statement, both of the rights and the duties of the plaintiffs in the circumstances. He then proceeds to state his findings of fact in the following succinct terms: "In our opinion in the emergency which had arisen through the act of the defendants the plaintiffs acted reasonably, and from a business point of view no fault can be found with their action. The hiring of the *Adria* to complete an important contract with a public body was clearly a direct and natural result of the collision, and was, as we find, under the existing circumstances, a reasonable step to take. It follows from this finding of fact that the plaintiffs are entitled to recover reasonable expenses from the 26th Nov. to the 16th June, and also those incurred in hiring the *Adria* together with the extra costs of operating the *Adria* as compared with the dredger *Liesbosch*." I hardly think that it is open to me to disturb these findings, and even if I possess the right I do not see my way to exercise it.

It remains to notice in detail the several objections put forward by Mr. Dickinson on behalf of the defendants. As to part (i.) of the claim he criticised only the amount and not the principle upon which it was allowed, but he did not develop his criticism under this head very far in view of the obvious answer that amount must always be a matter for the registrar. As to part (ii.), although from one point of view his criticism might also be said to go to amount, he claimed as matter of principle that in any event the plaintiffs should only be allowed a reasonable time in which to find a new dredger. He suggested that two months rather than eight months was, in the circumstances, a reasonable time. His main objection that the damages claimed were too remote was the basis of this criticism under part (ii.), and extended to the whole of parts (iii.), (iv.), and (v.), and he asked that all of these three latter parts should be disallowed *in toto*. With this main objection I have already attempted to deal.

I have endeavoured to indicate in this judgment that my sympathy with the defendants is very considerable. I can imagine few things more maddeningly provoking than to be called upon, as a consequence of sinking a somewhat elderly dredger, to pay a sum amounting to more than twice her value when generously computed. I cannot, however, extend this sympathy to the point of doing violence to what I think to be the law of damages; and I was appositely reminded by Mr. Raeburn of a dictum of Scrutton, L.J. in *Banco de Portugal* v. *Waterlow and Sons Limited* (145 L. T. Rep. 362; 47 Times L. Rep. 359, at p. 361): "To that must be added the qualification that the plaintiff was not bound to injure himself, his character, his business, or his property to lessen the injury caused by the wrongdoer: (see *James Finlay and Co.* v. *N. V. Kwik Hoo Tong Handel Maatschappij*, 140 L. T. Rep. 389; (1929) 1 K. B. 400)." This seems to me to be particularly apposite in considering the conduct of the plaintiffs in the present case.

If the argument of the case by the respective counsel suffered somewhat from the fact that they were quite unable to agree as to the point to be argued, and therefore dealt each with their own contention rather than with that of the other side, the several arguments at least lacked nothing in incisiveness; but in spite of this it is pleasant to be able to record that an agreement was reached concerning one minor item. In the notice of motion, par. 5, it was claimed that an item in part (i.) of the claim relating to notarial fees had been abandoned before the registrar. Mr. Raeburn, for the plaintiffs, agreed that this was so and that the report should be amended by a deduction of the sum of 30*l*. 1*s*. 11*d*. I am afraid this sum is too

small to carry with it any consequences as to costs, and the motion will therefore be dismissed with costs.

Leave to appeal.

The defendants appealed.

Dickinson, K.C. and *Main Thompson* for the appellants. — The damages which have been awarded are not the natural and reasonable consequences of the collision, but arise solely from the respondents' lack of financial resources. The losses which have been sustained are not therefore the natural consequences of the negligence of the appellants. The registrar and Langton J. misdirected themselves in holding that any damages beyond the value of the vessel together with interest from the date of the loss could be awarded. [They referred to *Hadley* v. *Baxendale* (1854, 9 Ex. 341), *The Notting Hill* (5 Asp. Mar. Law Cas. 241 ; (1884) 51 L. T. Rep. 66 ; 9 Prob. Div. 105), *Polemis* v. *Furness Withy and Co.* (15 Asp. Mar Law Cas. 398 ; 126 L. T. Rep. 154 ; (1921) 3 K. B. 560), *The Philadelphia* (14 Asp. Mar Law Cas. 68 ; 116 L. T. Rep. 794 ; (1917) P. 101), *The Racine* (10 Asp Mar. Law Cas. 300 ; 95 L. T. Rep. 597 ; (1906) P. 273), *The Argentino* (11 Asp. Mar. Law Cas. 280 ; 101 L. T. Rep. 80 ; (1909) P. 236), *The Amerika* (13 Asp. Mar. Law Cas. 558 ; 116 L. T. Rep. 34 ; (1917) A. C. 38), *Gee* v. *Lancashire and Yorkshire Railway Company* (3 L. T. Rep. 328 ; 6 H. & N. 211), *The Mediana* (9 Asp. Mar. Law Cas. 41 ; 82 L. T. Rep. 95 ; (1900) A. C. 113), *Hobbs* v. *London and South-Western Railway Company* (1875, 32 L. T. Rep. 252 ; L. Rep. 10 Q. B. 111), *Speake* v. *Hughes* (89 L. T. Rep. 576 ; (1904) 1 K. B. 138), *H.M.S. London* (12 Asp. Mar. Law Cas. 405 ; 109 L. T. Rep. 960 ; (1914) P. 72), *The Valeria* (16 Asp. Mar. Law Cas. 25 ; 128 L. T. Rep. 97 ; (1922) 2 A. C. 242), *Weld-Blundell* v. *Stephens* (123 L. T. Rep. 593 ; (1920) A. C. 956), *The Empress of Britain* (1913, 29 Times L. Rep. 423), *Banco de Portugal* v. *Waterlow and Sons Limited* (145 L. T. Rep. 362), *James Finlay and Co.* v. *N. V. Kwik Hoo Tong H. M.* (17 Asp. Mar. Law Cas. 566 ; 140 L. T. Rep. 389 ; (1929) 1 K. B. 400), *The Columbus* (1849, 3 W. Rob. 158), *The City of Rome* (8 Asp. Mar. Law Cas. 542*n*), and *The Anselma de Larrinaga* (29 Times L. Rep. 587).

Raeburn, K.C. and *Noad* for the respondents.— The decision of the registrar and of Langton, J. was right. The question is not really a question of remoteness : the real question is whether the plaintiff took reasonable steps to minimise the damage. If such steps were taken the expenses incurred in so doing are recoverable. The respondents have not really been allowed any substantial sum for loss of profit, but they have been allowed expenses, *e.g.*, the hire of the dredger, which they reasonably incurred in order to protect their profit. [They referred to *The Kate* (8 Asp. Mar. Law Cas. 359 ; 80 L. T. Rep. 423 ; (1899) P. 165), *The Harmonides* (9 Asp. Mar. Law Cas. 354 ; 87 L. T. Rep. 448 ; (1903) P. 1), *Thames and Mersey Marine Insurance Company* v. *British and Chilian Steamship Company* (13 Asp. Mar. Law Cas. 221 ; 114 L. T. Rep. 34 ; (1916) 1 K. B. 30), *Société Anonyme de Remorquage à Helice* v. *Bennetts* (1911) 1 K. B. 243), *Davis* v. *Orwell* (1837, 7 Car. & P. 804), *Bodley* v. *Reynolds* (1846, 8 Q. B. 779), and *France* v. *Gaudet* (1871, L. Rep. 6 Q. B. 199).]

Dickinson, K.C. replied.

Cur. adv. vult.

Feb. 1.—**Scrutton, L.J.**—This is an appeal from a decision of Langton, J. (sup. ; (1931) P. 230), affirming the decision of the Admiralty Registrar as to the amount of damages to be paid by an American shipowner for sinking a dredger near the Port of Patras. The dredger was at the time employed by its owner in carrying out part of a contract with the Patras Harbour Authorities to build a large line of quay, quay wall and mole in the harbour of Patras. The dredger was not under any special charter ; no special sum was to be paid for its services ; the owner might have taken it away and substituted another dredger without any breach of contract ; the specification in the harbour contract was mainly concerned with the building construction, but it was essential to the building of the quay walls that the dredger should remove soil to a specified depth so that the foundations might be laid for the quay wall.

This is not a case of partial damage, which can be repaired, and a claim for the loss while the vessel was being repaired. It is a case of total loss, and in such a case the measure of damage laid down in *The Philadelphia* (14 Asp. Mar. Law Cas. 68 ; 116 L. T. Rep. 794 ; (1917) P. 101) is "the value of the vessel at the time of her loss, plus the proper net sum for profits or freights at the end of her existing charter." I discuss later the question whether those sums should not be included in the value of the ship at the time of her loss, instead of being added to it.

The actual figures awarded seem to me to suggest strongly that something has gone wrong in the working out of principles. Langton, J. says in his judgment : "I can imagine few things more maddeningly provocative than to be called upon, as a consequence of sinking a somewhat elderly dredger, to pay a sum amounting to more than twice her value when generously computed." The dredger *Liesbosch* was built in 1924 and purchased by her present owner in Holland in Oct. 1927 for 4000*l.*, 2000*l.* further being spent in getting her out to Patras. She began in Patras in Sept. 1927, and was sunk in Nov. 1928, being at that time insured by her owner for 5250*l.* The registrar has assessed her value at the time of loss—Nov. 1928—at a little over 9000*l.*, and has reached that conclusion by taking the figure for which, in June 1930, nineteen months after the loss, the Patras Harbour Board purchased a much older but larger dredger *Adria*, in order to sell her for the same sum to the contractor, he paying the price in instalments spread over four years. Why this sum is selected as the value of the *Liesbosch* in Nov. 1928 I find it difficult to understand. Instead of giving interest on the value of the *Liesbosch* in Nov. 1928 till the time of payment, which is one measure of damages, the registrar then gives interest on the sums he awards from the 11th May 1929 to time of payment. This date is taken as being the date when the owner signed a contract to hire the *Adria*, he having no money to buy her. Taking this date, the claimant does not get interest on the value of the dredger at the time of the loss from the date of the loss for the six-and-a-half months till he signs the contract for the hire of the *Adria* ; but he does get interest from the 11th May 1929 on a number of sums which he did not pay till long after, for instance, on the hire of the *Adria* from the 11th May 1929 to the 3rd July 1930. The oddities do not stop there, for the registrar then awards, in addition to the 9000*l.* value of the *Liesbosch* at the time of the loss, a sum of 10,000*l.* roughly more, or over 100 per cent. of the value apparently as loss sustained in the working of the construction contract.

The plaintiffs claim is under five heads.

I. is said to be the value of the *Liesbosch* at the time of loss, but is in fact the price of the *Adria* about twenty months later plus the expenses incurred in purchasing her. I have already said

I do not see how this can be the value of the *Liesbosch* at the time of her loss.

II. is the plaintiffs' expenses as contractor from the loss of the *Liesbosch* in Nov. 1928 to the hire of the *Adria* in May 1929. Of those about 400,000 drachmas are allowed, roughly a little over 1000*l.* These damages seem in fact to be that the staff and implements for the construction contract were lying idle during this period. On the evidence work could have been done in preparing the blocks for the quay walls, but the harbour authority would not allow it to be done because it would lock up capital by premature payments for the work done. This seems to me to be too remote a consequence of the loss of the *Liesbosch,* and to make the wrongdoer liable for the loss on a contract not exclusively concerned with the employment of the dredger. I deal with this later.

III. Expenses incurred during the hiring of the *Adria.* It is clear that the plaintiffs hired the *Adria* because they had no money to buy her. In doing so they spent in fourteen months about 5000*l.*, more than half the value assigned to the *Liesbosch,* and then had after all to buy the *Adria* at the end of the fourteen months at a price which must have been larger because its payment was spread over four years.

IV. The extra cost of working the *Adria* over the *Liesbosch.* On this head I do not understand how a claimant who has been given the value of his ship lost can also be given an extra sum because in working the ship which he buys he does not get the value of the old ship. The figure given for him for total loss should have taken into account all the direct loss he suffered by losing his ship and not have added to this part of the loss he claimed to have suffered by working his contract with the substituted ship. This might be relevant in cases of partial loss, but seems to me to have no relevance in cases of total loss.

V. Lastly, plaintiff claimed a proportion of the profit he expected to make under his construction contract lost because he was delayed six months in receiving it. The registrar has very properly cut down this claim substantially by only giving him a sum to compensate him for delay in receipt of profits, and not a sixth share of the profits themselves, arrived at by contrasting six months' delay with three years' contract construction time, but, as appears hereafter, I do not understand how the construction contract, which has no special terms relating to the remuneration for the work done by the *Liesbosch,* comes into this matter at all.

I have repeatedly said that so far as questions of fact are concerned the court should be very slow to interfere with the decision of the very experienced registrar and merchants (*The San Gregorio,* 1922, 12 Ll. L. L. Rep. 249; *The Susquehanna,* 17 Asp. Mar. Law Cas. 81; 135 L. T. Rep. 456; (1926) A. C. 655), but it is also clear that if the registrar purports to act on any principle of which the court disapproves, or if his decision of fact obviously conflicts with some principle of assessment, the court should interfere. It is, unfortunately, also true that until recently, possibly even at the present day, there is no very clear statement of the principles on which damage caused by collision is to be assessed in spite of a number of decisions on the point of the highest tribunal. I am emboldened to make this remark by the fact that as late as 1927 Lord Sumner in *The Chekiang* (17 Asp. Mar. Law Cas. 74; 135 L. T. Rep. 450; (1926) A C. 637) recognises the justice of a similar criticism, and devotes some time to the exposition of the measure of damages in the case of ships owned by the Crown or public bodies, usually not employed commercially. Having read the authorities I agree with Lord Atkin's remark in *The Susquehanna* (17 Asp. Mar. Law Cas. at p. 556; 134 L. T. Rep. at p. 50; (1925) P. at p. 210): "This is one of those cases dealing with damages which, in my experience, I have found to be a branch of the law in which one is less guided by authority laying down definite principles than in almost any other matter that one can consider."

I also note the remark of Lord Sumner in *The Susquehanna* (17 Asp. Mar. Law Cas. at p. 84; 135 L. T. Rep. at p. 459; (1926) A. C. at p. 664) that though in theory one would consider the loss of the shipowner, by inveterate practice which cannot be disturbed the ship is treated as the claimant and an isolated account taken as if the injured ship were the whole business of the shipowner. But generally, however, it is clear on the authorities that the measure of damages is the same in Admiralty and common law; and that it is the same in tort and breach of contract, except that in the latter case damages can be given in respect of circumstances which were in the contemplation of the parties at the making of the contract, which damages would not be given in tort.

The claims for damage to a ship by collision fall into two classes. (1) Where the ship is not lost but damaged so that for a time she cannot be used. (2) Where the ship is totally lost.

In each of these cases there may be a subdivision according as the injured ship is one commercially used for profit or is a ship used by bodies which do not carry on business to earn commercial profits, such as a dredger used by a Harbour Board, and used in their own work (*The Greta Holme,* 8 Asp. Mar. Law Cas. 317; 77 L. T. Rep. 231; (1897) A. C. 596; *The Marpesa,* 10 Asp. Mar. Law Cas. 464; 97 L. T. Rep. 1; (1907) A. C. 241), a lightship (*The Mediana,* 9 Asp. Mar. Law Cas. 41; 82 L. T. Rep. 95; (1900) A. C. 113), or a King's ship (*The Chekiang,* 17 Asp. Mar. Law Cas. 74; 135 L. T. Rep. 450; (1926) A. C. 637; *The Susquehanna,* 17 Asp. Mar. Law Cas. 81; 135 L. T. Rep. 456; (1926) A. C. 655). I refer to Lord Dunedin's and Lord Sumner's judgments for the discussion of these cases, and confine myself to the cases of ships commercially used whether for carriage of goods or for dredging.

Take, first, the case of damage to the ship other than total loss. The claimant is entitled to the cost of repairing the damage. But, besides the actual damage done to the ship, he has been prevented from using the ship to earn profits till the damage is repaired. How is this loss to be measured? This was the question considered by the House of Lords in *The Argentino* (6 Asp. Mar. Law Cas. 433; 1889, 59 L. T. Rep. 914; 14 App. Cas. 519). At the time of the collision the *Argentino* had an oral engagement to go to Messrs. Westcott's berth for a Black Sea round to Batoum, which engagement, owing to the collision, she could not fulfil, but when repaired she was put on Messrs. Westcott's Black Sea berth for Odessa, and a sum was claimed which was arrived at by estimating how much less the *Argentino* had earned by reason of the change of berths. The registrar and Lord Esher thought this damage too remote. The President, and the majority of the Court of Appeal—Bowen and Lindley, L.JJ.—held that it could be considered. Bowen, L.J. stated the principle thus: "The damages recoverable from a wrongdoer in cases of collision at sea must be measured according to the ordinary principles of the common law. Courts of Admiralty have no power to give more, they ought not to award less. Speaking generally as to all wrongful acts whatever arising out of tort

or breach of contract, the English law only adopts the principle of *restitutio in integrum*, subject to the qualification or restriction that the damages must not be too remote, that they must be, in other words, such damages as flow directly and in the usual course of things from the wrongful act. To these the law super-adds in the case of a breach of contract (or, to speak according to the view taken by some jurists, the law includes under the head of these very damages, where the case is one of breach of contract) such damages as may reasonably be supposed to have been in the contemplation of both parties at the time they made the contract as the probable result of its breach. With this single modification or exception, which is one that applies only to cases of breach of contract, the English law only permits the recovery of such damages as are produced immediately and naturally by the act complained of.

A collision at sea caused by the negligence of an offending vessel is a mere tort, and we have only therefore to consider what has been in the particular case its direct and natural consequence. This consequence (in the case of an innocent ship which is disabled by an accident) is that its owner loses for a time the use which he otherwise would have had of his vessel. There is no difference in principle between such a loss and the loss which the owner of a serviceable threshing machine suffers from an injury which incapacitates a machine, or the loss which a workman suffers who is prevented from earning money by the wrongful detention of plant which cannot at once be replaced. A ship is a thing by the use of which money may be ordinarily earned, and the only question in case of a collision seems to me to be, what is the use which the shipowner would, but for the accident, have had of his ship, and what (excluding the element of uncertain and speculative and special profits) the shipowner, but for the accident, would have earned by the use of her. It is on this principle alone that it is habitual to allow in ordinary cases damages for the time during which the vessel is laid up under repair in addition to the cost of the repairs themselves. But this is merely an application of the general principle, and is not the measure in all cases of the loss. It might conceivably, upon the one hand, be the fact that the damaged ship would not and could not have earned anything at all while laid up for repairs, though such a case must necessarily be exceptional. In such circumstances nothing ought to be allowed for demurrage. Upon the other hand, the direct consequences of the accident might be that the injured vessel was necessarily thrown out of her employment, not merely during the period of repair, but for a longer period still. In such a case the loss could not properly be measured by the time taken in repairs alone." It will be noticed that Lord Bowen excludes "uncertain and speculative and special profits which are sometimes described as too remote." This is the reason why fishing vessels are not allowed the profits they might have made on the voyage which the collision prevented them from making, and why in *The Philadelphia* (14 Asp. Mar. Law Cas. 68; 116 L. T. Rep. 794; (1917) P. 101), the claimant was not allowed anything for the fact that if the ship had completed the voyage which she was making at the time of the collision, she would have been in a place at a time when her market value was in fact much higher than it was at the time and place of the collision. Rise or fall of market is generally uncertain and speculative. I understand Lord Herschell, in affirming the decision of the majority of the Court of Appeal, to approve Lord Bowen's language, but to point out that the claimants could not have both the profits lost and demurrage for the days under repair, for this would be to give the same amount twice.

In the case of total loss of the ship the case seems to me quite different. The claimant has lost his ship and is entitled to be paid the value of his ship at the time of the loss, plus interest from the time of the loss, till he receives payment. And the value of the ship is not necessarily limited to the market value of the ship, the price at which it could be sold at the time of the loss. This is well illustrated by the judgment of Lord Gorell in *The Harmonides* (9 Asp. Mar. Law Cas. 354; 87 L. T. Rep. 448; (1903) P. 1). That vessel was a liner of peculiar construction profitably employed in a well-known line; but evidence was filed, and was probably accurate, that if put up for sale she would fetch 16,000*l.*; the owners said that to them, with that profitable line, and as a vessel suited to that line, she was worth 31,000*l.* Lord Gorell said: "The real test is what is the value of the vessel to the owners as a going concern at the time the vessel was sunk." I should add "at that place," for if the vessel had to be replaced at Patras expense and time might have been added to the cost of the vessel replaced.

But if this is the value of the ship to which the claimant is entitled, payable at the time of the loss, I do not see any room for the addition of profits on an existing contract which would have been made but for the loss. Suppose the lost ship is under a ten years' charter, is the claimant to have both the value of the ship as a going concern at the time of the loss, and the profits he would have made under the ten years' charter? The value of the ship is an estimate, or rough capitalisation, of the earning power of the ship for its life. You cannot give both the value of the ship and the profits it would probably earn. As Lord Herschell said in *The Argentino* (*sup.*), this would be giving the same amount twice. The fact that there is a ten years' charter, of course, must be considered in fixing the value of a going concern. It gives more certainty to the value, but is subject to the possibilities that the ship may be lost or the charterer go bankrupt. As Maule, J. remarks in *Reid* v. *Fairbanks* (1853, 13 C. B. 692): "The value of the ship is 3000*l.*, because she is capable of earning money by carrying goods or freight. When you pay a man for his ship you pay him for what it can or may, or shall do to produce profit."

In the present case the registrar has added to the value of the ship roughly 100 per cent. for loss of profit caused by its loss. Now it is to be noticed that this is not a case of a ship under a definite engagement at a fixed rate. The dredger has no charter and no time rate of remuneration. The owner had a profitable contract to do a large constructional work, some part of which required the use of a dredger, but he was under no obligation to employ this dredger; he could have sent her elsewhere and employed another dredger. A dredger was necessary to excavate a trench in which a wall could be built. Payment will be made according to work done, cubic measurement of earth excavated. There is not any time rate of payment for the dredger. This is very different from a profitable charter of the dredger. It is merely part of the plant, with a diver, a floating crane, and other machinery, employed in the performance of a much larger contract for an unseverable work. It is like the shaft of a mill in *Hadley* v. *Baxendale* (1854, 9 Exch. 341, 354), or in *British Columbia, &c., Saw Mill Company Limited* v. *Nettleship*, (3 Mar. Law Cas. (O.S.) 65; 1868, 18 L. T. Rep. 291; L. Rep. 3 C. P. 499), where loss

of or delay to the shaft was not held to involve liability for the loss of profits to the mill, of whose machinery the shaft formed part.

Another marked point of difference between the present case and the ordinary claim for total loss is that the owners adopted a very unusual and extravagant way of replacing the lost dredger. They at first could not afford, had not sufficient money, to pay for another dredger, and hired one at a very high rate compared with the assessed value of the lost dredger. After paying this high rate of hire for a considerable time they then bought the dredger they had hired at a price higher than the ordinary price, because payment was spread over four years. I am not aware that the poverty of the injured person has ever been allowed to increase damages for loss of property before. In cases of failure to deliver goods the measure of damage is the difference between contract and market price. I have never heard it suggested that if the injured person is too poor to pay the market price he can, therefore, increase his damages.

The learned registrar has found that the owners, in their " lack of liquid resources," took reasonable steps to perform their construction contract, and that such steps, and the attendant expenses, were direct and natural consequences of the collision.

Langton, J. treats the dredger as the main item of the owners' plant for the construction contract. Having carefully read the contract, I cannot understand this finding. The contract work largely consists of construction in which the dredger is not employed at all, once the foundation trench has been excavated. He holds the proper test to be what the plaintiff has lost, and whether the sums he has lost are the result of operations properly incurred. But what the owner has lost is his dredger. If the court gives him the value of his dredger at the time and place of the loss as a profit-earning dredger, and gives him interest on that value from the time of the loss till payment, I do not see any room for a further award of profits he has lost because he cannot effectively replace the dredger by reason of his poverty, or because a contract which requires the use of a dredger becomes less profitable because the owner is too poor to replace the dredger on ordinary market terms. I am of opinion that neither sums due to the existence of such a contract, nor extra expenditure due to the owners' poverty, are direct and natural consequences of the collision. Further, to give such sums, in addition to the value of the dredger as defined above, appears to me to be giving the value of the ship twice over, once in the capitalised value of the earnings of the ship, estimated at its present value, once as the extra expense incurred by the loss of the ship, which, in my view, is cured by giving the ship at the time of the loss its value at the time of the loss. If the owner says : " I have lost the ship, give me *restitutio in integrum*," the answer is : " You cannot have the ship back, it is lost, but you have 'its value to you as a going concern.' This restores you *in integrum*."

What, then, is to be done in this case ? The registrar has given the owner a value of the ship, 9000*l*.—half as much again as her original cost to him at Patras, more than half as much again as her insured value. This seems to me an ample measure of the dredger's value as a going concern. If, in addition, the owner is given interest from the time of the loss till the time of payment of the value, he is, in my opinion, replaced in his original condition ; any further payment arises from circumstances which are too remote to be the direct and natural consequences of the loss ; circumstances and profits which are, in the language of Lord Bowen, " uncertain and speculative and special profits."

As to costs, the defendants made no tender or payment into court, and must pay the costs of the reference. They must pay the assessed value of the *Liesbosch*, together with interest thereon from the time of loss to the time of payment. The defendants must have the costs of this appeal, and of the appeal to Langton, J.

Greer, L.J.—In my judgment this appeal must be allowed, and judgment entered as hereinafter stated. With all respect to the learned registrar and the judge, I think they have misconceived and misapplied the rules of law as to the measure of damages recoverable. Their judgments appear to me to be based on the assumption that a plaintiff who has suffered injury by tort is entitled to recover all the damage he has in fact suffered, diminished only to the extent to which he could by reasonable steps reduce such damage. In my opinion the true rule was as stated in his argument for the appellants by Mr. Dickinson. The damages recoverable in an action based on a tort whereby the owner of a chattel has been wholly deprived of it do not differ from the damages recoverable for breach of contract for non-delivery of a chattel, except that in the latter case they may be increased by the application of the second rule in *Hadley* v. *Baxendale* (1854, 9 Exch. 341, 354). In *Cobb* v. *Great Western Railway Company* (68 L. T. Rep. 483, at p. 485 ; (1893) 1 Q. B. 459, at p. 464) Bowen, L.J. states the law as follows : " The law is that the damages must be the direct and natural consequence of the breach of obligation complained of. The law is the same in this respect with regard both to contracts and to torts, subject to the qualification that in the case of the former the law does not consider too remote damages which may reasonably be supposed to have been in the contemplation of the parties when the contract was made." See also the judgment of the same Lord Justice in *The Argentino* (6 Asp. Mar. Law Cas. 348 ; 59 L. T. Rep. 914 ; 13 Prob. Div. 191). It is also well established that the principles which apply at common law to the measure of damage in cases of negligence apply just as much to the ascertainment of damages for negligence in the Admiralty Court as they do in the King's Bench Division. In *The Argentino* (6 Asp. Mar. Law Cas. at p. 351 ; 59 L. T. Rep. at p. 917 ; 13 Prob. Div. at p. 200) Bowen, L.J. uses these words : " The damages recoverable from a wrongdoer in cases of collision at sea must be measured according to the ordinary principles of the common law. Courts of Admiralty have no power to give more ; they ought not to award less. Speaking generally as to all wrongful acts whether arising out of tort or breach of contract, the English law only adopts the principle of *restitutio in integrum*, subject to the qualification or restriction that the damages must not be too remote, that they must be, in other words, such damages as flow directly and in the usual course of things from the wrongful act." And at p. 202 of 13 Prob. Div. he also says : " The questions, therefore, to be inquired into are two : the first, to what extent, if any, the vessel has been thrown out of employment by the accident ; the second, what would have been the fair earnings of a vessel such as the *Argentino* advertised to sail, as was the *Argentino*, on Messrs. Westcott and Laurence's line to Batoum, excluding, as I have said, everything in the nature of uncertain and speculative profits."

In *The Susquehanna* (17 Asp. Mar. Law Cas. at p. 83; 135 L. T. Rep. at p. 458; (1926) A. C. 655, at p. 661, Lord Dunedin says: "There is no difference in this matter between the position in Admiralty law and that of the common law, and the common law says that the damages due either for breach of contract or for tort are damages which, so far as money can compensate, will give the injured party reparation for the wrongful act and for all the natural and direct consequences of the wrongful act"; and at p. 669 Lord Blanesburgh refers to the rule of the common law "which must be followed in such matters." See also the speech of Lord Sumner in *The Amerika* (13 Asp. Mar. Law Cas. 558; 116 L. T. Rep. 34; (1917) A. C. 38).

If we apply in the present case, as we must, the rules of the common law applicable to damages occasioned by the plaintiffs being deprived by a breach of contract of the possession or use of a chattel, it seems to me that we must exclude from the computation all the losses which the plaintiffs sustained by reason of the fact that they were using and required their dredger for the purpose of performing a very special contract which they had made with the Port Committee of Patras.

The facts in *Hadley* v. *Baxendale* (*sup.*) are conveniently summarised in the 10th edit. of Mayne on Damages, at p. 10: "The plaintiffs owned a steam mill. The shaft was broken, and they gave it to the defendant, a carrier, to take to an engineer as a model for a new one. On making the contract the defendant's clerk was informed that the mill was stopped, and that the shaft must be sent immediately." The defendant delayed its delivery, and in an action for breach of contract the plaintiffs claimed as specific damages the loss of profits while the mill, as a result of delay, was idle. It was held that the defendant was not so liable, he not having been informed that a loss of profits would result from delay, or that the want of the shaft was the only thing that would keep the mill idle. It is quite clear in this case that the loss occasioned by the delay was the actual result of the delay in the circumstances in which the plaintiff was placed at the time of the breach of contract, and the case involves a decision that a result cannot be treated as a natural and direct result of the breach unless it is of a kind which would so result in the ordinary course of things.

What is known as the rule in *Hadley* v. *Baxendale* (*sup.*) is laid down in these terms: "We think the proper rule in such a case as the present is this: where two parties have made a contract which one of them has broken, the damages which the other party ought to receive in respect of such breach of contract should be either such as may fairly and reasonably be considered arising naturally, *i.e.*, according to the usual course of things, from such breach of contract itself, or such as may reasonably be supposed to have been in the contemplation of both parties at the time they made the contract, as the probable result of the breach of it." The second portion of the test has, of course, as Bowen, L.J. pointed out in the case already mentioned, no bearing on damages for tort. Applying this rule to the present case, I think it would exclude from consideration all the special damages claimed in respect of the loss occasioned to the plaintiffs by their inability to proceed with their contract, those being damages such as would not arise naturally according to the usual course of things from their being deprived of a dredger. This principle was applied in the case of *Gee* v. *Lancashire and Yorkshire Railway Company* (3 L. T. Rep. 328; 6 H. & N. 211) to a case where a claim was made for damages for delay in the delivery of cotton to a cotton mill, which in the circumstances in which the owner was placed at the time resulted in his mill being idle until the cotton was delivered. It was held that the plaintiff's inability to run his mill, though in fact it was the result of the breach, was not either the natural result in the usual course of things, or such as might reasonably have been supposed to have been in the contemplation of the parties.

The common law case which seems to be nearest to the present case is *Horne* v. *The Midland Railway Company* (28 L. T. Rep. 312; L. Rep. 8 C .P. 131). The facts are sufficiently stated in the headnote in these words: "The plaintiffs, being shoe manufacturers at Kettering, were under a contract to supply a quantity of military shoes to a firm in London for the use of the French army at 4*s.* a pair, an unusually high price. The shoes were to be delivered by the 3rd Feb. 1871, and the plaintiffs accordingly sent them to the defendants' station at Kettering for carriage to London in time to be delivered there in the usual course in the evening of that day, when they would have been accepted and paid for by the consignees. Notice was given to the stationmaster (which for the purpose of the case was assumed to be notice to the company) at the time that the plaintiffs were under a contract to deliver the shoes by the 3rd, and that unless they were so delivered they would be thrown on their hands; but he was not informed that there was anything exceptional in the character of the contract. The shoes were not delivered in London till the 4th Feb., and were consequently not accepted by the consignees, and the plaintiffs were obliged to sell them at 2*s.* 9*d.* a pair, which, in consequence of the cessation of the French war, was, apart from the previously-mentioned contract, the best price that could have been obtained for them, even if they had been delivered on the evening of the 3rd Feb. instead of the morning of the 4th." The defendants paid into court a sum which was sufficient to cover any loss which would occur in the ordinary course of things, but the plaintiffs further claimed the loss they had sustained by their inability to use the goods for the purpose of implementing their contract for shoes to be used for the French army. It was held by the majority of the court that this was not recoverable, as it was not such damage as might reasonably be considered as arising naturally from the defendants' breach of contract. Lord Blackburn (then Blackburn, J.) in the course of his judgment, says: "If a man contracts to carry a chattel and loses it, he must pay the value, though he may discover that it was more valuable than he had supposed. But when the damages sought to be recovered are not those which in the ordinary course of things would naturally arise, but are of an exceptional nature, arising from special and peculiar circumstances, it is clear that in the absence of any notice to the defendant of any such circumstances such damages cannot be recovered."

It is to be observed that in all these cases the damages which were sought to be recovered, and were disallowed, were damages which in fact the plaintiff suffered in the circumstances in which he was in fact placed at the time when the wrongful act was committed which deprived him of the use of his chattel, but it was held that as those damages were of an exceptional nature arising from special and peculiar circumstances, they were not recoverable.

It seems to me that all the damages claimed by the plaintiffs arising out of the hindrance occasioned to them by the loss of their dredger in performing

their contract with the Patras Port Committee were, to use the words of Lord Blackburn, of an exceptional nature arising from special and peculiar circumstances and they are irrecoverable in an action of tort, and would only be recoverable in an action for breach of contract if the party breaking the contract had notice at the time of the constract that such damages would be the probable result of a breach.

So far I have dealt only with the case at common law. I do not think there is anything in the decisions in the Admiralty Court inconsistent with the rule in *Hadley* v. *Baxendale* (*sup.*). If a shipowner be deprived of a ship which has a special value to him because he has got the benefit of a charter at a good rate of freight, and is not entitled to substitute another vessel to perform that charter, the damage which he suffers by losing his ship, and therefore losing his charter-party freight, is damage which arises naturally in the usual course of things, because it is the usual course of things for vessels to be chartered. The vessel's engagements at the time of the loss are part of the value of that vessel to the owner. In the strict sense of the words a vessel like a dredger has not got a market value. You cannot go into the market on any day and buy an exact substitute for it, especially if you lose it when it is in the middle of the Mediterranean Sea. If a seller of goods which cannot be obtained in the market fails to perform his contract, the buyer may use a sub-contract of sale which he has made at an enhanced price as evidence of the value to him of the article which by the seller's breach of contract he has been deprived of: (see *Borries* v. *Hutchinson*, 11 L. T. Rep. 771 ; 18 C. B. (N. S.) 445). It is clear that if a vessel which has been destroyed or delayed by the negligence of a defendant is under charter, what it would earn under the charter may be taken into account in estimating the loss occasioned to the owner by the temporary or permanent loss of his vessel : (see *The Philadelphia*, 14 Asp. Mar. Law Cas. 68 ; 116 L. T. Rep. 794 ; (1917) P. 101 ; *The Argentino*, 6 Asp. Mar. Law Cas. 433 ; (1889) 59 L. T. Rep. 914 ; 14 App. Cas. 519).

It seems to me that the right method of estimating the damages in this case is that the tribunal should ascertain the value to the owner of his vessel at the date of the loss, taking into account that it is a tool of his trade ordinarily used for the purposes of profit, and taking into account if such be the fact, the existing engagements of the owner with respect to the particular vessel, but excluding, to use the words of Bowen, L.J. everything in the nature of uncertain and speculative profits. The above method of estimating damages was the one which I think was used by Gorell Barnes, J. in *The Harmonides* (9 Asp. Mar. Law Cas. 354 ; 87 L. T. Rep. 448 ; (1903) P. 1), and by Sir Francis Jeune in *The Kate* (8 Asp. Mar. Law Cas. 539 ; 80 L. T. Rep. 423 ; (1899) P. 165), and the one which ought to have been adopted in the case under appeal. I do not think there is anything in the case of *Polemis* v. *Furness Withy and Co.* (15 Asp. Mar. Law Cas. 398 ; 126 L. T. Rep. 154 ; (1921) 3 K. B. 560) inconsistent with the above view. That case was concerned with the direct consequences of the wrongful act which occurred immediately after the act of negligence complained of. It was not concerned with consequences arising out of contracts made by a shipowner of a special nature giving rise to uncertain and speculative profits.

In my judgment the plaintiffs will be adequately compensated in accordance with the rules of law applicable to his claim for damages if he receives the sum of 9000*l*. as the value to him of the dredger at the date of its loss, together with interest at 5 per cent. to the date of judgment. I think the appeal should be allowed, the judgment set aside, and judgment entered for the sum arrived at by adding to the 9000*l*. 5 per cent. interest up to the date of this judgment, and that the appellants should be allowed their costs of the appeal to the judge, and of the appeal from the judge to this court.

Where I think the learned judge missed his true course in his very breezy judgment was that he paid no attention to the two principles which I have stated in the early part of this judgment, and seems to have thought that in questions relating to the measure of damage the Admiralty Court might pursue a course of its own.

Slesser, L.J. — I have read the judgments of Scrutton, L.J. and Greer, L.J. in this case. I agree with their conclusions and the reasons for those conclusions by them stated, which I do not repeat.

In my opinion it is impossible to say, in the circumstances of this case, that more should be taken into account as the direct, natural, and unexceptional consequences of the defendants' wrongful acts than the actual value to the plaintiffs of the dredger as such at the date of its loss, together with interest as stated by Scrutton, L.J. The appeal, consequently, must be allowed on the terms stated.

Appeal allowed.

Solicitors for the respondents, *Wm. A. Crump* and *Son.*

HIGH COURT OF JUSTICE.

KING'S BENCH DIVISION.

December 10, 11, 14 *and* 15, 1931.

(Before WRIGHT, J.)

C. Wilh. Svenssons Travaruaktiebolag v. Cliffe Steamship Company. (*a*)

Charter-party — Exception clause including "accident to hull" — Deck-load of timber "at charterer's risk"—Loss of deck cargo while loading—Negligence of master—Seaworthiness—Accident to hull—Whether shipowners protected—Claim for short delivery.

Under a charter-party the defendants' steamship was to proceed to specified ports and load pit props for delivery at one port of the East Coast of England as ordered by the charterers. Under the charter-party a full deck-load of props was to be carried "at charterers' risk," not exceeding what could be reasonably stowed or carried. The exception clause in the charter-party included "accidents to hull" even when occasioned by the negligence of the master or other persons employed by the shipowner, or for whose acts he was responsible. The steamship having loaded part of her cargo at one port proceeded to another port to complete loading. Some three slings remained to be placed on deck but owing to the vessel having a list to port the master, in spite of misgivings,

(*a*) Reported by R. A. YULE, Esq., Barrister-at-Law.

allowed them to be put aboard. The vessel then took a list to starboard when the deck cargo shifted, broke the bulwarks, and, then the vessel listing to port, the same thing happened on the port side, whereby a considerable part of the deck cargo was lost by falling overboard and being carried out to sea. The plaintiffs claimed damages for short delivery and alleged that the vessel was not seaworthy at the moment of the accident.

Held on the evidence, that the loss was due to the negligence of the master.

Held, however, that the ship was seaworthy to receive the cargo, and as the process of loading had not been completed there was no breach of warranty of seaworthiness.

Held, further, that, though the words in the charter-party "at charterer's risk" did not cover negligence on the part of the defendants or their servants, the words must be read in conjunction with the exception clause, and the defendants were protected by reason of an "accident to the hull" due to negligence, and there must be judgment for the defendants.

Action tried in the Commercial List without a jury.

The defendants were the owners of the steamship *Headcliffe.* Under a charter-party dated the 3rd Aug. 1929 the plaintiffs chartered the vessel, which was described as being of a carrying capacity 1550 cub. fathoms, 10 per cent. more or less, to "proceed to one or two places in the Skelleftea district as ordered by the charterers," and there load a cargo of pit props and deliver the same at one port on the East Coast of England, as ordered. By the terms of the charter-party the vessel was to be "provided with a deck-load, at full freight, at charterers' risk not exceeding what she can reasonably show or carry." The exception clause, clause (11), provided: "The act of God, enemies, restraints of princes and rulers, and perils of the sea excepted. Also fire, barratry of the master and crew, pirates, collisions, strandings and accidents of navigation, or latent defects in, or accidents to, hull and (or) machinery, and (or) boilers, always excepted, even when occasioned by the negligence, default, or error in judgment of the pilot, master, mariners, or other persons employed by the shipowner, or for whose acts he is responsible, not resulting, however, in any case from want of due diligence by the owner of the ship, or by the ship's husband or manager." The vessel loaded part of her cargo at Bjornsholmen and proceeded to Burea to ship the balance of the cargo. It was at Burea that the accident happened whereby a substantial part of the cargo was lost overboard and being carried out to sea could not be recovered. At the time of the accident the vessel had an under-deck cargo of 987 cubic fathoms and a deck-load of 514 cubic fathoms. The captain came aboard when the loading was nearly finished, on the 2nd Sept. 1929. At that time the vessel had a slight list to port—2 or 3 degrees—and the captain was doubtful whether he ought to take in more cargo. There were, however, some props lying alongside which had been rafted down in the ordinary course, amounting to three or four slings of about 1 ton each which the stevedore asked should be taken aboard and put on the starboard side. The captain acceded to the request and went into his cabin, and, while he was in his cabin, where he had been joined by the chief officer, the ship took a list to starboard and they heard the sound of timber falling overboard. What had happened was that the ship had taken a list to starboard, possibly hung for an appreciable time, and then the bulwarks in the forward part of the ship, where the loading was being completed, carried away on the starboard side and a large quantity of cargo was shot overboard. The ship then listed to port and the same thing happened on that side, the bulwarks on the port side carried away and cargo shot overboard. The cargo shot overboard was carried out to sea and lost. The charterers claimed for the value of the cargo so lost, and the questions were whether the cargo was lost by the unseaworthiness of the vessel, or, in the alternative, by the negligence of the master in the conduct of the loading; and, in either event, what was the position under the charter-party and the charter-party exceptions.

Van den Berg, K.C. and *H. Atkins* for the plaintiffs.

Le Quesne, K.C. and Sir *Robert Aske* for the defendants.

Wright, J., after stating the facts and reviewing the evidence, held that the accident was due to the negligence of the captain in the conduct of the loading of the deck cargo, and that the ship was unseaworthy, owing to the deck cargo being excessive. His Lordship continued:

What, then, are the consequences? In this charter-party there is no exception of unseaworthiness and, therefore, if my finding that the ship was unseaworthy in the sense that she was at the moment in question unfit safely to load and to carry the cargo which was put on board amounts to a finding that there was a breach of warranty of seaworthiness, the plaintiffs are entitled to recover. But the warranty of seaworthiness is not a continuing warranty. There is no suggestion here that at the beginning of the loading at Burea the ship was not. The trouble which arose followed from acts done in the course of loading at Burea, and those acts in no way affected the fulfilment of the initial warranty when the loading began. It is, however, contended by Mr. Van den Berg that at the moment of the casualty a new stage had begun—namely, the stage which comes on completion of loading—and that the vessel, having entered upon that stage, for this purpose was unseaworthy, because the conditions which I have found constituted unseaworthiness were in existence at the beginning of that stage and, therefore, that the plaintiffs must recover. That there are stages of unseaworthiness on a voyage is well established. In particular, it has been held that when a vessel is loading in port the first stage is on the beginning of the operation of loading, and the vessel must be at that stage fit to receive and hold the cargo in the conditions existing at the place of loading. When the loading is completed a new stage begins. Whether the next stage is one which involves the fitness of the vessel with the cargo on board to proceed on her voyage, or whether before that stage begins there is an intermediate stage at the beginning of which the vessel, though not fit to proceed on her voyage in the open sea, is still fit either to lie in the port or to proceed down some sheltered waters before she enters on the open sea must, I think, depend on the circumstances of the case. If it were necessary here to decide the question, having regard to the fact that this vessel was loading in an open roadstead, which, at least in certain winds, might be very dangerous, and would proceed to sea at once when the loading was

completed, it seems to me that the intermediate stage of waiting, or of proceeding in sheltered waters ought not to be held to exist, because it appears to me undesirable to multiply unduly stages of unseaworthiness unless the circumstances of the case require it. But there can be no doubt that there is, in a case like this, for the purpose of the warranty of seaworthiness, the stage which begins at the commencement of the loading and ends on the completion of loading, whereupon a new stage for the warranty of seaworthiness will begin.

The latest case on that point is *Reed and Co.* v. *Page, Son, and East Limited* (17 Asp. Mar. Law Cas. 231; 137 L. T. Rep. 77; (1927) 1 K. B. 743), and an earlier case is *Wade* v. *Cockerline* (1904, 10 Com. Cas. 47; affirmed (1905) Com. Cas. (C. A.) 115). In *Wade* v. *Cockerline*, Vaughan Williams, L.J. states the proposition, perhaps tentatively, in this way (10 Com. Cas. at 120): "It may be that there is a warranty of fitness of the ship to receive the cargo, and it may be that, after the goods have been received and have been stowed, before the ship sails away, there is a warranty that the ship is in such a condition as to be fitted safely to hold and keep the goods which have been stowed." Vaughan Williams, L.J. did not consider it necessary to express a definite conclusion on that point, because, as he went on to say, "in my opinion it is perfectly plain (in fact it is admitted) that this ship was in a condition which made her perfectly fitted for the reception of this cargo, and in my judgment, the accident which occurred, and which resulted in the loss of part of the timber which was being loaded, was an accident that occurred in this stage of the transaction—that is to say, in the course of the reception of the goods; and it matters not for the purposes of this decision what may be the warranty at the next stage, that is, at the stage when the stowed goods have to be held and taken care of after they have been stowed." He goes on to say: "In my judgment it is perfectly plain that she was fitted to receive this cargo. And it is equally plain that the operation of reception had not come to an end, and that we need not, therefore, trouble ourselves as to what warranties would arise at subsequent stages in the transaction." In *Reed and Co.* v. *Page, Son, and East Limited* (*sup.*), the principles which are stated tentatively in *Wade* v. *Cockerline* (*sup.*), are stated clearly and affirmatively by the Court of Appeal, where it was held, in the words of Scrutton, L.J. (17 Asp. Mar. Law Cas. at p. 240; 137 L. T. Rep. at p. 86; (1927) 1 K. B. at p. 743) "that the barge was unseaworthy as a barge from the time loading finished, unfit to lie in the river, and still more unfit to be towed."

The question here is whether the case falls within *Wade* v. *Cockerline* or *Reed and Co.* v. *Page, Son, and East*. That depends on the question whether the stage had been reached when the loading was completed. It has been contended very strenuously by Mr. Van den Berg for the plaintiffs, that that stage had been reached because, in his submission, loading for this purpose means simply the reception of the goods on board, and the moment the last parcel of cargo which it is intended to load is placed on the vessel the loading is completed notwithstanding the fact that some stowage may be necessary and may commonly be done. I do not think that that is the law. I think that in a case like this, and indeed in most cases, the mere reception or dumping down of the cargo on the ship does not involve the completion of loading, because I think the operation of loading involves all that is required to put the cargo in a condition in which it can be carried. In this case the operation of stowing the cargo was comparatively simple. The pit-props came up from the water in the ship's slings and were slung on to the deck. Then the sling was released, but before it was released, the sling was put in such a position that the props would fall in the proper direction—that is, lying fore and aft—and would more or less fall into their places. Some operation of stowing, however, was necessary in respect of each such sling—some props would not fall in the right position and would have to be straightened out, and the props generally would have to be arranged so that they would lie as closely as possible together with their round sides as neatly in contact as could be achieved. That was a small operation, no doubt, but it was done sling by sling before the next sling could come on board, and it had to be done in respect of the last load. It might only take one, two, three, or four minutes in respect of each sling load, but it was, in my judgment, a necessary part of the operation of loading. There has been some debate in and on the evidence whether that operation had actually been completed. On the whole, I am convinced that the operation of stowing the last sling load had not been performed, and, therefore, that the loading was not completed at the moment the accident happened. Indeed, it would be extremely artificial to hold that this accident occurred after the warranty that the ship was fit to receive and load the cargo had expired because, in my judgment, what caused the accident and all the trouble was the putting of these extra sling loads on board, and, in particular, the last sling load. It was the last straw, and it caused the ship, unstable as she was, to adopt the change of motion which led to the casualty. It seems to me that that happened, and must have happened, while the operation of loading was still *in fieri*. If it were necessary to decide the matter, but it is not, I should also hold that on the facts of this case the lashing was a necessary part of the operation of loading. The ship, as I have said, was lying in an open roadstead. Though the lashing is done by the crew, it is done immediately after the stevedores have finished their work—the crew were actually engaged in lashing the after-deck cargo when this accident occurred—and I think that it is an integral part of the operation of loading in the case of a vessel situated like this and lying with her deck cargo in an exposed roadstead. But it is not necessary to decide this point because I am satisfied that the operation of loading had not been completed, and that the second stage for the purpose of the warranty of seaworthiness had not been reached. I hold, therefore, that there was no breach of the warranty of seaworthiness, and the plaintiffs are not entitled to recover on that ground.

I have now, therefore, to consider the alternative claim based on the negligence of the officers of the ship. I have found that there was such negligence, and I must decide what effect is to be given to the exceptions in the charter-party. There are two exceptions to be considered. There is the exception "a deck-load at charterer's risk," and there is the series of exceptions contained in clause 11. Mr. Le Quesne (for the defendants) has contended that he is entitled to a wider protection by the former of these exceptions, and has submitted a very careful argument on that point. He relies on certain authorities, in particular on the language used by Bowen, L.J. in *Burton and Co.* v. *English and Co.* (5 Asp. Mar. Law Cas. at p. 189; (1883) 49 L. T. Rep. 768, at p. 769; 12 Q. B. Div. 218, at p. 222), who there says: "Now the words we have to construe are these: after providing in the earlier part of the charter-party that

the 'ship is to load from the factors of the merchant a full and complete cargo,' &c., &c., it states that 'the steamer shall be provided with a deck load if required at full freight, but at merchant's risk.' Now that is clearly a stipulation in favour of the shipowners, and *primâ facie* it seems to me meant to relieve them from the responsibility of some act of their servants by which they would otherwise be bound, and from the incidents of some risk which otherwise would fall upon them as carriers and under their contract of carriage. It would, I think, clearly cover improper jettison, also it would cover negligence of the captain or crew, occasioning stranding or collision, and any other acts, if any there be, of the servants of the shipowners for which they would otherwise be responsible." That is a dictum, because it was not necessary for the decision. The claim in that case was a claim by the charterers against the shipowners for a general average contribution, and it was held by the Court of Appeal that that right of contribution was not affected by those words of exception. But the dictum was, I think, accepted as giving the construction of these words in *Wade* v. *Cockerline* (*sup.*), by Kennedy, J., who says: "The true meaning of clauses of this kind in charter-parties is always so far open to question that I hesitate to use any expression of strong confidence with regard to my own view, but it seems to me, as at present advised, that if it were necessary, to decide the point there is no reason why I should not hold that the words 'at charterers' risk' cover the loss." Kennedy, J., however, goes on to say: "I am content to rest my judgment upon clause 7"—which is, substantially, if not entirely, identical with clause 11 in this case. He adds: "It seems to me that this clause, apart from any other provision of the charter-party, affords a complete defence for the defendants." When the case went to the Court of Appeal (10 Com. Cas. 115) there was an elaborate argument of this clause by Mr. Hamilton, as he then was, who contended that clause 7 did not apply to the deck cargo at all, and that the words "at charterers' risk" had to be construed as subject to a proviso that they were meant only to apply if the ship was not a cause of damage by negligence, especially as negligence was expressly dealt with in clause 7 of the charter-party. The Court of Appeal do not seem to have given any opinion on this argument but, like the trial judge, they decided the case on the express terms of clause 7, which they held applied. The learned reporter in his headnote says: "*Semble*, the owners were also protected by the words 'at charterer's risk,'" but I think it difficult to find that in the judgments. The argument of Mr. Le Quesne was based, apart from arguments of principle, on these authorities, where, in no instance, was the opinion expressed necessary to the decision of the case. Before I can accede to the argument I must take into account various authorities in the main, if not entirely, subsequent to these decisions relied on by Mr. Le Quesne. It is quite clear, in my judgment, on the authorities as they now stand, that the words "at charterer's risk," standing alone and apart from any other exception in the charter-party, do not excuse the shipowner in the case of a loss due to the breach of warranty of seaworthiness. That, if it needed authority, is clearly laid down by the Court of Appeal in *The Galileo* (12 Asp. Mar. Law Cas. 461, 464; 110 L. T. Rep. 614; (1914) P. 9), and I do not find any reason to qualify that conclusion by anything that I find in the decision of the same case in the House of Lords (12 Asp. Mar. Law Cas. 461; 111 L. T. Rep. 656; (1915) A. C. 199). The words "at charterer's risk" would clearly also not apply to damage occurring after a deviation. These limitations on the apparent generality of the words are, I think, too clear to need further discussion, and I think that the words, standing by themselves, have also to be read as limited to losses and damage where there has been no negligence on the part of the shipowner or his servants. That is clearly stated by Bankes and Scrutton, L.JJ., sitting as a Divisional Court in *Mersey Shipping and Transport Company* v. *Rea* (1925, 21 Ll. L. Rep. 375), and is deduced from the principles well established and laid down in the Court of Appeal in *Price and Co.* v. *Union Lighterage Company* (89 L. T. Rep. 731; (1904) 1 K. B. 412), Mr. Le Quesne, however, has argued that, though that is so if the clause stands by itself, yet, if there is an exception clause—such as clause 11 here and clause 7 in *Wade* v. *Cockerline* (*sup.*)—then the principles stated by Bowen, L.J., in *Burton and Co.* v. *English and Co.* (*sup.*) must be applied, and the words must be construed as giving some wider extension to an exception of negligence. For that he cites the authorities to which I have referred, and if those authorities were not simply matters of observation I should feel bound to follow them. But as they are matters of observation, it seems to me, applying the principles which I find in the authorities, I must hold that this argument fails and that the words "at charterers' risk," whether they are found alone or whether they are found in conjunction with an exception clause, such as clause 11 here, do not in themselves contain any exception of negligence. If they were to be construed in their isolation as involving an exception of negligence, then that exception would have to be construed along with the other exception clause, clause 11, because the general exceptions of the charter-party apply to a deck-cargo, where, as here, the cargo is carried with authority either express or by custom. If, on that view, the clauses were to be construed, the one as containing a wider exception of negligence and the other as containing a narrower exception of negligence, then, on the principle of *Elderslie Steamship Company* v. *Borthwick* (10 Asp. Mar. Law Cas. 24; 92 L. T. Rep. 274; (1905) A. C. 93), the shipowner would be only able to avail himself of the exception which was less beneficial to himself. On the other hand, if the words "at charterers' risk" are to be construed as subject, among other things, to a limitation of negligence, then I see no difficulty in reading those two clauses together, because the narrower clause is not a cutting down a positive provision, it can be read in connection with the words "at charterers' risk," and they can both be read so that the later clause (clause 11) receives full effect. Nor has clause 11 to be cut down by reason of the fact that the general clause "at charterers' risk" contains no exception of negligence, because that is not a matter of express language, but merely a matter of implication and the application of the ordinary rules of construction.

It seems to me, therefore, that the true position here is that the words "at charterers' risk" have to be read along with clause 11, and that the effect of reading the two together is to enable the shipowners to rely on clause 11, but that that is the full extent of the exception available for them. That is exactly the conclusion arrived at in *Wade* v. *Cockerline* (*sup.*) in the actual decision, and, therefore, I arrive at the position in which I simply follow that and apply that notwithstanding the arguments which have been put forward. A similar view has been adopted by Roche, J., in

Herbert Whitworth Limited v. *Pacific Steam Navigation Company* (1926, 25 Ll. L. Rep. 573).

There still remains the question whether clause 11 protects the shipowners in the circumstances of this case against the consequences of the negligence of their servants. The words relied on by Mr. Le Quesne here are primarily " accidents to hull," and I think he is entitled to succeed on those words. What happened here, in my judgment, was that the cargo was lost by reason of the carrying away, first of the starboard, and then of the port bulwarks, as the ship rolled from side to side. The impact of heavy timber carried away these protections, and the cargo shot overboard, and it seems to me that there was an accident to the hull just as there would have been if the cargo had escaped overboard through an aperture made by a collision. In this case the break in the protecting fabric of the hull was made by the cargo itself, and was due to the ship heeling over by reason of the negligent way in which she was being loaded. I hold, therefore, that the shipowner was protected by those words, and although the present case is not precisely covered by the decision of the Court of Appeal in *Wade* v. *Cockerline* (*sup.*), where the same words were held to apply, I think the circumstances are so analogous as to bring this case within the same principle. The defendants, therefore, are protected by those words.

That renders it unnecessary for me to consider further the submission of Mr. Le Quesne, which I merely mention so that, if necessary, it may be open to him, namely, that the words " accidents of navigation " apply. There is a good deal to be said for that argument, but, in my judgment, the word " navigation " in this connection ought to be limited to matters done in the handling of the ship, in what is naturally called navigation, that is to say when she is under weigh.

For the reasons I have stated, I think that the plaintiffs are met by the exception clause. The defendants are entitled to succeed on it, and there will be judgment for them with costs.

Judgment for defendants.

COURT OF APPEAL.

Jan. 12, 13, 14, 15, 18 ; *March* 17, 18 ; and *April* 11, 1932.

(Before SCRUTTON, LAWRENCE and SLESSER, L.JJ.)

China Navigation Company Limited v. Attorney-General. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Crown—Piracy in Chinese waters—Protection for British ships—Armed guards supplied by Government—Payment claimed by Crown—Liability of shipowners.

There is no legally enforceable duty on the Crown to protect British subjects from danger in foreign parts and to provide armed guards for British ships. Shipowners who require those services must pay for them if the Crown requires them to pay. The payment, when made, is sanctioned and controlled by Parliament in the Appropriation Act under the system of appropriations in aid under the Public Accounts and Charges Act 1891.

APPEAL by the plaintiffs from the decision of Rowlatt, J. dated the 19th May 1931.

The statement of claim set out that the plaintiffs were a British company incorporated and registered under the Companies Acts carrying on a shipping business in Far Eastern waters and conveying on their ships a large quantity of valuable cargo and large numbers of Chinese passengers. For many years there had been a great deal of piracy in the China seas, and the Crown had recognised that protection was necessary for these ships, and armed guards had been put on board by the Crown. By a letter written by the Admiralty on the 18th March 1930 the plaintiffs were informed that regular guards would only be supplied if paid for by the shipping companies in full. In reply the shipowners said they must under the circumstances accept guards from His Majesty's forces to be paid for in full, but did so under protest. The plaintiffs then brought an action against the Attorney-General claiming a declaration that the stipulations for the provision of protection against, and for the prevention of, piracy, sought to be imposed upon them by the letter of the 18th March 1930, were illegal and unenforceable against the plaintiffs and void ; further, that the plaintiffs were under no obligation to make any of the payments to or for the use of the Crown for which the stipulations provided ; and further, that so long as and whenever in the view of the Crown such protection was required, the plaintiffs were entitled to enjoy the same without making any specific payments therefor. By his defence the Attorney-General informed the court that His Majesty was not under any duty to provide armed guards or to use his naval or military forces for the purpose of preventing the outbreak of internal piracy on British ships ; and that certain armed guards had been from time to time provided on the request of shipping companies upon the terms that the whole cost thereof should be paid by the shipping companies, including the plaintiffs.

Rowlatt, J. held that the action was misconceived, and gave judgment in favour of the Crown.

The plaintiffs appealed.

Sir *Leslie Scott,* K.C. and *Valentine Holmes* for the appellants.

Sir *Thomas Inskip,* K.C. (A.-G.), Sir *William Jowitt,* K.C. ; Hon. *S. O. Henn Collins,* K.C., and *Wilfrid Lewis* for the respondent.

Cur. adv. vult.

Scrutton, L.J.—An English shipping company carrying passengers and goods on the coast of China desires protection from the British military forces against what may be called " internal piracy." It receives for payment large numbers of Chinese passengers. Some of them coming on board under pretence of being passengers, but with the intent of robbery, during the voyage attack and overpower the ship's officers and rob the ship. Various means have been suggested for meeting this danger. For some time under Hong Kong Ordinances the local police supplied Indian guards for which the shipowners paid ; but the shipowners

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law.

came to the conclusion that such guards were inefficient. The British authorities suggested convoy by naval forces, but the owners of fast ships objected that their operations were handicapped by the slow pace of the convoy of inefficient ships. The local authorities favoured a grille system, which might enable armed officers to defend themselves in a kind of fortress till assistance arrived; but the shipowners argued that the grille, if strictly worked, interfered with the working of the ship, and, if worked with less rigid precautions, was of no use. The system then tried was to put a small military guard of British soldiers in each ship; but the British forces in the locality were not numerous enough to supply a guard for each ship. Some 200 British ships were concerned, and the appellants calculated that they alone wanted 200 men. At first the British authorities provided free such soldiers as they did provide, though in some cases the shipowners furnished the food. Ultimately, after the highest authorities had been consulted, by a letter of the 18th March 1930, the shipowners were informed at first that regular guards would only be supplied if paid for by the shipping companies in full. By a letter of the 26th March 1930, the shipowners said they must, under the circumstances, accept guards from His Majesty's forces to be paid for in full, but did so under protest. The Government required the companies, before guards were supplied, to give a written assurance of agreement to the conditions as to cost and liability on the terms of a document of the 28th March 1930, and payments were made accompanied by letters similar to that of the 19th June 1930.

The shipowners now bring, not a petition of right to recover the money paid, as paid under illegal duress, but an action against the Attorney-General for four declarations alleging in substance that the Crown has no authority to demand money for providing protection against piracy, the shipowners being entitled to require the Crown to provide the necessary protection without payment. Rowlatt, J. decided in favour of the Crown, and the shipowners appeal.

The argument before this court took rather a different course from that before the judge below. As I understand, the argument below was mainly that the Crown was under a duty to supply protection and could not demand money payments for performing their duty. The argument begins with the very general statement in *Calvin's* case (4 Co. Rep., p. 8): "For as the subject oweth to the King his true and faithful ligeance and obedience, so the sovereign is to govern and protect his subjects," which in turn is founded on a passage in Glanville as to the relation between the landlord and his tenant by homage. Henry II. would, I think, have been surprised to hear that, if his tenant went to China, the King was bound to follow and protect him. The argument then relied on the authorities cited by Atkin, L.J. in his dissentient judgment in *Glamorgan County Council* v. *Glasbrook Brothers* (131 L. T. Rep. 322; (1924) 1 K. B. 879), such as *Dew* v. *Parsons* (2 B. & Ald. 562), *Morgan* v. *Palmer* (2 B. & C. 729), and *Steele* v. *Williams* (8 Ex. 625), where public officials demanded fees not authorised by Parliament for performing their duty. The argument also relied on the post-War cases in which controllers, who had the duty to grant licences, affixed to them conditions of payment not authorised in the statutes appointing them; see *Attorney-General* v. *Wilts United Dairies Limited* (127 L. T. Rep. 822) as to the Food Controller; the case of the Shipping Controller, *Brocklebank (T. and J.) Limited* v. *The King* (16 Asp. Mar. Law Cas. 415; 132 L. T. Rep. 166; (1925) 1 K. B. 52); and also *Southwark Borough Council* v. *Partington Advertising Company* (3 L. G. R. 505). Rowlatt, J. distinguished these cases as relating to persons who had a duty legally enforceable, whereas there was no duty legally enforceable against the Crown to afford protection, especially in foreign countries. Indeed, counsel for the shipowners agreed that the courts could not control or review the discretion of the executive as to the method in which the Crown should afford protection, if any, but argued that, if the Crown did afford protection, it must be because it was necessary, and for necessary protection no payment could be required.

I entirely agree with the view of Rowlatt, J. that there is no legal duty on the Crown to afford by its military forces protection in foreign parts of British subjects. A missionary, in self-sacrificing devotion to his religious views, goes without the consent of the Crown into savage countries inhabited by tribes who strongly object to the missionary denouncing their religion. Has the Crown any duty to follow and protect the missionary and send armed forces to rescue him from his self-imposed danger? A shipowner without the assent of the Crown trades for purposes of his own profit in neighbourhoods inefficiently policed by foreign governments; for his profit he takes on board large numbers of foreign passengers going on the high seas, or up a navigable river, to a foreign port. He is unable to control these foreign passengers or guarantee their peaceful intentions. Has the Crown a legal duty to protect the shipowner against the criminal action of the passengers whom the shipowner himself has invited aboard? It is said, on the one hand, that a British ship on the high seas, or on the Yangtse, is British territory, and that the Crown must protect British subjects in British territory; on the other hand, that the protection asked is against anticipated danger which may never occur and which results from the act of the shipowner himself in taking evilly disposed passengers on board, and not against actual danger in existence.

Counsel for the shipowners used the same dilemma which Atkin, L.J. unsuccessfully used in *Glasbrook's* case (*sup.*). He says (131 L. T. Rep. at p. 329; (1924) 1 K. B. at p. 899): "If the request [for special protection] is one which is improper, they should not comply with it. If they do comply with it, they accept it as a proper means, though possibly not the best means of performing their duty." The majority of the House of Lords objected to being impaled on this dilemma. Lord Cave, L.C. said (132 L. T. Rep. at p. 613; (1925) A. C. at p. 279), after reading the dilemma: "With great respect to the learned Lord Justice I am disposed to think that this reasoning rests on an ambiguous use of the word 'duty.' There may be services rendered by the police which, although not within the scope of their absolute obligations to the public, may yet fall within their powers, and in such cases public policy does not forbid their performance." Lord Finlay, after again citing the passage of Atkin, L.J., says (132 L. T. Rep. at p. 616; (1925) A. C. at p. 287): "I think that this argument, like most arguments put in the form of a dilemma, fails to cover the whole ground. There was no duty on the police to give the special protection asked for, but it does not follow that it was their duty not to give it." In the same way the King, as head of the Army, may think this a way of affording protection which, in view of other calls on the Army, he is not able to afford except on the terms that those who ask for this special and

extravagant form of protection for enterprises which they themselves have selected without any authority from the King shall pay for the protection that they want for the dangerous enterprises which they themselves have chosen to enter upon for their private profit. Because every jeweller who leaves valuable jewelry at night protected only by a plate-glass window against smash-and-grab raids is in danger of robbery, are the police bound to keep a policeman outside every jeweller's shop, or can they say: "If you want this kind of individual protection, you, the individual, must pay for it"? Because every owner of a motor car who uses the street as a garage and leaves his car unprotected runs the risk of losing it, are the police under a legal duty to keep a policeman in charge of every car which the owner has left in self-created danger, or may the police authorities say that if this kind of special protection is wanted and can be afforded the individual must pay for it? The House of Lords accepted the second alternative in *Glasbrook's* case (*sup.*).

In my opinion, there is no legally enforceable duty to protect British property from danger in foreign parts. The remedy, if any, is pressure brought by Parliament on Ministers either to take diplomatic action or otherwise to protect British subjects. Britons fortunately are enterprising people accustomed to look after themselves; to suggest a duty on the British Government to follow adventurous Britons all over the world into places where their personal wishes or adventures have taken them and to protect them from the difficulties into which they have got themselves, does not represent a legal duty of any kind.

Before this court, while the question of duty to protect as correlative with allegiance was argued, more stress was laid on the argument that the Crown had no authority to demand payment for the use of its armed forces. Rowlatt, J. did not deal with this argument, but treated what he called "using the forces for reward" as a matter to which no objection could be taken. The important question was thus raised in this court as to the exact powers of the King as head of the Army, whether his Majesty by his prerogative could regulate the Army as he pleased, so far as he was not expressly restrained by the Army Act, or by the financial provisions of the Appropriation Act, or whether the position was not that the King as head of the Army could only incur such expense and take such action as was authorised by statute, and especially could not demand money for protection afforded by his armed forces, which was said to be imposing a charge on the subject without the authority of Parliament. But, if there was no duty to afford anticipatory protection in foreign parts, no charge was imposed on the subject, because he was not bound to accept the protection, and need not pay money unless he asked for protection, which the Crown was under no duty to afford him. I am reluctant to discuss the matter under the head of "Prerogative," because, as Professor Dicey said, the word introduces the political controversies of an earlier age as to whether the Sovereign had some power which could not be superseded, regulated, or abolished by Act of Parliament. Professor Dicey treats the prerogative as "the name for the residue of discretionary power left at any moment in the hands of the Crown, whether such power be in fact exercised by the King himself or by his Ministers. Every act which the executive Government can lawfully do without the authority of the Act of Parliament is done by virtue of the prerogative." Now, it is clear that there is a wide margin of executive acts done by the King or his Ministers in relation to the administration of the Army which the courts of law will not interfere with or control. The Statute Law Revision Act of 1863 left unrepealed that part of the preamble of the Act of 1660 (13 Car. 2, c. 6) which recited that "within all his Majesties realmes and dominions the sole supreme government command and disposition of the Militia and of all forces by sea and land and of all forts and places of strength is and by the lawes of England ever was the undoubted right of his Majesty and his Royall predecessors Kings and Queenes of England and that both or either of the Houses of Parliament cannot nor ought to pretend to the same." Lord Haldane, in Halsbury's Laws of England (vol. 25, p. 37, s. 69), cited this preamble as the authority for his statement that "the government of the forces is vested in the Crown, who has power to make regulations as to command and administration." As Lord Kenyon said in *Macdonald* v. *Steele* (Peake 175), where an officer was asking the paymaster-general for his half-pay, "His Majesty's pleasure supersedes all inquiry, as he has the absolute direction and command of the Army." The courts have repeatedly refused to intervene in questions of pay and service, though the Royal Warrants appear to entitle the claimant to what he asks the court to give him. This is so, whether the claimant asks relief from the King or from the executive officer. Colonel Mitchell, in *Reg.* v. *Secretary of State for War* (64 L. T. Rep. 764; (1891) 2 Q. B. 326), demanding half-pay under a warrant, failed against the Secretary of State for War on the ground that there was no obligation on the Secretary except to the Crown, and that "there is no obligation upon the Crown to make this allowance recognised by the law." He also failed in *Mitchell* v. *The Queen*, cited on petition of right against the Crown. Lord Esher said (1896, 1 Q. B. 121): "An officer cannot, as between himself and the Crown, take proceedings in the courts of law in respect of anything which has happened between him and the Crown in consequence of his being a soldier. The courts of law have nothing to do with such a matter." This is because the administration of the Army is in the hands of the King, who unless expressly controlled by an Act of Parliament cannot be controlled by the courts. Similar decisions are found in *Gidley* v. *Lord Palmerston* (3 Br. & B. 275); *Re Petition of Right of T. J. Tufnell* (34 L. T. Rep. 838, at p. 841; 3 Ch. Div. 164, at 176); and *Dunn* v. *The Queen* (73 L. T. Rep. 695; (1896) 1 Q. B. 116), where it was held that a servant of the Crown, though expressly engaged for a fixed term of years, could be dismissed without notice at the pleasure of the Crown; *Kinloch* v. *Secretary of State for India in Council* (47 L. T. Rep. 133; 7 App. Cas. 619); and *Grant* v. *Secretary of State for India* (37 L. T. Rep. 188; 2 C. P. Div. 445).

The constitutional aspect of the financial side of the question was more fully explored in this court than it had been below. The court was anxious to ascertain exactly in what kind of cases the Crown received money for the sale or use of Crown materials, or for the services of members of the national forces, and under what authority and how the sums so received were dealt with in the national accounts. In consequence the hearing was adjourned, and the Attorney-General supplied us with two detailed memoranda as to the Navy and Army respectively. Counsel for the appellants did not discuss in detail the Navy papers, as he appeared to take the view that the prerogative of the Crown in respect of the Navy was much wider than that, if any, in regard to the Army, owing to the historical circumstances connected

with the Revolution of 1689 and the Bill of Rights in connection with a "standing Army."

In the case of the Navy it was obvious that the Admiralty constantly received payments from outsiders, foreign Governments, or British and foreign subjects, for work done or services or materials supplied to those outsiders; and that the Admiralty so acted without any express authority from statutes, though the sums which they received were dealt with in the Appropriation Act as stated hereafter. For instance, the Admiralty charter the Navy oil-tankers to private individuals for reward when they are not required for Navy services, and there is no statute authorising such action. The most interesting question is that of salvage. In *The Mary Ann* (1 Hagg. 158) Lord Stowell had said "although there is an obligation upon King's ships to assist the merchant vessels of this country, yet, when services have been rendered, those who confer them are entitled to an adequate reward." That statement was limited in later years by the statutes requiring that no salvage reward should be claimed without permission of the Admiralty. It was also made more precise by the decision in *The Cargo ex Ulysses* (6 Asp. Mar. Law Cas. 354; 60 L. T. Rep. 111; 13 Prob. Div. 205), where the court said that it would not treat the presence of a King's ship protecting against actual pirates or robbers as salvage service, but did treat the presence of guards and sentinels not on the King's ship but on a wrecked ship to guard against pirates or robbers who might attack, and of members of the Navy salving cargo from maritime perils, as entitling them to salvage reward. This was not the case of a claim for salvage service and remuneration under an agreement made, not when perils were actually endangering the ship, but in anticipation that such perils might arise. The question of King's ship salvage was not exhaustively discussed before us, but will be found so discussed in Kennedy on Civil Salvage, pp. 112 to 118. The Admiralty render services to private persons and companies in time of civil commotion for payment. A similar series of payments to the War Office for the supply of materials and men is set out in the Army Memorandum. None of these payments are required or protected by express statutory authority; all are said to be justified by the uncontrolled discretion of the King as head of the Army. in matters under which he is under no express statutory restriction, such as the requirement that he shall not employ more men or spend more money than Parliament authorises. He need not employ all these men or spend all the money that Parliament authorises. The matter is left to the uncontrolled discretion which he exercises by his Ministers. The courts cannot question it, though Parliament by vote of no confidence, or pressure in Parliament, may influence it.

The financial side of the matter, the question of imposing a charge on subjects without the consent of Parliament, is illuminated by two memoranda from the Treasury produced to us during the second hearing. The first sets out the way in which receipts for services rendered by the Army and Navy have been dealt with during the last 120 years. After much discussion, the system was put on a statutory footing by the Public Accounts and Charges Act 1891. Sect. 2 deals with all such receipts as appropriations in aid, under the direction of the Treasury, of money provided by Parliament for any purpose, and as such they are so applied and audited and dealt with. The suggestion that such receipts are not authorised by Parliament disappears. The second memorandum shows in detail in the case of a payment by the present appellant company, for services similar to those the subject of the present appeal, the progress of the particular payment through the various revenue authorities, till at last it is sanctioned as an appropriation in aid under the head "Miscellaneous Receipts" by the Appropriation Act for the year, and this is devoted to the relief of the sum voted by Parliament.

I am, therefore, of opinion that the appeal fails on the following grounds: (1) That there is no duty enforceable by the courts on the Crown to render the services for which the appellants ask. The matter is one for the uncontrolled discretion of the King as head of the Army, both as to whether he shall afford such protection against such anticipated, not actual, danger, and as to the terms on which he should afford it. (2) There is no compulsion on the appellants to make the payment of which they complain; but if they want the services they must pay for them if the King requires them so to pay. (3) The payment, where made, is sanctioned and controlled by Parliament in the Appropriation Act under the system of appropriations in aid under the Act of 1891.

The appeal must be dismissed with costs.

Lawrence, L.J.—The plaintiff company is an English company incorporated under the Companies Acts and carries on an extensive shipping business in Chinese and neighbouring waters. These waters have for some considerable time past been infested by Chinese pirates, and frequent piratical attacks have been made on ships belonging to the plaintiff company and other owners both from without and within the ships. An important part of the plaintiff company's business consists of carrying Chinese passengers travelling from one port to another along the coast, and the plaintiff company and other owners have found it difficult to prevent pirates from coming on board their ships in the guise of passengers and then overpowering the master and crew and taking forcible possession of the ship and her cargo.

Various expedients for preventing this form of piracy having been tried in vain, the plaintiff company and other owners (being unwilling to give up the Chinese passenger traffic, which constituted a valuable section of their trade) in the autumn of 1928 approached the military authorities in Hong Kong and London and urgently requested them to provide military guards to be carried on their ships. In response to such request the military authorities in the month of Oct. 1928, while maintaining that the defence of ships against internal piracy was essentially a matter for the owners to deal with, eventually agreed as a temporary emergency measure to provide armed guards on as many British ships carrying Chinese passengers as was reasonably practicable in view of the limited number of soldiers at their disposal on the China station. In making this provision the authorities pointed out that these protective measures could not be continued indefinitely and that shipowners should themselves take adequate measures for internal defence. As about 200 British ships were engaged in the China trade, and the plaintiff company alone would have required about 200 soldiers adequately to guard all their ships, it was obviously impracticable for the military authorities to provide armed guards for more than a small proportion of the total number of ships requiring them. At first no charge was made to the shipowners for providing these guards beyond the additional expenditure over and above the normal cost of the guards. Later on, in the month of Dec. 1928, the military authorities notified the

shipowners that the provision of guards would be continued for a period of six months as from the 1st Nov. 1928, on the conditions then in force, but that if military guards were required after that date the full cost of providing them must be met by the shipping interests concerned.

Early in 1930 the military authorities, after informing the shipowners that it had been decided to reduce the strength of the British garrison in the China command by one battalion from Hong Kong at the end of Feb. 1930, and that consequently it would be necessary to reduce considerably the number of military guards available in British ships, notified the shipowners that it was the declared policy of His Majesty's Government that all military guards should be withdrawn on the 1st April 1930, and that consideration must be given by the shipowners to the steps which they were prepared to take for providing guards from other sources.

The plaintiffs and other shipowners protested against this decision and requested the authorities to reconsider it and to continue the supply of military guards after the 31st March 1930. In the month of March 1930, the commander-in-chief on the China station notified the shipowners that, in view of the fact that the shipping companies concerned were then engaged in working out details for the formation of a properly trained force for the prevention of piracy of their vessels, His Majesty's Government had reconsidered its attitude to the extent that it had decided to sanction a further extension of the provision of military guards for a definitely limited period, subject (*inter alia*) to the condition that any guards supplied after the 31st March 1930 must be paid for in full.

The plaintiffs and other shipowners at first protested against the condition of paying for the military guards in full, but ultimately submitted to that condition and agreed to pay, and, in fact, paid in full for all military guards supplied to them after the 31st March 1930. The plaintiff company, after having made that agreement, commenced this action against the Attorney-General, alleging that the agreement was made under compulsion and asking the court to declare that the condition imposed upon the plaintiff company by the Crown of paying for the military guards was illegal and unenforceable, and that the plaintiff company was under no obligation to make any such payment.

The first ground on which the plaintiff company bases its claim is that the Crown has provided the military guards in fulfilment of the common law duty which it owes to its subjects, and that in the absence of express statutory sanction it is not entitled to demand any payment as a condition of fulfilling that duty. Sir Leslie Scott's contention on this branch of the case was that the King, both as liege lord and as defender of the realm, was by the common law under a duty to protect the lives and property of his subjects and to defend his realm and every part of it (including British ships wheresoever they might happen to be) against attacks by enemies.

In support of the proposition that the King owed such a duty as liege lord the following authorities were cited: (1 Blackstone, p. 354): "Allegiance is the tie or ligament which binds the subject to the King in return for that protection which the King affords the subject"; *Calvin's* case (4 Co. Rep. at p. 5*a*), "ligeance is the mutual bond and obligation between the King and his subjects, whereby subjects are called his liege subjects, because they are bound to obey and serve him; and he is called their liege lord, because he should maintain and defend them"; and *Reg.* v. *Keyn* (2 Ex. Div. 63, at p. 236): "According to the doctrine of Lord Coke in *Calvin's* case (*sup.*) protection and allegiance are correlative." Counsel also referred to *Re Johnson* (88 L. T. Rep. 161; (1903) 1 Ch. 821) and *Markwald* v. *Attorney-General* (122 L. T. Rep. 603; (1920) 1 Ch. 348) on this point.

In support of the proposition that by the common law the King owed a duty to the plaintiff company to defend its ships against internal piracy Sir Leslie Scott cited the following authorities: *Attorney-General* v. *Tomline* (42 L. T. Rep. 880, at p. 883; 14 Ch. Div. 58, at p. 66), which was a case dealing with the King's duty to defend the realm from the encroachments of the sea: "It is said by Lord Coke, who is a great authority, in the case of *Isle of Ely* (10 Rep. 141*a*), that by the common law 'the King ought of right to save and defend his realm as well against the sea as against the enemies that it should not be drowned or wasted'—that is to say, there is a duty on the King, by reason of his being King, to defend his realm, and therefore, of course, all his realm and every part of his realm"; *Reg.* v. *James Anderson* (19 L. T. Rep. 400; 1 C. C. R. 161, at p. 163): "It has been decided that a ship, which bears a nation's flag, is to be treated as a part of the territory of that nation. A ship is a kind of floating island"; Hawkins's Pleas of the Crown (vol. 1., cap. 20, p. 251): "A pirate is one who, to enrich himself, either by surprise or open force, sets upon merchants or others trading by sea, to spoil them of their goods or treasure; and he is called *hostis humani generis*"; the Army Act, s. 190, sub-s. (20): "The expression 'enemy' includes all armed mutineers, armed rebels, armed rioters and pirates"; *Attorney-General for Hong Kong* v. *Kwok-a-Sing* (29 L. T. Rep. 114, at p. 117; L. Rep. 5 P. C. 179, at p. 200), where it was held that passengers as well as mariners who violently dispossess the master and carry away the ship or any part of the cargo are pirates. It is contended that these authorities support the proposition that as by the common law it is the duty of the King to defend every part of his realm against enemies, and as every ship belonging to the plaintiff company (being part of the territory of England) is a part of the King's realm, and as all pirates are enemies, so the King ought of right to defend the plaintiff company's ships against piratical attacks by the passengers carried in those ships.

It is admitted by Sir Leslie Scott that the manner in which the King should perform this alleged duty is entirely in his discretion; that it is for the King to say whether any case for its exercise has arisen and in whose favour it ought to be exercised, and that the King could not be compelled by any process of law to perform it: "It is a duty of what is called imperfect obligation. Supposing that the King were to neglect that duty, I know of no legal means—that is, no process of law—common law or statute law—by which the Crown could be forced to perform that duty, but there is that duty of imperfect obligation on the part of the Royal authority": per Brett, L.J. in *Attorney-General* v. *Tomline* (42 L. T. Rep. at p. 883; 14 Ch. Div. at p. 66).

Whatever may be the extent of the duty which the King owes as liege lord or as defender of the realm—and I do not propose to attempt to define the limits of that duty—I am clearly of opinion that it does not extend to the provision of military guards for the plaintiff company's ships in the circumstances of the present case. If the aid of the armed forces of the Crown were available and were required in order to defend a British ship which was actually being attacked by pirates at the time, entirely different considerations would arise. That, however, is not the case here; the plaintiff

company, realising that if it continues the Chinese passenger traffic such continuance will almost certainly lead to further internal piracy, but being unwilling to discontinue that traffic, has asked the Crown to provide military guards in order to assist its officers and crews in controlling the persons whom it intends to invite to become passengers in its ships and in preventing those passengers after they have been taken on board from committing piracy; in other words, has asked the Crown by means of its armed forces to assist it to continue its Chinese passenger traffic with more safety, and thus enable it to earn the resulting profit. In the circumstances I entirely agree with the view expressed by the Crown to the shipowners that the provision of preventive measures against internal piracy is essentially a matter for the owners and forms no part of the duty of the Crown. It would, I think, be stretching the duty of the Crown beyond all reasonable limits to hold that it extended to providing military guards on ships belonging to private traders engaged in the Chinese passenger traffic in view of the fact that such traders are free to continue or discontinue this traffic as they please, and that the Crown has no right to control or interfere with the manner in which that business is conducted. I know of no authority which lends countenance to the suggestion that it is the duty of the King, either as liege lord or as defender of the realm, to provide military guards for the protection of a ship which her owner voluntarily takes into foreign ports with the intention of embarking passengers, some of whom to his knowledge may turn out to be pirates in disguise.

In the result, I have come to the conclusion that there was no common law duty on the Crown to provide the military guards for the plaintiff company's ships, and consequently no question as to the Crown having demanded payment for the performance of a duty which it owed by the common law arises in this case. This conclusion, however, by no means disposes of the case. There remains the important and difficult question whether, assuming the Crown to be under no common law duty to provide the military guards, but having in its discretion decided that it was a proper thing to do under the circumstances, the Crown can legally demand a money payment as a condition of rendering those services. This question has given rise to an interesting discussion on the question occupied by the Crown in relation to the royal forces.

The contention of the plaintiff company, stated shortly, was that all prerogative powers in relation to the Army in time of peace had long since been swept away; that the powers exercised by the Crown in relation to the disposition and use of the Army in time of peace at the present day are purely statutory powers; and that the Crown has a statutory duty to exercise those powers whenever it considers that they ought properly to be exercised, and cannot therefore, in the absence of express statutory authority, legally demand any payment as a condition of such exercise.

In support of the proposition that it is illegal for the Crown or any other body or person invested by statute with discretionary powers to exact money *colore officii*, Sir Leslie Scott relied mainly on the following cases: *Morgan* v. *Palmer* (*sup.*), where it was held that the Mayor of Yarmouth, who in his character of mayor was one of the justices of peace in and for the borough, had no right to demand a sum of money for granting the renewal of the annual licence of a publican; *Attorney-General* v. *Wilts United Dairies* (*sup.*), affirmed by the House of Lords (127 L. T. Rep. 822), where it was held that the Food Controller had no power to impose as a condition of the grant of a licence to purchase milk in a certain area a charge of 2*d.* per gallon payable to him by the purchaser; and *Brocklebank* (*T. and J.*) *Limited* v. *The King* (*sup.*), where it was held that the Shipping Controller had no power to impose as a condition of the grant of a licence to sell a ship to a foreign firm the payment to the Ministry of Shipping of a percentage of the purchase money.

The basis of the decisions in the two last-mentioned cases was that the demand of payment made by the Crown as a condition of granting a licence amounted to the levying of money for the use of the Crown without grant of Parliament contrary to the Bill of Rights and was therefore illegal. Lord Buckmaster, in the *Wilts United Dairies* case (127 L. T. Rep., at p. 823), says: "However the character of this payment may be clothed, by asking your Lordships to consider the necessity for its imposition, in the end it must remain a payment which certain classes of people were called upon to make for the purpose of exercising certain privileges, and the result is that the money so raised can only be described as a tax, the levying of which can never be imposed upon subjects of this country by anything except plain and direct statutory means."

The question whether the principle upon which these cases were decided applies to the facts of the present case depends entirely upon the nature and extent of the discretionary powers admittedly exercisable and exercised by the Crown in relation to the disposal and use of the Army in time of peace. As to the nature of these powers Sir Leslie Scott has been at great pains to demonstrate that they are purely statutory, for which purpose he has placed before the court a short historical survey of the position occupied by the Crown in relation to the royal land forces from the Conquest to the present time, culled from various well-known writers.

An admirable historical account of the Army in a compendious form is to be found in the Manual of Military Law, published by the War Office (particularly in chapter 2, dealing with the history of military law, written by Lord Thring, and in chapter 9, dealing with the history of the military forces of the Crown, written by Sir H. Jenkyns), from which source I have taken most of the historical facts to which I am about to refer.

After the Restoration in 1660 considerable changes took place in the military system of this country, and the foundations for the present standing Army were laid. Among the various Acts which were then passed I need only mention the statute of 13 Car. 2, c. 6, containing the following recital, which still stands unrepealed upon our statute book: "Forasmuch as within all his Majesties realmes and dominions the sole supreme government command and disposition of the militia and of all forces by sea and land and of all forts and places of strength is and by the lawes of England ever was the undoubted right of his Majesty and his Royall predecessors Kings and Queenes of England and that both or either of the Houses of Parliament cannot nor ought to pretend to the same."

One of the causes which led to the Revolution in 1688, no doubt, was the increase in the number of troops raised and maintained by James II., and to prevent trouble arising from such a cause in the future the Convention Parliament, when calling the Prince and Princess of Orange to the throne, inserted in the Declaration of Rights a declaration that "the raising and keeping a standard Army

within the Kingdom in time of peace unless it be with consent of Parliament is against law." This declaration was embodied in the Bill of Rights and in the first Mutiny Act. It has since been repeated in the subsequent Mutiny Acts and in the annual Army Acts down to the present time, and the Army has since the year 1689 continued to exist only by virtue of the annual renewal of the sanction given by Parliament. In addition to the control which Parliament then assumed over the raising and payment of the Army it also secured to itself full control over the discipline requisite for the government of the Army.

The various statutory provisions relating to matters of discipline were finally consolidated in the Army Act, which of itself has no force, but requires (see sect. 2) to be brought into operation every year by the annual Army Act; each of these annual Army Acts contains a preamble reciting (*inter alia*) the illegality of raising or keeping a standing army in time of peace without the consent of Parliament, the necessity of continuing a body of forces for the safety of the United Kingdom and the defences of the possessions of the Crown, the number of such forces required and the necessity of the observance of an exact discipline, and then enacts that the Army Act shall be and remain in force for a period of twelve months.

As regards the payment of the Army, Parliament grants the necessary money on estimates submitted by the Crown, but the expenditure of the money granted is left to the discretion of the Crown, subject only to audit on the part of Parliament. Under the legislation referred to a standing Army has been maintained in England without intermission since the passing of the Bill of Rights. As the raising, government, and payment of the Army has always been expressly sanctioned by Parliament for a period of twelve months at a time, the Army may properly be said to be a statutory and not a prerogative force, and the Crown is under the necessity of asking annually for the consent of Parliament to its maintenance.

Except in so far as Parliament has by statute regulated matters relating to the raising, keeping, and discipline of the Army, however, the Crown has retained and exercises many wide and important powers in relation to the Army. It was by no mere oversight that the preamble to 13 Car. 2, c. 6, has remained unrepealed, as in 1863 the whole of the rest of the Act was repealed, but the declaration as to the King's right to the government, command, and disposition of the forces by sea and land was expressly left standing. It is to be noted that Parliament has never purported expressly to confer upon the Crown any powers of disposing of or using the Army or administering its affairs. When Parliament has given its consent to the raising and keeping of the Army for the year, it leaves the Crown to exercise its prerogative powers as to the manner in which the Army is to be raised and kept and in respect of the disposition and use of the Army and the administration of its affairs. The manner in which these powers are exercised is constitutionally subject, like the exercise of other prerogatives, to the advice of the Ministers of the Crown, of whom the one particularly responsible for the Army was, until recently, the Secretary of State for War. By Letters Patent dated the 6th Feb. 1904, all the prerogative powers of the Crown in relation to the Army, which had theretofore been exercised by the Secretary of State, the Commander-in-Chief, and other officials, were vested in the Army Council, to whom further powers were transferred by the annual Army Act, 1909, but the Secretary of State for War remains responsible to the Crown and Parliament for all the business transacted by the Council. It is unnecessary to specify the various powers relating to the Army which Parliament has thus tacitly left to the unfettered control of the Crown; it is sufficient to state that they undoubtedly include the organisation, armament, maintenance, disposition, and uses of the standing Army in time of peace.

In my opinion, therefore, the powers which the Crown exercises as to the disposition and use of the standing Army in time of peace are powers vested in the Crown by prerogative right at common law, and are not powers conferred upon the Crown by statute.

However, the question whether the Crown was acting under its prerogative powers or under powers conferred upon it by statute, when acceding to the request of the plaintiff company to provide guards for its ships, is, in my opinion, not really the material question to be decided in this case. The extent of the powers exercisable by the Crown in relation to the Army is, in my opinion, the same whether they are technically prerogative powers or statutory powers. If, contrary to my opinion, they are statutory powers, Parliament has not limited them in any way save by the enactments already referred to and, except as so limited, their scope must be measured by the powers which were vested in the Crown by prerogative right at the time of Charles II.

This brings me to the crucial question in the present case, whether the powers of disposition and use of the Royal forces vested in the Crown include a power to hire out troops to a British company at its request for the protection of its property and the lives of its employees. Admittedly, the powers retained by or vested in the Crown, in relation to the Army, are wide and undefined, and unless the plaintiffs can establish that these powers do not include a power to lend troops to a private individual for the protection of himself and his property in consideration of a money payment, or that the Crown by providing the guards in consideration of a money payment has violated some constitutional principle of which the court can take cognisance, I think that the plaintiff company must fail on this appeal. In my judgment, the powers of the Crown are wide enough to include a power to lend troops to a private individual for reward, and the Crown has not violated any constitutional principle in providing the guards in consideration of a money payment. The manner in which the Crown exercises its powers is not a matter which can be inquired into by a court of law. As Lord Kenyon said in *Macdonald* v. *Steele* (Peake, at p. 234): "His Majesty's pleasure supersedes all inquiry, as he has the absolute direction and command of the Army. It is true Parliament has provided a sum of money, but that is to be distributed as the King chooses." The contention that the Crown, by imposing, as a condition of providing the guards, the payment of a sum of money to cover their pay while they are employed on that service, has attempted to levy a tax on the subject without grant of Parliament contrary to the Bill of Rights is, in my opinion, not well founded. The plaintiff company was at liberty to carry on its trade without any licence or interference from the Crown. The Crown was under no duty to provide the guards; the plaintiff company was free to accept or reject the offer made by the Crown. The facts of the present case are quite different from the facts in the cases upon which the plaintiff company has relied, and the principle referred to by Lord Buckmaster in the *Wilts*

United Dairies case (*sup.*) has no application to this case.

Sir Leslie Scott put his case on this point in the form of a dilemma. He contended that either the Crown in its discretion decided that it was necessary to provide the guards for the protection of the plaintiff company, in which case the Crown was performing a duty which it owed to the plaintiff company, or else the Crown was at the request of the plaintiff company making use of the Army in an unauthorised manner, in which case the contract was void as being contrary to public policy. This is the dilemma which, according to the speech of Lord Cave in *Glasbrook Brothers Limited* v. *Glamorgan County Council* (132 L. T. Rep., at p. 613; (1925) A. C. 270, at p. 278), was put by Atkin, L.J. in that case in the Court of Appeal. The answer given by Lord Cave to the dilemma so put applies to the present case. It by no means follows that, because it was not the duty of the Crown to provide guards for the plaintiff company's ships, that therefore the Crown had no power to provide the guards and to demand the payment of a sum of money in consideration for making such provision. I know of no authority which prevents the Crown, if so minded, from employing any available soldiers in time of peace as well as in time of war in rendering services to private individuals, or from demanding and receiving remuneration for any services so rendered. It might form the subject of just criticism in the House of Commons if the Crown were to employ soldiers gratuitously for such purposes, but I see no valid reason for holding that such employment, with or without remuneration, is unconstitutional or against public policy.

The only cases to be found in the reports where the armed forces of the Crown have in time of peace rendered services to private individuals for reward are the salvage cases. These cases are not closely analogous to the present, although in some of them the Admiralty has made a claim for the use of his Majesty's ships and in others the Admiralty has deducted the pay of the officers and crew employed on the salvage operations from the amount recovered by them, but some of the passages in the judgment are not without interest in connection with this case.

In *The Mary Ann* (*sup.*), where a demand was made for the remuneration of salvage services which had been rendered by the commander and crew of one of the King's ships, Lord Stowell said: "Undoubtedly, the parties may fairly claim a remuneration although the ship belongs to the State; and although there is an obligation upon King's ships to assist the merchant vessels of this country, yet, when services have been rendered, those who confer them are entitled to an adequate reward."

The case of *The Lustre* (3 Hagg. 154) was where a Government steamer assisted a merchant vessel on a stipulation to reimburse all expenses arising from damage to the steamer or the stores, and it was held that such a stipulation was no bar to salvage compensation. Sir John Nicholl, in the course of his judgment, said: "It is a mistake to suppose that the public force of the country is to be employed gratuitously in the service of private individuals merely to save them from expense; these Government steam vessels are kept for the public service, and the officers in command cannot employ them in the service of individuals, and thus risk the public property without authority, or an indemnity for all expense and damage."

In the case of *The Ewell Grove* (3 Hagg. 209), where a merchant vessel was salvaged by a Government steamer and 200 men, and the court awarded 1200*l.* and costs to the salvors, Sir John Nicholl said, at p. 224: "It is true that the Rhadamanthus is one of his Majesty's ships, worked by steam, found and paid at the expense of the public, yet that does not give a title to private individuals to employ and be assisted by them without remuneration, any more than by any other vessel in the public service. . . . I have, therefore, no doubt as to the title of his Majesty's steam vessels, in the case of civil salvage, to remuneration."

In the present case we requested the Attorney-General to procure a search to be made for precedents both at the Admiralty and at the War Office in order to see whether there was any and what practice on the part of the Crown in regard to charging for services rendered to private individuals by the naval or military forces. In response to this request we have been furnished with statements on behalf of the Admiralty and of the War Office. The Admiralty statement says that services rendered to private individuals for payment are subject to varying conditions according to the nature of the service, and that in general such services would only be rendered in special circumstances and in response to a definite request, and generally would not be undertaken if alternative private or commercial facilities were available. It also appears from that statement that in 1879 the principle of charging for the services of naval personnel was recognised in the Queen's Regulations (art. 1772), which provided that where divers are lent to effect repairs to merchant ships a charge of 21*s.* a day is to be made for wear and tear of their dresses and apparatus, and in addition a sum that will cover the pay and allowances of the persons engaged for the time they may be actually absent from their ships. It also appears that in times of strike or civil commotion naval ratings have been employed, in the absence of regular workers, on railways in manning pumping and power stations, coal-mine pumping, machinery, lock gates, tugs and lighters conveying petrol, oil, and foodstuffs, and in loading and unloading these commodities, for which services it has been the practice to make a charge on the companies concerned based on the wages which would have been payable at current industrial rates if naval personnel had not been employed, or on the actual naval pay and allowances of the naval personnel employed, whichever was the greater amount.

Sir Leslie Scott contended that the Navy stood on an entirely different footing from that of the Army, and that what the Crown may have done in exercise of its prerogative in the case of the Navy could have no bearing on the question what the Crown is empowered to do as regards the Army. It is true that the Navy was never looked upon as a menace to the country like the Army was considered to be in the seventeenth century, and that it has never been brought under control of Parliament to the same extent as the Army, yet the preamble of 13 Car. 2, c. 6, declares the prerogative rights of the Crown in respect of the forces both by sea and on land in the same terms, and except in so far as there are any statutory restrictions the prerogative powers of the Crown in relation to the Army are the same as those in relation to the Navy.

The statement from the War Office contains many instances of occasions upon which the War Office without statutory authority has received payment in respect of services rendered by the personnel of the Army. From these instances it appears that for very many years it has been the practice of the War Office to demand and receive payments for services rendered to foreign countries,

British Dominions, Colonies, and private individuals. These payments fall under four heads, namely: (1) Payments for services rendered in ordnance factories; (2) payments for services rendered by military forces; (3) payments by Dominions, colonial and mandated territories, and foreign Governments; and (4) payments in respect of foreign missions.

The instances given include under head (1) charges made to many private individuals and firms for goods sold and services rendered; under head (2) charges for military protection afforded to Malta, the Ionian Islands, and Ceylon, for services rendered to private individuals, companies, and firms during the War by the Dock Battalion and the Transport Workers' Battalion, for services rendered by military fire brigades, and for lending troops to reputable British film companies; under head (3) charges for British troops stationed in the territory of Dominions, colonies, and foreign countries; and under head (4) charges in respect of foreign missions, all of which (with the exception of one instance in 1904 when 10 officers were lent to the Turkish Government for services with the gendarmerie in Macedonia) were post-War missions arising out of the War.

In reference to the War Office, it is to be observed that no case has been found where a military guard has been provided for the ship of a trader who for his own profit sets out on a hazardous enterprise. In my opinion, however, the propriety of lending troops for such a purpose and of making a charge for doing so is not a matter which can properly be inquired into in a court of law. If the wide powers which the Crown has and exercises with regard to the disposition and use of the Army are to be restricted in any way, this can only be done by Parliament. In view, however, of what has been said in the course of the argument, I would only add that if a shipowner asks the Crown to provide armed guards to assist him to control the passengers whom he invites on board his ship, and the Crown accedes to his request, it seems only reasonable that he and not the public should pay for that privilege.

Lastly, it has to be remembered that ever since Parliament has sanctioned the raising and keeping of a standing Army in 1689 it has insisted upon a thoroughly open and independent examination of the annual Army estimates and audit of the Army receipts and expenditure. All receipts in respect of the Army have to be applied as an appropriation in aid of the money provided by Parliament for that service under sect. 2 of the Public Accounts and Charges Act, 1891, and have therefore to be brought into the Army estimates. The amount which may be appropriated is definitely limited to the sum authorised by Parliament by the Appropriation Act of the year, and any sum received in excess of that amount is surrendered to the Exchequer as an extra receipt.

In practice the Army Council submit their estimates to the Treasury, which critically examines them both as to the estimated expenditure and as to the estimated receipts. After approval by the Treasury the estimates are submitted to Parliament by the Secretary for War and may be discussed in Parliament before the granting of supply and the passing of the Appropriation Act. After the supply has been granted the administration of the moneys granted is left to the War Office under the direction of an accounting officer, who is responsible to the Treasury and to Parliament for the due administration of those moneys. The accounts are audited annually by the Comptroller and Auditor-General, whose duty it is to report to Parliament any case in which he considers that service has been wrongfully given, or for which inadequate authority existed, or for which inadequate or improper payment was made. The accounts are then placed before the Public Accounts Committee of the House of Commons.

The sums paid by the plaintiff company for the provision of armed guards on its ships were included in the estimates for the years in which they were received as an appropriation in aid, and were duly granted by Parliament as part of the supply for the Army for that year; they were subsequently passed as proper receipts by the Comptroller and Auditor-General. In the face of these facts it is difficult to see how the contention that the Crown has levied money for its use without grant of Parliament contrary to the Bill of Rights can successfully be maintained. Moreover, if, contrary to my opinion, the sanction of Parliament were wanted for the Crown hiring out troops to the plaintiff company and other shipowners trading in Chinese waters, such sanction is, in my opinion, necessarily implied from the grant by Parliament of the amount received by the Crown for such hire as part of the supply for the Army.

In the result, for the reasons stated, I have come to the conclusion that the decision of Rowlatt, J. was right and that this appeal should be dismissed with costs.

Slesser, L.J. — In this case declarations are sought against the Crown to the effect, in substance, that the Crown is not entitled to charge the appellant company for the use of troops employed to protect the property of the company and the lives of their employees in circumstances stated by my Lords, which I do not repeat.

The appellant company seek to support their case on three grounds. First, they say that the powers of the Crown with regard to the Army are by law limited, and that in particular the common law and statutes which authorise or require the Crown to employ the Army do not authorise it to make charges for the use of the Army. Secondly, they argue that, in any event, even if the Crown has a discretion how it will protect the subject, yet that discretion should not be influenced by any consideration of the giving of money by the subject or the denial of such money. Thirdly, it is said that the Crown has a duty to protect the subject and that its officers cannot properly demand money from the subject, *colore officii*, as a term of the performance of that duty.

These three arguments I propose to consider in the order in which I have stated them. (*a*) As regards the alleged limitation of the prerogative of the Crown in its disposition of the Army. By statute 13 Car. 2, c. 6, it is declared that "the sole supreme government command and disposition of the Militia and of all forces by sea and land is, and by the lawes of England ever was the undoubted right of His Majesty and his Royall predecessors Kings and Queenes of England." This declaratory Act is still law, and, as late as the year 1863, by schedule to the Statute Law Revision Act of that year, the words in the preamble of the Act of Charles II. which I have quoted, are expressly preserved. "His Majesty's pleasure supersedes all inquiry, as he has the absolute direction and command of the army"; per Lord Kenyon in *Macdonald* v. *Steele* (Peake 233, at p. 234).

The government of the forces is vested in the Crown, which has power to make regulations as to command and administration: (Halsbury's Laws of England, vol. 25, p. 37) "The supreme government and command of all forces by sea and land and of all forts and places of strength is vested in

the Crown by prerogative right at common law and by statute": (Halsbury's Laws of England, vol. 6, p. 481). This last quotation cites Comyns's Digest to the like effect, and although Sir John Comyns appears to limit his statement, that "the government and command of the Militia and of all the forces by sea and by land belong only to the King" (Prerogative—Command of the Forces, 4th edit., vol. 6, p. 33), to prerogative in respect of the King's own subjects in time of war, apart from the legalisation of the Army by the Army Acts, his submission would appear to be equally true as regards time of peace. It is by virtue of his prerogative that the King by Letters Patent in 1904 constituted the first Army Council, and it is there stated that the Army Council has been constituted "for the administration of matters pertaining to our military forces and the defence of our Dominions, that such power and authority for the purpose as has hitherto been exercised under our prerogative" by various officers. . . . Although by sect. 7, sub-sect. (1), of the Army Act express provision is made for removing doubts as to the powers of command vested or to be vested in officers, by sub-sect. (2) of that section it is expressly provided that nothing in the section shall be deemed to be in derogation of any other power otherwise vested in his Majesty.

Sir Leslie Scott, confronted with the declaratory words of the Act of Charles II., sought to confine them to forces by sea and land existing at the time of the passing of that Act. He argued that in effect there were at that time no forces by sea and land other than the Militia itself. It is true that an Act of the previous year (12 Car. 2, c. 15) had provided for the speedy disbanding of the Army, but it appears that this disbanding had not been completed at the time when the Act 13 Car. 2, c. 6, was passed, for there are several later statutes of the reign of Charles II. dealing with the remnants of the then Army: (see Clode, Military Forces of the Crown, Appendix 1). But, in any event, whether there were or were not at that time any forces by sea or land on which the statute could operate, other than the Militia, it is clear from the language of the statute, which is a declaration of the existing prerogative, that the prerogative of command of the forces by sea or land has always been vested in the Crown, that it would equally apply in the absence of express statutory provision to any forces thereafter lawfully to be raised.

The language of the statute which I next consider is the first Mutiny Act (1 Will. & M., c. 5). That Act, which contained provision for punishing officers and soldiers who should mutiny or desert their Majesties' service, was to continue until Nov. 1689, and it is significant that that Act contains no provision for amending or repealing the Act of Charles II. which had declared the prerogative.

In 1689 was passed the Act generally known as the Bill of Rights (1 Will. & M., sess. 2, c. 2), which recites that the late King James II. "did endeavour to subvert and extirpate the Protestant religion, and the laws and liberty of this Kingdom by raising and keeping a standing army within this Kingdom in time of peace without consent of Parliament," and declares, among other matters, that the raising or keeping of a standing army within the kingdom in time of peace, unless it be with consent of Parliament, is against law. This was by chapter 2. By chapter 4 of the same session was enacted the second Mutiny Act. The position, therefore, in 1689 was this: A standing army was illegal without the consent of Parliament, but, when once Parliament had given its consent, the standing army became legal; there is no indication in the statutes that the prerogative of the King with regard to the government or command of such a legalised standing army was in any way impaired.

It is not necessary, in my opinion, to consider in detail the subsequent Acts which continued annually to legalise the Army. The earlier Acts did not specify the number of troops to be raised. This was not done until the Mutiny Act of 1714, and in 1715 power was given to the Crown to draw up articles of war for the discipline of troops in the United Kingdom. But such articles of war which continue to have statutory authority (see the Army Act, s. 69) are to be distinguished from the King's Regulations, which, with certain exceptions, continue to have force apart from the authority of statute. Articles of War are said by sect. 69 of the Army Act to be for the better government of officers and soldiers, and statutory power is given by sect. 71 of the same Act to make regulations as to persons to be invested as officers. These regulations now appear among the King's Regulations, but the remainder of the regulations have no statutory authority and are made by virtue of the prerogative.

It is also worthy of note that the responsibility, both to the Crown and to Parliament, of all the business of the Army Council borne by the Secretary of State is conferred upon him by Order in Council and not by statutory provision (see the Order in Council dated the 10th Aug. 1904).

In place of the Mutiny Acts there is now passed an annual Army Act which, as a rule, contains amendments of the principal Act, which it continues for one year. It provides in its preamble that the keeping or raising of a standing army within the United Kingdom in time of peace, unless it be with the consent of Parliament, is against law (see the Army and Air Force Annual Act 1931), and provides that the Army Act and the Air Force Act shall be and remain in force during the periods thereafter mentioned and no longer unless provided by Parliament. There follows a period to the 30th April 1932, in Great Britain and Northern Ireland, the Channel Islands, and the Isle of Man, with different provisions elsewhere: see sect. 2, sub-sect. (1) (*a*) and (*b*).

This short investigation of the history of the relations of Parliament and the Army shows clearly that at no time has Parliament derogated from the prerogative with regard to the command of the forces as it was declared in the time of Charles II. It has declared the standing Army illegal in time of peace without the consent of Parliament, but has abstained from interfering with the command by the Crown over a legalised army.

In so far as practice is to be considered in such a connection, the memorandum with which we were furnished by the War Office makes it clear that moneys have from time to time been received by the Crown without statutory authority for military protection. In 1846 from Malta and Ceylon and the Ionian Islands; from the old East India Company; during the late War the service of Dock Battalions and Transport Workers' Battalions were charged for, so also were soldiers released for civil work, and charges have been made for military fire brigades, regimental bands, for the use of troops employed by film companies, and for the guard at the Bank of England.

It is stated that from time to time almost every Colony has in one way or another made payments to the British Exchequer in respect of British troops stationed in its territory. Payments have been made for the extra cost of British forces in Iraq and in Palestine, by the Governments of those countries; by the Egyptian Government, and by

certain foreign commissions and boundary commissions. None of these payments was authorised directly or indirectly by statute. If Sir Leslie Scott's argument is correct, the whole, or most of them, would be contrary to law. Indeed, until the present case, I do not know that it has ever been questioned that the Crown has the right to receive payments for the use of troops used in one way or another by private persons or foreign Governments or Dominions of the Crown. It was at one time suggested in argument that Parliament would lose its financial control if the Crown received these moneys, but it has been made clear to us that the provisions of the Appropriation Acts guard against any such contingency. All the receipts resulting from the use of the Army are brought into the appropriation account, and although the sums so received are not always paid directly into the Exchequer, the Treasury, acting under the authority of the Public Accounts and Charges Act 1891, allows the department, instead of paying such receipts into the Exchequer, to use them to defray the expenditure of the year so far as they suffice to meet it.

Parliament, on being shown that the department requires to spend a certain sum but that receipts from fees, &c., will amount to a smaller sum, grants the difference, together with authority to use the sum received from the fees, and therefore the department is limited to the gross expenditure from the sums granted and the fees, and is financially in exactly the same position as if they had asked Parliament for the whole sum and paid the fees into the Exchequer. The practice has varied from time to time, but the system of appropriation in aid, operating as I have described, removes all chance of the Crown receiving moneys which will not be under the control of Parliament: (see May's Parliamentary Practice, 13th edit., p. 396, *et seq.*

For all these reasons, I am of opinion that, once Parliament has sanctioned the Army for a period of one year, there is no statutory limitation on the right of the Crown, acting under its prerogative of command and disposition of the forces, to make it a condition of the supply of troops for a particular purpose that a charge shall be made for them.

(*b*) In regard to the suggested influence of the Crown's discretion by considerations of the possibility of the receipt or denial of money. On this matter there is little direct authority; the assumption that the Crown is entitled to make a stipulation that when a Government steamer assists a merchantman it shall be reimbursed all expenses arising from damage to the government steamer is to be found in the case of *The Lustre* (*sup.*), in which Sir John Nicholl, in the course of his judgment, said: "It is a mistake to suppose that the public force of the country is to be employed gratuitously in the service of private individuals merely to save them from expense." This was clearly a case where the discretion whether the government steamer would or would not be employed in a particular matter of salvage was decided upon an express stipulation that the owners and underwriters would be answerable for certain payments. So also in *The Ewell Grove* (*sup.*); later authorities and statutes as to salvage, such as the case of *The Cargo ex Ulysses* (*sup.*), do not, in my view, affect the principle.

If the argument of the appellants here were right, such a consideration was improper, for, as was stated by Lord Stowell, in *The Mary Ann* (*sup.*): "There is an obligation upon King's ships to assist the merchant vessels of this country." In that case, salvage remuneration was claimed after service had been rendered, but in *The Lustre* (*sup.*) a stipulation for payment to cover damage was made before the commander exercised his discretion to allow the use of the ship.

In Chitty on Prerogative of the Crown, 1820, p. 6, it is said: "In the exercise of his lawful prerogatives an undoubted discretion is, generally speaking, allowed to the King"; and at p. 44: "The King is at the head of his Army and Navy, is alone entitled to order their movement, to regulate their internal arrangements as may seem to his Majesty most consistent with political propriety." According to Blackstone (8th edit., vol. 1, p. 251): "In the exertion of those prerogatives which the law has given him, the King is irrefutable and absolute, according to the forms of the constitution. And yet, if the consequence of that exertion be manifestly to the grievance and dishonour of the Kingdom, the Parliament will call his advisers to a just and severe account."

"Prerogative is the discretionary power for acting for the public good" (Locke on Government, 2, par. 166), quoted by Blackstone, *ibid.* "The King has the sole power of raising and regulating fleets and armies." "He is first in military command, within the kingdom" (Blackstone, *ibid.*, p. 262). "It is true that the prerogative is created and limited by the common law and that the Sovereign can claim no prerogatives except such as the common law allows" (Comyn's Digest, Prerogative). "But in so far as such prerogative includes the government of the Army, the court cannot consider the propriety of its exercise. Upon any doubtful point of prerogative the Crown and its Ministers must bow to the decision of the legal tribunals": (Halsbury's Laws of England, vol. 6, p. 382). But, in so far as, in my view, the powers here under consideration are within the prerogative, the function of the court is exhausted in so deciding.

I am of opinion that a declaration cannot be made against the Crown if, in its discretion, it refuses the provision of military protection to a subject unless such protection is paid for by the subject.

(*c*) Lastly, I have to consider whether the Crown or its ministers can demand money from the subject *colore officii* as a term of the performance of the duty of protection.

In order to determine this matter it is necessary first to consider whether the Crown has a duty to protect the subject, and, if so, what is the nature of that duty. It is not suggested by Sir Leslie Scott that the duty for which he contends is one directly enforceable by the subject by process of law. It is, he says, a duty of imperfect obligation. The best passage for his purpose is that of Brett, L.J. in *Attorney-General* v. *Tomline* (42 L. T. Rep. at p. 883; 14 Ch. Div. at p. 66), in which he uses the phrase "Duty of imperfect obligation." The duty there under consideration was the duty to protect the realm from the inroads of the sea. He says: "Supposing that the King were to neglect that duty, I know no legal means—that is, no process of law—common law or statute law—by which the Crown could be forced to perform that duty. It is a right which as against the Crown the subject has no means to enforce. Nevertheless, the right exists." In the *Isle of Ely* case (10 Rep. 141*a*) Coke, C.J. said: "The King ought of right to save and defend his realm as well against the sea as against the enemies, *protectio trahit subjectionem et subjectio protectionem*, that it should not be drowned or wasted." A declaratory statute, 23 Henry VIII, chap. 5, says: "By reason of our dignity and prerogative royal, we are bound to provide for the safety and preservation of our Realm of England." The right to protection is

not necessarily limited to the realm. "The protection and government of the King is general over all his dominions. . . . Seeing power and protection draweth ligeance . . . extendeth out of England, that ligeance cannot be local, or confined within the bounds thereof" : *per curiam* in *Calvin's* case (4 Coke 9) (see per Cockburn, C.J. in *Reg.* v. *Keyn* (2 Ex. D. 63, at p. 236) and 1 Blackstone, p. 364). But Cotton, L.J., in *Attorney-General* v. *Tomline* (*sup.*) expressly pointed out that the duty or obligation of the Crown was one which the subject could not enforce (42 L. T. Rep. at p. 884; (14 Ch. Div. at p. 70) "For this reason only, that the Crown is not amenable to the jurisdiction of the court, and any default of duty on the part of the Crown cannot be made the ground of an action."

The question then arises whether the many authorities which decide that money cannot be demanded *colore officii* have any application to a case where there is no enforceable duty, the performance of which can be refused unless payment is made. In the *Attorney-General* v. *Wilts United Dairies* (*sup.*), Lord Buckmaster pointed out that no enactment enabled the Food Controller to levy any sum of money on any of his Majesty's subjects. That was a case where the Food Controller, an official having power under the Defence of the Realm Acts to make orders regulating the supply of milk products, obtained an agreement from the subject that in consideration of the issue of a licence to deal in milk he would pay a certain sum to the Food Controller. In the Court of Appeal Bankes, L.J. said : "It is not disputed for the Crown that the Food Controller could not without Parliamentary authority impose the charge complained of." Atkin, L.J. points out that by the Bill of Rights no money can be levied for or to the use of the Crown except by grant of Parliament. See also *Brocklebank* (*T. and J.*) *Limited* v. *The King* (*sup.*), where the Shipping Controller was similarly held not to be entitled to charge for granting a licence.

Other cases, such as *Wathen* v. *Bandys* (2 Camp. 640) (a case of a sheriff being under a duty to erect hustings not being liable to charge candidates with expenses, being part of a duty upon him in executing a writ to return members to Parliament), *Morgan* v. *Palmer* (*sup.*) (in which a justice of the peace sought a fee for renewing a licence of publicans), *Steele* v. *Williams* (*sup.*) (where a parish clerk sought illegally to make charges for extracts from a register book), *Snowdon* v. *Davis* (1 Taunt. 358), all establish the proposition stated by Baron Martin in *Steele's* case (*sup.*) that a person who illegally takes money under cover of an Act of Parliament is liable to be sued for it. All these cases depended upon a duty existing in some person arising from his office, which duty that person refuses to perform unless he receives payment. In so far as there is here no enforceable duty in the Crown or its officers to use the troops in any particular way or at all, these cases do not appear to me to assist the appellants.

In *Glasbrook Brothers* v. *Glamorgan County Council* it was argued that as there was a duty on the police to provide protection, the discretion as to the way that should be done was not to be bought or sold. Lord Cave (132 L. T. Rep., at p. 613; (1925) A. C., at p. 279) points out that power may exist where there is no absolute duty, that is the present case, and that where there is no absolute duty a demand for payment is not necessarily contrary to public policy. The duty here, being of imperfect obligation, is not so absolute as to preclude a charge. I would add that, in any event, I have grave doubts whether the duty of imperfect obligation to defend the subject from enemies by the use of troops extends to the suppression of piracy on the seas. By 11 & 12 Will. 3, c. 7, s. 11, an Act for the more effectual suppression of piracy, specific power is given to the judge of the High Court of Admiralty and other persons to raise and levy upon the owners of a ship and goods defended by officers, seamen, and mariners against pirates, enemies, or sea rovers, money to be distributed among the defenders, the widows and children. And, although for certain statutory purposes a pirate is to be deemed to be an enemy (Naval Discipline Act, 29 & 30 Vict. c. 109, s. 49), yet the definition of a pirate stated in Hawkins's Pleas of the Crown, chap. 20, at p. 251, still stands, "that a pirate is one who, to enrich himself, either by surprize or open force, sets upon merchants or others trading by sea, to spoil them of their goods or treasure. . . . A pirate, at the common law, is a person who commits any of those acts of robbery and depredation upon the High Seas, which, if committed on land, would have amounted to felony there."

Were there no other obstacle in the way in the argument of the appellants in contending for the duty of the Crown, this consideration would have to be considered; whether the obligation of the Crown, such as it is, to protect the subject extends to a protection against pirates upon the high seas, and, if so, whether it is not a duty cast upon the Navy and not the Army.

The duty of the King to protect his subjects is stated in Chitty on Prerogative thus: "Protection, that is the security and governance of his Dominions according to law, is the duty of the Sovereign." Blackstone, p. 262, indicates that monarchical government has for one of its purposes the protection of weakness of individuals by the united strength of the community. But as regards the duty of protection by sea, I do not know that such a duty can be put higher than is stated by Lord Stowell in *The Mary Ann* (*sup.*), that there is an obligation upon King's ships to assist the merchant vessels of this country; see also the observations of Sir J. Hannen in *The Cargo ex Ulysses* (6 Asp. Mar. Law Cas. 355; 60 L. T. Rep. at p. 112; 13 Prob. Div. at p. 208), which indicate that the Admiralty is the normal protector of the subject against pirates. Piracy is robbery within the jurisdiction of the Admiralty: *Attorney-General for Hong-kong* v. *Kwok-a-Sing* (*sup.*), *Rex* v. *Dawson* (13 State Trials 454).

I can find no obligation upon the Army to protect merchant ships. If there be any such duty in the Crown, it would appear to be imposed not upon the Army but upon the sea forces of the Crown, for the use of which there is no complaint as to charge in the present case. In any event, in such a case it is for the Crown to decide what resources in its armoury, naval or military, it will employ.

For all these reasons I am of opinion that this appeal must be dismissed.

Appeal dismissed.

Solicitors for the appellants, *Thompson, Quarrell, and Co.*

Solicitor for the respondent, *Treasury Solicitor.*

April 25 *and* 26, 1932.

(Before SCRUTTON, GREER and SLESSER, L.JJ.)

Leon and others v. Casey. (*a*)

APPEAL FROM THE KING'S BENCH DIVISION.

Insurance (marine)—Practice—Discovery—Risk insured covering sea and land transit—Warehouse to warehouse clause included—Loss by fire on land transit—Whether risk a marine insurance—Order for discovery of ship's papers.

Goods were insured for the voyage from Cairo to Jaffa by a named steamer. The policy also contained a warehouse to warehouse clause. On the land transit from Cairo to Alexandria by motor lorry, the goods were burnt. An order for discovery of ship's papers having been made,

Held, that the policy, being substantially a marine policy, the order for discovery of ship's papers had been rightly made.

Harding *v.* Bussell (10 *Asp. M. C.* 50 ; 92 *L. T. Rep.* 531 ; (1905) 2 *K. B.* 83) *followed.*

APPEAL from an order of MacKinnon, J., dated the 11th April, made in Chambers. The plaintiff's claim as endorsed on the writ was "for the loss by fire of goods in transit by lorry from Cairo to Alexandria, on or about the 9th June 1931, insured under a policy of insurance dated the 24th July 1931 and subscribed by the defendant and other underwriters. The plaintiff, Esther Crespin, sues as assignee of her co-plaintiffs." The defendant was an underwriting member of Lloyds. The risk covered in the policy was "from Cairo to Jaffa in the good ship *Lotus*." The policy also incorporated a warehouse to warehouse clause. On the 5th June 1931 a certificate of insurance was issued to the plaintiffs at Alexandria in respect of a cargo of hosiery and cotton goods which was insured for 2257*l.* While the goods were being conveyed between Cairo and Alexandria by motor lorry on the 9th June 1931 the lorry caught fire and the goods were destroyed. On the 11th April 1932 MacKinnon, J. made the usual order for discovery of ship's papers by the plaintiffs.

The plaintiffs appealed.

H. G. Robertson for the appellants.

W. L. McNair for the respondent.

Scrutton, L.J.—This is an appeal from an order of MacKinnon, J. on a writ against Lloyd's underwriters endorsed: "The plaintiffs' claim is for the loss by fire of goods in transit by lorry from Cairo to Alexandria on or about the 9th June 1931, insured under a policy of insurance dated the 24th July, 1931, and subscribed by the defendant and other underwriters. The plaintiff, Esther Crespin, sues as assignee of her co-plaintiffs." On that writ MacKinnon, J. has ordered what is known as an affidavit of ship's papers. The plaintiffs appeal on the ground that this was not a case for an affidavit of ship's papers, but a case in which the ordinary order for discovery ought to be made. I need hardly explain that whereas the ordinary order for discovery is made after pleadings and relates only to documents which are or have been in possession of the plaintiff, an order for ship's papers goes very much farther and requires the plaintiff to produce from all persons who have any interest in the adventure—not in the policy but in the adventure—any material documents which are in their possession or to show that he has endeavoured to get but has not succeeded in getting them. People not accustomed to marine insurance have always felt a difficulty in understanding why this distinction should be made and have tried to restrict it as much as possible; and, in my view, it has always been logically difficult to account for the cases in which the order must be made and the cases in which it need not be made.

The origin of the order for ship's papers goes back to the time of Lord Mansfield. In those days common law courts did not order discovery, and if you wanted to obtain discovery of the papers in possession of the other side you had to apply for a bill in equity and get discovery in equity, and very frequently an action in the King's Bench was delayed while equity proceedings were going on. Partly in consequence of that and partly in consequence of the fact that insurance has always been said to be a transaction involving the utmost good faith, where the assured is bound to communicate everything in his knowledge to the insurance company, both at the inception of the risk and at every subsequent proceeding during the risk—for instance, where he makes a claim—the King's Bench courts have invented the order for ship's papers which is made as soon as the writ is issued in an action on a policy of marine insurance. The particular case which is always referred to, *Goldschmidt* v. *Marryat* (1 Camp. 559), shows what was happening because there the plaintiff desired to get his case advanced so that he might go to trial without the bill of discovery in equity being filed, and there was a discussion there by the judges in which doubts were expressed as to whether this order for ship's papers was one which was usually made and ought to be made. In that case it will be seen that Sir James Mansfield sent Mr. Campbell, who was then a reporter in the Court of King's Bench, to inquire from the court what the practice was upon the subject, and Mr. Campbell having done so came back and reported in these terms: "Campbell, upon his return, certified, that Lord Mansfield had laid it down as a rule, that, although he would not wait for any proceedings in equity, he would on no account take a cause out of its course at *nisi prius* for the purpose of defeating them; and that the same rule had been observed by his two noble and learned successors, Lord Kenyon and Lord Ellenborough." The report then proceeds: "In the course of the discussion it was stated, on the part of the defendants, that they had applied to Mr. Justice Heath for an order upon the plaintiff to produce upon affidavit all the papers in his possession concerning the cause, but that that learned judge had refused to make any order, except for the production of specific papers mentioned by the defendant, or, generally, for all papers without any affidavit. Sir James Mansfield said: "I have great difficulty in believing this statement to be correct. I have made fifty such orders since I became Chief Justice of this court. I was, to be sure, a good deal surprised when they were first applied for, as nothing of the sort was known when I practised in the King's Bench. But I consulted

(*a*) Reported by EDWARD J. M. CHAPLIN, Esq., Barrister-at-Law.

the other judges, and found they had become extremely common. I think they have been very properly introduced, as they often obviate the necessity of going into a court of equity, and save a great deal of delay, expense, and litigation. Without requiring the plaintiff to produce the papers on affidavit, the order would be nugatory. He would only select such as could be of no use to the opposite party. Nor would it answer to limit the order to such papers as are specifically named, since there may be others which the party has not the means of describing, and which may be got at through the medium of a court of equity."

From that time there has been a regular practice in cases concerning policies of marine insurance, or, as one may also express it, in adventures involving marine insurance, to make an order, as soon as the plaintiff has issued his writ, that he shall disclose to the other side all material documents, not only those which he has in his own possession, but those which persons interested in the adventure —not merely interested in the policy but interested in the adventure—must also have in their possession. If he cannot get the other documents he must show on affidavit that he has been unable to get them.

At that time insurance was almost entirely marine. Then the big companies came into existence and Lloyd's confined themselves to marine insurance; and it was not until enterprising underwriters at Lloyd's began insuring all sorts of risks which their predecessors never thought of, such as that a cricket match would not be spoilt by rain, that servants would be faithful and not commit frauds concerning their master's money, excess of bad debts, and so on, that a large volume of insurance grew up which was not marine in any sense, and in which the adventure never involved any marine risk.

When the Judicature Act came in, and rules were made under it, it was held by some of the judges that the order for ship's papers had been superseded by the rules made under that Act, and in the case of *Fraser* v. *Burrows* (2 Q. B. Div. 624), Cleasby, B., having made an order in chambers staying proceedings, was reversed by two judges on the ground that the Judicature Act had swept away the order for ship's papers and superseded it by the procedure under the Judicature Act. But in a case within six months of that order (*West of England Bank* v. *Canton Insurance Company*, 2 Ex. Div. 472), another order in chambers to the same effect came before Kelly, C.B. sitting with Cleasby, B. Kelly, C.B., who had been a party to the previous case, was instructed by Cleasby, B. and changed his mind, saying that the order for ship's papers continued. In the case that has been cited by MacKinnon, J. (*Graham Joint Stock Shipping Company* v. *Motor Union Insurance Company*, 15 Asp. M. C. 445; 126 L. T. Rep. 620; (1922) 1 K. B. 563) this court said again, it being apparently necessary to say it, that *Fraser* v. *Burrows* (*sup.*) was wrongly decided, and that the order for ship's papers continued in its old form. In that particular case the court declined to make any order to produce the ship's papers relating to the ship which was in fact found to have been scuttled.

As the scope of insurance grew at Lloyd's, other questions began to arise. Before I go into that I ought to say perhaps that Brett, L.J. in *China Transpacific Steamship Company* v. *Commercial Union Assurance Company* (45 L. T. Rep. 647; 8 Q. B. Div. 142) gave the reasons for the order for ship's papers and A. L. Smith, L.J. repeated them in the case of *China Traders' Insurance Company Limited* v. *Royal Exchange Assurance Corporation* (8 Asp. M. C. 409; 78 L. T. Rep. 783; (1898) 2 Q. B. 187). The extension of insurance from marine insurance to insurance for semi-marine or other than marine risks soon began to raise the question how far the order for ship's papers extended. Logically it has always seemed to me that if the justification of the order for ship's papers was the duty to disclose on the part of the assured, the order for ship's papers ought to extend to all insurances. But the development has not been logical. The reason given for the order for ship's papers applies equally to many other insurances, but it has not been extended beyond policies of marine insurance. As far as I know, the first case in which the question arose was *Henderson* v. *Underwriting and Agency Association Limited* (64 L. T. Rep. 774; (1891) 1 Q. B. 557), and one of the difficulties in that case, so far as I can recollect, was that no one knew exactly how the papers were conveyed; they were insured by the good ship Post Office Conveyances from Cadiz to Alexandretta on the coast of Syria. Of course, it is obvious that there is no line running from Cadiz to Alexandretta; they are both rather out of the way places, and there is a perfectly good way of transit by sea the whole way, and in my recollection of the case there was no particular evidence as to how the good ship Post Office Conveyances was going to carry the papers which were insured from Cadiz to Alexandretta. But coming before Cave, J. and Jeune, J. (as he then was), a compromise order was made; the order for ship's papers was not made, but an order for discovery before pleadings was made, giving some effect to the duty of the assured to disclose, but not the full effect that would be given by an order for ship's papers.

Henderson's case (*sup.*) was followed by a case before Kennedy, J. (*Village Main Reef Gold Mining Company* v. *Stearns*, 5 Com. Cas. 246), in which goods were insured from the mines in South Africa to London; the loss there occurred on the railway going down to the port of shipment, and Kennedy, J. purported to follow the decision in *Henderson's* case (*sup.*). The next case came before Mathew, L.J. The case which came before him in *Harding* v. *Bussell* (10 Asp. M. C. 50; 92 L. T. Rep. 531; (1905) 2 K. B. 83) concerned goods in transit from various places in England, the farthest being Hull, to various ports, London or Southampton, and thence by sea to South Africa, and it was argued that as the policy was partly for land transit, an order for ship's papers ought not to be made. There is a slight difference in the report of that case as between the Commercial Cases report (10 Com. Cas. 184) and the report in the *Law Reports*. In the report in Commercial Cases, Mathew, L.J. said at p. 188: "As I have said, the rule equally applies where the transit, though partly by land, is covered by a policy such as a policy in this form, which is substantially a policy of marine insurance. I am, therefore, unable to concur in the decision of Kennedy, J. in *Village Main Reef Gold Mining Company* v. *Stearns* (*sup.*), or of the Divisional Court in *Henderson* v. *Underwriting and Agency Association Limited* (*sup.*) if the latter case is to be regarded as a departure from the ordinary practice. I can see no reason why the ordinary practice should not be followed, though part of the transit covered by the policy be by land." That is reported not quite so strongly in the *Law Reports*—whether Mathew, L.J. revised the report I do not know—some judges do, some judges do not—but the passage in the *Law Reports* as to *Henderson's* case (*sup.*), on p. 86, is this: "If I were called on to express an opinion I should doubt whether the

decision was a correct one. It appears to have influenced my brother Kennedy in the case that came before him, and he appears to have treated it as an authority that wherever any portion of the venture is a transit by land there is no right to an affidavit of ship's papers. In that view I cannot concur. As I have said, the reasons for ordering an affidavit of ship's papers apply equally in a case where a part of the transit is by land. The other cases which were cited as authorities for the general rule need not be discussed, and I see no reason why the ordinary practice should be departed from in this case." Very shortly afterwards the same learned judge, Mathew, L.J., had before him the case of *Schloss* v. *Stevens* (10 Com. Cas. 224). In that case there was an insurance upon the goods "at and from on board the import vessel" at her port of discharge "to any place or places in the interior of the Republic of Columbia." It appeared that the transit was by railway, by mule pack and by river steamer and that the delay which had happened which had caused deterioration of the goods was owing to a breakdown of the railway. Mathew, L.J. said that the affidavit for ship's papers was ordered in marine insurance and not in an insurance of risks in inland waters, and as the only trace of "marine" in this case was the inland waters of the inland river the order for ship's papers did not apply. I have always wondered what would have happened if the mode of transit being railway, mule pack and partly river it had been partly up the Amazon where a steamer can go a thoundsa miles up the river and may ground and possibly suffer any amount of water damage. However, it was not, and being by mule pack and railway, Mathew, L.J. said that inland waters were not a matter for ship's papers.

Then in the case of *Tannenbaum and Co. and others* v. *Heath and another* (99 L. T. Rep. 237; (1908) 1 K. B. 1032), in the Court of Appeal, Lord Alverstone, C.J. presiding, sitting with Farwell, L.J., we find four different classes of adventure put into the same policy. Three of them have nothing whatever to do with marine insurance. The first is fire, limited to a place inland. The second is what is always known technically as the in-and-out policy by which the fidelity of servants in taking money in and out of a bank is guaranteed—again having nothing to do with the sea. The third is the risk in transportation of theft of the assured's property shipped to or from any salesman or customer by registered mail, express or messenger—again having nothing to do with marine—and the fourth is risk of transportation by sea. The particular adventure, the subject-matter of that claim, was fire on land, and the two arguments presented were these. On the one hand it was said: Here is a policy which under some circumstances may carry a marine risk, and, therefore, to the whole of the policy, whether it has anything to do with marine adventure or not, the rule of ship's papers ought to be applied. On the other hand it was said: This might have been marine adventure under this policy, but it was not; the thing which was insured had nothing to do with the sea or any marine adventure; and following that line, though giving in my view somewhat inconsistent reasons, the court said that the rule as to ship's papers would not apply to that adventure.

Now I need not go through the judgment in *Graham's* case (*sup.*), which has been cited because there I gave, possibly at not the same length as I am doing now, the history of the procedure, which is set out in great detail in sects. 1271 and 1272 of Arnould on Marine Insurance. But one of my expressions in *Graham's* case (*sup.*) was misunderstood by the counsel who argued the next case, *Teneria Moderna Franco-Española* v. *New Zealand Insurance Company* (16 Asp. Mar. Law Cas. 236; 130 L. T. Rep. 139; (1924) 1 K. B. 79); and an argument was put forward to limit the affidavit of ship's papers to documents in the possession of someone interested in the policy other than someone interested in the adventure, and the Court of Appeal had occasion there, while commenting on the form of the order for ship's papers, to say that it applied, not merely to people interested in the policy but also to people interested in the subject-matter of the adventure, such as the shipowner, though he had no interest in the policy on the goods. The court suggested that the order for ship's papers should be revised; the Lord Chancellor appointed a committee consisting of some counsel and solicitors specially experienced in insurance matters; I was chairman of the committee and we made a report to the Lord Chancellor, in consequence of which the present form of order for ship's papers was sanctioned by the Rule Committee and incorporated in the Rules.

Now, in my view, in order to see whether the matter comes within the order for ship's papers, you must look at the policy and the adventure giving rise to the action. The question is, Is the policy a marine policy?—because that is really what it began with and ended with—that in connection with every marine policy an order for ship's papers should be made. Is the adventure in respect of which a loss is being claimed a marine adventure?—and if you find that the adventure has nothing to do with the sea at all, as, for instance, the in-and-out policy in *Tannenbaum's* case (*sup.*), you will say: "No ship's papers," and if you find that the policy is not in the marine form at all, you will say: "No ship's papers." But if you find the policy in the form of a marine policy involving risk at sea, it does not, as Mathew, L.J. said in *Harding* v. *Bussell* (*sup.*), exclude the order for ship's papers, although you find that in addition to the transit by sea there are preliminary and subsequent transits by land. That does not take the case out of the class of marine adventures, and it becomes very marked when you remember that of recent years—because it is a comparatively recent alteration—every marine policy, every policy for transit by sea, has included the warehouse to warehouse clause involving at the beginning and end of the marine adventure a transit by land; and in the case of transit at the end of the marine adventure it is extremely important that you should have full discovery. When the transit to the warehouse takes place, damage to the goods may be discovered, and there may be a question whether it happened at sea, and, if so, whether the ship was seaworthy, or whether it happened on land by reason of something not in any way connected with the sea. So far as regards the warehouse to warehouse clause at the end of the adventure, the reason is obvious, and, in my view, the practice has always been that the rule as to ship's papers applies though there is a warehouse to warehouse clause in the policy. It is curious that except in *Harding* v. *Bussell* (*sup.*) nothing has been said about it, but I think the explanation is that the limited class of people who deal with marine insurance and with the order for ship's papers have known that the practice is such that nobody has ever dreamt of raising the question; and it is only when very able and ingenious people who are not familiar with marine insurance make an incursion into that sacred sphere that words begin to be used that no

man familiar with marine insurance would ever dream of using.

Now if that is the line to be followed, I look at the policy to see what it is. Obviously we have not got all the documents, because I have no doubt that there is behind this policy an open cover under which declarations will be made by the assured to the underwriter; but owing to the English stamp laws you cannot sue under an open cover; you are not able to fulfil the stamp law requirements of the policy that it should specify the adventure because the open cover is made before the adventures that are going to be declared on it are known. Means have been discovered to get round that system, and this is one of them. In this form of policy every week the adventures that have been declared during the week on the open cover are put into a stamped policy; that can be done at the end of the week because everything has been declared, and you can declare the amount and the adventures. Accordingly, one finds that this policy is a record of the risk covered for the week ended the 5th June 1931. The policy bears on the outside: "Lloyd's, London. Steamers as specified. Voyages as specified. 6028*l.* on interest"—6028*l.* being the amount that has been declared during the week. In the schedule of risks declared appears a particular number, "Advices," so and so, "Insured, Leon"—Leon being the name declared—by the steamship *Lotus*. "Voyage from Cairo to Jaffa," and looking at the policy one finds the warehouse clause. The policy itself is in a marine form, but being drawn up in this form before the declarations were made it is for voyages as specified; and they are specified in the schedule in the policy: "Steamers as specified and (or) steamers and (or) conveyances as specified subject to classification clause as attached for steamers unnamed"—"Interest as specified." It is, therefore, obviously in form a marine policy with land risks before and after the marine risk of the same nature as the warehouse to warehouse clause which is also included.

In my view, such a policy comes clearly within the decision of the Court of Appeal in *Harding* v. *Bussell* (*sup.*), and the order for ship's papers should, therefore, be made. MacKinnon, J. himself, a very experienced judge in marine insurance matters, has come to the conclusion that this policy and the risk insured under it requires an order for ship's papers none the less because the loss is alleged to have occurred on the voyage by land before the shipment by the *Lotus* which is contemplated in the policy. For these reasons I think MacKinnon, J. came to a right conclusion and the appeal must be dismissed.

Greer, L.J.—I have with much regret come to the same conclusion, that is to say, that the authorities which have been cited oblige me to hold that this order of MacKinnon, J. was an order which he was entitled to make and with which we cannot interfere.

Before dealing with the law on the subject and with the facts of this case, I should like to make two general observations. The first is that no more unpleasant duty has to be performed by a judge than the duty of deciding a case in accordance with a previous decision of courts which are binding on him which he thinks, as applied to the facts of the case before him, is both unreasonable and unjust. That is the task which I have before me in the present case.

The facts are these. The plaintiff wanted to get some goods from Cairo to Jaffa. He went to an insurance agent to get his adventure insured, and if he had got a policy in the form of the certificate which was given to him by the insurance broker he would have had on the same document two insurances: (1) an insurance of a land journey from Cairo to Alexandria, or whatever port the *Lotus* was going to sail from. and (2) an insurance of the marine voyage on board the *Lotus*. Those two adventures are kept separate in the certificate. But unfortunately for him the broker did not obtain—in fact, has not yet obtained—a policy in that form; what he obtained was the ordinary marine policy with the warehouse to warehouse clause which in form is a marine policy covering the sea voyage and the ancillary journey by rail from Cairo to the port; and in those circumstances I cannot escape the conclusion that we are bound to regard the policy which has in fact been taken out and which is the only document upon which the action can be brought as a marine policy liable to the legal incidents of a marine policy.

The other general observation I should like to make is this, that nothing blinds the vision so much as custom and habit. There was a time when the criminal law of this country was in a state which would have been a disgrace to a half-civilised community and, notwithstanding that fact, judges in high authority and writers of textbooks who had been brought up to regard the law as it was in their time wrote about it that it was the perfection of human wisdom; and I cannot help thinking that those members of my profession who have been largely engaged both at the Bar and on the Bench in considering questions of marine insurance have been infected with the idea that that which has always been applied in marine insurance is that which ought to be applied, and that the law as it stands is incapable of improvement. I take exactly the opposite view. I think that when the rule as to ship's papers was invented it was a rule which was necessary to do justice to the case of the insurers, but it has in time been so extended by judicial decision that it has become an unfair and unjust weapon in the hands of insuring companies and the insurers of Lloyd's. I have known case after case which came before the judge taking the commercial list where defendants who had no real defence to the claim have been enabled by means of this engine of oppression to keep the plaintiffs out of their insurance money for long periods of time; and I regret that the court has not felt itself justified in holding a tighter hand over the power to order an affidavit of ship's papers than it has done. But it has ultimately been decided that if the case is one of marine insurance and if there is a single document that has not been accounted for by the plaintiff, the defendant can hold up the case until the plaintiff searches all over the world for that document, which is just as available for search by the assured as it is by the insurers. It is possible under the existing powers of the court to give the judge on the hearing of the summons a greater control over the order for ship's papers, so that he might exercise his discretion in each case as to whether it is really being used for the necessary purposes of the litigation or whether it is being used as an engine of oppression on behalf of the insurance company or the defendant Lloyd's insurer. I doubt whether it is possible to do that by rules of court now, but if it is, at any rate, I should think the change would be a welcome one to those who desire that justice shall be done and that there shall be an early end to litigation.

That, of course, is by the way, and it is not possible for me to decide this case on general principles: I have to decide it in accordance

with the previous decisions. In the present case the claim was expressly made as a claim relating to that part of the insured adventure which took place on land; and it was contended that in any case where the claim is confined to that portion of the adventure which takes place on land, then the rule as to the affidavit of ship's papers does not apply—because what is the use, it is said, of having ship's papers when the voyage by ship has nothing whatever to do with the matters in dispute in the action? But, of course, it has been clearly laid down, and frequently acted upon, that the affidavit of ship's papers does apply to a marine adventure with a warehouse to warehouse clause; and it is impossible to say that ship's papers in the literal sense of the word may have nothing to do with the transit which begins on land, a substantial part of which is continued on sea. There may, for example, be such a thing as a through bill of lading and there may be in the course of performing the journey covered by that through bill of lading a deviation either on that part of the journey which takes place on land or on that part of the journey which takes place on sea; and it has, as I think it has, been decided that where the adventure is substantially a marine adventure the rule as to an affidavit of ship's papers applies, then the question has to be determined in each case whether the adventure is or is not substantially a marine adventure; and in deciding that it seems to me that it is not possible to leave out of account the kind of contract which was made with the insurers. It is not possible to leave out the form of the contract made with the insurers because that is an indication as to what the adventure was that the two parties were considering when the policy was entered into.

I think in this case what the parties were considering when the policy was taken out was a marine adventure starting on land, but an adventure which was substantially a marine adventure within the meaning of sect. 2 of the Marine Insurance Act 1906, which provides that "A contract of marine insurance may, by its express terms, or by usage of trade, be extended so as to protect the assured against losses on inland waters or on any land risk which may be incidental to any sea voyage." I think perhaps, without looking at the cases, that those words are wide enough to cover the contract of insurance in this case; and I think the authorities show that in order to determine whether there should or should not be an affidavit of ship's papers you have not to look at what the claim in the action is, but at what the nature of the contract is that is sought to be enforced by the action at law. I think that view is consistent with all the cases, and I doubt whether the case of *Village Main Reef Gold Mining Company* v. *Stearns* (*sup.*) is in the least inconsistent with that, although apparently Mathew, L.J. seemed to think that it was, because in the course of his judgment in that case Kennedy, L.J. (then Kennedy, J.), says this at p. 248: "Of course, if the insurance is substantially one of sea carriage, although the subject-matter is also covered while on shore, it would still be a marine insurance." I think the case upon which my Lord has particularly relied as deciding this matter in the Court of Appeal is *Harding* v. *Bussell* (*sup.*), but I think that is on the same lines; the only question that the court had to determine in each of these cases was whether the contract in question was or was not a contract substantially for a marine risk. In giving his judgment in *Harding* v. *Bussell* (*sup.*), Mathew, L.J. says at p. 187 in the report in 10 Com. Cas.: "Here the policy sued upon is substantially a marine policy, but we are asked to say that because a small portion of the transit covered by the policy is by land, and because the policy covers the goods from warehouse to warehouse and while there, the whole of the established practice should be altered." I do not regard that as in any way conflicting with the decision of Kennedy, J. to which I have referred.

Then came the case in the Court of Appeal which has given me the most trouble; that is the case of *Tannenbaum and Co. and others* v. *Heath and another* (*sup.*), a decision of Lord Alverstone and Farwell, L.J. It is difficult to follow from the words of Lord Alverstone exactly what his view was; he appears to hesitate between two different views, one, that the right to an affidavit of ship's papers is to be determined by the nature of the claim made by the assured, and the other that the right is to be determined by the nature of the contract on which he is making the claim. Lord Alverstone says this (99 L. T. Rep., at p. 239; (1908) 1 K. B. at p. 1036): "There the decision"—he is referring to the decision in *Harding* v. *Bussell* (*sup.*)—"in *Henderson* v. *Underwriting and Agency Association Limited* (1891) 1 Q. B. 557) was questioned, and it was held that, where an insurance was substantially a marine insurance, the fact that part of the transit was by land did not affect the right of the defendant to an affidavit of ship's papers. That case is important, because it shows that for this purpose that which has to be looked at is the substance of the claim in the action." That is not what is to be looked at. What is to be looked at is the substance of the contract upon which the claim is made which is put as a test in the next sentence: "Mathew, L.J., at the beginning of his judgment, called attention to the fact that the policy in that case was in substance a marine policy, although it did cover a short transit by land, from ship to warehouse." Then on the next page the learned Chief Justice says this: "In *Harding* v. *Bussell* (*sup.*), discovery of ship's papers was ordered, where the real claim was on a marine insurance," and lower down, "What is really the nature of the insurance upon which the action is brought? Here it is not disputed that the action is upon a policy of fire insurance on precious stones on land. It is admitted that the claim was not on clause 4 of the policy." That case was concerned with a policy of insurance which was obviously in its substantial incidence a fire policy and a policy against the dishonesty of servants for acts committed on land with incidentally the clause which covered an event which might have happened, namely, that occasionally these goods were travelling by sea. I do not regard the case as a decision to the effect which was relied upon by Mr. Robertson, that you have to look at the nature of the claim and see whether it is a claim for a loss which occurred on land or a claim for a loss which occurred at sea. The true view seems to be that you must look at the contract of insurance and ask yourself is that substantially a contract of marine insurance; and whatever might have been the view I could have taken if a policy had been drawn up in accordance with the certificate which was obtained, I find myself unable to hold that the policy which has been handed over, which is the only one which can be made the subject-matter of action at the present moment, is not substantially a marine policy.

For those reasons, though I do not see how the usual affidavit of ship's papers can be of any real

use to the insurers in this case, I think it is a case in which the learned judge was entitled to make the order, and we cannot interfere with it.

Slesser, L.J.—I agree that this policy must properly be considered to be substantially a policy of marine insurance. Indeed, I doubt if Mr. Robertson really contests that point. As I understand his argument, it is this. He says: "We have to have regard to the claim with reference to the misadventure which here befell." There may be cases where it is doubtful whether the misadventure took place on land or on sea, cases, for example, such as the disappearance of the goods when the ship reaches the point of destination or the final warehouse. Here, however, he says that his claim as appears in the writ is based specifically and only on a loss incurred before the goods were at sea at all; and, having regard to the narrowness of his claim and basing himself upon the original purpose and intention of all discovery, he says there is here nothing further to be inquired into than there would be in the case of a loss insured solely in respect of land risks, and, therefore, that the underwriters are not entitled to those particular privileges which are conferred upon them with regard to marine insurance.

Now I can find no authority at all for Mr. Robertson's proposition, except a passage in the judgment of Lord Alverstone, C.J. in the case of *Tannenbaum and Co. and others* v. *Heath and another* (*sup.*). The authorities which I have read and considered are all concerned with this question: Was the contract one substantially of marine insurance or not?—not with the question, Was the loss actually covered by such part of the policy as did not apply to the marine adventure? The only case, as I say, which does contain some passages which might raise the contrary view are to be found in *Tannenbaum's* case (*sup.*) and, like Greer, L.J., it is that case which has caused me the greatest trouble here.

In *Tannenbaum's* case (*sup.*), it is quite true that there was ample material on which the court could have come to the conclusion, having regard to the nature of the policy and the risks there insured, which were of four kinds, one only of which had any relation to transportation by sea, that the policy was not one of marine insurance taking it as a whole, and, therefore, the case might well have been held to fall within the decision of *Schloss* v. *Stevens* (*sup.*), and cases on that side of the line rather than the cases of which *Harding* v. *Bussell* (*sup.*) is the chief representative.

But Lord Alverstone has not been content in *Tannenbaum's* case (*sup.*) to found himself, as I read the judgment, wholly on the question of the nature of the contract. He discusses the nature of the claim, and he says this (99 L. T. Rep. at p. 240; (1908) 1 K. B. at p. 1037): "If the claim had been under that clause"—that is, clause 4, which is the clause dealing with marine risks—"I do not say that there might not have been an order for discovery of ship's papers. But, when one finds that the only claim in this case is on a fire insurance, that the exceptional privilege given to underwriters of a marine policy has never been extended to other insurances." If that means, as Mr. Robertson contends it means, that even if it be assumed that the policy be substantially one of marine insurance, one has to look at the particular part of the risk covered to see where the loss was—to see whether it was a marine loss or a land loss—I think that what Lord Alverstone is saying is inconsistent with the whole line of authority. But, rather than take that view, I would prefer to think that Lord Alverstone there was treating the policy in that case as really being four separate policies, and when he speaks of the claim there he means the claim on that part of the policy which is dealing with marine matters and not that part of the policy which is dealing with land matters. If he is treating the insurance in *Tannenbaum's* case (*sup.*) as four separate insurances, the inconsistency between that case and the other cases, which therwise leaps to the eye, does not arise. However that may be, it is quite clear, I think, that Farwell, L.J. took the view, because he says: "In this case the claim is not upon such a policy"—he is referring to marine policy. "It is immaterial that, in another clause of the same document, which is not sued upon, there is an insurance against marine risks." I think it is quite clear that Farwell, L.J. is treating the insurance in *Tannenbaum's* case (*sup.*) as one of four separate insurances. He is not speaking of the claim arising out of the particular loss. He is saying that this claim is on the insurance against fire which, although contained in the same document, is a separate contract and severable from the marine insurance. In that way after much hesitation I have gone into that case: and, that being so and the case not in any way throwing any doubt upon the leading case of *Harding* v. *Bussell* (*sup.*), I think that, as far as it is substantially marine insurance, the misadventure has occurred within the limits of that insurance between warehouse and warehouse, and, therefore, the principle laid down in *Harding* v. *Bussell* (*sup.*) would apply.

I would only add one word, and that very reluctantly, on the more general question of policy. My reluctance arises for two reasons—firstly, because I feel myself incompetent to express an opinion, and, secondly, from a natural hesitation to appear to invade the province of the Legislature. For my own part, in the conflicting views which may be expressed on the merits or demerits of these orders for ship's papers, I should be inclined to come to this view. On the one hand it is said they may be used as instruments of oppression and delay; on the other hand it is pointed out that in the form in which underwriters grant their policies they do not get that specific information which is usual when a declarant fills up a paper in any policy on land. Speaking for myself, my natural conservative inclination would lead me to believe that where a practice has developed over many years' dealing with a very difficult matter, the probability is that it is right and not wrong; and if there is to be any alteration in this particular matter it should be done with care and discretion and after long consideration. As I say, the probability is that that which has prevailed on the whole, so far as I can see from the authorities, with the acquiescence both of the insurers and the assured, is probably the most expedient way in which to deal with this difficult matter.

HIGH COURT OF JUSTICE.

CHANCERY DIVISION.

Tuesday, March 8, 1932.

(Before EVE, J.)

Re Argonaut Marine Insurance Company Limited. (*a*)

Insurance—Transit and marine form—Transit risks with fire risk included by indorsement—Fire excluded from company's business—Loss thereby—Proof in liquidation rejected—Assurance Companies Act 1909 (9 *Edw.* 7, *c.* 49), *s.* 28, *sub-s.* (3).

A consignment of wool in transit to a warehouse, near Hamburg, where it was stored for a month, was insured on a German policy for 150,000 *dollars. The transit covered the distance from the ship to the warehouse. The form of policy was for transit or marine indorsed to cover fire and pilferage risk. It was renewed for two months, during which the wool was seriously damaged in the warehouse by fire. The insurers claimed against the company, but they declined to pay. They then sued in the local court and recovered judgment on which they sued in the King's Bench Division under Order XIV., and recovered judgment for* 2000*l. and upwards. The company had meanwhile gone into liquidation, and proof was tendered for that amount, but rejected on the ground that the policy was a fire policy* ultra vires *the company. This summons was by way of appeal. It appeared that fire, life, and accident business was excluded from the company's objects. By the Assurance Companies Act* 1909, *s.* 28, *sub-s.* (3), *a policy was not to be deemed a policy of fire insurance by reason only that loss by fire was one of the obvious risks covered thereby.*

Held, that the question was whether the policy was mainly transit or marine, to which fire risk was incidental or the reverse. The transit for so short a space was subsidiary, the main risk being that of fire. The above-mentioned section did not, therefore, apply and the summons would be dismissed with costs.

THIS was a summons taken out in the winding-up of this company by the applicants asking that the decision of the liquidator not to admit their proof should be reviewed, and the proof admitted. The facts were as follows: On the 9th June 1928 this company and four German insurance companies, by their agents in Hamburg, insured the applicants in 150,000 dollars with 30 dollars premium in respect of a consignment of raw wool for transit in Harburg–Wilhelmsburg from quay to warehouse for one month, including any stay there, and by a typed indorsement warehousing risks against fire and explosion on the general insurance conditions of the companies were included. By art. 1 of these conditions especially were included partial or complete destruction, risk of fire, theft, and pilferage. The policy was renewed for two more months at the like premium. In August the wool was damaged by fire to the amount of 384,000 dollars. It was then sold by the companies for 133,047 dollars, and this was remitted to the applicants, who subsequently received an amount equal to all their loss except the share of this company—9424.21 dollars, with interest. The applicants took proceedings to recover this in the court at Hamburg, and although the company had before contended that their agents had exceeded their authority in entering into such a contract, not being within their powers, judgment was given by default for the applicants for that sum. The amount not being paid, judgment was obtained in the King's Bench for the amount under Order XIV. This company then went into liquidation. The applicants put in a proof for the amount, but this was rejected by the liquidator as being *ultra vires* the company. Clause 8 of its memorandum of association was "to carry on . . . every kind of transit, insurance business, and generally every kind of insurance and marine insurance business, whether of the like or a different kind . . . except life assurance business, fire insurance business, or accident insurance business within the meaning of the Assurance Companies' Act 1909. Hence this summons.

Lindon for the applicants.—Fire insurance is defined in sect. 1 (*b*) of the Act, but this case comes within the qualification in sect. 28, sub-sect. (3), namely, that a policy is not to be deemed one of fire insurance by reason only that loss by fire is one of the various risks covered. The indorsement of the policy did not alter its nature: (*Royal Exchange Assurance* v. *Hope*), 138 L. T. Rep. 446; (1928) Ch. 179).

G. O. Slade for the liquidator.—The policy was one of fire insurance within sect. 1, sub-sect. (3), of the Act. Its form is immaterial: the transit risk was negligible. Fire was the principal risk: (*Re United London and Scottish Insurance Company*, 13 Asp. Mar. Law Cas. 170; 113 L. T. Rep. 400; (1915) 2 Ch. 12). It is not within the saving of sect. 28, sub-sect. (3).

Lindon replied, and referred to *Simon Israel and Co.* v. *Sedgwick* (7 Asp. Mar. Law Cas. 219, 245; 67 L. T. Rep. 785; (1893) 1 Q. B. 303).

Eve, J.—This is an application on the part of a German firm to review the action of the liquidator in rejecting the proof they have lodged in the winding-up for damages caused by fire to a consignment of raw wool. The claim is based on a policy of insurance dated the 9th June 1928, and the liquidator justifies the course he has taken by asserting that the policy is in substance a fire insurance policy and one into which the company had no power to enter. One cannot help regretting that the applicants should already have been involved in the expense of recovering judgments in Germany and in England, but now that the company is in liquidation the liquidator is bound to protect the assets for those who are legally entitled to participate in their distribution.

His case is that the policy—although purporting to be a transit one—was in substance an insurance against loss or damage by fire, and he relies on clause 8 of par. 3 of the company's memorandum of association as establishing that this class of insurance business is outside the company's powers. The company is thereby empowered to carry on every kind of transit insurance, and generally every kind of insurance business, except life assurance business, fire insurance business, accident insurance business, or employer's liability insurance business

(*a*) Reported by A. W. CHASTER, Esq., Barrister-at-Law.

within the meaning of the Assurance Companies Act 1909.

What I have to decide, therefore, is whether this is a fire insurance policy or a marine policy, and in considering that question, sect. 28, sub-sect. (3), of the Act, whereby it is provided that the policy shall not be deemed to be a policy of fire insurance by reason only that loss by fire is one of the various risks covered by the policy, must be borne in mind. If the policy is a marine policy, then, although fire was one and only one of the risks insured against, it would not be within sub-sect. (*b*) of sect. 1 of the Act, but if, according to its true construction, it is a policy insuring against loss by or incidental to fire, then it is fire insurance business under the Act, and business which the company had no power to undertake. In the former case the claim of the applicants would be provable in the winding-up; in the latter case their right of proof is limited to the unexpired portion of the premium.

I have come to the conclusion that the liquidator's contention is right. The policy is in form a transit one, but was altered by indorsement so as to cover the wool while in transit or in storage against risk of fire or explosion. The transit part of the risk was of an almost negligible nature, involving only the transit of the wool from the quay to a shed or warehouse in the same place, and when, after the transit was over, the policy was renewed on two occasions, the same premium was charged as had been charged for the first period, which included transit, a clear indication that what was really being insured against were the warehouse risks and not the transit. Moreover, the wording of the policy specially including in the insurance the risk of partial or complete destruction by fire discloses the real nature of the contract, and I feel bound to hold that this was the real risk insured against. I must, therefore, dismiss this summons, with costs.

Solicitors: *Stokes* and *Stokes; Stafford Clark and Co.*

KING'S BENCH DIVISION.

Friday, Nov. 27, 1931.

(Before Bateson, J.)

Dampskibsselskabet Botnia A/S v. C. P. Bell and Co. (*a*)

Charter-party — "Weather working day" — Loading prevented by ice—Claim by owners for dead freight.

A charter-party provided that a cargo of timber should be loaded at the rate of 125 fathoms per weather working day. Under the charter-party the ship proceeded to the port of Mollersvik, Finland, to load timber for carriage to Cardiff. Ice formed at Mollersvik shortly after the ship's arrival, in consequence whereof the timber could not be loaded at the agreed rate. Before the loading was complete the ship was obliged to leave port to avoid being icebound. The owners claimed against the charterers for dead freight. It was not disputed that if the days on which loading was prevented by ice were treated as "weather working days" the ship could have been fully loaded before it was necessary for her to leave port.

Held, that days on which work at the port of loading could not be carried on by reason of the presence of ice were not "weather working days," and consequently that the claim failed.

In this action the plaintiffs, as owners of the steamship *Sydhavet*, claimed a sum for dead freight on a charter-party for the carriage of timber from Baltic ports to Cardiff. The charter-party, which was dated the 27th Oct. 1930, provided that the plaintiff's ship *Sydhavet* should go to one place in Middle Finland as ordered by the charterers and load a cargo of pit props, and being so loaded should proceed to Cardiff and there deliver the cargo on payment of the freight. The defendants were the owners of the pit props and holders of the bill of lading, which incorporated all the material terms of the charter-party.

In pursuance of the charter-party the steamer was ordered to Mollersvik, a Finnish port, which was icebound in winter. She arrived there on the 8th Nov., and loading commenced. Shortly afterwards ice began to form, and from the 21st Nov. loading was impossible. By that date 394 fathoms had been loaded out of 750 required to make a full cargo. On the next day the ship put to sea, as she was compelled to do to avoid being icebound. The part cargo was carried to Cardiff, and was there deposited with the dock authority in pursuance of sects. 492 to 496 of the Merchant Shipping Act 1894, and the master claimed a lien on it for dead freight in respect of cargo which had not been carried.

The question in issue in the action was whether days on which cargo could not be brought to the ship because the harbour was ice-bound were "weather working days" within the meaning of clause 5 of the charter-party. That clause provided as follows: "At loading port the cargo shall be brought alongside the vessel at charterers' risk and expense. The cargo shall be loaded at the rate of 125 fathoms per weather working day on an average during the ordinary working hours of the port, but according to the custom of the port."

Clause 7 (*d*) provided: "If after arrival the master for fear of vessel being frozen in deems it advisable to sail he shall be at liberty to leave without cargo, and to fill up for vessel's benefit at any port or ports whether such ports are in the course of the chartered voyage or not. . . ." The charter-party further provided (by clause 18) that the master or owners should have an absolute lien on the cargo for dead freight.

G. St. C. Pilcher for the plaintiffs.—The obligation on the charterers was to load at a stipulated rate "per weather working day." Days on which loading was prevented by ice were "weather working days." If not, the loading could have been delayed until the following spring. Ice is not "weather" in the sense used in this charter, but is a mere result of weather. Weather suggests something fortuitous, but there is nothing fortuitous about ice in this place at that time of the year, for the formation of ice was something which was bound to occur. If a gale on shore had blocked the road by which the timber was being carried to the port it might have rendered the loading of this cargo impossible, but the day on which the progress by land was so impeded would be none the less a "weather working day."

Willink for the defendants.—There never were sufficient "weather working days" in which to complete this contract. Ice is "weather." It is merely rain in another form, and no one could

(*a*) Reported by V. R. Aronson, Esq., Barrister-at-Law.

suggest that rain was not weather. The charterers only bound themselves to load whilst the weather permitted loading; and if great cold, resulting in the formation of ice, prevented loading, days on which that condition existed were not "weather working days."

Pilcher replied.

Bateson, J.—This is an action by shipowners against cargo-owners to recover dead freight on the steamship *Sydhavet*, which was chartered to carry pitprops from a port in Middle Finland to Cardiff. On the 8th Nov. 1930 the ship arrived at Mollersvik, which is a port in Middle Finland. At Mollersvik the cargo has to be brought down a river to an estuary, and the ship lies at an anchorage one or two, or possibly three, miles out in the bay, and the method of loading is by towing rafts of timber from the mouth of the river out to the ship. Any part of the raft that is not completely loaded in the day is towed back again, because it is not safe to leave it alongside the ship.

The ship arrived at this port in the afternoon, and the following day was a Sunday. From the 10th to the 16th Nov. there was only one day on which the ship could be loaded, namely, the 11th Nov., and she then loaded 136 fathoms. There was some little question as to whether she ought to have loaded a little more on the Saturday, but the tug towing the raft out got ashore owing to a snowstorm. It does not look as if it was a very good day for loading, but that is what was done, and nothing was loaded on that particular day. It was very unfortunate from the point of view of the ship, because if it had been fine weather she would have been loaded and would have got away. On Sunday, the 16th Nov., which was not a working day, ice began to appear. A little cargo was loaded on the 17th and 18th, but the ice set in substantially, and with the exception of some small parcels which were farther outside than the mouth of the river, in places where some small quantities were kept stored, no more loading was done before the 21st. Ice was the cause which prevented any more cargo being brought to the ship from the storage place, and the port was practically shut on the 18th Nov. for the winter. It was obvious that no more cargo could be given than what the shippers had managed to do from the other small place where there was a small store, and it was no good the ship waiting any longer. The master, and his owners, wanted to get a full cargo, and if he did not get a full cargo he wanted dead freight, and in order to protect himself the master would not go without getting a letter from the shippers to say that it was not possible to ship any more cargo. Thereupon the shippers gave him a letter in the following terms: "As we now, on account of weather hindrances (ice), consider ourselves unable to supply any more props in Mollersvik, we are ready to clear your vessel, in accordance with the charter-party, with the approximate 400 fathoms loaded. On account of the reason mentioned above we are now also unable to deliver any props from any other place stipulated in the charter-party."

Of course, if the master had stayed very much longer he would have been frozen in himself. He had to go, and there was no chance of his getting any more cargo.

Those are most of the facts in this case. In fact, 394 fathoms were loaded, leaving 356 fathoms short. The vessel proceeded to Cardiff on the 22nd Nov. and arrived there on the 27th Nov. The claim was made for dead freight and a deposit was made under the Merchant Shipping Act on the 2nd Dec.

The charter-party was made on the 27th Oct., a fortnight before the vessel arrived at the port of loading and was in the "Scanfin" form. It was agreed between Messrs. Galbraith, Pembroke and Co., agents for the owners, and Messrs. Pitwood, the charterers, that the vessel should proceed to one place in Middle Finland and load a full and complete cargo of short pit props and being so loaded should proceed to Cardiff. [His Lordship then read the material clauses of the charter-party, as above set out, and continued:]

The question which I am asked to decide really comes to this: What is the meaning of "weather working day" in clause 5? Mr. Pilcher points out that clause 7 (*d*), the sub-clause in the ice clause, does not apply to this shipper, and that it is only put in for the protection of the owners. Mr. Willink, on the other hand, says that the corresponding protection for the shipper is under clause 5, which regulates his duty to put cargo on board the ship in weather working days only. That is really the dispute between the parties. Mr. Pilcher says that clause 5 merely relates to the rate for loading, and that it does not negative or cut down the obligation to load a full and complete cargo, that the shipper is bound to ship at the fixed rate per weather working day, and he says that ice is not weather; that it may be the result of weather, but that it is not weather, and that on a perfectly fine, bright, cold day ice would not prevent the vessel being loaded. He further says that if they had wanted to except ice from the loading they could have said so in that clause, or they could have made it clear elsewhere in the charter-party, and they have not chosen to do so. He goes on further to say that there is no reported case where it has ever been held that when loading is prevented by ice it is not a weather working day.

Of course, the answer to that is the one so often made where no cases can be found in the books, that nobody ever thought of saying so before. But the question has arisen now, and I have to determine it, and the way I approach it is this. Is a day on which ice prevents loading a weather working day within the meaning of this charter-party? It was a charter-party for a vessel to go to an ice port at a very late period in the season. One of the worst things of an ice port is, I suppose, that ice prevents the loading; and I, myself, think that where, in such a charter as this, for such a place as this, the parties have agreed that the loading is only to take place on weather working days, if the conditions are such that the cargo cannot be got out of the ice in order to be taken to the ship, that day will cease to be a weather working day. I think that the formation of ice by cold which prevents the loading is weather, and that the meaning of the phrase "weather working day" between business men dealing with this kind of charter-party must relate to prevention from loading by ice.

Passages in the correspondence have been referred to where the parties themselves talked about it being the weather that prevented the loading, and such expressions are used as "If the weather turns mild we might get on with the loading." The actual wording of the notice which the master got the shippers to give him says "weather hindrances," and I think, in ordinary English, the meaning of the words in this charter-party are that ice such as prevented the loading in this case, was weather preventing the loading, and that the excuse for not loading more is that there were no more weather working days on which that could be done. Mr. Willink pointed out that

if ice is not weather the waves which are produced by the wind and which prevent lighters or rafts from getting alongside vessels could not be said to be weather. I think that is somewhat analogous. I think the phrase means loading weather, and if you have ice which prevents you from loading you have not got loading weather. In other words, you have not got a " weather working day."

Mr. Pilcher says there is only one case, namely, *Bennetts* v. *Brown* (98 L. T. Rep. 281 ; (1908) 1 K. B. 490), where the words, " weather working day " have ever been interpreted. In that case, Walton, J. said : " I think it has a natural meaning, namely, a day on which the work of discharge—it might be of loading, but in the present case it is of discharge —is not prevented by bad weather " : (98 L. T. Rep. at p. 283).

Mr. Pilcher says that this was not bad weather, that ice is very often beautiful weather ; but I think that in this charter-party it is bad weather when ice prevents you from loading. Scrutton, L.J., in his book on charter-parties, says that " weather working days " means days on which the weather allows working : (Scrutton on Charter-parties, 13th edit., p. 365). Those two definitions are almost identical in meaning, and I am satisfied that in this case the proper interpretation of these words is that which I have put upon them. There will, therefore, be judgment for the defendants.

(Before MacKinnon, J.)

Portvale Steamship Company v. Corporation of the Royal Exchange Assurance. (*a*)

Marine insurance—Institute Time Clauses—Continuity of voyage—Particular average.

The defendant corporation insured the plaintiffs' steamship Portvale *for twelve calendar months from midnight the 30th July* 1930 *to midnight, the 30th July* 1931, *subject to " Institute Time Clauses as attached." Clause* 13 *of the Institute Time Clauses provided " warranted free from particular average under* 3 *per cent." Clause* 16 *provided : " The warranty and conditions as to average under* 3 *per cent. to be applicable to each voyage as if separately insured, and a voyage shall be deemed to commence at one of the following periods to be selected by the assured when making up the claim, namely, at any time at which the vessel* (1) *begins to load cargo, or* (2) *sails in ballast to a loading port. Such voyage shall be deemed to continue during the ensuing period until either she has made one outward and one homeward passage (including an intermediate ballast passage if made) or has carried and discharged two cargoes, whichever may first happen, and, further, in either case, until she begins to load a subsequent cargo or sails in ballast for a loading port." The* Portvale *was chartered to load in the River Plate for Antwerp, and between the* 10*th Jan.* 1931 *and the discharge of her cargo at Antwerp on the* 9*th April* 1931 *she sustained damage on three occasions. She then lay up at Antwerp till the* 27*th Aug.* 1931 *owing to absence of freight. During the period of lying up she sustained damage on two occasions. The question for decision was whether the cost of repairs arising from these two later casualties could be added to the expenses incurred on the three earlier casualties so as to ascertain whether the* 3 *per cent. particular average was exceeded.*

Held, on the clear wording of clause 16 *which defined a " voyage," the voyage which had commenced on the* 10*th Jan., was still continuing during the period of lying up. On any other construction there would be great difficulty in knowing what limit to put on the period of delay. The contention of the plaintiffs was right, and there must be judgment for them.*

Action tried in the Commercial list without a jury.

Under a policy of marine insurance dated the 30th July 1930 the defendant corporation insured the plaintiffs' steamship *Portvale* " for and during the space of twelve calendar months commencing midnight the 30th July 1930 and ending midnight, the 30th July 1931 as employment may offer subject to ' Institute Time Clauses ' as attached." Clause 13 provided " warranted free from particular average under 3 per cent.," and clause 16 defined when a voyage was deemed to begin and end.

The *Portvale* sailed in ballast from Pernambuco on the 10th Jan. 1931, chartered to load in the River Plate for Antwerp. On the 17th Jan. 1931 she encountered heavy weather which caused damage to the hull and machinery, and she put into Montevideo for repairs on the 21st Jan. She later proceeded on the voyage, and on the 7th Feb., when entering the port of Santa Fé to load, she struck the quay wall, sustaining damage to her bows. After loading a complete cargo the vessel proceeded to St. Vincent for bunkers, and while bunkering there on the 18th March 1931 the steamship *Sagres* collided with her, damaging her bulwarks.

The vessel then proceeded to Antwerp, arriving there on the 2nd April 1931, and the discharge of the cargo was completed on the 9th April. The vessel was then shifted to a lay-up berth pending arrangements for further employment. While so lying up, the steamship *Kabinda*, on the 24th June 1931, collided with her. She was dry-docked, and the collision damage was repaired, together with the damage previously suffered. In leaving the dry-dock, on the 9th July 1931, the vessel struck the quay walls on two occasions and sustained further damage. That damage was repaired in due course, and on the 27th Aug. 1931 she sailed in ballast for Hamburg, where she subsequently loaded cargo for the Kara Sea.

The plaintiffs contended that under the provisions of clause 16, the voyage which began at Pernambuco was still continuing while the ship lay-up, and the casualties suffered at Antwerp were covered. The defendants contended that the voyage was not so continuing, and that the cost of repairs, &c., arising from the casualties of the 24th June and the 9th July 1931 could not be added to the expenses incurred in respect of the

(a) Reported by R. A. Yule, Esq., Barrister-at-Law.

earlier casualties, regardless whether the 3 per cent. particular average had been exceeded or not.

Carpmael for the plaintiffs.

Sir *Robert Aske* for the defendants..

MacKinnon, J.—In this case the steamship *Portvale* was insured by the defendant corporation under a policy dated the 30th July 1930, the policy being expressed to be " for and during the space of twelve calendar months commencing midnight the 30th July 1930 and ending midnight the 30th July 1931 as employment may offer," subject " to Institute Time Clauses as attached." In the Institute Time Clauses it was provided, in sect. 13, " warranted free from particular average under 3 per cent.," with a qualification that is of no moment in this case. It was then provided, in clause 16 : " The warranty and conditions as to average under 3 per cent. to be applicable to each voyage as if separately insured." The clause then goes on to give a definition of what is meant by a voyage. As it is upon the wording of that part of the clause 16 that this dispute turns, I need not read it until I come to consider the point in dispute.

It is perhaps not immaterial to observe that clause 23 provides for what is commonly known as laid-up returns, the material one of which would be the return of 13*s.* 6*d.* per cent. if abroad when laid up in port.

The material facts which happened were these. On the 10th Jan. the vessel sailed in ballast from Pernambuco under a charter-party to load cargo for carriage to Antwerp. On the 17th Jan., while she was in ballast, she sustained some damage at sea. That was repaired in January at Montevideo, but on the 7th Feb. she sustained at Santa Fé some further damage by colliding with a quay wall. On the 22nd Feb. she sailed from the Plate with her cargo, but put into St. Vincent for bunkers, and on the 18th March she sustained some further damage from collision there. She then arrived at Antwerp, and on the 9th April had discharged her cargo at Antwerp. Owing to the unhappy condition of the freight market her owners then had no immediate employment for her and she was laid up at Antwerp from the 9th April until the 27th Aug. During that period, on the 24th June, she sustained some further damage through a ship running into her, and on the 9th July she sustained some further damage by bumping into a sea wall. On the 27th Aug. her stay at Antwerp came to an end, and she sailed for Hamburg under charter to load a cargo for the Kara Sea.

The collective cost of the damage which she sustained on these three occasions—the 17th Jan., the 7th Feb., and the 18th March—as I understand, came to more than 3 per cent. under the policy, and was admitted to be a claim. The cost of repairing the two sets of damage at Antwerp, on the 24th June and the 9th July, did not amount to 3 per cent., and the assured can only claim for these if he can assert that these two claims arose during the same " voyage " as that upon which the three earlier claims arose. In other words, he must establish that all five claims arose during the same " voyage."

The defendants say that that claim cannot be made, inasmuch as these five sets of damage were not all sustained during one voyage, but only the first three of them were sustained during the course of the voyage, and the two later ones were during a different voyage, or at any rate, not during the same voyage.

That involves the question what is the effect of the definition of a voyage set out in the words of clause 16. Those words are these : A voyage shall be deemed to commence at one of the following periods to be selected by the assured when making up the claim, namely, at any time at which the vessel (1) begins to load cargo, or (2) sails in ballast to a loading port." There is no dispute in this case when the voyage which we have to consider began. It is obvious, and it is admitted, that the voyage began when the ship sailed in ballast from Pernambuco. That is clearly within the provision that the voyage " shall be deemed to commence at one of the following periods to be selected by the assured when making up his claim." One of those is when the vessel " sails in ballast to a loading port." So the voyage began at Pernambuco. But the clause, having defined when the voyage should be deemed to have commenced, goes on to provide how long such voyage shall be deemed to continue in these words : " Such voyage shall be deemed to continue during the ensuing period until either she has made one outward and one homeward passage (including intermediate ballast passage if made), or has carried and discharged two cargoes, whichever may first happen ; and further, in either case, until she begins to load a subsequent cargo or sails in ballast for a loading port." Clearly the assured are correct in saying that under that provision this voyage had not finished by the 9th July when the fifth of the series of damages and the second of those, when laid up at Antwerp, occurred, because he can say that, the voyage having commenced at Pernambuco, it is to be deemed to continue until the vessel has carried and discharged two cargoes, and further, until she begins to load the subsequent cargo or sails in ballast for the loading port. On the actual words of the clause I think there can be no doubt that the assured is right in saying that the voyage which has been deemed to commence at Pernambuco under this condition must be deemed to be still continuing.

But it is alleged by Sir Robert Aske, on behalf of the defendants, that you ought to bring in some implication that the period when the vessel is actually lying up waiting for further employment to offer ought to be excluded from the period covered by the voyage, and he relies upon the fact that what one is dealing with, and what one is considering, is a voyage, and that the period when the ship is laid up is entirely alien to any notion of the ship being engaged upon a voyage. I should quite agree with that contention on the part of Sir Robert Aske if the question one had to consider was what was the natural construction to be applied to the word " voyage," and what is covered by or implied by it. But in this case we are dealing with a clause or provision which uses the word " deemed," " such voyage shall be deemed to continue " as from a certain date. Whenever you get the words " deemed to be " it means, though obviously the thing is not true, you have to pretend that it is true. Whenever you are dealing with a phrase which provides that something or other shall " be deemed to be " so and so, you have got to avoid and leave out of account any real consideration of the true facts, and you have only to ascertain whether the facts stated in the provision have arisen. If they have arisen, then you have to pretend and to deem that they are something else, though apart from such direction you would not think of doing so. Furthermore, I feel great difficulty in knowing, if I give effect to this contention, what limit I am to put upon the period, and how much is to be excluded from that which would clearly be covered under the clear words of the clause. I put the possible

case that in the circumstances here it might have happened that this ship, after discharging at Antwerp, had been chartered to load cargo in the Baltic, at first open water, and that as a result of waiting until the ice was broken she had to wait three weeks or a month, or even longer perhaps, at Antwerp, instead of hanging about out at sea until the ice allowed her to enter her new loading port. Sir Robert Aske, I think, was inclined to say that the period of waiting at Antwerp then would not be part of the voyage. From that the next stage would be, if she had not actually a new charter, that her owners would have to wait for a certain period before they could find a new charter, which might be a fortnight. As to that, Sir Robert Aske was inclined to say, I think, that it was only a little time, and he could not say that that was not included in the voyage.

The real truth is that the underwriters, not unnaturally, feel that it is hard that so long a period as this, which amounts to five months, should be included in this voyage which started at Pernambuco. But, in my view, upon the clear wording of the clause, though it results in this case in what appears to be a somewhat strange and possibly hard result, I do not see my way to say that as the time when these last two pieces of damage were sustained this ship had ceased to be on the voyage which commenced at Pernambuco, under the artificial definition of a voyage provided by this clause.

The result is that the assured are entitled to recover the claim they make in this case.

As it happens, by an accident we have discovered (because I had brought to me the old edition of Arnould) that this clause has remained unaltered since 1908, and it is perhaps rather a happy illustration of the comparative regularity of the employment of British ships that circumstances have not previously arisen to make this point obviously one of difficulty.

I am not going to suggest that the underwriters of the institute should make still longer what is already a very lengthy "Institute Time Clause," but I imagine, if this sort of point had been previously considered, there would have probably been some sort of addition or qualification to clause 16 providing that any period in respect of which the assured recovered a lying-up premium under clause 23 was not to be deemed to be part of a voyage within the meaning of clause 16. I am not inviting them to introduce that condition, but I do not think that I can imply such a condition as it has not been expressed.

I understand there is no dispute about the amount. The result is there must be judgment for the plaintiff for 17*l.* 4*s.* 10*d.*, and there will, of course, be judgment with costs on the High Court scale.

Judgment for plaintiffs.

PROBATE, DIVORCE, AND ADMIRALTY DIVISION.

ADMIRALTY BUSINESS.

May 2 *and* 11, 1932.

(Before LANGTON, J.)

The Mons. (*a*)

Ship — Priorities — Master's disbursements — Master's wages—Crew's wages—Necessaries.

The following claims were made against the proceeds in court of the sale of the steamship M., *which were insufficient to meet all claims in full: (i.) Claim of a former master for disbursements in respect of necessaries made in June* 1931; *(ii.) claim by the master for disbursements in respect of necessaries supplied in Norway in Jan.* 1932; *(iii.) claim by salvors for services rendered in Jan.* 1932 *on the voyage from Norway to the United Kingdom; (iv.) claim by the master for wages and disbursements and by the crew for wages for periods before and subsequent to the salvage services.*

Held, that the lien of the master for disbursements ranks upon precisely the same footing as his lien for wages; that the claims of the respective masters ranked pari passu *and not in the inverse order of attachment of their liens; and that the lien of the master is postponed to that of the crew.*

The Salacia (1862, *Lush.* 545) *followed.*

MOTION to determine priorities. On the 17th Jan. 1932 the Norwegian steamship *Mons*, whilst in the course of a voyage from Norway to the United Kingdom, being short of bunker coal, took the salvage assistance of the steam trawler *Heugh*, which towed her into Aberdeen.

A salvage action (fo. 24) was subsequently started against the *Mons*, her cargo, and freight. No appearance was entered for the ship and freight and the *Mons* was sold by order of the court for the sum of 1464*l.* 14*s.* 5*d.* An award of 650*l.* rateably against the *Mons* and her cargo, valued at 1201*l.* 13*s.* 10*d.*, was made by Langton, J. on the 11th April 1932.

Other claims were made against the *Mons*, and judgment obtained in the following actions:

Fo. 66. An action by Martin Clausen, a former master, for disbursements in respect of bunker coals amounting to 312*l.* 12*s.* 3*d.*, supplied in June 1931, at Kopervik, Norway, for which he had made himself liable.

Fo. 31. An action by Sigmund Thorbjornsen, the master of the *Mons*, for disbursements in respect of bunker coals amounting to 83*l.* 9*s.* 5*d.*, supplied in Jan. 1932, before the *Mons* started on her voyage to the United Kingdom, for which he had made himself liable on a promissory note.

Fo. 43. An action by Thorbjornsen and the crew of the *Mons* in respect of (*a*) disbursements by Thorbjornsen for provisions and travelling expenses amounting to 28*l.* 10*s.*, and (*b*) wages of the master and crew for different periods between Sept. 1931 and Feb. 1932, amounting to 589*l.* 4*s.* 5*d.*

Cur. adv. vult.

May 11, 1932.—**Langton, J.**—One or two minor problems were raised by this motion, and, as they were matters which I do not think have been dealt with before, I reserved my judgment to consider them.

I will dispose first of a point which was not really in dispute—namely, the question of the value of the master's lien for wages as compared with that of the crew. There is good reason, and, although an old case, good authority (*The Salacia*, 1 Mar. Law Cas. (O. S.) 261 ; 1862, 7 L. T. Rep. 440 ; Lush. 545) why the crew's claim for wages should have priority to the claim of the master, and Mr. Carpmael did not contend to the contrary. The master's lien, therefore, must be postponed to that of the crew.

The next matter was a curious point as to whether the master's lien for disbursements was on the same footing as his lien for wages. In my view there is no substance in this point. When one is considering the ranking of liens regard is had to the position of A.'s lien as against B.'s, but the relative position of A.'s liens are not matter for consideration at all. A master either has a valid claim in respect of wages and (or) disbursements or he has not. If he has a genuine claim for disbursements it will rank on precisely the same footing as his claim for wages.

The third point is more important. It is whether the claims of the respective masters for disbursements should rank *pari passu* or in the inverse order of their attachment ; and as Mr. Carpmael said, the authority on the point is of a somewhat illusory character. In Roscoe's Admiralty Practice, 5th edit., p. 227, it is stated that it may be regarded as settled that "liens *ex contractu* or quasi *ex contractu* rank against the *res* in the inverse order of their attachment on the ground that the last act in respect of which the latest claim arises, being a service to those who have anterior claims, is entitled to rank before such claims. As regards wages earned before a salvage service, this is clearly just, because the salvors have preserved the *res* in which the sailor has a lien." The authorities do not support quite so wide a statement as the one I have just quoted. They really only show that in certain instances liens of a contractual character have been held to rank in the inverse order of attachment, and I have considered them carefully to ascertain whether I can find any reason in law or in natural justice why these particular liens should be held to rank in any other order than the natural one of *pari passu*.

The origin, or idea, of liens ranking in the inverse order of attachment is not far to seek. Where a ship has been salved, as this one was, it accords with one's natural view of justice that the salvor who has preserved the whole of the *res* should have his claim considered in priority to the various creditors of the ship who would have nothing upon which to claim if the exertions of the salvor had not been made. But when one is considering claims, as between two creditors who have supplied necessaries to the ship or claims made in the name of the master for necessaries, it is difficult to see how the same principle could be applied, or indeed why it should be applied at all. A. supplies necessaries in January, and B. supplies them in February. The master pledges his credit for both, and both claims come against the proceeds of the sale of the ship. Why should B.'s claim be preferred to A.'s ? Of course, if A. has been guilty of some form of laches or negligence in putting forward his claim, one could see some ground for preferring B.'s claim to A.'s. No suggestion of that sort is made here, and I can see no ground of authority and no ground of equity or justice upon which one should be preferred to the other. The claims of the necessaries men (suing in the names of the masters) acquired the priorities of those masters, and the two masters' claims, including those of the necessaries men, will rank *pari passu*. Any other claims for disbursements will also rank *pari passu*, and not in the inverse order of attachment.

It is to be noted that it was admitted on behalf of the salvors that wages earned subsequent to the salvage service took priority of the salvage claim. Accordingly, in this particular case, there will be certain wages and disbursements of a later date which will take priority of wages and disbursements of an earlier date. This priority is solely due to the intervention of the salvage services and the admission by the salvors in this case of a priority in respect of wages (and disbursements, I hold, are on the same footing) incurred subsequent to their own services, and does not rest on any principle of inverse order of attachment.

The order of priority will, therefore, be as follows : (i.) The costs of the arrest up to the date of the order for sale ; (ii.) the crew's wages subsequent to salvage ; (iii.) the master's wages and disbursements subsequent to salvage ; (iv.) the salvage award and costs ; (v.) the crew's wages before salvage ; (vi.) the wages and disbursements of the two masters before salvage.

Shipping—Salvage—Value of salved property—Time charter-party—Appraisement—Whether value of future earnings under charter-party to be included.

In appraising the value of a vessel for the purpose of awarding salvage, the fact that the vessel was at the time of the services under a profitable and unexpired time charter-party can be taken into account, and the present value of future earnings under such charter-party can be included in the appraised value.

The Hohenzollern (10 *Asp. Mar. Law Cas.* 296 ; 95 *L. T. Rep.* 585 ; (1906) *P.* 339) *followed.*

SALVAGE ACTION.

The plaintiffs, owners, masters and crew of the steamship *Ousebridge*, of West Hartlepool, claimed

(*a*) Reported by GEOFFREY HUTCHINSON Esq., Barrister-at-Law.

salvage for services rendered to the Swedish motor vessel *Castor* and her cargo.

The *Ousebridge*, 5601 tons gross, whilst on a voyage from Nicolaieff to Baltimore via Oran, received a wireless message that the *Castor* was on fire in lat. 36° 34′ N. long. 22° 39′ W., and that her master had ordered the vessel to be abandoned. The *Ousebridge* at once proceeded to the *Castor*, and succeeded in making fast at about 4.30 p.m. on the 28th April 1931. The *Castor* was then towed to St. Michaels, Azores, where she was moored in safety at about 9.45 a.m. on the 2nd May 1931. The *Castor*, 8714 tons gross, was loaded with a cargo of oil.

At the time of the services the *Castor* was running under a remunerative charter-party, which still had seven years to run.

The value of the *Castor* was appraised at 72,820*l.*, but it appeared that the valuer in making his appraisement had not taken into consideration the value of the unexpired part of the time charter.

Dunlop, K.C. and *Naisby* for the plaintiffs.—The appraiser ought to have taken into account the value of the unexpired portion of the time charter-party, and he should have added something for the present value of the profits which the vessel will earn under it. The plaintiffs are entitled to an award on the value of the vessel to her owners as a going concern: (*The Hohenzollern*, 10 Asp. Mar. Law Cas. 296; 95 L. T. Rep. 585; (1906) P. 339). The same principle of valuation has been recognised in damage cases: (*The Harmonides*, 9 Asp. Mar. Law Cas. 354; 87 L. T. Rep. 448; (1903) P. 1; see also *The Edison*, 147 L. T. Rep. 141; (1932) P. 52). If the appraiser has proceeded upon a wrong principle the plaintiffs are not bound by the appraisement.

Digby, K.C. and *Carpmael* for the defendants.—The appraisement is conclusive, and ought not in this case to be set aside. In any case the appraiser has not proceeded on any wrong principle. The decisions in *The Harmonides* (9 Asp. Mar. Law Cas. 354; 87 L. T. Rep. 448; (1903) P. 1) and *The Hohenzollern* (10 Asp. Mar. Law Cas. 296; 95 L. T. Rep. 585; (1906) P. 339) must be read subject to the limitations of the decision in *The San Onofre* (14 Asp. Mar. Law Cas. 74; 116 L. T. Rep. 800; (1917) P. 96).

Dunlop K.C. replied. *Cur. adv. vult.*

June 6, 1932.—**Lord Merrivale, P.**—In addition to the controverted questions as to what was done by the *Ousebridge* and what was its effect, there was a stubborn contest at the hearing as to the value of the property salved, and a serious conflict as to the principle on which the value must be determined. Ordinarily an appraisement of the ship, a valuation of her cargo, and a simple adjustment of relevant matters of account will provide the material for arithmetical ascertainment of the values in question. Here, however a question of general importance has been raised, namely, whether in valuing the *res* in salvage cases the court can have regard to a charter-party in force at the time in question. This came about by reason that when the *Castor* was salved she was under time charter, with nearly seven years to run, with the Anglo-Saxon Petroleum Company.

The *Castor* had been built under the terms of a contract made in Dec. 1926, between her owners and the Anglo-Saxon Petroleum Company Limited, which determined the design and structure of the ship to be built and gave the company an interest in her as soon as she should be completed, the principal term being that she should be under hire to the company for a term of years at fixed rates for the carriage of oil at 6*s.* 10½*d.* per ton per month upon a dead weight capacity of 12,500 tons. Hence the charter-party. The *Castor's* gross earnings thereunder for a year were estimated by one of the witnesses at about 46,000*l.* and, after payment of working expenses and allowances for various charges, including charges for depreciation, it was said on the plaintiff's part that there was a net profit accruing to the owners under the charter-party of upwards of 12,000*l.* per annum, and it was contended that, the charter-party having nearly seven years to run, the present value of the prospective earnings of the *Castor* during that period must be taken into account as an element of value additional to her appraised value as a damaged ship of 72,820*l.* Mr. Dunlop also suggested in his final argument that the prospective earnings under the charter-party, if not treated as an element in the value of the vessel, ought to be regarded as freight at risk and part of the property or interest of her owners salved for them by the *Ousebridge*.

For the defendants the figures I have mentioned were not at all admitted. They regarded the net profit as only 4000*l.* It was contended by Mr. Digby that the value to be taken into account was the appraised value and no more.

In view of this conflict I thought it was necessary to ascertain from the valuer by whom the appraisement of the *Castor* had been made whether he had valued upon the footing that the vessel was on hire to the charterers on the terms of the actual charter-party, and I learned, and so informed the parties, that the charter-party had not been before the valuer. The vessel had been valued simply on the footing only of her actual employment. Evidence was given by expert witnesses as to the value of the *Castor* to her owners under the charter-party, and counsel discussed the question of value on this footing in light of a number of well-known legal authorities.

The outstanding cases cited were: *The Five Steel Barges* (6 Asp. Mar. Law Cas. 580; 63 L. T. Rep. 499; 15 Prob. Div. p. 142), *The Harmonides* (9 Asp. Mar. Law Cas. 354; 87 L. T. Rep. 448; (1903) P. 102), and *The Hohenzollern* (10 Asp. Mar. Law Cas. 296; 95 L. T. Rep. 585; (1906) P. 339); and in contrast with these the decision of Sir Samuel Evans, P. in *The San Onofre* (14 Asp. Mar. Law Cas. 74; 116 L. T. Rep. 800; (1917) P. 96). The judgments in the recent case of *The Edison* (147 L. T. Rep. 141; (1932) P. 52) in the Court of Appeal, were also mentioned. The substantial dispute, however, was whether the decision of the court in *The San Onofre* (*sup.*) limits or qualifies the principles applied in the earlier cases. As the question affects everyday practice it has been necessary to examine the cases closely.

Lord Hannen's judgment in the case of *Five Steel Barges* is useful for the reminder it gives that salvage cases are not mechanically uniform in process or in effect. It was a personal action against barge builders to establish a salvage claim in respect of services rendered to five barges, whereof two, though still under the builders' control, had passed to the Government for which they were built. Lord Hannen, in holding that payment for salvage was recoverable in respect of the possessory interest of the builders in these two barges, gave his well-known pronouncement on the principles which in our courts govern every salvage award. "It is," he said, "a legal liability arising out of the fact that property has been saved, that the owner of the property who has had the benefit of it shall make remuneration to those who have conferred the

benefit upon him. . . . I think that proposition applies equally to the man who has had a benefit arising out of the saving of the property. . . . The same moral obligations to which the law has given force in the case of an owner applies equally to those who have an interest in the property." The jurisdiction in salvage cases Lord Hannen also described as one of "a peculiarly equitable character."

As to the test of value in these cases, *The Harmonides* (*sup.*) and *The Hohenzollern* (*sup.*) were accepted by counsel on both sides as authoritative decisions. *The Harmonides*, like *The Edison* (*sup.*), was a case of ascertainment of value of a ship sunk in collision, but the test applicable appears to be the same in case of salvage. That this was Lord Gorell's view appears from the proceedings in the case of *The Hohenzollern* (*sup.*). What Lord Gorell had defined as the test in the damage case of *The Harmonides* (*sup.*) was: "What is the value to the owners as a going concern of the vessel in question at the material time?" and in *The Hohenzollern*, Bargrave Deane, J. after consultation with Lord Gorell, P. assessed salvage upon the footing that "the value is what the ship was worth in the damaged state to her owners."

Substantially the case of the defendants is that the judgment in *The San Onofre* (*sup.*) limits the operation of the earlier decisions by establishing as a legal principle that in determining the value of a salved vessel for salvage purposes contractual arrangements which exist between the owners and charterers of the ship must be excluded from consideration.

The facts as to *The San Onofre* can be shortly stated. She, like the *Castor*, was a vessel built for the purpose of being chartered to an oil company under a time charter. The time charter was in force with fourteen years to run at the date of the salvage. Her owners declared her value in her damaged condition to be not more than 160,000*l.*, that being the sum at which she stood in their books, with due allowance for depreciation and repair of damage. At the instance of the salvors, however, appraisement had been made in the ordinary course, and the value had been thereby fixed at nearly 370,000*l.* as "the market value of the vessel as a going concern at the date of the completion of the salvage services." This larger value was held by the court to be the value upon which the reward for the salvage services must be determined.

Certain passages in the judgment of *The San Onofre* were specially relied upon for the defendants, and these in particular: "In no case, so far as I am aware," the President said, "have the charters of a vessel been taken into account in assessing the value of a salved ship in salvage proceedings." Also this: "The ship is salved and may be arrested as she is, as the salvors are entitled to arrest the *res*. If bail is not given, the ship may be sold. She would not be sold subject to charter-parties, but as she existed to anyone who wanted to buy a ship of her description." And further, this: "The court has nothing to do with the relationship between the shipowners and the charterers; nor, in my opinion, have the salvors anything to do with any such question."

Read by themselves, as if they were statements of principle applicable in all cases, the words cited would perhaps establish the defendants' contention. They must, however, be applied to the facts with which the judgment deals. This is illustrated in respect of the question whether charter-parties may ever be taken into account in assessing value for salvage by a case reported in the same volume of the Law Reports with *The San Onofre* (*sup.*)—that of *The Kaffir Prince* (1917) P. 26). There, in determining a salvage award, the learned President took into account as an element in the value of the salved ship freight which the vessel was, by reason of the salvage, enabled to earn under a charter-party which was in being at the time of the salvage. In a damage case (*The Kate*, 8 Asp Mar. Law Cas. 539; 80 L. T. Rep. 423; (1899) P. 165), Lord St. Helier had treated the charter-party as a material element of value.

So far as I am able to see there is nothing in the case of *The San Onofre* (*sup.*) which in any way infringes or was intended to infringe the principle laid down in the case of *The Hohenzollern* (*sup.*). All parties interested in the *res* were before the court, and were interested in the salvage claim and the amount of the award. Two sets of rights—proprietory and possessory—had been benefited, and an award was made on the footing of the full value of the whole. The actual judgment was nothing exceptional. Upon an appraisement salvage was awarded. In what proportions the sum payable was provided as between the owners and charterers is not reported. Apparently they did not differ about it. As the vessel was not sold by auction, it did not become necessary to determine whether by virtue of the sale the owners had become entitled to the whole balance of the purchase-money on the footing that the charter-party had become discharged by operation of law. Had such a claim been made I cannot doubt that the equitable nature of the Admiralty jurisdiction in cases of salvage would have been vindicated.

As in the case of *The Hohenzollern* (*sup.*), what has to be determined here is what is the value of the *Castor* to her owners as a going concern? What was she worth in her damaged state to her owners?

The view I have expressed seems to me consistent with the judgments of the Court of Appeal in the recent case of *The Edison* (*sup.*) to which both parties referred. There, in the case of a vessel lost by collision damage, Scrutton, L.J. cited the judgment of Lord Gorell in *The Harmonides* (*sup.*), and added the words which directly affect the present inquiry. "The value of the ship," he said, "is an estimate on rough capitalisation of the earning power of the ship for its life"; and he added this: "You cannot give both the value of the ship and the profits it would probably earn."

Bearing authorities in mind, what seems to me fallacious in the contention for the plaintiffs here, is that after an appraisement which was manifestly based on some earning power they assert a right to enhance the appraised value by adding thereto the capitalised value of the ship's whole earning power under a charter-party. On the other hand, it seems to me inconsistent with authority and wrong in principle to exclude from consideration the earning power of the *Castor* under the charter-party, under which so long as it subsists she could alone earn money for her owners. The appraisement, as I have said, proceeds on the footing that the ship is an employed ship likely to be employed. To determine whether the agreed employment enhances the value so arrived at I have made the necessary further inquiries of the valuer. He advises me that the rate of hire is not exceptional so as to call for any adjustment on that ground, but that the agreed duration of the charter-party is an element of value proper for consideration in determining the *Castor's* value to her owners as a going concern. Acting to the best of my judgment upon the valuer's advice, I determine the salved value of the *Castor* at £85,000.

There was no dispute between the parties as to the salved value of the cargo. Taking account of

expenses involved amounting to 3938*l.*, the value of the cargo at Lisbon was 20,828*l.*

Having arrived at the values of the salved ship and cargo, I have to determine what should be the reward for the services rendered in salvage. It must be borne in mind that the salvage service involved loss of the *Ousebridge's* services to her owners for a period of six days, twenty hours, various expenses amounting to 1177*l.*, and 117*l.* expenses incurred by reason of the accident which happened to the seaman Prince. It is also material in respect of the claim of the owners of the *Ousebridge* that for several days their property, worth nearly 70,000*l.*, was exposed to risks involved in the salvage undertaking with no other prospect of compensation than that which depended upon the safe delivery of the *Castor* in port.

As to the master and crew of the *Ousebridge*, they undertook their task in face of some real risks which were inevitable, and of possible risks which might well have been alarming, and for the master the responsibility he took as well as his actual risk and labour, must be taken into consideration.

On the whole, I have come to the conclusion that the sum of 11,500*l.* would not be an excessive award for the salvage. Out of this sum 1000*l.* should go to the master of the *Ousebridge*, and 2300*l.* to her officers and crew, rateably, except that 300*l.* must be paid to the seaman Prince in respect of his injury in addition to his due share of the balance. Deducting from the total award of 11,500*l.* the sum of 3300*l.*, the balance of 8200*l.* will remain for the owners of the *Ousebridge*.

I have been asked to apportion the salvage found payable as between ship and cargo, and I direct that the total sum I have named of 11,500*l.* shall be apportioned between ship and cargo in proportion to their respective salved values of 85,000*l.* and 20,828*l.*

Supreme Court of Judicature.

COURT OF APPEAL.

April 26 *and* 27, 1932.

(Before SCRUTTON, GREER and SLESSER, L JJ.)

The Torni. (*a*)

ON APPEAL FROM THE ADMIRALTY DIVISION.

Carriage of goods—Bill of lading issued in Palestine—Bill of lading illegal by Law of Palestine—Failure to incorporate the "Hague Rules"—Bill of lading "wherever signed to be construed in accordance with English law" Whether "Hague Rules" incorporated—Government of Palestine Carriage of Goods by Sea Ordinance No. 43 *of* 1926.

(*a*) Reported by GEOFFREY HUTCHINSON, Esq., Barrister-at-Law.

By the Government of Palestine Carriage of Goods by Sea Ordinance No. 43 *of* 1926 *it is provided that any bill of lading or similar document of title issued in Palestine which contains or is evidence of any contract to which certain rules scheduled to the Ordinance (which are identical with the rules in the schedule of the Carriage of Goods by Sea Act* 1924) *apply shall contain an express statement that it is to have effect subject to the provisions of the said rules, and shall be deemed to have effect subject thereto, notwithstanding the omission of such express statement.*

Bills of lading issued in Palestine in respect of a cargo of oranges shipped on board the appellants' steamship at Jaffa did not contain any express statement as required by the above Ordinance, nor were the rules in any way incorporated therein. The bills of lading provided that, wherever signed, they should be construed in accordance with English law.

Held, on an issue as to a preliminary point of law, that the bills of lading sued upon under which the property in the goods was alleged to have passed by indorsement of the bills of lading to the indorsees must be construed subject to the rules scheduled to the Ordinance. The provision contained in such bills of lading that they should be construed in accordance with English law did not mean that the incorporation of the rules should be excluded, but merely meant that the bills of lading with the rules so incorporated should be construed in accordance with English law.

Held, further, that as regards certain plaintiffs who had taken delivery of goods and paid the freight, but as to whom it was not alleged that the property in the goods had passed by indorsement, no order could be made until the facts had been proved.

Order of Langton, J. varied and in part affirmed.

TRIAL of a preliminary point of law in an action for damage to cargo and short delivery.

The plaintiffs were the owners of the cargo of oranges *ex* the Esthonian steamship *Torni*. The defendants were the owners of the *Torni*, which at the time of the matters in question was under time charter to a firm of shipbrokers at Swansea. The cargo of oranges was shipped at Jaffa, where the bills of lading were issued.

By their statement of claim the plaintiffs alleged (par. 3) that Messrs. White and Son Limited and Messrs. William Machin and Co., two of the plaintiffs, were respectively the owners of 749 and 340 cases of the said oranges, to whom the property in the oranges passed upon indorsement of the bills of lading relating thereto. It was further alleged (par. 4) that Messrs. I. H. Goodwin Limited, White and Son (Hull) Limited, Humber Fruit Brokers Limited, Connolly Shaw Limited, T. J. Poupart (Northern) Limited, William Machin and Co., William N. Gibson and Co. (Leith) Limited, T. S. Johnson and Co., Andrew S. Clarke and Co. respectively took delivery of various cases of oranges set forth in the statement of claim under bills of lading held by them and presented to the defendants and paid freight due under such bills of lading respectively.

By their defence the defendants relied upon certain exceptions and other provisions contained in the bills of lading. In their reply the plaintiffs alleged the exceptions and provisions upon which the defendants relied were null and void under Art. III., r. 8, of the Government of Palestine Carriage of Goods by Sea Ordinance No. 43 of 1926, which requires rules similar to those scheduled to the Carriage of Goods by Sea Act 1924, to be incorporated in all bills of lading issued in Palestine. The defendants by their rejoinder denied that the bills of lading were subject to the Ordinance, and relied upon the following further provision in the bills of lading in question: "This bill of lading wherever signed is to be construed in accordance with English law." They further alleged that the *Torni* was at all material times under the flag of Esthonia.

The Government of Palestine Carriage of Goods by Sea Ordinance No. 43 of 1926 provides, so far as material, as follows:

"An Ordinance to amend the law with respect to the carriage of goods by sea.

"Whereas a Convention for the unification of certain Rules relating to bills of lading was adopted by the International Conference on Maritime Law held at Brussels in 1922 and 1923;

"And whereas it is expedient that the Rules of the Convention as set out in the schedule to this Ordinance should, subject to the provisions hereof, be given the force of law in Palestine with a view to establishing the responsibilities, liabilities, rights and immunities attaching to carriers under bills of lading;

"Be it enacted by the High Commissioner for Palestine [Field-Marshal Lord Plumer] with the advice of the Advisory Council thereof: . . .

"2. Subject to the provisions of this Ordinance, the Rules contained in the Schedule hereto shall have effect in relation to and in connection with the carriage of goods by sea in ships carrying goods from any port in Palestine to any other port whether in or outside Palestine. . . .

"4. Every bill of lading or similar document of title issued in Palestine which contains or is evidence of any contract to which the Rules apply shall contain an express statement that it is to have effect subject to the provisions of the said Rules as applied by this Ordinance, and shall be deemed to have effect subject thereto, notwithstanding the omission of such express statement."

Schedule [contains rules similar to those scheduled to the Carriage of Goods by Sea Act 1924.]

The question which the court was asked to determine as a preliminary point was whether the provisions of the Palestine Ordinance applied to the bills of lading in question.

Van den Berg, K.C. and *Cyril Miller* for the plaintiffs.

Raeburn, K.C. and Sir *Robert Aske* for the defendants.

The facts and arguments of counsel fully appear from the judgment of Langton, J.

Dec. 11, 1931.—**Langton, J.** read the following judgment:

This case belongs to a class which I have already referred to in a judgment which I delivered last term as a kind of case which generally presents difficulties to me. It is no exception to that rule. Since I have endured in the present case the refined, but well-merited, torture of listening to almost the whole of my somewhat prolix judgment in the previous case (*The Adriatic*, 145 L. T. Rep. 580; (1931) P. 241) read to me *viva voce*, I will say at once that I have found very little in that pronouncement which has been of any assistance to me in this case.

Although one of the points to be determined now is the same as in *The Adriatic* case, namely, which of alternative systems of law applies in interpreting the several contracts between the parties, the facts are wholly dissimilar. In the present case certain parcels of oranges were shipped from Jaffa and carried to Hull upon the steamship *Torni*. The vessel is owned by the Reval Shipping Company Limited, an Esthonian company, and is an Esthonian ship. At the time in question—Jan. 1930—she was under time charter to Messrs. Stockwood, Rees, and Co., shipbrokers of Swansea, and was employed by them in a service which they advertised to the world in general and Palestine in particular as the Jaffa Union Line. All the bills of lading concerning these oranges were dated in Jaffa and signed in Jaffa by persons purporting to sign as directors of the Jaffa Union Line Limited. It was proved in evidence before me, upon testimony which I accept, that the Jaffa Union Line Limited is a corporation under the law of Palestine, which has been formed by certain gentlemen in that country who act as agents for Messrs. Stockwood, Rees, and Company. Some of the preference shares in the Jaffa Union Line Limited are owned by Messrs. Stockwood, Rees, and Co., and the Palestine Corporation is paid a loading commission by Messrs. Stockwood, Rees, and Company upon all shipments made at Jaffa upon ships which sail in the service known as the Jaffa Union Line. The average number of trips made per season in this service is about sixteen, but in a busy season the number has been as high as twenty-five. There was for a short while some obscurity in my mind as to the precise relationship of the Jaffa Union Line to the corporation known as the Jaffa Union Line Limited. This obscurity was quickly and finally dispelled by Mr. Rees, who explained that the Jaffa Union Line was nothing more than a name for the service, used to advertise and designate the service. There was a house-flag flown by the *Torni* to show that she belonged to the service, and the bills of lading are headed by the words "Jaffa Union Line," but there is no existing separate entity which bears this imposing title, and the words are descriptive only of the service of ships provided by Messrs. Stockwood, Rees, and Co.

Upon the pleadings in the case the plaintiffs were divided into two classes. The first and smaller class contained two firms who sued severally as indorsees to whom the property had passed of two separate and comparatively small parcels of oranges. The second and much larger class comprised nine firms suing in respect of individual parcels of greatly varying size. This second class did not, however, purport to sue as indorsees or owners, but only as parties who had presented the bills of lading and paid the freight due thereunder. Upon this a case was raised of implied contract by the shipowners to deliver the oranges in good order and condition in accordance with the bills of lading. Some of the plaintiffs complained of short delivery and some of damaged goods, and some of both damage and short delivery, and two questions were submitted to me as preliminary points of law. The first of these was as to whether the law of Palestine or the law of England governed the interpretation of the contract, and the second as to

whether the bills of lading were or were not subject to what may be called for brevity's sake, The Hague Rules, under whichever law was found by me to be applicable.

The bills of lading are all identical in form, and contain a large number of provisions protecting the shipowners, some of which are pleaded in the defence. In reply, the plaintiffs set up the Government of Palestine Carriage of Goods by Sea Ordinance, No. 43 of 1926, and claim that under the said ordinance the provisions of the bills of lading relied upon in the defence are null and void and of no effect. By way of rejoinder the defendants deny that the bills of lading are subject to the ordinance, or that the ordinance formed part of or affected the contract between the plaintiffs and the defendants. Alternatively they say that the ship was at all material times under the flag of Esthonia, and in the further alternative rely upon the latter part of clause 14 of the bills of lading, which is in these terms : "This bill of lading wherever signed is to be construed in accordance with English law." There can, of course, be no dispute, and there is no dispute in this case that Palestine is at present mandated territory, and His Majesty the King is the Mandatory for Palestine. In pursuance of the powers under the Foreign Jurisdiction Act 1890, His Majesty made and promulgated the Palestine Order in Council 1922, constituting *inter alia* the office of High Commissioner and defining the powers attaching to this office. In the year 1926, Field Marshal Lord Plumer, as High Commissioner for Palestine, made and published an Ordinance (No. 43 of 1926), entitled the Carriage of Goods by Sea Ordinance 1926. It was not suggested on the part of the defendants that this Ordinance was in any way *ultra vires* or in excess of the powers conferred upon the High Commissioner. Briefly stated, the effect of this Ordinance was to apply to Palestine with certain named and familiar exceptions, the rules relating to bills of lading adopted by the International Conference on Maritime Law held at Brussels in 1922 and 1923. These rules are, of course, The Hague Rules, which are now incorporated in the British Statute 14 & 15 Geo. 5, c. 22, known as the Carriage of Goods by Sea Act 1924. The Ordinance is in fact an obvious adaptation of the statute to conditions in Palestine, and for the present purposes differs from the statute in only one material respect. This difference, which is, in my view, of the greatest importance in this case, lies in a somewhat remarkable addition in the Ordinance to the parallel provision in the statute. Sect. 3 of the statute is in the following terms : "Every bill of lading or similar document of title issued in Great Britain or Northern Ireland which contains or is evidence of any contract to which the rules apply, shall contain an express statement that it is to have effect subject to the provisions of the said rules as applied by this Act." Provision 4 of the Ordinance, reads : "Every bill of lading or similar document of title issued in Palestine which contains or is evidence of any contract to which the rules apply shall contain an express statement that it is to have effect subject to the provisions of the said rules as applied by this Ordinance, and shall be deemed to have effect subject thereto, notwithstanding the omission of such express statement." It is difficult to conceive how a legislative authority could use stronger terms than those employed in the Ordinance to secure that any and every shipment made in the country under a bill of lading should be made subject to the provisions of the rules enjoined. In the present case the bills of lading not only contained no express statement as directed by the Ordinance, but included the provision to which I have called attention at the end of clause 14, that the bill of lading wherever signed was to be construed in accordance with English law. Since the whole argument for the defendant shipowner turned upon this provision in clause 14, it is in my view most material to notice at the outset that this clause occurs in a bill of lading issued and signed in Palestine. By way of introduction, I think, rather than positive argument, Mr. Van den Berg first contended that, since an Ordinance of Palestine had its fount and origin in His Majesty's Order in Council, the law of Palestine was nearly or practically or almost English law. I think that one might agree that it is British made, or even that, in the jargon of the day, it comes under the heading of an "invisible export"; but Mr. Raeburn, for the shipowners, made short work of the contention that it is English law or that there is any such thing as "nearly English" or "quasi English" law. Indeed, if the argument were sound, it would be not a little surprising to find, as one does, that the Palestine Order in Council 1922 invokes the Foreign Jurisdiction Act 1890 (53 & 54 Vict. c. 37) as the source of the Royal Authority. The preamble to this statute states that its object is to consolidate the Acts relating to the exercise of jurisdiction out of Her Majesty's dominions. I think the words of this preamble clearly mark the distinction. English law comprises the law laid down by Parliament for England, Wales, and for such other possessions, territories and dominions as take their law directly from this source in the same form as that laid down for England. All other law, whether of British origin or not, is for the present purpose, at any rate, foreign law.

Another aspect of the matter strongly relied upon by Mr. Van den Berg was that if the shipowners' contention was sound, it would lead the court to a conclusion so paradoxical as to be manifestly absurd. The Hague Rules are clearly incorporated in the Law of Palestine. They are no less clearly incorporated in the Law of England. But since in each case they apply only to outward shipments they would not, if English law were held to apply, cover a shipment such as this from Palestine. The position, therefore, would be produced in which a shipment from a country governed by the Hague Rules, made to a country also governed by the Hague Rules would escape the Hague Rules. I agree that this sounds sufficiently absurd, but I am afraid that it is no part of my duty to strain the law in the laudable desire to produce logical results. In short, this aspect of the matter seems to me to belong to the area of general comment, rather than exact argument.

The strong points for the shipowners were that the bills of lading were in English, that they stated in unequivocal terms that wherever signed they were to be construed in accordance with English law, and they were received by Englishmen in England who might well be totally unaware of any law appertaining to Palestine. As a general principle no one nowadays questions that the test as to what law applies to the construction of a given document or contract is the intention of the parties at the time when the contract was made. Mr. Raeburn pointed to clause 14 of the bills of lading. If, he said, the contract deals expressly with the matter, this is the clearest possible evidence of the intention of the parties. As authority for this proposition, if authority were needed, he cited the judgment of Roche, J. in *Anselme Dewavrin Fils et Cie.* v. *Wilsons and North Eastern Railway Shipping Company Limited* (39 Ll. L. R. 289). He

urged too, that there were excellent reasons in this case, from the business standpoint, why English law should have been intended to apply. Apart from the two cases which concern indorsees, the large bulk of the plaintiffs were mere sellers of oranges in Hull. It was to be presumed that the course of business followed in this case was the usual one, and nothing could be more convenient than that receivers of goods of this class should know exactly where they stood when they came forward to pay the freight and take delivery. Doubtless, he said, it was for the express purpose of achieving this desirable end that the express clause as to construction was inserted in the bills of lading. For these reasons, *inter alia*, he contended strongly that English law, meaning thereby the law of England in England and not any transported or transposed version which might be applied in Palestine governed the present contract. Upon the effect as regards the application of the Hague Rules, which I have called the second point here, he argued that if English law applied the Hague Rules were excluded, since they applied to outward shipments only, and from the English standpoint this was an English inward shipment. If, on the other hand, the law of Palestine applied, he did not contend that as regards the small class of indorsees he could exclude himself from the operation of the Hague Rules, since the indorsee could be in no different position from the original shipper of the goods. As regards the second and large class, however, he claimed that, since they were not claiming under the bills of lading at all, but were relying upon an implied contract arising from the payment of freight, this class could not claim to apply the Hague Rules to their claims. The contract made by the shippers was not their contract, and they were neither affected by it, nor could they claim any benefit thereunder. These contentions constituted a formidable array. Nevertheless, I do not see this matter altogether in the light in which Mr. Raeburn so powerfully presented it.

I have had to ask myself in the first place: What did the parties to the original contract contained in the bills of lading intend as to the law to be applied? These parties were, nominally, Esthonian shipowners and shippers resident in Palestine. In reality, as we know, the Esthonian shippers were in nowise concerned in the transaction. No one has suggested here that the law of the flag should govern the contract. The real parties then were Messrs. Stockwood, Rees, and Co. Limited, of Swansea, and the shippers in Palestine. On this footing there is much to be said for the application of English law, but in my view still more to be said for the application of the law of Palestine. Of the cases in the books the nearest to the present case was by common consent the case of *Re Missouri Company* (6 Asp. Mar. Law Cas. 423; 61 L. T. Rep. 316; 42 Ch. Div. 321) and both sides claimed it as a decision in their favour. It is a very familiar and well-tried authority, and concerned the shipment of cattle from Boston, United States of America, to England upon a British ship by a British company whose domicile was England. The shipowners claimed the benefit of the negligence clause in the bills of lading, and the shipper replied that it could not avail them because such a clause would be invalid according to the law of the State of Massachusetts where the bills of lading were signed, given and accepted. A very strong Court of Appeal consisting of Lord Halsbury, Cotton, L.J. and Fry, L.J., affirmed unanimously a judgment of Chitty, J. in favour of the shipowners. But Lord Halsbury, in the course of his judgment (6 Asp. Mar. Law Cas. at p. 425; 61 L. T. Rep. at p. 318) makes the following express saving: "I put aside, as Sir Walter Phillimore candidly put aside, questions in which the positive law of the country forbids contracts to be made. Where a contract is void on the ground of immorality, or is contrary to such positive law as would prohibit the making of such a contract at all, then the contract would be void all over the world, and no civilized country would be called on to enforce it." Similarly Cotton, L.J. (6 Asp. Mar. Law Cas. at p. 427; 61 L. T. Rep. at p. 319), adopts the same position in the clearest possible terms: "As the Lord Chancellor has said, I do not enter into the question what will be the result where parties have made in America a contract which they intend to be governed by English law, when according to the American law such a contract would be in itself illegal." Fry, L.J. deals with this aspect of the matter in a less precise way, but he, too, draws the clear line between what is merely void and what is actually illegal according to the law of the country where the contract is made.

Re Missouri Company is, therefore, an authority for the proposition that the English courts will not refuse to uphold a stipulation in a contract merely because that stipulation would have been held to be void in a country where the contract was made. It is, however, no authority at all for the proposition that the English courts will enforce a stipulation which is prohibited by the positive law of the *loci contractus*, or which would be illegal according to that law. It might perhaps be argued that Lord Halsbury's dictum which I have cited above was *obiter* to the case in hand, but it is at least not lacking in clarity or incisiveness, and whether *obiter* or not I should be surprised even to hear it challenged.

Now, as I have already pointed out, the legislative authority for Palestine has been at quite extraordinary pains to incorporate the Hague Rules in the positive law of Palestine. Not content with including them in an Ordinance, as they are included in the Carriage of Goods by Sea Act 1924, the Ordinance goes on to provide that even in the absence of the express statement which the Ordinance expressly enjoins, every bill of lading issued in Palestine shall be deemed to have effect subject to the rules contained in the Ordinance.

The bills of lading in the present case were issued in Palestine. The shippers in practically every case bore names eloquent of eastern origin, and it is not suggested that they were not at least residents if not natives of Palestine. Am I to imagine that in the face of the insistent terms of the Ordinance they nevertheless intended and agreed to contract themselves out of the benefit which that Ordinance was designed to confer upon them? Can I infer that they were entitled to do so? And in the face of Lord Halsbury's plain pronouncement, have I any right to enforce such a provision as that contained in clause 14 of the bill of lading, which would be a clear infringement of the law of Palestine if it were to be taken to exclude the Hague Rules, which ought to have been expressly included, and are to be deemed to be included, even in the event of actual omission? In my view it would be both contrary to law and contrary to commonsense so to hold. To my mind the terms of the Ordinance are stronger than the parallel and familiar terms in the Harter Act of the United States of America. The Harter Act (Act of Congress 1893, No. 57) declares that words or clauses contrary to its provisions are to be null and void and of no effect, and the Hague Rules themselves, Art. III. (8), go just as far in this direction. In a word, the Harter Act says that

you must not evade the Act, but the Ordinance seeks to go a step further. It says you cannot evade the Ordinance, however hard you may try. I accordingly decline to believe that these parties in these circumstances either intended to evade or, if they so intended, succeeded in evading the Ordinance. To put it another way, I am not really sure that in the face of an Ordinance of this kind the familiar question as to the intention of the parties really arises at all. I incline rather strongly to the belief that it is taken out of their hands, and, so far as the Hague Rules are concerned, they have no longer any right to an opinion or intention. But, if I am wrong in this view, I hold that, in view of the facts that these goods were shipped by a regular service from Palestine, bearing a name taken from a Palestine port, that the shippers were presumably residents in Palestine, that the bills of lading were issued in Palestine and the law of Palestine has dealt quite recently and quite concisely with this express point concerning bills of lading, the intention of the parties must be taken to be that they contracted upon the footing that the law of Palestine should apply to the contract.

At this stage it becomes material to consider Mr. Raeburn's second point, namely, as to the effect of the decision which I have reached upon the second and larger body of plaintiffs. As regards the first body, only two in number, it is clear and, as I understand, conceded, that they can be in no better or worse position than the original shippers. They succeed, therefore, completely upon the present issue, once I am satisfied that the law of Palestine applies to the bills of lading.
